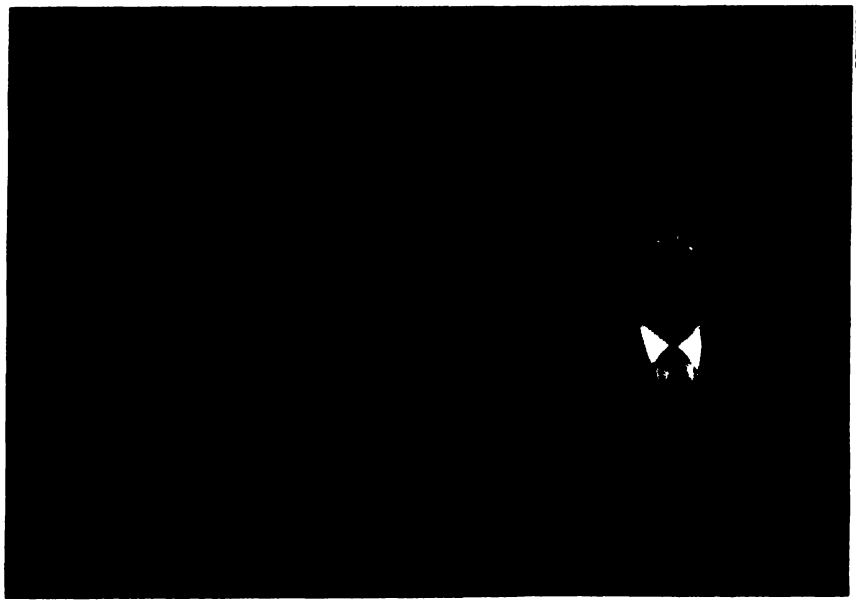
■ COVER STORY

PEOPLE'S CHINA AT 50

As a celebration of state, the accent of the festivities that mark the half century of the People's Republic of China is on the achievements of the past 20 years – of the post-Mao Zedong era of reform which made China the fastest-growing economy of the world and a player of global consequence.

MIRA SINHA BHATTACHARJEA



A GRAND parade at Tiananmen Square, and functions all over the country, will mark the celebration of a half century of China's existence as the People's Republic of China (PRC). The festivities, to which no foreign guests have been invited, will undoubtedly convey strong messages to the people of China and to the watching world. Some of these messages will confirm that the Communist Party of China (CPC) still plays the central and leading role in Chinese politics, that the third-generation team led by President Jiang Zemin is in control, and that China has successfully avoided going the Soviet way. Other messages will highlight the achievements of these 50 years not only in the indices of economic and state power but also in terms of living standards. In short, this anniversary will celebrate the fact that China, having 'stood up', as Mao Zedong so proudly announced on the founding of the PRC on October 1, 1949, now stands upright, sturdy and tall in the world of states.

As a celebration of state, the accent of the festivities will fall heavily on the achievements of the past 20 years, that is, of the post-Mao Zedong era of reform which made China the fastest-growing economy of the world and a player of global consequence. But no survey of the five decades of the PRC can ignore Mao Zedong, for he was both China's revolutionary and China's nationalist, *par excellence*. When victory in the civil war was won, and the new state was founded, Mao as leader of China's millions promised to bring to a close the long century of China's 'humiliation' by imperialist powers, including Japan. He promised to unite the nation and the state and set it on the path to wealth and power and to a standing of equality among the nations. No single imperialism had dispossessed China of its sovereignty; it never was fully a colony as India was. Only Japan thought of making the whole of China its colony. Its invasion

(Facing page) Premier Zhu Rongji speaks at a banquet in Beijing on September 30 to mark the inauguration of ceremonies in connection with the 50th anniversary of the founding of the People's Republic of China. The anniversary will buttress the fact that 50 years after it was founded, the PRC stands upright, sturdy and tall in the world of states. (Above) At Tiananmen Square on October 1, 1949, Mao Zedong announces the founding of the Republic. (Right) President Jiang Zemin addresses a gathering of the 1999 Global Forum in Shanghai on September 27.

and aggression against China in the 1930s provided the conditions for Mao to entwine anti-Japanese nationalism and anti-imperialism into the compelling dynamic of the Chinese National Revolution. China's Revolution, therefore, did not confront the 19th century imperialist powers, especially Britain, which had opened its century of humiliation with the Opium War of 1840. It confronted, instead, the new imperialists of the 20th century – first Japan and, after its defeat in 1945, the other new imperialist, the United States.

To stand up – united, strong and equal with the powers – was a promise that history would have demanded of any government that may have come to power in Beijing. The CPC, on this anniversary, can claim to have fulfilled these promises in the main. Of the three territories that remained outside the jurisdiction of Beijing after 1949, Hong Kong was returned to China in a remarkably smooth transition under the innovative one-country, two-systems formula, and so will be Macao by the end of this year. It was often said that the Chinese leadership had privately decided on 2005 as the outside year for the peaceful reunification of Taiwan – to which that formula was first offered – with the mainland. But developments since the missile crisis in the Taiwan Strait in 1995 and, more recently, a few months ago have set up serious roadblocks. If

President Lee Teng-hui of Taiwan continues to describe cross-Strait relations as between two equal states, he risks making the one-plus-two formula, as well as the whole question of reunification, dangerously redundant. The new situation will involve the U.S. more directly and could delay indefinitely a resolution of the Taiwan problem. This is one success that the CPC would have liked to have claimed at this anniversary. Instead, it represents a serious setback for the Chinese Government, and raises new tensions in the Asia-Pacific region.

THE other two promises made to the nation on the founding of the state have been more or less fulfilled. In its search for equality, as for wealth and power, China had set its sights on the richest and the most powerful country, namely the U.S. It was also the U.S. that had denied the PRC's existence as an international entity, treating Taiwan as China, for 23 years. Appropriately, therefore, it was President Clinton who symbolically conferred, as it were, 'equality' on China during his first summit meeting with President Jiang Zemin in 1997 in Washington. The Beijing summit the next year confirmed China's new status and considered establishing a 'strategic' partnership between the two countries. This suggests that China, already a permanent member of the United Nations Security Council, may envisage a diplomatic reach beyond its Asian region. However, it still has a long way to go before it can – if it ever will – acquire sinews of power to match those of the U.S.

Nevertheless, China's economic statistics testify to the giant strides it has taken in these five decades towards acquiring wealth and power with an average annual growth rate of 9.8 per cent over these decades. China weathered the recent Asian financial crisis without devaluing its currency, and its economy grew at a respectable 7.8 per cent during the period. In 1997 its gross domestic product (GNP) reached $1,055 billion, making it in terms of purchasing power parity (PPP) the third largest economy in the world. Per capita income rose to $860, having doubled over the past decade; adult literacy rose to 87 per cent; and average life expectancy rose to 70 years. In the years from 1985 China attracted upwards of $140 billion in direct foreign investment and accumulated foreign exchange reserves of $120 billion and a trade surplus with the U.S. of about $40 billion. It also became the world's 11th largest trading state.

These are impressive figures. But the goal before China is modest – to reach the income levels of middle-ranking countries such as France and Italy by the middle of the coming century. Actually the goal is far from modest, for it aims to provide all its 1.2 billion people with the comforts and living standards of those countries. China still has a long way to go before it can achieve this goal.

Nevertheless, at the end of the 20th

Deng Xiaoping brought order to the nation after the unsettled conditions during the Cultural Revolution. He also represented continuity with the Revolution, with the party organisation and with Mao. (Below, left) President Jiang with Premier Zhu Rongji. (Below, right) Vice-President Hu Jintao, considered the man of the future.

The Chinese flag is raised as the Union Jack is lowered at the ceremony to mark the handover of Hong Kong from Britain to China, in July 1997.

century, China is no longer the ripe melon ready to be carved up by the imperialist powers that it was at the end of the 19th century. Instead, the present leaders could borrow from Zhou Enlai a description of China today. China, he said in 1975, was like a piece of tough meat, difficult to chew on or to swallow.

EVEN if the 50th anniversary is, in essence, a celebration of state and not of 'socialism', much of the credit for what the state is today must still go to Mao the nationalist. As a nationalist Mao led the millions of China. As a Marxist, however, he led a party that comprised, at that time, only a mere 5 per cent of the population. With this limited tool he undertook the awesome task of building socialism in the country from a peasant and backward base. Constantly aware of being in the minority, Mao made 'serve the people' (not just the proletariat), the *raison d'etre* of the party and the state and made the test of such service an incremental increase in the basic necessities of life for all the Chinese people. Building a strong state and serving the people were two separate and often conflicting items on the agenda. At best they were linked by the choice of means employed by the party in managing the large society and increasing its productivity.

In the mid-1960s, fearful that the party was beginning to serve itself rather than the people, Mao called for the overthrow of the party leadership and organisation. The famous big character poster that urged 'bombard the headquarters' launched the disastrous Cultural Revolution (C.R.). In the desperate hyperbole of those heady days, the C.R. was presented as an attempt to touch people's souls, to bring about a sudden transformation of outlook and values in society, more in keeping with socialism. But Mao was in the minority even within the party. It was almost a foregone conclusion that Mao would fail, as he did, in this desperate gamble. His failure also heralded the end of the socialist effort in China, despite its present use as a signboard, to proclaim identity – that is, a socialist China building a socialist market economy, and so on.

Mao's portrait still looks out over Tiananmen Square and the 50th anniversary festivities. But his contribution to the building of the state will in all probability not be acknowledged. Yet Mao's contribution was not negligible, and needs to be recalled for it laid the base from which Deng Xiaoping's reforms could take off. To list a few of his contributions: At the end of the Mao era, China was debt-free; oil resources (not revealed by Soviet prospecting) were discovered and exploited; the nuclear programme proceeded apace; land reform had been thorough and recovery had been made in agriculture.

Externally also China had made significant and strategic gains. Its 23-year-long period of isolation in the world ended with its acquiring a seat in the U.N. and its diplomatic recognition by the developed countries – on its own terms. This meant the de-recognition of Taiwan and the promise by other countries that relations with that island would henceforth be conducted only at sub-diplomatic levels. The crowning act in this drama of undoing the past was the 'private' visit of President Richard Nixon to China in 1972. That journey by the most powerful leader of the world to what was an 'enemy' country for 23 years, to be received by the man and a system he had threatened to destroy, and to a country which

The architect of 'new China'

JOHN CHERIAN

MAO ZEDONG is no doubt one of the greatest of leaders who strode the world stage in the 20th century. The architect of the Communist Revolution in China, he presided over the country's destiny for 27 years. Maoist ideology may have been put on the backburner now, but the leaders of today's China acknowledge the role of Mao in building and consolidating the revolution. Many leading economists and Sinologists have forecast that China will become an economic superpower in the next three decades. It was Mao's insistence on self-reliance during the first three decades after liberation that enabled China to withstand Western attempts to rein it in militarily and hamper its economic growth. Small wonder then that the Chinese people give Mao the credit for creating the "new China".

Mao was born in Hunan province on December 26, 1893. He was the eldest of four children – three sons and a daughter. His father, a dispossessed peasant, joined the army to escape poverty. His stint in the army made him relatively rich. From the beginning, Mao had the makings of a radical. He was against his father's profiteering ways.

Mao completed formal education at the age of 25. He passed out of an institution that trained teachers. While he was there, he participated actively in the country's nascent revolutionary movement. One of the early supporters of the Russian Revolution was Li Ta-chao, a librarian at Beijing University. He, along with some progressive-minded people, started a Society for the Study of Marxism in 1920, which was the forerunner of the Communist Party of China (CPC). Li employed Mao, who was one of its members, as an assistant.

Mao was part of a group of young intellectuals in the CPC and began organising revolutionary activities in 1921. It was in the mid-1920s that Mao began to realise that tremendous revolutionary dynamism could be unleashed by mobilising China's vast, impoverished population. Although both Lenin and Stalin had recognised that peasants could play a revolutionary role in underdeveloped areas, Mao was the first to propose that the peasantry was potentially the backbone of the Chinese Revolution.

The Communist Party suffered a series of setbacks between 1921, when the party was founded, and 1927. Chiang Kai-shek's forces violently crushed the urban-based National Democratic Revolution and an attempt by industrial workers, who constituted a very small proportion of the population then, to ignite a revolution between 1925 and 1927. The failure of two revolutions sidelined the bourgeoisie and the proletariat. After 1927 the revolution shifted to the countryside, where Maoist ideology thrived, and it triumphed ultimately.

After conducting some investigations on his own, Mao wrote in 1927 a report, the key elements of which was to constitute his lifelong conviction – that it was the rural areas that would be the key centres of revolution not only in China but all over the world. Mao predicted that the power of peasants would "bury imperialism and militarism". In a celebrated passage in the report, Mao emphasises that only "armed struggle" can bring about genuine change. "A revolution is not a dinner party, or writing an essay, or painting a picture, or doing embroidery; it cannot be so refined, so leisurely and gentle, so temperate, kind, courteous, restrained and magnanimous. A revolution is an insurrection, an act of violence by which one class overthrows another."

Mao's strategy and tactics were effective. Between 1928 and 1933, the Communist Party's membership in China swelled from 40,000 to 300,000. During the same period, the Communist army's strength grew to 100,000. Chu Teh, a former warlord, and his forces joined hands with Mao. Chu Teh became the Commander of the Red Army and was Mao's comrade-in-arms during the 21 years of revolutionary warfare that followed.

Alarmed by the growth and popularity of the Communist Party, the Nationalist Government of Chiang Kai-shek, launched a fierce military offensive aimed at destroying Mao's military base in Kiangsi province, where Mao had proclaimed the creation of the Kiangsi Soviet, a Communist republic. For three years, the Communists administered a territory of 15,000 square miles. The CPC was advised by the Comintern, an organisation of world Communist parties, against conceding any territory to the Kuomintang. This strategy, however, backfired, and in order to avoid a military rout the Communists, under Mao's leadership broke through the Kuomintang encirclement and embarked on the epic Long March. The March, one of the most heroic episodes in history, dramatically changed the course of 20th century history.

The March, which lasted from October 1934 to October 1935, saw Mao

and his followers trek 6,000 miles (9,600 km) from Kiangsi to the northern Shensi province. A temporary headquarters was set up at Pao An before a permanent base was established at Yenan 14 months later. During the March, the Communist forces were reduced from 90,000 to around 20,000: they had not only to negotiate rivers, rough mountain terrain and arid areas, but also to engage the Nationalist (Kuomintang) army in battles. Among those who died were some of Mao's closest comrades. One of his brothers, Mao Tse-t'an, was killed in one of the battles with the pursuing Kuomintang and warlord armies. Two of Mao's children, who were left behind with sympathetic peasants in Kiangsi, were never traced.

Few would disagree with Edgar Snow's assessment of the Long March as "an Odyssey unequalled in modern times". The heroic deeds which the Communist guerillas under Mao accomplished are now part of revolutionary lore. They have inspired several revolutions, including the Cuban Revolution. The Long March was also instrumental in consolidating Mao's hold over the Chinese revolutionary movement. In January 1935, Mao was elected Chairman of the Politburo of the CPC. The other leaders of the party who held sway for decades since the 1930 were also veterans of the Long March.

The Yenan experience (1937-45) was invaluable for Mao and the CPC. During his sojourn in Yenan, Mao was at the height of his creativity. He addressed himself to the needs of the peasants and carried out land reforms and rent reduction programme. Peasants became fully involved in the political, economic and military organisations in the liberated areas. In order to sensitise the peasantry, Mao created a corps of poor peasants – this was in addition to the farm labour union – and encouraged them to participate actively in the land reform movement. During this period Mao also formulated the "Three-Thirds System", which limited the participation of party cadre in local government to one-third, leaving two-thirds of the posts to progressive citizens and intellectuals. The bulk of his writings, which later appeared as *Thoughts of Mao*, were written in Yenan. (Even while steering China towards progress in later years, Mao never forgot his Long March experiences or his days in Yenan. The periodic shake-ups he carried out in the government and in society in the 1950s and 1960s owed a lot to these experiences.) In Yenan, he criticised comrades who could "repeat quotes from Marx, Engels, Lenin and Stalin from memory but understand very little or nothing of their own history."

The Communists under Mao made spectacular military gains from the mid-1930s to 1945. At the outset of the war with Japan, they gained immense prestige by routing the Japanese in the Shansi province, while the Nationalist troops had fallen into disarray. The Japanese invasion undermined the Kuomintang regime as it was evicted from the major cities. The Communists, on the other hand, gained enhanced access to the countryside as they had generated tremendous goodwill among the peasantry and were good at guerilla warfare. The invading Japanese did not have sufficient manpower to enforce their writ in the countryside.

Much of the guerilla warfare against the Japanese were organised by the Communists. During this period the communist army gradually coalesced into a professional army. After the Japanese surrendered in 1945, it emerged as the strongest force in China. But the Nationalists under Chiang Kai-shek refused to acknowledge this reality and started another civil war in the country which was just recovering from the ravages of Japanese occupation. (The Kuomintang war machine was financed by the United States of America. Chiang Kai-shek's main adviser was Gen. Ludwig von Falkenhausen, a German.) At the beginning of the civil war in 1945, the Communists only had half a million regular troops, which was one-fourth the size of the Nationalist army. By 1948, however, the Communist army's strength was the same as that of the Kuomintang's.

The U.S. tried to change the course of history by coming quickly to the aid of the Nationalists. When the Japanese were withdrawing from the cities, the U.S. dispatched 50,000 marines to key ports and communications centres, besides airlifting Nationalist troops to Tientsin, Beijing, Shanghai and Nanking. The defeated Japanese Army also collaborated with the U.S. and the Kuomintang. The CPC, however, managed to retain control of most of northern China. The entry of Soviet troops into Manchuria was also a positive development from the CPC's point of view.

Mao's leadership role was crucial to the final outcome. His theory was that an inferior force could defeat a larger enemy only through a gradual process. When the civil war started, the Communists adopted a defensive posture, taking into account the overwhelming numerical superiority of Chiang Kai-shek's forces. In a classic gambit, the Communists withdrew from several areas which were under their control, including their Yenan headquarters. Chiang Kai-shek interpreted the withdrawal of the Communists from their headquarters as a sign of military weakness and ordered his elite troops to pursue them deep into Manchuria. This, however, put an enormous strain on his supply lines. He did this against the advice of the U.S., his staunchest ally.

The second stage of the Communist plan was implemented in 1947. A limited counter-offensive was launched against the provinces of central China and against the railway network used extensively by Chiang Kai-shek to provide supplies to his troops. By the end of 1947, when Chiang Kai-shek's best troops were fighting in Manchuria and his communications capabilities were overstretched, the more mobile Communist army captured key railway junctions in the Hopei province south of Beijing. The Nationalist Government in Nanking found it difficult to send reinforcements and supplies to its beleaguered troops in Manchuria and northern China.

By the middle of 1948, the Nationalists were in total disarray. Mao initiated the final push by launching a series of military campaigns through central and eastern China, which ultimately brought him and his men to the doorstep of the Nationalist capital, Nanking. Chiang Kai-shek had fled to Taiwan. Despite the reservations expressed by some of his own comrades and allies such as Stalin, Mao ordered the capture of Nanking. The rest is history. On October 1, 1949, Mao stood high on the Gate of Heavenly Peace in Beijing to announce the establishment of the People's Republic of China. It was a day that was as significant as the end of the French Revolution in 1789 and the Russian October Revolution of 1917.

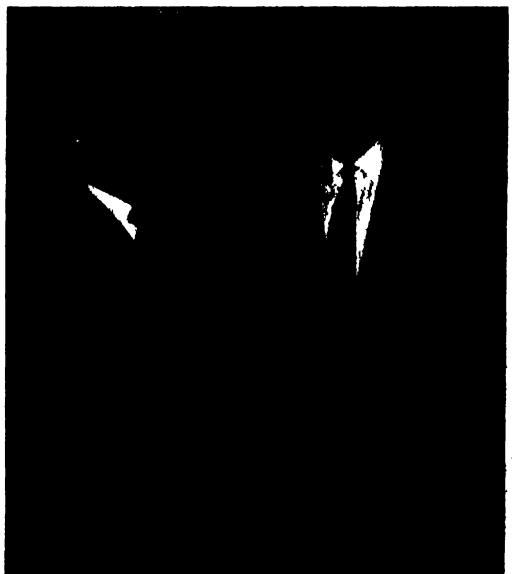
While riding into Beijing triumphantly, Mao composed a poem, which reflected his worldview. A line from it is: "The true way that governs the world of men is that of radical change." ■

Washington did not recognise, was an exercise in the most extreme form of realpolitik. It could only be accomplished by denying a friend of as many years, during which time Taiwan, with a population of only 11 million, was for the U.S. the only China. The Nixon visit opened the door to the technologies and markets of the developed world for Mao's successors.

DENG XIAOPING, as Mao's successor, must, however, be given the credit for knowing how to walk through that open door where he wanted to take China. Deng's coming to power was an accident of history – he was not one of Mao's chosen successors. Mao identified him as the second most important target of the C.R. Deng survived that turmoil and witch-hunt, to be recalled to power and position in 1974 as Mao aged and cancer took its toll of Zhou Enlai. As soon as he had consolidated his power, he decided to pronounce a formal assessment of and verdict on the C.R.

No assessment of the C.R., however, was possible without a similar assessment of Mao and the party. Unable to throw out Mao with the C.R., as it were, his erstwhile targets found his merits to be primary and his errors to be secondary. Mao's undeniable contribution lay in waging a successful struggle and in bringing the CPC to power. His mistakes, such as the Great Leap Forward and the Cultural Revolution, had stemmed, it was found, from an inability to understand what building socialism meant. This had lost China 10 years and more of development. This verdict on the C.R. and Mao was to be the foil for Deng's genius in putting economics, not politics, in command of socialist development.

Physically Deng Xiaoping was a little man, small built and stocky, but he had the makings of a big leader, unlike Zhou Enlai who seemed destined to be the permanent No. 2 in the leadership hierarchy. The story of his return to power after the C.R. is unsavoury, and understandably it is not often recounted in China. But China was fortunate to have him as leader. He brought order to the nation and to governance after the chaos of the C.R. Above all, in his person, he represented continuity – so important for a C.R. ravaged China – with the revolution, with the party organisation, and with Mao, even though he switched the tracks on which the nation was going to travel. These were the sources of his right to power.

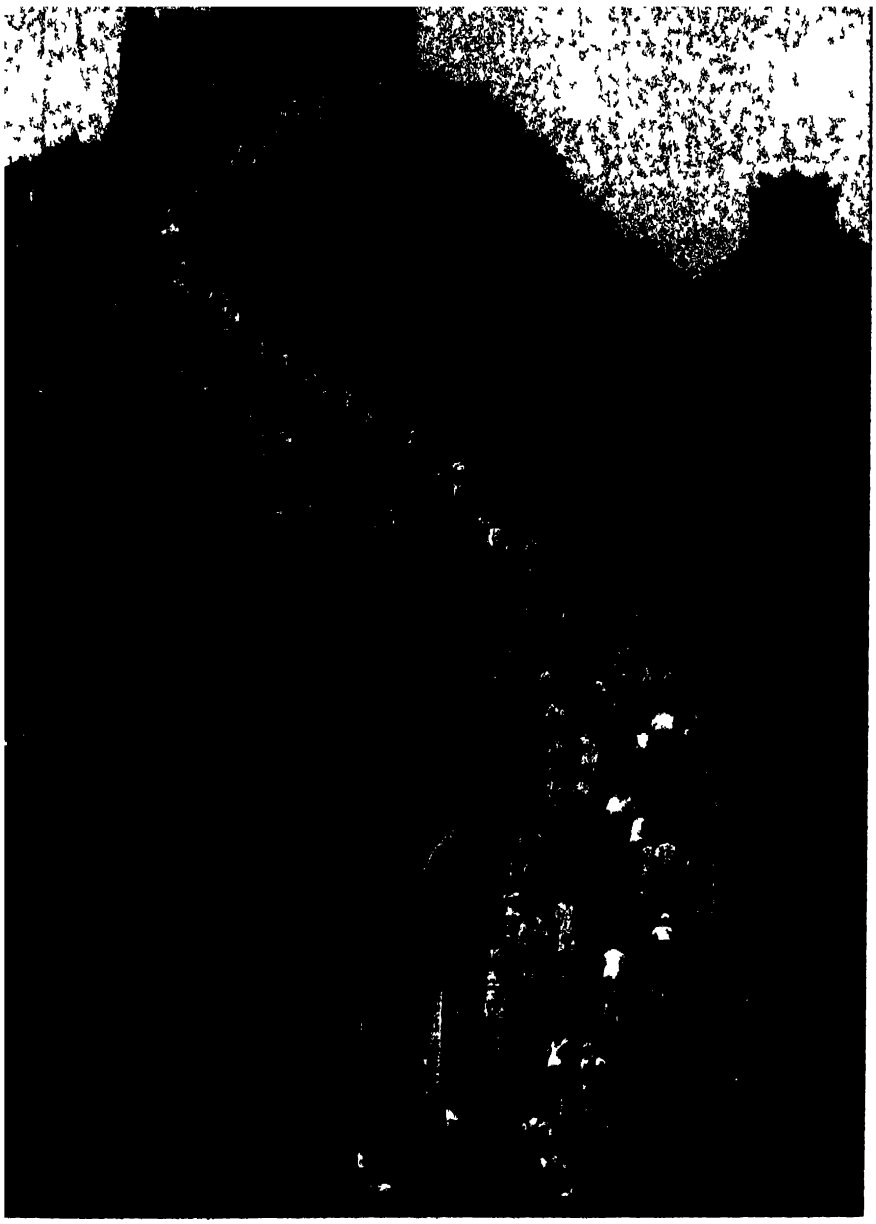


Yet, like Mao before him, he worried about leadership succession, on which would depend the future of China. He was unlucky with his chosen heirs until he brought Jiang Zemin from Shanghai to Beijing after Tiananmen (1989) and then devoted the next six years of his life to grooming Jiang to be the core of the third-generation leaders of party, state and army.

Deng, like Mao, had the ability to think in the round. Having put economics in command, he undertook reform from above in all sectors of society, both to support the modernisation drive and to contain the inevitable fallout on the party and society as vested interests were disturbed. At the same time, he had to manage a complex relationship with the world, and in particular with the U.S. His biggest challenge was to introduce political democracy, taken to mean freedom of expression and association, the rule of law and the separation of powers. Both internally and externally he was unable to fit political democracy into his reforms. Instead, as student demonstrations rocked China, the 'Democracy Wall', which had come up during the C.R., came down. His new Constitution also dispensed with the earlier Maoist inclusion of 'four big freedoms' to the people, including the right to strike work.

With Tiananmen and the collapse of the Soviet Union with its break-up on ethnic lines, and its adoption of a multi-party democratic system, China became the bad boy on the block. Isolated once again, as in 1950, by the developed world, it faced international criticism and sanctions on many fronts – on human rights, on its one-child population policy, on prison labour, on censorship and so on, all of which added up to a condemnation of China's refusal to abandon socialism and change to a multi-party democracy.

There was domestic criticism of his line too from both the Right and the Left, and not until 1992 was he able to assert his free-market, get-rich strategy and tempt the developed world with the prospect of a market of a billion consumers. That strategy, with some modifications and considerable skilful diplomacy, has resulted in the lifting of international sanctions and the muting of criticism by governments wanting to do business with China. Ten years after its international standing touched a low following Tiananmen, and 20 years after the reforms began, China's economic development, supported by domestic stability and considerable military muscle, both conventional and nuclear, has enabled it to recover and improve its international standing, though not its pre-Tiananmen image.



This duality will continue to characterise the way the developed world will look at China in the years to come. On the one hand, the lure of the China market will strengthen those who advocate closer 'engagement' with China, who argue that this will in time bring about a greater democratisation of its system. On the other, in a strange reversal of roles, the ideologues of democracy – if one can call them that – are the new Cold War warriors who argue that China should be 'contained' by putting pressure on it to change its system through strong sanctions and diplomatic and trade isolation. As China becomes stronger, these voices will probably become louder. History has no precedent for the international community's adjustment to a new power without resorting to war.

WIN MCNAMEE/AP

U.S. President Bill Clinton with Jiang. China's objective is to use diplomacy to avert conflict with the U.S. and point out the advantages to both countries of a cooperative relationship.

EVEN as China reaches a critical take-off period in its domestic development, it is faced with a new and more complex external environment. The reform era began, by contrast, in the relatively simple and predictable bipolar world, which China charted with some skill until the collapse of the Soviet Union ushered in a unipolar world and with it, supposedly, the 'end of history'. Since then new complexi-

VIDYA RAM

Tourists at the Great Wall. China's 'new security concept' calls for a series of bilateral and multilateral arrangements with its near and distant neighbours.

ties have been added – for instance, the nuclearisation of South Asia and the spread of international terrorism.

Since that time China has been concerned not only with the problem of managing this complex world, but with the need for it and India, as ancient civilisations, to influence the shape, structure and norms of the coming world order. In the last half decade, China has indicated the kind of world order it would like to encourage, namely one in which a number of big powers can be identified. At present these comprise China, Russia, Japan, Germany, France and, potentially, India. In this multi-polar system of its preference, no one pole can aspire to equal the U.S., but collectively and in their own interests they would be able to act as curbs on it, both within and outside the United Nations

It has also revived the old India-China case for introducing a new set of behavioural norms – the Panch Sheel – to replace what it calls 'power politics' In short, these would accept the territorial limits and the sovereignty of states; respect the right of governments to manage domestic problems without outside interference; help move disputes from the ground to the negotiating table; and encourage a mutuality of approach to common problems. This is its theoretical framework.

In its practice, China's grand strategy takes the U.S. as the 'other' both in terms of the world order it advocates and perhaps as the biggest obstacle to the emergence of China as a global great power. At the same time, it needs U.S. markets and U.S. technology. Its latent suspicions of the U.S. have become more overt as it aggregates the sum meaning for China of U.S. policies in the Asia-Pacific region of the past few years. Briefly these include what it sees as a qualitative change in Washington's more official relations with Taipei; the revival and strengthening of U.S security relations with Japan and Australia, and America's proposed theatre missile defence system in Asia. Its overall objective is not to risk a military conflict with the U S. but to use diplomacy to deflect from such a possibility and to continue to point out the advantages to both countries of a cooperative relationship.

Partly as a result of the present skewed balance of power, partly because of U.S. policies and presence in the region, and partly because of its own limited military capability, China has begun to concentrate on Asia The clearest expression of this interest is to be found in the speeches made by President Jiang Zemin on his recent state visit to Thailand. China's 'new security concept' calls for a series of bilateral and multilateral arrangements with its near and distant neighbours, which would increase the density of interaction to the degree of making conflict a more and more distant possibility. China presents these as the building blocks of a comprehensive security system for the region, and by extension an alternative such system for the world. These arrangements, as should be obvious, have the added worth of reducing opportunities for the U.S. to take advantage of China's bilateral problems with its neighbours

The 50th anniversary thus also marks the beginning of a period fraught with grave problems for China, both domestic and external which, in addition, intersect at many points. Some external problems have been mentioned above. China's many domestic problems include those that flow from a loosening of party controls, from a lack of higher purpose which has permitted religion to extend its hold and fringe groups like the Falungong to emerge; from the growing inequalities between the hinterland and the coastal areas, the rural and the urban, the rich and the poor, the ethnic minorities and the Han, and so on, and from the consequences of its one-child family on the population profile of the early 21st century. These will test the management skills of the leadership as it takes China forward to achieving its mid-21st century goal for the Chinese state. ■

China in a globalised world

China's post-reform growth was made possible either because of the achievements of the pre-reform economic regime or because of the continuation of certain features of that regime.

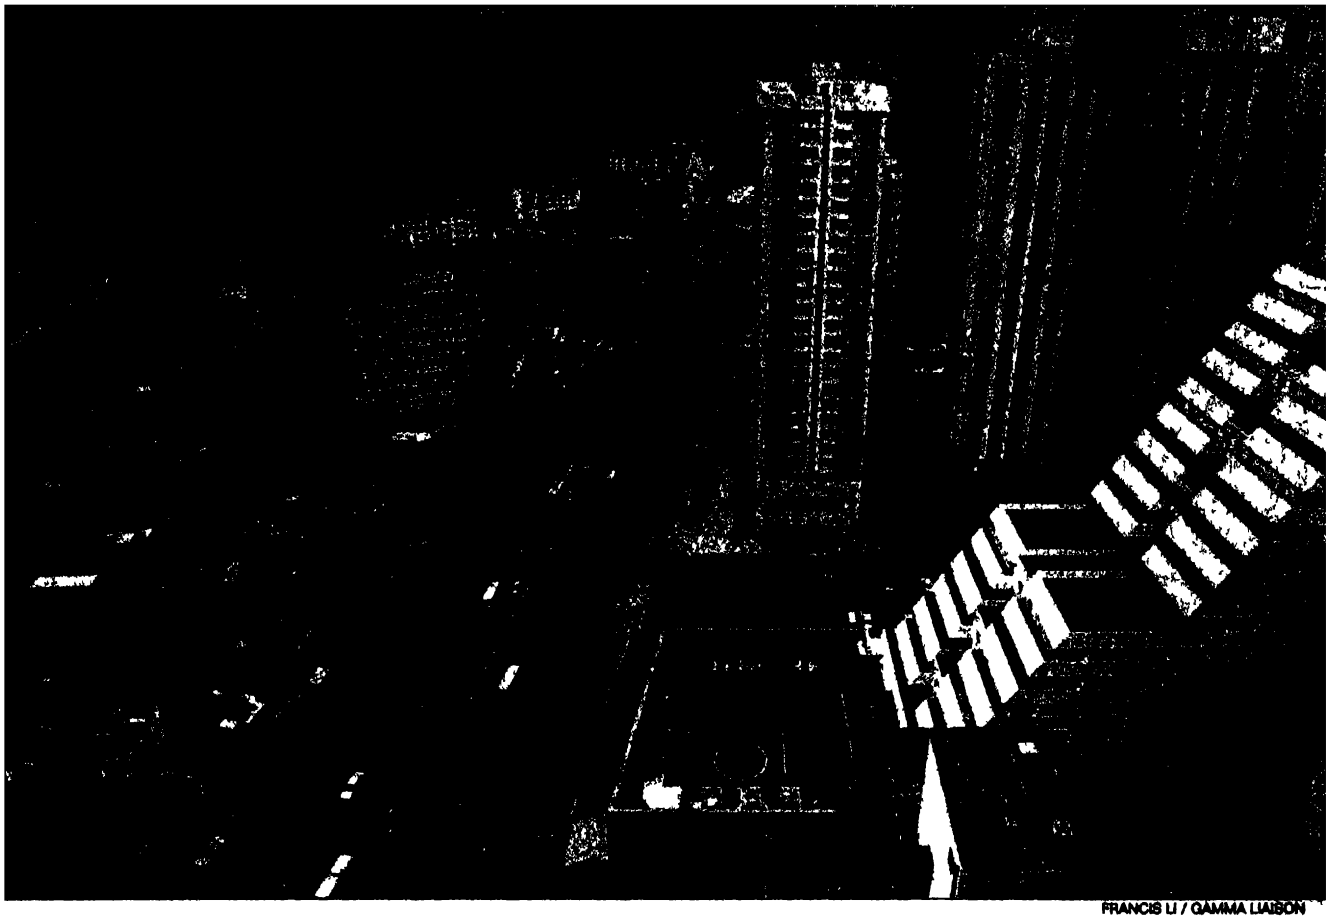
PRABHAT PATNAIK

CHINA's economic progress since 1949 is among the most significant phenomena of this century, a source of hope for the wretched of the earth that their lot too can improve dramatically within a short span of time. True, China has not been alone among the underdeveloped countries in experiencing rapid economic progress, but its case is unique because of its size: its development makes a substantial difference to world poverty. A mythology, however, has grown up of late around China's development, which claims that it began with the introduction of "market reforms", that the earlier years were "wasted years" marked by bungling, bureaucratism, excesses, arbitrary experiments, and one terrible famine, all of which were associated with the effort to build socialism. China's pursuit of "pragmatic" neo-liberal economic policies not only has brought it prosperity but also constitutes a lesson for others who may still be suffering from a residual ideological inclination towards socialism.

This perception, which underlies such remarks as "China should be celebrating 25 years of reforms rather than 50 years of Communism", is in my view completely wrong: the contrast between a pre-reform period devoid of progress and a post-reform period marked by great achievements is factually incorrect, and the interpretation of the post-reform economic performance is fundamentally flawed.

China overcame poverty (as defined in Third World countries such as India) before it embarked on "market reforms". China put in place a universal public distribution system, which gave every citizen a certain minimum amount of essential commodities, before it embarked on "market reforms". China's stupendous achievements in terms of social indicators occurred before it embarked on "market reforms". And China, despite having an adverse land-man ratio (far more adverse than India's), managed to record significant increases in food production (both absolute and per capita) through the construction of impressive water management systems under collective ownership, by mobilising locally available surplus labour, before it embarked on "market reforms". All these facts are well-known and have been attested to by a host of distinguished scholars (including Professor Shigeru Ishikawa of Japan). If for tactical reasons the current Chinese leadership underplays earlier economic progress, and if Western authors, either owing to neo-liberal ideological predilections or because of a penchant for bowing before the prevailing orthodoxy, underplay these remarkable achievements, then that is no reason why we too should close our eyes to them. In fact, in some ways, as we shall see later, the post-reform period represents a retrogression compared to the earlier years.

Even more important, however, is the fact that this perception, by attributing post-reform high growth to the so-called "virtues of the market", actually misinterprets this growth experience. China's remarkable post-reform growth (though I personally believe it has been less remarkable than is usually made out) was made possible either because of the achievements of the pre-reform economic regime or because of the continuation of certain features of that regime.



GAMMA

Construction work under way on the Three Gorges Dam across the Yangtze, a 1997 picture.

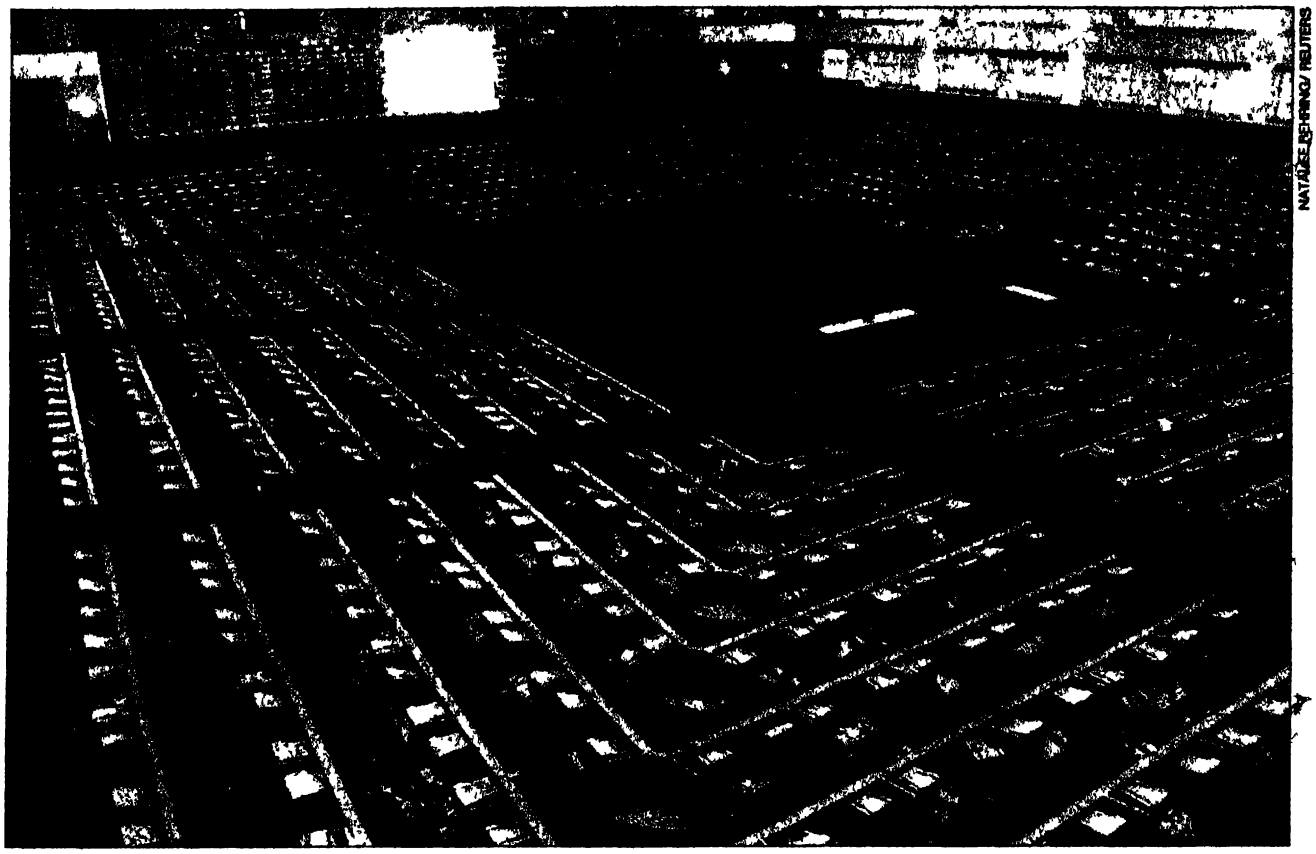
THERE are at least four ways in which this happened. First, the achievement of near-universal literacy and the improvement in the educational and health status of the work-force, which were some of the legacies of the earlier years, were important factors that contributed to the dynamism that China has experienced in the more recent period.

Secondly, there can be little doubt that inequalities in China, both inter-regional and inter-personal ones, have increased greatly in the reform years, which has been a major problem associated with the reform process. Let us, however, eschew judgment for the present. The point is that if these increases in inequalities were superimposed on an

FRANCIS LI / GAMMA LIAISON

Modern skyscrapers and other symbols of growth in the Shenzhen Special Economic Zone. China's economic progress since 1949 is among the most significant phenomena of this century.

already highly skewed pattern of income and wealth distribution, then, notwithstanding such high growth rates that China is supposed to have been achieving, social tensions would have become difficult to manage. The surfacing of these tensions in turn would have made these growth rates impossible to sustain. Thus China was able to sustain its post-reform growth, for whatever it is worth, because it started with a relatively egalitarian base, and that was a contribution of the earlier regime.



Thirdly, to call China a neo-liberal "model" is a travesty. China's success during the reform years has sprung precisely from the fact that it has managed to combine in an altogether novel way the virtues of centralisation with those of decentralisation, or, putting it differently, the advantages of a command economy alongside the flexibility imparted by the functioning of markets. It has been, if you like, a command economy at one remove. In periods of runaway inflation, for instance, price controls have been clamped down with ease rather than resorting to drastic deflation with high social costs (as would happen under capitalism), because a large part of the economy continues to be state-owned and hence amenable to control by the party. Likewise, foreign exchange management, a potential source of serious problems in any Third World capitalist economy, has been handled with somewhat greater ease because the old system of party directives to enterprises continues to be effective. In short, China has had the advantage of being able to supplement the usual instruments of state intervention available in a capitalist market economy with other instruments which it has retained from its pre-reform years. In this sense, drawing a sharp contrast between the pre- and post-reform periods is altogether misleading.

Finally, the high agricultural growth witnessed in the early reform years, which provided the bedrock for the reform experiment, was made possible because the regime of collective ownership and management of the irrigation systems was not abandoned. Here again China reaped the advantages of the old collective system in terms of the irrigation works it bequeathed, and continued to reap the benefits of collective ownership of such works, even while breaking up the communes and privatising agricultural operations.

The new regime, in other words, was erected on the shoulders of the old one, but not after wholly dismantling or destroying the latter. There was, and still is, a peculiar symbiosis between the new and the old, which characterises the Chinese economy. That is why lauding its neo-liberalism is as out of place as uncritically hailing it as a socialist "model".

THE complex admixture of dirigisme and a market economy that characterises China is reminiscent of what other East Asian economies too had used to register remarkable growth rates. The difference lies in the fact that in China the dirigisme is that of a socialist economy while elsewhere it was dirigisme associated with capitalism. Notwithstanding this basic difference, the element of similarity must not be missed and this consists of the fact that the range of instruments available for intervention in the market is much wider than under usual (metropolitan, especially Anglo-Saxon) capitalism. This admixture, particularly in the context of rapidly expanding world trade, can be a powerful promoter of growth.

Precisely as the experience of East Asia shows, however, this arrangement, this capacity to take advantage of the market and yet not be a market economy in the conventional sense of the term, can only

NATALIE BEHRING/ REUTERS

Inside the Shanghai Stock Exchange. China's success during the reform years has been achieved only because it has managed to combine in a novel way the virtues of a command economy alongside the flexibility imparted by the functioning of markets.

be a transitional one. The very fact of high growth brings about changes in the domestic social structure, in the class configuration of society, which undermines the continuance of this arrangement. Even more important, changes in world capitalism unleash new forces that make such an arrangement untenable and with this the continuation of the remarkable growth rates. East Asia has already reached a point of crisis from where a return to the earlier growth trajectory is almost impossible even if there is some recovery. China too, in my view, would find it difficult to continue with the regime it has been having and hence the growth experience that went with it. To say this is not to predict a slowing down of the Chinese economy but to suggest that China would have to adopt an altogether new course if it has to maintain its economic dynamism.

I mentioned earlier that despite market reforms China continued to have collective ownership of the irrigation works and that this contributed to the agricultural dynamism of the early reform years. Over the years, however, as agriculture has come under the sway of private ownership, the collectively owned irrigation works have tended to atrophy. A particular admixture of centralisation and decentralisation may be very fruitful in terms of growth, but it cannot be frozen for ever. Changes in class configuration arising from this growth itself keep upsetting it, even though such upsetting has the objective consequence of choking off growth or making it more "expensive". The case of agriculture is only an illustration. More generally, as the private (or decentralised) sector of the Chinese economy becomes stronger and stronger, this very fact would restrict the ability to use party directives in special cases. The proposition that the "purity" of the Chinese Communist Party would act as a bulwark against China's proceeding towards full-fledged capitalism scarcely carries conviction. The Communist Party, after all, is not an entity that can for ever remain impervious to social pressures; if capitalists are on the ascendant, they would sooner or later enter and influence the Communist Party itself. In such an eventuality, however, China would lose its current unique advantage and would not be able to maintain its dynamism.

There is a second and even more powerful reason for this and that has to do with the changes occurring in world capitalism. The ascendancy of finance and its globalisation constitute a crucial feature of the contemporary capitalist world. This has two obvious effects. On the one hand it is responsible (among other factors) for the slowing down of the world economy, since Keynesian demand management, which worked so well in the post-War period, becomes difficult to undertake in a world of extreme financial fluidity. On the other hand, globalised finance capital tries to break down the insulation which particular economies enjoy from its movements. It attempts to suck every country into the vortex of its movements.

Now, the success of East Asia earlier and even of China arose from the fact that they managed to insulate themselves from the movements of finance even as they pushed out substantial exports of commodities. In the new situation, however, it becomes difficult to sustain both these features. The slowdown in the world economy adversely affects trade performance, which then creates the condition for globalised finance to insinuate itself into the economy. Once the economy has become open to financial flows, it becomes a plaything in the hands of international speculators, and its growth atrophies. This is what happened in East Asia. The question is: will China go the same way?

China managed to avoid the East Asian contagion because, as President Jiang Zemin himself pointed out, it did not have a convertible currency and had not undertaken any significant financial liberalisation. China had, in other words, managed to keep its economy insulated from international speculative financial flows. Nonetheless it had to pay a price. While the stability of its currency was maintained, the economy had to be deflated for this purpose. No doubt the economy can experience a resumption of growth (though not perhaps of the same order as before), provided there are enough controls in place to keep it insulated from the activities of domestic and international speculators. But this would require above all a countering of the political pressure that these groups would bring to bear in various ways, including via the Bretton Woods institutions. The only way that such pressures can be countered is by mobilising the people. But if the working masses are depoliticised, then such countering becomes difficult. And if, in addition, the government wishes to win their favour by initiating growth through inflows of short-term finance, which makes the economy vulnerable to capital flight, then that would be a recipe not only for economic atrophy but for imperialist hegemony over China. This is not just a political necessity. It is essential for China's continued economic advance.

We are, in short, entering a new phase of world capitalism. In this phase the possibility of the diffusion of activities from the metropolitan centres to certain sites in the Third World, which was responsible for the East Asian "miracle" and which also underlay the Chinese growth performance, is restricted. On the other hand there is enormous pressure for opening Third World economies for international financial flows, which would bring in their train economic atrophy, loss of economic sovereignty and loss of control over domestic natural resources and productive assets (especially of the public sector) to metropolitan capital (or what Karl Marx would have called "centralisation of capital" on a global scale).

The days of a socialist economy achieving high growth by using the capitalist world market are over. Adopting socialist ways (which must not be taken to mean getting back to the regime that prevailed earlier) may well be the means of achieving high growth itself in the new situation. ■

■ COVER STORY

Experimenting with market socialism

At this stage, China perhaps needs to think afresh about the direction in which the anti-egalitarian market reforms have been taking its hard-won Revolution.

UTSA PATNAIK

THE 20th century will surely be counted by China as one of the most momentous in the history of its ancient civilisation; and indeed China's rise from the status of a poor, humiliated semi-colonial nation to an independent, vibrant and confident nation poised to emerge as the second largest economy in the world is of great moment for the course of world history. As China celebrates the 50th anniversary of the formation of the People's Republic after the victorious Revolution, one wonders anew at the enormous transformations that the great civilisation has undergone in the last century alone.

Successive images and events flash through the mind: the humiliation of the Triple Intervention by the Western imperialist powers, Beijing students in the May 19 Movement, the 21 demands made by the Japanese, the seizure of Manchuria, the peasant movement in Hunan, the Canton uprising, Chiang Kai-shek's annihilation campaigns against the Communists, the incredible Long March by a band of ill-clad and ill-equipped revolutionary soldiers with only handfuls of millet to sustain them physically but fired by the resolve to survive and wrest victory from retreat; the long guerilla war, land reforms in the liberated areas, and final victory over the Japanese and the Kuomintang, enabling the initiation of the historic second experiment in the world of an autonomous strategy of building socialism. The consternation in the advanced capitalist world at that time when China "went Communist" and the joy of the majority of the populations in the Third World at the victory can now only be imagined.

That China is poised to emerge as the second largest economy in the world is of great moment for the course of world history.

The Chinese have written their own history in bold strokes in this century; after the formation of the People's Republic of China (PRC), they have also demonstrated to the world that under socialism it is possible for a very poor nation to reach basic health care not only to the urban but also to the rural population, to provide education to all, to ensure not only food security but an improving standard of life to those who were the poorest in the old society. At this point some will talk of the "famine" of 1959-61; we will discuss this at length in a moment. All analysts of Chinese development history in the last half century, even those hostile to socialism, are forced, however reluctantly, to accept that in terms of human development indicators – food security, advances in health and education, lowering of income poverty, in short, in promoting the welfare of the people – the record is outstanding, in fact better than that of developing capitalist countries with 10 times the per capita income of China. All socialist economies, including Cuba of course, have a very good track record in this respect; but the case of China acquires importance owing to the sheer enormity of the problems that were tackled and the huge size of the population that has benefited.

There is a widespread misconception, however, that the gains are mainly to be traced to the period of market reforms from 1980 onwards and that there was little improvement in the period of Maoist egalitari-

an policies followed in the preceding three decades – from 1949 to 1979. Nothing could be farther from the truth, in the earlier period, not only was the share of investment in income raised greatly (from about 15 per cent to 35 per cent of national income) and a diversified industrial base established, but there was a sharp lowering of both the death rate for the general population and of infant mortality rate, accompanied by large gains in literacy, above all owing to the improvements in villages where the majority of the population lived and which tend to be the most neglected areas in other developing countries.

The basis for this improvement was precisely the socialisation of property (through cooperative and later commune organisation), which enabled a collective welfare fund to be set up, as also egalitarian distribution policies, especially as regards foodgrains and other necessities. Because the subsequent policies of Deng Xiaoping, which were implemented from 1980, were fundamentally different in content, calling for "combating egalitarianism" and "breaking the iron rice bowl" while doing away with collective operation of land, all the achievements of the earlier period have been deliberately sought to be downgraded since that time. In this effort, most Western academics with their hostility to socialism have participated eagerly; some who were all praise for earlier policies switched their views with remarkable alacrity to correspond with the changed government and political line in China. While China has performed much better than India, it is widely believed that China had a more severe famine than India ever had, during the "Great Leap" period in which millions are said to have died; the figure of 27 to 30 million famine deaths is frequently quoted. The main source of this figure in India is Amartya Sen's writings and speeches, which are more widely known and reported than are the basic sources, the work of Western scholars, which he uses. The argument made by him is that the absence of press freedom in China explains the fact that the world did not have any inkling at the time that such a massive famine had taken place.

Similarly, Peter Nolan and others have argued that a massive famine took place during the collectivisation drive in the Soviet Union in the 1930s. In general, the thrust of the argument is that collectivisation produces famine and that the absence of a "free" press as in capitalist countries, prevents anyone outside these countries from knowing about it until much later – when liberal Western scholars painstakingly uncover the facts through their research. Since collective ownership and production form the very essence of socialist production relations, this appears to constitute a damning indictment of socialism. The picture is complicated by the fact that in China itself, some of those earlier termed "capitalist roaders", who were always opposed to egalitarian principles of distribution and who wanted to dismantle the rural communes (which were indeed dismantled from 1980 onwards), seized upon the alleged massive "famine" as one argument for an *ex post* justification for doing so, regardless of the fact that they themselves, despite their active involvement in political life, were apparently quite ignorant at that time that such a massive famine which led to 27 million to 30 million deaths, had taken place in their own country.

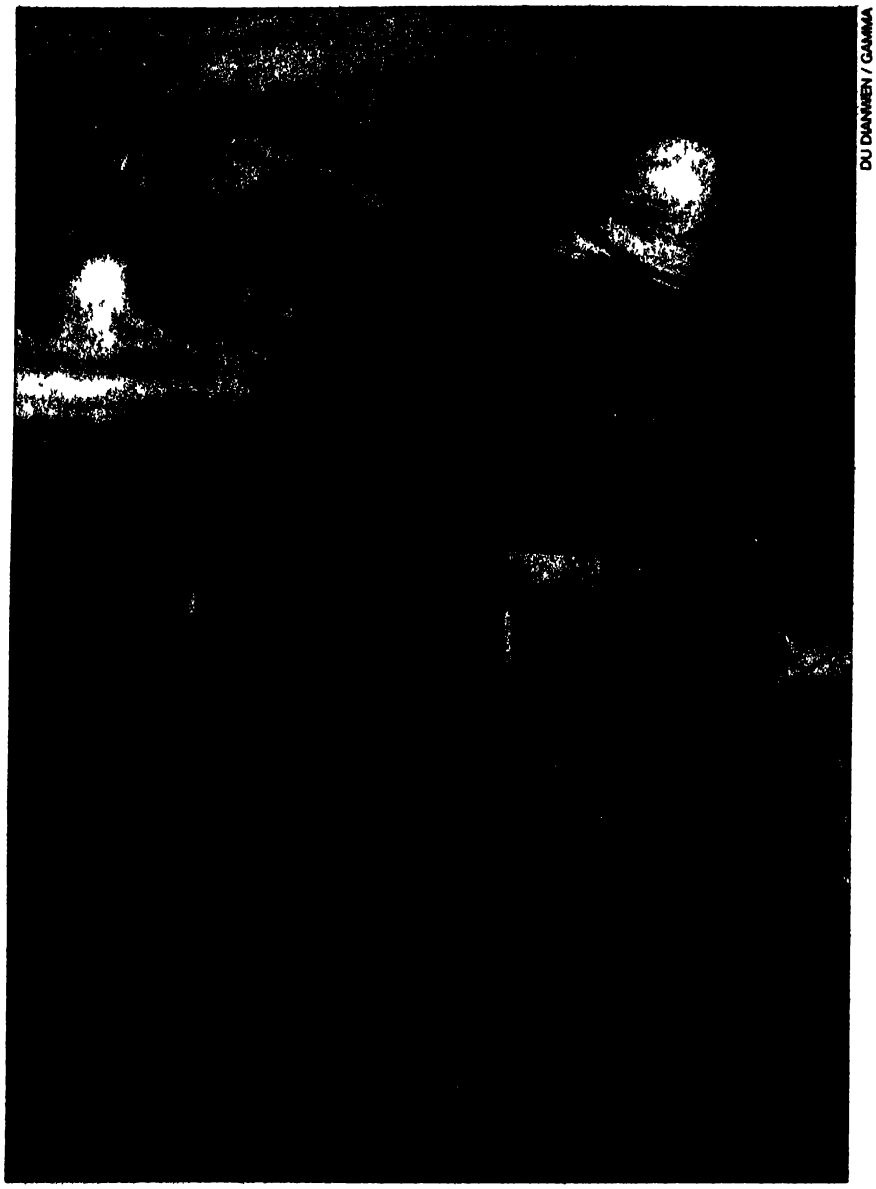
It would be instructive to look at how exactly this estimate of "famine deaths" has been arrived at. In China in the period of 1959-61 there was indeed a large shortfall in agricultural output, as much as 15 per cent from the normal level in 1959 and 25 per cent from the normal in the next two years, and this decline did in fact coincide with the "Great Leap" when the transition from advanced cooperatives to the people's communes took place. At that time a number of reasons, including drought in parts of the country, floods in others and attacks by pests, were put forward for the fall in output. No one, including members of the foreign diplomatic corps stationed there, or the ideological critics of collectivisation within the party, at that time suggested that there was massive famine. In India too the 1960s were difficult years and output shortfall owing to drought in 1965-67 was severe, although less so than in China, and it was combined with rapid inflation which eroded real wages and raised poverty levels to 60 per cent of the population, according to available World Bank estimates.

When we look at the estimates made by U.S. scholars of death rate and birth rate for China during the years 1959-61, we find that the death rate rose sharply in a single year, 1960, by as much as 10.8 per thousand compared to 1959. But because China in the single preceding decade of building socialism had reduced its death rate at a much faster rate (from 29 to 12 comparing 1949 and 1958) than India had, this sharp rise to 25.4 in 1960 in China still meant that this "famine" death

rate was virtually the same as the prevalent "normal" death rate in India which was 24.6 per thousand in 1960, only 0.8 lower. (All vital rates quoted here are from Carl Riskin's *China's Political Economy: The Search for Development Since 1949*). Further, in both the preceding and the succeeding year India's crude death rate was 8 to 10 per thousand higher than in China. Of course, each economy has to be judged in relation to its own internal performance; and no doubt the rise in the death rate during the worst years of output shortfall is a bad blot for China on its otherwise very impressive record of rapid decline and good food security.

Indeed the death rate would not have risen as much as it did despite the output shortfall, as Riskin argues, if the government had not bungled and continued to procure foodgrains from farmers. After 1961 the death rate again fell very steeply and reached 9.5 by 1966, a low level not achieved by India until three decades later in the mid-1990s. But is it correct to say that "famine deaths" in China totalled as much as 27 million to 30 million; and that absence of press freedom meant that China's then leaders, despite being aware of such massive deaths, were so cynical and depraved that they could mislead the world successfully? In a recent article pub-

Farmers in Jilin province storing grain, a 1986 picture. In terms of providing food security, making advances in health and education and lowering income poverty, China's record in the last half century is remarkable.



lished in the Bengali-language journal *Anushtup*, Badruddin Umar has provided a powerful and explicit critique of the widely accepted argument put forward by Western scholars and popularised by A. Sen on large famine deaths (and hence also a critique of others like P. Nolan). Umar argues that there is a contradiction in saying that the very state in China which had demonstrated its commitment to people's welfare through measures to reach basic health services and ensure food security to the poor, and which had achieved a much faster reduction in infant mortality and the death rate in the very first decade of independence than had India, could conceivably have wilfully suppressed information it had of such a large number of "famine deaths". We think there can be a more realistic estimate of mortality, and we also think of why no one, including the Westerners in China, even noticed that mortality was higher during these years.

Most people will accept that in order to qualify to "die" in a famine, and become a famine-death victim, it is necessary to be born in the first place. But over 16 million of the estimated 27 million "dead" in China's famine were not born at all! Most of those non-experts, journalists and others who accept and propagate the "massive famine deaths" in China argument do not themselves realise that people who were never born at all are being included to arrive at a grossly inflated estimate of "famine deaths" in China.

The measurement techniques seem designed to mislead, to talk about the "death" of people who were never born. How is this absurd situation possible? It has come about because not only the rise in the death rate but also the accompanying sharp fall in the birth rate is being taken into account when estimating "famine deaths". The birth rate in China declined and fell to a low of 18 per thousand in 1961 compared to 29.2 in 1958. (After 1961 it rose at a faster rate than it had fallen, to reach a peak of over 43 by 1963). The rise in the death rate during 1959-61 compared to the bench-mark year 1958 implies that there was indeed a total excess mortality of about 10.5 million persons over the three-year period 1959-61 in China. This is the correct estimate of excess deaths, but this order of "famine deaths" is not quite spectacular enough for liberal scholars. (Had India lowered the death rate after 1962 at the same pace as China, over 6 million deaths per year could have been avoided here over a period of three decades.) Therefore, the decline in the birth rate which was very steep during these three years, is taken into account and the babies which would have been born if the decline in birth rate had not taken place are added on by them to arrive at a nearly three times higher estimate, which is then called the "missing millions" and identified with "famine deaths".

The fact that at least 16.5 million of the alleged famine victims were never born seems to be a minor point for those who want to talk about massive "famine deaths" totalling at least 27 million in China and thereby discredit collectivisation. To the lay mind with its robust common sense this cannot be anything but tendentious academic sophistry. That periods of food shortage do lead to decline in fertility is a fairly well-established proposition. Periods of mass mobilisation of males, for military service, for example, also get reflected in a decline in the birth rate. There was no military conscription at this date in peacetime China, but there was massive mobilisation of both male and female workers for a stupendous construction effort during this period of early commune formation. The established peasant family living and work patterns were radically reorganised with the formation of the communes; large bands of men and women set out in teams and brigades for constructing water management systems, cleaning up the environment and eradicating disease-carrying organisms, afforesting hills, terracing and bunding and so on. They spent weeks at the work-sites, and there were communal kitchens and creches to look after children in these years. It is not surprising if this disruption of normal family life in the interests of construction may have also contributed greatly to the observed decline in the birth rate as birth decisions were postponed. With the stabilisation of the new system, dismantling of communal kitchens and reversion to family life the birth rate again surged to unprecedented levels, peaking at 43.4 in 1963, as though the people were scrambling to make up for the earlier decline.

As regards the genuine excess mortality during China's difficult years, while shortages were very real and visible, famine was not easily visible, including to

DU DANWEN / GAMMA

An agricultural worker in Yunnan province in southwest China.

the Westerners resident at that time in China, because China by then was an egalitarian society, not a class society. The undoubtedly severe rural food shortage was not concentrated in a sharp drop in consumption by the members of a particular deprived class like poor peasants who then died in the sight of all, while others had more than enough to eat, as typically happens with famine in class societies. Food shortage, while it was severe, was spread out over the rural consuming population much more evenly, and therefore, we can hypothesise, may have led to higher rates, but not immediately or obviously visible higher rates of mortality in those sections which remain vulnerable even in otherwise largely income-equalised – such as parturient mothers, infants and the aged. Paradoxically, the very success of egalitarianism in distributing the burden may have contributed to the invisibility. It is a mistake to think that all real trends are visible to the individuals living through the events at the time.

Thus even though we ourselves in this country have lived through the period when the infant mortality rate has fallen greatly, it is a matter we are convinced of not from our direct experience of it but after the numbers have been counted and presented to us. China's leaders were not guilty of wilful suppression of knowledge of the higher mortality; the knowledge itself was built up much later than the events, and the correct estimate as we have seen is about one-third of the highly sensationalised estimates which are still being circulated.

On a visit to China in the early 1980s, during the time the inflated "famine deaths" were being talked about in the West, this author mentioned these estimates and asked some very senior Chinese economists about their own experience of this period. They were extremely surprised and said that while there were cases of more deficiency diseases than usual, they were not aware of widespread famine deaths. It should be noted that those who designed the above-mentioned unique measure of "famine deaths" by including unborn babies, seem to be very reluctant to apply it to non-socialist countries. Their method, if impartially and honestly applied, would produce more than one episode in this century of large "famine deaths" – by their own definition – in the West European countries, which saw not only a rise in civilian mortality but also a decline in the birth rate during the time of wartime shortages. Even the accurate definition in terms of rise in the death rate is never applied by them to talk about famine in countries which are no longer socialist. Thus, in Russia, comparing 1994 with 1990 with the data given in World Bank publications, we find that the death rate rose from 48.8 to 84.1 per thousand able-bodied persons (that is, excluding children and the aged), the infant mortality rate rose, the birth rate also fell to a level below the death rate so that the population has been declining. Male life expectancy fell drastically as that country plunged into "shock therapy" to usher in a capitalist paradise and succeeded only in halving its national income. No one can say that the press is under censorship in Russia today or that the estimated vital rates are not known. But not one of those eminent economists, experts and others who have deafened us with their estimates of "famine deaths" during the Soviet or Chinese collectivisation, have bothered to apply the same method to the current Russian data.

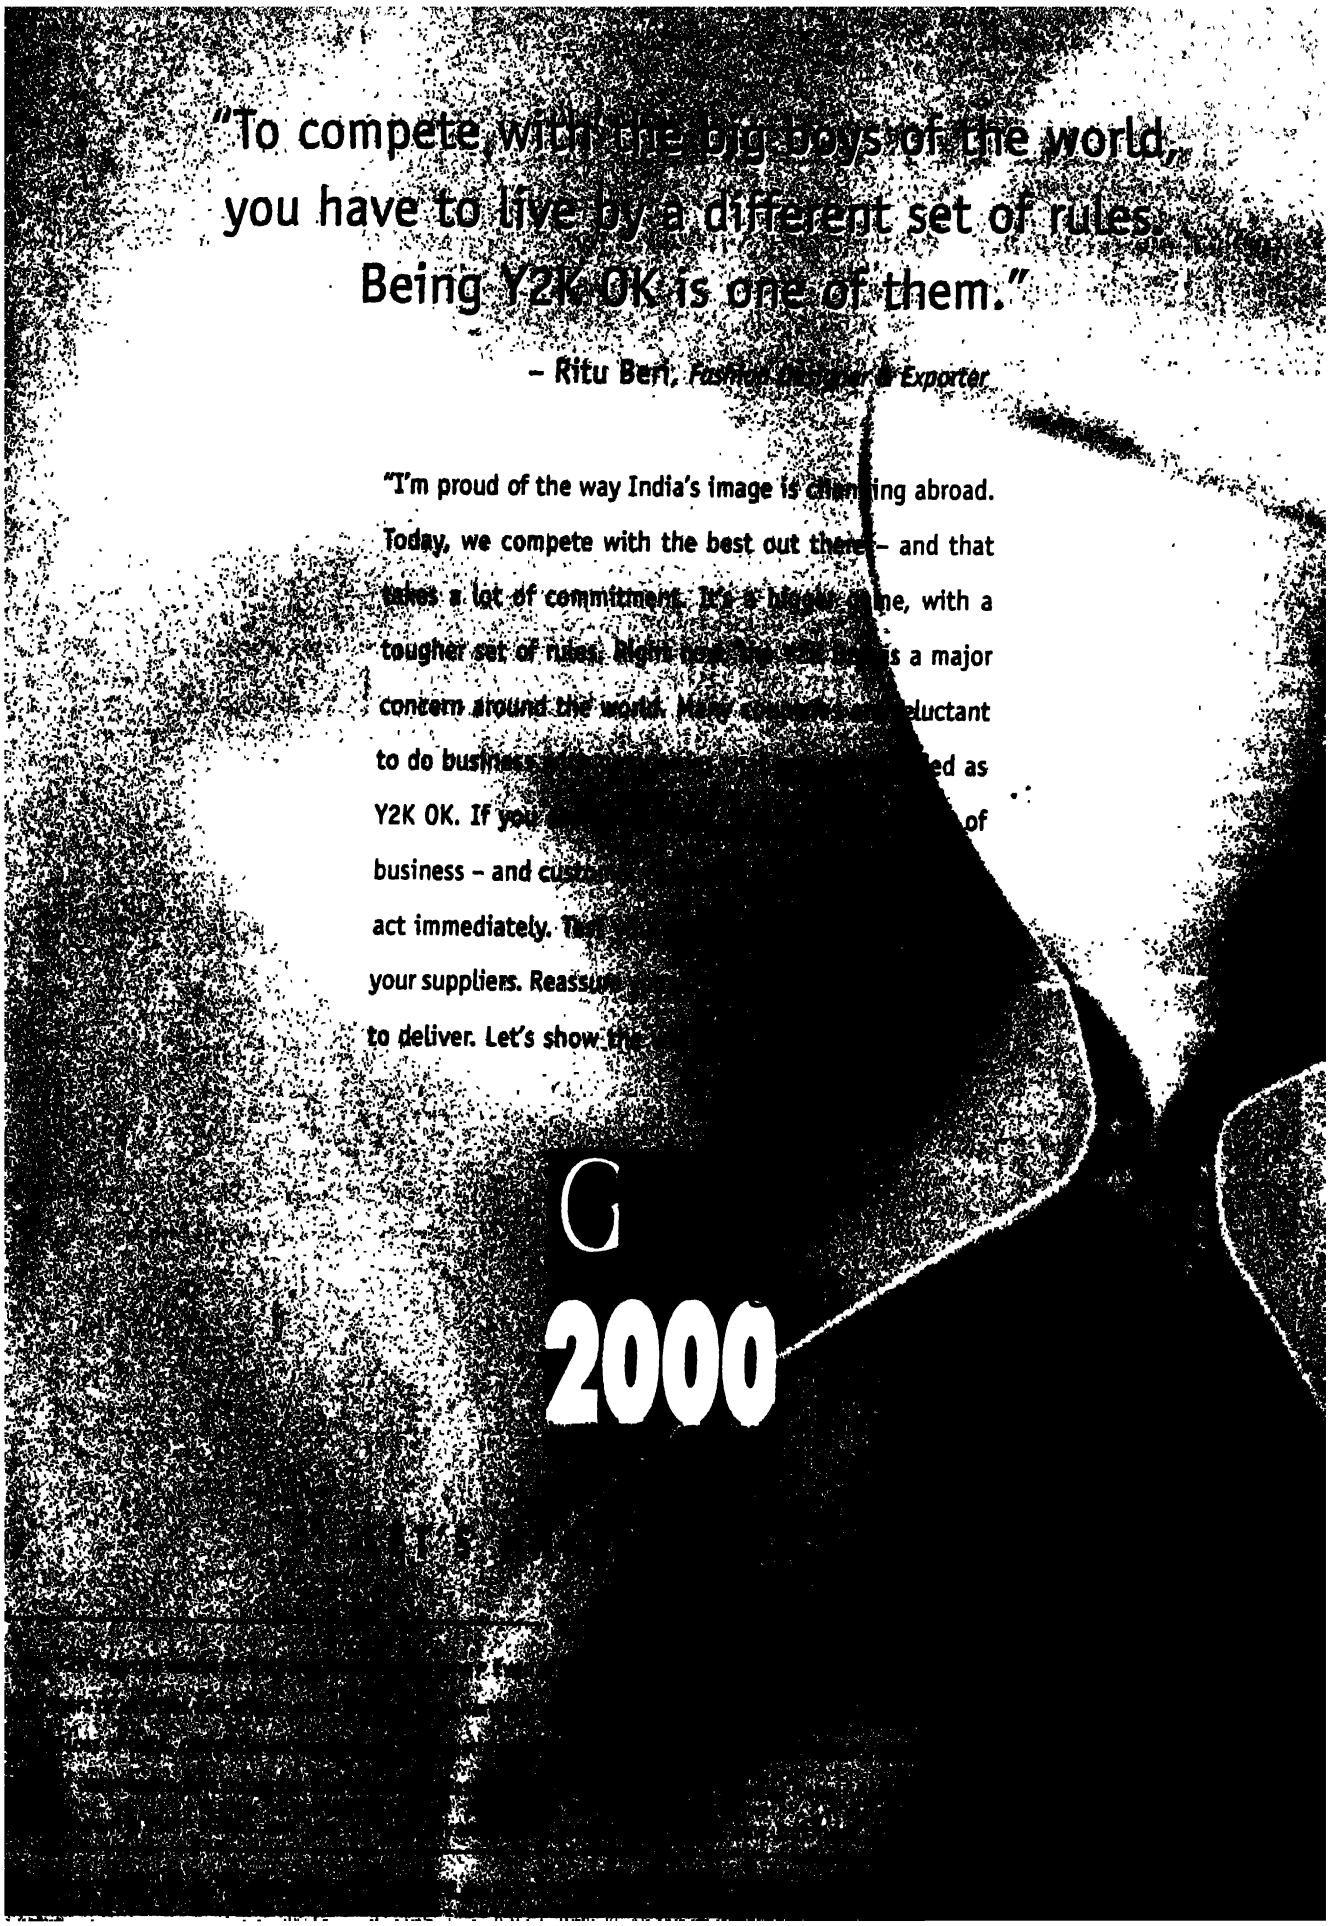
With the transition to market socialism in China too some of the welfare gains of the three decades of egalitarianism have slowly been reversed, as reflected in the rise in the infant mortality rate. There is a new emergence of large-scale unemployment and the proliferation of urban slums of migrants from the villages. As China celebrates the achievements of its half century of independence and building of socialism, its people perhaps need to reflect afresh on the direction in which the last two decades of anti-egalitarian market reforms have been taking their hard-won Revolution. Much has been achieved; but the vision of an alternative society still remains to be realised. ■

A defensive strategy

Perceptions about China in India are not always rooted in the reality; this situation calls for change.

GIRI DESHINGKAR

IT has been an article of faith in India for almost 40 years out of the 50 years of existence of the People's Republic of China that it is an aggressive and expansionist country. In the immediate aftermath of the 1962 border war, such a perception was perhaps understandable. But it has persisted although the India-China border has essentially remained tranquil since that short war. This is because India's leaders projected an image of China, which was almost racist. "Whenever China has been powerful in history it has been expansionist," declared Jawaharlal Nehru, without consulting any history book. Much play was made about the literal translation of Zhongguo, the Chinese name for China, as the "Middle Country" as proof that China considered itself to be the centre of the world. Radio programmes such as "India and the Dragon" were aimed at creating a feeling of disgust about Chinese culture, food habits and so on.



Belief accumulates "evidence" to reinforce itself and rejects all contrary facts. So when China exploded its first nuclear device in 1964, there was panic in India; the perception was that those atom bombs were surely aimed at India. China's "no first use" declaration was laughed at by the very people in India who today want other countries to trust India's "no first use" doctrine. India's think tanks treated the Sino-Soviet dispute as proof that China could not live in peace even with its ideological brothers. Reports in India spoke of nuclear-tipped Chinese missiles deployed in Tibet, targeted at Indian cities; Defence Minister George Fernandes asserted this a year ago without checking out the facts with military intelligence. He also spoke of Chinese naval bases on the Cocos islands off Myanmar, again without the benefit of an opinion from naval intelligence.

Why did China withdraw to essentially India's claim line in the eastern sector after advancing to its own claim line in 1962? Why has China never conveyed even the hint of a nuclear threat against any country? Why has the India-China border remained largely peaceful for so many years? Why did Rajiv Gandhi's visit to China in December 1988 suddenly improve India-China relations? India and China have signed two agreements over the Line of Actual Control. The first operative sentence of the agreement of 1996 says: "Neither side shall use its military capability against the other." Why did China bind its hands with such agreements? Such questions must be asked and answered in order to get beyond the preva-

lent one-line conclusions with which public opinion has been "educated" about China in India. Only then can India come up with an intelligent, sober China policy for the 21st century.

With this in mind, let us look at China's security and defence policies as they have evolved over the last 50 years. These have gone through two phases: the first, ideologically dominated one lasted approximately until the end of the 1970s. During this phase, ideology defined who China's friends and enemies were, regardless of what the actual situation on the ground was. China's actual conduct of foreign relations was, however, laced with pragmatism. But the pragmatism came to an end with the onset of the Cultural Revolution in 1966. Foreign policy until the early years of the 1970s was no longer determined by professionals in the diplomatic service but by the highly ideologically indoctrinated Red Guards.

Ideology told the Chinese that another world war, a nuclear war, was inevitable, and that it would come sooner rather than later. China would therefore remain in a permanent state of mobilisation. Everyone in China became a soldier. Deep and extensive tunnels were dug under all the big cities to withstand anticipated nuclear attacks by imperialist enemies such as the United States and "social imperialists" such as the Soviet Union. China's general defence posture in those days was one of giving the tit-for-tat response. This led to quite a few armed clashes on the Sino-Soviet border. Later China was to launch a "punitive" strike against Vietnam as well.

This astonishingly tough posture was based on a People's Liberation Army (PLA) which was high on manpower (at one point it had 6,000,000 soldiers) but very low on technology when it came to weapons and equipment. The basic military doctrine asked for a combination of millet and rifles, or a simple lifestyle and whatever weapons were available. The weapons were of old Soviet design. China's attempts to design new weapons were unsuccessful. What it lacked in weaponry was supposed to be made up with troop morale, that is, revolutionary fervour. Notwithstanding its deficiencies, the Chinese Army projected a formidable image of power, reinforced undoubtedly by a growing nuclear arsenal and a missile force. During this phase China's defence expenditure also remained high.

High-alert military preparedness, however, went with a totally defensive strategic doctrine. The motto was: "We will not attack unless we are attacked but we will certainly counter-attack if attacked" was the motto. This kept peace between China and other countries for the most part but the posture was also susceptible to over-reaction; retired Chinese officials admit today that China overreacted to India's provocative "forward policy" in 1962. Their Indian counterparts agree that the policy was unnecessarily adventurous.

Chinese leaders at last digested the evidence which cast serious doubts on what Marxist-Leninist ideology had been telling them and came to a new conclusion. By 1985 they were ready to declare that a nuclear world war was unlikely in the foreseeable future. So China should divert towards economic development its resources that were earlier earmarked for national defence. Since the new strategic doctrine did not envisage any large-scale invasion of China, the PLA's manpower could be gradually reduced: as of now it has been reduced to 2,500,000 and may see further reductions as the PLA's mobility improves. China's military industry has virtually stopped producing weapons of obsolete designs, among them long-range bombers, the MiG series of combat aircraft, main battle tanks, army vehicles of different types, and some classes of submarines. Both troop reduction and a virtual end to arms procurement have enabled China to reduce the defence budget to a level that is lower than India's. (Journalistic opinion of course dismisses the official budget figures as false but China-specialists say that the official figures are correct.) China's attempts to produce new designs for its weapons systems have not been successful so far. So, departing from past principles and practice, China has begun to import advanced combat aircraft, submarines and anti-aircraft missiles from Russia and some military technology from Israel.

Since the change of strategic doctrine, China has made special efforts to improve relations with its neighbours and these efforts have yielded results. The earlier antagonism between China and Vietnam has now given way to a cordial relationship; the border problem between them is close to being resolved. Russia, Kazakhstan and other Central Asian countries have already resolved their border problems with China. As a result, China has drastically reduced its troops strength on its northern border. The dispute between China and some of the islands in the South China Sea is alive on paper, but things are under control despite an occasional skirmish between the Philippines Navy and Chinese fishermen. China has become an active member of several multilateral forums in the Asia-Pacific region.

CHINA'S relations with the U.S. had their ups and downs; at the moment they are at a new low. But there is no mil-

itary tension between the two except insofar as the U.S. is prepared to involve itself in the event of China using force to integrate Taiwan with itself. The same problem plagues China-Japan relations, in addition, of course, to the historical distrust China has for Japan. Two earlier adversaries, Outer Mongolia and South Korea, are now on friendly terms with China.

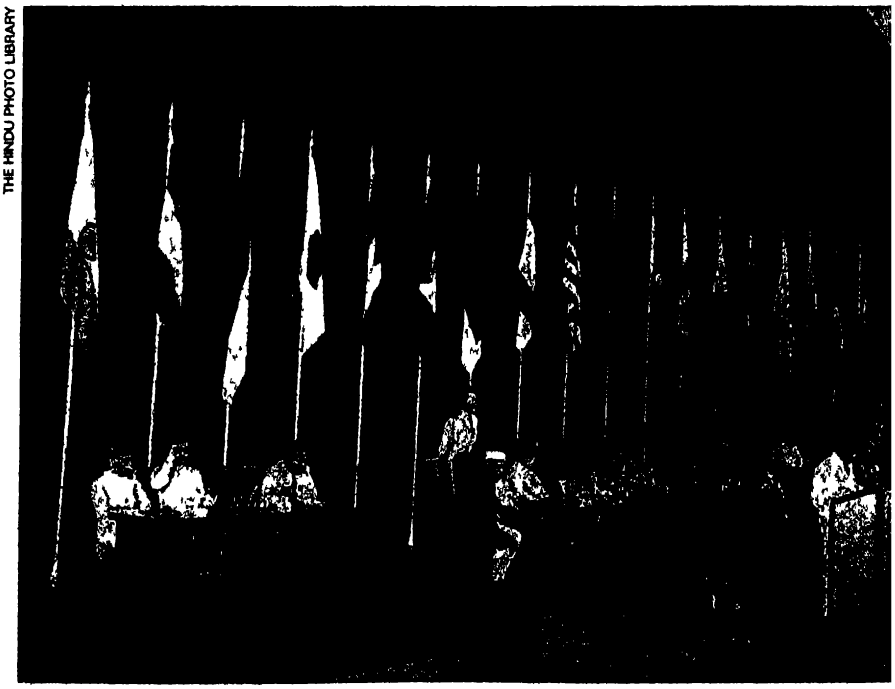
The end of the Cold War has given China a feeling of security and facilitated several of these relationships, but China's foreign and defence policies had changed well before the end of the Cold War. Mikhail Gorbachev's Vladivostok initiative of July 28 1986 (the Soviet leader had unveiled an ambitious project for a dramatic recasting of Moscow's diplomacy towards the Asia-Pacific region, which included demilitarisation and an end to nuclear weapons development) may have induced Rajiv Gandhi to visit China and agree to a mutually acceptable solution to the border dispute (India had earlier refused to grant any legitimacy to the Chinese position) but by that time China's new policy of befriending earlier adversaries was already under way. Once relations started improving the pace picked up remarkably; the fact that China "readjusted" its policy towards Pakistan also helped the process along.

The perception in India that China is inherently an aggressive country and it will "show its teeth" when it becomes a super power is still deep-rooted, particularly in the armed forces and the bureaucracy. Without an enemy the military loses its mission and importance. The bureaucracy is institutionally unable to admit that the policies it made were wrong. The politicians have no such inhibitions but their views are dictated by the needs of domestic politics; they are often the victims of public opinion, which they had created in the first place.

Both independent India and China are 50 years old. China has learned the hard way quite a few lessons during this period. India has been slow in understanding China. Today, the fact is that there is no basic conflict of interest between the two countries; there are only specific bilateral problems, as they exist between any two countries. It is important for India to watch China's security policies in order to see how a country can formulate a security doctrine, which is not imported or outmoded like the "draft" Indian nuclear doctrine, but is a product of its own genius. ■

Foreign policy directions

China is in the process of reorienting its foreign policy with the focus on promoting stability and prosperity in the Asian region and bringing about multipolarity in international relations.



JOHN CHERIAN

CHINA'S foreign policy has evolved considerably over the past 50 years. In 1949, Mao Zedong unequivocally announced the "lean to one side" policy: "The Chinese people must lean either to the side of imperialism or to the side of socialism. There can be no sitting on the fence; there is no third path."

The China-Soviet Union axis lasted until the late 1950s. There were many concrete manifestations of the friendship. One of these was the Soviet assistance to China in the nuclear field, which began in 1957. A year later the Soviet Union sent a heavy water type reactor to Beijing. This relationship was the cornerstone of Chinese foreign policy during the first decade after the Revolution.

In the early 1960s, the simmering ideological differences between Beijing and Moscow boiled over, and until the 1980s the two countries remained implacable ideological foes. However, the collapse of the Soviet Union and the emergence of a unipolar world once again made Beijing reorient its policies. Now Moscow and Beijing have re-established a "special" relationship but it is unlikely that the close ties of the 1950s will be replicated.

In the last two decades China's foreign policy has to a large extent been dictated by its security environment. China has about two dozen neighbours. Five of them – Russia, Japan, India, Pakistan and Indonesia – have a population of over 100 million each. China's foreign policy with regard to its non-Communist neighbours has been more or less consistent. Bilateral relations with these countries are guided by the five principles of peaceful co-existence: mutual respect for each other's territory and sovereignty; mutual

non-aggression; non-interference in each other's domestic affairs; equality of relationship; and mutual benefit.

China played a crucial role in the Korean war in 1950 when it unhesitatingly sent a million "volunteers" to fight the American invasion. Chinese help to the Vietnamese in the 1940s and 1950s in their fight against the French and later in the 1960s and the 1970s against the Americans was also of great importance.

U.S. President Richard Nixon with Chairman Mao during a path-breaking visit to China in February 1972.

CHINA'S key role in the 1955 Afro-Asian Conference in Bandung (Indonesia), where its theme of peaceful co-existence won it a leadership position among the countries of the Third World, was an important foreign policy milestone. The Chinese Government did its bit in the struggle to decolonise the Third World by providing liberation movements both moral and material support. In the 1960s and the 1970s, Beijing undertook ambitious infrastructure projects on a turn-key basis in the developing world. The railway line connecting Lusaka to Dar-es-Salam, which was completed in the 1970s, has contributed to the development of the region. Many underdeveloped countries benefited from such projects.

But after Deng Xiaoping consolidated his hold on power and ushered in the Four Modernisations – agriculture, industry, science and technology and national defence – Chinese foreign policy became more pragmatic. The focus was now on turning China into a leading modern state by the year 2000. Since the 1980s Chinese officials have repeatedly emphasised the importance of economic development while underlining the danger posed by looming U.S. hegemony. The Chinese view is that in the 21st century, national power will derive primarily from economic, scientific and technological prowess.

The fast pace of events instigated in the latter half of the 1980S by Soviet leader Mikhail Gorbachev's "new thinking" alarmed Beijing. China made no secret of its view that Gorbachev's reforms oriented towards *perestroika* (restructuring) and *glasnost* (openness) would lead to the weakening of the Soviet Union and the socialist world. Secondly, the critical position Washington adopted after the Chinese authorities tackled the Tiananmen Square protests in 1989, led to a serious rethink in Beijing. It became apparent to China that Washington was using the issue of "human rights" to interfere in its domestic affairs. Another alarming development related to indications of Japan's overt inclination to assume again the role of a military power.

The situation in the Korean peninsula was seen in Beijing as yet another matter of concern. The United States had made it clear by the mid-1990s that it intended to keep a forward force of 10,000 troops deployed in Japan and Korea for the next 20 years. Naturally China feels that these forces are aimed at it. Washington retains the right to position nuclear weapons in Okinawa in Japan, in case a military crisis erupts in the region. In May 1999, the Japanese Diet (parliament) passed legislation to enable the implementation of the U.S.' plans for joint U.S.-Japan operations in case another war breaks out in East Asia. The guidelines replace the joint strategy drawn up more than 20 years ago to fight the Soviet Union.

Beijing feels that it is being shortchanged by the U.S. and Japan on the Taiwan issue. President Bill Clinton, after visiting China in 1998, reiterated his support for China's position on the Taiwan question. But in July this year President Lee Teng-hui of Taiwan declared that Taiwan no longer considered itself part of China. China was infuriated and has announced its intention to "uphold national sovereignty, dignity and territorial integrity". The U.S., on the other hand, has pledged to defend Taiwan if it faces an external attack. From China's point of view, the U.S. position is aimed at preventing China from emerging as a great power.

The distrust between China and Japan runs deep and is fuelled by historical animosities. Beijing is suspicious of the intentions of Japan as also of some other states in its immediate neighbourhood that are cosying up to the U.S. and tacitly supporting Pentagon's long-term plans to encircle China militarily. The Americans are doing their best to prevent China from emerging as the dominant power in the region and to hold on to their

claim to be the sole arbiter in the Asia-Pacific region. China may be trying to follow the Japanese strategy of economic development, but it has carefully avoided the Japanese pattern of subservience to the U.S.

The recent crisis in Kosovo, during which the bombing of the Chinese embassy in Belgrade was bombed by U.S.-led forces, has further alienated Beijing from Washington. The continuing expansion of the North Atlantic Treaty Organisation (NATO) and the plans to set up a theatre missile defence (TMD) system are also viewed as manifestations of Washington's desire to dominate the world. The TMD umbrella is ostensibly meant to shield Japan, South Korea and Taiwan from a perceived missile attack. The system would for all practical purposes make Taiwan a U.S. protectorate. China is justified in concluding that a new Cold War is in the making, with itself replacing the Soviet Union as the "enemy".

However, the Chinese leadership is optimistic about multipolarity in international relations becoming a reality in the not-so-distant future. Chinese security and strategic experts are of the opinion that Russia will recover and will soon pursue vigorously its national interests. They do not expect Japan to remain subservient to the U.S. for long and they feel that China will emerge as a world power.

China is also aware of the U.S. backing to separatist ethnic and religious tendencies. Beijing has accused Washington of supporting a pan-Mongolian movement. Inner Mongolia is part of China. Statements have been issued from Mongolia urging "the peoples of Inner Mongolia, Tibet and Xinjiang to fight for freedom and independence". In Xinjiang, the movement by Islamic fundamentalists to create an independent "Republic of East Turkistan" has the tacit support of the U.S. The U.S. encouragement to the separatists in Tibet is well-documented.

The Shanghai Group of Five, consisting of China, Russia, Tajikistan, Kazakhstan and the Kyrgyz Republic, is coordinating action to combat the separatist and fundamentalist forces. Beijing attaches great importance to this regional grouping, citing it as an illustration of multipolarity. China, like India and Russia, takes the threat from Islamic fundamentalists seriously. Followers of Islam in China are concentrated mainly in the Xinjiang area (Muslims in the country number more than 17 million). China depends a great deal on Pakistan to use its influence on the Taliban leaders to prevent the supply of arms to Islamic rebels in Xinjiang.

WASHINGTON has accused Beijing of being one of the biggest arms exporters. Chinese officials, however, maintain that they are careful about entering into defence deals. The Chinese Government has denied that it has supplied missiles and advanced missile technology to countries such as Pakistan, Iran and Saudi Arabia. Beijing has accused Washington of being a greater proliferator of nuclear weapons, pointing out that the U.S. is the world's largest weapons exporter, with 44 per cent of the global sales. The Chinese Government is especially angry about the sale of high-tech U.S. weapons to Taiwan. The warm relations Beijing has with Moscow today has made China the second largest defence partner of Russia. India is the biggest buyer of Russian weapons.

Former Russian Prime Minister Yevgeny Primakov was a strong proponent of a Moscow-New Delhi-Beijing strategic axis to counter U.S. hegemony. But both New Delhi and Beijing, for their own reasons, were lukewarm to this proposal. But they do share some common perspectives. For instance, both India and China are alarmed at the growing trend in international politics of using "human rights" as a pretext to intervene in the internal affairs of sovereign countries. The Clinton administration has used this rationale to intervene in Kosovo.

Further, United Nations Secretary-General Kofi Annan's call for "more active intervention" by the U.N. when civilian populations are at risk has set alarm bells ringing. Chinese Foreign Minister Tang Jiaxuan has said that respect for national sovereignty and non-interference in the affairs of another country "are the basic

principles governing international relations" and that any deviation from these would lead to a new form of gunboat diplomacy that would "wreak havoc" with global peace.

China continues to have close ties with developing countries. It is involved in a number of joint ventures which, according to Chinese officials, are for "mutual benefit". The government allows "special enterprises" to take part in these ventures. China recently completed a major project in Sudan, which involved the developing of an oilfield and the laying of an oil pipeline. This project has made Sudan an oil-exporting country. Cash-strapped Sudan will repay China with crude oil. Sudan is one of several countries facing a U.S. economic embargo.

China has excellent relations with Cuba. It is one of the biggest trade partners of Cuba outside Latin America. Moreover, Beijing has been vociferous in its criticism of the inhuman U.S.economic blockade against Cuba. Both Cuban President Fidel Castro and President Jiang Zemin have exchanged visits.

BEIJING'S focus is on promoting stability and prosperity in the region. Defence Minister General Chi Haotian said recently that the confidence-building measures (CBMs) signed by China since 1994 with Russia, Kyrgyzstan, Tajikistan, Kazakhstan and India have increased mutual trust and provided safeguards for border security. This in turn has promoted stability and prosperity.

China is on the verge of settling most of its border disputes. The long-standing disputes with Russia and the Commonwealth of Independent States have been more or less resolved. China and Vietnam have set the year 2000 as the deadline for resolving their border problems. The dispute with India is the only one that remains to be resolved. Chinese officials feel that a solution to this could take some time as the Line of Actual Control was never fully demarcated.

Jiang Zemin, in a recent speech in Bangkok, said that "the world is far from being tranquil. Hegemonism and power politics still exist and have even been developed in the international political, economic and security fields." He added that the "gunboat policy" and the economic neo-colonialism pursued by some powers had undermined the independence and development interests of many small and medium-sized countries and threatened world peace and international stability. ■

Line and leadership

Mao Zedong's socialist vision would remain a reference point for assessing the Deng Xiaoping line of reforms.

MANORANJAN MOHANTY

AS China celebrates the 50th anniversary of the founding of the People's Republic, the people of China recall the Yi He Tuan movement, also known as the Boxer Uprising, whose centenary falls this year. It was an anti-imperialist armed struggle which started in Shandong province in 1899 and spread to Tianjin in early 1900 and to Beijing in May that year. The Qing dynasty dowager Ci Xi, after showing sympathy for the rebels, capitulated when the combined armed forces of Britain, Germany, Italy, Russia, the United States and Japan landed to suppress the uprising in August. After this, yet another unequal treaty was imposed on China in 1901 giving more rights to the imperialist powers, including the right to set up their legation quarters in Beijing.

This uprising fuelled the sentiments of nationalism, leading to the 1911 Revolution that overthrew the Manchu monarchy and set up a republic. But only after the Bolshevik Revolution did the Chinese nationalist movement acquire a democratic content. The students' protest in Beijing against the Treaty of Versailles giving German possessions to Japan spilled over into other cities. The May Fourth Movement of 1919 brought the masses into the political struggle against colonialism and social oppression. This struggle was led by the Communist Party of China (CPC), which was founded in 1921. After a tortuous process of political experiments, the CPC evolved its strategy of People's Democratic Revolution under the leadership of Mao Zedong and achieved victory on October 1, 1949.

The running theme of the 20th century history of China is gaining prestige for the nation and achieving welfare for the people and making them masters of their own destiny. Dr. Sun Yatsen, the leader of the 1911 Revolution, enshrined it in his Three People's Principles – Nationalism, Democracy and People's Livelihood. Mao Zedong's theory of New Democratic Revolution built upon it and

China's top leaders (front row, from left) Li Lanqing, Hu Jintao, Zhu Rongji, Jiang Zemin, Li Peng, Li Ruihuan and Wei Jianxing with nuclear and space scientists who were honoured at the Great Hall of the People in Beijing on September 18.

propounded the concept of a four-class united front of workers, peasants, petty bourgeoisie and the national bourgeoisie – constituting the people who formed 90 per cent of the population. This united front sought to carry out an anti-colonial and anti-feudal revolution. Deng Xiaoping reverted to this theme of nationalism with economic well-being in 1978 through his programme of reforms and an open-door policy. Mao's political line of the People's Democratic Revolution led to the founding of the People's Republic of China (PRC) and Deng's political line of building a socialist market economy has brought about significant economic successes in China and a steadily rising status for the country in the world. Deng followed the united front framework to mobilise social forces to the maximum extent in order to carry out economic modernisation.

Mao Zedong's line for building socialism was different from what Deng adopted. Mao advocated the application of the class struggle perspective while striving for economic development. He stressed that without the right political-ideological orientation economic growth may bring about capitalist development. The Cultural Revolution propounded this perspective, but in the course of the ideological campaigns during 1966-76, factional political battles became widespread, causing conditions of anarchy and large-scale persecution. Deng carried the party at the Third Plenum of December 1978 to repudiate the Cultural Revolution *in toto* and affirm the centrality of 'economic construction' in place of class struggle and emphasised the need for socio-political stability as against the political campaigns of the Cultural Revolution.

Deng's and his successors' economic successes have put Mao's line on socialism in the museum of rejects. But two things cannot be denied. First, much of the economic successes of the reform period would not have been possible without the structure of collective economy built during Mao's leadership. Secondly, as capitalist forces grow in China and the capitalist culture takes root and social inequality and regional disparity, corruption and crime acquire serious proportions, Mao's socialist vision remains a reference point to assess the Deng line of reforms. But without doubt, the living standards of every Chinese family have substantially improved during the past two decades.

The line has been put in place by a political leadership to carry it out firmly. This year is the tenth year of Jiang Zemin's leadership, which was installed by Deng Xiaoping in June 1989 after the crushing of the youth demonstrations in Tiananmen Square. Interestingly enough, both Mao and Deng tried out three sets of their colleagues to carry out their respective lines. Mao had Liu Shaoqi as his deputy in what was a collective leadership until 1965. During the Cultural Revolution, Liu was disgraced and Lin Biao, the Defence Minister, became the second-in-command. After Lin Biao's failed coup and death in an air crash in 1971, Premier Zhou Enlai took command and he brought back Deng Xiaoping. Deng was challenged by Mao's wife Jiang Qing, who led the 'Gang of Four' and was arrested in October 1976 (Mao died in September that year). Mao's designated successor, the centrist Hua Guofeng, could not withstand the new wave initiated by Deng, who proclaimed the new line at the end of 1978.

A common commitment to the Deng Theory has created layers of leaders in China.

Deng Xiaoping decided not to occupy top party or state posts except a crucial position as the Chairperson of the Military Affairs Commission, which he held until after the Tiananmen Square incident in 1989. His first nominee was Hu Yaobang, who was the CPC General Secretary from 1982 to 1987 until he was replaced by Premier Zhao Ziyang. Zhao Ziyang was dismissed in June 1989 for his mishandling – read sympathising with – the Tiananmen Square demonstrations.

Jiang Zemin, then the Secretary of the Shanghai Party Committee, slowly consolidated his position as the leader since 1989. Deng reaffirmed the reform line in early 1992 during his tours of the Special Economic Zones and invoked people to carry out the reforms vigorously without fear of capitalist restoration; he pointed out that the Communist Party leadership was there to direct it. Jiang moved fast and christened the new ideas in the 14th Party Congress as the theory of "socialist market economy" and Deng Xiaoping's theory of "building socialism with Chinese characteristics". After the death of Deng (in February 1997), the 15th Congress, held in September 1997, proclaimed Deng's theory as the new "ideological banner" of the CPC. In the meantime, Jiang assumed the office of the Chairperson of the Military Affairs Commission after Deng's retirement and became President of the People's Republic.

Jiang at 73 has sidelined his critics and challengers such as Qiao Shi who was retired in 1997 on consideration of age. He has pulled along reasonably well with former Premier Li Peng, 71, now Chairperson of the National People's Congress Standing Committee (NPCSC). Jiang's trusted colleague from Shanghai is Premier Zhu Rongji, also 71, who has directed the economy through periods of crisis and periods of smooth growth. Another technocrat in his team in the Standing Committee of the Politburo is Li Ruihuan, 65, who was the leader in Tianjin earlier. Now he is the Chairperson of the Chinese People's Political Consultative Conference (CPPCC), the United Front organ. Li Lanquing, 67, a Vice-Premier, is in charge of international economic relations, and Wei Jianxing, 68, the Secretary of the Party Discipline Commission spearheading the ruthless drive against corruption, is in charge of Security Affairs. But the man of the future is Hu Jintao, the youngest member of the team at 57, the Vice-President of the PRC who has been elevated to the post of a Vice-Chairperson of the Military Affairs Commission in the just-concluded Plenum of the CPC Central Committee. A former Secretary of Guizhou and, more important, of the Tibet Party Committee and earlier the Youth League leader, Hu has been the President of the Party School for many years. Jiang Zemin may be grooming him to become his successor at the 16th Party Congress to he held in 2002.

The leadership question does not seem to pose much of a problem as a common commitment to the Deng Theory has created layers of leaders in China. The Deng Theory has an intrinsic flexibility to address the burning socio-political problems that China faces at the turn of the century. But the legacies of the people's revolution of the century have created enough strength to pursue their agenda of national prestige and mass well-being and contribute to similar processes going on in other parts of the world. ■

Manoranjan Mohanty is Professor of Political Science, University of Delhi, and Director, Institute of Chinese Studies

Firmly on the socialist path

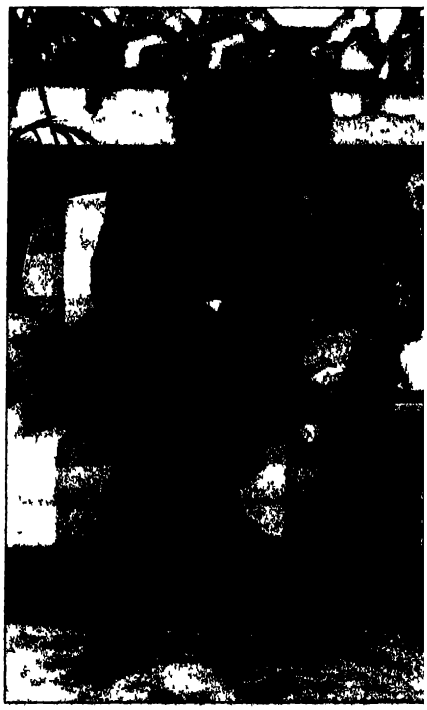
China is making major strides of economic development while at the same time being conscious of the problems of growth of any tendencies alien to socialism. Some observations and impressions from a visit.

SITARAM YECHURY

A FIVE-MEMBER Central Committee delegation of the Communist Party of India (Marxist) led by Polit Bureau member Sitaram Yechury visited China from March 31 to April 10, 1999, at the invitation of the International Department of the Central Committee of the Communist Party of China (CPC). The other members of the delegation were Nirupam Sen, P.K. Gurudasan, N. Varadarajan and Ashok Dhawle.

The delegation, which was received warmly, held fruitful discussions with the CPC leadership reflecting the mutual desire to strengthen relations between the two countries, peoples and the parties. At the Great Hall of the People in Beijing the delegation was received by Wei Jianxing, one of seven members of the Standing Committee of the CPC Political Bureau who is in charge of party discipline. The delegation held discussions with Dai Bingguo, head of the International Department of the CPC Central Committee, Ma Wenpu, Vice-Minister of the International Department of the Central Committee, and many others. Three days of intensive discussions with the leadership of the CPC in Beijing covered a wide range of bilateral and international issues.

Thereafter, the delegation visited the provinces of Xian, the ancient capital of China, and Yunnan. In Yunnan, the delegation visited remote hilly areas and deep down south the tri-junction with Laos and Myanmar inhabited by China's minority nationalities. The week-long tour to interior China aimed to study the living conditions of the people and find out how the problems arising out of the speedy developmental process are being tackled at the grassroots level. The itinerary was worked out at our suggestion that we visit interior China rather than the more developed, fashionable and prosperous east coast which has huge cities such as Shanghai and Guanzhou (Canton), which are easily comparable with Hong Kong.



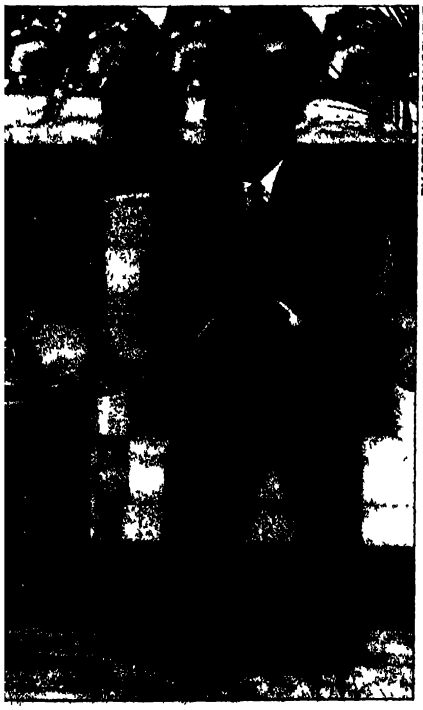
What we saw and experienced in China's interior reflected a country and a people seized with a singular passion to bring about all-round development based on speedy economic growth. This singularity of purpose and determination was evident at all levels. Given that this is happening in a country with 1.3 billion people which has been experiencing a phenomenal annual economic growth during the last two decades, such a massive human and material effort is bound to produce results that will have global implications.

One highlight of the visit was the discussions the delegation had with Wei Jianxing. While detailing various aspects of the current situation in China, he highlighted China's desire to improve good-neighbourly relations with India. This, he said, was in China's interest as its main priority was to develop its own economy and thus strengthen socialism, which required peace and absence of tension with any country. Despite the recent setback to the decade-long process of improvement of relations that had begun with Prime Minister Rajiv Gandhi's visit to China in December 1988, Wei Jianxing emphasised China's desire to overcome these problems and continue the process of improving relations. In response, we conveyed to the Chinese leadership that the Indian people, given their centuries-long association and interaction with the Chinese, are equally, if not more, desirous of improving these relations. In fact, mutual concern for good-neighbourly relations was a constant feature of all the discussions we had during the visit.

Considering that ours was the first political delegation visiting China after the BJP-led government assumed office in India and in the background of irresponsible acrimony unleashed by the BJP and its allies against China as a justification for Pokhran-II, the fact that there was such a universal desire among the Chinese leadership and the people to improve relations with India was heartening.

The Chinese leaders emphasised that while one arm of the present developmental process in China is that of economic reform and opening up to the outside world, the other arm is the firm adherence to the four cardinal principles (adherence to the socialist road; Marxism-Leninism, Mao Zedong thought; people's democratic dictatorship; and the leadership of the Communist Party) and the strengthening of socialism with Chinese characteristics.

A series of public campaigns are being conducted by the CPC on these issues and a vast network of party schools continuously train and re-train party members on ideological matters. Our delegation visited the party school in Yunnan province. One important activity at this school is to carry on study and research in Marxism-Leninism and Deng Xiaoping theory. Apart from research scholars, party cadres



CPI(M) Polit Bureau member Sitaram Yechury (left), who was part of a five-member Central Committee delegation from India that visited China earlier this year, with Wei Jianxing, member of the Standing Committee of the Political Bureau of the Communist Party of China.

sent by the lower-level committees come here for training. Over the last 20 years, the school has trained more than one lakh students. It conducts various courses in revolutionary theory and philosophy and also on party-building and party history. The faculty follows the method of criticism and self-criticism and studying theory by integrating the subjective with the objective.

Explaining their assessment of the international situation, the CPC leaders told our delegation that peace and development will remain the main themes of the 21st century. They were optimistic that the 21st century will offer more opportunities than challenges for the struggle towards socialism. In their perception, the circumstances also will be more favourable than they are unfavourable, and hence the opportunities should be seized to counter the challenges.

CERTAIN important features of the present international situation figured in the discussions. The first is the global tendency that propels the world towards multi-polarity. While on the one hand, such a development, after the bipolar Cold War period has ended, is a positive one, on the other, there are forces with a vision of a "new world order" which seek to convert this natural tendency towards multipolarity into one of unipolarity. Such an effort will have to be resisted in the interests of a democratic world order.

The second feature concerns the true nature of economic globalisation. Its potential to wreak havoc is becoming clearer with the severe economic damage it caused in South East Asia, virtually overnight. Globalisation poses serious threats to the sovereignty and economic security of Third World countries. On the other hand, globalisation also offers possibilities for expanding economic activity and, hence, achieving development. China is preparing to face this dual nature of globalisation.

BY SPECIAL ARRANGEMENT

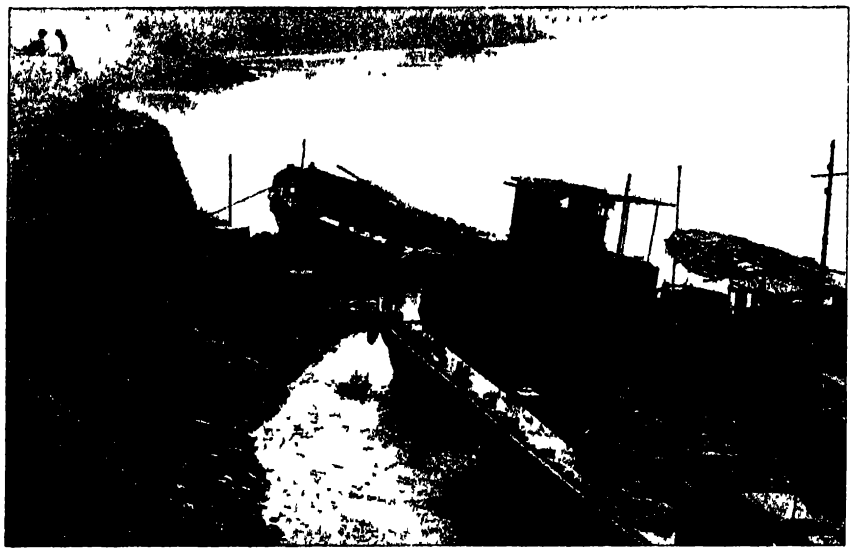
During the discussions with various leaders it became clear that over the past couple of years China has overcome enormous difficulties and achieved new advances while maintaining political and social stability alongwith a relatively high economic growth. China has achieved significant diplomatic victories as well and is bracing itself to re-unite Macau during the 50th anniversary year of its socialist revolution.

Domestically, China had to overcome two very serious problems: the impact of the South East Asian financial crisis and severe floods, unprecedented in this century.

The impact of the financial crisis, we were informed, is still felt. Over the past few years China's foreign trade was growing at an annual rate of 16 per cent. Last year this figure fell to 0.4 per cent. Anticipating such problems, China had targeted a modest 8 per cent growth. Of this, 2 per cent was to come from foreign trade. The sharp drop in the foreign trade was therefore a severe setback. The unprecedented floods caused damage of more than 200 billion yuan (the Chinese currency, approximately eight to a dollar). Despite this, China achieved a growth rate of 7.8 per cent during the year. And real per capita income grew by 4.3 per cent in the rural areas and 5.8 per cent in the urban areas. How was this achieved?

China faced these two formidable challenges mainly by effecting a massive increase in state spending that stimulated internal domestic demand. This year, more than yuan 100 billion was spent by the exchequer on building infrastructural facilities. It was this timely and effective state intervention that helped China avoid going the way of the South East Asian countries, which would have caused tremendous chaos in a country of China's size.

While China's decision not to make its currency freely convertible helped it insulate itself from the financial crisis elsewhere, it has refused to devalue its currency despite this being the obvious choice to bolster exports and, thereby, improve the growth of foreign trade. The country, instead, took a series of measures to encourage exports through a variety of subsidies. One of the main reasons for not opting for the devaluation of the currency was that it would have affected Hong Kong which was already suffering the consequences of the financial crisis. Further, any devaluation would adversely affect the overall confidence in the economy and its international standing. More important, it would increase China's foreign debt burden.



Incidentally, the few hours we spent in Hong Kong during our return journey confirmed the fact that mainland China had greatly helped Hong Kong to avoid buckling under the regional financial crisis. Apart from not devaluing the yuan, mainland China had stepped up investments in Hong Kong, boosting demand and employment. This has silenced even the worst critics of Hong Kong's unification with China. The bulk of Hong Kong's population appears more grateful to the mainland than even before.

It would be interesting to note that when we, in India, argue that in order to overcome the current industrial recession and at the same time generate employment it is necessary for the government to undertake large public expenditures, we are told by the Indian "liberalisers" that this will push up the fiscal deficit and, hence, would be counter-productive. Then why is this not true for China? Because, it is not true for India either.

On the contrary, despite such huge public expenditure, both retail and consumer prices grew at a lower rate in China than in the previous year. The Chinese explained that the problem is not in building up domestic debt. The question is how such borrowed funds are utilised? If it is employed productively and not wastefully, then it need not give rise to inflation. They claimed that the ratio of deficit plus the total value of outstanding national bonds (domestic borrowing) to GDP is still below the internationally accepted alarm level and, hence, sustainable. This has been so because, unlike India, over the years China has pursued a prudent fiscal policy.

As regards foreign debt, a question with which we are often confronted in India, China has explained that in no single year has its outstanding foreign debt been more than its foreign exchange reserves. This, it was stated, is the key to ensuring that the country does not get indebted excessively.

WE were most impressed to learn how China tackled the unprecedented

XINHUA

Building a bund in the lower reaches of the Yellow River in order to check flood damage. The experience of the Chinese people in mobilising mass efforts to fight floods has been impressive.

floods. Apart from a direct economic loss of over yuan 200 billion, many mines and industrial enterprises had to be closed down. But, following a massive mobilisation programme under the leadership of the CPC and the People's Liberation Army, China succeeded in battling the floods and minimising losses. Despite such a major calamity, the harvest that followed was generally good. Amazingly, the grain output did not fall; it was estimated to have grown by around 4 per cent. In fact, very high priority has been accorded to agricultural development with an emphasis on urgent modernisation.

With regard to industry, a major problem China is facing is that of its public enterprises. Public enterprises continue to be the overwhelmingly predominant part of Chinese industry. And we were assured that this situation will be maintained. However, in the process of restructuring these enterprises, the problem faced is that of workers being laid off. Around five to six million workers are laid off every year. But at the same time, six to seven million new jobs are created every year. But due to population growth and additions to the labour force every year, around five million workers remain to be re-employed. This situation is expected to be resolved in the next couple of years.

The laid-off worker is protected by the state; he or she receives a minimum amount of money required to sustain norm[illegible]life. Further, in China, whenever a pers[illegible]n is employed, the employer is oblig[illegible]d by law to take out an insurance poli[illegible]against the employees' future risk of unemployment. The employer pays the premium. If the employee loses the job, then he or she receives the insurance amount as compensation.

Another problem being faced by China is the regional economic imbalance between the prosperous east coast and the rest of the country. We were told that conscious efforts were being made to overcome this situation through greater financial allocations for major projects in these areas and to create a better climate for the introduction of private capital. The developed areas are to assist the backward areas through economic linkages, that is, by encouraging the establishment of auxiliary units in the backward areas. Through this process, people deprived of developmental benefits should receive them at the earliest. What was in evidence, therefore, was an active policy of state planning to ensure balanced economic development, far from relying exclusively on "market forces".

Another problem that China is facing relates to the growing disparities in the income levels of its people. The Chinese dictum that in the process of getting rich some people will get rich faster is there for all to see. But through conscious state intervention, China is seeking to provide benefits to those at the lower end.

Apart from such disparities, a major problem that continues to surface is the growth of illegal activities such as corruption. The CPC has adopted a vigorous policy of encouraging people to grow rich through honest means and simultaneously cracking down on illegal activities. A widespread campaign is on in this regard and some deterrent action has also been taken. The action taken against the former Mayor of Beijing, who was found to be corrupt, is one example.

In March 1999, the National People's Congress, the highest state authority, met to review the activities of the past year. The Chinese emphasise that Deng Xiaoping's theory means working from practical conditions. In the past, they had committed, according to them, the mistake of not acting on the basis of this theory. China is not yet a developed country; it is still backward. Hence their decision to develop productive forces through the socialist market economy and to demonstrate the superiority of socialism through the growth of economic productivity. In the process of such a review, they realised the need to amend the Constitution in order to allow the development of other forms of property ownership such as private, collective or cooperative ownership while retaining public ownership as the dominant one.

This, they said, was necessary to stimulate the initiative of private or other forms of ownership and to allow them to co-exist with public ownership. Responding to the obvious question whether this would permit the growth of a capitalist class, they answered that under the leadership of the CPC with its commitment to maintaining and strengthening socialism in China, they are confident that they can preserve China's socialist character and not allow such forms of property ownership to become dominant.

With differences in incomes and standards of living growing, the danger of such differentiation laying the basis for a possible process of class differentiation is a cause for worry. The Chinese leadership, however, is confident that while tackling the ill-effects of the reform process, they will also preserve and strengthen the socialist character of the People's Republic of China.

In sum, our delegation's visit to China was an experience which helped us gather more information regarding how China is making stupendous strides of economic development while at the same time being conscious of the problems of growth of any tendencies alien to socialism. The CPC leadership repeatedly emphasised the fact that they are combating such trends and would preserve and strengthen the socialist character of China. The visit resulted in a better understanding of current developments in China and the discussions reinforced the mutual desire to strengthen further the bonds of friendship between the two giant Asian neighbours. ■

Now for the verdict

As the marathon polling exercise ends, attention turns to the shape of governments to come.

SUKUMAR MURALIDHARAN
in New Delhi

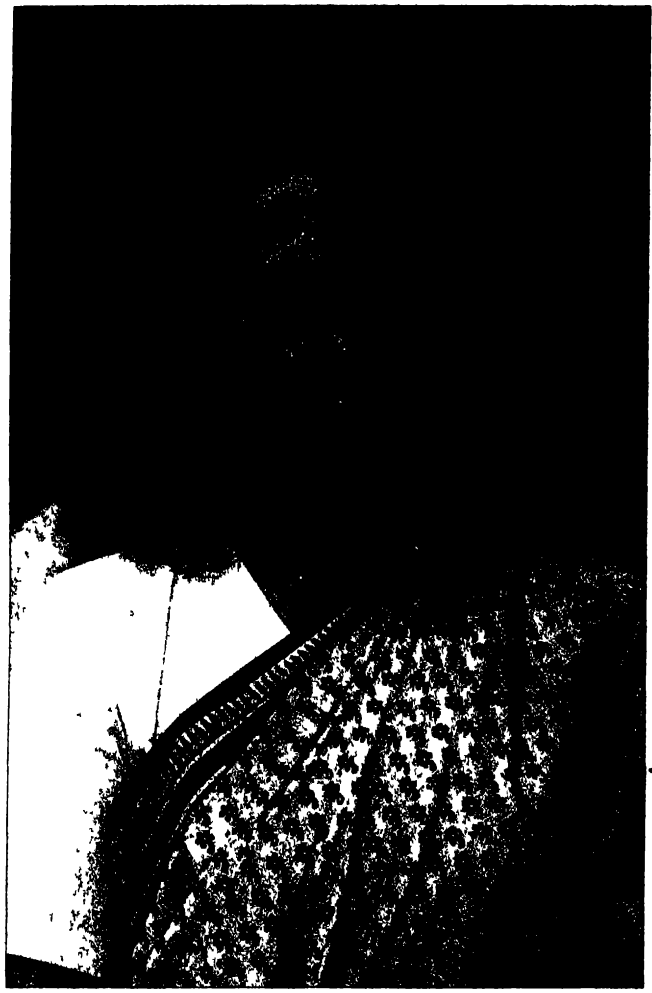
THE Bharatiya Janata Party had obviously preserved the choicest specimens in its vocabulary of political invective for the home stretch of the marathon election season Lal Krishna Advani rode into West Bengal deriding the dominant Left Front as mere "palanquin bearers" for the Congress(I) The veteran Marxist Chief Minister, Jyoti Basu, responded suitably by denouncing Advani as a "criminal" guilty of the demolition of a place of worship in Ayodhya Prime Minister Atal Behari Vajpayee, in high dudgeon, demanded a personal apology for the insult inflicted on the Union Home Minister Chief Minister Basu, at the time of writing, was in no mood to oblige

Advani chose to portray renewed talk of the relevance of a "Third Front" as evidence of political confusion on the Left The reality perhaps is that there is now an increasing likelihood that the BJP's leadership role within the National Democratic Alliance (NDA) will be eroded by the numerical outcome of the Lok Sabha elections. This could unfetter some of the partners of the BJP-led front and allow them greater latitude to strike up political bargains in the future. The NDA being essentially an effort at numerical vote consolidation rather than an ideological fraternity, the BJP could well have to contend with fresh political headaches once the final arithmetic of the 13th Lok Sabha becomes clear.

EARLY projections of a triumphal romp for the BJP and its allies, it later transpired, were premised upon an assumption that the sense of national bonding and euphoria that the Kargil military operations engendered would be sustained through the election campaign, overriding contingent problems on the ground This was not a very sound proposition for several reasons The course of the election campaign – in particular the manifest sense of panic within the BJP's ranks over political events and trends in Uttar Pradesh – has proven that the "wave effect" that was so pronounced until 1984 is now decisively a thing of the past

All of the social sections that were united in uneasy alliance under the BJP banner in U P have strong political stakes in maximising their parliamentary representation They were disinclined to cede their perceived right to political prominence to a Prime Minister basking in the glow of a military triumph In the case of U P , Vajpayee himself was seen not so much as a detached observer but an active element in the BJP's factional turmoil In assuming that the Prime Minister's newly won moral authority would drown out the compulsion of appeasing every faction, the BJP strategists seem to have grievously erred The response of U P Chief Minister Kalyan Singh, which just stops short of open rebellion, is a deeply embarrassing development, which threatens to erode considerably the Vajpayee halo

The bad news for the BJP is that the States where it is the dominant electoral presence in its own right are unlikely to give it the harvest of seats it garnered in 1998 Problems are at their most acute in U P , although Madhya Pradesh and Rajasthan also seem to be posing their own difficulties Bitter infighting within the U P unit, and a relatively cohesive challenge from the



AJITH KUMAR/AP

Prime Minister A.B. Vajpayee waves to supporters at Bagpat in Uttar Pradesh.

Congress(I) in M.P. and Rajasthan, have ensured that the core area of the BJP's strength will be relatively less rewarding this time around.

The erosion of the party's strength in these States could conceivably be remedied through fresh gains in Bihar and Maharashtra. But in both these States, the BJP is one among equals, and in the case of Bihar, its partner is only loosely affiliated to it in terms of ideological commitments. Andhra Pradesh and Karnataka could also bring it certain gains, of a relatively less decisive character in the latter State. In A.P., though, the BJP is quite clearly the junior partner in the NDA, having yielded most of the seats to the Telugu Desam Party (TDP).

The strategic alliances which have been a large part of the success of the BJP could, in the post-election scenario, engender a fresh set of difficulties. Except for Maharashtra, where its partner shares a strong element of ideological commitment with it, the other States present a uniform picture of contingent alliances, oriented towards the limited objective of maximising electoral gains. What this means for the core ideological programme of the BJP in the post-electoral scenario, when conceivably the NDA will be given the first call to form a government, remains to be seen. There is a strong possibility that even if the alliance that it leads exceeds its total tally of seats in the last Lok Sabha, the BJP's own influence within will be rather diminished.

V SUDERSHAN

Congress(I) president Sonia Gandhi.

THE ally that is most likely to increase its clout within the NDA is the newly "united" Janata Dal bloc led by Ramakrishna Hegde and George Fernandes. Also performing strongly in the campaign is the Biju Janata Dal in Orissa, which has gained ground on account of a virtual abandonment of the Congress(I) by the Janaki Ballabh Patnaik faction. Among the new partners, the Dravida Munnetra Kazhagam and the TDP would be pressing for positions of influence.

Considering that the Janata Dal(United) in Bihar alone is likely to have a minimum of five contenders for senior Cabinet positions, the post-electoral scenario for the NDA is likely to be rocky. It is perhaps on account of an uneasy awareness of the likely consequences for the party's ideological commitments that there is already talk of an imminent change in the leadership of the BJP. The colourless tenure of Khushabhau Thakre as party president is unlikely to be prolonged very much further. Even if he is allowed to serve out his full tenure, he is likely to be put on notice immediately after the election results are in, of an imminent change of regime. The custodians of ideological purity in the Rashtriya Swayamsevak Sangh (RSS) have already indicated that they would like somebody capable of a more purposive leadership style, such as Advani, at the helm of the party.

The NDA being essentially an effort at numerical vote consolidation rather than an ideological fraternity, the BJP could well have to contend with fresh political headaches once the final arithmetic of the 13th Lok Sabha becomes clear.

ONCE the results are in, there is also likely to be renewed attention to the role that election forecasts have played in this campaign. There was a virtual glut in the market for projections after the Election Commission's rather weak and legally infirm effort to restrain them failed. Many of these failed even to make a pretence of subtlety, plainly putting on view their partisan loyalties. To an extent, the multitude of conflicting or varying projections that have been made by rival agencies provide the best negative advertisement of the accuracy of opinion and exit polls. But the matter is not one that can be wished away quite so easily, especially in a context of a reassertion of government control over the official electronic media.

To work out the various political possibilities that could emerge from the 13th Lok Sabha elections may at this stage be a pointless exercise. When the BJP assumed office in 1998, sections sympathetic to the party were known to predict confidently that it was only one election removed from absolute power. A rather dubious record of governance in the first year of the Vajpayee government seemed to puncture this boast. Some semblance of credibility was restored to this expectation by the manifest inability of the Opposition parties to work out a coherent strategy to neutralise the BJP. Kargil then gave it a renewed momentum. The campaign leading into General Elections 1999 will perhaps be remembered as the story of how this momentum was rapidly dissipated. ■

End of a marathon exercise

Moderate voter turnout and stray incidents of violence mark the fourth phase of the Lok Sabha elections.

V. VENKATESAN

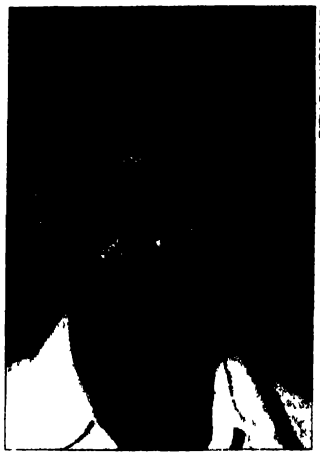
FOR the Election Commission (E.C.), each phase of polling is a challenge. The E.C. is deemed to have conducted an election efficiently if incidents of violence or rigging on the day of polling are limited and moderate-to-heavy voter turnout is recorded. And the E.C. would be seen to have passed the "neutrality" test if both the ruling and opposition political formations simultaneously accuse it of bias.

Therefore, it was easy to understand what Chief Election Commissioner Dr. M.S. Gill meant when he remarked, after the close of the penultimate phase of polling on September 25, that "it has been a very satisfactory day for the Commission". In the fourth phase, 74 Lok Sabha constituencies in nine States went to the polls. There were reports of six deaths and injuries to eight persons, reflecting a better situation relative to the previous round. Most of these incidents took place in the sensitive, high-profile constituencies of Barh and Nalanda in Bihar; the police opened fire to disperse mobs that tried to disrupt polling. Former Railway Minister Nitish Kumar and Defence Minister George Fernandes are seeking re-election from these two constituencies.

About 51.16 per cent of the 8.3 crore voters in the 74 constituencies exercised their franchise. The turnout in Bihar and Orissa was 55 per cent each, while in Manipur it was 53 per cent, in Himachal Pradesh and Meghalaya 52 per cent each, in Uttar Pradesh 50 per cent, in Madhya Pradesh and Mizoram 40 per cent each and in Nagaland 30 per cent. The turnout more or less reflected the trend in the earlier phases of the election in these States.

On September 27, the E.C. ordered repolling in 559 polling stations – 481 in Bihar, 36 in Uttar Pradesh, 13 in Madhya Pradesh and 29 in Nagaland – of the 1.05 lakh polling stations where voting took place. This followed reports by the respective Returning Officers that there were disturbances or electoral malpractices.

Forty-three of the 74 constituencies were in U.P. and Bihar. Most of these were categorised as either "sensitive" or "hyper-sensitive" and violence was expected. Gill claimed that special measures adopted by the Home Ministry in consultation with the Commission to prevent violence in Bihar had paid off and that the election process was more or less peaceful.



IN Bihar, where elections were conducted in 19 constituencies (see separate story), clashes between political parties in Nalanda, Barh and Siwan left six persons dead. In all, 750 people, including two Ministers, were arrested. While Cooperatives Minister Shyam Bihari Prasad was arrested on a charge of disturbing voting at a booth in the Govindganj Assembly segment in the Motihari constituency, Agriculture Minister Shiv Shankar Yadav was arrested after the police recovered four rifles from his vehicle in Siwan while polling was on. C.P. Thakur, who is seeking to re-enter the Lok Sabha from the Patna constituency on the BJP ticket, was detained and later released by a magistrate. He allegedly attempted to snatch ballot papers from a polling station.

Bihar Governor Justice B.M. Lal could not cast his vote as his name did not figure in the voters' lists in the Raj Bhawan polling booth in Patna. This is the second

RAJEEV BHATT

instance of a public figure finding his name missing from the voters' list. On September 5, Election Commissioner G.V.G. Krishnamurthy was dismayed to find his name missing from the list in the New Delhi constituency. (Election officials later located Krishnamurthy's name in a booth covering his previous residential address.)

RITU RAJ KONWAR

Dr. Pannalal Oswal, BJP candidate for the Dhubri Lok Sabha seat, who was killed by ULFA militants.

In Uttar Pradesh (see separate story), polling could not take place in 60 booths in Balia, Begusarai, Munger and Ara owing to heavy rain and floods. A sub-inspector of police in Muzzafarnagar was suspended for his alleged involvement in disturbances in some booths. Polling in nine booths at Sujro village in Muzaffarnagar district was suspended when people clashed with policemen, leaving a magistrate and five others injured. No other instance of poll-related violence was reported from the 24 constituencies in U.P.

In the 10 constituencies in Orissa, a State that had witnessed incidents of violence against Christians in the recent past, polling was by and large peaceful. However, people boycotted the elections in a number of booths protesting against the lack of developmental works in their areas. These included nine booths covering 19 villages in the four Assembly segments of the Keonjhar (reserved) constituency, five booths in three Assembly segments in the Kalahandi constituency, four booths in the Bolangir constituency and three in the Sundargarh (reserved) constituency.

ALTHOUGH stray incidents of violence were reported from the north-eastern States, which are affected by insurgency, polling there was by and large peaceful. In Himachal Pradesh, voters of the Goro Kanwari polling station in the Shoghi area of Shimla boycotted the elections in protest against the non-implementation of their demands.

Incidents of naxalite violence were reported from six polling stations in the Bastar constituency in Madhya Pradesh. Naxalites hindered the polling process in three stations in Pushmaar village of the Bijapur Assembly segment. They torched a bunch of ballot papers in the Patarpara polling station. A gang of naxalites looted at gunpoint ballot boxes and ballot papers from the Konta Assembly segment. The election material was, however, replaced and polling resumed.

The BJP candidate for the Dhubri Lok Sabha constituency in Assam was abducted and killed by suspected United Liberation Front of Asom (ULFA) activists on September 20.

The Samata Party took serious exception to the E.C. asking Haryana Chief Minister Om Prakash Chautala to stay away from the Bhiwani constituency, where his son Ajay Chautala was pitted against former Chief Minister Bansi Lal's son Surender Singh, in the first phase of polling on September 5. Chautala complied with the E.C's directive. However, his ally, the Samata Party, has now complained that the E.C. deprived Chautala of his fundamental right to vote. Gill, however, refused to explain the E.C.'s stand. "I will explain it later, if necessary," was all he said.

Jammu and Kashmir also saw polling in four constituencies on September 25 (see separate story).

THE allegation by Defence Minister George Fernandes (he quoted the Director of the Intelligence Bureau) that 65,000 duplicate ballot papers meant for Barh and Nalanda had been printed at the Saraswathi Press in Calcutta was denied by the E.C. The E.C. observed that Fernandes had "by his own admission sought to use the Director of the I.B. to disturb the constitutional electoral process". The E.C. chastised Fernandes for misusing the government machinery to spread "loose allegations" of conspiracy in order to influence the elections in Bihar. It said that as a candidate his actions amounted to "corrupt practice". Gill sought the help of the "highest authorities in government" to clear the contradiction between the Defence Minister's letter to the E.C. and the I.B. Director's denial. A team of senior officers despatched by the E.C. to Calcutta did not find any evidence of having printed ballot papers in excess. As a precautionary measure, the ballot papers for Bihar are printed outside the State.

The Congress(I) and the Left parties demanded Fernandes' resignation in view of the E.C.'s observations with regard to his conduct. The Congress(I) challenged the Prime Minister to explain Fernandes' conduct, or dismiss him. The Communist Party of India (Marxist) urged the Prime Minister to clarify the alleged involvement of the I.B. in the matter, for the Home Ministry had denied Fernandes' claim that the I.B. chief had sent a report about the printing of excess ballot papers. "Any delay by the Prime Minister is tantamount to his involvement in the conspiracy to spread false information in order to influence the voters," the CPI(M) Polit Bureau said. Communist Party of India secretary D. Raja made a similar demand.

The BJP-Samata Party combine, however, lashed out at the Commission. "The language the E.C. had used is that of a political rival, not that of a constitutional body," Samata Party general secretary Jaya Jaitly said. Accusing the E.C. of overreaction, she wondered whether it would at all be possible for anyone to raise legitimate fears on such matters if the E.C. attacked a political party that complained about a malpractice. Fernandes expressed his readiness to face prosecution if he was found guilty of electoral malpractice.

The Patna High Court dismissed a public interest petition seeking an inquiry into the alleged printing of excess ballot papers, in the light of the affidavits filed by the E.C. and the I.B. Director. While the E.C. denied that any such printing of excess ballot papers had taken place, the I.B. denied having given any report to Fernandes on the matter. The High Court, however, asked the E.C. to speak to the complainants in order to ensure free and fair elections and depute additional observers in sensitive constituencies.

THE fourth phase of the Lok Sabha election was the last one to be conducted by the present three-member Commission. Election Commissioner G.V.G. Krishnamurthy retired on September 30 after a six-year term. Krishnamurthy said that his tenure was not without its ups and downs. He described the role played by him and Gill during the two-year tenure of Chief Election Commissioner T.N. Seshan as "non-batting batsmen"; at the same time he paid tributes to Seshan's contribution to the E.C. Krishnamurthy said that the Commission under Gill took unanimous decisions, implying that their functioning was cohesive. ■

Of political intrigue and defiance

The BJP in U.P. hobbles through the final phase of elections with dissent and defiance at a new high.

VENKITESH RAMAKRISHNAN
in Lucknow

ON September 24, a day before the second round of polling in Uttar Pradesh, Chief Minister Kalyan Singh complained of giddiness and fatigue. Doctors who examined him said that he had spondylitis and advised him to stop active campaigning for the next seven days. This meant that the Chief Minister would not be able to drum up support for the Bharatiya Janata Party in the run-up to the last round of elections on October 3.

Even as the Chief Minister's supporters expressed dismay at this turn of events, his detractors in the BJP were quick to detect signs of political intrigue. A leader who is close to State BJP president Rajnath Singh, Kalyan Singh's rival in the party, told *Frontline:* "This is no physical ailment. It is the disease of political reorientation." According to this leader, the "illness" will in all probability develop into a "political game" after the elections. "And when this develops," he said, "Kalyan Singh is bound to turn friends into enemies and *vice versa.*" He was referring to the alleged secret understanding between the Chief Minister and Samajwadi Party (S.P.) leader Mulayam Singh Yadav.

Many leaders in the State, including those belonging to the BJP, share this view. Some of them even believe that the BJP is heading for a split in Uttar Pradesh on caste lines (backwards vs forward castes) and that this will lead to a realignment of forces along the same lines. "What one will witness then is a reassertion of Mandal politics, which is supposedly on the wane now," said a BJP leader, who belongs to a forward caste.

Whether these projections come true or not, Kalyan Singh's reluctance to campaign for his party's candidates has been one of the most conspicuous features of the campaign scene in Uttar Pradesh. While he refused to canvass in a few constituencies including his home town of Aligarh, he consented to address public meetings in certain others but failed to turn up at the appointed hour, citing reasons such as inclement weather or technical snags in the aircraft he was to travel in. The constituencies he refused to campaign in fell in the Mathura-Farrukhabad belt. The obvious reason for this was the denial of the ticket to Sakshi Maharaj, one of his close associates and a former Member of Parliament who belongs to the same caste (Lodh Rajput) as his, and his son Rajveer Singh. Kalyan Singh had planned to field Sakshi Maharaj from Farrukhabad and Rajveer Singh from Aligarh. Kalyan Singh made it clear to the central leadership that he would not canvass in the Farrukhabad region since his supporters were upset that he could not get the ticket for Sakshi Maharaj. Constituencies like Allahabad, from where Union Human Resource Development Minister Murli Manohar Joshi is contesting, belong to the second category.

It is not only Kalyan Singh's refusal to canvass that has struck a discordant note; the way he responded to Sakshi Maharaj's extensive campaigning for the S.P. under the banner of the Lodh Swabhiman Sabha in the Lodh Rajput belt between Mathura and Farrukhabad also attracted attention. Not once did the Chief Minister criticise his former associate's decision to campaign for a rival party. Whenever his response was sought on Sakshi Maharaj's campaign, Kalyan Singh said that he did not want to comment on the actions of people who had left the party of their own accord. Large sections of the party saw this as a wrong tactic in dealing with a defector. And since the reaction, or the lack of it, came from Kalyan Singh, who is known for his strong and powerful verbal assaults and pointed repartees, it was deemed as being significantly soft.

Incidentally, in many of the constituencies in which Kalyan Singh campaigned extensively, such as Amethi and Rae Bareli, it was the Congress(I) and not the S.P., that was the main opponent of the BJP. Again, in his interactions with the media, Kalyan Singh was quick to disagree with the view that the State would see a "Congress(I) revival" and assert that the S.P. would retain its number two position in the State behind the BJP.

MANISHA SINGH

Chief Minister Kalyan Singh with Prime Minister A.B. Vajpayee and State BJP president Rajnath Singh at an election rally in Agra.

The backward caste dimension of these events manifested itself in several forms. Sakshi Maharaj's campaign for the S.P. focusses exclusively on this aspect. According to him, the upper-caste leaderships of the BJP and the Congress(I) planned to sideline backward class leaders such as Kalyan Singh and Mulayam Singh Yadav from the politics of the State and the country. Sakshi Maharaj, who spoke to *Frontline* in Lucknow, said that he campaigned for S.P. in order to "overturn this vile stratagem". He added: "Backward castes all over the country have realised this and

JOHN MCCONNICO/AP

At a polling booth in Meerut on September 25.

want to be united under one flag. I am carrying out this historical task."

According to Sakshi Maharaj, his campaign, which he claimed had united the backward castes, would help Mulayam Singh Yadav win not less than 40 seats in Uttar Pradesh. Sakshi Maharaj said that he planned to initiate a dialogue between all backward caste leaders of the country in order to unite them. The leaders he identified included Laloo Prasad Yadav of the Rashtriya Janata Dal (RJD), Ram Vilas Paswan and Sharad Yadav of the Janata Dal (United), Subhash Yadav of the Congress(I) and Uma Bharati of the BJP. Sakshi Maharaj claimed that this combine would change the face of Parliament and of the country. He said that the backward castes were the natural allies of the minorities and that they would add greater strength to this grouping. On whether his Hindutva background and active participation in the Ram temple agitation would not drive Muslims away from such a combine, he said that if Muslims could forgive Vajpayee, they could forgive him too. In any case, he added, the insincerity shown by the BJP in the matter of building the temple had been laid bare before the people.

MULAYAM SINGH YADAV'S campaign more or less followed the path elucidated by Sakshi Maharaj. In the meetings he addressed in places like Deoria, Gorakhpur and Fatehpur, he did a virtual head count of backward caste members and Muslims among the audience and, according to party workers, was pleased with the results. Evidently, the S.P's augmentation of strength among the backward castes helped it retain its hold over Muslims to a large extent, even though large sections of the minority community are unhappy with Mulayam Singh Yadav for having upset the prospects of an alternative government after the collapse of the Vajpayee-led government. Even in places like Shajahanpur, from where former Congress(I) vice-president Jitendra Prasada is contesting, it was evident on September 24, a day before the second phase of polling, that Muslims, who had gravitated towards the Congress(I), were returning to the S.P. in the belief that only the S.P. would be able to defeat the BJP. In scores of villages and small towns, this correspondent could see evidence of this. The same trend was visible in constituencies such as Moradabad and Amroha.

There are many people in the S.P. and in the Kalyan Singh group in the BJP who believe that the new combination – when it takes a concrete form – will leave no other option to Bahujan Samaj Party chief Kanshi Ram but to join it. If that happens, the concept discussed by Mulayam Singh Yadav and Kanshi Ram in June would be revived, and the fortunes of both the leaders would be on the upswing. The emergence of a formidable force comprising Dalits, Yadavs, Lodh Rajputs, a section of Muslims, a section of Thakurs and Other Backward Castes is bound to change the politics of the country. Such a combination would easily garner over 50 per cent of the votes in Uttar Pradesh and win a majority of the State's 85 Lok Sabha seats.

Such an alliance would naturally check the shifting of the BSP's Dalit vote base and the S.P.'s Muslim vote base towards the Congress(I). This would, in turn, stem the movement of the Brahmin community from the BJP towards the Congress(I). With this, the process of revival of the Congress(I) would be stalled and the party would be forced to depend more and more on the new grouping.

Some middle-level BSP leaders were of the opinion that Kanshi Ram may respond to Sakshi Maharaj's venture by entering into an alliance with the Congress(I). They, however, believe that such a move would be suicidal. "In no way can it prevent the movement of Dalit votes to the Congress(I)," a former BSP MP told *Frontline*.

Even as such calculations were being made, it was clear that the BJP leadership was jittery about the developments. In fact, soon after the first phase of polling the party's central leadership summoned its four main leaders in the State – Kalyan Singh, Rajnath Singh, Kalraj Mishra and Lalji Tandon – to Delhi. At this meeting Kalyan Singh was apparently given an assurance that there would be no threat to his chief ministership after the elections but that he would have to work hard for the party, keeping this in mind. After the meeting, Kalyan Singh addressed a couple of meetings in places like Amethi and Rae Bareli, only to fall sick again on September 24.

According to BJP insiders, the Chief Minister's actions have unnerved the BJP. A senior functionary of the party's State unit told *Frontline:* "It is more or less certain that Vajpayee's parliamentary majority will come down. We are doing our best to boost it. But party workers are no longer confident of repeating the performance in U.P. in the last elections."

Clearly, a sense of apprehension prevails among BJP workers in U.P. They expect the Lok Sabha elections to throw up a few unpleasant surprises for the party in the State. ■

RAJEEV BHATT

Samajwadi Party leader Mulayam Singh Yadav.

Voting and violence

Naxalite violence during the first round of voting in Bihar gives rise to speculation that two Left extremists groups that are ideologically opposed to each other have decided to join forces.

KALYAN CHAUDHURI
in Patna

THE political temperature in Bihar has risen sharply after Acting Governor Justice B.M. Lal sent a detailed report to the Union Home Ministry blaming the Election Commission (E.C.) and the State's Chief Secretary for the poll-related violence on September 18. Thirty-eight persons, mostly State police and Central Reserve Police Force (CRPF) personnel, were killed in landmine blasts engineered by the outlawed Maoist Communist Centre (MCC) and the Communist Party of India (Marxist-Leninist) Party Unity, now known as the People's War Group (PWG), to enforce their call to boycott the elections.

Faced with the criticism of its handling of the elections, the State government blamed the violence on the inadequate deployment of Central paramilitary forces. It had requested 600 companies of the paramilitary forces to cover polling booths in 19 parliamentary constituencies where elections were held on September 18. The Centre sent only 132 companies.

Top State government officials, including Chief Secretary S.N. Biswas and Director-General of Police K.A. Jacob, admitted that Central intelligence agencies had warned the State government that extremists might use landmines in Palamau, Chatra, Hazaribagh and Rohtas districts in south Bihar. Biswas said that apprehesions had been expressed at a meeting convened by the Union Home Ministry in August. The request for more security forces followed this.

Biswas said that during the brief period of President's Rule in the State in February, the Centre had promised to send 50 companies of the paramilitary forces for anti-extremist operations. However, only 39 companies of the CRPF were sent. Biswas claimed that as the anti-extremist operations had begun to show results in May the Centre withdrew 18 companies. He said that this affected the combing operations and that repeated requests to redeploy the companies had no effect.

AFTER unleashing violence in several areas in south and north Bihar on September 18, naxalites lay low during the next phase of polling in 19 constituencies on September 25. Although polling was held amidst tight security, six persons were killed and several people injured in bomb explosions and shooting incidents. Of those killed, four died in police firing (two in Nalanda and one each in Barh and Siwan) and the two others in clashes between political groups. Two Rashtriya Janata Dal (RJD) Ministers of the State, Shyam Behari Prasad and Shiv Shankar Prasad, were arrested for alleged electoral malpractices. While the former was accused of interfering with the poll process, the latter was taken into custody after four rifles were found in his vehicle.

Shoot-at-sight orders were issued following the landmine blasts of September 18. Mine-detectors were pressed into service in volatile constituencies, including Patna, Arrah, Buxar, Nalanda and Barh. Helicopters were requisitioned to monitor polling in districts where naxalites are active. On September 25, 147 companies of paramilitary forces were deployed.

Clashes and incidents of snatching of ballot papers were reported from Patna, Barh, Nalanda, Arrah, Munger, Gopalgunj, Maharajgunj, Vaishali, Muzaffarpur and Motihari. Polling was affected in more than 100 booths. In Nalanda and Barh, the constituencies of Janata Dal (United) leaders George Fernandes and Nitish Kumar respectively, RJD and JD(U) activists clashed. They were also involved in shootouts and the snatching of ballot papers and police rifles. One person was killed in the crossfire between supporters of Nitish Kumar and his RJD rivals. In Siwan, the pocket-borough of RJD candidate Mohammed Sahabuddin, CPI(M-L) Liberation and RJD activists exchanged fire. A naxalite

Targeting missionaries

KALYAN CHAUDHURI

FOLLOWING in the footsteps of others who have in the recent past targeted Christian religious workers in Orissa, fanatics appear to have started a calculated campaign against Christian missionaries working in Bihar.

According to a 19-year-old nun, Sister Ruby of the St. Joseph's convent at Jalalpur, 8 km from Chhapra in Saran district in north-west Bihar, she was kidnapped, disrobed and forced by the kidnappers to drink their urine. The incident came to light 48 hours before the second round of voting in the Lok Sabha elections on September 25. According to the nun, she delayed lodging a complaint at the Chhapra town police station as she had to obtain permission from the church authorities before doing so.

Sister Ruby belongs to the Congregation of Franciscan Sisters of the Immaculate Heart of Mary, also known as the Pondicherry Blue Sisters. The Sisters are involved in the "ministry of healing the poorest of the poor". Sister Ruby hails from Tamil Nadu and is actively associated with the St. Joseph's Health Centre. She has been doing social work in Nawadi, Jalalpur and Maharajgunj areas for about 15 months.

Director-General of Police K.A. Jacob said that religious fanatics were behind the attack. Shortly after the First Information Report was filed, the DGP visited the St. Joseph's Church in Chhapra to speak to the nun about the incident.

According to Sister Ruby's statement, three persons who accused her of converting people to Christianity abducted and threatened to kill her. She was kidnapped at 9.a.m. when she was going to Gandhi Chowk from the convent, the statement says. The miscreants, who were in an autorickshaw, offered her a lift. The nun grew suspicious when the vehicle took a route other than the usual one and she asked the driver to stop. She was threatened and taken to a mangrove where she was dragged out of the vehicle and taken to a deserted house. Her hands were tied and her clothes ripped off. The kidnappers urinated in a bottle and threatened to rape her if she did not drink the urine, according to the statement.

The nun's statement says that she stood naked for almost an hour and was released only when she agreed to drink the urine. Before she was given back her clothes, the men, brandishing a knife, demanded to know how many people she had converted. They rained abuses on and made lewd gestures to her. "We will teach the Christians a lesson after the elections are over," they said, according to the statement. She was also asked not to approach anyone for help; one of them followed her to ensure that she complied with the order. She, however, made her way to the convent and narrated the incident to others, the statement says.

The DGP said that 18 persons had been rounded up in connection with the case. An identification parade was conducted, but the nun said her kidnappers were not among the people.

According to the nun's statement, she was asked about the activities of Christian missionaries. The abductors wanted to know whether the convent functioned only from Jalalpur, how many nuns were attached to it, how many persons she had converted and how many languages she knew. She was also asked why the missionaries had not learnt a lesson from the several incidents of kidnapping, rapes and killings that had already been carried out, according to the statement. They warned her that they would demolish the convent at Jalalpur, she said.

The Archbishop of Delhi and president of the United Christian Forum for Human Rights, Archbishop Alan de Lastic wrote to Prime Minister Atal Behari Vajpayee registering the anguish of the Christain community over the continued attacks on Christian missionaries. The Archbishop complained of anti-Christain violence in Orissa, Bihar and some other States. Also, in view of statements issued by the Rashtriya Swayamsevak Sangh (RSS) and the Vishwa Hindu Parishad (VHP) expressing their intention to take out a 'rath yatra' to coincide with the arrival of Pope John Paul II in Delhi in November, the Archbishop urged the Prime Minister to take steps to ensure that the Pope is not insulted.

Quoting from a report on the Bihar incident sent by Bishop Victor Henry Thakur of Bettiah, the Archbishop said that the convent of the Pondicherry Sisters had been repeatedly threatened in the last two years and it was only at the intervention of the local priest and the civil authorities that major incidents were averted.

Following complaints from a delegation of Christian missionaries to Chief Minister Rabri Devi, the State government has constituted a three-member committee under a woman officer of the Indian Police Service who knows Tamil, to speed up the investigation. The Union Home Ministry has sought a detailed report from the State government. ■

was killed in the incident. At Gopalgunj, the home town of RJD chief Laloo Prasad Yadav, polling was disrupted when polling agents and officials staged a walk-out after ballot papers were snatched from them.

The threat against those who vote from naxalites, an organised force in south and central Bihar, cast a shadow on the final phase of polling on October 3. The clinical precision with which the [illegible] nine blasts were carried out on S[illegible]mber 18 led to speculation that the MCC and the PWG have sunk their differences and are working in unison. "Every action was worked out meticulously," said R.K. Singh, Superintendent of Police, Palamau. He added: "This would not have been possible if the two groups were not working in tandem."

The MCC and the PWG have been known to target each other's cadres. Observers, however, think that deep-rooted ideological differences would prevent the warring organisations from coming together. They may have just closed ranks to target a common enemy during the elections, they say. The police said that if the two groups had decided to work together, they posed a serious threat to the districts in south Bihar. Naxalites are believed to have used plastic explosive devices for the first time in the State on September 18. In Palamau, where 10 CRPF jawans were killed, a tractor-trailer in which poll officials were travelling was blown up at least 100 feet above the ground. A five-foot-deep crater was formed at the site. ■

The highs and lows

Was the National Conference trying to engineer victories by ensuring that the turnout of voters remained low?

PRAVEEN SWAMI
in Srinagar

THE winding road from Larnoo, below the mountain passes that lead from Anantnag into Doda, was jammed by traffic, perhaps for the first time ever. Convoys escorting three politicians had converged at a checkpoint to travel into the hills, but stood blocked since the search for any landmines ahead was yet to be completed. Terrorist violence has been a key motif in the Lok Sabha election campaign in Anantnag, as it was in Baramulla and Srinagar. But it is not the only one. Post-Kargil reportage of the elections has represented Kashmir's political theatre as one made up only of armed actors, censoring out its processes and content.

Mohammad Yusuf Tarigami, the Communist Party of India (Marxist) candidate from Anantnag, turned back from the checkpoint to address an impromptu village meeting. Dozens of Larnoo residents gathered as his jeep, flying the red flag with the hammer and sickle symbol unfamiliar to most voters in Kashmir, drew up off the main village street. The audience listened patiently to Tarigami, who began his speech by outlining his commitment to seeking autonomy for Jammu and Kashmir. Former Union Minister Mufti Mohammad Sayeed and his newly-formed People's Democratic Party (PDP) is fighting to retain his Anantnag seat on the same platform. But, Tarigami argued, Sayeed had done nothing to secure autonomy when he was a Union Minister, presiding instead over a brutal campaign of state repression.

People responded with laughter to Tarigami's wry account of Sayeed's shifting political allegiances, and sought to utilise the occasion to push their own local agenda. An X-Ray machine and medicines, they said, had been looted from the local government-run health centre by the official-in-charge. The health centre had burned down in 1993 after its power transformer caught fire, but the equipment had survived the blaze. Now, the equipment had been moved to a private institution in Anantnag owned by the same officer, it was alleged. "You should vote to punish the government for this," Tarigami said. "If you don't vote, you will suffer, not the National Conference."

Sofi Shalla village lies hours away from Larnoo, in the beautiful Shalla valley. The bridge connecting the village to the rest of the district was washed away years ago, so the already infrequent bus service to Sofi Shalla grinds to a halt when it rains. Here, hundreds of people had gathered for Tarigami's scheduled campaign meeting, despite a venomous campaign in conservative south Kashmir against the CPI(M) leaders' atheistic position. Again, Sayeed's credentials to argue for state autonomy were at the centre of Tarigami's address to the villagers. Corruption and poor governance also figured. "There is no money to build roads, or schools or hospitals", Tarigami said, "but there is plenty of money to build golf courses. You have always voted for the National Conference, but have they repaid their debt?"

Tarigami's campaign is significant because it illustrates the support for democracy that continues to exist through the Kashmir Valley, a support that the low voter turnout in Baramulla and Srinagar has been used to obscure. The only red flag most voters in Anantnag have ever seen is that of the N.C., but the fact that hundreds of people in the district's most remote villages come out at the CPI(M)'s political meetings despite terrorist threats illustrate their endorsement of democratic politics. Unlike his rival, Peerzada Sayeed of the N.C., and the PDP's Sayeed, Tarigami has neither the backing of the state apparatus nor significant financial resources, but the CPI(M) campaign had become the principal threat to both the leading contenders.

Why then were voter turnout levels so low in Baramulla and Srinagar? State government orthodoxy has it that fear of terrorists, represented politically by the All-Party Hurriyat Conference's call for a poll boycott, kept voters away on election day. Posters warning that those who voted would be shot were indeed put up in several areas. Another favoured explanation is that there was a genuine disgust with the democratic process set in place by the 1996 Lok Sabha elections, which fuelled support for the Hurriyat campaign and other anti-India political forces. Supporters of this proposition point to a proliferation of media reports that security personnel pushed voters into polling booths, a state-sponsored enterprise of coercion without which levels of turnout would have been even lower.

But none of these explanations is satisfactory. Contrary to some media assessments, there have been overall

PRAVEEN SWAMI

CPI(M) candidate from Anantnag Yusuf Tarigami addresses a meeting in Sofi Shalla village.

improvements in the security situation in July and August despite the thinning of the counter-terrorist grid after Kargil. In these two months, 166 terrorists were killed in the Kashmir Valley alone, 108 of them persons of foreign origin. By contrast, 172 terrorists were shot dead through the whole of Jammu and Kashmir in May and June. Around 95 civilian lives were lost through July and August, actually marking a decline in the figure from the previous two months. And, as important, the ratio of security personnel killed to terrorists killed, which had dropped to 1:1.92 in June, rose to almost 1:7, for just 24 security force personnel were killed in Kashmir in July and August.

If the much-discussed poll-eve deterioration in the security situation was more fact than fiction, neither fear nor anti-India feeling seems to have been at work in an even manner. Consider the case of Baramulla, which registered an overall turnout of 24 per cent. But the breakdown of voting by Assembly segment throws up enormous disparities. Sopore town, a traditional pro-Pakistan stronghold, saw only 5 per cent of voters coming out, and nearby Sangrama just 2.5 per cent. But Kupwara, indisputably the segment in the Kashmir Valley worst hit by the recent terrorist violence, saw an above average turnout of 25.3 per cent. The border segments of Uri and Gurez, pocketboroughs of the powerful N.C. hill-area leader Mohammad Shafi Uri, have again seen severe terrorist violence and cross-LoC (Line of Control) Pakistan shelling. But 50 per cent of voters came out in Gurez, and 46 per cent in Uri.

Voting patterns in Srinagar showed a similar curious behaviour. Urban Srinagar, the Hurriyat Conference's core constituency, registered uniformly poor turnout as it did in both 1996 and 1998. Just 5.5 per cent of voters came out in Hazratbal, 3 per cent in Zadibal, 2 per cent in Idgah, 5.2 per cent in Khanyar. But Amirakadal, home turf for the N.C. youth leader Shafi Bhat, saw 10 per cent of voters exercise their franchise. In Budgam, 22.5 per cent of voters came out, a sign of the local influence of Congress(I) candidate Aga Syed Mehdi, son of the powerful Aga Shia-community religious leaders. In Chrar-e-Sharif, a traditional N C. bastion, 55 per cent of those eligible to vote did so, but in the Chief Minister's Assembly segment, Ganderbal, just 10 per cent came out either to support or oppose him.

How then does one account for these wide variations in voter behaviour? If voters in Sangrama were too scared to vote, why did their counterparts in Kupwara, who had more reason to be afraid, choose to defy threats? Alternately, if Chrar-e-Sharif residents were pushed out of their homes and made to vote *en masse*, why did similar tactics fail in Ganderbal? When the N.C. was able to push turnout figures up to 10 per cent through foul means in Amirakadal, why did it fail to rig the elections in segments a couple of kilometres up the road? The obvious explanations for voter behaviour in this Lok Sabha election do not seem to have an answer to these questions, questions which media reportage in general has chosen to ignore.

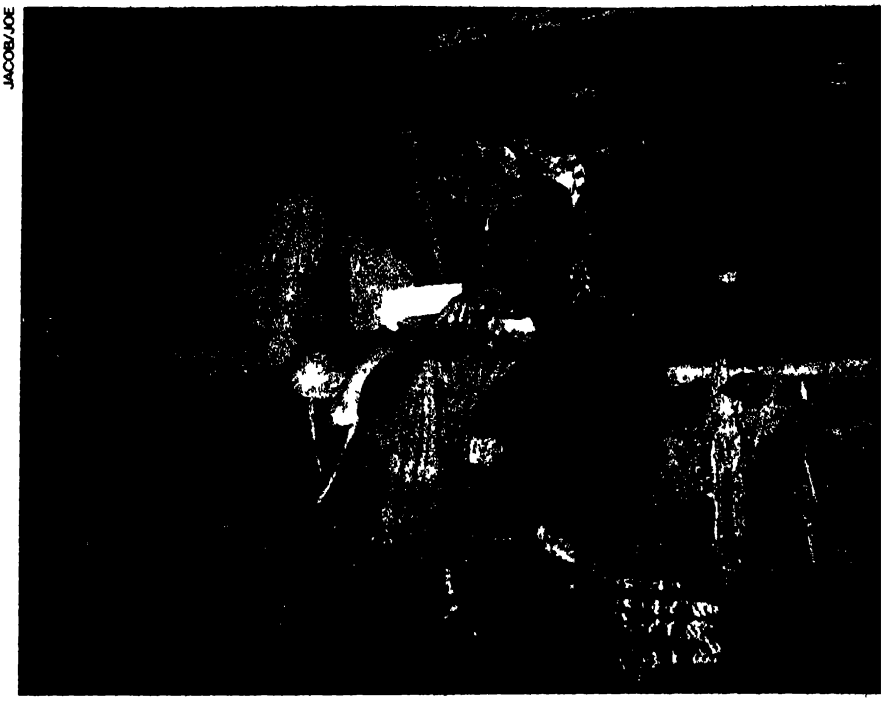
ONE factor behind turnout level may indeed have been security-related, though not in an obvious sense. Last year, 354 additional companies of Central forces had been deployed in Jammu and Kashmir. This time, just eight were brought in, but Farooq Abdullah did not protest. The shortfall was sought to be made up by fixed-period deployments of Army units relieved of their regular border duties, but such deployment appears at best to have been thin. Voters in relatively better secured areas may have chosen to come out, even if they guarded their interests by telling journalists they were forced to do so. Residents of poorly protected towns and villages wisely decided to stay indoors on polling day.

A second, more apparent factor was the local influence of community and political leaders. Caste, class and regional affiliation are factors that are often ignored in discussions on Jammu and Kashmir, but they appear to have played a significant role in some segments of Baramulla and Anantnag. Shafi Uri's success in bringing out voters in Uri and Gurez led Hurriyat leader Maulvi Umar Farooq to refer to the N.C. as the "Gujjar Conference", a derogatory remark which reflected nothing so much as his own Srinagar-elite biases. Mehdi's success in Budgam illustrates the same phenomenon. The N.C. candidate from Baramulla, Abdul Rashid Shaheen, a former aide of Sayeed, similarly secured reasonable levels of turnout in his home segment of Pattan, and pro-India militia leader Yusuf Parrey in Sonawari.

One interesting explanation is that the N.C. itself may have sought to engineer low turnout levels in several areas by spreading rumours of widespread violence, and putting its own formidable election machinery in deep freeze. Ganderbal is a case in point. N.C. candidate and sitting Srinagar MP Omar Abdullah's rallies in the segment evoked a poor response, illustrating the erosion of support for his father. The low turnout in the segment suggests that only committed N.C. cadre were encouraged to vote, unlike in Chrar-e-Sharif, where support for the N.C. still runs high. The principal rival of the N.C. in Srinagar, the PDP's Mehbooba Mufti, lacked the party apparatus to mobilise voters: a resource invaluable in a situation where threats against votes were pervasive.

In Baramulla too, the lack of state support and a party apparatus could have cost the PDP's Muzaffar Baig and former Union Minister Saifuddin Soz a realistic opportunity to take the seat. Days before polling, Farooq Abdullah announced that he would ensure voters "are dragged out of their houses to the polling booths". Few observers understood the real impact of the announcement, which the Chief Minister in characteristic style promptly denied having ever made. In effect, any persuasive activity by security personnel became impossible. "There is an important difference between persuasion activity," points out Tarigami, "and coercion to vote. In a situation where someone is using guns to secure a boycott, it is imperative that the state intervene to reassure voters. Abdullah created a controversy to ensure it could not do so."

Anantnag, too, is only too likely to see an effort to engineer the destructive manipulation-by-inaction witnessed in Baramulla and Srinagar. The terms of combat are already unequal. While even N.C. campaign vans are escorted by bullet-proof police vehicles, no similar cover has been provided to other parties.



If Anantnag goes the N.C. way, it could well be because of tactics far more important to poll turnout than the string of attacks on candidates by terrorists seen over the past weeks. N.C. politicians should have little reason for delight in their ability to engineer victories through low turnout levels. Interestingly, no effort was made to terminate the Hurriyat's anti-poll campaign in Srinagar and Baramulla this year, since the organisation's efforts would have hit the PDP the hardest. The long-term consequence of such strategies will be to strengthen anti-India formations and discredit the democratic foundations on which the State government's own legitimacy rests. The N.C. has mounted a tiger, which could well end up devouring the party. ■

A protest action in full flow

The three-month-long satyagraha undertaken by the Narmada Bachao Andolan was a major event in the organisation's history of protest against big dam projects on the Narmada.

LYLA BAVADAM

JACOB/JOE

Narmada Bachao Andolan leader Medha Patkar and Samarpit Dal workers on a satyagraha in a hut in Domkhedi village even as the water level rises.

WITH the main southwest monsoon over, the three-month-long satyagraha undertaken by Narmada Bachao Andolan leader Medha Patkar and thousands of people displaced by the Narmada valley projects came to a close in end-September. The satyagraha in Domkhedi (in Maharashtra) and Jalsindhi (in Madhya Pradesh), which began on June 20, was in protest against the February 1999 order of the Supreme Court lifting a stay order issued four years ago which had restrained the Gujarat Government from raising the height of the Sardar Sarovar dam in Gujarat.

The satyagraha was a major event in the Narmada Bachao Andolan's 13-year history of protest against big dam projects on the Narmada. The event drew tremendous popular response from many parts of India and abroad and generated an informed debate on the impact of development projects that fail to factor in the human and ecological costs. Booker Prize-winning author Arundhati Roy made a notable contribution, to the debate and to the satyagraha: following up on her essay "The Greater Common Good" (*Frontline*, June 4), she was at the forefront of a high-profile "Rally for the Valley" campaign which drew people from various walks of life to the Narmada valley to express solidarity with the displaced people and the NBA (*Frontline*, August 27, 1999). She returned to the satyagraha sites on August 12, a day after the satyagrahis were arrested for the first time; they were arrested on three more occasions.

Patkar and others of the Samarpit Dal (Dedicated Squad), who had taken a vow of *jal samarpan*, were arrested thrice when the water level in the satyagraha villages alongside the Narmada rose to dangerous levels. A fourth round of arrests was made when the satyagrahis sat in peaceful dharna outside the administrative office in Dhadgaon tehsil.

On August 11, flood waters entered the hut in Domkhedi village where Patkar and a band of NBA activists and displaced people were offering satyagraha. Even after the water level rose chest-high, the satyagrahis were determined to stay on, but after a day's vigil, the police arrested Patkar and 60 others. NBA activists alleged that the government had caused the floods deliberately by opening the sluice gates of the Bargi dam upstream; this, the activists alleged, was done in order to create an emergency situation and disrupt the satyagraha.

The satyagraha drew tremendous popular response and generated an informed debate on the impact of development projects that fail to factor in the human and ecological costs.

On September 17, water levels again rose alarmingly in the riverside villages, and the NBA said that the flood was man-made. This time, Patkar and others of the Samarpit Dal were in undisclosed locations; however, on September 19 police teams tracked down Patkar at Pipalchop village and arrested her and 135 others. NBA activists said that the arrests were motivated not by concern for the lives of the satyagrahis but by the state's keenness to avert public embarrassment in case Patkar succeeded in her resolve.

A representative of the NBA had at that time told *Frontline:* "Many other satyagrahis have been standing in water for more than 48 hours, and the police are well aware of this. Since the police claim they arrested Patkar only to 'rescue' her, why don't they also 'rescue' these others?"

The third round of arrests was carried out on September 21. According to NBA reports, about 300 satya-

grahis, who were standing neck-deep in water for more than 28 hours in Domkhedi village, were arrested and taken to Dhadgaon village.

Patkar was being held in "protective custody" at Dhule Jail in Maharashtra. On September 24, she was handed over a letter from Prime Minister A.B. Vajpayee in which he appealed to her "not to resort to any course of action" that would put her life at risk. In the letter, which was delivered by an official in the Prime Minister's Office, Vajpayee said that the "issue of the Narmada project is highly complex and is not amenable to any facile solution". Resettlement and rehabilitation (R&R) of those who had been displaced by the project, he said, is "primarily the responsibility of the concerned States". Even so, a number of mechanisms had been put in place to monitor the implementation of R&R measures, keeping in view the "enormous human problems associated with large-scale displacement". Conceding that "there is a need for great sensitivity in conceptualising and implementing appropriate R&R schemes", Vajpayee added: "We are trying to ensure the best possible rehabilitation... I assure you that we will continue the process."

It is believed that the letter from Vajpayee came at the urging of President K.R. Narayanan, to whom several organisations and individuals had presented petitions and memorandums seeking his intervention. An NBA member told *Frontline:* "It took four rounds of arrests in three months, the vow of *jal samadhi,* the determination of the Samarpit Dal, countless letters to the President from concerned citizens, the Rally for the Valley and a Narmada Sahayog Yatra (from Kanyakumari to New Delhi) for the plight of the people in the valley to be noticed."

The state machinery's response to the satyagraha in Domkhedi has been insensitive. The Maharashtra Govern-ment's stand has hardened and it has refused even to consider holding a dialogue. The State Government's handling of the rehabilitation of the people displaced by the project is equally insensitive. The Maharashtra Government submitted affidavits to the Supreme Court holding out assurances that it was prepared to resettle the oustees. The NBA disputed this claim and asked to see the resettlement sites, at which point it was made known that there was no land available for rehabilitation.

The State administration's responses throughout the period of the satyagraha, particularly the methods employed by the police during the third and fourth rounds of arrests, has given cause for concern.

On September 19, reports of satyagrahis standing in chest-deep water came in. According to NBA sources, the water level at the Sardar Sarovar dam site at that time was over 97 metres. The Bargi dam upstream was releasing 5,00,000 cusecs of water; the Tawa and Barna dams, also upstream, were releasing 10,000 cusecs. Even so, say NBA sources, no police personnel were posted at Domkhedi. Inquiries made by *Frontline* with the Nandurbar district police control room revealed that there was no police boat patrolling the river. However, an informed source in Mantralaya, the seat of State administration, claimed: "Police camps have been present there throughout the monsoon ever since Medha Patkar said she would take *jal samadhi.* They have had to be posted there because the area is completely inaccessible and we know that we can't get policemen there in an emergency." Two Deputy Superintendents of Police and 30 other police personnel were deputed to rescue the Samarpit Dal volunteers.

Soon after the satyagrahis were arrested on September 21, villagers from the surrounding areas gathered at Dhadgaon, where Patkar had been taken, and sat in peaceful protest outside the district administration offices demanding to speak to officials. Their numbers soon grew to more than 500. The district administration invoked Section 144 of the Indian Penal Code, which forbids assembly of groups of people, in Akrani tehsil; those who were sitting in dharna were arrested on September 23. According to NBA reports, 484 people were arrested by the police. Some of them, the NBA alleged, "were beaten and dragged by their hair". Offered the option of being released on furnishing a personal bond, the villagers declined; they demanded unconditional release, for they had committed no crime.

In a statement, Patkar said, "When people have been raising basic issues and have been challenging injustice, the response of the State Government has been to trivialise it with the police actions. This is not at all a law-and-order problem; the situation has arisen due to the wrong policies and actions regarding the dam and displacement on the part of Maharashtra rulers. It is a question of tribal rights."

ONE interesting outcome of the satyagraha has been the response of a variety of individuals to the entire gamut of issues thrown up by the struggle of the displaced people in the Narmada valley, and the administration's apathy towards the displaced people. The administration's attempt to impose an information black-out prior to the arrests was countered by individual volunteers of a group called the Association for India's Development (AID-India). The group is made up of Indians living or studying abroad who maintain a keen interest in development-related issues in India.

When the water level rose in the satyagraha villages and there was no news on the fate of the Samarpit Dal volunteers,

Hell and high water

LYLA BAVADAM

ALL through this monsoon season, water levels rose considerably in villages along the Narmada that are marked out for submergence. Rain-swollen rivers no longer flow freely because of the 85-metre-high Sardar Sarovar dam in Gujarat. To compound the problem, the sluice gates of big dams upstream in Madhya Pradesh are opened from time to time to release excess water.

As a result, villages located in the area between the Sardar Sarovar dam and the upstream dams, which are mostly inhabited by tribal people, have become particularly vulnerable to sudden floods. Fields on the river's edge are submerged one day and left dry barely a few days later. Low-lying houses are similarly affected, and residents can often be seen splashing about in one or two feet of water.

More than 193 villages in Madhya Pradesh face submergence; about 33,000 families will eventually be displaced. The Narmada Bachao Andolan claims that the State Government has not given land to even a single one of these families, let alone rehabilitated those who were displaced years ago for the construction of the Bargi, Tawa, Sukta and Barna dams on the Narmada and its tributaries.

Ironically, the Bargi dam has submerged more land than it is to irrigate today. This is because the State Government does not have the funds to build enough canals. ■

Ravi Kuchimanchi, a Mumbai-based AID-India activist, alerted other members of the group in the United States and set off a telephonic campaign to demand information about the volunteers. Despite the early hour (it was 5 a.m. in the U.S.), ten volunteers from the U.S. started making calls to Mumbai and attempted to speak to the Governor, the Chief Minister or the Police Commissioner. Finally, one volunteer named Kiran got through to the Deputy Inspector-General (Law and Order), Maharashtra, at 6-45 a.m.

Numerous other organisations and individuals were involved in campaigns to express solidarity with the displaced people and to raise awareness about the human and ecological costs of big dams The Narmada Sahayog Yatra, in which AID-India participated, was another citizen-initiated action that was intended to raise awareness about the "destructive nature" of big dams on the Narmada. The yatra, which started from Kanyakumari on September 12, ended in Delhi on September 20. In Delhi, a 15-member delegation met President Narayanan and presented a memorandum drawing attention to the plight of those displaced by the Sardar Sarovar dam, the government's failure to rehabilitate them, and the absence of a viable rehabilitation policy. The delegation requested the President to visit the valley. It also sought the establishment of a new Narmada Water Disputes Tribunal to review the construction of the dams, holding of public hearings on issues related to the project and the President's personal intervention in order to protect the land rights of the tribal people who were displaced. The President said he had received many letters from displaced people as well as citizens regarding the Narmada issue and the plight of the adivasis.

Meanwhile, other support groups are continuing their programmes of agitation in Maharashtra and Madhya Pradesh in support of the NBA's demands. Activists of the Samajwadi Janparishad, the National Alliance of People's Movements and other groups blocked main roads in Thane city. At Mandleshwar in Madhya Pradesh, people affected by the construction of the Maheshwar dam met the District Magistrate and registered their protest. At Badwani, people from the plains of Nimad, which face submergence, took out a rally and raised slogans that reaffirmed their resolve: "*'Doobenge par hatenge nahi*" (We will drown but we will not move from our homes). ■

Labour at the helm

A workers' cooperative of the Girni Kamgar Sangharsh Samiti takes over the Raghuvanshi Mills in Mumbai, which was shut down in June, and takes on the challenge of making it financially viable.

LYLA BAVADAM
in Mumbai

THE 86 spinning machines in the Raghuvanshi Mills in Mumbai, which have been silent since June, should start humming again on October 1, following a bold initiative taken by workers of the mill who have taken over its working.

On September 16, workers belonging to the Girni Kamgar Sangharsh Samiti (GKSS), a union that represents 12,000 textile mill employees in Mumbai, marched through the imposing gates of the Raghuvanshi Mills and took over the premises – and in the process took charge of their own lives.

Although the workers have a daunting task ahead in making the mill financially viable, the mood is one of jubilation, tempered marginally by a sense of disbelief at the turn of events. Proudly putting a machine through its paces, worker Bajirao Patil said: "For three months we had no work. We wondered if this is where our lives stop. But now that we're as good as the *maliks* (owners), I'm sure we'll make this work."

Patil's optimism about the mill's future is rooted in 25 years' work experience. He says that since the Raghuvanshi Mills is now only a spinning mill (the weaving section was sold years ago), capital inputs are not as crucial as they might have been. "Those who want yarn come to us with the raw material; we spin it for them and are paid for that." Since the mill was non-functional for only three months, its erstwhile clients may now flock back.

In terms of land area, the Raghuvanshi Mills is among the largest in Parel, Mumbai's heartland. However, according to its former owner Nayan Mehta, it was making losses consistently. The mill was shut down in 1984 and referred to the Board for Industrial and Financial Reconstruction (BIFR). Mehta offered to revive and modernise it if he was allowed to sell a portion of the mill lands for commercial development. The Development Control Regulations of the Brihanmumbai Municipal Corporation (BMC) were amended in 1991 to permit mill land classified as industrial land, to be sold and used for commercial purposes if the proceeds from such sales went

A tale of woes at SAIL

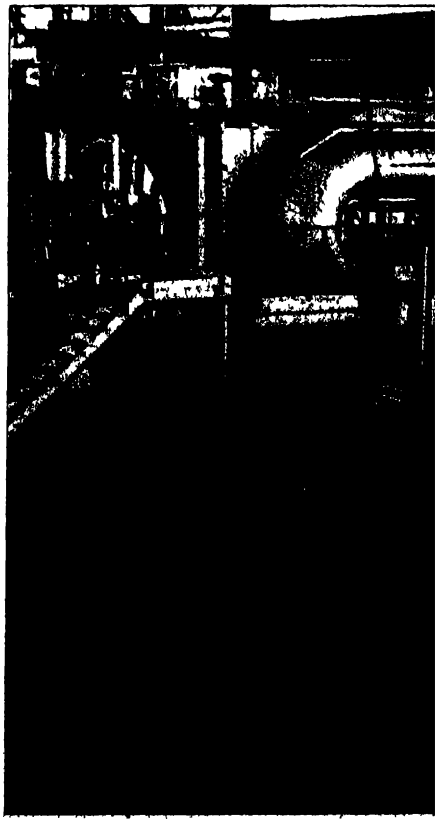
Buffeted by market realities and overstretched on several fronts, the public sector steel behemoth faces an uphill climb back to viability.

SUDHA MAHALINGAM
in New Delhi

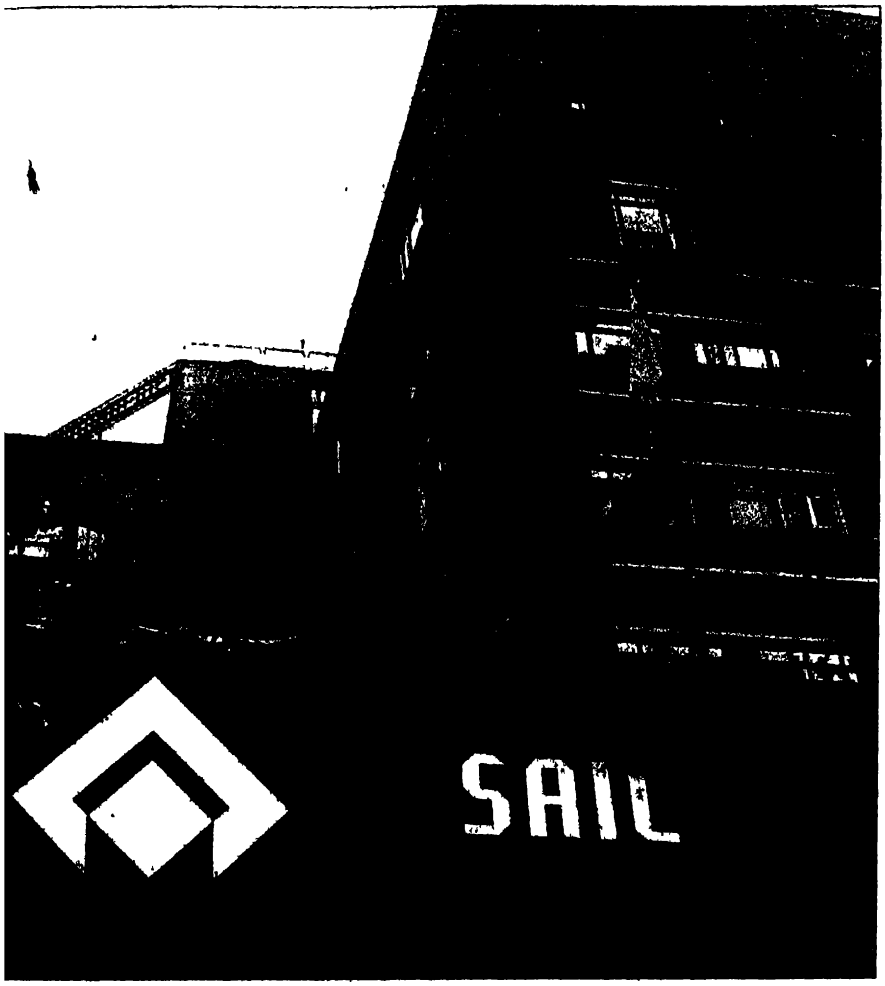
THE steel-making giant once considered a jewel in the public sector crown, Steel Authority of India Limited (SAIL), today faces massive haemorrhaging. SAIL, which has the largest workforce among corporate entities in the country, had been a profitable enterprise until recently. However, it suffered a sudden downturn last year and posted losses of Rs. 1,574 crores. In the first quarter of this year, it toted up losses of Rs. 610 crores.

With reports of the government refusing to agree to a financial restructuring proposal and with no other remedy in sight until after the new government takes over, the prognosis is rather grim. If the losses continue, even the infusion of massive doses of taxpayers' money is unlikely to revive the mammoth undertaking, and this could affect the livelihood of 1.75 lakh employees. Talk of referring the PSU to the Board for Industrial and Financial Reconstruction (BIFR) has set the alarm bells ringing. The irony is that the crisis has come about despite a 5.6 per cent growth in sales last year.

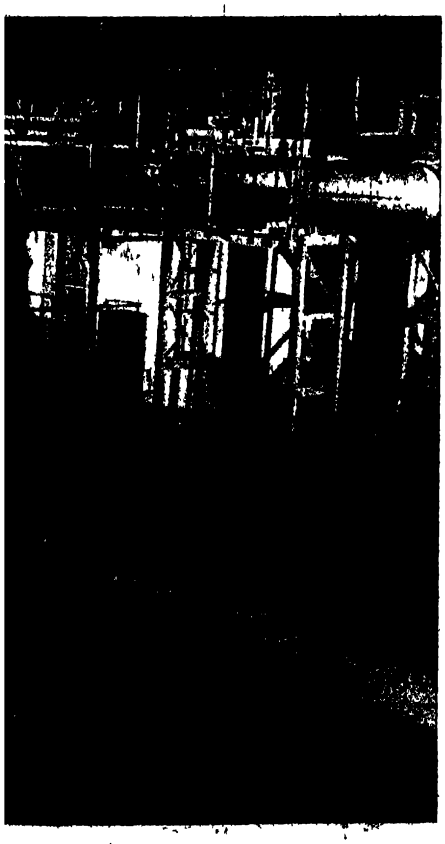
What has caused SAIL's decline and almost imminent fall? How far is the company itself to blame for the current situation and to what extent did factors beyond its control contribute to the process?



That the decline has occurred in the post-liberalisation era which has witnessed rapid capacity creation in the private sector is not entirely coincidental. When the government decided to decontrol steel and open up the sector for private capital in the early part of the decade, steel consumption had appeared to be growing at a promising rate and there was a rush of investments into the sector. The private sector is in the process of adding fresh capacity to the tune of nearly 11 million tonnes by the year 2000. Nearly all of this will be in flat products.



Not to be outdone, SAIL also planned a massive modernisation and expansion exercise at a cost of Rs.12,000 crores over the last three years, a process that envisaged adding 1.5 million tonnes to its capacity of flat products. SAIL is already the largest steel producer in the country with a capacity of 12.4 million tonnes of crude steel. It has a capacity of 10.192 million tonnes of saleable steel, 1.184 million tonnes of mild steel, 1.84 lakh tonnes of alloy steel and 1.86 lakh tonnes of hot-rolled carbon steel.



Was this creation of additional capacity in the public and private sector warranted? Demand projections made during the earlier part of the century were rather optimistic and the capacity addition was made based on these projections. However, these projections have been proved wrong. According to a recent paper prepared by the Economic Research Unit of the Joint Plant Committee of the Government of India, domestic demand for finished steel, which is currently around 22.9 million tonnes, is estimated to reach no more than 27.73 million tonnes by 2001-2002. Of the latter, flat products will account for 15.95 million tonnes. According to the paper, even by optimistic estimates the demand will only be 29.6 million tonnes. Projections made by the Ministry of Steel had envisaged a demand level of 31 million tonnes of finished steel for 2001-2002 and 47.04 million tonnes of finished steel for 2006-2007.

How did the projections go awry? First, they were made on the basis of optimistic gross domestic product growth predictions, which have since been belied. Second, even the 5 per cent GDP growth that has occurred owes itself to an increase in the share of the services sector in national income. In fact, it has been found that the linkages between growth in the primary and secondary sectors and GDP have been weakening. Third, the industrial growth rate hovers around 7 per cent, a much lower level than estimated, resulting in an overall fall in steel consumption. This is mainly because the government,

SAIL headquarters in Delhi. (Left) A transfer bar being rolled into a coil at the hot-rolling mill of the Salem Steel Plant.

which was the prime provider of infrastructure, has retreated from the sector in the post-liberalisation phase expecting the private sector to step in to the field. But the private sector has played coy. Fourth, such private investments as there have been in sectors like power, have relied on equipment sourced abroad, and domestic steel-makers have had no part of the pie.

In the case of flat products, which were earlier in short supply and for the manufacture of which substantial additional capacity has been added, the predominant consumer, the automobile industry, prefers to source them from abroad for reasons of quality or other considerations. Maruti Udyog Limited, the market leader in the passenger car sector, imports its requirement of flat steel from Japan. So do most other manufacturers, and this has created a near-crisis situation in the flat products segment. Fifth, construction activity, which accounts for the largest segment of steel consumption (it consumes nearly a fifth of all steel produced in the country) has been sluggish in the last three years not only in India but in the entire South East Asian region. Gross domestic capital formation in the construction field has been much lower than was projected.

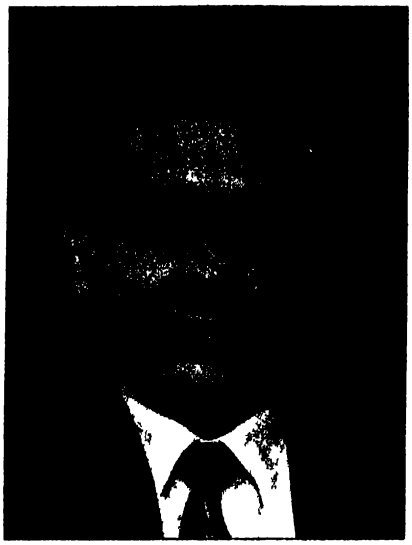
Thus, the situation today is that demand predictions have gone awry but ambitious capacity expansion has taken place. How did this happen? Ardhendu Dakshi, former general secretary of the Steel Workers' Federation (SWF), the largest union in the industry, told *Frontline:* "The World Bank not only encouraged the private sector to set up these huge capacities but even canvassed to find funding for them. The unplanned and irresponsible capacity additions in the private sector have been responsible for the state in which SAIL is in today."

The situation has been exacerbated by the growth in imports. Steel imports under the open general licence category were allowed and the duties were brought down from 85 per cent a few years ago to between 20 and 30 per cent now. In fact, hot-rolled (HR) coils used to be imported through advance licences for $225 a tonne until recently, when the government fixed a floor price of $302 a tonne. Steel producers from the Commonwealth of Independent States (CIS) and South Korea have exported flat products to India at prices no Indian producer can match, leave alone SAIL with its enormous wage bills, interest burden and overheads. While some private producers have matched import prices in a desperate attempt to cut down on inventories and losses, SAIL has been unable or unwilling to do so. The mechanism to fight the dumping of cheap steel into India is rather weak although Indian producers are often subjected to anti-dumping legislation and punitive measures by foreign steel companies.

While some SAIL plants are in sore need of modernisation, should it have gone in for large-scale modernisation and expansion using borrowed funds? Should it not then have simultaneously revamped its marketing set-up to face the competition? Should it not have pruned costs and made itself competitive even while it was making profits, rather than lock the stables after the horses had bolted?

SAIL has hitherto had a domestic orientation with a virtually captive buyer in the government under controlled market conditions. As a public sector unit and a lumbering giant at that, it not only lacked the agility displayed by its private sector counterparts but lacked the marketing

savvy so essential to succeed in a competitive environment, especially when demand projections have gone awry. Insiders say that revamping the marketing and other departments within the company is easier said than done in an environment where SAIL has been treated as a milch cow by successive parties in power and sundry politicians seeking all kinds of favours including employment opportunities for their near and dear, preference in the award of purchase contracts and so on.



Questions have also been raised as to whether the modernisation and expansion could not have been undertaken at much lower costs than have been incurred. SAIL insiders also say that its modernisation has been sporadic and uneven. Rs. 5,000 crores have been spent on the Rourkela plant alone. While downstream facilities have been modernised with the installation of hot strip mill/continuous casting facilities, raw material handling has not been modernised. Lack of vision in designing a comprehensive modernisation programme has resulted in investments which have not yielded commensurate improvements in productivity and quality, they say. While the modernisation measures in Durgapur are satisfactory, Rourkela and Bokaro have not yielded the expected results, according to knowledgeable sources in SAIL. The modernisation programme was, incidentally, designed by SAIL although it did get consultants to advise it.

The recession combined with overcapacity led to a demand-supply mismatch. SAIL was bound to feel the impact of the mismatch most. The continuing withdrawal of the government from infrastructure development tasks has had a serious impact on SAIL because until recently the government had bought 80 per cent of its steel production.

Following the train accident at Khanna, Punjab, on November 26, 1998, the Railways suspended orders for rails made at SAIL's Bhilai plant which it believed did not meet the requirements. The orders were resumed only in the second quarter of this year after ultrasonic and gamma ray tests proved otherwise. SAIL not only lost business in the first quarter, but it also had to invest in new testing equipment. The Railways have been buying around 1.5 million tonnes of rails from SAIL annually.

A paper presented at a seminar on 'The Impact of the New Economic Policy on the Steel Industry in India' organised by the SWF records an all-round fall in the production of saleable steel in all the units of SAIL except the Durgapur unit.

For SAIL, price levels fell even as input costs rose. Increases in railway freight, and the costs of coal and power pushed up the expenditure bill by around Rs. 700 crores a year, prompting SAIL to undertake a massive cost-cutting exercise. However, McKinsey & Co, the international firm which was consulted by SAIL to recommend measures to achieve a turnaround, reportedly found that SAIL

Arvind Pande, Chairman and Managing Director, SAIL.

had failed to negotiate effectively with its suppliers to obtain inputs at lower prices even as its output prices were falling. Purchase departments in large PSUs often have entrenched interests, and SAIL is perhaps no exception.

Defective distribution channels have been another problem for SAIL. Under controlled market conditions, steel was first shipped to stockyards in various parts of the country before being sent on to the buyers, which added to the transportation cost. Under the freight equalisation policy, SAIL absorbed the additional costs. This policy has since been partially amended but there has been resistance to its scrapping. A multi-tiered system of distribution has led to delays in delivery and higher costs. The Tata Iron and Steel Company (TISCO) has managed to scrap a system that relied on stockyards and cut costs, but SAIL, in typical bureaucratic fashion, has fought shy of revamping the distribution set-up.

There are also historical factors that have aggravated SAIL's woes. Located mainly in the central and eastern parts of the country near coal and iron ore mines, SAIL plants are far removed from the industrialised belt in western India. Private sector suppliers located closer to this industrial belt have a distinct advantage over SAIL in terms of cost as well as delivery schedules.

While other steel plants have better access to imported coal at rates cheaper than those that prevail in the country, SAIL's options in this regard are rather limited. Notwithstanding improvements in energy-saving and other areas, SAIL can hardly hope to match the lower costs of its overseas competitors given its bloated size. SAIL has a workforce of 1,74,736 lakhs, of which 18,249 are in the executive cadre. Its wage bill is in the region of Rs.2,381 crores for 1998-99. Reports say that some managers who have had long tenures have converted their charges into personal fiefdoms and enjoy political patronage which have made them firmly-entrenched. The top management does not always enjoy the freedom to transfer senior executives. A financially attractive Voluntary Retirement Scheme (VRS) offer last year was availed of by 3,000 employees, but knowledgable SAIL sources say that the brighter employees were the ones who left.

AT the core of SAIL's current problems is the huge interest burden it has to bear on account of its over-ambitious modernisation programme initiated a few years ago based on demand projections which have since gone awry. The modernisation programme undertaken at Durgapur, Rourkela and Bokaro cost the company Rs.12,000 crores, much of which was financed by loans from the Steel Development Fund. Currently, SAIL has a debt equity ratio of 3.03:1 with a total debt of Rs.21,000 crores. The interest burden has been mounting. From Rs.808 crores in 1995-96 it rose to Rs.2,017 crores in 1998-99 (including inventory carrying cost). Depreciation amounted to Rs.585 crores in 1995-96, but rose to Rs.795 crores in 1997-98 and to Rs.1,104 crores in 1998-99 thanks to newly capitalised investments in modernisation. SDF loans account for Rs.6,415 crores.

SAIL has submitted a financial restructuring plan to the government, seeking either a waiver of the SDF loan of Rs. 5,000 crores or its conversion into equity. Contributions to the SDF came from SAIL and TISCO in the form of a levy which was neither a tax nor a cess and the fund was to provide soft loans to steel companies. However, Ispat Industries

challenged the proposal even before the government could consider it and the Calcutta High Court restrained the Joint Plant Committee from entertaining SAIL's plea.

The financial restructuring plan submitted to the government by SAIL also envisages writing down the asset value to the extent of capitalised interest accrued between 1993-94 and 1998-99 along with the writing off of loans and advances, including interest accrued on it, given by the Government of India to the Indian Iron and Steel Company routed through SAIL. The interest waiver granted to IISCO in the past by SAIL on loans from its own sources, amounting to Rs.506 crores, is sought to be brought back to SAIL's books of account. All these measures are intended to improve SAIL's debt-equity ratio.

SAIL reportedly hired McKinsey & Co to advise it on a restructuring package for a fee of Rs.8 crores even as its losses mounted. It is learnt that the crux of the McKinsey recommendations is that SAIL confine itself to its core competence, namely, steelmaking, and hive off peripheral and ancillary activities. The Steel Executives Federation of India is aggrieved over the recommendations of McKinsey & Co, which they allege lacks the competence to undertake such an exercise.

Persistent efforts by *Frontline* to secure an appointment to meet with the Chairman and Managing Director (CMD) of SAIL, Arvind Pande, or any senior directors of the company, to elicit their views on various issues, including the McKinsey recommendations, failed. And *Frontline* was informed that none other than the CMD was authorised to speak to the press.

According to a note faxed by SAIL officials to *Frontline*, the company has been scouting for partners to set up joint ventures for its captive power plants at Bokaro, Durgapur and Rourkela, its oxygen plant at Bhilai and its fertilizer plant at Rourkela. It is on the look out for partners also for the backward integration of the Salem Steel Plant and for the revival of IISCO. These measures are believed to be in line with McKinsey's recommendations. SAIL intends to transfer some of its captive power units in its integrated steel plants producing totally 542 MW of electricity and 660 tonnes of steam per hour to a proposed subsidiary company and is seeking a strategic alliance partner to maintain that company for a period of 15 years. SAIL proposes to offer 49 per cent of the equity of this subsidiary, which will continue to supply power to its steel plants, to the alliance partner. SAIL has received expressions of interest from seven companies, of which the Bombay Suburban Electric Supply (BSES) and Enron are shortlisted. However, SAIL has to obtain government approval before it can execute its plans.

McKinsey is also learnt to have advised SAIL to divide its remaining four integrated steel plants into two strategic business units (SBUs), one for flat products, comprising the Bokaro and Rourkela plants and the other for long products, comprising the Durgapur and Bhilai plants.

McKinsey has advised SAIL to revamp its Central Marketing Organisation (CMO) in order to save on operating costs, to improve quality and to prune the staff strength by 70,000 in the next five years. A note submitted by SAIL admits that it has targeted the "right-sizing" of manpower to one lakh people in the next five years. The note claims that its marketing personnel have been empowered to resort to aggressive marketing techniques. It says that SAIL has recently succeeded in securing turnkey orders for mega-projects as well as orders for high-value items. Inventory-reduction, which was another recommendation of McKinsey, is also being attempted. With increase in direct despatches and the establishment of dealer networks, the CMO's stock yard system is undergoing a change with unviable yards being closed, says the SAIL note.

SAIL also wants to close down its uneconomical units, shops and those facilities that have become redundant as a result of modernisation. The beleaguered company has proposed to reduce subsidies in social infrastructure and turn them into independent profit centres.

The 27th annual general body meeting of SAIL held on September 22 reiterated the resolve to prune costs through the implementation of the new proposals.

According to senior Steel Ministry sources, McKinsey has also advised that eventually the flat product SBU be sold to the private sector, followed by the long product SBU. Most of the business and financial restructuring proposals put forward by SAIL are clearly based on the McKinsey report, whose prescriptions leave no one in doubt as to their ultimate objective, namely, to privatise SAIL. ■

Transfer of power

As an international force takes control of East Timor, the departing Indonesian troops adopt a 'scorch and scoot' policy.

MAYA VIDON AFP/ AP

Australian soldiers, part of the international peacekeeping force, at work in Dili on September 24.

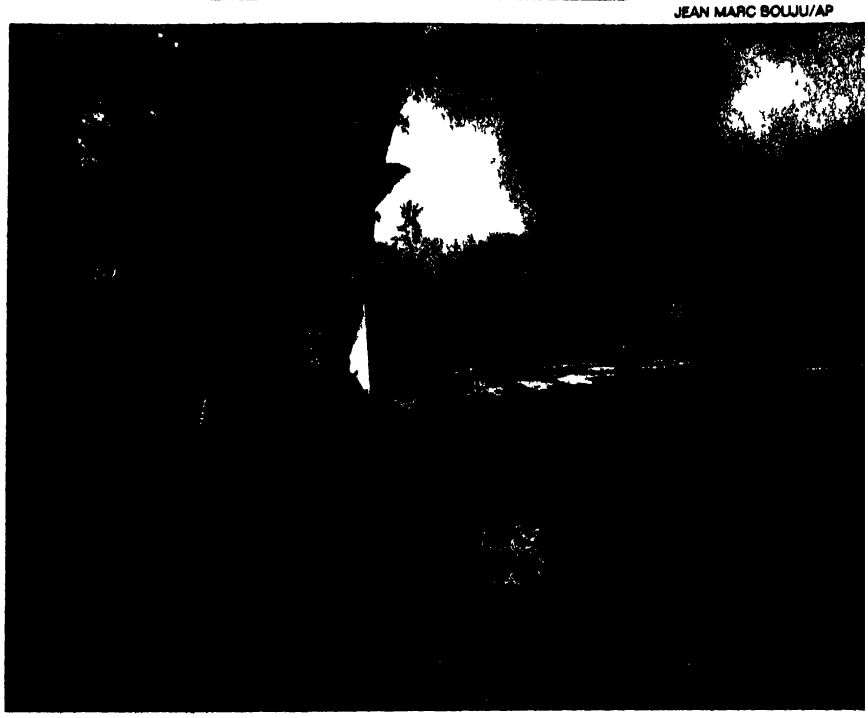
SETH MYDANS

AS departing Indonesian soldiers marched with their duffel bags toward Dili's port on September 24, the foreign troops who were replacing them in East Timor staged an aggressive show of force, sealing-off and searching the city centre for hours as helicopters circled and clattered above them.

Refugees peeped out from cardboard shelters to watch Australian soldiers sweep through their burned-out neighbourhoods, fingers on the triggers of their guns, as if on the forward lines of a war.

The commander of the operation, Lt. Col. Nick Welch, said that it was intended to send a message to the frightened refugees and to any potential troublemakers that Dili belonged to the international force now. Welch said: "With the random looting and fires, there may have been the perception that we were not fully in control. The reality is we are capable of carrying out our mission."

The show of force, together with the quick departure of Indonesian troops, sparked the first spontaneous celebration in Dili of the victory of East Timor's vote for independence in a referendum on August 30. The celebrations, which started with two boys on bicycles, soon grew to 15 men on motorcycles and then to a pick-up truck filled with whooping, chanting celebrators who waved the green-blue-and-white flag of the East Timorese independence movement. "Thank you for coming, whee-hee." shouted a motorcycle rider, Jose Antonio, 21, as he drove past an Australian guard post.



But one man on a van, Mario Victor da Costa, who wore a pale blue United Nations cap, said that as soon as darkness fell, the revellers would leave the streets because "we are still afraid at night". Welch said that no shots had been fired in the sweep, which lasted through the afternoon and into the night, and that his troops had met no resistance. But it also appeared that they made few arrests of armed men and seized only a few weapons.

In an earlier report, the international force had said that it made its first arrest, of Caitano da Silva, a senior member of the violent militias that laid waste to much of the region in the previous three weeks.

Despite the show of force, military officers conceded that they did not have full control of Dili and that it would take

The intention of the operation, according to the commander, is to send a message to the frightened refugees and to any potential troublemakers that Dili belonged to the international force now. "We are capable of carrying out our mission," he said.

JEAN MARC BOUJU/AP

JOHN HARGEST/AP

far longer to enforce security in the rest of the territory. "How long is a piece of string?" one colonel countered when asked for a time estimate.

A formal military hand-over of the territory from the Indonesian troops who have occupied it for 24 years to the international force that began arriving on September 20 was to be completed in a few days, the top generals of both forces said at a news session. In Jakarta, Gen. Wiranto, the chief of the Indonesian armed forces, said that the hand-over would be on September 27. But announcements in Jakarta often have little connection with events in East Timor. On September 23, President B.J. Habibie declared an end to martial law in Dili.

The local Indonesian commander, Gen. Kiki Syahnakri, said that by September 25 all 11,500 soldiers who had been stationed in the capital of East Timor would be gone. Those included "territorial forces," many of them East Timorese, who were responsible for much of the violence, together with the irregular militias that they support. Syahnakri said that 4,500 troops who arrived with him in September in what was officially described as an attempt to restore order would be phased out in a few days or in a few weeks.

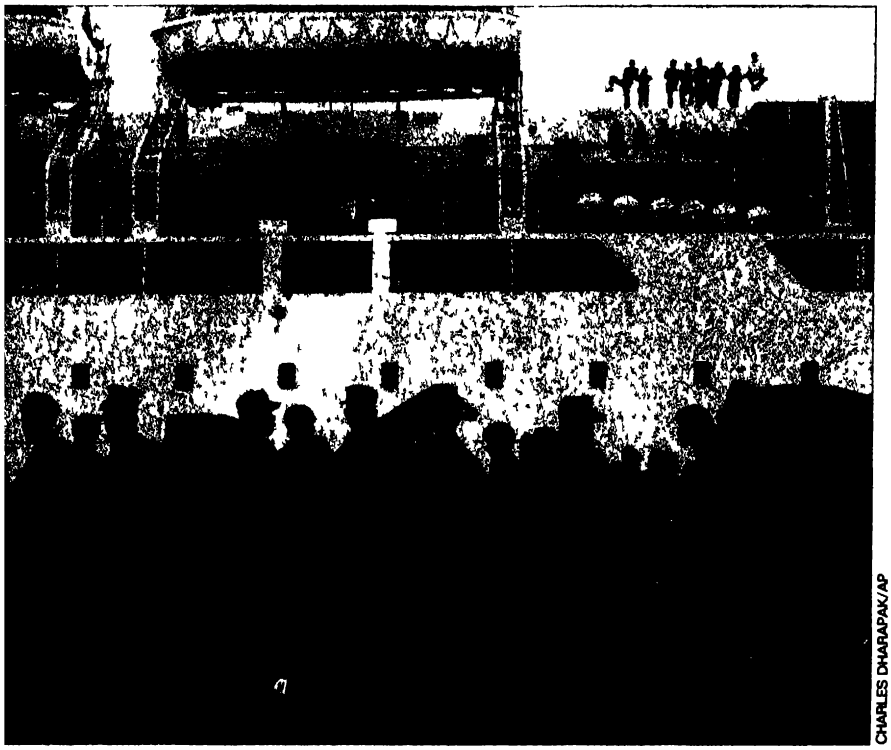
The process of withdrawal was creating its own momentum as the mood in the mostly empty city of Dili shifted to one of guarded hope. The port was busy with arriving troops, including the first Asian contingent, 127 soldiers from the Philippines. As the foreign soldiers walked down the gangplanks of huge transport ships, the departing Indonesians loaded belongings on one of their own ships at a far corner of the port.

Outside the gates of the port was a tiny sign of commerce: Women squatted and sold mangoes, papayas and bananas. Few people had enough money to buy them.

On September 23, as the Indonesian Army began its final pullout, smashing and burning their barracks and headquarters behind them, international peacekeepers engaged in their first tense encounters with armed men. In one small incident after another, the peacekeepers responded to gunshots, some of them coming from truckloads of Indonesian

soldiers, some apparently fired by irregular fighters.

Maj. Gen. Peter Cosgrove, the Australian who commands the peacekeeping operation, said that despite the increasingly tense situation, his troops from the international force known as Interfet had held their fire. "Interfet has yet to engage an armed militia," he said, referring to the irregular groups created and sometimes commanded by the military. "We are ready to do so, but at this stage the discrimination, restraint and judgment of the troops has been outstanding. We have been able to confiscate weapons rather than take them off dead bodies."



He also said that he hoped that the withdrawal of the Indonesian troops could calm the situation. "Among the territorial battalions – those who are ethnic East Timorese – there are some very hard feelings about the referendum outcome," he said, referring to the vote on August 30.

Once these troops have left, he said, "to a large degree some of the complicating factors will have gone." Nevertheless, both Australian and Indonesian officers said that the next few days would be tense and crucial as the Indonesian military hands over control of East Timor to the international forces.

They said they expected a possible eruption of violence to mark the moment, both as a parting gesture and possibly as an opening salvo by defectors and irregular troops determined not to give up the fight.

With few large buildings left intact in Dili, soldiers loaded up their transport trucks with furniture and other spoils, then set their buildings on fire. Columns of smoke rose above the city.

Maj. Gen. S. Ahmad, who commands one of the last units to leave, said that the prevailing attitude – in effect, the policy – of the departing troops was, "We're not going to leave anything for those idiots to take over." He predicted that "all hell will break loose" in the coming days. Deserters who have decided to fight on here, he said, "will leave something for the people to remember."

CHARLES DHARAPAK/AP

Indonesian soldiers wait to board a ship at the Dili port on September 24.

Plumes of smoke continued to rise from military buildings set afire by the departing troops. But on the sea front, at one building the Australians intended to use, two armoured vehicles and two helicopters kept a protective eye as the Indonesians prepared to leave. The miniature hand-over crystallised the tensions and poignancy of the transfer of power.

"See you again," an Indonesian soldier said, trying to smile as a column filed out past the Australians. "Goodbye, East Timor." With elaborate courtesy, an Australian officer paused as the last Indonesian left the gate. "May I?" he said, waiting to enter. "Of course," the Indonesian responded.

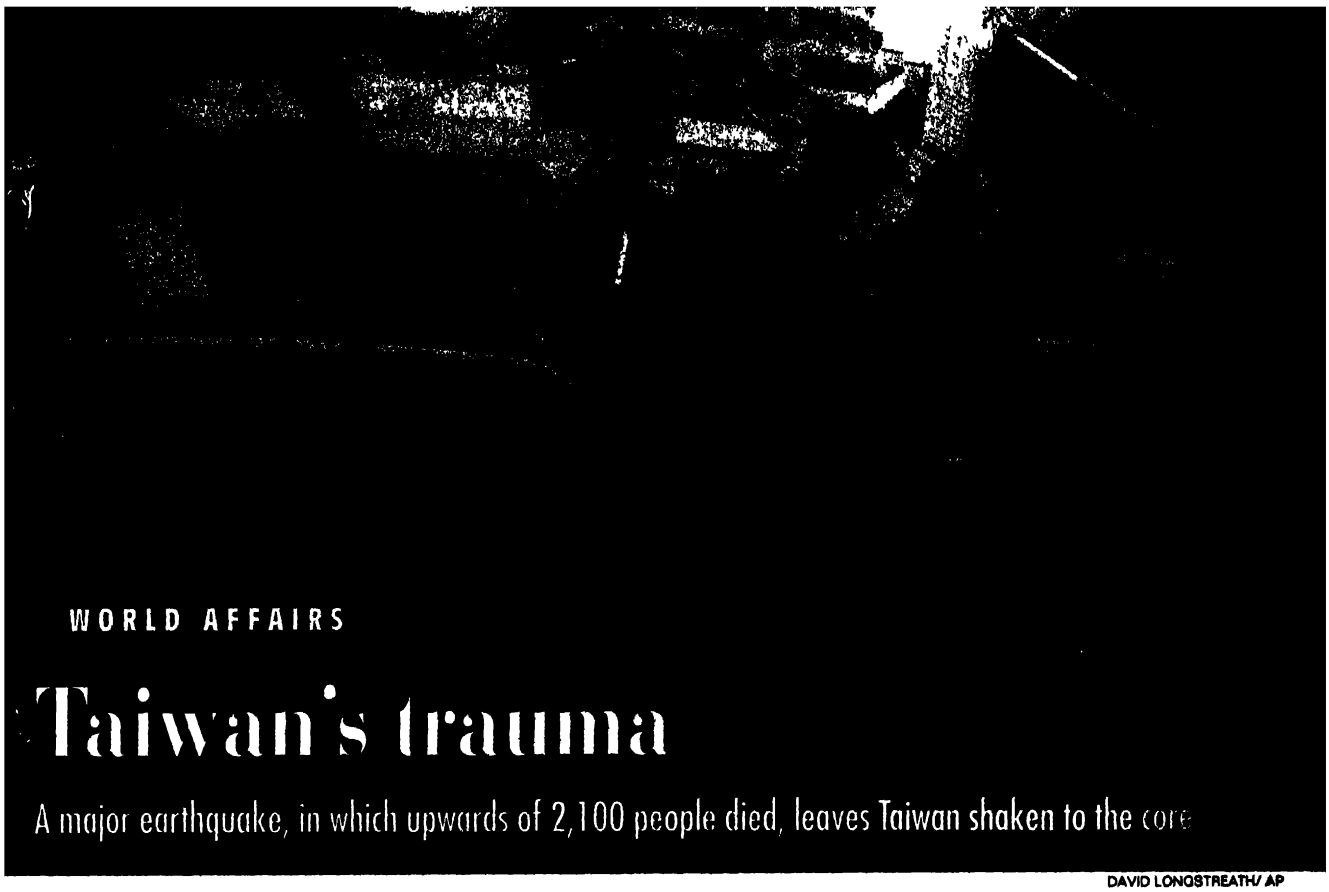
In the empty compound, strewn with litter, the Australians found three barrels of fuel oil, together with long blue hoses, waiting to be set afire.

GIVEN their small numbers and the scattered and dangerous nature of the armed groups they faced, the 3,000 peacekeepers who had arrived moved carefully to secure a few key areas and – apart from helicopter reconnaissance – had not yet ventured beyond the city.

An initial contingent of 120 troops secured the airport in the eastern town of Baucau because of its strategic location as an entry port for supplies. In Dili, young men, some of them concealing weapons, roamed the mostly empty streets. Truck convoys of soldiers – many wearing bandanas as head scarves in the red and white colors of the Indonesian flag – also travelled the city, staring coldly at the Australian troops they passed.

One of the Australian troopers they passed, who gave his name only as Chris, sat with his rifle across his knees at his post outside the fence at the eastern end of the port.

"I've never been in a fire fight and, I hate to admit it, but I'm looking forward to it," he said. "If any of them draws a weapon on me, I'll warn them to put it down, and if they don't, I'll just cap them."



As he spoke, half a dozen young men, one of them carrying a club, lounged nearby on a couch that had found its way somehow to the beach front beside the fence around the port. "They seem friendly," the trooper said. When the convoy of territorial troops drove slowly by, he waved a greeting. They stared back at him.

Military officials gave few details about shooting incidents in the city. Most were in the general area of the port, Cosgrove said. One incident witnessed by reporters illustrated the tensions and emotions of this moment of military transition.

Responding to a report that shots had been fired, two jeeploads of British troops burst into an Indonesian military barracks, only to find the soldiers smashing and looting their own living quarters.

As the British withdrew, the Indonesian soldiers followed them angrily, leveling their guns at them. Driving away in their armoured jeeps, the British returned the gesture with their mounted machine guns. ■

Taiwan's trauma

A major earthquake, in which upwards of 2,100 people died, leaves Taiwan shaken to the core

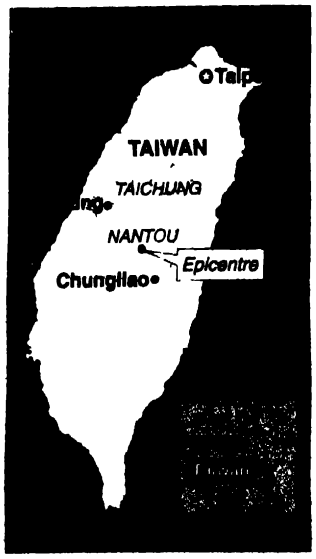
DAVID LONGSTREATH/ AP

Rescue teams search a building for possible survivors.

SETH FAISON

THE front half of Wang Chong-shih's third-floor apartment has disappeared, but the rear half remains intact. When Wang opens his bedroom door, instead of looking down a narrow hallway, he looks outside at the neighbourhood.

"It's pretty strange," said Wang, 57, who owns a camera store. "Part of my home is still here, as it was before, and the rest is gone." The same can be said for the entire city of Tungshih, which has reported the highest number of deaths from the earthquake that devastated Taiwan on September 21. Out of the 2,100 deaths reported, 430 residents have died in Tungshih, a city of 60,000 people located a few miles into the mountains in central Taiwan. More than 7,800 people have been injured and 360 have been listed missing. One street in the middle of the town looked clean and remarkably unaffected; the next one resembled a wasteland of rubble.



The port of Taichung, one of the four international ports in the country, was heavily damaged, rendering five wharfs inoperable. Officials estimate that it will take at least two years to return to full operations.

Beyond the obvious damage to life and property, the earthquake, with a magnitude of 7.6 on the Richter scale, seems to have left a deep psychological scar. Survivors feel lucky, yet they are burdened with the knowledge that they knew so many of those who died.

"No one in my family was hurt," said Wang, his eyes widening momentarily, before he grimaced with his next thought: "Half my neighbours are dead." On Ben Street, where Wang's half-home stands, many of the buildings collapsed when the quake struck.

The Cathay Tea House was standing, seemingly undamaged. But next door, a house seemed to have vanished, leaving remnants of a tile roof on the ground and, inexplicably, a child's chest of drawers that was somehow thrust forward and left intact on the sidewalk. One drawer hung open, showing a neatly folded stack of cotton shirts inside.

Several doors down the street, rescue workers dug through the rubble of a collapsed five-storey building, where more than 20 people were still believed to be buried. Rescue workers from South Korea, wearing navy blue vests emblazoned with the name "Samsung", looked on as Taiwanese soldiers dug through the rubble. The soldiers were guided by a makeshift map of the building's layout, drawn up with the help of a resident who had escaped the ruins.

A pair of dogs, also wearing Samsung vests, took turns to sniff the debris for the scent of a human. Shortly after noon, one of the dogs indicated that it had found something, but an hour of excruciatingly careful digging yielded nothing.

"They can smell a person, but the problem is that they cannot identify the spot exactly," said a Taiwanese rescue worker. "There's too much chaos." Rescue work has also been slowed down by the col-

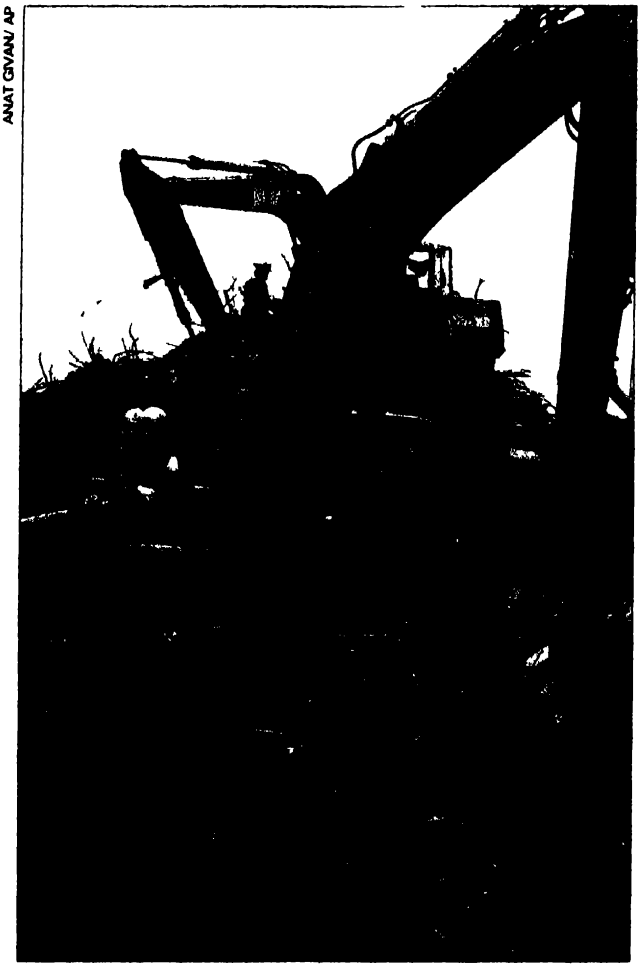
Economic fallout

CALVIN SIMS

THE devastation caused by the earthquake will slacken Taiwan's economic growth for 1999, according to government officials. They warned that repairing the buildings, highways, power generators and other structures could take years.

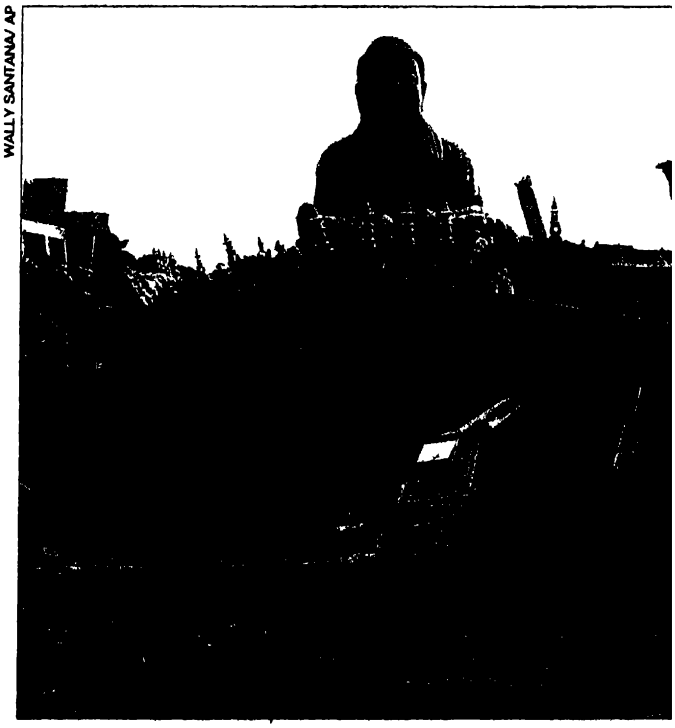
Although it is still too early to determine the extent of the damage, some officials have used figures as high as $5 billion to $10 billion as the total cost of reconstruction and compensation payable to the victims. If the preliminary estimates stand, the September 21 quake could be one of Asia's costliest natural disasters.

Finance officials said that the government had ample money to rebuild the shattered public works and that the quake would have little long-term effects on the economy, which had been rebounding this year after a sharp slowdown in the Asian financial crisis.



"For this year, the earthquake will have a negative effect on the economy, and we will fall short of our growth targets," said Chi Schive, vice-chairman of the Council for Economic Planning and Development, which had forecast a 5.74 per cent growth rate for 1999.

Some economists are predicting that the quake, which caused widespread water and power failures that disrupted semiconductor production and temporarily shut down many businesses, will limit economic expansion to a range from 5.3 to 5.5 per cent.



Taiwan is a leading manufacturer of semiconductors and maker of personal computer equipment, with a combined annual production of $40 billion. A protracted disruption in production could have major effects on foreign markets, driving up the prices of computer chips and equipment.

The Hsinchu Science Park, where 25 computer-chip factories produce 90 per cent of the semiconductors made on the island, has been idle since the quake knocked out power generators and substations. Industry analysts estimate that Taiwanese chip makers are losing $60 million in revenues each day they are not

lapse of bridges on two roads that connect Tungshih. Some towns farther inland have been unable to receive any outside help, despite efforts by the army to deliver emergency supplies by helicopter.

At a park on Ben Street, Liu Yu-chun, a 20-year-old woman sitting with her sister in a broken chair outside the remains of her family's cosmetics store, mused about the fact that she was alive.

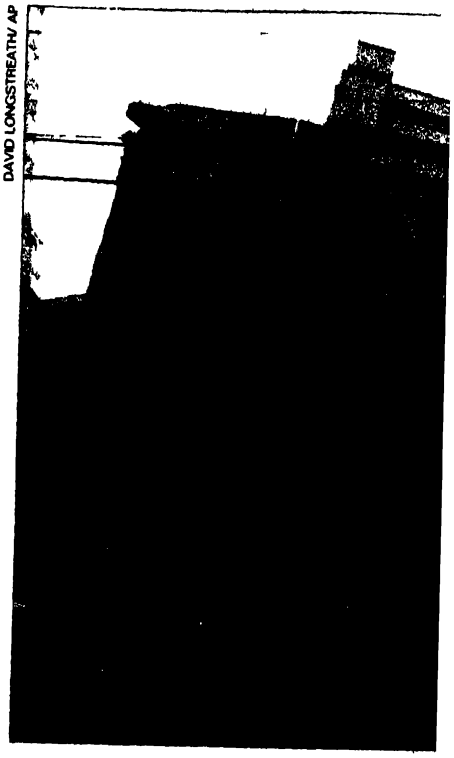
Liu considers herself lucky. At first she laughed easily at her fortune, though she grew more pensive as she described how odd it felt to have escaped unscathed on a street where so many neighbours have disappeared. Five houses collapsed right across the street.

"I don't know whether to be happy or sad," said Liu, thoughtfully resting her hands behind her head. "I don't know how I should feel." On September 20, for no particular reason, Liu broke her habit of sleeping on the third floor of the family home and settled in with her sister on the second floor. After the quake jolted

producing.

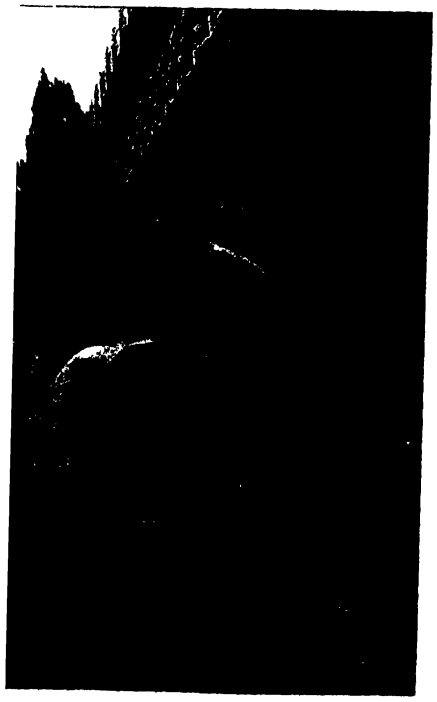
Chi said that any production slowdown caused by the quake would probably be offset next year by the positive effects of the government's spending on reconstruction. "If we don't count the loss of human life and social disorder, we will come through this natural disaster in pretty decent shape," Chi said. "There will be a balancing out."

In fact, the major industries were largely unscathed, as major manufacturing cities such as Taipei and Hsinchu, just south of the capital, were spared significant damage.



Peter Kurz, an analyst with Merrill Lynch in Taipei, said plans to spend heavily on public works would be a boon to industries such as cement and steel, sectors that will be used in constructing roads, bridges and housing.

The quake has devastated public works, and officials said that rebuilding would be long and laborious, probably spanning years. Engineers have to go back to the drawing board to determine how best to reinforce structures, roads and bridges to survive possibly more powerful quakes.



Hundreds of thousands of buildings have been damaged, along with parts of 25 roads and highways, five so seriously that the government is uncertain when they will reopen. Five major bridges that link to main highways have also collapsed.

In some cases, roads, bridges and buildings will be relocated away from fault lines or they will simply not be rebuilt. The quake and its continuing aftershocks caused huge cracks at one of the nation's largest dams, at the Sun Moon Lake Reservoir, where water was emptied as a precaution. Workers also found structural damage at the Nantou County dam complex. ■

Anxious Taiwanese women outside an apartment building (above) destroyed in Dali.

them shortly before 2 a.m., Liu realised that she might have been crushed by the remnants of a neighbouring house that smashed through a window had she remained on the third floor.

"I was extra lucky," she said. "I don't know why." With the packaging of almost all the cosmetics in the store damaged, Liu wondered whether she should be giving the products away to rescue workers.

The disastrous collapse of Wangchao Mansion, a 13-storey apartment building completed last year and widely known as the fanciest and most expensive address in Tungshih, attracted crowds of rescue workers. What was left of the building was wedged against another building at an impossible angle. More than 100 residents are believed to be buried inside. Taipei's former Mayor, Chen Shui-bian, also showed up. Chen, who heads Taiwan's Democratic Progressive Party, is one of three leading candidates for the presidential elections scheduled for March next.

Road repairs in Taichung and Nantou Counties, near the epicentre are expected to take months, if not years. ■

Mortification in Paris

An incident relating to the alleged mistreatment of a young woman employed as domestic help by an Indian diplomat in Paris turns into a major embarrassment.

THOMAS ABRAHAM
in London

INDIAN embassies abroad are supposed to project the country as being dynamic and modern, and try to erase the prevalent images of poverty, backwardness and social inequality. These efforts have, however, received a severe setback in France, after a young woman employed as domestic help by an Indian diplomat in the Indian embassy in Paris ran away from her employer's house and told the French authorities that she had been maltreated by her employer. While Indian diplomats are staunchly denying any mistreatment, the French media have been full of reports about the apparently horrific injuries on her person, which according to her, were inflicted by her employer, besides the terrible working conditions she had to endure.

The accounts given by the maid, Lalita Oraon, and the Indian embassy are so much at variance that only an enquiry will clear up the matter. (The French authorities have begun an enquiry.) According to information made available till now, on September 5 Lalita, who was employed at the house of Amrit Lugon, First Secretary (Economic) in the Indian embassy, left her employer's flat and walked out into the streets of Paris. The French police found Lalita, who had been with the Lugons since January and knows neither French nor English, wandering in the streets, clearly lost. They contacted the Indian embassy that evening and reported that an Indian citizen had been found wandering. She was then identified, but was not handed over to the embassy. Instead, she was placed in the charge of the Brigade des Mineurs, a police wing that deals with juveniles.

At some stage Lalita was examined by a panel of three doctors, who did not find anything wrong with her. The medical examination, however, revealed that she was only 17 years old and not 19 as stated in her passport, making her a minor.

Embassy officials told the police that Lugon was planning to send Lalita back to India, and that she had probably run away after getting wind of this. Lalita, however, told the police that she had been ill-treated by her employer. In the light of her allegations, the French authorities were reluctant to hand her back to the embassy. Embassy officials then said that they would send her back to India on September 7, and offered to meet her at the airport with her passport and ticket.

The French authorities, however, decided to place her in the care of a non-governmental organisation, the Comite Contre l'Esclavage (Committee Against Modern-Day Slavery). This organisation campaigns against various forms of exploitation, including the mistreatment of domestic helps. Lalita told the organisation that she had worked every day from six in the morning till midnight, that she was beaten and abused by her employers, and that she was paid a paltry sum. (This is not the first time that the NGO has had a run-in with the Indian authorities – a few years back, it raised the issue of an Indian diplomat in Geneva paying his domestic help poorly.)

THE case took a new turn on the night of September 7, when Lalita tried to escape from the Convent of St. Joseph of Cluny, where she was being lodged, by jumping over a 5-metre-high wall. Lalita, who suffered serious injuries in the fall, was found by a motorist and taken to the Cochin Hospital, one of Paris' main hospitals.

According to French media reports, she was found wandering with her clothes blood-stained and her feet bare. At the hospital she was examined by Prof. Bernard Debre, the head of the hospital's urology department. The doctor reported that Lalita bore severe wounds in her genital region which had become septic. French officials then said that they suspected that she had been abused by her employer, and pressure began to mount for a judicial enquiry.The head of the Committee, Phillipe Boudin, stated that he had been told by Lalita earlier that she had been drugged by her employer and his friend, a doctor, and injured.

The Indian embassy came to Lugon's defence, and denied all allegations of wrongdoing. In a statement released by it, it called on the local press to "cease its campaign of defamation against the diplomat" and criticised the "mendacious statements by individuals and organisations who are themselves responsible for Ms. Oraon's actual plight."

Indian diplomats alleged that the NGO was behind this negative campaign, and said that "Ms. Oraon is not a laboratory animal on which these individuals and organisations should experiment with their social concerns." The release said that Lalita had been employed to care for the Lugons' two small children, but that since her work had not been satisfactory, the Lugons were planning to send her back to India.

Indian diplomats were also incensed that the French authorities refused to give them access to the maid, besides refusing to hand her back to them so that she could be sent home. When asked about the injuries that Lalita had suffered, embassy officials said that they must have been sustained when she tried to escape from the convent. They pointed out that an earlier medical examination conducted on her after she was taken in by the French police had not revealed any injuries.

The medical examination report of the Cochin Hospital, however, states that the injuries in the genital area had been caused earlier than the injuries to the vertebrae and legs that were attributed to her fall from the wall.

Given the wide inconsistencies in the accounts given so far, it is difficult to determine where the truth lies. The focus of the French police enquiry will be to determine how Lalita was injured and who was responsible for the acts of violence against her.

Among the other unanswered questions is why Lalita tried to escape from the convent. The Indian embassy itself does not appear to have conducted an internal enquiry, and is standing by what Amrit Lugon has said. ■

The siege within

The civil war in Angola, heightened by the renewed offensive by UNITA rebels, has displaced millions and left them in the grip of starvation.

JOHN CHERIAN

IT is the bloodiest of the civil wars that has devastated the African continent in this century. The civil war in Angola, the second oldest conflict in Africa after the Sudanese civil war that started in the late 1950s, has been going on virtually non-stop since the Portuguese left the colony in 1974. Many observers had expected that after the end of the Cold War, peace would finally dawn on the country, as in neighbouring Mozambique which is now concentrating on the herculean task of reconstruction. In 1992, Angola seemed to be heading in the same direction as Mozambique when President Eduardo Dos Santos and the leader of the National Union for the Total Independence of Angola (UNITA), Jonas Savimbi, signed a peace accord in Lusaka, the capital of Zambia. Provincial elections were held and UNITA members joined the new government at senior levels. But when Savimbi lost the presidential elections held two years later, the UNITA leader relaunched a full-scale war.

In the 1970s and the 1980s, Savimbi fought a proxy war for the West. His forces were equipped and trained by many countries. The apartheid regime in South Africa was his main supporter in terms of logistics and supplies. Western intelligence agencies were also deeply involved until the early 1990s. After the Cold War was over, Savimbi had very few friends but the area under his control had the richest diamond deposits in the world. International companies based in South Africa and other countries continued to have indi-

rect links with UNITA. The trade in diamonds and other minerals, worth millions of dollars annually, kept the UNITA killing machine in fine fettle.

In 1997, there were reasons for optimism again when Savimbi's long-time ally, Mobutu Sese Seko, the dictator of the Congo, was ousted. The new government was no friend of UNITA. Savimbi seemed to be on the defensive for some time. But the renewed civil war in the Congo in 1998 and its spillover into countries in the region gave another opportunity to Savimbi. The government in Luanda also seemed to have been lulled into complacency.

When Congolese President Laurent Kabila sent a message seeking urgent military help to fight rebels, Luanda sent an elite fighting force which helped save Kinshasa, the Congolese capital *(Frontline,* February 26, 1999). Savimbi saw in the absence of the elite troops an opportunity to launch a full-scale offensive. UNITA made big territorial gains and surrounded many major cities, which were already overcrowded with people and refugees, as a result of three decades of uninterrupted war. UNITA has gained control of over 70 per cent of Angolan territory. The Government has launched what it calls the "last war for peace" against the rebels. But the Army is yet to make a breakthrough.

TWO million people lead a precarious existence in Angola. They are fully dependent on aid. According to the humanitarian agencies working in the country, another three million people, all internal refugees, live in inaccessible areas and their condition is impossible to verify. According to the Sergio Vieira de Mello, United Nations Under-Secretary for Humanitarian Affairs, 70 per cent of the population live in besieged provincial capitals such as Huambo, Malange and Kuito or in areas controlled by the government near the coast.

Intermittent shelling of the provincial capitals and the targeting of U.N. planes by UNITA rebels have prevented the delivery of humanitarian aid. Hundreds of civilians have also been killed. Today, the average citizen in Angola is under siege, unable to cope with the collapse of the economy and his or her means of livelihood, soaring inflation and lack of access to arable land. According to U.N. sources, of the two million people known to be in urgent need of assistance in Angola, only about 600,000 receive humanitarian assistance.

WANG YAN/XINHUA/AP

President Eduardo Dos Santos.

Chairman of the U.N. Angola Sanctions Committee Robert Fowler said in late August that out of the country's total population of 11 million, one million were killed since the war began 20 years ago and two million have been internally displaced. Fowler said that the current sanctions against Angola were directed against UNITA which made it difficult for aid workers and humanitarian agencies to operate. In the past four months, six aid workers were killed. UNITA specialises in the indiscriminate killing of civilians, through shelling, ambushes, infantry attacks and landmines.

In a recent interview with the BBC, Savimbi claimed that there is no humanitarian catastrophe in Angola. The U.N. and other agencies in the field have estimated that at least a hundred Angolans were dying every day and they expect the toll to go up if the fighting continues on the present scale. Fowler said that the aim of the U.N. sanctions committee, was to limit the capacity of Jonas Savimbi to wage war.

Sanctions have been in force in the country in some form or the other for the last six years. However, as events have shown, they have had minimal impact on Savimbi's capacity to wage war against his own people. Fowler said that the sanctions first sought to limit Savimbi's access to arms and munitions. With Savimbi undeterred, the U.N. tried to curtail UNITA's diplomatic activities and limit the ability of Savimbi and his senior associates to travel and raise money abroad. The U.N. Security Council has also passed resolutions, limiting Savimbi's access to products that fuel his war machine – petroleum, oil and lubricants. Only last year did the U.N. Security Council pass the important resolution which made the purchase of diamonds offered for sale by UNITA sources illegal. Fowler said: "We are hoping to limit his (Savimbi's) ability to make war in two obvious ways. First of all, to make it less easy for him to make money by selling diamonds abroad and to ensure that he earns less money from the sale of diamonds." This would be done by forcing Savimbi into the parallel gray and black markets where more unscrupulous dealers would give him less money for his diamonds.

The focus of the U.N. will be on stopping the sources of arms by making it "more embarrassing, more dangerous and expensive" for people to sell arms to UNITA. Anders Mollander of Sweden, a member of the Angola sanctions committee, while addressing the media in the last week of August gave a graphic account of the suffering of the Angolan people. Mollander said that during his visit to Angola in 1992, he had seen children starving and aid workers classifying people into those who could survive on normal food and those who had been starving for so long that they could not eat normally. He visited a football stadium full of starving people who were too weak to move or talk. "I understand that it is not as bad as that now, but we are getting there," said Mollander.

Mollander admitted that UNITA was using more sophisticated weapons now, including cannons mounted on armoured carriers, multiple-launch rocket systems and a variety of heavy artillery. It is resorting to heavy artillery bombardment on cities mostly inhabited by refugees. They were in the first place herded into these cities by UNITA. The government is now forced to feed them as well as protect them from the constant attack from heavy artillery.

According to a 200-page report "Angola Unravels", released by Human Rights Watch, Bulgaria and Albania are the main source of weapons for UNITA. Other countries that have helped channel arms to UNITA and smuggle diamonds out include Burkina Faso, the Ivory Coast, Rwanda, South Africa, Togo and Zambia. The international community seems to have become immune to the suffering of the Angolan people. Instead, Angola is a country where profits are there for the asking, if you are ready to deal in guns and diamonds. ■

Sweeping charges

The Cox report has clearly gone beyond available evidence in levelling nuclear espionage charges against China.

M.V. RAMANA

TOWARDS the end of the 1990 film *Flashback*, Dennis Hopper predicts that "once we get out of the eighties, the nineties are going to make the sixties look like the fifties." Unfortunately, that prediction has not come true. Instead, as the 1990s end, some things do look like the 1950s all over again. In what appears to be the beginning of a new Cold War that certain interests within the United States would like to initiate, China is being assigned the role that had been earmarked for the Soviet Union earlier. Attempting to gain political mileage from the situation is Christopher Cox, a Republican Congressman from California and the Chairman of the House Select Committee on U.S. National Security and Military/Commercial Concerns with the People's Republic of China (PRC).

The committee was set up in 1998 after disclosures that two U.S. aerospace corporations were under criminal investigation for providing data relating to rockets to China. Its full report, classified Top Secret, was released on January 3, 1999; a declassified version, the so-called Cox report, was released on May 25. The report accuses China of stealing nuclear secrets from the U.S. and using "elements of the stolen information" to build warheads for its new Inter Continental Ballistic Missiles (ICBMs). Among the specific systems listed are the W-70 enhanced radiation warhead (popularly known as the neutron bomb), the W-88 thermonuclear warhead, and the Minuteman II, the Minuteman III and the Trident C-4 missiles.

The Cox report received wide media coverage, both in the U.S. and elsewhere, including India. Less attention was paid to the responses it generated. After having issued various statements attacking the Cox report, China released an official document on July 15 entitled "Facts speak louder than words and lies will collapse by themselves". The issues raised by the Chinese official responses, as well as numerous critiques of the Cox report within the U.S., suggest that the Cox report and some of the allegations therein go beyond what was implied by available evidence.

Two questions need to be analysed. First, was China involved in nuclear espionage? Second, does information thus obtained give China a new, substantial capacity to design weapons that it was previously incapable of?

According to the Cox report, the answer to the first question is yes. The report states: "The People's Republic of China (PRC) has stolen design information on the United States' most advanced thermonuclear weapons."

There are many people who think that the Cox report goes beyond what the evidence would suggest. For example, John Spratt, a Democrat in the House of Representatives and one of the members of the Cox committee, called the charge a "sweeping" one. Spratt criticised the haste with which the report was produced and said that his objections to some sections of the report were not taken into account.

KARIN COOPER/AP

Christopher Cox, Republican Congressman and Chairman of the House Select Committee on U.S. National Security and Military/Commercial Concerns with People's Republic of China.

The sweeping nature of the charges is also clear from another example. The report claims: "The stolen information includes classified information on seven U.S. thermonuclear warheads, including every currently deployed thermonuclear warhead in the U.S. ballistic missile arsenal." Spratt maintained that "the select committee did not find evidence that China obtained design information on all our (that is, the U.S.) most advanced nuclear weapons."

It would not be surprising if China, like most nations with nuclear ambitions, does indulge in nuclear espionage. But to prove it is another matter. Certainly nobody in either country has stepped forward and admitted to spying. Even Wen Ho Lee, who was fired from the Los Alamos laboratory for security violations, was not charged with any crime; he denied being involved in espionage (*Frontline*, June 18). Thus, it is difficult to conclude from public reports whether or not China stole classified information.

What is worth noting is how the U.S. obtained details about China's nuclear arsenal and plans. According to William Broad of *The New York Times*, details about Chinese weapons designs became clear only after "a Chinese nuclear expert who had been recruited to spy for the United States delivered an intriguing report to his American handlers". In other words, the U.S. got this information through its own espionage networks – what is diplomatically termed "intelligence". The U.S. has an annual intelligence budget that is estimated at $30 billion (the actual sum is classified), and for it to talk of Chinese espionage amounts to the pot calling the kettle black.

With regard to the second question, it is important to remember that China has worked on nuclear weapons for decades. China's first hydrogen bomb test came less than three years after its first atom bomb test. In comparison, the United Kingdom took over five years, the Soviet Union over six years, the U.S. over seven years and France nearly nine years to test a hydrogen bomb. While the Soviet Union helped with technologies to produce fissile material, the break between the two countries occurred in part owing to the Soviet Union's refusal to transfer nuclear weapons designs to China.

The first hydrogen bomb test – the mike test – by the United States.

Some U.S. scientists who have visited Chinese weapons laboratories and talked to their counterparts also attest to the fact that the Chinese programmes are, for the most part, quite advanced. Harold Agnew, a past director of the Los Alamos nuclear weapons laboratory, found that in some cases Chinese capabilities were better than that of the U.S. As an example he mentions an advanced X-ray camera called the pinex for which the Chinese design was superior to the American one. Such evidence for the advanced nature of China's nuclear programmes has led some American critics of the Cox report to point out that Beijing, even if it did spy, has made major breakthroughs on its own.

Further, there is a lot of information on different aspects of nuclear weapons technology – including the weapons that China is accused of spying on – available in the public domain; much of this can be found on the Internet. When a set of weapons scientists with large financial resources and government support gain access to such information, even coarse details may suffice to suggest research possibilities for newer weapons designs. Making use of publicly available data as a guide to research cannot be considered espionage.

Even if China resorted to espionage, it is unlikely to have acquired complete details about any weapons system. Any espionage is more likely to yield in par- design tips and, perhaps, computer -s. But, as Harold Agnew wrote in a - to *The Wall Street Journal*, "No -on would ever stockpile any device based on another nation's computer codes." Thus, even if some classified data or computer codes from the U.S. had reached China, its scientists would still have had to do extensive research and conduct explosive tests in order to devise usable nuclear weapons based on them.

What is worth noting is how the U.S. obtained details about China's nuclear arsenal and plans... through its own espionage networks – what is diplomatically termed "intelligence".

The Cox report states: "With the stolen U.S. technology, the PRC has leaped, in a handful of years, from the 1950s-era strategic nuclear capabilities to the more modern thermonuclear designs." China may well be in the process of developing more modern thermonuclear designs, but this would not imply that it stole those designs from the U.S. Indeed, there is substantial evidence that China is working on a new, more modern range of missiles. A few months ago, China conducted a test of the DF-31, a mobile ICBM. There are at least two reasons to expect it to work on such missiles and deploy them.

The first is that current Chinese ICBMs are large and cumbersome. Hence they may not survive a pre-emptive nuclear attack by, say, the U.S. Smaller mobile missiles that are more easily hidden require modern, miniaturised warheads, the kind that China is believed to have tested in the 1990s. The second reason stems from institutional pressures. Nuclear weapons laboratories derive their rationale for existence and financial support from developing new or modified weapons designs. Chinese weapons laboratories, therefore, are likely to push for modernising the arsenal to further their own institutional goals. In this process, they may well use any information that may become available from spying. Nevertheless, with China signing the Comprehensive Test Ban Treaty (CTBT), it would be difficult, if not impossible, to verify adequately any new designs that weapons laboratories may develop from now on.

What is worth noting is that these modernisation programmes have had long gestation periods. This suggests that the Chinese government does not place a high priority on developing these missiles. Once again, there are reasons for this low priority, and for the assumption that even if the weapons laboratories did develop more modern missiles, China would not deploy them in large numbers.

China adheres to a no-first-use policy, which means that it will use nuclear weapons only if attacked by nuclear weapons. Given such a policy and the relatively small size of its arsenal, estimated at around 400 warheads with only about 20 ICBMs capable of reaching the U.S., the Chinese strategy is to target cities rather than missile silos and other military sites. It matters little whether a large nuclear weapon explodes in the centre of Los Angeles or Moscow, or whether it explodes 2 km from the centre of the city. In either case, hundreds of thousands of people will die.

Unlike China, U.S. and Russian strategies involve localised hardened targets like missile silos. This requires highly accurate missiles like the Trident with high-yield warheads. Such accuracy, however, comes at a price. The re-entry vehicle of a very accurate missile has to be extremely narrow so as to reduce the

impact of high winds that may buffet the missile as it re-enters the atmosphere. This necessitates one of two requirements. One is to keep the warhead away from the tip and add ballast in front of the warhead so as to prevent the re-entry vehicle from tumbling as it re-enters the atmosphere. This, however, leads to a loss of payload capacity.

The alternative is to develop a warhead that is small enough to fit close to the tip of the missile. One of the special features of the W-88 warhead that is employed on Trident missiles, for example, is that its primary fission explosive (that ignites the secondary fusion explosion) is not spherical and can be placed near the tip of the missile.

Developing such a small warhead would, even given China's level of technological prowess in this field, require major advances, especially in manufacturing the supplementary parts that go with a warhead, the fuses, electronic components and so on. According to Richard Garwin, a physicist who has had extensive experience in nuclear weapons work, these technologies may be more of an impediment than the explosive parts themselves. *(Frontline,* July 16, 1999). In his judgment, therefore, "even if China were confident that it had every detail of the W-88 and its Mk-5 re-entry vehicle, it would not reproduce the weapon."

China has worked on nuclear weapons for decades... Some U.S. scientists who have visited Chinese weapons laboratories attest to the fact that the Chinese programmes are, for the most part, quite advanced.

On the "enhanced radiation" weapon (the so-called neutron bomb) design that China is accused of stealing, Chinese officials claim that work on it started in the late 1970s and achieved success during the mid-1980s. Indeed, in 1988, *The Washington Post* had reported that China had tested a "neutron bomb" design. This indicates that China may not have had to rely on espionage as the Cox report suggests. Nevertheless, at a recent conference in Shanghai, a senior Chinese weapon scientist said that such bombs were not deployed because they were not suited to the country's military plans. Once again, institutional pressures from weapons scientists rather than any initiative from the armed forces may have been responsible for the 1988 test.

The signs of vested interests are evident all over the Cox report and the media hysteria over it. Two such interests are obvious. Clearly the Republican Party welcomes anything that can be used against President Clinton and his administration. And, with the collapse of the Soviet Union, the defence establishment has been left without a major enemy; China provides the best substitute.

Unlike the case of the Soviet Union during the Cold War, however, the U.S. has strong business interests in China. These are behind sections of the U.S. government and business community arguing for an "engagement" with China. U.S. policy towards China will ultimately depend on how the conflict between these two camps is resolved. As of now, the report has damaged relations between the two countries, but only to a small extent.

In the final analysis, the Cox report and the brouhaha surrounding it says more about the current climate in the U.S. than it does about China. It comes at a time when high levels of military expenditure and exorbitant, technically ineffective programmes such as Ballistic Missile Defence are sought to be rationalised by invoking threats of irrational "rogue nations". Alongside this is the bogey of a new peril from terrorism, based on a presumption that there are "others" who are unethical and fundamentally opposed to the U.S. Feeding indirectly on such images, the Cox report's allegations about espionage adds to the sense of the U.S. being under threat, internally and externally.

In such a milieu, one effect of the report is likely to be a curtailment of civil liberties and scientific freedom, especially when it comes to foreigners, within the U.S. And, if the supporters of the report and its message, including nuclear hawks of many stripes, have their way, these allegations would be used to decelerate the already slow pace of nuclear disarmament. If that happens, the world will continue to remain within the confines of the nuclear prison. ■

The real story. Every time

Distinctive landscapes

In recent times, the work of Venkatappa, the painter from Mysore, has received relatively scant attention. A fresh look at the artist's technique.

HANS MATHEWS

IN his time and place the painter Venkatappa was thought to be a great artist But history seems not to have favoured him An account of 20th-century Indian painting written today would very likely pay scant attention to his work, finding more interest in the man himself, and in the circumstances of his life

He was long attached to the court of the royal ruling family of the Wodeyars in Mysore where he was not always or entirely accepted on his own terms, as an *artist* rather than a 'mere artisan (as his painter-father had been in the Wodeyar palace) Later in life, having fallen foul of the Maharajah, Venkatappa's 'independence' and care for his 'dignity' as an artist made him a cultural hero, so to speak, to the Kannadigas of a newly independent India (An essay by Janaki Nair in the *Indian Economic and Social History Review* (35, 2, 1998) last year looked rather closely at this)

Whether or not Venkatappa's painting itself should get much attention from the historian is a delicate question Were the pictures to be set beside the work of contemporaries such as Nandalal Bose – or the younger Benodebehari Mukherjea's Darjeeling landscapes, say – we would not know, off the cuff as it were, just how to value them as examples of *art*

Nandalal and Venkatappa were both prized students of Abanindranath Tagore, and both in their early work built on their teacher's manner to produce fine samples of the Bengal School of painting But Nandalal, after he went to Santiniketan at Rabindranath Tagore's urging, developed into a versatile painter, capable of drawing from a range of pictorial traditions, and what Nandalal did at Santiniketan prepared the ground for

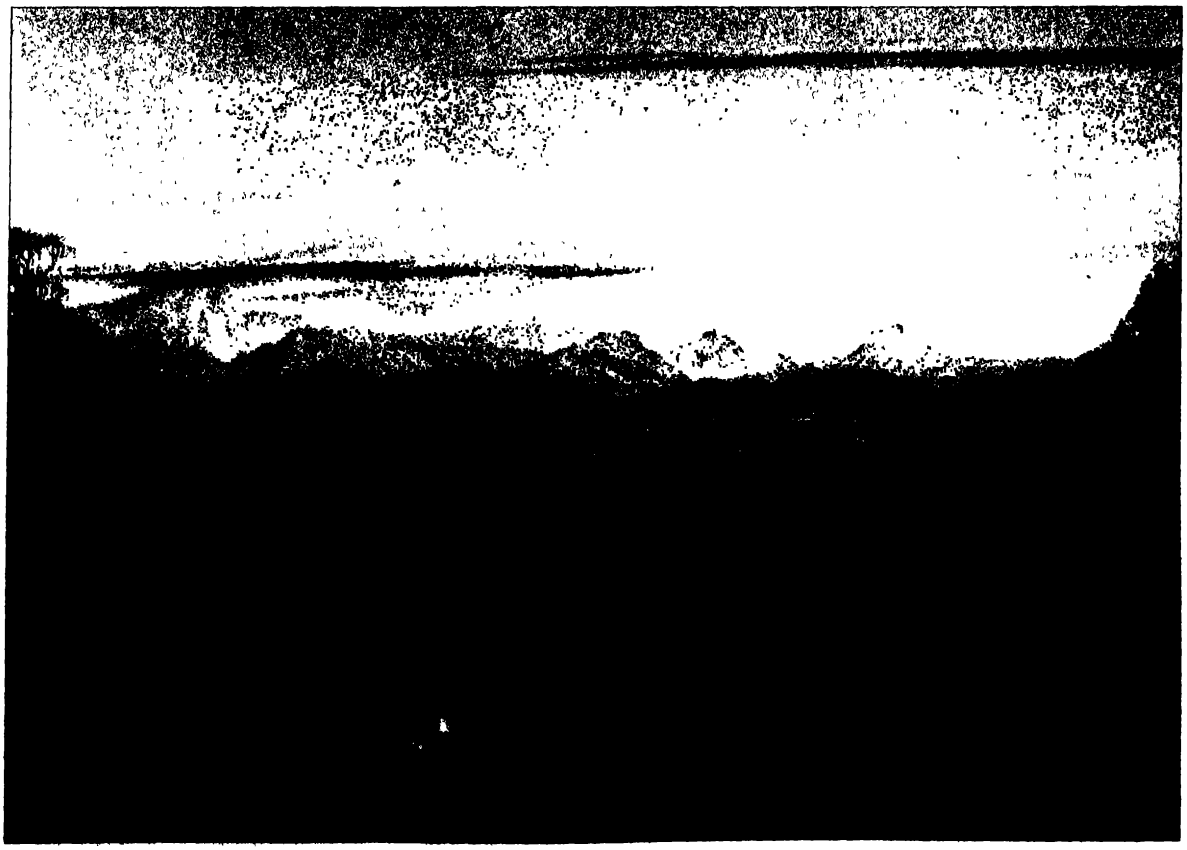
"Reflection, Ooty Lake" (1926).

a specifically Indian modernism (which, spurred by Rabindranath's pictorial experiments perhaps, emerges in the work of his students Ramkinkar Baij and Benodebehari Mukherjea).

No such distinction can be claimed for Venkatappa, who came straight back, from the larger world of the Tagores in Calcutta (in which he had found a place as Abanindranath's gifted pupil), to the rather constricting culture of the Wodeyar palace; and though he made a new place for himself there as an artist, the painting that secured him his position does not impress much anymore.

Two examples of that work can still be seen at the Jagan Mohan Palace in Mysore: a picture of Ganesha receiving *puja,* and the once-famous Mad after Veena. The painting here has a strange feel; a touch at once fastidious and febrile (although the latter is not the best word). And though the Bengal School impulses are clearly at work, these pictures hold the eye in ways the 'revivalist' look of most Bengal School paintings does not.



But they do not interest enough, really, to figure as more than curiosities in the story of how Indian painting develops through this century; and it looks as if one could not say much more of the painting reproduced here either (though Venkatappa himself valued his landscapes highly, refusing to sell them and consenting even to show them only to those whom he considered discerning viewers).

One could venture to say, in fact, that Venkatappa's view of the Ooty lake tries to put to its own uses the sorts of visual habit photography was beginning to induce.

These pictures are apt to strike our eyes as very competent now – and sometimes marvellously crafted, as the view of the Ooty lake is – but little else; and if you went today to the Venkatappa Gallery in Bangalore to see its collection of landscapes, you would very likely come away with nothing more than the pleasure any display of consummate skill produces.

SOME of these works are worth a closer look, though: as samples of early 20th-century watercolour and tempera landscape painting in India, if nothing else. By putting things so – stressing place, period, medium and genre – one means to suggest that watercolour and tempera landscape, in the Indian art world of the 1920s and 1930s (when these pictures were painted), might have served pictorial purposes that we no longer pursue: and perhaps cannot even recognise now, given how modernist practice has shaped our ways of looking at art.

Our view of the Ooty lake does not bear any of the usual marks of modernist

"Dawn", Ooty (1929)

"Sun Rise," Ooty (1926).

painting. It does not draw attention to facture, or acknowledge the *flatness* of the surface on which it is painted, or in any evident way suggest that the painter wants his picture to do very much more than *relate visual fact*, let us say, in as convincing a way as his medium will let him. How this picture *depicts* its bit of the visible world, using the special resources of watercolour, *represents* that bit of the world *as it would appear*, one might say, to an observer with normal sight on a clear day: or so it seems. (A painting which depicts an object can – within the limitations of its medium, depending on how that medium has come to be used – try to represent that object as it would normally look, in a certain light and so on, without trying to make the image *itself* look *exactly like* the object: without trying to fool the eye into taking the image for the object, that is to say, in the way a mirror might.

Understood so, as an example of naturalism, Venkatappa's picture of the Ooty lake could not be thought to be modernist at all, of course: because the desire for aesthetic autonomy – which is supposed to have driven modernist painting forward to disclose more and more perspicuously the essence of painting as an *art* – would be entirely absent. But this is only one reading of modernist work (and a caricature, actually, of the Formalist understanding of it); and however usefully it might apply to Europe or America, Indian modernist painting might well have to be limned in different terms (because, for one, the desire for autonomy – if it did emerge here – would probably not have worked itself out as a Formalist expects.)

IT might be better at this point to put aside these sorts of questions and look as directly as one can at the painting itself. One thing that surprises is the way this picture *sends* the eye over the scene it shows: the eye's motion acquires an even *velocity*, so to speak – which watercolour landscape does not usually allow. There would be many formal causes for that, of course; but, given that this picture was painted in 1926, one is prompted to think that the growing presence of photography would be a formal factor here.

One could venture to say, in fact, that Venkatappa's view of the Ooty lake tries to put to its *own* uses the sorts of visual habit photography was beginning to induce. It would be hard to characterise those habits now, given how the development of photography through this century has formed *our* visual habits (which, for example, now enable a black and white photograph, by not being in colour, to have effects of a kind it could not have had in the 1920s). But what this picture does with our eyes does warrant what has just been claimed.

One should try next to indicate what this picture's 'own uses' might have been for Venkatappa; and that again is difficult. We could begin by noting the two ways of employing watercolour which Venkatappa could best understand: which were, first, the already mentioned Bengal School's 'revivalist' practices; and, second, the very particular ways of English watercolour landscape.

Both modes of painting seem to have attracted Venkatappa; and in other works from the same year we see him trying to balance the very different formal

"Bear Shola Hills and Bryan's Park", Kodaikanal (1934).

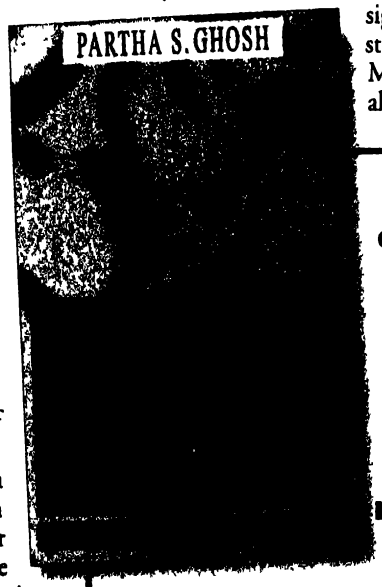
demands they make. One could set the pictures titled "Dawn", "Sun Rise" and "Twilight" next to one another to see how. "Dawn" is conspicuously English; while line and colour in "Sun Rise" is more 'revivalist' (but awkwardly so: the detailing of the silhouetted tree only distracts the eye). In "Twilight", however, a satisfying formal synthesis has been achieved.

When it is set beside these works we can see how our view of the lake attempts something novel; and what was claimed for it above should seem more plausible now. One could even hazard saying that Venkatappa is trying here – by, as it were, 'reflecting' his picture 'off' photographed landscape – to refine or extend certain formal possibilities that watercolour painting itself offered him at that point in time.

One would have to reach, of course, to defend this claim. But there are details that help: certain choices that were made, for instance. Look at the straight trunks of the trees at left; they could as well have been angled in individual ways. That would have rendered the picture more 'scenic', perhaps in the way photographed landscapes of the time could be; but as such the picture would probably have made the eye 'swim' too much in its space. As they are, the straight trunks subtly steady the eye's motion across the picture: and one might suppose then that the work managed to 'poise' in some unusual way those who, among its first beholders, were familiar with watercolour landscape.

This is the sort of thing at any rate that makes one think that Venkatappa is using photography as he was just said to be (rather than painting a picture which would lead the eye as 'naturally' as a photograph might). But to make such claims good one would have to see whether, and how, Venkatappa continued to make use of the visual habits photography might induce; and that would not be easy to do, given how the later landscapes look.

There is a little room to work: one could, for instance, take the two Panoramas of 1929 (one of which is 'natural' and 'English' in ways the other is not, with its 'heightened' colour and its oddly formed clouds) and set them beside the rather differently 'lit' "Bear Shola Hills and Bryan's Park", Kodaikanal of 1934. But the pictures that come after these do not encourage us to go on: and we are tempted to conclude that Venkatappa too soon left off trying to exploit the photograph formally.



Whatever has been claimed for Venkatappa here will not be enough to make him a principal character in the story of 20th-century Indian painting (however that is told). But perhaps what has been said can serve to draw attention to the painting again, in ways that acknowledge his particular gifts. ■

Neither wave nor saffron?

A. G. NOORANI

BJP and the Evolution of Hindu Nationalism: From Periphery to Centre by Partha S. Ghosh; Manohar; pages 460, Rs. 800.

AFTER the French scholar Christopher Jaffrelot's classic *The Hindu Nationalist Movement in India* (1996) and the Danish scholar Thomas Blom Hansen's erudite and incisive work *The Saffron Wave* (1999), we have an Indian academic addressing himself in equal earnest to the two questions on which they had laboured. How did the Bharatiya Janata Party manage to travel from the periphery to the centre of Indian politics – from two seats and 7.68 per cent votes in the 1984 Lok Sabha elections to 86 seats and 11.5 per cent votes in the 1989 Lok Sabha elections? The answer is obvious and was provided repeatedly by one of its leaders L. K. Advani; namely, its Ayodhya movement, launched on the basis of the Palampur resolution of 1989 on the eve of the general elections. That, however, is a formal answer. The considerable transfer of votes would not have been possible but for an ideological affinity between the BJP and some leaders and workers in other parties, chiefly the Congress(I).

The book is one of the most objective and impartial works by an Indian scholar of integrity and dedication who has brought together a mass of useful material enlivened by candid appraisals.

The second question is whether the so-called "saffron wave" is receding and, relatedly, whether the BJP is shedding its ideological baggage. The answer to the first part will be provided in the election results. Rashtriya Swayamsevak Sangh chief Rajendra Singh's revival of the triple mosque issue recently – Ayodhya, Mathura and Varanasi – shows that the RSS has not changed one bit. Nor has the BJP. Advani said emphatically in Bhubaneswar on September 19 that "there is no question of giving them (triple demands) up. Only deference is being shown to the sensitivities of the coalition partners.

Partha Ghosh has worked hard to collect data and ranges wide in his work to make it a useful source of reference on the last decade of India's politics generally, besides the communal situation. The book is marked by excessive reliance, generally, on secondary sources and a lack of rigour in analysis in many places. Ghosh rightly points out that "distortion of history in school texts is not a phenomenon peculiar to the BJP. In the 1950s and 1960s, when the Bharatiya Jana Sangh (BJS) was nowhere in sight of power even in strongholds such as M.P. and Rajasthan, let alone the Centre, there were complaints of distortions of history. Textbooks in circulation in the Hindi-speaking States as well as Gujarat and Maharashtra were heavily loaded in favour of India's Hindu past and against Muslim rule. When this question was raised in Parliament in 1966, a committee consisting of K. G. Saiyidain, J. P. Naik, Gopinath Aman and others was appointed to look into the matter. The committee reported that there was substantive evidence in the allegations that there was a Hindu bias in the textbooks of certain States and that historical events were "presented in such a manner as to arouse and perpetuate prejudice against certain religious groups. Besides, 'the books were overweighed with Hindu mythology,' the literary texts were full of 'prayers to Hindu deities' and 'Hindu beliefs are presented in a manner as if they are universally held by all Indians.'" The footnote at the end of the paragraph (page 240) does not cite the committee's report but a book which mentioned its findings. Opinions are quoted at length, and they are not always from ones known for expertise in the matter under discussion.

"Was Partition avoidable?" the author asks and cites the opinions of four writers of varying equipment without leaving the reader any the wiser as to his own views. Elsewhere, he expresses his views plainly enough.

These blemishes detract from the quality of the work but do not affect its essential worth. It is one of the most objective and impartial works by an Indian scholar of integrity and dedication who has brought together a mass of useful material enlivened by candid appraisals. At places they are wide off the mark. "Unlike majority (sic) Hindus, who wanted to wrest their rights through a political struggle with the British, the minority Muslims chose to do the same by aligning with the British. Even Sir Syed Ahmed Khan, the father of Muslim modernisation in India, subscribed to this line of argument." Apart from the inappropriate characterisation ("line of argument"), Sir Syed was *the* foremost advocate of this policy. It was opposed with compelling logic by Badruddin Tyabji, then Congress president, and also by a substantial body of the *ulema*. Maulana Abul Kalam Azad belonged to this school. The Sir Syed-Tyabji correspondence is very relevant to the situation of Indian Muslims today (For the text, see the writer's *Badruddin Tyabji*; Publications Division, 1969).

There is one formulation that raises an important issue: "Religion played an important role in the growth of Indian/Hindu nationalism and Muslim separatism." The amazing stroke (Indian/Hindu) apart, Hindu nationalism is surely no less "separatist" and a

lapse from Indian nationalism than Muslim communalism is. One is reminded of Jawaharlal Nehru's remark on January 5, 1961 that "the communalism of a majority community is apt to be taken for nationalism." How right he was. Serbian "communalism" proved "separatist" and wrecked the Yugoslav federation constructed by Tito, a Croat. Not every Congressman shared Nehru's outlook. Morarji Desai had no hesitation in declaring at the National Democratic Convention in New Delhi on November 29, 1964: "The Hindu majority is clean-hearted and fair minded. I cannot say the same about the majority of Indian Muslims" (*The Hindustan Times*; November 30, 1964).

The two-nation theory was first propounded by V. D. Savarkar in his essay 'Hindutva' in 1923. In his presidential address to the Hindu Mahasabha in 1937 he amplified the theory: "There are two nations in the main, the Hindus and the Muslims in India." He rejected "the conception of Territorial Nationality not cemented by any Cultural, Racial or Historical affinities and consequently having no common will to incorporate themselves into a Nation". This doctrine of "cultural nationalism" was echoed by RSS chief M. S. Golwalkar in his *Bunch of Thoughts* (1966) and was ardently reiterated by the BJP in its election manifesto of 1998. A whole chapter is devoted to "Our National Identity: Cultural Nationalism". It asserts that "the cultural nationalism of India... is the core of Hindutva". The BJP astutely decided not to issue a separate manifesto in 1999 for fear of upsetting its gullible allies. Its 1998 manifesto is tacitly affirmed. It has not been abandoned, as Advani's speech on September 19, 1999 makes clear.

The origin of Mohammed Ali Jinnah's two-nation theory bears recalling. In an article published in *Time and Tide* (London) on January 19, 1940, he said: "A Constitution must be evolved that recognises that there are in India two nations, who both must *share the governance of their common motherland.*" This implied power-sharing in a *united* India, not its partition. The point was also made earlier in the article which rejected "unqualified Western democracy" and insisted that "all Governments, Central or Provincial, must be Governments that represent all actions of the people". On his part, "in evolving such a constitution" Jinnah was prepared to cooperate with the Congress "so that the present enmities may cease and India may take its place amongst the great countries of the world."

If only two months later, on March 23, 1940, he got the Muslim League to adopt the Pakistan resolution, it was, as is widely realised, as a bargaining chip. On December 20, 1986, the Liberation Tigers of Tamil Eelam spokesman in Chennai told *The Sunday Observer* that it would accept a "viable alternative" to Eelam if it was made possible for "two nations to co-exist in our country".

Jinnah's intellectual equipment on this subject, like that of most lawyers, was limited. The concept of "consociational democracy" was articulated by Arend Lijphart in his book *Democracy in Plural Societies* (1982). In 1996 he noted that while "inter-group hostility and violence have increased" in India, it has adopted some elements of his concept. ("The Puzzle of Indian Democracy: A Consociational Interpretation"; *American Political Science Review,* June 1996).

But power-sharing was precisely what most in the Congress and all in the Hindu Mahasabha were opposed to. Hence, the ungenerous Motilal Nehru Report (1928). One of the finest political minds in the country and also a man of sterling integrity, Prem Bhasin, formerly general secretary of the Praja Socialist Party (PSP), alluded to the latent reality in *Janata,* a journal founded by Jayaprakash Narayan (Annual Number 1998). He wrote: "The ease with which a large number of Congressmen and women – small, big and bigger still – have walked into the RSS-BJP boat and sailed with it is not a matter of surprise. For, there has always been a certain affinity between the two. A large and influential section in the Congress sincerely believed *even during the freedom struggle that the interests of Hindu Indians could not be sacrificed at the altar of a united Independent India.*" He named two stalwarts, Madan Mohan Malaviya and Lala Lajpat Rai, explicitly; Vallabhbhai Patel, haltingly. This group *preferred* partition to power-sharing in a united India. Lala Lajpat Rai had in the famous article in *Tribune* (December 14, 1924) proposed a partition of Punjab on communal lines (emphasis added, throughout).

None of this can excuse the havoc Jinnah wrought. When discussing the Indian Finance Bill (1925), he stated on the floor of the Legislative Assembly: "... I, Sir, stand here with a clear conscience and I say that I am a nationalist first, a nationalist second and a nationalist last... I once more appeal to this House, whether you are a Mussalman or a Hindu, for God's sake do not import the discussion of communal matters into this House, and degrade this Assembly, which we desire should become a real National Parliament. Set an example to the outside world and our people!" When, in 1940, he endorsed the poisonous two-nation theory and demanded Pakistan, he ought to have known that he was playing with fire.

Partha Ghosh has no hesitation in tracing the lineage of the BJP to the old Hindu communal constituency which came into being in the 19th century. Bitterness in the aftermath of Partition gave it an edge. It existed, however, for years earlier. This school would also have flourished even in a united India, along with its Muslim counterpart. Secularists in both communities would have fought jointly against them. The pass was sold by secularists in both the Congress and the Muslim League. The BJP has profited by it in India, as has the Jamaat-e-Islami in Pakistan. (On the lineage vide B. R. Purohit; *Hindu Revivalism and Indian Nationalism*; Sagar, Sathi Prakashan; 1965). It is the minorities in both countries who bore the brunt of Partition.

Partha Ghosh does a fine job, as only a scholar of strong secular commitment would, exposing thoroughly the bogey of "the pampered Muslim" with a wealth of data. Muslims constitute about 13 per cent of the Indian population but are grossly underrepresented in jobs, professions and education even fifty years after Independence.

"The National Sample Survey of 1988 provides the following figures: (1) A total of 52.3 per cent Muslims are below the poverty line (BPL); (2) the monthly income of Muslims is only Rs. 150; (3) 50.5 per cent Muslims are illiterate; (4) Muslims educated up to high school are 4 per cent; (5) in government services their share is 4.4 per cent; (6) for starting any business enterprise 3.7 per cent Muslims got financial loan; (7) 5 per cent of Muslims got bank loans from the scheduled banks; (8) among Indian entrepreneurs who get industrial loans, only 2 per cent are Muslims. Male illiteracy among the Muslims is 42.4 per cent compared to 25.3 per cent among the Hindus. The corresponding figures of female illiteracy are 59.5 and 45.2, respectively. Less than 1 per cent (0.8)

Muslims are graduates while 4.5 per cent Hindus are."

In Central government employment, Muslims account for 4.4 per cent. Only 3 per cent of Indian Administrative Service officers are Muslims. Muslims are underrepresented in the police force. It will be long before anyone will think of reforms on the lines of those suggested in Chris Patten's recent Report on the Royal Ulster Constabulary (RUC). Catholics comprise 43 per cent of the population of Northern Ireland. The RUC is 92 per cent Protestant (*International Herald Tribune;* September 10, 1999).

Contrary to the BJP's propaganda, there is no monolithic Muslim votebank. The Muslim in Tamil Nadu, for instance, might perceive the situation differently from his counterpart in Bihar or West Bengal.

The author has not confined himself to the BJP's political agenda. He has also analysed its foreign policy and economic policy. He provides an interesting quote from Atal Behari Vajpayee's speech in May 1978 as Minister for External Affairs at Jawaharlal Nehru University. "The only way to prevent proliferation of nuclear weapons is to bring about complete cessation of the production of nuclear weapons and simultaneously cut off the manufacture of all weapon-grade fissionable material. There can be no doubt about India's policy. We have set an example by abjuring the manufacture or acquisition of nuclear weapons. We have pledged ourselves to developing nuclear technology exclusively for peaceful purposes."

The chapter containing the conclusions is sparse in analysis. "The moot question is, now that the BJP has come to power, if it would mean the takeover of political power by Hindu zealots with the collapse of the inter-communal social fabric of India. BJP is a Hindu communal party but its communalism has limits. The same Advani who talks about Hindutva with so much aplomb castigates the Shiv Sena for its naked Hindu aggressiveness when the latter defeats his party at the Aurangabad municipal polls. As a political party with national ambitions BJP knows that mobilising religious sentiments from a position of responsibility is quite another."

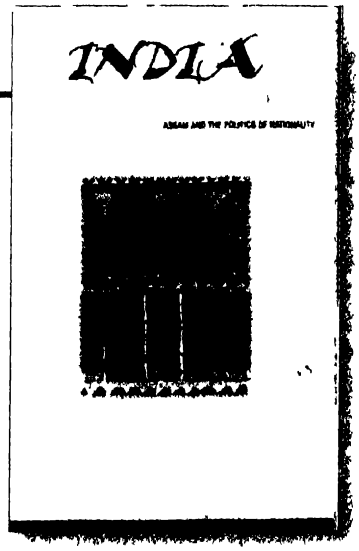
The author does not deign to reflect on the RSS factor. The limits to the BJP's features are set by the RSS and no less by the outlook of its leaders who are the products of its upbringing. Advani has demonstrated that. ■

■ **BOOKS**

Of State and nationalism

M.S. PRABHAKARA

India Against Itself: Assam and the Politics of Nationality by Sanjib Baruah; University of Pennsylvania Press, Philadelphia, 1999; pp xxiii + 257, $36.50.



COMBATIVE and polemical in its tone and substance, this passionately engaged but dense narrative challenges the received concepts of the State and Nationalism as articulated in Indian nationalist discourse – a structure and an idea invested with an immaculate, eternally valid and near-mystical properties. The narrative does not claim to be, and indeed is not, a dry, impersonal and normatively detached academic exercise either. On the contrary, the author makes clear in the introductory chapter his committed engagement as an "interested and implicated observer". Baruah is indeed deeply involved personally and professionally in the memories and experiences of his narrative – as an "ethnic Assamese" (a term he says he is uncomfortable with even while using it) at a personal level, and as a political scientist teaching in the United States at the professional level.

The focus of the narrative is the Brahmaputra Valley, historically the core of Assam. However, the narrative also touches on the peripheral areas of this core which once formed a part of what one might call the "geographical Assam". These peripheral areas were politically, economically and culturally in varying degrees of proximity and distance from the core, the relations marked by amity or hostility or indifference and ignorance. Indeed, the present problems plaguing Assam cannot be understood except in the context of the historical process of the changes in the very physical contours of Assam. A crucial element of these changes which has a bearing on the present situation is the widely shared perception among the majority of ethnic Assamese that they have only been passive spectators, if not the pre-destined victims of conspiracies hatched by foreigners and outsiders which they could barely comprehend, of these developments which have fundamentally affected their land and their history, their past and their future.

Chapters 2 to 5 dealing with the geographical and territorial background of the growth of Assamese nationalism delineate these changes and the underlying rationale of both the colonial regime and independent India. The process involved an artificially imposed enlargement of the territory of the Province of Assam by the colonial regime and, since Independence, an insensitively imposed process of progressive dismemberment of the State of Assam. Integral to this process was migration into Assam, the last land frontier providing opportunities for those enterprising enough to seize them, and its inevitable impact on the demography of the region. These developments have posed grave challenges to the concept and, even more importantly and irrespective of its "empirical validity", the self-perception of the Assamese as a distinct and internally coherent people, a nationality within the broader framework of a pan-Indian civilisation and the Indian nation-state, a *jati,* and to use Baruah's expression, a "sub-nation". (The Assamese word *jati,* meaning a people and a nation, has a significance going far beyond the relatively restricted meaning the term has in other Indian languages.)

THESE chapters together chart the historical and ideological terrain which provided fertile ground for the anti-foreigner agitation in Assam. A notable feature of the narrative is that it brings together diverse themes from sources which one would not normally tap, as for instance, the interesting analysis of the songs of Bhupen Hazarika, to reinforce some of the arguments and to weave together the complex political and ideological landscape in Assam and the rest of northeastern India, where received notions and ideas of nation, nationality and sub-nationalism continue to be in contestation.

What one misses, however, is an equally in-depth treatment of the economic issues of development and underdevelopment that have contributed to the tensions. Indeed, the argument about the failure of the centralised Indian state and, concomitantly, of the necessity of a federal arrangement to overcome the tensions between the nation-state and disaffected nationalities (or sub-nations) overemphasises the organisational features of the Indian dilemma and fails to look at the far more serious structural weaknesses arising out of unequal relations of production and distribution. The sharp and telling analysis of the superstructural contradictions and weaknesses does contrast with the relatively weak treatment of the corresponding contradictions in the sub-structural material base.

The real subject of the book is the larger dilemma postulated in its very title – India Against Itself. This is a dilemma that is self-evidently as much an Assamese dilemma as an Indian one.

The rest of the narrative deals with the agitation itself, and the other ideas and forces that are causally related to the Assam agitation. The challenges posed by the insurgencies in the core territory of Assam by the United Liberation Front of Asom (to India) and by the Bodo agitation (to Assam and in its later stages, to India) and together to the neatly contrived concepts of sub-nationalisms of India's States and less well-defined regions and peoples existing in manageable and manipulable relations of violently articulated tension and understated complicity with the great nationalism of the Indian nation-state are yet to be resolved. Implicit in the analysis is the belief that even if these were to be eventually managed, the issues raised will not disappear and are likely to take fresh forms and manifest themselves in other areas.

The above is a necessarily selective summary of the themes of the book. However, its real subject is the larger dilemma postulated in its very title – India Against Itself. This is a dilemma that is self-evidently as much an Assamese dilemma as an Indian one in that the various people of India, even those whose repudiation of Indian nationhood is apparently absolute, continue to negotiate, sometimes in violent confrontation and sometimes by making openly opportunistic deals – the two processes are not mutually exclusive – a working arrangement to live together in that necessarily flawed structure, the nation-state of India.

Is that admittedly flawed structure worth defending? Does it, can it, engage its citizens in any reasonable dialogue? Setting aside the Indian dilemma, is the very concept of a nation-state, what Baruah characterises as the "contingent and contested nature of nations and nationalities", and the dismissively derided process of "nation-building" in societies that have emerged from centuries of colonial rule worth one's loyalty? Can a nation-state sustain itself without the ideological prop of aggressive and exclusivist nationalism? Is there a necessary dichotomy between "nations" or "peoples" on the one hand and the "nation-state" on the other as categories that have a right to self-determination, that holy Wilsonian cow which is lined up with remarkable selectivity only when existing post colonial states striving to consolidate themselves as nation-states are confronted with separatist movements?

Formulations on the "declining relevance" of the nation-state inform the argument of this narrative throughout. Linked to this is the sharp criticism of "nation-building" both as an envisaged objective and as an operational exercise. Given the fact that India and Assam is the theme of the narrative, it is perhaps natural that the criticism in this regard is made only in respect of these processes as they are at work in nation-states that have emerged from colonial rule. The obverse side of Baruah's often valid criticisms of unilaterally imposed exercises in "nation-building" is the process of re-colonisation that is also at work in these entities, often with the complicit support of civil society structures and non-governmental organisations heavily funded by the West. This broader agenda which stares one in the face when one sees them at work in societies ravaged by war and starvation, appears never to have been questioned.

Not to put too fine a point on it, the single minded objective of the U.S., the one and only imperial power since the end of the Second World War, has been the effective debilitation of other nation-states – except of course of itself and those under its wings. Even in the latter case, a weakening is sought, although this is problematic, as is evident in the rivalries among the U.S., the European Union and Japan. The major part of the task was accomplished with the destruction of the Soviet Union and the dismantling of the "existing socialist states" of Eastern Europe. Unlike earlier battles, this battle has not directly involved weapons of war and the physical occupation of defeated territories. Rather, apart from the systematic subversion and appropriation of international instrumentalities like the United Nations and the World Trade Organisation (WTO) to serve the national objectives of the U.S., the most effective weapons have been ideological and technological ones – the beguiling promises and visions of consumerism and the so-called liberalisation and globalisation.

This is not to question the destructive, even self-destructive, potential of nationalism. An Indian scarcely needs to be reminded that the culmination of the national struggle was as much national independence as national slaughter. Indeed, the current ascendancy of Hindutva nationalism can be causally linked to the symbols and forces mobilised during the national struggle. However, to argue that the excesses of rampant nationalism of the Indian state in northeastern India could have some-

how been mitigated if only the Indian polity had a working federal system, seems such an inadequate remedy to the horrors the narrative has delineated with such passion. Only the wilfully blind can fail to see the horrors and cruelties perpetrated by the very structures and organisations and individuals, who, while themselves being victims of rampant nationalism of the Indian state, posit against it even more restrictive and exclusivist sub-nationalisms.

A key element of Assamese nationalist discourse is the position of the Assamese language in the province and the State of Assam at all points of its constitution and reconstitution.

One last point about Baruah's treatment of what he calls "cultural politics of language". A key element of Assamese nationalist discourse is the position of the Assamese language in the province and the State of Assam at all points of its constitution and reconstitution, and the contested relations between Assamese and Bengali before and since Independence. The standard view of the "fears" about the future of the Assamese in their one and only homeland is that those who have migrated (or more accurately their descendants) into Assam from former East Bengal (legal), former East Pakistan and present day Bangladesh (illegal) being Bengali-speaking would, over a period of time, outnumber the indigenous Assamese-speaking people, thus endangering the very existence of the people and their tongue.

Baruah cites the observation of C.S. Mullan, the superintendent of the 1931 Census in Assam, on migration into Assam of "land-hungry Bengali immigrants, mostly Muslims, from the districts of eastern Bengal and in particular from Mymensingh". The culmination of this process, envisaged in metaphors of war and invasion, would be that in another 30 years, it would not be improbable that "Sibsagar district would be the only part of Assam in which an Assamese will find himself at home". This reading has for long been a favourite text of Assamese nationalist discourse. It was also a constant in the polemics of the leaders of the anti-foreigner agitation. Baruah, however, notes that the critics of the agitation found Mullan's "fears" to have been misplaced. "Contrary to Mullan's mischievous prediction," Baruah quotes one such critic, "the entire East Bengal Muslim peasant community adopted the Asomiya language as their mother tongue."

It is surprising that the real nature of the "fear" of Assamese nationalists about the present and putative future identification of their home language is missed on both sides of this polemical divide. The fear is not that the descendants of erstwhile migrants will, at some point in the future, claim to be Bengali speakers, and thus reduce Assamese speakers to a minority in Assam. Rather, the real fear is that this section of the population, most of whom have been probably using Assamese for at least two generations, will not merely continue to speak the language but indeed claim it as their own, stealing away, as it were, a crucial cultural patrimony which defines the Assamese people. This is the significance of the inscriptions on the graves of those killed in the Nellie massacres of the 1983 elections – the overwhelming majority of whom were of East Bengal origin – being in Assamese.

Incidentally, and as seen from the perspective of this reviewer from his present domicile, similar are the "fears" of the Afrikaners in South Africa about the future of Afrikaans under a democratic dispensation and without the kind of state and official patronage it enjoyed under apartheid. However, the real "fear" is not about the future of Afrikaans as such, but that the language, like so many other claimed symbols of Afrikanerdom cherished as the unique patrimony of the white Afrikaner, is being taken over, used or abused in vibrant and independently creative ways by other people who, despite their historic contribution to the growth and development of Afrikaans had been despised and made outcasts under apartheid. Closer home, one thinks of the condescension with which a creative endeavour by Bengali Muslims used to be greeted not so long ago by those who too viewed Bengali language as their own unique and exclusive patrimony. How things have changed! For, if Bengali as a language and literature has any future at all in the long run, it will have to be in Bangladesh, where it is the national language, unlike in India, where it is only one of several. ■

■ BOOKS

SUSAN RAM

Interpreter of Maladies by Jhumpa Lahiri; Flamingo, 1999; pages 198; Rs.469.95 (paperback).

THE movement of peoples across borders and cultures that has, in the era of globalisation, broadened and accelerated beyond all previous experience, poses a special literary challenge. At one level, the cultural collisions, dislocation, loneliness and loss of identity thrown up by the process offer writers rich possibilities: locations, themes and characters abound, and the act of cultural juxtaposing promises interesting literary results. The scale of the canvas can, as Salman Rushdie has shown, elicit extraordinary results. But writers also face being swamped by such plenitude. The task becomes one of negotiating the material in such a way that intimacies emerge out of the vastness, the exotic is rendered familiar and the reader, irrespective of geographical location or cultural background, is jerked into new perceptions and understandings.

In her debut collection of short stories, Jhumpa Lahiri impressively unfolds the possibilities of the diaspora fiction genre, while also indicating some of the problems. Of Bengali origin, born in London and raised in the United States, she writes in the main within the bounds of her own experience; most of her stories explore uprooted Bengali experience in or around Boston, a beacon city for India's upwardly mobile by dint of its universities and career opportunities. Her instinct to explore her themes and characters within this well-defined, bipolar geography underlines the necessity, within this genre, for delimitation and control; it is when she strays beyond its parameters that problems surface.

LAHIRI'S Boston is a city of parks and tree-lined streets and quiet orderliness, a foil for Calcutta's clamour and vivacity. Here, her characters, Indian and American, lead unremarkable lives, grappling with everyday challenges, coping with inadequacy or failure, seeking to survive the visitation of tragedy. Their take on life is that of the educated middle class professional for whom income is assured; existential challenge lies in the essential unpredictability of human relationships and the whole business of living.

Chronicle of the cultural interface

For Mrs. Sen, the wife of a visiting Indian academic, homesickness for family, friends and the sheer exuberance of Calcutta is compounded by immobility in her new surroundings, her fear of driving through the fast, impassive Boston traffic locking her into loneliness and accentuating the fragility of her links with life back home. Mr. Pirzada, a Bengali from the other side of the border, is initiated into the mysteries of Halloween by a small Bostonian girl of Indian Bengali origin. Through the prism of his presence, she in turn seeks to make sense of events taking place far from Boston and her history lessons in the American Revolution; the year is 1971, India is at war with Pakistan, and Mr. Pirzada must fear for his family caught in the maelstrom of a nation in the making. Sanjeev, an MIT-trained engineer making it very good indeed in corporate America, finds his life turned upside down and his basic assumptions challenged by Twinkle (Tanima), his lively and precocious new wife.

Working within the confines of this canvas, Lahiri exhibits the deftness of the gifted miniaturist, unlocking mysteries to throw light on sensitive areas of human experience. In the best of the stories, she pursues an identifiable literary strategy: something offbeat or unexpected or quirky is introduced, and this becomes the means by which problems are brought out into the open, confronted and resolved.

In the fine opening story, "A Temporary Matter," a nightly electricity cut – a rare event in Boston or indeed any Western society – creates interludes of intimacy, shadowed by folk memories of India, in which Shoba and Shukumar can at last begin to deal with the grief bequeathed by their stillborn child. For Sanjeev and Twinkle, the newly married couple whose first weeks together are explored in the story "This Blessed House", a trail of Christian iconography and bric-a-brac secreted in their new home by its previous occupants proves deeply unsettling, destabilising the husband's instinctive male assertiveness and setting the marriage on quite a different course.

In other stories, the perceptive abilities of a child cut to the heart of things. In the story "Sexy", Miranda, a young American woman, is shaken out of her obsession with Dev, a married Bengali investment banker, by seven-year-old Rohin, every bit as precocious and forthright as the boy in the story of the emperor's new clothes. Elsewhere, Eliot, an American boy on the threshold of adolescence, is edged into India across the evenings spent at the home of Mrs. Sen, his Bengali babysitter. In this beautifully observed story, one of the best in the collection, East meets West in the shared experience of loneliness and the poignancy of Mrs. Sen's situation is handled with utmost delicacy and control, unsullied by any hint of mawkishness.

In the best of her storytelling, Lahiri

eschews showiness in favour of simplicity, delicacy and sustained understatement. This results in moments of acuity and insight. The immaculately attired Mr. Pirzada, escapee from subcontinental chaos and mayhem, makes a small girl feel a stranger in her own home through the superb ease of his gestures. Eliot, observing his mother in the new universe of Mrs. Sen's flat, suddenly finds his own perceptions turned upside down: it was his mother, Eliot had thought, in her cuffed, beige shorts and her rope-soled shoes, who looked odd. Her cropped hair, a shade similar to her shorts, seemed too lank and sensible, and in that room where all things were so carefully covered, her shaved knees and thighs too exposed. She refused a biscuit each time Mrs. Sen extended the plate in her direction and asked a long series of questions, the answers to which she recorded on a steno pad.

IT is when Lahiri moves outside her Boston setting to assay India as the backdrop for stories that her grip on her material falters. In the story that lends its title to the collection, the Bengali diaspora feeds back into India in the shape of Mr. and Mrs. Das and family, visiting from the United States. Their interaction with the homeland is observed by Mr. Kapasi, a part-time guide who chauffeurs them on a day trip to the Sun Temple at Konarak. Through the story runs the theme of misinterpreted signals: Kapasi believes the (by Indian standards) scantily dressed Mina Das to be interested in him and the interpreting work he does at a doctor's clinic, while she assumes that Kapasi, by his very Indianness, will be able to interpret her failing marriage and falling out of love with life.

But the authenticity of their doomed encounter is undermined by stilted dialogue, elements of cliche and loaded symbolism exemplified by a gang of menacing monkeys.

Set loose from her Boston moorings, Lahiri allows herself to wander rather too freely. In the story "A Real Durwan", she attempts an Indian morality tale with surreal undertones. Magical realism surfaces unconvincingly in "The Treatment of Bibi Haldar", accompanied by overwriting and awkward sentences: "thus, her soliloquies mawkish, her sentiments maudlin, malaise dripped like a fever from her pores" (p. 161). Detached observation, a hallmark of Lahiri's writing elsewhere in this collection, becomes edged out in this story by elements of judgment and caricature.

Lahiri as a chronicler of cultural interface, rooted firmly in the Boston she knows and with her antennae tuned to the muted anguish of her middle class protagonists, emerges from this first collection as a writer of deftness, control and understatement. In the best of her stories, she binds reader to character so artfully that the reader longs for the narrative to continue beyond its typically low-key ending.

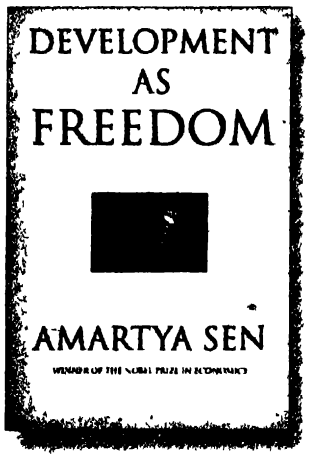
Lahiri, it seems, is a writer well-positioned to move from short story writing to a more sustained fiction. What is not yet clear is whether she is interested in making such a journey. ■

The practical effects of development

RICHARD BERNSTEIN

Development as Freedom by Amartya Sen; Knopf, 1999; pages 304, $27.50.

IT is often remarked that democracies do not fight wars against each other. Less noted is this arresting observation offered by economist Amartya Sen: "No famine has ever taken place in the history of the world in a functioning democracy – be it economically rich (as in contemporary Western Europe or North America) or relatively poor (as in post-Independence India or Botswana or Zimbabwe)." Never in the history of the world! That statement is not the only remarkable one in Development as Freedom, Sen's thoughtful, expansive, sober, but not easily accessible reflection on the relationship between economic well-being and political freedom.



Sen's work on the causes of famines and on the measurement of poverty gained him the Nobel Prize in Economic Science in 1998.

Some of his earlier findings are repeated in this volume, but the overall argument – that freedom is the principal goal and purpose of development – gets full elaboration here.

In his new book, Sen attempts to shift the focus of an old debate. The modern discussion about how economies grow and how people can benefit from that growth goes back at least as far as the 18th century, to Adam Smith's *Wealth of Nations*, a work much cited by Sen.

Economists have tended to look at such quantifiable things as income levels, gross national products and the availability of primary goods as the main measures of economic well-being. Sen looks instead at the practical effects of development, the impact it has on the way people actually live. Freedom in this sense becomes "the primary end" and "the principal means of development". The crucial concept, which Sen develops in a demanding but rewarding chapter titled "Freedom and the Foundations of Justice", is what he calls "capabilities", specifically the capabilities that development should provide for people to live the way they want to.

In this view, poverty is not simply a lack of money because a lack of money in one place can mean something very different elsewhere. Sen uses the example of American blacks, who are much richer than Chinese citizens or the inhabitants of Kerala, but have lower life expectancies than people in either places. In his result-oriented framework, poverty is not simply a low income level; it is what he calls "capability deprivation". "An alternative to focussing on means of good living is to concentrate on the actual living that people manage to achieve (or going beyond that) on the freedom to achieve actual livings that one can have reason to value," Sen writes. "Capability is thus a kind of freedom: the substantive freedom to achieve alternative functioning combinations (or, less formally put, the freedom to achieve various lifestyles)." Many of Sen's analytical concepts come together in his chapter on famines and other crises. Here, as elsewhere, he emphasises capabilities.

Famines, he argues, are not the result of food shortages *per se*. In fact, they usually occur where the food supply is adequate. The problem is that people have lost the "economic power and substantive freedom" to buy food. The remedy, Sen writes, lies in "systematically recreating a minimum level of incomes and entitlements for those who are hit by economic changes." Moreover, he argues, "the minimum level of purchasing power needed to ward off starvation can be quite small." Famine is also central to Sen's overall concept of freedom because in democracies, where information flows freely and elected officials are judged on the results of their rule, the worst food shortages have been alleviated – even in poor countries. Hence Sen's attention-getting statement about the non-occurrence of famines in fully functioning democracies.

There is much else in this book, which is not always easy going for the lay reader (in fact, in places, Sen's supposedly non-technical writing will seem technical enough). Still, even when it is tough going, this is a book that rewards a reader's effort, not least for the calm, practical wisdom that Sen brings to difficult subjects.

One of his most eloquent and probing arguments is his refutation of the doctrine, fashionable among dictatorial regimes in Asia, that there is something called "Asian values", in which discipline and obedience bring better results than the protection of individual rights. Sen, who was born in India, argues that this is a misreading of Asian values and that freedom, not the lack of it, leads to economic well-being.

SEN'S analysis of poverty includes what he calls the "missing women", which he has written about before. Sen says that "the terrible phenomenon of excess mortality and artificially lower survival rates of women in many parts of the world" is an underestimated element of "capability deprivation". These mortality rates, he says, have caused more than 100 million women – half of them Chinese – to be "missing".

Sen also makes a fascinating comparison of the development experiences of China and India, a contrast that leads Sen to conclusions about the importance of social spending – on health care and education especially – that liberals favour and conservatives distrust. "Those who see themselves as financial conservatives," he writes, "sometimes express scepticism about human development." Sen continues, striking a rare note of asperity: "What really should be threatened by financial conservatism is the use of public resources for purposes where the social benefits are very far from clear, such as the massive expenditures that now go into the military in one poor country after another... Financial conservatism should be the nightmare of the militarist, not of the schoolteacher or the hospital nurse." ■

The second self

CHRISTOPHER LEHMANN-HAUPT

Out of Place: A Memoir by Edward W. Said; Alfred A. Knopf; pages 295, $26.95.

LATE in his absorbing memoir, *Out of Place*, Edward W. Said describes an incident that occurred during his first year in the United States, 1951, when he entered his junior year of high school at the Mount Hermon School in Northfield, Massachusetts, after having been educated mainly in English and American schools in Cairo.

He writes about being assigned to write an essay for English class, "On Lighting a Match": how he dutifully researched the subject in encyclopaedias, histories of industries and chemical manuals and compiled what he had found. After turning his piece in, his teacher almost immediately asked to see him and complimented him on his research. "But is that the most interesting way to examine what happens when someone lights a match?" Said reports the teacher asking. "What if he's trying to set fire to a forest or light a candle in a cave or, metaphorically, illuminate the obscurity of a mystery like gravity, the way Newton did?"

Said continues: "For literally the first time in my life a subject was opened up for me by a teacher in a way that I immediately and excitedly responded to. What had previously been repressed and stifled in academic study – repressed in order that thorough and correct answers be given to satisfy a standardised syllabus and a routinised examination designed essentially to show off powers of retention, not critical or imaginative faculties – was awakened, and the complicated process of intellectual discovery (and self-discovery) has never stopped since."

This story is one of many entertaining epiphanies in a narrative that takes the author from his birth in Jerusalem in 1935, through childhood in Egypt, Palestine and Lebanon, and up to 1962, when he had all but completed his doctorate at Harvard but had not yet become a leading spokesman for the Palestinians. (Because the book was written before a recent accusation that he has exaggerated how much of his childhood was spent in Jerusalem, he does not tackle that issue head on but has dealt with it elsewhere.)

The narrative includes an almost Proustian portrait of the author's parents: Wadie Ibraham, a prosperous Cairo businessman from Palestine who moved to the United States as a teenager and served in the American Expeditionary Force in the First World War, and Hilda, some 20 years younger than her husband, born in 1914 of a Lebanese mother and a Baptist minister and educated in Beirut, Lebanon, which, he ruefully adds, was "the happiest part of her life".

But most of all, *Out of Place* is a portrait of the child these two unusual people worked so hard to construct, a child named Edward, after the Prince of Wales, his mother told him, and Said after his father, although its original source could never be determined by the author.

What this construct got from his father, among other things, was an unrelenting need always to be busy regardless of results and endless instructions that he found hard to follow: typical was his father's suggestion when he heard his son practising the Cub Scout oath and referring to God and king. " 'Why are you saying that?' he asked me, as if I had devised the words myself. 'You're an American, and we have no king, only a President. You are loyal to the President. God and President.' "

What he got from his mother was love and protection and a passion for the arts. (When he was nine, Said writes, she had them read *Hamlet* aloud together, he taking the male parts, she the female plus Polonius in "implicit solidarity" with her husband's tendency to spout platitudes). But she could also withdraw her love with devastating effect.

Together the parents monitored their child so carefully that they would even inspect his pyjamas to confirm that he was having wet dreams, and when they found no evidence, they accused him of "self-abuse", much to his shame and guilt. What all this attention accomplished, Said writes, was completed by the schools he attended, which condescended to him as an Arab and judged him to be lacking in sufficient "moral stature". (At Mount Hermon, although he consistently ranked first or second in his class, he was made neither valedictorian nor salutatorian.) The result, far from his parents' or the schools' conscious design, was that Said grew up feeling flawed, defeated, clumsy and forever "out of place".

Yet at the same time, the author gradually began to detect a second self within him, and the emergence of this doppelganger lends this memoir its irresistible dramatic tension. The other self first emerged in outbursts of physical force and endurance, belying the uncoordinated weakling that the author pictured himself as being. Then that self saw through the hypocrisy of his treatment as a second-rate person and rebelled.

Next he began to tap the dazzling intellectual and artistic gifts that his mother had nurtured and the metaphorical match struck at Mount Hermon had illuminated: Eventually it would light the way to his becoming a prolific writer and the distinguished professor of English and Comparative Literature at Columbia University. And finally the second self grew into a politically committed spokesman for the Palestinian cause, although here in these pages Said touches on that issue only glancingly.

The growth of these two selves was not neatly schematic. At every point in his story, the author's persona remains painfully and sometimes amusingly contradictory. In fact, not until 1991, when he was found to have chronic lymphocytic leukaemia, was he able to alter his pattern of driven activity, which he calls one of his father's legacies, and begin to recall the past and write the present memoir. Once he did, his remarkable memory provided such rich detail that at moments it nearly overwhelms his story.

Some might call *Out of Place* a classic immigrant's voyage to America, where, in an important sense, everyone is out of place. But Said fails to express appreciation at having fulfilled what was apparently, subliminally at least, his father's dream for him. True, he does offer some begrudging praise of the United States: "I feel a much sharper sense of dissociation about its relationship with Israel than my Palestinian contemporaries, who see it as a Zionist power pure and simple but do not acknowledge any contradiction in the fact that they also send their children to college here or do business with U.S. corporations."

Yet his portrait of the country is less of a haven for the dispossessed and more of a refinement of the colonialist outlook toward Third World people. Maybe the brighter side of his experience is another story. ■

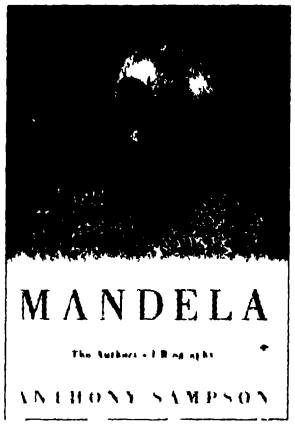
A lasting monument

JOHN CARLIN

Mandela: The Authorized Biography by Anthony Sampson; Illustrated; Alfred A. Knopf, New York; pages 672; $30.

EARLY in 1994 Nelson Mandela presided over a meeting of the executive committee of the African National Congress. South Africa's first fully democratic elections were going to be held in April, the ANC was clearly going to win and the issue on the table was: what should the position of the new government be on the delicate question of the country's national anthem?



The existing anthem was clearly unacceptable. "Die Stem," a sombre martial tune, celebrated the triumph of the Afrikaner trekkers as they drove upward through South Africa in the 19th century, crushing indigenous resistance. The unofficial anthem favoured by black South Africans, "Nkosi Sikelele," was the richly soulful expression of a long-suffering people yearning to be free.

The ANC executive meeting had barely begun when Mandela was called away, but the discussion continued without him. An overwhelming majority swiftly emerged in favour of scrapping "Die Stem" and replacing it with "Nkosi Sikelele." Tokyo Sexwale, a leading ANC figure who spent time with Mandela in prison, vividly remembered the mood at the meeting during Mandela's absence. "We were enjoying ourselves. It is the end for that 'Die Stem' song, we said. The end. No more."

Then Mandela walked in. "We were all like small primary schoolchildren," Sexwale recalled. "When he found out what we had decided he said, 'Well, I am sorry. I don't want to be rude... but this song that you treat so easily holds the emotions of many people whom you don't represent. Yet, with the stroke of a pen, you would take a decision to destroy the very – the only – basis that we are building upon: reconciliation.' "

Mandela carried the day. "Nobody," Sexwale said, "raised a finger to object."

TODAY, and ever since Mandela became President following the ANC's enormous victory in the 1994 elections, South Africa has two anthems, always played in succession at official ceremonies: "Nkosi Sikelele" and "Die Stem." The issue of the anthem was all about generating a national mood, persuading people politically by touching their hearts. Mandela's colleagues capitulated because they knew he had a special acumen for this art – they had long ago come to accept that "the old man" was far more skilful than any of them in the craft of political symbolism.

A facet of Mandela the politician that is often obscured by Mandela the myth is that he is, in Anthony Sampson's phrase, a master of imagery. This is a quality all the more remarkable in that he is most certainly not a master of oratory. Next to him Al Gore is Shakespeare's Mark Antony in full flow. But in all other respects Mandela's carefully honed charm and talent for political theatre are every bit as sophisticated, Sampson suggests, as that of the Great Communicator himself, Ronald Reagan.

THE central challenge any serious biographer of Nelson Mandela confronts is to track, dissect and explain how it was that he managed to reconcile a nation so bitterly divided by the perversions of apartheid; to bring stability where the scale of the injustice, and the potential for bloodshed, was biblical. Anthony Sampson's authorised biography of one of the century's great individuals, of South Africa's indispensable man, achieves just that. And he does so, at Mandela's express bidding, without stooping to hagiography. The triumph of *Mandela* is that it successfully demythologises the man without in any way undermining his heroic stature.

The author, who has now written three books about South Africa, came to know Mandela during the 1950s. An Englishman who moved easily in black Johannesburg society, Sampson was the editor of *Drum*, a Johannesburg magazine aimed at the black African market. He was not alone in those days in seeing Mandela as a dandy, a showman – a perception not diminished by the amazing expenses he incurred in having his suits made by the very same tailor employed by South Africa's diamond king, Harry Oppenheimer. "Showmanship," in fact, is a concept that recurs in Sampson's biography. And it acquires new and deeper meaning as Mandela's story unfolds, until we come to grasp that his histrionic gifts are central to an understanding of his political triumphs.

Sampson writes that in the early days he was not alone among ANC sympathisers in wondering whether any serious political substance lay behind the dazzling smile. All doubts were put to rest after Mandela's arrest in 1962.

At his trial, which Sampson covered for *The Observer*, Mandela's response, when asked to plead, was: "It is not I, but the Government, that should be in the dock. I plead not guilty." Staring the death sentence in the face, he challenged the court to do its damnedest. He hoped to live, he said, to see his democratic ideal realised. "But if need be, it is an ideal for which I am prepared to die."

Theatre it undoubtedly was. But the stakes were too high to doubt Mandela's sincerity. And what lay there for all to see was that his grand gestures were in perfect harmony with a black population that had been demoralised by the arrest of its leaders and hungered for a heroic reminder that no matter what, the struggle continued.

Mandela was to remain the "dramatic personification of his people", as Sampson puts it. Before prison he personified defiance. After it he personified reconciliation.

The 27 prison years, to which Sampson dedicates a third of his book, are the key to understanding Mandela's transformation from warrior to peacemaker. Trawling through a wealth of letters and prison records that had not previously seen the light of day, conducting interviews with jailers and prisoners alike, Sampson paints a dramatic picture of what he calls "the psycho-politics" of prison life. Mandela "was able," Sampson writes, "to stand back from himself, to see himself as others saw him. He learned to... empathise and persuade,

and to extend his influence and authority, not just over the other prisoners, but over the warders."

His regal bearing, his air of warm command, were qualities he deliberately taught himself to project. Add what Sampson describes as the "essential integrity" he exuded and you come to understand how it was that, having achieved mastery over his prison, he charmed and cajoled the senior government officials with whom he held talks secretly in jail – and later at the negotiating table – to submit to his personal authority and political will.

If Mandela's political progress provides the core of this biography, Sampson does not shirk the challenge of exploring the private pain that he endured – and caused – as a consequence of his decision to put "the struggle" ahead of his family. We learn of the resentment some of his children harboured toward him, of the awkward emotional paralysis they came to feel in his presence. And running through the book is the subplot of his former wife, Winnie, who is presented in all her transformations, from Cleopatra to Boadicea to Lady Macbeth.

Mandela adored her, but charting the intimate progress of Mandela's dawning realisation after he emerged from prison that she was not worthy of his love is a task that, finally, eludes Sampson. Borrowing Arthur Schlesinger Jr.'s description of Franklin D. Roosevelt, Sampson says of Mandela that "he combined extreme heartiness with impenetrable reserve".

In recent years Mandela's self-effacement has tended at times to self-deprecation. He has felt impelled to say and do things seemingly intended to deflate his giant reputation, to keep the perils of pomposity at bay. That is why he has fallen into the habit of telling stories against himself, like the one his aides have grown tired of hearing about the five-year-old girl who cut him down to size after she asked him why he had spent so long in jail. Mandela having explained, in all solemnity, the reasons for his incarceration, the girl replied: "You must be a very stupid old man."

No doubt in time other biographers will be tempted to lend substance to the little girl's perception, to smash the icon. Anthony Sampson's work will endure as a corrective to any such endeavour, as a lasting monument to Mandela's imperishable greatness. ■

Pinning it down in words

MICHIKO KAKUTANI

More Matter: Essays and Criticism by John Updike; Alfred A. Knopf, 1999; pages 900, $35.

"IF one sets up to be a writer," John Updike once declared in a speech, "one should be able to write anything, from a sonnet to a sermon, or at least be willing to try." This industrious Victorian ideal of an all-around man of letters seems daunting in our current age of electronic distraction and wilful specialisation, but Updike has succeeded in the course of his five-decade career in taming if not mastering virtually every literary form from the novel to the short story, from the poem to the essay.

In this, his 50th book, he brings together his most recent non-fiction – that is, the book reviews, essays, addresses, comic *feuilletons* and random, autobiographical jottings written since *Odd Jobs* (1991) and *Hugging the Shore* (1983). Like those earlier collections of prose, *More Matter* attests to Updike's remarkable versatility (his familiarity not only with the world of books but with the worlds of movies, paintings, photography and cartoons as well) and to his ardent drive to turn all his observations into glittering, gossamer prose. Indeed, the longtime observer of his career cannot help but suspect that things only seem real to Updike if they can be caught and pinned down in a net of words, that his fascination with the muchness of the world is matched only by his need to transform that interest into something hammered and lovely and all his own.

IN this volume, Updike ranges freely across the cultural landscape, tackling both large questions of religion, relations between the sexes and the American Zeitgeist, and smaller, Andy Rooney-like matters like the difficulty of opening childproof pill bottles and the problems created by recalcitrant burglar alarms. He gives us smart, sparkly profiles of Lana Turner and Gene Kelly, grapples thoughtfully with the work of Herman Melville, Edith Wharton and Henry Green, and amplifies the self-portrait he gave us in his 1989 memoir (*Self-Consciousness*) with a series of autobiographical asides. His classic study of Mickey Mouse's evolution can be found in *More Matter*, as can a wonderfully astute appraisal of Saul Steinberg's drawings and their darkening vision of America and the American dream.

As usual, Updike's book reviews demonstrate his own interest as a craftsman in the techniques employed by other writers and in the limitations imposed on imaginative freedom by culture and experience. He is able in passing to give the reader a sense of the arc of an author's life (he describes Dreiser, for instance, as a "writer of starts and stops, of elephantine gestation periods and quasi-religious periods of hesitation and meditation"), and he can just as easily map the spiritual geography of a writer's oeuvre. Of Graham Greene, he writes: "The entire climate and topography of Greeneland is a kind of self-portrait; its features are pain, guilt, ennui and lassitude." And of Edith Wharton, he observes: "She learned from Proust the dignity of nostalgia and the value of each character as a specimen, an index to the species and to broad laws of behaviour."

Although Updike tackles a wide variety of authors, from American contemporaries like Norman Mailer and Philip Roth to such foreign writers as Harry Mulisch, Ivan Klima, Manuel Puig and Orhan Pamuk, he seems less willing in this volume than in *Hugging the Shore* or *Odd Jobs* to embrace writing that significantly departs from his own conviction as a novelist that "a fiction writer's life is his basic instrument of perception – that only the imagery we have personally gathered and unconsciously internalised possesses the colour, warmth, intimate contour and weight of authenticity the discriminating fiction-reader demands." He cavalierly lumps the work of John le Carre together with that of Tom Clancy, Robert Ludlum and Frederick Forsyth, and in a much-debated review that originally appeared in *The New Yorker*, he dis-

misses Tom Wolfe's latest novel, *A Man in Full*, as "entertainment, not literature, even literature in a modest aspirant form".

This curmudgeonly tone also creeps into other pieces, which lament the declining market for short stories, the embattled state of literature in an age of electronic entertainment and the coarsening of the American psyche. "We feel bad," Updike writes, "because a once-sinewy nation, exultant in the resourcefulness that freedom brings, now seems bloated and zombified, pillaged and crumbling, all around us. Enough of our original Puritanism remains to generate self-disgust."

Updike himself points out that as he has gotten older, his "thoughts have become not only fewer and smaller but more spiteful and timorous", and this tendency makes *More Matter* a less captivating book than his previous non-fiction collections, which showcased his gifts as an enthusiast capable of using his own knowledge of the alchemical processes of art to convey the magic of others' creations.

Matters are not helped in this volume by the author's decision to include virtually every snippet of writing he has produced in recent years – including picture captions for a *Playboy* spread on Marilyn Monroe, dutiful responses to questions posed by assorted publications (like why does he live in New England?) and one-paragraph-long reviews of books like *The Hidden Life of Dogs*. An imaginary dialogue between Bill Gates and Johann Gutenberg reads like a silly exercise in the obvious, while another piece on the male body feels like weary vamping on old gender cliches.

Read selectively, however, *More Matter* delights more often than it disappoints. In his strongest pieces, Updike's awesome pictorial powers of description combine with a rigorous, searching intelligence to produce essays of enormous tactile power and conviction. In such pieces, the author's sheer joy in writing, "in making sets of things and in bringing something imperfect closer to perfection", is communicated to the reader. In this volume, Updike suggests that for him writing provides the "thrill of the fixed, the interlocking", and a hedge against disorder and death. And in satisfying his own "itch to charm" and inform, his best pieces manage both to edify and to beguile. ■

Secrecy as publicity

There are some books that remain under wraps until publication day, in contrast to the usual rush to get as much pre-publication exposure as possible.

MARTIN ARNOLD

ONE of the seemingly immutable axioms of modern-day book publishing is that the purveyors of new books try noisily and at times shamelessly to get as much advance, pre-publication publicity as conceivable for their product. But every year there are a handful of titles for which there is the opposite impulse, with publishers just as aggressively trying to suppress any early word of a book's contents. These choice titles are embargoed. This year on the American book publishing scene, there have already been four interesting examples.

The books were *The Sword and the Shield* (Basic Books), a secret history of the KGB by Christopher Andrew and Vasili Mitrokhin; *Hitler's Pope: The Secret History of Pius XII* (Viking) by John Cornwell; *Dutch: A Memoir of Ronald Reagan* (Random House) by Edmund Morris; and *Stiffed: The Betrayal of the American Man* (William Morrow) by Susan Faludi.

Generally books are embargoed because the publisher has sold an excerpt to a magazine or made a deal with a television news magazine programme for first-use rights (called first serial rights). But there are other reasons for secrecy. For instance, if the book is alleged to contain news, or the mere fact of its publication is news, then by releasing it to stores and reviewers on the same day, a lucky publisher can orchestrate a tremendous burst of publicity, and, hopefully, sales. (An example of this was *Hannibal* (Delacorte Press), Thomas Harris' sequel to *The Silence of the Lambs*. It went on sale this year but was so anxiously awaited by readers and store owners that the mere acknowledgment of its existence produced a crescendo of book-selling publicity.)

Of course, sometimes a book is potentially so controversial or it is such a lemon (or both) that the publisher wants to give it some shelf time in the stores before it is buried in a wash of bad reviews or mocking news stories.

THERE are two ways to attempt to enforce an embargo. First, there is the confidentiality agreement. To receive a copy of the book the recipients, usually reviewers, have to agree to look and read but not tell until a mutually decided-upon day. That is the most commonly employed method, and it keeps the book's secrets, yet allows reviewers time to read and digest it. The other way is for the publisher simply to keep all the copies out of sight, hidden until they are shipped, timed to arrive on the reviewers' desks and in the bookstores on the same day. Sometimes, although certainly not always, the secret can be kept. But publishers admit there is nothing more deleterious to the peace and sublimity of a publishing house than the dreaded decision to embargo a book and the worry that the embargo will be broken.

The embargo was placed on the KGB book, which was based on a secret archive, because its American publisher, Basic Books, had a contract with the original publisher, Penguin U.K., to issue it simultaneously so that the publisher on one side of the Atlantic would not be scooped on the other side. But ABC News independently learned about the existence of the archive, if not its contents, and broke the story nearly a week before the book's scheduled publication, and this led to newspaper headlines.

Jack McKeown, president and chief executive of the Perseus Books Group, of which Basic Books is an imprint, said: "Frankly, in retrospect, I don't think we were hurt. It turned out we were better off. *Hurricane Floyd* would have buried us, and we wouldn't have gotten a great amount of news coverage." The book had a first printing of 80,000, but there are now 105,000 copies in print in the U.S., and the book will be No. 7 on *The New York Times*' non-fiction best-seller list on October 3.

Faludi's book, *Stiffed*, was embargoed because *Newsweek* had bought first serial

rights. Lynn Goldberg, the publicist for *Stiffed*, said that the magazine had a two-week window to publish it first, plus the right to have it on the newsstands for a whole week before the book went on sale. "So we had it embargoed until September 21," she said, "but *Newsweek* ran it on September 6. An embargo is not only hard to put in place, but it's also hard to dismantle, so we kept the publication date at September 21," but, of course, as soon as the magazine was out, those who wanted to break the embargo did so.

The book about Pius XII was embargoed because the publisher had sold first rights to *Vanity Fair* magazine, which published an excerpt in its September issue.

Perhaps the book embargo that will have the most notoriety was the one on the Reagan memoir. Random House has refused to discuss the book until its publication date, September 30. It was embargoed mainly for the usual reason: Random House had sold the first serial rights to *Newsweek*, and, obviously, if the book's contents became known before the magazine was in readers' hands, the bang of exclusivity that *Newsweek* paid for would be lost. But there was another reason the book's contents were guarded with such ardour. The writer, Edmund Morris, placed himself in the book as a fictional Zelig-like narrator who first met the future President on Reagan's high school football field, which was long before the real Morris was born.

So in this case the main reason for the embargo was that the contract with *Newsweek* mandated one, but there was also the desire to get the book into the stores with some momentum before reviewers could decipher what was history and what could well have been borrowed from Woody Allen.

The book embargo has a relatively short but nonetheless illustrious history. In 1979, *The Nation* magazine printed an article based on a pirated copy of President Gerald R. Ford's then-unpublished memoir, *A Time to Heal* (Harper & Row and the Reader's Digest Association), which had sold first serial rights to *Time* magazine. An appeals court eventually upheld *The Nation*'s right to do just that.

But the first book that anyone remembers being embargoed was *All the President's Men* (Simon & Schuster), the seminal 1974 Watergate book by Bob Woodward and Carl Bernstein. ■

■ THE ENGLISH LANGUAGE

First things first: a presidential slogan

WILLIAM SAFIRE

SUBTLY, stealthily, almost subliminally, a political slogan has been drummed into the heads of Americans all year long. The rallying cry was never shouted; the insistent phrase was never capitalised in speeches or printed on buttons. But it has quietly gripped the United States and is doing its job of persuasion.

Speaking of the budget surplus in his State of the Union address, President Bill Clinton said: "We should not spend any of it until after Social Security is truly saved. *First things first.*" He had inserted that phrase during a rehearsal on January 16, 1999, in the White House theatre at the suggestion of Gene Sperling, a domestic-policy aide. Michael Waldman, the speechwriter, seized on it as an easy-to-grasp way out of the anticipated GOP charge that Clinton was opposed to tax cuts.

The rallying cry was never shouted; the insistent phrase was never capitalised in speeches or printed on buttons. But it has quietly gripped the U.S. and is doing its job of persuasion.

The noun in the phrase (infinitely better than "Let's prioritise") had the added advantage of being plural. That meant it could cover not just Social Security but a range of other outlays. But how could all of them be "first"? Answer: Taken as a group, they were first in contrast to the one proposal that was designated to come last.

Throughout the year, Clinton resolutely repeated the familiar phrase whenever asked about tax cuts: "*First things first.* When we have met our obligation of showing what we need for debt reduction, for Medicare and Social Security and education, then we will be in a position to know how much is left for a tax cut."

Press releases followed the line in lock step: "The President will urge Congress to work with him to enact a responsible budget that puts *first things first.*" John Podesta, the White House chief of staff, was programmed to use the phrase at least twice at every Sunday talk-show appearance when asked about the GOP tax bill: "Send it down to us so that we can veto it and then move forward, putting *first things first.*"

By September, Clinton was able to work the three-word agenda prioritiser into almost every appearance, no matter what the subject: "I want America to say," he told elementary-school pupils in Olney, Madison, "let us put *first things first*, nothing is more important than our children."

The familiar phrase was first popularised first in 1894. (Nope; the redundancy works best with a noun in the middle, not a verb.) The Rev. George Jackson titled his collection of sermons "First Things First: Addresses to Young Men," which included his ringing harangue on "Modern Idolatry."

It was taken up early in 1992 by David Wilhelm, the Clinton campaign manager: "*First things first*, and the first thing is winning." (But it was set aside for James Carville's "It is the economy, stupid.") Clinton, meeting later that year with Israeli Prime Minister Yitzhak Rabin, told reporters he had explained that his emphasis on the economy "was not a symbol of isolationism, but a necessary commitment to putting *first things first.*"

Part of the brilliance of Clinton's relentlessly repeated slogan putting everything else behind is that it resists argument or parody. How can Republicans respond? With *last but not least?* ■

The soldier's wife

A Burmese short story by Mo Mo (Inya), translated by Usha Narayanan.

WHAT a terrible pain it is! What kind of illness could this be! The pain is in my abdomen and in the whole of my back. Not like any ordinary type of pain. Oh, I can't express it myself clearly. The pain is so severe that I can't breathe easily. If it goes on like this for long, I won't be able to stand it.

It has been like this for nearly an hour. I have been suffering quietly, without crying out loudly. According to the nurse, this will go on for six more hours. Perhaps this may go on for another day! For a person who is suffering so much, even one hour seems like a lifetime. Childbirth is not a small matter to suffer!

Dear nurse, please take me to the Labour Room, I cannot stand the pain; it is getting to be too much. The nurse said, "Oh! it is a long way to go. Even your water has not burst as yet. The first baby is always like this. It will take a long time. Wait! wait a little more."

For the nurse, it was nothing new. She went away coolly. I was left behind, exhausted. The patients on either side of my bed were fast asleep. How I wished to change places with them!

Catching hold of the bed pole I got down from the bed. I walked towards the verandah and looked down. I was on the third floor of the Central Women's Hospital. As I looked down I could see my husband sitting in the dim light. He saw me at once and signalled to ask if there was any news. It must be about eleven o'clock at night.

Later, when I returned from the Delivery Room, I saw some snacks and coffee laid out on the table next to my bed. So, my husband had made enquiries with the attendants and had come to know that I was in the Delivery Room. A little later an attendant called out my name and asked if there was any news. My husband must have sent him. I told him the good news that I had a baby boy. My husband, who was sitting up the whole night in the garden downstairs, must have gone home to sleep only after he got the news.

It is now 7 a.m. After drinking coffee I dozed off. I woke up only when they called out my name. It was lunch time.

"What would you like to have from home, sister?" I said I would like to have a *longyi*. "By the way, is not my husband coming up?"

"I will tell him. You see, he is not supposed to come here."

Oh, my God. What strict discipline this hospital has! At meal time, other hospitals allow a member of the family to visit. Here only the hospital attendants could go up and down bringing the messages to and fro. Though they do not ask for tips, they are normally paid money – anything from half a rupee to three rupees. They had a good opportunity of making extra money, especially at meal time when the food was brought up.

Mo Mo (Inya) was born in Daik-U, Burma, in 1944. Inya, part of her pseudonym, was the name of the hostel where she stayed as a student of Rangoon University which she joined in 1964. Her very first novel won an award in 1972. In 1974 she received a national award and during the period 1980-86 her short stories won several awards. She also wrote poems. Her novels have been translated into English, Russian, Japanese and Chinese. She died in 1990.

I wanted to see my husband just to tell him how tired I was after the delivery – how I still feel dizzy and how some pains still linger in the abdomen. I wished to talk about the birth – just like a soldier back from a victorious battle talking proudly about his deeds. I had so many things to tell my husband. Is not this the time when a woman wished to cuddle up against her husband's chest to be fussed over by him? People say women always want to see their husbands' faces the first thing on return from the Labour Room after birth of the child. That gives her a lot of comfort. So I wanted to see my husband's face. After all, I had gone through the big adventure single-handed!

I was thinking so much of meeting my husband that I could hardly eat my food. I was wondering why my husband had not come to my room. Of course, I knew him to be a stickler for discipline. So he must be waiting for the visiting hours. Yet, he knew that this hour was the most important one for me and I had always been a timid person. I had to bring out our first baby all by myself.

At half past four, the visiting hour had arrived and a big crowd of visitors was rushing upstairs as if they had come out of the cinema hall. I tried to sit up and tidied my hair to look presentable when my husband came. I am sure he would be the first to be here. Poor thing! I wonder how long he had to wait for this hour.

But alas! There was no sign of my husband. After half an hour, his mother and sister turned up. "My brother said he would be coming later," his sister said. I was no longer interested in what they had to say. Even the fried chicken and the lovely meal in the tiffin carrier could not attract my attention.

When my husband came in finally, I was eating the meal. I kept on eating the food without looking up. When he saw tears falling into the plate, he shook my arm and said "Are you not well? Please tell me, darling, please!"

When I went on eating without raising my head, he realised that I was annoyed with him.

"Look here, Chaw darling, you are behaving like a child! You are now the mother of a child, you know. The whole night I had no sleep and so I fell asleep today and woke up only at 5 p.m. So I sent mother and sister ahead and I stopped on the way to buy some snacks for you to eat. That's why I am late."

"Don't you call me the mother of a child. You think I slept the whole day?" Tears came streaming down my face as I spoke, and my husband was just laughing away.

"I know, I know, my darling Chaw. I understand how you women have to suffer. People never stop composing poems on mothers – how a mother's love is great. Now, you too belong to this group of great mothers."

This translation is dedicated to the wives of Kargil martyrs.

In the end, I was comforted by my husband.

II

ONE day my husband said, "Chaw dear, look who's here, your great friend and her husband."

I was so happy to see my friend Myint and her husband so unexpectedly.

"My dear Shwe Myint, I am really so happy to see you both. Have you come on leave, Captain Soe Myint?"

Myint said, "I have been wanting to come and see you, and since he also came home on leave, it was just right. Here we are. I never expected that you would be having the baby now."

Myint and I have been very close friends. Wherever we lived we managed to be at each other's side on important occasions. When I got married Myint was with me and when she got married at the Registrar's office, I was there to be the witness.

Myint is not like me at all. She is strong-willed, smart and hard-working. Me, I am delicate. While Myint graduated from the university and got a job, I failed in my examinations and settled down to marriage with Maung, my husband.

"Myint dear, you had better fix a meal for yourselves. For me, my mother-in-law sends food."

"Don't worry about us, Chaw dear, you take care of yourself."

While Capt. Soe Myint was looking the other way, I whispered a question to Myint. She answers shyly: "There is no change in me at the moment, but he wants a baby and is crazy about the idea."

"Then when will the two of you be able to live together?" I asked.

To this, Myint answered with an unhappy face, "We cannot live together for sometime as yet, Chaw. As you know, my mother is in indifferent health and so I can't leave her alone and be with my husband. Even if I can get leave from my work or get transferred, I may have to live alone as my husband has been deployed in a forward area."

I sighed. I commiserated with Myint. Their situation was such that husband and wife had to live separately. As the husband was in the armed forces, he had to give priority to his duty. Love had only second place. My friend Myint was an ideal companion to him and I really appreciated it. A soldier's wife might not be very brave herself. But she must have very strong character to face situations such as this. I recalled Myint's life before their marriage. Myint wrote to me then, "Dear Chaw, I have decided to accept him. You know, my mother does not like war. So she does not like a soldier also... You see, he is coming to Rangoon on leave on 6th and 7th of July, 1969. Will you go and meet him at the station?"

I went to the station and welcomed Capt. Soe Myint. They had met each other when the Captain was on duty at Chaw's small town. He had then declared his love and admiration for her and was waiting for her response. And Myint was ready with an answer in the affirmative.

Thus, their reunion came about. Myint and her beloved Captain were sitting on the banks of lake Inya. A friend of mine and I were sitting a little away from them. My friend grumbled and said, "How I feel bored as I watch those two!"

Capt. Soe Myint had to return to his Regiment the next day.

So we asked her, "How is this? Your man has to return so soon? This is the time you should be most happy."

Myint said, "What can he do? He has come on duty here. When I got his letter, I took leave just to come and meet him."

I sighed. Capt. Soe Myint was on duty in Magwe and so it was not so easy for him to see Myint in Daik-U-So. So they were meeting in Rangoon just to be together for one day.

AS for me and my husband, it was not like this at all. Since we fell in love, I never went anywhere alone. We went shopping together, we went to the cinema together. Wherever I went on business – even to a chemist's shop to buy some medicine when I was not well – I phoned him up to accompany me and he obliged me. I talked to him of small matters with exaggerated sounds.

I commiserated with Myint. Their situation was such that husband and wife had to live separately. As the husband was in the armed forces, he had to give priority to his duty.

Did Myint and her man find time to talk of love and utter sweet nothings, I wondered.

Myint and I used to write to each other once a year if at all. When I received a letter from Myint, I knew there would be some news.

One such letter said, "Come quickly, we are getting married at the Registrar's office on the fifth of January '70." I rushed to Pegu where they signed at the Registrar's office and went to the Shwemaw-daw Pagoda for prayers.

While climbing the stairs to the Pagoda, I whispered to her, "Is this visit just for signing at the Registrar's for the marriage? When will you two be able to live together, my dear Myint?"

Myint said, "You see he cannot take long leave now. He will have to go back tomorrow. We'll arrange a reception when he gets leave next. We may be able to live together only later."

"If that is so, you need not hold any reception."

"It is my mother's idea and not mine to hold a reception. I couldn't care less."

"Then the two of you should have waited until he got long leave."

"You see, Ma Chaw, we are not sure when that will happen. So we had to get one job done."

After they decided on the Big Day, Myint came to Rangoon alone. She looked quite cool. She had to arrange the wedding clothes, the invitation cards, flowers and so on. My brother and I helped Myint in all this. She did all the work with a pleasant face. We did not hear any grumbling from her.

In contrast, there was a lot of hullabaloo prior to my wedding day. I discussed with my husband what he and I should wear on the day of the wedding. We even talked about what flower I should wear. He wanted me to wear an orchid. But I wanted the fragrant thazin. My husband gave in to whatever I wanted. When he said impatiently, "Oh! wear what you like", I was annoyed and said if he could not be patient with me even before our marriage what it would be like after the marriage. Then he pacified me. My friend Myint had to manage everything alone, she told me. "A person who decides to be a soldier's wife has to be prepared for sacrifices and have a lot of understanding. As my husband is on full-time duty he cannot spare time to come and help me in these matters. Being a perfect companion, I managed to do everything by myself."

I was very proud of my friend. Her face was fresh and there was no sign of fatigue on it. I admired her a lot.

When my son was one year old, Myint visited me alone. This time, she was dressed in a pretty maternity gown.

Relive the sensation

to show off, or what?"

"My dear friend Chaw, I want my baby born in Rangoon. I have come here so you can take care of me."

"Good. Has Capt. Soe Myint seen you in this condition?"

"No, I have written to him, but he has not got leave as yet."

"Dear Myint, you two were together for only 10 days after the marriage. Now it is time of childbirth, and you are still planning to be together."

"Life is such, Chaw dear. I have a friend whose husband is also a soldier. Six days after their wedding, the husband had to return for duty to the front. When he returned the next time, he found his wife with a baby who did not know him. Myint was laughing while telling me the story. For them it was a joke.

Myint's daughter is a little heroine. Her father is a big army official fighting for the country on the front, doing his duty well, and the mother is a real brave woman.

But for me, when I was expecting my first baby, my husband was by my side all the time, looking after me. "Don't lift any heavy weight, don't eat chilli or any hot food, don't bend down to pick up anything," he used to say. He took care of me so much!

The next time I saw Myint was when she turned up suddenly in a three-wheeler in front of my house. She needed the assistance of two persons even to walk. She was in great pain. We took her at once to the Dufferin Hospital and admitted her there. The three of us waited patiently downstairs. I was all the time thinking about Myint who was alone upstairs." Was she suffering too much? Will the delivery be easy?" When I was in a similar situation, I had my husband by my side – for any emergency. Knowing that he was at hand, I could bear the suffering. But Myint was alone – all by herself. Of course, we were near her but it is not the same as having her husband by her side.

Myint's delivery did not take place even the next day. Perhaps the position of the baby had changed during the train journey. We were all very worried. Myint's sister-in-law began to cry: "Oh! how difficult the situation is!. Her husband is not here. Should something serious happen, what can we do?"

I said, "Don't worry! This is a reliable hospital. Even if an operation is necessary, there is nothing to worry about. Everything will be all right!" I felt like crying myself. When I went home, I discussed with my husband if we should engage a mid-wife.

But when I visited the hospital again, the big worry in my mind disappeared as a little baby girl had been born. This news was given to me by her sister-in-law, who went upstairs by giving a tip to the people in charge, just like others who were going upstairs the same way. We were all very happy for Myint.

During the visiting hour in the evening, we found Myint fresh and happy.

"I am sure your husband Capt. Soe Myint would be very happy to hear this good news. Shall I send a telegram to him or call him at Magwe?"

"No, he is at the front, it seems," Myint said. "If we send the message to his Regiment's headquarters, they might inform him."

"Has he not got leave as yet?" I asked.

Myint answered coolly, "He could not get leave now, it seems. Anyway he is not needed here right now. He might leave after a month."

"We all wanted a daughter. It is a baby girl and so it is just right. We have even chosen the name 'May' for the baby."

Myint wanted the birth announcement to be made in the press. She gave me a piece of paper with the baby's name, "Zani May" (Heroine) written on it. I was very pleased with the name.

Yes, Myint's daughter is a little heroine. Her father is a big army official fighting for the country on the front, doing his duty well, and the mother is a real brave woman.

I praised Myint wholeheartedly. When I was having a baby of my own, I was not satisfied even when my husband was by my side looking after me. I don't know how I would have behaved if I had to go through everything like her all by myself.

Myint is after all a woman like us. She must be longing to have her husband by her side, to see his face, and tell him how much she is suffering. I am sure she too would love to be fussed over by her beloved husband.

Yet there was not a tinge of sadness or longing on her face. Instead I saw a fresh happy fulfilment on her beautiful face. I patted her hands and murmured quietly. "Myint, dear, you are brave, very brave." ■

Renaissance man

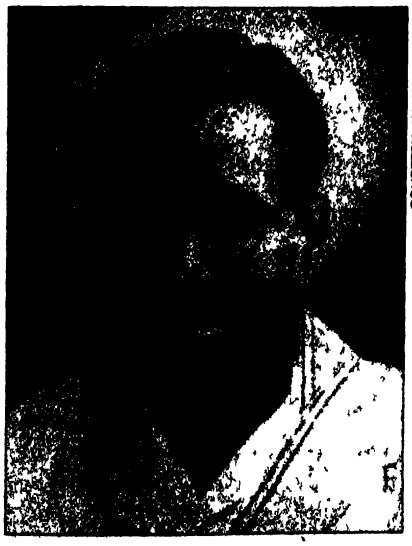
The birth centenary of 'Kalki' R. Krishnamurthy occasions an appraisal of the contributions made in numerous fields by the Tamil novelist, freedom fighter and social crusader.

S. VISWANATHAN

LOVERS of Tamil literature across the country celebrated the birth centenary of "Kalki" R. Krishnamurthy on September 9.

Krishnamurthy was freedom fighter, social crusader, novelist, short story writer, journalist, humorist, satirist, travel writer, script-writer, poet, critic and connoisseur of the arts – all rolled into one. A prolific writer, he wielded his pen with force and tenderness for three decades (1923-1954). He wrote on varied subjects during an eventful period in Indian history. His writings include over 120 short stories, 10 novelettes, five novels, three historical romances, editorial and political writings and hundreds of film and music reviews.

Although there is practically no subject he left untouched and no genre he did not experiment with, he is best known for his historical romances, which are acclaimed as classics and remain popular to this day, nearly five decades after his death.



His historical novels, *Parthiban Kanavu* (Parthiban's Dream), *Sivakamiyin Sapatham* (Sivakami's Vow) and *Ponniyin Selvan* (Ponni's Son) – which were first serialised in *Kalki*, the weekly he edited, and later published as books between 1943 and 1951 – attract 20,000 to 25,000 additional readers for the magazine, whenever it re-serialises these stories, according to K. Rajendran, son of Krishnamurthy and the present publisher of the weekly. (*Ponniyin Selvan* re-appears for a fourth time now.) It is amazing that whereas works of several contemporary writers fail to see even a second edition, each of these novels has been re-published eight times over the past 15 years (1984-1999).

KRISHNAMURTHY was born on September 9, 1899 at Puttamangalam in the old Thanjavur district in an orthodox, large Brahmin family with limited means. Father Ramaswamy Aiyar was the village karnam (accountant), drawing a monthly salary of Rs.10. With the yield from land, he managed to maintain the family. After primary education in the village, Krishnamurthy joined the National High School at Tiruchi, about 100 km away.

When Mahatma Gandhi launched his Non-Cooperation Movement in 1921, thousands of students gave up their studies to participate in the movement. Krishnamurthy was one among them. With the Secondary School Leaving Certificate (SSLC) examination just three months away, he left school and joined the Indian National Congress. Gandhi's speech at a public meeting in Tiruchi inspired him.

In 1922, he was awarded a one-year imprisonment for participating in the independence struggle. It was during this period that Krishnamurthy came into contact with two great persons, who were to play a major role all his life – veteran Congress leader C. Rajagopalachari (Rajaji) and T. Sadasivam, who was to become a life-long friend and partner in journalistic ventures.

Krishnamurthy's first attempt at writing fiction also came during that period. In 1923 he joined as a sub-editor in *Navasakthi*, a Tamil periodical edited by Tamil scholar and freedom fighter V. Kalyanasundaram, popularly known as "Thiru Vi. Ka". Krishnamurthy's first book was published in 1927.

COURTESY *KALKI* MAGAZINE

Leaving *Navasakthi* in 1928, Krishnamurthy stayed with Rajaji at the Gandhi Ashram in Tiruchengode in Salem district and helped him edit *Vimochanam*, a Tamil journal devoted to propagating prohibition. In 1931, he was again imprisoned for six months.

Next year Krishnamurthy joined *Ananda Vikatan*, a humour weekly edited and published by S.S. Vasan, as its *de facto* editor. The magazine soon became a household name in middle class families. Krishnamurthy's witty, incisive comments on politics, literature, music and other forms of art were looked forward to with unceasing interest by readers. He wrote under the pen names of "Kalki", "Ra. Ki", "Tamil Theni", "Karnatakam" and so on. *Vikatan* published many of his short stories and novels (as serials).

In 1941 he left *Ananda Vikatan* and rejoined the freedom struggle and courted arrest. On his release after three months he and Sadasivam started *Kalki*. He was its editor until his death on December 5, 1954.

THE success that Krishnamurthy attained in the realm of historical fiction is phenomenal. Sixty years ago, at a time when the literacy level was low and when the English-educated Tamils looked down on writings in Tamil, *Kalki*'s circulation touched 71,000 copies – the largest for any weekly in the country then – when it serialised his historical novels.

Noted historian Professor K.V. Rangaswamy Iyengar says that Kalki established his reputation as a novelist with *Parthiban Kanavu*. In his "introduction" to the novel, Rangaswamy Iyengar describes it as "a star of the first magnitude (that) had appeared in the firmament of historical fiction." "It was the first attempt, to my knowledge, to utilise the ancient history of a famous South Indian dynasty and region as the background of an attractive story," says

Rangaswamy Iyengar.

Describing *Sivakamiyin Sapatham* as a brilliant piece of writing, Rangaswamy Iyengar says that because of its stylistic qualities, the novel will have a permanent place in Tamil prose.

Although Kalki's historical romances captured the hearts of thousands of readers, recreating for them the glorious Tamil life during the periods of Pallavas and Imperial Cholas, critics were divided on their literary merits. One criticism was that Kalki's novels dwelt rather overmuch on royalty and not enough on common people. The sudden twists and turns, which characterised serialised stories, made the stories unrealistic. There has, however, been a re-appraisal of Kalki, particularly among Marxist critics, in recent years. *Semmalar*, the monthly organ of the Tamil Nadu Progressive Writers Association, brought out a special number to commemorate Kalki's birth centenary.

Marxist critic Arunan says: "Kalki might not have gone into the inner layers of the social structure of those days, but he did give glimpses of the social life through his descriptions of the experiences and exploits of the royalty" (*Semmalar*, September, 1998). "At least, parts of people's history are touched," he says and adds: "*Ponniyin Selvan*, for instance, gives detailed accounts of the conflicts between Saivites and Vaishnavites and their impact on society."

Analysing the reasons for Kalki's continued relevance, Maran, another critic, says that Kalki, whose main concern was to arouse people's consciousness against colonial rule, sought to remind the people of their cultural heritage. Kalki's writings sought to instil pride in the greatness of Tamil language, literature, art, culture and valour. "Even after Independence, there is still a need to fall back on the cultural heritage. Kalki's works perhaps continue to serve that purpose" (*Kanaiyazhi*, August, 1999).

Stating that Kalki was a social force, not an ordinary writer, writer D. Jayakanthan says, "In politics, literature, criticism of the arts and Tamil renaissance, no other person has served as much as he did."

One of the criticisms against Kalki's short stories was that they were propagandist, but Kalki, for whom writing was part of political activity, a mobilisation exercise, was unconcerned about such criticism. If writing stories with a purpose was propagandist, he said, he did not mind being dubbed propagandist. Inspired by the national movement, he sought to instil patriotism in his readers and his stories did succeed in doing so. "He knew the art of creating interest in and writing convincingly on any subject," observed Dr. M. Varadarajan, novelist and literary historian (History of Tamil Literature). "He understood the spirit and force of the spoken language and used it as a powerful medium for his writings."

Se. Ganesalingan, Sri Lankan Tamil writer, says that Kalki "democratised" literature and enabled even the common people to appreciate it. In simple Tamil he judiciously blended humour and satire with real incidents.

In writing historical fiction, Kalki was influenced by English novelists Sir Walter Scott and Lord Lytton and French novelists Victor Hugo and Alexandre Dumas, according to Sunda, Kalki's biographer.

Kalki's early interest in listening to *harikathakalakshepam* (musical religious discourse) and his acquaintance with the pamphlets of Sri Lankan Tamil Hindu propagandist and scholar, Arumuga Navalar, helped him acquire the skill of story-telling.

Kalki's crusade against drink, untouchability, superstition, oppression of women and many of the decadent practices in Brahmin families of those days is testimony to his progressive thinking. Thiru Vi. Ka., veteran labour leader, and Rajaji (who took classes in socialism for jail-mates) imparted in him socialist ideals, according to some critics. Soorya, a character in his novel *Alai Osai* (The sound of the waves) belongs to the Socialist group in the Congress. "Soorya is none other than the author," says Rajendran.

Kalki considered *Alai Osai*, which was serialised in *Kalki* in 1948-49 and published as a book in 1963, as his best. The novel won for him the Sahitya Akademi award posthumously in 1956; it has for its backdrop the freedom struggle and deals with social reforms and politics. His other social novels include *Thyaga Bhoomi* (The land of sacrifice) and *Kalvanin Kadali* (Bandit's sweetheart), both of which have been filmed. *Thyaga Bhoomi*, which has the salt satyagraha as its backdrop, dealt with women's rights and untouchability. It was serialised in *Ananda Vikatan*; stills from the movie, which was being filmed at the same time, were used as illustration. After a successful run for six weeks, the film, directed by veteran K. Subrahmanyam, was banned by the colonial Government on the grounds that it indirectly aroused the people to fight for freedom.

S. Krishnaswamy, film historian and son of Subrahmanyam, told *Frontline* that the film had a theme that was "extraordinarily revolutionary" for the period it covered; it represented the high watermark of the liberation of Indian womanhood. "The film combined the spirit of Indian womanhood with the spirit of national freedom," said Krishnaswamy. According to Aranthai Narayanan, film critic, the film ranks on a par with the works of Satyajit Ray or Mrinal Sen in thematic as well as production values. "Kalki's dialogues were sharp, particularly in the court scene; the heroine's offer to pay alimony to her husband who deserted her long back and wants to rejoin her, was revolutionary," says Aranthai Narayanan. Krishnaswamy has made a teleserial of the story in Hindi with Bharat Bhushan in the key role.

Parthiban Kanavu, Kalvanin Kadali and *Poiman Karadu* were also filmed. Kalki wrote the script and some lyrics for *Meera*, an M.S. Subbulakshmi starrer.

Kalki's contribution to the cause of Tamil music is also noteworthy. He spearheaded a movement that wanted Carnatic musicians to include more Tamil songs in their concerts and composed a number of songs. His Tamil translation of Gandhi's autobiography, *My Experiments with Truth*, was published as *Satya Sothanai*.

Kalki was in the midst of some controversies. One related to his response to an observation by a respectable writer that Subramanya Bharati was a "mahakavi"; although Kalki was a great admirer of the nationalist poet, he did not agree with this estimation. The other related to some contemporary writers' charge of plagiarism against Kalki. Kalki admitted that among his over 120 stories, the themes of some six or seven were adaptations.

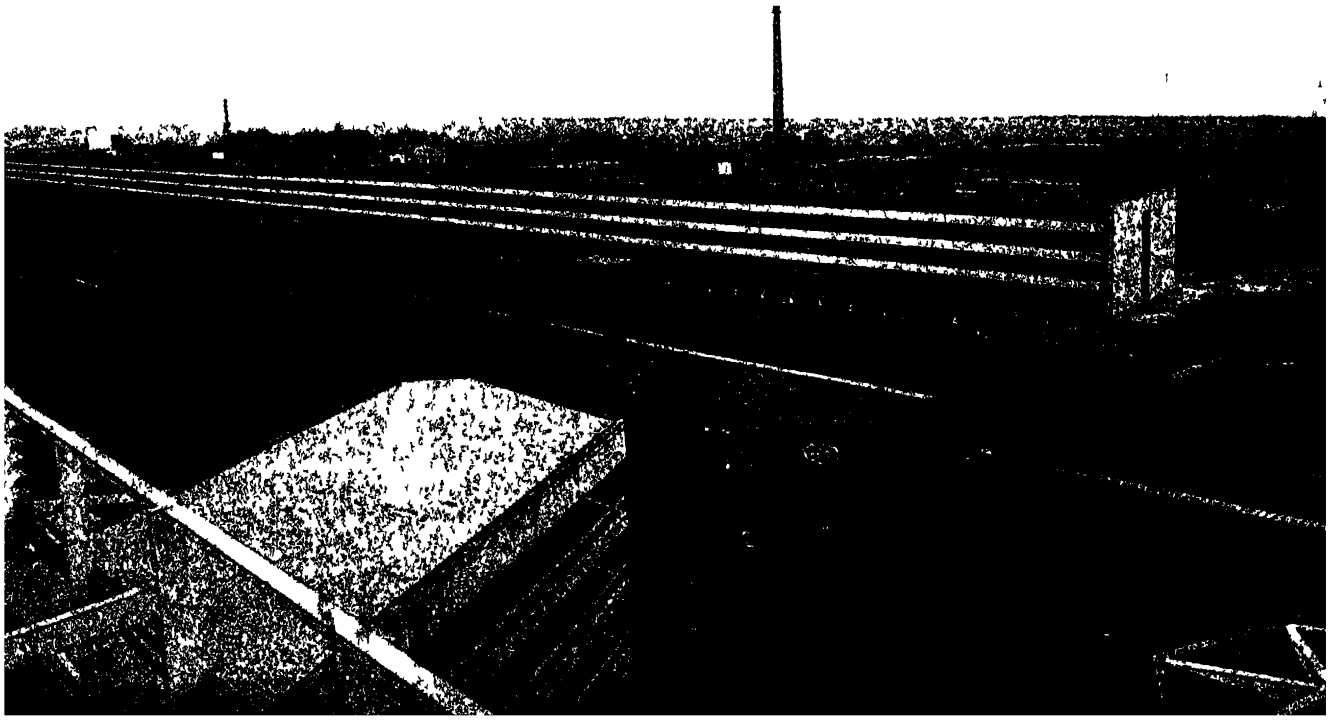
The release of a postage stamp in honour of Kalki was among the highlights of the centenary celebrations. Sometime ago, the Tamil Nadu Government announced the nationalisation of Kalki's works; this will enable publishers to come out with reprints of his works. The celebrations have already inspired publication of a number of new books, which include *Kalki: Selected Stories* by Penguin Books and *Kalki Kalanjiyam* by Vanathi Pathippagam, which has published Kalki's books for decades. The Penguin book is an English translation of 12 selected short stories of Kalki by his granddaughter Gowri Ramnarayan. ■

A mission for total safety

Averting radiation leaks and ensuring total safety at nuclear power facilities are the principal goals of scientists and engineers at the Bhabha Atomic Research Centre.

T.S. SUBRAMANIAN
recently in Trombay

Right from day one in the Bhabha Atomic Research Centre, safety has been one of the most important aspects of its programme. We look at safety not as an administrative process or review or regulation but as a scientific discipline. In the Department of Atomic Energy, safety is a comprehensive programme. From the cradle to the grave, so to say, we have technologies in place not only to generate electricity but to ensure safety.
– Dr. Anil Kakodkar, Director, BARC.



THERE is a touch of pride in Dr. Anil Kakodkar's voice as he outlines the total commitment to safety that drives scientists and engineers at the Bhabha Atomic Research Centre (BARC), Trombay, about 30 km from Mumbai. And as was made clear during a two-day visit to the laboratories and vast engineering halls at BARC, the pride is wholly justifiable. As part of their mission to ensure total safety, hundreds of scientists and engineers simulate a Loss of Coolant Accident in a nuclear reactor, study the effects of an earthquake-like situation, and build up a series of measures to ensure that radioactive releases into the atmosphere from nuclear power stations are well below permissible limits.

Safety is the watchword right from the stage of designing a nuclear reactor. Kakodkar, one of the foremost nuclear engineers in the country, said, "Design of a nuclear reactor is one important aspect of safety. You have to evaluate the normal and abnormal conditions under which a reactor will behave. Radiation protection is another important area (of safety)."

Y.S.R. Prasad, Chairman and Managing Director, Nuclear Power Corporation of India Limited (NPC), defined safety in the nuclear field as "avoiding the release of radioactivity into the atmosphere". The NPC operates 10 nuclear power reactors, two each at Tarapur in Maharashtra, Rawatbhatta in Rajasthan, Kalpakkam in Tamil Nadu, Narora in Uttar Pradesh and Kakrapar in Gujarat. Prasad said, "In the 30 years since the Tarapur reactors were commissioned, we have had no incidents of release of radioactivity into the atmosphere which has harmed people." This safety culture is in no small measure due to the vision of Homi Bhabha, the founding father of India's nuclear electricity programme.

VIVEK BENDRE

The Modular Laboratory building at the Bhabha Atomic Research Centre premises in Trombay, near Mumbai.

Radiation in excess can damage the environment and affect human beings. What is more, radiation cannot be seen. However, although in the public mind, radiation and radioactive materials are associated with nuclear reactors alone, the fact remains that radiation is always present in the atmosphere. It is also used in medicine for treatment of cancer. Radioactive materials such as uranium, thorium, radium and potassium are present on land, in sea, in the air and even in human bodies. The human body contains potassium-40, which emits radiation. Cosmic radiation is also constantly streaming towards the earth from outer space.

When the Department of Atomic Energy (DAE) was created in August 1954, Bhabha mandated that the Atomic Energy Establishment (AEET) should handle radiation in such a manner that it caused no harm to people and to the environment. He stipulated that standards should be so set that others could be asked to emulate them.

Dr. Umesh C. Mishra, Director, Health, Safety and Environment Group, BARC, said that Bhabha's mandate had been followed "in letter and spirit". Thus, unlike in most nuclear countries, he said, in India, environmental surveillance is undertaken even before a nuclear facility starts functioning. "We established a chain of Environment Survey Laboratories (ESL) at all major nuclear sites long before any statutory regulations were established by government agencies."

ESLs were established several years before the reactors at Tarapur, Rawatbhatta, Kalpakkam, Narora and Kakrapar attained criticality. There is also an ESL at Jaduguda, Bihar, where the Uranium Corporation of India Limited (UCIL) has its complex for mining and processing natural uranium *(Frontline,* September 10).

The ESLs study samples of soil, grass, plants, milk, water, fish, crabs, and so on, around the site of the nuclear power plants and collect data about the baseline radioactivity before the reactors start generating electricity. The ESLs have kept up with the times and have state-of-the-art equipment and talented scientists to ensure compliance with radiation exposure limits for the public set by the International Commission on Radiological Protection.

The ESLs collect samples of drinking water, food items, air, sea water, goat's thyroid, and so on from a number of locations over a radius of 30 km all through the year. (Goat's thyroid is a sensitive biomarker for the presence of even extremely low levels of iodine-131 in the environment.) In addition, the scientists routinely sample the atmosphere for tritium or estimated particulate activity. Grass is analysed for deposited radionuclides.

All the ESLs report to Mishra. His group comprising more than 500 scientists is responsible for providing radiation protection services for all the DAE units, covering the entire nuclear fuel cycle, and all radiation users in the country, including industrial, agricultural, medical and research installations.

The ESLs, said Mishra, collect data throughout the life of the plant so as to be able to detect any degradation in the environment. No facility in India has so far been decommissioned, but even if one were, the ESL would continue to remain functional so that the results of the decommissioning can be known, said Mishra.

These ESLs, situated in the residential colonies of nuclear facilities, are open to the public. "Initially, an impression that we are secretive gained ground. But it was never our intention," Mishra said. The data collected by the ESLs, he added, were available to the public too. University students use it for project work and some are trained there.

Mishra noted that while in many other countries, radiation protection personnel were drawn from among, or reported to, employees in the nuclear plants concerned, in India they reported to the Health, Safety and Environment Group. "This means we do not compromise on safety," he added.

The safety culture is in no small measure due to the vision of Homi Bhabha, the founding father of India's nuclear electricity programme.

IF radiation is released from a nuclear plant and it warrants immediate action, the Atomic Energy Regulatory Board (AERB) is informed. The AERB, the watchdog body for nuclear installations, lays down safety policies and standards connected with the application of radiation and radioisotopes. Its Safety Review Committee reviews all safety aspects of nuclear operations under the DAE; the executive functions in respect of the implementation of safety rest with the Health Physics Division of BARC.

Mishra said, "We report our findings to the AERB, which will decide whether it is safe to continue the operation of the plant."

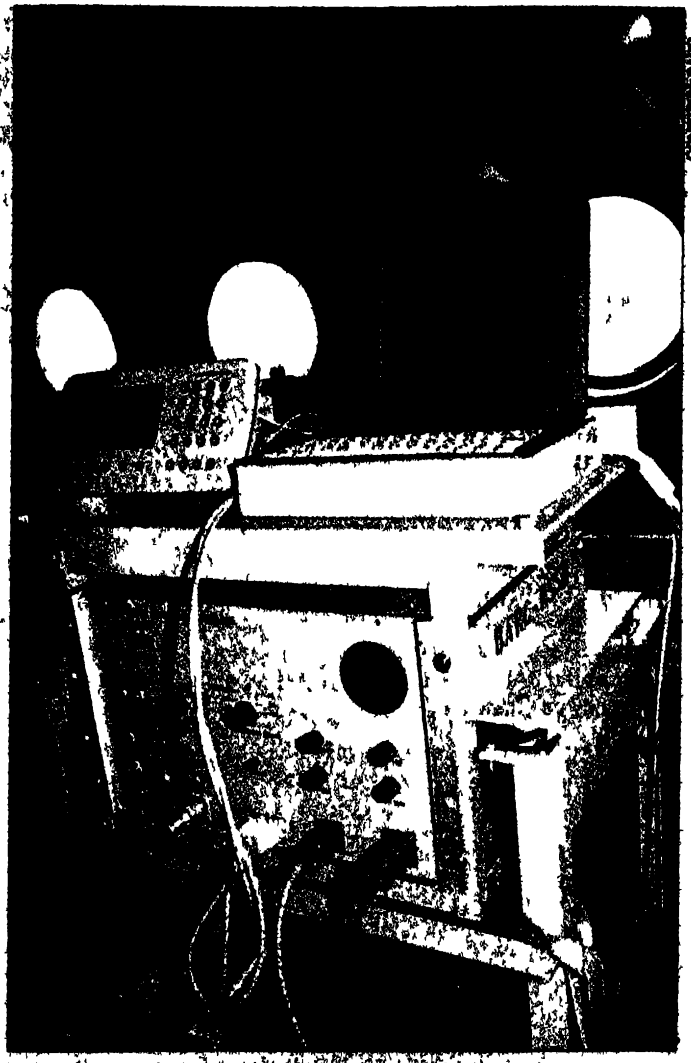
Every nuclear power station has a Health Physics Unit which keeps tabs on

Eye in the sky

T.S. SUBRAMANIAN

AN image of a helicopter appears on a computer console inside the Modular Laboratory building, with its host of research centres, at the Bhabha Atomic Research Centre (BARC). As it flies over Kalpakkam, Sadras and nearby places on a map of India, a green dot appears. As the helicopter moves farther afield, the dots turn blue, and then red. Dr. M.C. Abani, Head of the Radiation Safety Systems Division (RSSD) at BARC, explained: "The green dot indicates that there is no radiation. When the helicopter flies over a contaminated area, the colour changes. Blue and red dots indicate slightly higher levels of radiation." Abani said that the simulation had showed that at Kalpakkam in Tamil Nadu, where the Madras Atomic Power Station is located, "there is no (dangerous) level of radiation".

The helicopter is an Aerial Gamma Spectrometry System (AGSS), developed by BARC. It has two sophisticated instruments – a global positioning system (GPS) and a gamma spectrometer. In the event of a radiation emergency, the AGSS helps assess the severity of the accident and the extent of the deposited activity over the area. Dr. K.S. Pradeepkumar, officer-in-charge, Site Emergency Control Centre, RSSD, said: "If there is any large-scale radioactivity scram, you have to identify and map the area affected. This system can scan hundreds of square kilometres quickly, identify the affected area and help us take countermeasures."



Dr. Umesh C. Mishra, Director, Health, Safety and Environment Group, BARC, called it "a marvellous system. The GPS, which was linked to satellites,

uld, dispense informa-
on on the latitude, longi-
de and altitude. The
mma spectrometer
lped detect radiation.
This is of interest not only
) us but to the defence ser-
ces in case of nuclear, bio-
gical and chemical
arfare. This system is also
eful if detecting lost or
olen radioactive sources,"
id Mishra.

Dr. Anil Kakodkar,
irector, BARC, called
e GPS "a good system"
hich could relay data on
diation within a short
me.

BARC had developed

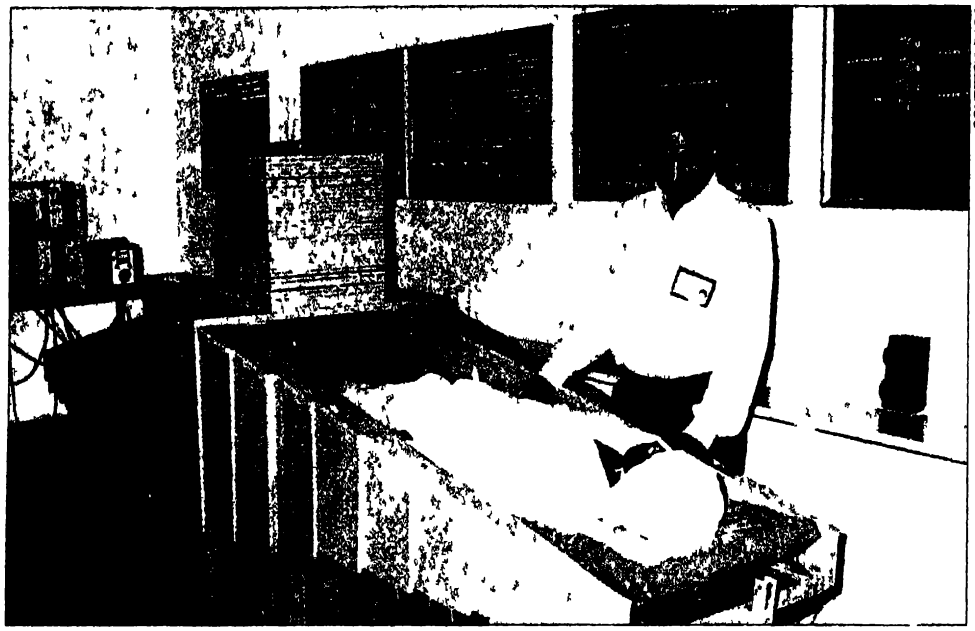
he system was taken by
in from Mumbai to
ne; it showed no radia-
on waves on the com-
ter screen en route. The
ilways had permitted
e BARC to monitor the rest of the
untry, Mishra said.

BARC is a member of the Global
vironmental Radiation Monitoring
twork (GERMON), which is a com-
ed programme of the World Health
ganisation (WHO) and the United
tions Environment Programme
NEP). They came together to pro-
de it after the accident at the nuclear

The helicopter-borne Aerial Gamma Spectrometry System, which could help assess rapidly the intensity of any environmental radiation in the event of a nuclear accident.

reactor at Chernobyl in April 1986 which led to the release of intense radioactivity into the environment.

The three objectives of the network were: to collect global radiation data on a routine basis; to assess the impact on public health and environment rapidly in case of accidents; to provide information on environmental radiation resulting from a major nuclear accident; and to help those countries that did not monitor their environment radiation to set up monitoring programmes. Every three months, member-countries communicated their data to the headquarters in Paris.



Sixteen GERMON stations have been set up in various parts of India, and 12 more are to follow. Each station consisted of an ionisation chamber and gamma dose monitors; beta gamma air particulate activity monitor to measure radon/thoron daughter products and long-lived fission products typically expected from nuclear accidents; and air sampling system where the filter is analysed for gamma emitting radionuclides.

BARC and the Indian industry have developed a wide range of systems, devices and instruments for radiation protection. BARC had sensitive instruments that could measure radiation at a level far below the harmful level. Indian industry manfuctured plastic suits, masks, badges, and so on, needed by radiation workers. India was therefore not dependent on other countries for these instruments – except the hyperpure germanium detector, which was mainly required for research. S. Kannan, Head of the Radiation Protection Instruments Centre at BARC, said, "We make instruments for radiation protection, radiation measurement and quality assurance." ■

: radiation dose received by workers
d the release of radioactivity into the
nosphere. It reports to the Health,
fety and Environment Group of
ARC.

Every radiation worker is personally
nitored, irrespective of whether or not
or she is at risk. Every such worker
ars a badge which records the dose he
she receives. If there is any possibility
t the worker may have been exposed to radiation through inhalation or ingestion, he or she is subjected to bioassay. Urine and excreta samples are analysed for radio-nuclides. The whole-body monitoring laboratory at BARC examines every year several thousands of radiation workers for any sign of radiation. Whole-body counters have also been installed at the Tarapur Atomic Power Station, the Rajasthan Atomic Power Station, the Madras Atomic Power Station, UCIL, Jaduguda, and the Nuclear Fuel Complex, Hyderabad. The radiation doses received by a worker are monitored all through his or her life and the data is stored.

Mishra said, "We have data to show that the incidence of cancer among our workers is far lower than among the general population. This is because of better medical coverage and education. We can therefore conclude that there is no

adverse impact of radiation on workers in the nuclear industry in our country."

Data is maintained about doctors and nurses who administer radiation therapy to cancer patients in hospitals run by the DAE. Exercises are run on machines with the help of dosimeters to see whether the right amount of radiation is delivered.

NUCLEAR power stations conduct three types of emergency exercises: plant emergency, site emergency and off-site emergency. Unless these drills are conducted to check the preparedness of the staff, the AERB will not give a nuclear power station the operating certificate.

Plant emergency is a localised emergency, whereas site emergency extends over the campus of the station. Off-site emergency is a much bigger exercise: it covers the public domain over a radius of 16 km and is conducted every two years.

Mishra said that particular emphasis was laid on re-training personnel. In key installations such as power reactors, research reactors and fuel reprocessing plants, only certified health physicists who qualified in written examinations, plant-related check-lists and interviews were recruited. This applied to both radiation protection workers and plant personnel. Regular training courses were held on radiation protection. "We have talented manpower. This is a big asset," Mishra said. Besides, only qualified engineers were recruited for operating the reactors.

According to Dr. Ashok Mohan, Technical Advisor to Chairman, Atomic Energy Commission, re-training and movement of qualified personnel from one nuclear power station to another had an important bearing on safety.

Radiation may have two kinds of harmful effects – somatic and genetic. The former affects only the individual concerned; the latter affects the children of the individual too. Mishra said that there were many misgivings that exposure to radiation could lead to genetic deformities. He added: "This is not possible. This type of dose cannot be delivered... Even occupational radiation workers (in hospitals) receive only small doses and are always monitored. We have not observed any deformities of any type – either somatic or genetic – in our occupational workers or their children."

Ashok Mohan said that the DAE had inherited a system where there were no limits to safety procedures. "We do not stop just because it does not look probable. As technology is improving, systems are improving. The whole philosophy is that we should try a little more." ■

This is the second article in a two-part series on issues of nuclear safety. The first part appeared in the previous issue.

For safeguards against bio-piracy

Governments of developing countries must recognise the urgency to protect their biological wealth and tackle the issue of a soft patent regime at the global review meeting of TRIPS at Seattle.

BIPLAB DASGUPTA

WEEK after week there are reports of the patenting of some Indian plant variety or the other by multinational agri-business companies. First, it was the patent on neem and its several uses, then came *haldi* (turmeric), followed by basmati, *karela* (bitter gourd), *kalajira* (black cumin seeds, brinjal... Most of these have been an integral part of traditional systems of medicine in India, evolved over centuries mainly by small village communities. The medicinal and other useful properties of most of these plants and their many varieties were widely known, although these were not properly documented in most cases. There was no bar on access to such traditional knowledge and no individual or company, far less a foreign one, thought of obtaining private rights on the use of these varieties.

The multinational companies (MNCs) began to scour poor countries in April 1994, when, following the signing of the Marrakesh Agreement, particularly the TRIPS (Trade-Related Aspects of Intellectual Property Rights) component, countries which were a party to the agreement were asked to protect (read individualise) their plant varieties by means of patent legislation. Time-bound proprietary rights began to be bestowed on individuals or companies instead of on the communities with a traditional knowledge base. Since patent implies the exclusion of others from IPRs, only the patent-holder is legally authorised to produce or to regulate production by selling, leasing or mortgaging such rights. Anyone producing those products without the permission of the patent-holder, obtained in exchange of a fee or royalty, would be violating the holder's legal rights.

TOWARDS SEATTLE

Patent rights have been internationalised. This was one of the major features of the TRIPS agreement. Every member-country of the World Trade Organisation (WTO), which was established in January 1995 in order to monitor the implementation of the Marrakesh Agreement, had to recast its patent law in line with the global patent regime as ordained in the agreement, within a given time-frame. The poor countries were given a deadline of end-1999 to modify their laws, while pharmaceutical and agro-chemical industries were given another five years. But that was no more than a formal concession devoid of substance. The time agreed upon was 2005, along with the 'transitory rules' regarding Exclusive Marketing Rights (EMRs). A precondition for WTO membership was agreeing to the EMRs of companies that had patented their products during the transitional period, the transitional period being the time

A basmati rice crop in Andhra Pradesh. A Texas-based company, which has patented a variety of the rice, now even has the right to exclude indigenous basmati from the Indian market unless it is patented as a product distinct from or produced through a different process from that of the company's product.

between obtaining WTO membership (1994 in the case of India) and overhauling the patent legislation in line with the global format (2000 in the case of India in general and 2005 in the case of pharmaceuticals). Such transitional rights were not to be questioned by national patent laws.

The *modus operandi* of the MNCs has been to collect the plant varieties and their germplasms from poor countries in order to cross-breed them with other varieties, and claim that they had invented something novel, non-obvious and of practical use (which are the requirements for acquiring patent rights), and then to patent them in their own countries or in any other country of their choice. Patenting a product in the United States or Burkino Faso or Burundi is as good as patenting it in Calcutta.

A typical example has been the patenting of basmati by Rictec, a Texas-based firm which, after collecting specimens from India and Pakistan and experimenting and cross-breeding them with other varieties, eventually patented them: first as Texmati, then as Kashmati, and finally as Basamati. Rictec is claiming novelty because its Basamati, although identical in taste to the sought-after rice variety produced in India and Pakistan, has been produced by following a different method and in a different terrain. And as such, with the passage of the EMR legislation early this year, the company is, legally and effectively, the owner of basamati. This ownership right has been instantly recognised by WTO members. They now have even the right to exclude indigenous basmati from the Indian market unless it is patented as a product distinct from the variety patented by the Texas-based company or as one that is identical but has been produced through a different process. Under the TRIPS agreement, the onus of providing this is now on the Indian or Pakistani basmati producer.

ONE way of combating the menace of bio-piracy is by challenging the patent claims by MNCs in the courts of the rich countries. On the turmeric patent, the Council for Scientific and Industrial Research (CSIR) won a battle. But such legal battles are expensive and time-consuming, and not easy to fight in each and every case. The main difficulty, even assuming that the judicial system is neutral, is that courts in the developed countries rely mainly on documentary evidence. Such documents are hard to come by in India. Unlike in the case of China or the Arab countries, India is not known to have had a systematic method of documentation. Without documents a patent application cannot be challenged in a foreign court on the ground of "prior art".

Another method is to counter TRIPS with the United Nations Convention on Biodiversity (CBD), which was signed by 170 countries in 1993, as against 150 signatories for TRIPS. The CBD recognises the collective rights of the village communities, and not those of individuals or companies. It further decrees that a rich country's demand for patent rights should not be at the cost of the overriding need for the conservation of plant diversity. It was possible for India to insist that both TRIPS and the CBD, one insisting on conformity and the other on diversity, cannot be right at the same time. Unfortunately, such arguments have not been fruitfully deployed by the Indian government in international negotiations to counter patentability, and as a result, individualisation of plant varieties.

This emphasis on the collective right of village communities can be taken a step further by arguing that the government, as the guardian of numerous village communities, should be permitted to exercise proprietary rights on their behalf. Such a step is legally feasible and defensible, and would have the additional advantage of protecting plant varieties. Once the sovereign right of a government over the biological wealth of a country is recognised, one can go even further and prepare an inventory of Indian flora, particularly the 8,000 medicinal plants targeted by the MNCs, and get those patented before the companies gain access to them. This is the commonsense approach to saving biological resources from lurking predators, rather than engaging in costly and risky legal battles in foreign courts.

No government in power in India appears to have been concerned enough about the urgency of protecting the biological wealth.... The rich countries, poor in biological resources, are keen to gain a time-bound monopoly on India's biological wealth.

PERHAPS there are better ways of preventing this poaching that has been going on for five years. But no government in power in India appears to have been concerned enough about the urgency of protecting the biological wealth. Something needs to be done now, and fast. The rich countries, poor in biological resources, are keen to gain a time-bound monopoly on India's biological wealth.

Article 27(3)(b) of TRIPS provides an option for patenting, that is, by way of *sui generis* or a combination of patent and *sui generis*. *Sui generis* is different from patenting but serves the same purpose of 'protecting' plant varieties. Generous though it appears at first glance, it is analogous to a patent in its essential features. The intent is the same as patenting, that is, privatising rights over plant varieties, but where the recording of rights would be simpler and less formal. *Sui generis* that India has in mind is UPOV (International Plant Breeders' Rights Convention), a soft patent regime that has its origins in an international convention in 1961 and was supported by 37 countries. UPOV has three versions: the original 1961 version and two more that were formulated in 1978 and 1991. Of these, only the 1991 version remains.

A major criticism of UPOV is that it is more concerned about protecting the interests of the plant breeder than the farmer. In its 1991 version the rights of village communities have been ignored, as also the right of re-use and exchange of seeds, while the breeder has been given the right to seize the harvest of the farmer should he fail to pay royalty for the use of seeds.

Further, given its insistence on stability and uniformity, an ordinary farmer would not be able to get the seeds developed by him registered, while the seed market would be dominated by MNCs engaged in agri-business, such as Monsanto (see separate story). The MNCs, it is feared, may use genetic information obtained from farmlands without paying any fee to the farmer to develop seeds and register them under UPOV, and then sell them at a high price back to farmers and those who had supplied the genetic information. This has revealed another serious dichotomy. The rich countries insist on the recognition of plants and their germplasms that are located mainly in the poor countries as the common heritage of mankind, access to which should be open and free. But at

At a gene bank in Brunswick, Germany.

the same time they have no qualms about selling at a high price plant varieties and products they produce (and patent) from those countries

Biodiversity legislation likely to be passed in India in a year gives MNCs easy access to biological resources for a fee to be paid to the community in the name of 'benefit-sharing' The idea of benefit-sharing makes no sense in an unequal world with the MNCs on the one side and the communities, not having the faintest idea of the economic price of their resources, on the other It is more than likely that by paying a negligible amount MNCs would seize the right of 'bio-prospecting', and arrogate to themselves the rights of these communities Non-governmental organisation activists such as Vandana Shiva fear that in the long run, this benefit-sharing would force India to pay out a great deal more in the form of royalties to buy those plant varieties now patented elsewhere than what the country would obtain from such paltry 'compensations' Although this legislation is purported to conform to the CBD, it does not explicitly recognise indigenous knowledge, nor does it recognise village communities. It only talks about 'persons' with whom benefits would have to be shared by the companies. This legislation is likely to come in conflict with the existing laws relating to traditional management practices in areas inhabited by the Scheduled Tribes and with the Constitution (73rd Amendment) relating to local bodies

Article 27(3)(b) of TRIPS, incorporating the provision for *sui generis*, will be one of the major items on the agenda at the global review of TRIPS at Seattle in November 1999 If the governments of the poor countries are united in their resolve, they can induce the rich countries to accept a wide definition of *sui generis* that recognises indigenous knowledge and community rights and moves away for the soft patent format of UPOV If they fail, it is more than likely that even this mild provision of *sui generis* would be taken away and all the plant varieties would be required to be patented

On the issue of patentability, India seems to have missed a major opportunity on May 11, 1998, the day a nuclear device was exploded at Pokhran Until that day, the European Parliament had no legislation on patenting of life forms Although since the Marrakesh Agreement, European governments were under pressure from biotechnology and genetic engineering firms to move towards a patent regime, the Green and Left parties and a large section of the Social Democrats in various countries took the view that life was not patentable During the first reading in the European Parliament of the draft bill on patent on biotechnology, an amendment was moved by these political forces against bio-piracy This bill required the applicant for patent rights to disclose fully the source of its genetic material, and also to declare that such material had been taken out of its country of origin Had this amendment been passed, it would have been possible for India to bring forward a corresponding legislation that would have effectively prevented the poaching of biological resources More important, Europe would have become a powerful ally of India on this issue and it would have been possible to bring pressure on the U S and Japan in Seattle to incorporate such provisions in their respective laws

WHEN this writer, along with Indira Jaisingh, Senior Advocate in the Supreme Court, went to Brussels at the invitation of some NGOs, and met several members of the European Parliament, their impression was that a strong intervention from the poor countries, led preferably jointly by India and Pakistan, could tilt the balance in favour of this amendment on bio-piracy, as the difference between the two sides was not big, it was a matter of just 30 votes The author arranged to send urgent fax messages to the Ministers concerned, with the help of the Indian Ambassador, urging immediate and strong intervention as time was running out When he returned to India on May 9, the Ministers concerned confirmed that they had received the messages and were in agreement with the author, but during the intervening 10 crucial days nothing concrete had taken place Action taken by the Ministries was too late to have any effect on the deliberations at the European Parliament on May 11, the day the biotechnology bill, without any safeguards against bio-piracy, was adopted. Rather than make common cause with Pakistan on basmati, the government's preoccupation at that time was with Pokhran-II ■

For an alternative patents regime

There is a strong case for the revision of the TRIPS agreement concerning the protection of plant varieties, drawing lessons from India with regard to the development of a *sui generis* system.

PHILIPPE CULLET

THE agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS), one of the treaties administered by the World Trade Organisation (WTO), has been a subject of controversy in India. Membership of the WTO and the ratification of TRIPS have significant implications for developing countries. Public awareness about the implications of TRIPS with regard to biopiracy heightened following the patenting in some countries of neem and its various properties and the application for a patent on some medicinal properties of *haldi* (turmeric) in the United States, which was turned down after a review.

The WTO ministerial conference slated for November 1999 in Seattle, whose member-states are to decide on the launch of a new round of trade negotiations, will raise the stakes once again. More significant is the fact that India has to prepare for the implementation of TRIPS and initiate a broad debate on the issue since any legislation to protect a plant variety should, theoretically, be adopted before the year-end. The issue of protection of plant varieties has received a fair degree of attention. And a fresh look at the provisions concerning plant varieties and the responses being proposed in India is in order.

TRIPS provides for the availability of patents for inventions, whether they are products or processes, in all fields of technology. Member-states can restrict patentability to some cases. For instance, they can exclude plants and animals from patentability. But TRIPS mandates the introduction of a form of legal protection on plant varieties. Member-countries have the liberty to "provide for the protection of plant varieties either by patents or by an effective *sui generis* system or by any combination thereof" (Article 27.3.b). This constitutes one of the few areas where countries are given some margin of appreciation in devising a protection system.

There has traditionally been no legal protection for plant varieties in India or at the international level. Seeds were, for instance, exchanged among farmers and countries on the basis of the principle that the means of enhancement of food security should not fall into the domain of commercial interests. This free sharing of knowledge has in no way hampered the development of new plant varieties or agricultural research. Indeed, the hybrid varieties of the Green Revolution, celebrated as the ultimate solution to the challenges of improving food availability per capita, were developed entirely on the basis of free access to and free sharing of knowledge pertaining to biological resources.

In Europe and in North America, the principle of free access to information has been progressively restricted following pressure from the private sector for the establishment of a system of private property rights. This has been concomitant with the decline of agriculture as a subsistence activity and the overall commercialisation of the primary sector. In India, socio-economic conditions differ dramatically from those obtaining in the countries that are part of the Organisation for Economic Cooperation and Development (OECD). The primary sector still constitutes more than a quarter of the gross domestic product (GDP) and employs about two-thirds of the working population. Further, agriculture is still mainly a subsistence activity. The current Patents Act reflects both the traditional practices of free exchange and the socio-economic conditions of the country. It provides, for instance, that methods of agriculture or horticulture cannot be patented. Further, in the case of substances intended for use as food, it restricts patentability to the process and provides for a shorter duration of the rights.

The TRIPS agreement broadly reflects the current legal situation in the OECD countries. It thus imposes a significant burden of adaptation on countries such as India. In a few cases, it allows member-states the liberty to determine the form of protection (as in the case of plant variety) they want to adopt. In fields such as pharmaceuticals, patent protection is compulsory. If the new regime seems inappropriate to the local situation in India, the only remedy is to lobby for a change in the agreement or for India's withdrawal from the WTO.

Here the focus is on the current proposals at the governmental and non-governmental levels concerning the development of a *sui generis* system. All these proposals fall short of constituting appropriate alternatives for India. Efforts should be directed at the development of such an alternative. While fighting

patents and working towards a reform of the WTO agreements can be pursued in the long term, it is of utmost importance to use the scope provided in the treaties.

THE government has for the past several years been in the process of drafting a Plant Variety Protection and Farmers' Rights Act, which is to constitute a direct response to the TRIPS agreement. The draft mainly focusses on the definition of formal plant breeders' rights and follows closely on the model of the International Convention for the Protection of New Varieties of Plants (UPOV Convention). The UPOV Convention specifically seeks to develop plant breeders' rights. Patents and plant breeders' rights are conceptually similar Both seek to give the private sector incentives to enter the seed business. Plant breeders' rights are, however, less firm than patents and provide some exceptions to breeders' rights in favour of farmers.

The draft Act provides, as in the case of the UPOV Convention, that protection will be available only for varieties that conform to the criteria of novelty, distinctness, uniformity and stability. Further, the draft explicitly states that, in order to be protected, the 'new variety' must be clearly distinct by at least one essential characteristic from wild relatives and traditional cultivars. In this sense, it is geared to providing incentives to the private sector to engage in the seed business.

Although the title suggests that the Act also provides for farmers' rights, it focusses on plant breeders' rights, which are inherently incapable of recognising farmers as breeders. Farmers are seen as cultivators and managers of agro-biodiversity, whose varieties cannot be protected under the Act. At the most, farmers are granted the rights to save, use, exchange, share and sell the produce of a protected variety. These do not constitute novel rights but rather drastically restrict existing rights.

NON-GOVERNMENTAL activists have been active in the field of plant variety protection. Their efforts have focussed on both practical activities and policy development. Significant attention has been devoted to the setting up of biodiversity registers for benefit-sharing and in order to develop alternative legislative frameworks.

C. RATHEESH KUMAR

Biodiversity registers

Biodiversity registers have been proposed partly to fight patent applications. The process has been promoted on a large scale by the Centre for Ecological Sciences in Bangalore but has also been undertaken independently, as in Pattuvam village in Kannur district of Kerala.

The idea is to document existing plant and animal species and knowledge relating to these resources. This can then be used to show that a given patent application uses information which is already part of the common body of knowledge in use in a given community or in the country in general. This is enough to defeat a patent application since the patents system is premised on rewarding 'inventions'.

Biodiversity registers are of great importance in fighting unwarranted patents However, they do not contribute to the development of an alternative to the patents system as they are conceived exclusively as a defensive strategy against patents. They serve to show that the knowledge already exists and thus cannot be patented, but do not provide any other form of protection for this existing knowledge.

Benefit-sharing

As a corollary to the setting up of biodiversity registers, the concept of benefit-sharing has been put forward. Its proponents include, for instance, the M.S. Swaminathan Research Foundation in Chennai Benefit-sharing is directly linked to the idea that the knowledge of farmers and local communities is not susceptible to fulfilling patenting criteria or even that it should not be included in the patent system. It thus seeks simply to provide a form of monetary compensation for the use of local people's knowledge. The concept of benefit-sharing has been enshrined in the proposed Biological Diversity Act, which provides that the national biodiversity fund shall be utilised, for instance, for "channelling benefits to the conservers of biological resources, creators and holders of knowledge". There is no hint that the creators and holders of knowledge may be the owners of these resources and should thus have the right to determine whether they

want to sell and at what price.

Overall, benefit-sharing constitutes a useful strategy to mitigate some of the undesirable impacts of patents on biological resources for current holders of biodiversity-related knowledge. Without benefit-sharing, such knowledge may be 'taken' from its current holders without any form of acknowledgement or compensation. However, benefit-sharing does not contribute to the definition of an alternative regime to patents. Indeed, while it seeks to limit the impact of the introduction of patents in the field of biological resources, it does not seek to provide any rights to current holders of knowledge. In this sense, it assumes that local people do not have intellectual property rights (IPRs) over their knowledge and that a monetary reward constitutes a sufficient compensation. Further, benefit-sharing is not necessarily a practical or desirable solution since there are many instances where the source of the materials used is very difficult to trace to a particular community, region or even country. This is because most people around the world depend to a large extent on plants which are originally from other areas for some of their staple food. Since centuries may have passed since the first transfers took place, it is hardly feasible to trace the variety to its original source even if this was deemed to be desirable.

The dangers of benefit-sharing are also illustrated by what is seen by some as a model benefit-sharing transaction. In the case of Aarogyappacha, the Tropical Botanical Garden and Research Institute near Thiruvananthapuram decided unilaterally that the manufacturer of the drug award the Kani tribe, who shared their knowledge of the anti-fatigue properties of the plant, 50 per cent of the licence fee and royalty. If the percentage awarded to the Kanis is high, this transaction involves the transfer of the IPRs of the Kanis to the institute. While the monetary compensation is welcome, the rights should stay with the first holders of the knowledge.

Community IPRs

It has also been suggested that India should develop legislation which would extend the circle of potential holders of patents and make patents available to local communities. Proposals by the Research Foundation for Science, Technology and Natural Resources Policy, New Delhi, and by K. Abdul Latheef of Kozhikode have been circulated. Community intellectual property rights are premised on the idea that the current patents system only recognises the northern industrial model of innovation. The idea is therefore to foster intellectual property laws which recognise the more informal, communal system of innovation through which farmers and indigenous communities produce, select, improve and breed a diversity of crop and livestock varieties.

These proposals are significant insofar as they seek to give local holders of knowledge actual property rights. However, they do not constitute appropriate models for the development of an alternative to the patents system. This is due to the very nature of patents as monopoly rights, which cannot reward several actors. By granting local communities the right to seek patents, they are put on a par with any private company which is in this business. This implies that even if farmers manage to patent some of their innovations, they are bound to lose out in the long run since private companies will always be able to innovate faster than them.

All the proposals reviewed focus on fighting patents. However, the TRIPS agreement does allow for an alternative form of protection for plant varieties.

Towards an alternative system

Exclusion of patents in agriculture has traditionally been premised on elements of public morality, the need to foster innovations at all levels from the smallest farmer to multinational companies and the need to restrict the commercialisation of sectors dealing with the most basic needs of humankind, such as food and healthcare. While these characteristics are valid even today, TRIPS now requires the introduction of a form of plant variety protection.

The introduction of patents in agriculture should be avoided in the current socio-economic context characterised by the existence of a variety of actors involved in agricultural management and agricultural innovations. Patents are by definition incapable of apportioning benefits in a manner that fits this reality since the grant of a patent implies that the patentee derives all the benefits associated with the invention. Patents also have the undesirable side-effect of implying that all knowledge which is not patented is in the public domain and thus freely available. Any knowledge which cannot be protected by patents because it is not 'state-of-the-art' is thus deprived of legal protection. This is very unfortunate because it gives the impression that the work of the managers of biodiversity is devoid of value while the work carried out in laboratories is the only one which adds value to the final product. Finally, patent rights are not known to foster the conservation or sustainable use of biological diversity.

Current proposals clearly do not constitute a full alternative to patents. The plant variety legislation is closely modelled on the UPOV Convention and recognises plant breeders' rights which are, like patents, monopoly rights meant to foster the involvement of the private sector in the seed industry. Some of the other proposals are extremely interesting in the context of a patent regime but do not contribute to the development of an alternative. Clearly, India should develop an alternative system, not one modelled after UPOV. The UPOV system was developed by European countries at a time when subsistence agriculture had already mostly disappeared and when an overwhelming percentage of the population did not work in the primary sector anymore. These conditions do not obtain in India.

An alternative regime should have some of these characteristics: First, it should provide for the establishment of property rights for all actors involved in agricultural management and seed improvement. To this end, it should aim at protecting not only the interests of corporate biotechnology firms and seed companies, as is the case with patents and plant breeders' rights but also the interests of farmers, who are among the major seed producers in India. One solution would be to provide a two-pronged recognition of commercial breeders' rights and farmers' rights, a proposal made at the international level a decade ago but which is still being discussed. Concerning farmers, the aim should be to protect farmers' current techniques or varieties and to allow them to derive benefits from any improvements they will carry out.

Secondly, the system should provide for non-monopoly rights. This directly derives from the fact that various actors contribute to agricultural innovation and that each of them should be entitled to property rights over their inventions, whether they are state-of-the-art or not. This would, for instance, imply that while commercial breeders can have the right to market their varieties, farmer-breeders can at the same time have the right to use their own varieties, exchange them and sell them. In this framework, different property rights systems exist side by side. A non-monopoly system implies that no

single entity derives all the benefits associated with a given invention and that various inventors can have concurrent rights.

Thirdly, an alternative regime should recognise the fact that not all inventors seek to commercialise their knowledge. Indeed, one of the major shortcomings of the patent system is the assumption that the only incentive for innovation is the possibility of commercialising an invention and receiving monetary returns from it. Some farmers may try to take advantage of the possibility of commercialising their knowledge, while others may not. This fact should therefore be recognised in the proposed framework.

Fourthly, the TRIPS agreement requires that the alternative system should be 'effective'. This should not be understood as implying only the existence of legal enforcement procedures but should be understood in a broader context. While the WTO has assumed disproportionate importance in international relations partly because of the existence of a stringent dispute settlement system, plant variety protection is not regulated exclusively in TRIPS. Therefore, it is imperative that an alternative system be construed in the broader framework of India's international obligations which include, for instance, the Convention on Biodiversity (CBD). Of particular relevance is Article 1 of the CBD which states that the aims of the Convention are the conservation and sustainable use of biodiversity. The alternative system should thus contribute to the sustainable management of plant varieties.

Overall, the TRIPS agreement gives member-states the liberty to adopt plant variety protection regimes which are not based on patents. Given the current socio-economic conditions in India, this possibility should be fully utilised to strengthen the position of all innovators in the field of agricultural management. The current draft legislation, which is directly based on the UPOV Convention, should be abandoned because it provides for monopoly rights which will only benefit the private sector industry. A novel version should be drafted with a view to granting meaningful property rights to all relevant actors and foster the sustainable management of biological resources. ■

Dr. Philippe Cullet is research programme director at the International Environmental Law Research Centre in Geneva. This article draws largely from a longer paper prepared by the author that is published in the Journal of World Intellectual Property *(Volume 2, Page 617, 1999).*

■ INTELLECTUAL PROPERTY RIGHTS

Monsanto, again

Questions raised by the plasmids import controversy refuse to go away.

PARVATHI MENON
in Bangalore

THE seed and pesticide transnational, Monsanto, which in March set up what is believed to be one of the country's most advanced genetic engineering research laboratory at an estimated cost of $20 million in the premises of the Indian Institute of Science in Bangalore, is again at the centre of a controversy. Monsanto ran into trouble with environmental groups last year over field trials it conducted on BT cotton (a genetically altered cotton variety that is resistant to bollworm attacks). Environmental activist groups, as also a significant section of the scientific community, expressed concern over the permission granted by the Department of Biotechnology (DBT) for these trials, particularly in the context of Monsanto's acquisition of the patent for the 'terminator' gene technology. (A 'terminator' gene introduced in a seed will render it sterile. In traditional agricultural systems where seeds are saved from a harvest for the next crop, such technologies are seen as a major challenge and threat to community and national food security.)

The 'gene giant' (a term recently coined for the handful of transnational enterprises that control the global production/manufacture and marketing of seeds, pesticides, food and pharmaceuticals) recently applied to the DBT for permission to import 33 plasmids, or gene constructs, from its headquarters in the United States. These are to be used for genetic engineering of rice, sugarcane and some ornamental plants. "Researchers at

A specimen of Bollgard Bt, the genetically altered cotton variety from Monsanto. The multinational company ran into trouble with environmental groups first over field trial of this variety.

the Monsanto R and D Centre need to import these research materials to determine the suitability of these genes and the transformation procedure in crops like rice and sugarcane," a Monsanto press release said.

Although the DBT has not yet given Monsanto clearance for these imports ("The Review Committee on Genetic Manipulation (RCGM) is still examining their request," P K. Ghosh, Adviser, DBT, told *Frontline),* news that Monsanto is seeking entry into the segment of genetically altered food crops has alarmed sections of the scientific community. The imported gene sequences are likely to carry Monsanto's proprietary genes, and when used for the 'improvement' of Indian varieties will create patentable new varieties. Will the benefits of patentable research be shared?

In the absence of a national plant variety protection law, on what basis will research benefits be shared? If Monsanto, with its enormous economic clout (it has already, at an estimated cost of $4 billion, bought into leading Indian seed companies, such as Mahyco and Rallis, which it acquired when it took over the foreign interests of Cargill seeds) is allowed entry into the area of basic food crops, will Indian agriculture become dependent in the long run on its patented seeds? "It is not only the RCGM that examines and decides on clearance for all research proposals," Ghosh said. "There is also a legally set up Institutional bio-safety committee, which has a DBT representative on it and which too must give its clearance. My hand extends into Monsanto's laboratory." He said that the clearance by the RCGM was for imports alone, and that separate clearance would be needed for the introduction of these gene sequences into Indian varieties and for field trials.

ENVIRONMENTAL activist groups however do not find the DBT's assurances entirely convincing. That the imported gene constructs could contain the terminator technology is a theoretical possibility. Groups such as M.D. Nanjundaswamy's Karnataka Rajya Raitha Sangha have already alleged that the terminator gene is present even in BT cotton. "Monsanto will go ahead with this programme,". Nanjudaswamy said. "With the announcement of the second phase of reforms in India, the decanalisation of imports and port privatisation, Monsanto can bring in any kind of transgenic and dangerous varieties."

Any laboratory can identify the structure of the terminator gene ("Even a high school bio-chemistry student can do it," a senior scientist working at a government research institute said.) However, with the DBT having banned this technology and with a regulatory mechanism supposedly in place to vet all imports and research activities, what is of immediate concern is not the possibility of illegal import of the terminator technology, but the implications of allowing Monsanto, with its dubious international track record, into the area of genetically modified food crops.

THERE are other related issues that agitate plant geneticists. First, the lack of transparency in the way the DBT implements its bio-safety guidelines. "Why does not the DBT make public the scientific information on the 33 gene constructs imported by Monsanto," one scientist asked. "In all fairness, the DBT should form committees not just of their own people but from the public and private sector. This will help competition." The issue of intellectual property rights is another matter of concern. This geneticist said that the altered varieties generated by Monsanto with Indian germplasm should not become the company's property until India has plant variety protection laws in place.

After repeated attempts by *Frontline* to obtain Monsanto's response to some of these issues, the public relations department of the company in Mumbai responded (the director of the R and D Centre in Bangalore refused to meet or speak to *Frontline).* Some of the answers Monsanto gave on e-mail were to questions that had not in fact been asked. The company said that its application to the DBT was still under review.

To a question whether the gene constructs would have any of Monsanto's proprietary genes and how research benefits would then be shared, the terse response was that plasmids "are freely available in the public domain."

THE IISc's regulatory mechanisms function independently of and in addition to those of the DBT, according to the Institute's Director, Professor Goverdhan Mehta. "Our agreement with Monsanto has sufficient safeguards such that nothing will be done which will hurt the interests of the country," he said. Even those research projects for which Monsanto has got the DBT's clearance can be turned down by the scientific committee and bio-ethics committee of the institute that have been set up to vet all research projects proposed by Monsanto. "Any scientific activity in their R and D Centre conducted exclusively by Monsanto, or as a joint research project with the institute, or as research sponsored by Monsanto have to be cleared by the two committees," Mehta said.

On how patentable research benefits will be shared, he said that the agreement stipulated that while they would have the rights over the research that was exclusively theirs, the fruits of joint and sponsored research would be shared.

Several scientists and researchers *Frontline* spoke to felt that Monsanto appeared to be conducting its research activities under a veil of secrecy, something quite alien to the ethos of Indian science as it is practised in publicly funded research institutions. "We aren't even allowed in there," said a senior scientist from one of the departments of biological sciences. "Monsanto is not bringing in their advanced technology here," commented another scientist. "Apart from the benefits of funding what else does IISc get? Monsanto has access to IISc's pool of expertise in a large number of biological science departments, and from the liberal academic atmosphere of discussion and sharing of research. What do we get in return?"

Questions have been raised by environmental activists about the nature of the agreement between Monsanto and the IISc. These organisations have demanded that the terms of the contract be made public. Several scientists felt that there should have been some discussion about the merits or otherwise of entering into a research agreement with Monsanto.

In Mehta's view the agreement, as far as the institute is concerned, is already in the public domain."We have nothing to hide. As a publicly funded research institute, we are accountable to Parliament. The agreement was approved by the government, and I presume copies of the agreement are available with them and in Parliament. It is not for me to photocopy it and distribute it among the public."

As in some European countries and England, in India too Monsanto is up against popular movements that are closely following its every move. More than government and institutional regulatory mechanisms, it is public monitoring that may prove to be the most effective regulatory mechanism. ■

From the K-word to the T-word?

The government is promoting the bandwagon slogan of fighting "terrorism". This is a means to cover up its own failure in Kashmir, and to paint internal threats in external, communal, colours.

■ BEYOND THE OBVIOUS

PRAFUL BIDWAI

POOR Rajeshwar Dayal, once called a father of the Indian Foreign Service(IFS), who died last month, must already be turning in his grave. He simply could not have believed that the service he had so carefully nurtured into a professionally competent and skilful diplomatic corps has so quickly become inept, tactless and disoriented. Witness the horrible mess the Foreign Office and the Indian embassy in France made of the Lalita Oraon case with their disgraceful handling of the issue of her mistreatment and probable physical abuse, and the French media's and public's outrage.

In the absence of an independent investigation into the facts of the case, we still do not know what happened to Oraon before September 6, when she was handed over to the French authorities in a state of extreme distress, knife in hand. But she was clearly the victim of a horrendously exploitative relationship with her masters. She was very nearly driven to suicide by their decision to sack her without notice or compensation. We also have it on the authority of one of France's most respected physicians, and the highly regarded Committee Against Modern Slavery (CCEM), that Oraon recently sustained serious injuries, even genital mutilation, which could "not have been self-inflicted".

Clearly, this was a case deserving the most serious and sober attention and inquiry on the part of the Indian mission, especially once the matter attracted the attention of the French legal system. After all, the very first duty of the mission is to protect the life and limb of Indian citizens. Instead, the embassy rushed, without ascertaining the facts, to blame the victim and defend her employer. Worse, it disingenuously tried to turn the tables on the CCEM by accusing it of having harmed Oraon and the French media of practising "defamation and disinformation".

Embarrassed, New Delhi tried to control the damage by announcing that it would send an Additional Secretary to inquire into the matter. This move was stalled and sabotaged.

Meanwhile, the Paris mission issued another aggressive statement, demanding that Oraon be handed over to it, citing the Vienna Convention on diplomatic privileges. It now turns out that it is Oraon, not the French Government, that resisted the handover. The French authorities were wrong to deny Indian journalists access to Oraon. But the Indian mission's role was far more blameworthy. It tried to deny, suppress, and then dismiss, the truth.

The Indian embassy's reprehensible conduct in the Oraon case is symptomatic of the attitudes of many Indian diplomats towards their servants. Most pay them a pittance (Oraon received less than a tenth of the legal minimum wage) while overworking them – an 18-hour day is normal – without a semblance of security or dignity. These "heaven-born" worthies should know that such attitudes are regarded as uncivilised in the societies where they are posted – in most cases, seek to be posted – for the comforts they offer.

Evidently, many in the IFS want these "Western" comforts and privileges, but will insist on reproducing the worst aspects of Indian caste oppression and social bondage abroad. They see this as "natural", something no Westerner should "interfere" with. A diplomat was in fact quoted as having said that since the West did not pay them their salaries, it had no right to specify how much their servants' salaries should be! These attitudes are hopelessly contradictory and duplicitous. They reek of the perversions of privilege. It is futile to defend them by citing diplomatic immunity and the Vienna Convention. For enlightened citizens in many Western countries, basic considerations of human rights and fairness, and the European convention on human rights, clearly prevail over the Vienna Convention.

Equally deplorable is South Block's tendency to see the Oraon issue through the prism of Indo-French relations. This is similar to the government's reaction to the outbreak of bubonic plague in 1994: Prime Minister P.V. Narasimha Rao was much less bothered about the shameful disaster or its worrisome causes, than its likely impact on India's "image" as an investment destination. What is of vital importance in the present case is whether full justice is done to Oraon and whether her dignity as a woman and a worker is defended.

The mistreatment of Indians by other Indians abroad should occasion serious reflection on our society, rather than speculation in our media over whether France will now support India in scuppering the attempts of the G-8 to promote nuclear restraint, or transfer dual-use technology. India's "image" will not be enhanced through posturing about diplomatic immunity and sovereignty. It will be burnished only if India comes across as a nation seriously committed to values such as equality, dignity of labour, fairness and justice. For this to happen, our Lalitas have to get a fair deal.

There is something pathological about the attitudes and instincts in evidence in our Foreign Office. These are even more worrying than sheer ineptitude and tactlessness. They betray a myopic, inward-looking and self-obsessed calculus and a foundational confusion about the state of the world today, India's overall role in it, and what the promotion of the national interest really involves.

IT is indisputable that India's role in shaping and influencing global events and processes in the interests of its people – and a large majority in the world – has shrunk significantly over the years. New Delhi has had little influence in shaping the great events of the 1990s –

whether it is the post-Cold War resettlement of Europe or ethnic crises in the former Yugoslavia and Sub-Saharan Africa, or flashpoints such as Iraq, Bosnia or Kosovo. India has been a passive spectator to the further skewing of North-South imbalances, and the virtual takeover of policy-making in some 120 countries of the South by the World Bank and the International Monetary Fund (IMF) along lines which the Bank itself now admits were flawed: they failed to redress poverty, regional imbalances, and low industrial and agricultural capacities.

India's reaction to the aggressive reshaping of military blocs, especially the expansion of the North Atlantic Treaty Organisation (NATO), has been utterly passive, if not one of benign complicity. Indian policy-makers say that they want a multipolar world. But they have done precious little to bring it about by creating and strengthening countervailing forces to Washington. Compared to the progressive role India played until the 1970s, its recent part in global affairs has been marginal. Earlier, India was a strong advocate of decolonisation, national liberation, non-alignment, multilateralism, and peace and nuclear disarmament. These worthy causes received a boost owing to India's moral stature, not military might, which was always limited. India also represented an autonomous model of development, not just an imitation of what Nehru used to call "those Coca-Cola countries". India was heard with respect as a force of reason, not a source of fear.

India's global role has become increasingly conservative. It tacitly, if not explicitly, supports policies which erode democratic economic decision-making. On the environment, human rights, population, labour and gender, it has become *status quo*ist and pro-Western. Since the 1991 Gulf war, it has moved in a generally pro-U.S. direction. Its topmost post-Cold War priority is to find accommodation with the West, especially Washington. Rather than advocate multilateralism, it now favours an increasingly bilateral approach to the West. Between 1992 and 1995, for instance, India held four rounds of bilateral talks on nuclear weapons with the U.S., against its own proclaimed policy. Since Pokhran-II, there have been eight more.

From being an opponent of machtpolitik or power-based politics, India has become its unabashed practitioner. From being a campaigner for peace and disarmament, it has become one of the biggest obstacles to it. For five years, it demanded a special U.N. session on disarmament. Today, it opposes such a session tooth and nail. Barring No First Use – itself tokenist – India resists every serious proposal for nuclear arms restraint, reduction in conventional armament flows, ban on landmines – on grounds that are self-serving and do not even have a general, broad rationale.

New Delhi has become an obsessive defender of absolute national sovereignty – unfettered by human rights or other universal criteria. It failed to take a stand on the vital issue of human rights in Kosovo. It only opposed the NATO-led multilateral action as a violation of national sovereignty. But surely, in extreme, exceptional situations, for example apartheid or genocide, sovereignty must yield to other criteria.

Nuclear India is not at peace with the Great Powers, with its neighbours, not even with itself. Its horizons have shrunk even as its ambitions for a greater global role – largely through the short cut of military weapons – have vaulted.

On East Timor, India has not let out a squeak on the horrific repression unleashed by the Indonesian forces – one of the worst cases of near-genocidal terror anywhere, killing a third of the population. One reason is that Indonesia helped India get entry into the Association of South East Asian Nations (ASEAN) Regional Forum. However, perhaps a weightier reason is New Delhi's Kashmir and Pakistan preoccupations. It fears that supporting intervention in one region – however genuinely humanitarian, well-intentioned, multilateral and balanced it may be – would invite similar demands in Kashmir, opening a can of worms.

India's insecurities over Kashmir have intensified despite Pokhran-II. After all, nuclear weapons are utterly useless in the face of low-intensity warfare or insurgencies. Nuclear India is not at peace with the Great Powers, with its neighbours, not even with itself. Its horizons have shrunk even as its ambitions for a greater global role – largely through the short cut of military weapons – have vaulted. There is no coherent link between India's foreign policy and its pursuit of democratic domestic priorities. With the BJP's aggressive, bellicose, chauvinistic, nationalistic, these tendencies have got further accentuated.

New Delhi's notion of sovereignty is divorced from the people and the public interest. It is happy to surrender policy-making on industrial, agricultural, trade and investment policies to Western capital. It has done so through the 1990s in the name of "pragmatism". It affirms sovereignty only when it comes to human rights violations, threats to religious freedom, and the "right" to make weapons of mass destruction. Such sovereignty is irrelevant, even hostile, to the public interest.

FREED from a commitment to principle or universal doctrine, India's foreign policy establishment now takes whatever positions seem expedient. This is a highly subjective view, and can change arbitrarily. The latest shibboleth, fashion, or flavour of the month, is "counter-terrorism" and the "global" fight against (Islamic) fundamentalism. This has become a bandwagon slogan. In place of the K-word (Kashmir), which long spelt embarrassment, we are told, South Block has moved on to the T-word (Terrorism or Taliban), about which it can feel upbeat. The T-word gives India respectability, a feel-good proximity to, and a joint project with, the Great Powers, above all, the U.S., no less.

That is why Jaswant Singh in the U.N. General Assembly went all out to underline not just Pakistan's role in "terrorism" in Kashmir, but its links with Afghanistan and the "larger disorder" that makes it the main source of global terrorism. Jaswant Singh, A.B. Vajpayee and L.K. Advani have been at pains to present the anti-terrorism platform as the principal plank of India's new foreign policy. It is not hard to see the real motive: to focus on "Islamic fundamentalism" as the root of contemporary "terrorism" in its most menacing form; and then make a come-hither gesture to the U.S. (and secondarily to Russia too, which faces the Dagestan and Chechnya crises) to campaign jointly with New Delhi.

South Block's fond hope here is that this will help it isolate Pakistan and build a strong strategic relationship with the U.S. under which Washington decisively distances itself from Islamabad. That is why it accorded high-level treatment to

U.S. counter-terrorism envoy Michael A. Sheehan. This whole "strategy", if it can be called that, is myopically, desperately, Pakistan-specific and -obsessed.

This Brave New Campaign against terrorism has an implicit, unstated, anti-islamic angle, building as it does on prejudices prevalent in the West, and the need for its right wing to find new enemies to perpetuate high levels of military-nuclear preparations. It confuses popular Islam, first with political Islam, and then the latter with fundamentalism. In reality, there is little in common between practised Islam and the fundamentalism associated with the Taliban, and so on.

The *azadi* movement in Kashmir can be hardly assimilated to Taliban fundamentalism. The Hurriyat has explicitly distanced itself from the Taliban. Omar Farooq has emphatically said: "Laden has no role in Kashmir... He has no *locus standi* in the Valley... his movement is aimed at spreading Islamic *jehad* which is not our objective."

It is also wrong to believe that foreign militants' or mercenaries' weight has increased in the current movement in Kashmir, especially after Kargil. Going by the Army's own figures, the proportion of foreign militants to the total number of those killed was 22 per cent over the past three years. It has fallen to 15 per cent in 1999. The militancy is primarily domestic and must not be falsely "externalised". We have to deal with it without creating scapegoats.

Another pitfall of the counter-terrorism shibboleth is that it wholly ignores state terrorism, which tends to be far more effective, widespread, institutionalised and vicious than sub-state terrorism, and which state-based systems like the U.N. do not question.

However, New Delhi has a detestably devious agenda behind all this apparent show of joint concern and Indo-U.S. agreement against *jehad*. According to *The Hindustan Times*, during the talks with Sheehan, it agreed to allow the Federal Bureau of Investigation (FBI) to open a "permanent office" in India as part of a plan to train Indian officers in anti-terrorist operations. It is difficult to comprehend the rationale for this, just as it is hard to understand the ends to which the FBI office might be used. But one thing is clear. The BJP is promoting a dangerous agenda through this collaboration. It is inviting shady agencies to influence and train Indian personnel, much in the way many Latin American Banana Republics did – to their own disgrace and peril. ■

Openness, deficits and lack of development

A report from UNCTAD highlights the role that greater trade openness may have played in worsening growth prospects in much of the developing world.

■ PREOCCUPATIONS

JAYATI GHOSH ■

AT last, it's official. Although many economists and analysts in developing countries have been emphasising it for some time now, most multilateral economic agencies have tended to steer clear of noting the uncomfortable consequences that greater international economic integration has already implied for most developing countries. The latest Trade and Development Report (TDR) just released in Geneva by UNCTAD (the United Nations Commission for Trade and Development), however, finally does look closely at this issue.

In doing so, it has come to accept that both financial and trade liberalisation can have undesirable consequences not just for the balance of payments but also for domestic economic growth. The current received wisdom in the mainstream literature, especially from the World Bank, is rather different, and can be briefly summed up in the *mantra* "trade liberalisation good; financial liberalisation bad". But this is a simplistic view. More perceptive observers have noted that trade liberalisation can play a role in building up to crises like those in East Asia, or in causing recessions or declines in domestic manufacturing industry in several other developing countries, or even in limiting the possibilities of major shifts in the international division of labour.

Thus, the TDR '99 admits that "developing countries have striven hard, and often at considerable cost, to integrate more closely into the world economy. But in the face of deep-seated imbalances in economic power and systemic biases in the international trading and financial systems, their expectations of the gains from such integration in terms of faster growth, greater employment opportunities and reduced levels of poverty have been disappointed... the downside risks have proved far greater than was generally expected... the twentieth century is closing on a note of crisis and a growing sense of unease about the policy advice that was proffered in the past decade" (page V).

On the basis of a slightly longer look at the experience of growth and external imbalance in developing countries, the TDR points out that growth in developing countries as a group in the 1990s has been at an annual average of around 4.3 per cent. This does represent a recovery from the levels of the 1980s, but it is still well below the average of 5.7 per cent per annum of the 1970s. Moreover, this partial recovery in economic growth has been accompanied by a significant worsening of external deficits. Indeed, if China (whose performance was exceptional for a variety of specific reasons) is excluded, then it turns out that the average developing country trade deficit for the 1990s is higher than that for the 1970s by almost 3 percentage points of GDP, while the average growth rate is lower by 2 per cent per annum.

Of course, low oil prices in the 1990s (compared to high oil prices in the 1970s) have played some role in this average since a number of developing countries rely on oil exports. But the same pattern is evident, to almost the same degree, even for non-oil exporting developing countries, indicating that the basic problem lies elsewhere.

The pattern is also the same across

regions. In Latin America, growth has been lower while trade deficits as a share of GDP have been the same. In sub-Saharan Africa, growth has fallen but trade deficits have risen. Countries in Asia have on average run greater external deficits in the 1990s without achieving faster growth.

The general tendency among the majority of developing countries over the 1990s, therefore, is of widening external deficits combined with stagnant or falling growth rates. This is precisely the opposite of what had been promised by the proponents of liberalisation at the start of the decade.

Two forces were supposed to create a virtuous cycle of growth and (eventually) lower deficits for developing countries: the Uruguay Round of the General Agreement on Tariffs and Trade (GATT), which was supposed to bring about a dramatic increase in market access for developing country exports; and the greater freedom accorded to international capital flows in the wake of financial liberalisation, which would allow developing countries to finance deficits easily and increase their domestic growth rates.

Obviously, neither of these forces has acted quite in the manner predicted by their votaries. What explains the more depressing reality? To its credit, the TDR eschews the simplistic explanations which have been all too readily advanced in the recent past, which tend to blame everything on "over-hasty financial liberalisation" or domestic problems like "crony capitalism".

Instead, it seeks to find some common features which apply to all or most developing countries, and which also reflect the general conditions of the world economy. It thus isolates two important factors behind the adverse combination of payments deficits and lower growth: terms of trade losses and rapid trade liberalisation.

Both of these stem directly from the attempts of developing countries – pushed by public international institutions like the International Monetary Fund (IMF) as well as private ones like the World Economic Forum – to integrate more closely with the world economy in terms of both trade and finance, to make their economies more "open" and to rely more heavily on exporting activity as an engine of growth.

Thus, the terms of trade losses reflect the growing numbers of developing country exporters crowding into already saturated markets, pushing down prices further, and reducing the income gains from additional exports. Interestingly, the process of relative price decline occurred for both primary and non-primary goods exported by developing countries.

The decline in commodity prices (both oil and others) is well-known by now, reflecting both slow growth of aggregate demand in industrial countries as well as substitution away from the use of such commodities because of technological change. But standard adjustment policies continue to promote reliance on these traditional exports for most developing countries, further worsening the problem.

But even for manufactured exports by developing countries, relative prices fell. In fact, since the beginning of the 1980s, the terms of trade of developing countries relying mainly on manufactured exports have fallen by as much as 1 per cent per annum on average. This reflects the increased concentration of developing country interest on certain labour-intensive or natural-resource based manufactured products, including low-technology inputs to the electronics industry.

The TDR points to the concern that such manufactures may be acquiring the characteristics of primary commodities in world markets. The fear that several analysts had expressed earlier, that all countries cannot play the same game of aggressive export promotion in labour-intensive manufactures without affecting international prices, now appears to have been justified.

The problem has been aggravated by inadequate market access for developing country exports in developed markets. This has turned out to be one of the major false hopes raised by the Uruguay Round and the formation of the World Trade Organisation (WTO). The TDR is emphatic that increased market access for developing country exports should form the basis of negotiation in GATT, since it may turn out to be more important than capital inflows for development prospects.

While developed country markets have not become more open for developing exporters, the markets of developing countries have been significantly liberalised. Many developing countries opted for "big bang" forms of trade liberalisation which drastically changed the structure of domestic demand in favour of imports, but even the more gradual liberalisers have seen imports make big inroads into their markets and erode the viability of domestic manufacturers.

In the past, it used to be felt that trade liberalisation combined with currency devaluation would ensure that trade deficits would not get too large. Indeed, the inability to finance such deficits typically ensured that trade would eventually be brought into balance, even at the cost of domestic contraction. But the possibility of using private capital markets to finance such deficits, even if only for short periods, has meant that deficits now continue for slightly longer periods. More significantly, because trade liberalisation has often been accompanied by financial liberalisation, it has broken the link between the current account and exchange rate movements, which now get determined by the behaviour of capital flows at the margin. So the new scenario is one of exchange rate instability and currency "misalignment" driven by capital flows that further cause trade balances to deteriorate.

Often the imbalances can be sustained for some time because of continued capital inflow. But the story of the 1990s has been one of increasingly rapid reversal of such capital movements, leading to boom and bust cycles. The Asian crisis and the ongoing difficulties in Russia, Brazil and elsewhere, are evidence of this. In the process, there is also significant damage to domestic industry, in many cases leading to effective de-industrialisation because nascent manufacturers simply disappear in the face of severe and cheap external competition.

This is portrayed by some determined advocates of indiscriminate liberalisation as being bad for workers but good for consumers in the country. But it can only be good for consumers if domestic economic expansion is somehow sustained sufficiently to ensure that there is more purchasing power in the hands of consumers. The pattern of terms of trade movements along with effects on domestic economic activity and employment suggests that this has not been the case for most developing countries.

So the greater openness of developing countries in the 1990s has been associated not only with higher volatility and larger payments deficits, but even with inferior economic growth performance.

Clearly, it is time for those in developing countries to revise the now-hackneyed policy prescriptions which see liberalisation as the universal panacea, and take a more sophisticated and realistic view of the economic challenges ahead. To push for any real change in economic reality, ideas must change first. ■

A depreciating dollar

Will America stagnate if Asia recovers?

C.P. CHANDRASEKHAR

AN unusual question haunts the world's financial analysts. Can the United States sustain its robust growth if the rest of the world is buoyant as well?

This question arises in a context in which many economies which were experiencing stagnation or contraction appear poised to return to a situation of growth. The Japanese government's repeated efforts to pump-prime the system with deficit-financed government expenditures finally appear to be yielding results. Real GDP grew by a pleasantly surprising 2 per cent in the first quarter of 1999, after five consecutive quarters of decline. There is evidence of expansion in Europe as well, after the period of contraction induced by the fiscal austerity adopted as a run-up to the euro. Finally, not only has the recession bottomed out across East Asia, but there is evidence of robust growth in South Korea during the first two quarters of this calendar year. Since the United States and the United Kingdom have already been experiencing strong expansion, the world seems poised to return to a bygone era of "synchronised growth" in all major economies or regions.

But, as even the International Monetary Fund (IMF) makes clear in its recently released *World Economic Outlook*, that prospect is still uncertain. This is because developments during the decade of globalisation seem to have rendered synchronised growth (or recession) across the world's economies an unlikely occurrence.

The world economy in the 1990s has been characterised by two much-noted features. First, slow growth in Japan and across much of the world. According to *World Economic Outlook*, the average rate of world economic growth during the 1990s was only 3 per cent, which is below the 3.5 per cent average of the 1980s and 4.5 per cent in the 1970s. The second feature has been remarkable instability. Not only have there been two phases of sharp slowdown in economic growth (in 1991-93 and 1998-99) over the decade, but it has been characterised by periodic crises in Mexico, countries of East Asia, Russia and Brazil.

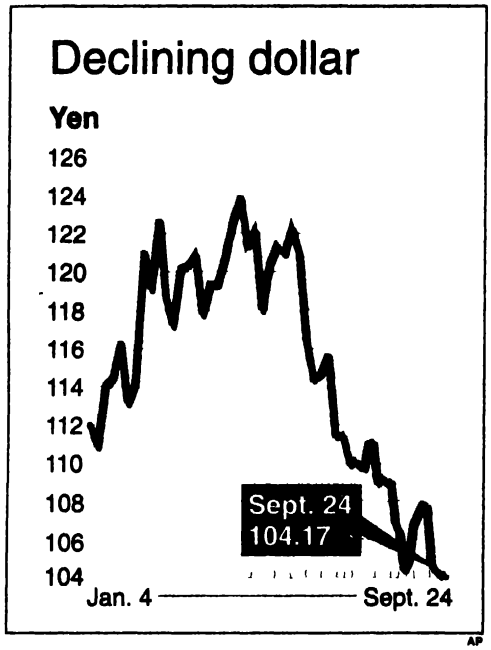
Yet the 1990s represented one of the best decades for the U.S.. Not only was the U.S. recession of 1990-91 unusually mild, but the country went on to record almost continuous and, more recently, particularly robust growth. If this process is sustained through early next year, as some expect it to, then this would be the longest episode of continuous growth on record for the country.

Till recently, this unusually splendid growth record of the U.S. was attributed to specific features of its economy or economic policy. The U.S., it was initially argued, had more flexible labour markets than Europe, as did the U.K. which was also performing better. This helped companies downsize and restructure, and kept wages down, enhancing U.S. competitiveness and growth.

More recently, better growth has been ascribed to U.S. policy. To quote from *World Economic Outlook*: "The recent impressive performance of the U.S. economy is, in large part, testimony to laudable policies. These include the turnaround in the fiscal balance from deficit to surplus (a structural improvement equivalent to roughly 3.5 per cent of GDP since 1993); the agile management of monetary conditions by the Federal Reserve in achieving and maintaining low inflation, in helping to maintain stable growth and also in helping to calm global financial turbulence; and structural policies that have continued to foster the flexible working of markets."

KORJI SASAHARA/AP

Currency traders at a Tokyo brokerage on September 24.



WHAT is left unexplored in that summary assessment is the role that 'external factors' played in reviving growth in the U.S.. Exports were clearly not a contributory factor. Export volumes grew at just 1.5 per cent in 1998 while import volumes grew by 10.5 per cent. As a result, the value of the current account deficit on the U.S. balance of payments has risen almost continuously from $43 billion in the first quarter of 1998 to almost

double that value in the second quarter of 1999. Despite this worsening current account deficit, the dollar remained strong and even gained in strength. This, as has been widely reported, was only because of large financial flows into the U.S. from abroad. Not only did money flow into U.S. equity, but outstanding amounts of international debt securities originating in the U.S. rose sharply from $552.8 billion at the end of 1997 to $946 billion at the end of the first quarter of 1999.

The willingness of foreign investors to hold dollar-denominated assets is thus the key to the rise of the dollar. And so also to robust growth in the U.S. Given the large direct and indirect (through pension funds, for example) investments of personal savings in equity in the U.S., the stock market boom enhanced the wealth of American citizens, reducing incentives to save. The net result has been a collapse of private savings in the U.S. Personal savings as a percentage of disposable personal income in the U.S. fell from 1.2 per cent in 1997 to 0.5 per cent in 1998, turned negative in the first quarter of 1999 and touched a remarkably high negative level of 1.3 per cent in the second quarter ending June 1999. The other side of the fall in savings was a rise in private consumption expenditure, which was crucial to sustaining growth in the U.S. economy.

Thus, growth in the U.S. was dependent on a consumption boom fuelled by the willingness of foreign investors to bet on the dollar, irrespective of the state of the U.S. balance of payments. That willingness stemmed from a range of sources, many of which were related to the dollar's still-unchallenged role as the world's reserve currency. Higher interest rates in the U.S. at a time when the Japanese economy was performing poorly is indeed one such factor. This triggered the infamous "yen-carry trades" in which investors borrowed yen funds, converted them into dollars and invested them in higher yielding dollar-denominated assets. When the occasion arose to unravel these trades, they gained not merely because of the differential in interest rates between Japan and the U.S. but also because of the depreciation of the yen in the interim period.

The other element contributing to investment in U.S. assets was the "flight to safety" from a stagnant Japan and an East Asia struck by crisis. In fact, till mid-1998 those flows virtually insulated the U.S. economy from the effects of that crisis. Finally, inflows into the U.S. fed upon themselves. To start with, investments in American financial assets helped sustain what was a completely unexpected boom in stock markets. High returns in the stock market obviously makes investment in American stocks an attractive proposition, drawing in more funds from the international economy.

In the circumstances, growth has been robust in 1997 and 1998 and remained at acceptable levels even in the first half of 1999. Overall, for much of the recent past, the U.S. economy has been characterised by a strong currency, a conservative budgetary stance, a buoyant stock market, a creditable rate of growth and low inflation. In the world of macroeconomic indicators, something must give to ensure this otherwise peculiarly favourable scenario from the American point of view. And that has been the deficit in the trade in goods and services. That deficit rose almost continuously and nearly doubled, from $33.3 billion in the first quarter of 1998 to $65 billion in the second quarter of 1999. This magnitude of increase in the trade deficit accounts for almost 85 per cent of the increase in the current account deficit in the U.S. balance of payments during this period.

What is worrying financial analysts is that as the recovery begins outside the U.S., this situation may change. The most telling sign of this has been the weakening of the dollar in recent times. Towards the middle of September the dollar touched a three-and-a-half year low of yen 103.3 to the dollar. Not only was the value of the U.S. currency that day at a new low, but underlying its day-to-day fluctuations was an acceleration of the depreciation of the currency from a value as high as yen 122 to the dollar just two months earlier. Even if we consider monthly average figures of the value of the yen *vis-a-vis* the dollar, the trend of a sharp appreciation of the dollar *vis-a-vis* the yen between August 1998 and January 1999, which was stalled thereafter, has revived from May this year. The weakness of the dollar has also resulted in a reversal of the "unexpected" appreciation in its value *vis-a-vis* the euro since its creation in January.

The current weakening of the dollar indicates that America's ability to borrow itself into growth when the rest of the world languishes seems to be under challenge. Observers are clear that the dollar sank sharply in mid-September because investors were no longer ready to bet on an overheated U.S. economy. The signs of reversal of capital flows into the U.S. have appeared despite the fact that the Federal Reserve Board has raised interest rates twice in recent months. The consequent widening of interest rate differentials between the U.S. and elsewhere is obviously proving inadequate to attract the foreign investor.

A number of factors could explain this tendency. The fall in the dollar occurred in the wake of the news of a record current account deficit in the second quarter and of a surge in retail sales of 1.2 per cent in August, which took its value to a level close to 11 per cent higher than in the corresponding month of the previous year. Clearly, private consumption was still buoyant and was still widening the gap between America's imports and exports. But now international investors have begun to pull out in the wake of these developments. All of a sudden what has been true all along – that U.S. fundamentals are indeed weak and that the economy is vulnerable – seems to matter to the investor.

This loss of confidence is related to a number of other developments. The incipient recovery in Japan and the rest of Asia is reversing the flight to safety into U.S. bonds and reducing the "autonomous" demand for dollar-denominated assets. Operators wanting to unwind positions financed through yen carry trades could be increasing their demand for the Japanese currency, resulting in a strengthening of the yen. Above

all, the possibility that as Japan recovers and the U.S. current account deficit widens, the yen would appreciate *vis-a-vis* the dollar, and more than neutralise any gains from investments in higher yielding U.S. bonds, would make investors turn dollar-shy and yen-friendly. And the more they turn away from the dollar and towards the yen, the more would their expectations of an appreciation of the yen be realised. All this is now happening with greater intensity because the biggest investors in U.S. Treasuries are Japanese investors, who are reportedly selling out in the U.S. and taking their money back to where it came from.

While this decision may be reasonable from the point of view of the individual Japanese investor, it is creating much discomfort among governments. A depreciating dollar is obviously bad news for the U.S. Underlying that depreciation must be a loss of confidence in U.S. equity, which could trigger an abrupt fall in U.S. equity prices. As the public information notification issued by the IMF after its executive board concluded the Article IV consultation with the U.S. noted: IMF directors believed that in the U.S. "the strength of demand, including corporate investment as well as household consumption, had been underpinned by the high level of stock prices – a level that was difficult to explain". This would mean that a sharp market decline could wipe out illusory wealth, lead to an abrupt adjustment in the household savings rate from its current historic low, and massively squeeze consumption demand. The era of high growth and large current account deficits appears to be near its end.

In the era of financial globalisation, synchronised growth in different parts of the world is impossible.

But the lessons from this episode go further. In the era of financial globalisation, it appears, synchronised growth in different parts of the world is impossible. The boom in America appears to depend on slow growth and crises elsewhere. And a recovery elsewhere appears to threaten America's economic health. Interestingly, *World Economic Outlook* does recognise this new conjuncture in the world economy. To quote the *Outlook:*

"Economic and financial linkages and policy transmission mechanisms across countries have become more complex in the 1990s, warranting a further reassessment of key relationships. Historically, the developing countries' economic cycle was mostly positively correlated with that of the industrial countries due to the impulses transmitted through trade and commodity prices. In the early 1990s, however, when the industrial countries went through successive episodes of cyclical weakness, growth actually accelerated in many emerging market economies, fuelled by the rapid growth of trade among them (especially in Asia) as well as by substantial capital inflows.

"More recently, in the wake of the Asian crisis, all industrial countries with significant trade links with Asia would have been expected to experience adverse effects on growth. In fact, however, while Japan and, to a lesser extent, Europe were negatively affected, the United States' economic expansion appears to have gained further momentum. A flight to dollar-denominated assets helped to sustain the U.S. expansion by boosting domestic demand through lower interest rates and the dampening effect on prices of an appreciating dollar, notwithstanding the negative impact on U.S. exports.

"In both examples, the integration of financial markets appears to have contributed to a tendency for global financial resources to move to whichever countries and regions are relatively dynamic at the time. In principle, such reallocations of financial resources are beneficial for the recipient countries and also for global growth and efficiency. However, as experience shows, large net capital flows into strongly expanding economies may exacerbate risks of overheating and asset market bubbles, while rapid reversals of such flows can severely strain weak financial systems and lead to destabilising currency movements."

Behind this elaborate reasoning is one striking judgment. In a globalised world dominated by financial as opposed to real flows, growth at one pole has come to depend on stagnation or contraction at the other. Whatever other virtue the IMF may find in market-driven globalisation, it has been forced to admit that its downside is that autonomous tendencies in the current conjuncture militate against the synchronised growth needed for a global consensus. ■

Arrogant nuclearism

What India needs is an urgent Strategic Defence Review to determine its security needs. Instead of this it now has a dangerous doctrine for nuclear weaponisation.

L. RAMDAS

However, in the last seven years, whilst much larger number of terrorists have infiltrated into the Kashmir Valley, inflicting tens of thousands of casualties on civilians, servicemen and police personnel, there is no suggestion that the Indian Army should follow the precedent of 1965. Here comes the nuclear factor. Since both India and Pakistan perceive each other as having nuclear weapons capability, the covert war waged by Pakistan has not escalated to a high intensity inter-state war because of the implied risk of a possible nuclear exchange. While Pakistan's nuclear capability has enabled it to launch a covert war against India, the perception of mutual deterrence has ensured that the situation does not escalate further. This has resulted in a no inter-state war situation between India and Pakistan for almost twenty-five years.

– K. Subrahmanyam in *World Affairs Journal*, October-December 1997.

YES, this is the same K. Subrahmanyam, the Convener of the National Security Advisory Board (NSAB), who in a 1997 article titled "Covert Operations pose new challenges for Indian Security" said that there was already a minimum nuclear deterrent working. The only change in the political and security firmament since then has been that a new coalition government, led by the Bharatiya Janata Party, came to office in March 1998 and went on full speed ahead to conduct the nuclear tests at Pokhran in May 1998. For its splendid contribution, the BJP-led government was rewarded with the limited war in Kargil, which accounted for the loss of nearly 500 precious lives. We must thank the "Good Shepherd" for his early warning. 'n our hi-tech post-nuclear profile this w is the reality of our command, control and communications readiness. We came very close to losing Ladakh and the northern parts of Kashmir. Without trying to sound too alarmist, there was a real possibility of this conflict escalating into an all-out war, including a nuclear exchange with all its disastrous consequences.

Just as the country was recovering from this traumatic experience came yet another bombshell from the caretaker government – the announcement of the draft Indian Nuclear Doctrine on August 17, 1999. Many observers have stated that the NSAB's draft had been with the government for nearly two months

(John Cherian in *Frontline*, September 10, 1999 and Achin Vanaik in *The Hindu*, September 4, 1999) but the government thought it fit to release it a fortnight before the first round of the general elections on September 5. Predictably, the Opposition parties were furious, and rightly so. A matter of such importance should not have been made public by a caretaker government. Having carefully stowed it away for two months, it could have waited until the next government took office after the elections. There is little doubt that the announcement was intended to influence voter opinion in the Government's favour. If ever there was a pre-emptive strike, this was it. There was no question of 'no first use' in this launch. Should a non-BJP government come to office, it may well have a different approach altogether.

Of late we are seeing a lot of this kind of unilateralism. Take the telecom dispensation, which resulted in a loss of over Rs. 50,000 crores to the exchequer, or the hurry with which certain appointments of senior civil servants and Governors were made quite arbitrarily. Or for that matter the utter disregard shown to the presidential advice on convening a Rajya Sabha session on the Kargil issue, which also demonstrated this arrogant and defiant attitude. The same government dismissed a Chief of the Naval Staff on the specious grounds of defiance when he was only trying to call its attention to the regulations that governed the Navy.

This government has specialised in putting the cart before the horse. It did s with the nuclear tests of May last year an now with the Nuclear Doctrine. At th time of the announcement of the latte NSAB Convener Subrahmanyam mer tioned three things, all of which not onl are worthy of mention but warrant som discussion. First: "The NSAB was work ing very hard at undertaking a Strategi Defence Review (SDR) and its repor would be finalised in the next fe months." Second: "No estimates on cost to maintain a minimum credible nuclea deterrent have been worked out." Third in response to a question from a media person whether the nuclear button woul be in a briefcase with the Prime Ministe he replied: "We are far more advance than those with the black box with th button." This remark exudes technica superiority.

The first thing that the NSAB shoul have undertaken was the SDR. Had thi been done before Pokhran-II, probabl there may have been no need for th nuclear tests at all. Likewise, there woul have been no need to evolve an elaborat nuclear doctrine to follow up the mistak of Pokhran-II. Finally, to support bot these decisions, we have to do an SDR The announcement has certainly not trig gered any great enthusiasm as expected No one even talks about the bomb or th doctrine. In an article in *The Times o India* dated September 6, Subrahmanyan laments "that the nuclear doctrine has no generated any worthwhile popular debat so far, but only criticism and endorse ments from a very limited number of com mentators. They reflect by and large th divide between those who consider a nuclear deterrent necessary for Indian security and those who oppose it. The rea debate has to be among different parties all of which had over the years sustained the nuclear weapon and missile pro grammes." If Subrahmanyam himself felt in 1997 that the "Existential Deterrence" was working, how can he fault these polit ical parties for not being fired by this great release? If anything, they have been angered by the release of this doctrine just

ANU PUSHKARNA

Prime Minister Atal Behari Vajpayee with R. Chidambaram, Chairman, Atomic Energy Commission, A.P.J. Abdul Kalam, Scientific Adviser to the Defence Minister and Brajesh Mishra, National Security Adviser.

prior to the elections Presumably, by 'popular' Subrahmanyam means political parties and not the people People are more concerned with basic necessities such as water, food, health care, schools, sanitation and jobs If we see the print and electronic media, the complaint that comes through loud and clear is that people's issues are not being discussed at all Regrettably for the caretaker government, the release of the nuclear doctrine has, if anything, misfired.

STRATEGIC DEFENCE REVIEW

What should the SDR address? It should:

★ Identify national and strategic interests, clarify the bottom line for border management.

★ Assess the overall strategic environment in the short-, medium- and long-term perspectives.

★ Evaluate threats to "human security" and "national security" in the short-, medium- and long-term.

★ Evolve plans and strategies to combat these threats. These should include a broad assessment of the priorities for both human security and other needs and the allocation of resources.

★ Given the present capabilities, determine additional weapons/equipment that need to be inducted

★ Carry out scenario studies to identify force level and weapon requirements

★ Assess whether nuclear weapons are needed or whether the present level of nuclear capability will suffice (see note on Subrahmanyam's statement made in 1997)

★ Conduct a cost-benefit analysis, keeping in mind both "human and national security" needs

★ Evolve suitable foreign and defence policies to match the above requirements

★ Examine the existing structure of the Ministry of Defence and suggest a more responsive architecture

★ If the nuclear answer is for the weapon, announce the doctrine, which should be brief and concise Leave the strategic and tactical details to be evolved by appropriate agencies. The current doctrine is a three-in-one package It contains doctrine, strategy and even some tactics

As this strategic review had not been carried out before jumping into the deep end with Pokhran-II, there is an elaborate justification to achieve maximum credibility with the launching of a grandiose nuclear doctrine This is based on a 'triad' of air, land-based and sea-launched weapons The doctrine goes on to say in paragraph 2 4 *"The fundamental purpose of Indian nuclear weapons is to deter the use and the threat of use of nuclear weapons by any state or entity against India and its forces India will not be the first to initiate a nuclear strike, but will respond with punitive retaliation should deterrence fail"* This must be read in conjunction with paragraph 2 5, which states *"India will not resort to the use or threat of use of nuclear weapons against states which do not possess nuclear weapons or are not aligned with nuclear weapon powers"* We have suddenly become so powerful that we are going to take on not only the nuclear weapon powers but also virtually half this world! This smacks of irrational and xenophobic thinking Surely this is not the kind of credible minimum nuclear deterrent that was originally advocated This is bound to create the demand for a very large and varied nuclear arsenal that would give us such a capability The trouble is that the people are made to believe that we have it already – "but it is only in the head"

In view of the heavy commitment

already made through the two mega decisions, one to go overt as a nuclear weapon state and the other to publicise our nuclear doctrine, which in short is our nuclear wish list, one can foresee the SDR ending up with 'Situating the Appreciation' instead of 'Appreciating the Situation'. Many of us have the habit of taking decisions guided more by instinct, desire or some preconditioned thinking rather than by mature and careful analysis of the pros and cons of the situation. Here we have a classic example of the former approach, adopted by the BJP-led government. The NSAB on its part is busy doing gymnastics to justify these decisions, which were made by leaving the SDR to the very end. Needless to say, this end product will be tailored to be a perfect fit to make it look as "The Complete Plan".

When one reads paragraph 2.1 in conjunction with paragraph 4.1 of the doctrine, two things become clear.

* First, deterrence can fail, which is what most of us have been saying all along.
* Second, the level and weight of punitive retaliation must be such that it inflicts "destruction and punishment" that the aggressor will find unacceptable if nuclear weapons are used against India and its forces.

This concept amounts to a tacit acceptance of the failure of the "deterrent theory". The approach of no first use and punitive retaliatory strike gives one the justification to have a much larger arsenal of nuclear weapons. The number of weapons could go up even further to cater for "adequate retaliatory capabilities after enduring repetitive attrition attempts" (see paragraph 4.3). These, when viewed in the context of taking on the U.S. and half the world – the sky is the limit. This is a doctrine for maximum credible deterrence.

UNACCEPTABLE DAMAGE

A few words on "Unacceptable Damage". It is perhaps best illustrated by quoting Gen. Thomas S. Power, Commander-in-Chief of the U.S. Strategic Air Command (SAC), who stated in February 1960: "*The closest to one man who would know what the minimum deterrent is would be (Soviet leader Nikita) Khrushchev, and frankly I don't think he knows from one week to another. He might be able to absorb more punishment next week than he wants to absorb today. Therefore Deterrent is not a concrete or finite amount*" (*Atomic Audit*, edited by Stephen I. Schwartz and brought out by the

SHANKER CHAKRAVARTY

Defence Minister George Fernandes.

Brookings Institute, page 22). *Nor for that matter is how much is acceptable or unacceptable damage.* If this be so, we can easily expect more and more demands to raise your inventory and therefore stockpile weapons to achieve these conjured-up desires of making the adversary think the way you do. This nuclear doctrine has shaped the course of an inescapable arms race and is therefore unacceptable. We have not come to the cost factor yet, which will say much more.

With a concept of multiple adversaries, we will certainly face a very serious problem identifying the source of the attack, especially if it comes from a submarine. Are we to understand that we will retaliate by attacking all nations which possess missile-carrying submarines? There seems to be no clarity as to how we propose to deal with ballistic-missile-carrying submarines of the nuclear weapon states. Is it our intention to have a large nuclear attack submarine fleet, to 'tag and tail' all ballistic-missile-carrying submarines operating in the Indian Ocean? Hopefully we are not visualising a replication of the "the hunt for Red/ Blue/ Green/ Pink October". We must get our sights trained properly and not get carried away by "it is only in the head" theory. It is extremely dangerous, silly and clearly beyond our reach financially for a long time to come. The U.S. Navy has recently commissioned the "Seawolf" class attack submarine to 'tag and tail' the Russian "Typhoons" and "Deltas". The cost of one Seawolf is $9 billion, or Rs.38,000 crores, equal almost to the entire defence budget of India for one year. Do we really want to join this league? We were well served by "Existential Deterrence" as stated by Subrahmanyam in 1997. Instead of this the BJP has gifted the nation the P3I system (*P*erennial *P*enury for the *P*eople of *I*ndia).

EARLY WARNING

The command, control, communication, information and intelligence (C4 I2) systems are going to be "robust". Presumably that means that the Command Post will be in a hardened site with back-up alternative locations elsewhere. The chain of command after the Prime Minister will also be designated. In the U.S. this is very clearly indicated. It is enacted by Congress and is a public document. Strange was the reaction of National Security Adviser Brajesh Mishra when he was asked to specify the chain of command after the Prime Minister: "They have to be kept a secret and could not be revealed for security reasons" (*The Times of India*, August 18. 1999). For lending *credibility* to paragraph 4.3 (sub para 2) of the doctrine, "for the continuity of nuclear command and control, read in conjunction para 2.6 (e)," regarding the 'will' to employ nuclear forces, it is necessary to identify the chain of command, including all the successors as for the U.S. practice. The U.S. lists a total of 17 people after the President who shall exercise this command (*Atomic Audit*, Note 42, page 220). Secrecy in this regard is therefore a misplaced concept.

The 'robustness' also envisages excellent communications systems, which must survive a first strike by an adversary. The state of the national communications system today is pitiable. This is borne out by the fact that the Prime Minister remained unaware of the news of Pakistan's nuclear tests at Chagai even after the rest of the world had learned about it through the electronic media. The Prime Minister's embarrassment was writ all over his face as he came to learn about the event on the floor of Parliament. There ended the great strategic gulf which lasted for precisely 14 days. We do not have radio communications even to guide drivers of fast trains on the Indian Railways, in order to avert accidents. Many incidents which could have been avoided had such a facility been available, have not yet led to technology upgradation. We see many accidents on the roads; disasters are frequent – floods, quakes, gas leaks, the capsizing of boats, and much more. Each time the platitudes are repeated and inquiries conducted, more as a yardarm clearing exercise. The reason is simple – because the elites in India have

ceased to have a soul. All that the political leaderships is busy doing at the moment is to hurl cheap and vulgar epithets at one another; they do not care at all for the people's needs.

TRIAD CONCEPT

Rear-Admiral Raja Menon, in an article in *The Times of India* on August 26, states: "There is a serious dysfunction between minimum deterrence and a triservice arsenal. The two cannot go together, and is akin to yoking a horse and a camel together." Clearly, this is our problem. The entire doctrine, based on no first use and the acceptance of a significant first strike and punitive retaliation, is dependent on survivability capacity for retaliation.

Aircraft-delivered nuclear weapons and land-based missile systems suffer from high vulnerability and therefore poor survivability in the context of a no-first-use doctrine. The least vulnerable platform – both for detection and for destruction – is the missile-carrying submarine. General K. Sundarji, former Chief of the Army Staff, had proposed an arsenal of 40 atom bombs and a couple of submarines as being enough to meet India's requirements. Even missiles on surface ships have a much greater survivability factor than land-based systems. This form of vectoring need not be ruled out.

Let us examine the cost factor which has conveniently been overlooked by the NSAB.

THE COST FACTOR

The book *Atomic Audit* has many interesting features which are worth noting. Although it has carried out an audit of the U.S. nuclear programme, the parameters and concepts used apply equally to the Indian programme. The outgo has been listed and analysed under several headings. Only the proportion of costs under each heading is shown, as these are likely to remain the same for the Indian programme, notwithstanding the numbers of nuclear weapons involved. The breakdown is as follows:

★ Building the bomb – 7 per cent
★ Deploying the bomb – 55.7 per cent
★ Targeting and controlling the bomb – 14.3 per cent
★ Defending against the bomb – 16.1 per cent
★ Dismantling the bomb – 0.5 per cent
★ Nuclear waste management – 6.3 per cent
★ Victims of U.S. nuclear weapons – 0.04 per cent
★ Nuclear secrecy – 0.05 per cent
★ Congressional oversight – 0.02 per cent

C.Rammanohar Reddy, with his modest assumptions of the nuclear arsenal, worked out a figure Rs.50,000 crores over a 10-year period. In view of the rather ambitious plan outlined in the nuclear doctrine we can easily double that figure, in which case we shall end up with a demand for a sum of Rs.100,000 crores to be spent over the next 10 years exclusively for the nuclear deterrent. In other words, Rs.10,000 crores a year. This amounts to an addition of 25 per cent per annum to the already burgeoning defence expenditure. With Rs.1 crore we can have 10 primary schools, each for about 50 children, or 10 primary health centres, or water supply for at least 100 villages with five borewells per village – there are several other options. A sum of Rs.10,000 crores would help provide primary education to all children in the country.

DEFENCE EXPENDITURE

The Kargil experience has thrown up strange and irrational deductions and consequently avoidable demands. The situation requires a management of both diplomacy and defence. We need to look at these kinds of options as well.

★ Defence spending has been inadequate.
★ We need to raise another corps to defend Kargil.
★ The Air Force needs more aircraft.
★ The Navy needs more ships and submarines and aircraft carriers.

Had the government and the Army been alert and listened to the commanders at the scene of action, Pakistani forces would never have reached where they did and the entire activity would have been nipped in the bud. These hasty and ill-advised demands would never have arisen. We need to do the SDR fast and come up with a composite and integrated plan. We will otherwise end up making the same mistake of trying to please everybody and at some cost. We certainly need to be far more pragmatic and realistic than that. What about opportunity costs?

The allocation of resources to ensure deterrence and the associated infrastructure have a penalty in terms of opportunity costs, capital costs, resource consumption and so on.

ECONOMIC COSTS

The allocation of resources to ensure deterrence and the associated infrastructure have a penalty in terms of opportunity costs, efficiency versus effectiveness, capital costs, resource consumption and so on. Even in the U.S., the huge expenditure incurred in the nuclear weapons programme has staggered many Americans. General Lee Butler says: "*Atomic Audit* lays bare the staggering price exacted upon the most technologically proficient of the Cold War antagonists. More important, it begins to expose the policy, planning, and other operational flaws that undercut both the logic and implementation of deterrence as perceived by its American practitioners." Maybe there is a lesson here for the Indian nuclear hierarchy. If a correct appraisal is made of the requirements for human security needs in the SDR, we shall arrive at the correct balance to be maintained between that and other national security requirements.

A POTENTIALLY rich country like India, with nearly one billion people – 38 per cent of them are below the poverty line as per the government's own statistics, but other estimates put the number of poor people at 750 million – is poised to enter an era of arrogant nuclearism so well articulated by the Indian Nuclear Doctrine. The architects of this document in the NSAB have not even addressed the cost factor to study the economic impact of such far-reaching recommendations. Instead of starting with an SDR to determine what was required by way of both human and national security needs, we are now left with the Hobson's choice of evolving and supporting a nuclear weaponisation programme and its doctrine. Hopefully our countrymen will put some saner leadership in place to manage our strategic environment better. Even now it is not too late to disengage from this useless, costly and totally unnecessary 'evil'. Let us try and craft a whole new strategic initiative and evolve an India-China-Pakistan peace and security agreement for the next century. This *'Triad'* would be far more effective and much cheaper in the long run. We need to usher in the new millennium with a new *vision and mission* if we are not to go down in history as the failed generation. ■

Admiral L. Ramdas (retd) is a former Chief of the Naval Staff.

A martyrdom

I would like to bring to the attention of readers the story of the martyrdom of Major Sameer Katwal.

Katwal was killed on the morning of August 28 while attacking a camp of the newly formed Dima Halong Dowga (DHD) militant group in the North Kachar Hills district of Assam. He was not waylaid and killed while travelling in a vehicle, as reported by newspapers.

Sameer, born on July 25, 1974, was the son of K.P.S. Katwal, an officer of the Indian Forest Service posted in Tamil Nadu. He had his school education in Tiruchi and Chennai, got trained at the National Defence Academy and the Indian Military Academy, and was commissioned into the 21st Battalion of the Kumaon Regiment on June 10, 1995. In the words of his Commanding Officer, Colonel J.J. Bajwa, Sameer was a very competent soldier with enthusiastic devotion to duty.

The night before he died, Sameer had led a group of 40 soldiers on foot for about 20 km across difficult terrain, to a DHD hideout. All the soldiers, including Sameer, had the protection of bullet-proof vests and steel helmets. The approach was so skilful that the militants, numbering about 15, did not notice the soldiers even whey were within 50 metres. The colonel had given clear instructions against any adventurism. Therefore several volleys were fired upon the camp before the final charge was made. Sameer was in the forefront. A fleeing militant turned around and emptied his AK-47 rifle, and one fatal bullet found its mark: it ripped through the right collar bone and neck of Sameer.

Dehra Dun

Narmada Valley

A few weeks after the February 18 Supreme Court order permitting an increase in the height of the Sardar Sarovar dam, I observed 1,000 people of Nandurbar district meeting and asking the Collector where the land that the Maharashtra government had mentioned in its Supreme Court affidavit as being available was. They waited for three days (they slept outside the Collector's office) only to be told that there was no such land.

I came to Dhule and saw the resettlement site – the jail. This monsoon, whenever there was submergence people were taken to jail. When the waters receded, they returned to the valley.

In the United States, they are building more and more jails. Although they have stopped building big dams, they still jail the poor, the migrant workers, the black people, and all who come in the way of their own forms of destructive development. In America jails make a profit and are getting privatised. If that is development, then we shall also have to build more jails as we build more dams.

BJP's unease

The Bharatiya Janata Party-led National Democratic Alliance (NDA) started with a bang, banking on the Kargil victory and the image of Prime Minister A.B. Vajpayee. But the euphoria vanished slowly. The staggered election schedule gave the Congress(I) an opportunity and the time to launch an aggressive campaign. Moreover, the anti-incumbency factor, infighting in States such as Uttar Pradesh, misunderstandings among alliance partners in States such as Karnataka, and local issues started causing problems for the BJP. So mid-way through the election the BJP lost the decisive edge ("Growing unease", October 8).

Still the NDA has hope. After V.P. Singh, Vajpayee has emerged as a national leader who can take on the "dynasty" and who is acceptable to the different regions of the country.

Nuclear doctrine

This refers to "Questions about capabilities" by T. Jayaraman (September 29). It is tragic that a country like India has presented its nuclear policy in shameful haste, reducing the status of such a serious and strategically important document to that of a comedy full of ambiguities and errors. The most disheartening aspect is the way in which the vision, ideals and hopes that inspired the freedom of India are abandoned by the 'honest' and 'liberal' leaders. What they have done is against the spirit of the Constitution, which directs the state to strive for peace and security.

A country whose basic defence needs are met through imports, a country which does not possess even a modern artillery unit made by itself, a country which does not possess an indigenous fighter jet, claims to build a nuclear force based on the "triad of aircraft, mobile land-based missiles, and sea-based assets". Judging by the pace of the R&D efforts in the country it does not seem that India will have these assets in the near future? This very fact makes the nuclear doctrine a 'comedy of errors'.

There is a word emphasised in the doctrine – "credible". Is this so-called credibility going to be managed by sheep-grazers? The Kargil shock is too recent for us to be able to believe in such "credibility". Moreover in this country (as well as in the rest of the subcontinent), where policy is guided not by wisdom and vision but by hidden agendas and the desire for power, what is the guarantee that there will be safe and secure control of the nuclear devices? It seems that even the policy of 'no first use' has also been abandoned: note that the deterrence capability will be such that it will inflict unacceptable damage on "any potential aggressor".

It seems that the Government prepared the doctrine without doing any homework. It is nothing more than an addendum to the NDA's election manifesto.

Deoria, Uttar Pradesh

Attack on minorities

The brutal killing of a Roman Catholic priest, Fr. Arul Doss, by armed assailants at Jamabani village in Mayurbhanj district of Orissa and the burning of a church on September 2 have once again shocked the peace-loving people of India.

Padiabeda village in the same district witnessed the gruesome murder of Sheikh Rehman, a Muslim trader, on August 26. The killing of Muslims and Christians in Orissa on the eve of the general elections is designed deliberately to intimidate the minorities and create divisions in society. This is in keeping with the hateful thesis of "one nation, one culture, one people and one language" propagated by Hindu fundamentalists. They neither advance the cause of the great Hindu religion nor help advance the secular ideal of the nation. Their sole aim is to gain political power and patronage. This conspiracy of hate, terror and division has posed a threat to the secular and pluralistic fabric of the nation.

We wish to highlight certain facts and raise some questions.

All the three killings witnessed in Mayurbhanj district took place close to Hindu festivals. Graham Stewart Staines and his two sons were burnt alive on the night before Saraswati Puja. Sheikh Rehman was killed on Raksha Bandhan day and Fr. Arul Doss was murdered on the night before Janmashtami. Is this a coincidence or the result of deliberate planning by communal forces?

Two gruesome murders took place in the same region within the span of one week after the Wadhwa Commission report on the Graham Staines incident was made public. Is this again a coincidence or has the clean chit given by the Wadhwa report to the communal organisations that are known to be involved in the Graham Staines incident emboldened them to go on a killing spree against the minorities?

When the Government's intelligence agencies could find out where Congress(I) president Sonia Gandhi was going to contest the elections, they are unable to trace Dara Singh, the main accused in these crimes, and his associates. Is this a coincidence or a case of deliberate neglect of the security concerns of the minorities in India?

Ever since the BJP-led coalition government assumed power, the minorities, particularly Christians, have been victims of communally motivated mob attacks. Is this a coincidence or a manifestation of the overt and covert support given by the government to the Hindu communal organisations?

Hatred against the minorities, secular-minded groups and the weaker sections of society in general has been spreading like cancer throughout India owing to the unchecked activities of the Sangh Parivar. The carefully nurtured secular fabric of the nation is under threat.

We appeal to all people of goodwill to join our campaign to save our country from disintegration by deciding to oppose actively the anti-secular ideology of the Sangh Parivar; dissociate from anyone who sympathises with the RSS and its sister organisations; inform your neighbours about the gravity of this situation; write letters to the President, the Prime Minister, the Home Minister, the Governor and the Chief Minister of Orissa expressing distress and anguish over the recent incidents; organise signature campaigns and mobilise support for our just demands such as immediate steps to apprehend Dara Singh and his associates who were involved in the killings, restore public confidence, ensure that there is no recurrence of such violence, and ban all communal organisations in the country.

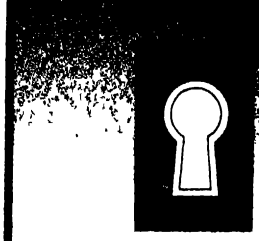
Jesuit College of Theology
New Delhi

Kargil

In "An aborted deal?" (September 10), the author, while projecting the deficiencies of the decisions taken by the BJP government to deal with the Kargil crisis, should have also mentioned the achievements made. India has made a silent achievement without compromising its self-respect and honour.

Shailendra Singh



Wadhwa Commission

It is shocking that the Wadhwa Commission gave a clean chit to organisations such as the RSS and the Bajrang Dal ("An exercise in illogic," September 10). What is most amazing is the Commission's failure to take note of the various First Information Reports that point to Dara Singh's association with the Bajrang Dal. It is deplorable that the Commission overlooked the reports of the Divisional Commissioner, the Deputy Inspector-General of Police (DIG, Crime) and the DIG attached to the National Human Rights Commission. On May 31, counsel for the Commission submitted that there was *prima facie* evidence to show the link between Dara Singh and the Sangh Parivar.

The murder of Graham Staines and his two children was not the result of any personal enmity between the Australian missionary and Dara Singh. It was a planned, well-organised attack. Such a heinous crime could not have been committed without the backing of organisations that are influential in the area. It is well known that the murder was committed at a time when attacks against Christians and their institutions were on the increase in different parts of the country. The murder cannot be viewed as an isolated incident. The ideological motives behind it and the social context in which it took place have to be taken into account in any attempt to arrive at the truth.

The real story. Every time

Cauvery water tussles

Even as Karnataka refuses to release Cauvery water to Tamil Nadu as recommended by a committee of the Cauvery River Authority and the two governments trade charges, the situation in the delta areas remains grim, with the *kuruvai* crop and *samba* nurseries in risk of withering.

T.S. SUBRAMANIAN
in Chennai

TAMIL NADU Chief Minister M. Karunanidhi has reasons to rue at least one of the themes he repeatedly invoked during the recent election campaign: that the Cauvery river agreement of August 7, 1998 was one of the "greatest achievements" of the Vajpayee Government. Within days of the conclusion of elections to the Lok Sabha in Tamil Nadu on September 11, the Cauvery issue sprung back on Karunanidhi, with the Karnataka Government refusing to release to Tamil Nadu its seasonal share of water. At stake is the standing *kuruvai* crop on 80,000 hectares, and *samba* nurseries for transplanting on another 20,000 ha, in its Thanjavur, Tiruvarur and Nagapattinam districts.

The Opposition, led by the All India Anna Dravida Munnetra Kazhagam (AIADMK), quickly went on the offensive. General secretary of the AIADMK and former Chief Minister Jayalalitha said that her characterisation of the Cauvery River Authority (CRA) headed by the Prime Minister (it was established in order to enforce last year's agreement) as a "toothless wonder" had been proved right. She termed as "a mere propaganda spin" the euphoric claims by the Dravida Munnetra Kazhagam (DMK) Government in the State and the Bharatiya Janata Party that the long-standing Cauvery dispute had been resolved. She demanded the revival of the original draft scheme of May 1997, which empowered the Centre to take over the reservoirs in Karnataka if it refused to implement the Interim Order of the Cauvery Water Disputes Tribunal.

The Karnataka Government stood its ground and refused to release water despite Vajpayee speaking to Chief Minister J.H. Patel and the Monitoring Committee of the CRA directing the State Government to release to Tamil Nadu 3 tmc ft of water by September 30 and 6 tmc ft by October, in addition to the mandatory releases for these two and other months. Karnataka Chief Secretary B.K. Bhattacharya, a member of the Monitoring Committee, said: "We are not for immediate release." Major Irrigation Minister K.N. Nage Gowda alleged that the Committee's recommendation was "illegal" and "one-sided".

On September 21, Patel told Karunanidhi that he would consider releasing water after two or three weeks if the reservoirs received adequate rains. The next day Karunanidhi alleged that Karnataka had "violated" last year's agreement on the implementation of the Interim Order of the Tribunal, which mandated the release of 205 tmc ft to Tamil Nadu every water year from June to May. Karunanidhi said: "We are not prepared to believe that Karnataka does not have enough water... Karnataka has always violated agreements." He said that although Karnataka had 85 tmc ft besides the dead storage, it was yet to release 32.5 tmc ft which was due to Tamil Nadu. It was wrong, Karunanidhi said, to say that Tamil Nadu had 25 tmc ft at Mettur; all it had was 15 tmc ft. Of this, 3 tmc ft was mere slush, he added.

After Vajpayee spoke to Karunanidhi and Patel on September 26, he sent a three-member team headed by Union Water Resources Secretary Z. Hasan to assess the water level in the reser-

K. ANANTHAN

At the Mettur dam on September 29, Z. Hasan (centre), Union Water Resources Secretary who led a team of experts to assess the storage levels in the reservoirs in Karnataka and Tamil Nadu, and A. Mohanakrishnan (right), Chairman of the Cauvery Technical Cell, Tamil Nadu.

voirs in Karnataka and Tamil Nadu. The team, comprising Central Water Commission members, visited reservoirs in Karnataka and the Mettur reservoir in Tamil Nadu on September 27 and 28. The team was to report to the Prime Minister before a meeting of the CRA, which was convened for September 29, with the Chief Ministers of Tamil Nadu, Karnataka, Pondicherry and Kerala participating. However, the CRA meeting was postponed after Patel, citing ill health, said he would be unable to attend. On September 28, even as Karunanidhi was presiding over a Cabinet meeting in Chennai, Patel phoned him up and conveyed his inability to attend the meeting.

The same day, the Central team visited the Mettur dam after visiting the reservoirs in Karnataka. Hasan told reporters in Mettur that "the situation is bad" in both the States because it had rained much less than last year. However, he said he would not like to describe it as "a distress situation". The team had got the actual figures and computed the two States' requirements. In response to a question, Hasan said that the Central team, working in two sub-groups, had visited the Karnataka reservoirs and physically assessed and verified the measurements, and computed the requirements.

In its report submitted to the Prime Minister's Office on September 29, the Central team confirmed the Monitoring Committee's recommendation to Karnataka to release 9 tmc ft to Tamil Nadu. The same evening, Hasan told a private television channel: "The Monitoring Committee has already recommended after considering all these things. We have confirmed this."

IN hundreds of villages in the delta region in Tamil Nadu, the *kuruvai* crop, almost ready for harvest, had started withering and water-starved paddy fields had become bone-dry. S.Ranganathan, secretary, Cauvery Delta Farmers' Welfare Association, said, "I have not seen such a bad situation in the past 40 years." In his opinion, "there is no possibility of revival" of the *kuruvai* crop and the *samba* nurseries unless Karnataka released water immediately. He said that unlike in 1987, when both Karnataka and Tamil Nadu faced a serious drought, there was a fairly good quantity of water in Karnataka now. "Their paddy harvest is over. They require water only for sugarcane and dry crops and for drinking purposes. They are in a position to clearly indicate how much they can spare."

On September 19, farmers in Tiruvarur district and at some places in Nagapattinam district blocked roads demanding water. At Melapidagai near Velankanni, they blocked the convoy of Public Works Minister Durai Murugan, who had claimed on September 17 that there was no water shortage in the delta and that neither the District Collectors nor the farmers had informed the Government that any crops had withered. He had further said that enough water had been released and that the *kuruvai* crop was being harvested in many places. The Tamil Nadu Farmers' Association and the Cauvery Delta Farmers' Welfare Association reacted sharply to this. Subsequently, however, Durai Murugan clarified that he had merely stated that the crops had not withered in Thanjavur district, but that they had wilted in Tiruvarur and Nagapatti-nam districts.

At the political level, on a lead given by the Dravidar Kazhagam, leaders of the AIADMK, the Congress(I), the Communist Party of India (Marxist), the Communist Party of India, the Janata Dal (Secular), the Indian National League, the Rashtriya Janata Dal and others organised demonstrations across the State on September 28 to protest against the "failure" of the Central, Tamil Nadu and Karnataka governments to protect the interests of farmers in Tamil Nadu. The DMK's allies – the BJP, the Marumalarchi Dravida Munnetra Kazhagam (MDMK), the Pattali Makkal Katchi(PMK) and the Tamilaga Rajiv Congress(TRC) – endorsed the steps taken by Karunanidhi to secure Tamil Nadu's share of water.

THE August 7, 1998 agreement, signed by the Chief Ministers of Tamil Nadu, Karnataka, Pondicherry and Kerala in the presence of Prime Minister Vajpayee, was projected as a mechanism that would resolve the dispute between Tamil Nadu and Karnataka. The agreement envisaged a scheme to implement the Interim Order of the Tribunal, issued on June 25, 1991, under which Karnataka should ensure that 205 tmc ft of water was available in the Mettur reservoir in a year from June to May, according to a fixed weekly and monthly schedule of releases. If there was any shortfall in a given week, it was to be made good in the subsequent week. The agreement provided for the setting up of the CRA and a Monitoring Committee headed by the Union Water Resources Secretary with Chief Secretaries of the three States and the Union Territory as members. (The Tribunal is yet to give its final order.)

V. SUDERSHAN

At the meeting of the Monitoring Committee of the Cauvery River Authority in New Delhi on September 24.

After the agreement was signed, Karunanidhi was confident that Karnataka would not contravene the scheme. If there was any violation, an appeal could be made to the CRA, he said. J.H. Patel said: "Both sides have won." But the AIADMK (then a member of the BJP-led coalition), and the MDMK, the PMK and the Janata Party, which were Jayalalitha's allies then, "totally rejected" the agreement, stating that the Authority's powers were not clearly defined and that it would be unable to take decisions by a majority vote.

The row over the sharing of Cauvery water, which has become something of an annual affair, erupted this year on September 15, a bit later than it usually does, although supplies to Mettur from Karnataka had almost stopped from the beginning of August. Tamil Nadu went to the polls on September 5 and 11, and the political parties were in the thick of the campaign. Farmers in the delta were perhaps lulled into believing that rain in August and September would prompt Karnataka to release water.

However, asked if the State Government had been indifferent to the problem, Karunanidhi said that his Government had first written, on July 13, to the Central and Karnataka governments pointing out that water had not been received at Mettur; the most recent letter, he said, was sent on September 13.

On September 15, when Karunanidhi met top officials, it was revealed that the water available in the Mettur reservoir would meet irrigation needs for only 15 days. Karunanidhi directed Collectors and other officials to tour the affected areas and report to him; he also deputed Agriculture Minister Veerapandi S. Arumugam and Durai Murugan to visit the areas alongwith Local Administration Minister Ko. Si. Mani. A turn-system for supply of water to the tail-end areas was introduced.

According to Ranganathan, the *kuruvai* crop was raised on 80,000 ha after water was received from the Mettur dam from July 1. No more wetting was required for the 90-day-old crop on 16,000 ha and it could be harvested now. The 70-day-old crop on 64,000 ha required more wetting. There was no water even "to puddle the nurseries" on 20,000 ha for the *samba* crop.

Ranganathan said: "An on-the-spot study will reveal the facts and prevent further bickerings between the two States. The Tamil Nadu Chief Secretary should have invited his Karnataka counterpart to look at our water and crop position so that the two sides could avoid making accusations against each other."

S THANTHONI

Chief Minister M. Karunanidhi.

According to him, 22 lakh people – 12 lakh marginal and small farmers and 10 lakh agricultural labourers – in the affected areas were jobless today.

After the Prime Minister spoke to the two Chief Ministers, Karunanidhi said that Patel had told him on September 21 that he would release water in two weeks. Karunanidhi further said that he had pointed out to Patel that if water did not come within a week, the standing crop would wither.

Karunanidhi reacted sharply to Nage Gowda's claim that Patel had given no such assurance and that Patel had told Karunanidhi that Tamil Nadu should first utilise the 25 tmc ft stored in the Mettur dam before making any request to Karnataka. Karunanidhi said: "Let Mr. Patel say that what the Tamil Nadu Chief Minister says is not right." He said that it was wrong to say that there was dearth of water in Karnataka. The catchment areas of the Cauvery in Karnataka usually received 2,650 mm of rain from the south-west monsoon; this year it had received 2,350 mm. "The deficit is only 11 per cent... We are not prepared to believe that Karnataka received deficit rainfall..."

Karunanidhi said that during the September 28 tele-conversation with Patel, he had pointed to the postponement of the CRA meeting and had asked Patel to release as much as water as possible in the interregnum to provide relief to Tamil Nadu farmers. He also said that he had told the Prime Minister that the Centre too should, "without reluctance", help delta farmers in Tamil Nadu to receive water. Ministers Veerapandi Arumugam, Durai Murugan and Aladi Aruna met Vajpayee on September 24 and requested him to ensure that Karnataka released water to Tamil Nadu.

Asked about Jayalalitha's demand that he should resign because he did not handle the Cauvery issue properly, Karunanidhi replied sharply: "If Patel says that he will release water to Tamil Nadu only if Karunanidhi resigns, I will resign immediately. Who is Jayalalitha to say (that I should resign)?"

The Tamil Nadu Government accused Nage Gowda of making "false statements" to the press – a reference to his claim that the Interim Order had only mentioned that Karnataka should ensure water at the Mettur reservoir and that nowhere had the word "release" been used. The Interim Order said: "We direct the State of Karnataka to release water from its reservoirs in Karnataka so as to ensure that 205 tmc ft of water is available in Tamil Nadu's Mettur reservoir in a year from June to May..."

IF the Monitoring Committee's recommendations raised hopes in Tamil Nadu, they were rather short-lived. Following Karnataka's rejection of the recommendation, the Tamil Nadu Government went on the offensive. It alleged that in "total disregard to the Tribunal's orders, Karnataka has not released water despite comfortable storage in its reservoirs..." The Monitoring Committee, which met on September 24, did not accept Karnataka's claim that there was difficulty in releasing water immediately. After taking into account the availability of water in Karnataka's reservoirs, the likely minimum inflows in the coming months and the requirement for irrigation, the Monitoring Committee recommended that Karnataka release a total of 10 tmc ft in September and 36.17 tmc ft in October.

A temporary respite to the problem was provided by very heavy rains (14 cm on September 27 and 13 cm the previous day) over Palacode in Dharmapuri district, which resulted in increased inflow into the Mettur dam from 2,024 cusecs to 10,592 cusecs, and a spell of rain in Tiruvarur district on September 28. Tiruvarur District Collector C. Uma Sankar said the rains would help save the *kuruvai* crop in his district and protect the *samba* nurseries. However, an official in the Cauvery Basin said on September 28 that 17 tmc ft of water was required over the next fortnight to save the standing *kuruvai* crops, and that the total requirement for cultivation in the delta until January 2000 would be 150 tmc ft. ■

Unresolved issues

Karnataka's refusal to abide by the recommendations of the Monitoring Committee of the Cauvery River Authority shows up the limitations of the agreement reached last year.

PARVATHI MENON
in Bangalore

KARNATAKA'S categorical refusal to implement the recommendations of the Monitoring Committee of the Cauvery River Authority to release 3 tmc ft of water to Tamil Nadu immediately and an additional 6 tmc ft in October is a pointer to the limitations of the agreement on water-sharing that was reached by the Cauvery basin States amidst much fanfare on August 7, 1998. It took just one season of deficient rainfall for the Cauvery Water Scheme to come apart.

What the latest crisis points to is the fact that the "historic" agreement, which the Bharatiya Janata Party-led government at the Centre claimed credit for, did not in fact address, let alone resolve, many of the substantive issues relating to the dispute. It merely put in place an administrative mechanism – the Cauvery River Authority (CRA), along with the Monitoring and Regulating Committees – that would oversee distribution of water between the two States as set out by the June 1991 Interim Order of the Cauvery Water Disputes Tribunal. Karnataka had deep reservations about this mechanism. The fundamental questions of how distress is to be measured and how water is to be shared in a distress year were not addressed in the agreement; as the current crisis indicates, that issue remains essentially unresolved.

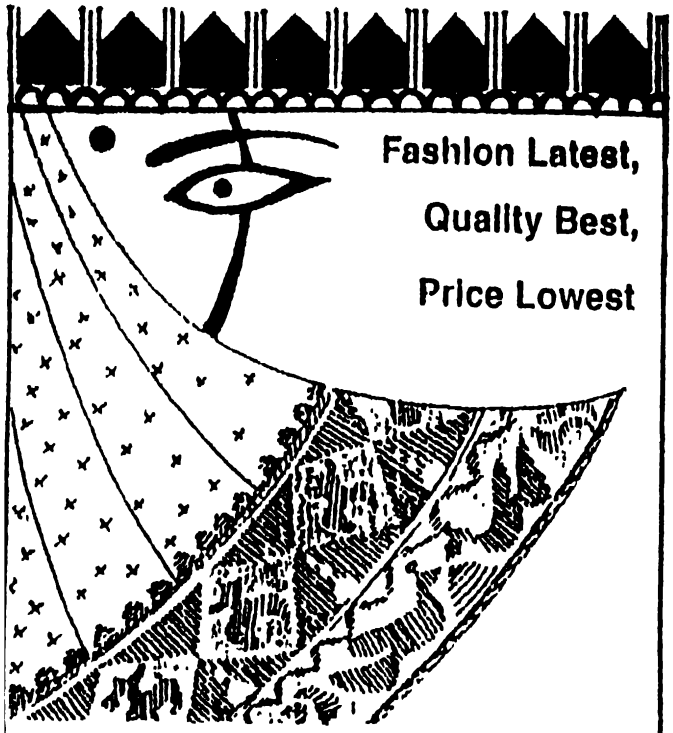
The latest crisis has a familiar ring to it. Tamil Nadu's demand for water on an urgent footing to save the standing kuruvai crops in the Cauvery delta was turned down by Karnataka on the grounds that the water stored in Karnataka's reservoirs was insufficient to meet its own irrigation and drinking water needs.

Karnataka's Minister for Major Irrigation K.N. Nage Gowda stated on September 20 that Tamil Nadu had enough water to last an additional three weeks. Karnataka, he said, had released 106 tmc ft until September 14, as against 121.4 tmc ft it should have released as per the June 1991 Interim Order. The deficit, he claimed, was only 15.2 tmc ft. "When we have not received rains, how can we spare water for Tamil Nadu?" he asked. He stated that the storage in the four reservoirs in Karnataka was only 73.56 tmc ft, as against the State's requirement of 102.33 tmc ft. According to him, crops in Mandya, Mysore and Hassan districts were "withering away" owing to poor rains.

Political interests have added another dimension to the problem. Prime Minister A.B. Vajpayee urged his alliance partners Chief Minister J.H. Patel and Union Commerce Minister Ramakrishna Hegde to see that water was released to Tamil Nadu. Patel expressed his inability to accede to a request from the Prime Minister's Office; he spoke to Tamil Nadu Chief Minister M. Karunanidhi and asked him to wait for two to three weeks during which time Tamil Nadu could utilise the 25 tmc ft that is available in the Mettur dam.

Karnataka's refusal to heed the recommendations of the Monitoring Committee citing low storage levels in its reservoirs prompted the Centre to send an official team to assess water levels in the Karnataka reservoirs and in Mettur. Nage Gowda's outburst against the team for not having assessed what the Government claims are drought conditions in some districts was misplaced as the brief of the team was clear: it was asked to assess water storage levels in the four reservoirs – in Krishnaraja Sagar, Kabini, Harangi and Hemavati – in Karnataka.

Rains in the catchment areas of the Cauvery and in Tamil Nadu provided the opportunity for the Centre to postpone the meeting of the CRA which was to held on September 29. In any case, Patel had decided not to attend it on the grounds of ill health. Although he has been indisposed and has been under treatment, his illness could not have been better timed. According to a clause in the agreement, the CRA cannot meet unless all Chief Ministers are present. Patel has said that he will not be able to attend the meeting before October 10. By then a new government would in all probability have been sworn in. Handling the Cauvery crisis will be the first item on its agenda.



The sharing of Cauvery waters is a highly politicised issue in Karnataka, and any perceived softening of the State government from a firm stance that no water will be released will be seen as neglect of the State's interests. This is especially so in a rain-scarce year.

Nage Gowda accused the Tamil Nadu Government of exerting political pressure on the Prime Minister and said that Karnataka would abide by the decision of the Monitoring Committee. The meeting

of the committee in Delhi on September 24 was chaired by the Secretary, Ministry of Water Resources, and attended by the Chief Secretaries of the three riparian States – Karnataka Tamil Nadu and Kerala – and the Union Territory of Pondicherry. Karnataka, however, rejected the committee's recommendation that the State make good a deficit of 20 tmc ft by December, in addition to the mandatory releases to Tamil Nadu.

The Monitoring Committee's recommendations have led to a hardening of postures in Karnataka against releasing water to Tamil Nadu; they have also reinforced the perception that there is a pro-Tamil Nadu bias working against Karnataka both in the Prime Minister's Office and in the CRA."Tamil Nadu's demand at this time is like Shylock asking for his pound of flesh," former Chief Minister M. Veerappa Moily told *Frontline*. "There is acute drought in the Cauvery basin and we need to look to our needs first. We have told Tamil Nadu to wait for 15 days. Can't they do that?" Moily accused the BJP-led government of "playing politics in the CRA". If the crisis is to be resolved, the distress formula contained in the Interim Order, which prescribes that shortages be shared proportionately, must be brought into force, he said.

Meanwhile, popular anger against the release of water has been building up in the State. A rally organised in Mysore by the Karnataka Rajya Raitha Sangha (KRRS), a farmer's organisation, warned of dire consequences if water was released to Tamil Nadu. The Mysore District Cauvery Action Committee threatened to disrupt water supply to Bangalore city if the interests of Mandya and Mysore farmers were not safeguarded. Its activists locked the office of the Chief Engineer (Irrigation South) in Mysore and resolved that the members would lie down in front of the crest gates of the Kabini dam in protest against any move to release water from the reservoir.

Accusing the Government of "playing politics", M.D. Nanjundaswamy of the KRRS told *Frontline* that the riparian States should follow the distress formula laid down in the Interim Order. "It does appear as if the Monitoring Committee is favouring Tamil Nadu as there really is no water available for us to give," he said. Nanjundaswamy, who was part of a civilian initiative to find a solution to the Cauvery dispute in the early 1990s, said that he planned to send a delegation of KRRS farmers to Tamil Nadu to assess the "real position" there and present a report on water availability and the state of the crops.

Congress(I) spokesperson B.K. Chandrashekhar, who has been part of the non-official initative to resolve the dispute, told *Frontline:* "Getting experts and engineers of the Centre and the State jointly to inspect reservoirs and determine the actual quantum of water against immediate requirement is the right thing to do in a crisis like the one we have just been through... Subject to the fact-finding committee's findings and given rain in the catchment, Karnataka would do well to consider if water can be released immediately." He was also of the view that the CRA should utilise the "peace-time" (that is, when there is enough water in the reservoirs) to work out a range of options of sharing water during scarcity. ■

Payback time

Harshad Mehta, along with three others, is convicted in the case relating to the misappropriation of funds belonging to Maruti Udyog Limited, in the first of the cases from the securities scam portfolio.

PRAVEEN SWAMI
in Mumbai

THE stocks and securities fraud of 1991 is perhaps the most vivid signpost of Indian politics in this decade. An unregulated and ill-conceived economic liberalisation process, high-level corruption, and the impunity of the rich and the powerful from the law were all unveiled in its wake.

The impunity, at least, seems to be coming to an end. On September 28, the most visible icon of the scandal, Mumbai stock broker Harshad Shantilal Mehta, was sentenced by the Special Court of Justice M.S. Rane to five years' rigorous imprisonment for his part in a criminal conspiracy to misappropriate funds from the public sector Maruti Udyog Limited (MUL). Three others were also convicted and sentenced for their role in the fraud as well as on a welter of secondary charges for which the sentences will run concurrently. If Mehta's conviction withstands an appeal in the Supreme Court, he could find himself keeping company in jail with his bear-cartel counterpart, Hiten Dalal, convicted on similar charges in March 1999 and in August 1998.

Mehta's MUL-related fraud involved little ingenuity; it was just a case of plain and simple corruption. Between November 1990 and May 1991, the Joint Parliamentary Committee (JPC) which investigated the securities scandal found that MUL had had transactions worth some Rs.126 crores with Mehta and his firm. In essence, the car major, like most major public sector undertakings, sought the highest possible returns for its surplus cash. The brokers desperately needed cash to play the market. But there was a small problem. Public funds could only be invested in government securities, Treasury bills and similar instruments. Brokers like Mehta found ways to bypass these restrictions by influencing MUL officials and bankers.

At the end of its romance with Mehta, MUL found itself short of Rs.38.97 crores. The methods used to bring this about were simple. Much of the story before Justice Rane emerged from the testimony of Mohan Khandelwal, the manager of Mehta's New Delhi operations, who turned approver. Khandelwal had been at the centre of unsubstantiated claims by Mehta that he paid bribes to former Prime Minister P.V. Narasimha Rao. Pramodkumar Mehta, a deputy manager with MUL in charge of finance, played a key role in the enterprise, along with an assistant manager at the Hamam Street branch of UCO Bank in Mumbai, Vinayak Deosthali. Another bank employee in New Delhi, ANZ Grindlays' Ram Narayan Popli, was the fourth player in the quartet.

One element in the MUL fraud was unsophisticated misappropriation. On January 23, 1991, for example, Manocha handed over 35 lakh Unit Trust of India (UTI) units, then valued at Rs.4.99 crores, to Khandelwal, in violation of specific orders of the MUL board of directors. The same day Deosthali forged a letter authorising the transfer of funds from Mehta through Bank of America to MUL, covering Manocha's tracks for the moment. Khandelwal continued to hold on to the UTI units, leaving Mehta free to use them to raise more money. In effect, Deosthali had enabled Mehta to help himself to the bank's money. As long as share prices continued to boom, and Mehta met his repayment obligations, no one seemed to object to a little criminal wrong-doing along the way.

Popli was the last cog in the wheel, set up to ensure that the funds Manocha and Deosthali generated actually made their way to Mehta. On one occasion in February 1991, he diverted a Canara Bank banker's cheque worth Rs.5.05 crores favouring Grindlays Bank to Mehta's account. He pulled off the same trick on March 18 and April 24 that year, this time with banker's cheques worth Rs.10.84 crores and Rs.7.62 crores respectively. Thus MUL was not the only victim of the Mehta quartet. Both UCO Bank and ANZ Grindlays suffered separately. That the bank employees could so easily siphon off their banks' cash says not a little about the state of their supervisory apparatus. Indeed, banks may have played along with the fraud, hoping for profits. In December 1998, the Special Court of Justice S.N.

SHERWIN CRASTO/AP

Harshad Mehta, left, with his lawyer Mahesh Jethmalani after the Special Court in Mumbai convicted him on September 27.

Variava slammed Standard Chartered Bank for playing "fast and loose" with banking regulations because of its "greed for profits".

By the spring of 1991, the MUL fraud had acquired a regular pattern. On March 13, Manocha handed over MUL's cash to Mehta. This time, an MUL banker's cheque worth Rs.10.12 crores, drawn on Canara Bank's Sansad Marg branch in New Delhi, made its way to one of Mehta's employees, Anuj Kalia. Kalia, later acquitted for want of evidence that he was actually involved in the fraud, sent the cheque to Mumbai. There Deosthali promptly got to work, this time forging a letter, Banker's Receipt (B.R.) 1121, designed to convince MUL that UCO Bank's Hamam Street Branch was holding UTI units which it would shortly deliver. Of course, no physical delivery ever took place. Mehta had a further Rs.10 crores with which to push up share prices on the market to ever-higher heights, fuelling an upward spiral which would collapse calamitously.

Manocha succeeded in pulling off the same trick again on May 2, 1991. This time he told MUL that UCO Bank wanted the car manufacturer to give it Rs.10 crores for five days at 21 per cent interest. Attracted by this high rate of return, MUL made over a banker's cheque, number 836260, for Rs.10.34 lakhs. This cheque too was handed over to Kalia and then recycled by Mehta. All that MUL received was a succession of fake UCO Bank banker's receipts, all forged by Deosthali. Forged B.Rs were a favoured instrument of the brokers involved in the securities scandal. Since few organisations ever bothered to monitor physical delivery of the securities listed in the B.Rs, funds could endlessly be raised against non-existent securities.

Indeed, Hiten Dalal's conviction in March showed that he had taken control of two defunct banks, the Metropolitan Cooperative Bank and the Bank of Karad, for this purpose. Dalal's conviction emerged from three transactions in government securities by Canara Bank Financial Services (Canfina), a wholly owned subsidiary of the public sector Canara Bank. Canfina was a key player in the securities scandal, trading in securities worth over Rs.85,000 crores in 1991-1992 although it had a capital of just Rs.33 crores in 1992. In this case Canfina purchased government securities worth Rs.494 crores from the obscure Bank of Karad. In return, it received worthless B.Rs. Banks need to acquire large volumes of government securities from time to time to meet statutory requirements.

No one in Canfina, as in UCO Bank, appeared to have asked any questions. And questions, in Dalal's case too, there were several. For one, the Bank of Karad, which was by then a virtually captive front organisation for Dalal and other brokers, had no securities to back its B.Rs. The B.Rs were in effect worthless pieces of paper. Then, the funds that Bank of Karad received from Canfina were promptly paid into Narottam's account. The broker in turn used this cash to play the market, paying banks for securities he purchased from them on the same day.

IT seems clear that the end of the MUL case is just the beginning of Harshad Mehta's problems. Mehta, the JPC had found, had transactions with 17 public sector undertakings other than MUL, notably the Discount and Finance House of India, the Oil and Natural Gas Commission (now Corporation) and the Indian Oil Corporation. Compared to their volume of business with the broker, MUL's involvement was minimal. In 411 transactions, the ONGC put up over Rs.5,146 crores, while the Discount and Finance House of India, in 779 transactions, made available Rs.4,905 crores. On paper it all looked above board, but once the scandal broke the organisations discovered that the funds they had received from Mehta amounted to only worthless pieces of paper. Several separate prosecutions are pending against Mehta and other brokers, which could take years to decide.

The conviction of Mehta and his trio of backers has been suspended until November 2, giving them time to go in appeal. While Mehta's principal charge is conspiracy, Deosthali and Manocha, both employees of public sector units, will have to contest their convictions under the Prevention of Corruption Act. Legal sources told *Frontline* that one central theme of their appeal is likely to be the testimony of Khandelwal and alleged political bias in the Central Bureau of Investigation's handling of the case. In general, the testimony of approvers is treated with caution by courts. Hiten Dalal's earlier conviction has already been admitted in the Supreme Court. Time has been given until October 28 to deposit the fines, which in some cases are heavy. Deosthali, for example, will have to pay a total of Rs.2.30 lakhs.

Whatever the fate of the appeals, it is a tribute to the work of the Special Court that the decade is ending with both the key architects of the securities scandal being convicted for their crimes. The securities scandal not only robbed the Indian public of thousands of crores of rupees of their tax money but saw hundreds of thousands of small investors, lured by the prospect of an evidently endless boom on the stock markets, robbed of their lifetime savings.

Harshad Mehta's conviction was greeted by sharp declines in several scrips on the Bombay Stock Exchange, a sign that impunity continues to be a valued commodity for Indian capitalists. Those committed to honesty and transparency in business can only hope that the legal system continues to ensure that economic crime is punished, for the real lessons of the securities scandal have clearly yet to be learned by India's rich. ■

Are you financially strong enough to meet future needs?

By a panel of experts

Financial planning helps you to take control of your financial life in the present and to provide for the future. Proper planning begins with three basic questions:

1) Where are you today? (i.e. What is your net worth?)
2) Where do you want to go tomorrow? (What are your financial objectives?)
3) How will you get there? (What is your plan of action?)

Let us deal with the first question of your net worth.

Your networth is, quite simply, the difference between what you own (your assets) and what you owe. (your liabilities). Your net assets are indicative of how much income they can generate for you. Your net liabilities are indicative of the cost of your obligations.

You can easily prepare your Net Worth Statement by taking inventory of your assets and liabilities, as shown below. Your net worth tells you your financial standing and provides a basis for finding out how much income you will require to support your chosen standard of living.

Prepare two Net Worth Statement: one for your position as it is today and the other as you estimate it to be at your retirement.

[redacted]

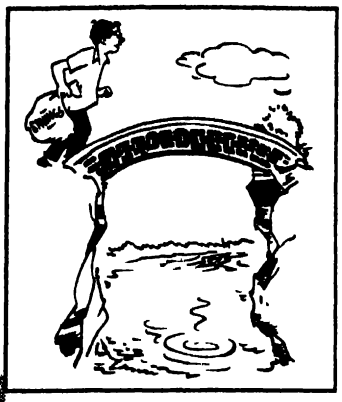
(1) Assets : (What income producing assets you own)

Rs. ..... Cash & Bank Balances
Rs. ..... Fixed Deposits & Bonds
Shares/Units (Face Value)
Rs. ..... Life Insurance on your life
Rs. ..... Provident Fund (accumulated till today)
Rs. ..... Gratuity (expected now)
Rs. ..... P.P.F.; N.S.C.; N.S.S. etc.
Rs. ..... Business/ Investments
Rs. ..... Other Income producing Assets

Total Assets (A)

[redacted]

Rs. ..... Education expenses
Rs. ..... Thread Ceremony expenses
Rs. ..... Marriage Expenses
Rs. ..... Start-In-Life expenses for children
Rs. ..... Mortgage or Loan repayments
Rs. ..... Last Illness expenses
Rs. ..... Other Liabilities (Taxes. Bill. etc)



Total Liabilities (L)

(3) Net Worth : (Asset Less Liabilities)

e.g. Total Assets (A) Rs. 10 Lacs
Less Total Liabilities (L) Rs. - 3 Lacs
Net Worth i.e. Capital Net Worth i.e. Capital available for income (N) Rs 7 Lacs

[redacted]

Taking 12% p.a. (after tax) as the earnings on this capital, Rs. 7 lac fetch an annual income of Rs. 84,000. Now, when you know that your annual living

expenses are say Rs. 96,000, you will see that this exceeds income by Rs. 12,000 (i.e. Rs. 96,000 less Rs. 84,000). So Rs. 12,000 is the Income Deficit : (D) or gap that you have to bridge in order to meet your living expenses.

[redacted]

To bridge this gap you will have to generate an income of Rs. 12,000. The capital required for this (again taking 12% p.a.), is Rs. 1 lacs. So, you will need to create additional capital worth Rs. 1 lac to make up for the deficit and meet your living expenses in full.

[redacted]

The best way of reducing the income deficit is the creation of capital e.g. by taking a Insurance Policy on your life. While other saving plans give you what you have been able to save, life insurance guarantees your family what you hoped to save, in the event of your departure before completion of your plan.

[redacted]

1. Save more about 30% of your Income.
2. With safety uppermost, revise you investment portfolio so as to maximise returns.
3. Invest wisely, not speculatively, and in shares of reputed companies. In the long run, equity shares are the best hedge against inflation.
4. Cut your taxes by getting the full benefits of tax-free income under Section 80-1 from bank deposits, N.S.C., units, mutual funds etc. and rebates under Section 88 by investing in approved schemes like P.P.F., infrastructure bonds, N.S.C. etc.
5) Split capital and income, bearing in mind the provisions of 'Clubbing of Income' in the hands of the donor. Passing on capital and the consequent income to the members of your family will reduce your taxes.
6) Invest in collectibles (stamps, antiques, art etc.) after proper study.
7) Pay proper attention to your health so as to minimise your medical expenses.
8) Cover your family with Mediclaim because hospitalization expenses can reduce your networth drastically.
9) Encourage your wife to translate her talents into income.
10) Plan for a second career after retirement.

Do remember to take into account the impact of taxes and inflation when calculating your income.

Partition plans?

The contents of a newly available document, together with other evidence, point to some kind of a disquieting enterprise by the BJP-led government to partition Jammu and Kashmir, which is being discussed under U.S. patronage.

PRAVEEN SWAMI

HAS the Bharatiya Janata Party-led government in New Delhi been engaged in a covert dialogue on plans to partition Jammu and Kashmir and create a new quasi-independent state?

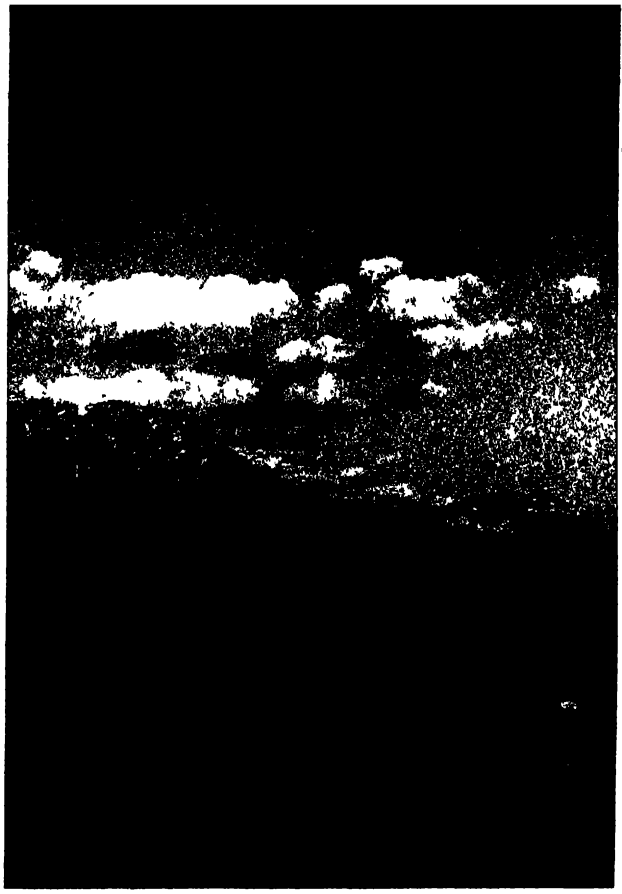
Frontline has obtained a confidential document issued by the New York-based Kashmir Study Group (KSG), which was circulated recently among a select group of top officials in the United States, Pakistan and India. The document, the second of a series called "Kashmir: A Way Forward", details proposals for the creation of a new Kashmiri state or states. These plans, the KSG asserts, came into being after tentative proposals authored in December 1998 were handed over "to government officials in India and Pakistan, and to diverse leadership in Kashmir, and many opinion makers in India, Pakistan and Kashmir". For more than one reason, the claim appears plausible.

The KSG is run by an affluent U.S.-based businessman of Srinagar origin, Farooq Kathwari. Kathwari owns Ethan Allen, an upmarket furniture concern whose clients include the White House. Several figures of the Indian establishment, including former Foreign Secretary N.K. Singh and Vice-Admiral (retired) S.K. Nair, participated in deliberations that preceded the release of the first "Kashmir: A Way Forward". Although all the Indians concerned denied having endorsed the report, Kathwari was subsequently granted a visa to visit India. His journey did not just consist of visits to his relatives in Srinagar, for the businessman met what one official source describes as a "who's who of the BJP establishment".

"Kashmir: A Way Forward" outlines five proposals for either one or two new states, which it describes somewhat mysteriously as a "sovereign entity but one without an international personality". "The new entity," the KSG document says, "would have its own secular, democratic constitution, as well as its own citizenship, flag and a legislature which would legislate on all matters other than defence and foreign affairs." The document adds: "India and Pakistan would be responsible for the defence of the Kashmiri entity, which would itself maintain police and gendarme forces for internal law and order purposes. India and Pakistan would be expected to work out financial arrangements for the Kashmiri entity, which could include a currency of its own."

IN essence, the KSG suggests five possible forms of a new Kashmiri state. The first two proposals envisage the creation of either two separate Eastern and Western Kashmiri entities on either side of the existing Line of Control (LoC), or a single state straddling it. The fourth and fifth options explore how these states would look like if an agreement came about on significant territorial exchanges along the LoC, with the whole of Rajouri and much of Poonch going to Pakistan in return for large but thinly populated Balti-speaking territory. "Kashmir: A Way Forward" argues that the exchanges would safeguard the Mangla dam watershed in Pakistan, while providing strategic depth to the Uri hydroelectric project in India and securing the Srinagar-Kargil highway from attacks.

But the third and most significant version that "Kashmir: A Way Forward" envisages is a single Kashmiri state on the Indian side of the LoC; this proposal is based on the assumption that Pakistan would for some reason be unwilling to accept the creation of a new entity on its side. Interestingly, the possibility that India would not be willing to accept the creation of some form of new state is not discussed in the paper. The KSG's concept is built on the assumption of a tehsil-level referendum leading to all of the districts of the Kashmir Valley, and the district of Doda opting to be part of the new entity. The entity could also include the district of Kargil, three northern tehsils from Rajouri and the tehsil of Udhampur.



PERHAPS more interesting than the geographical outlines of the KSG's Kashmir are the stated reasons for its creation. Enormous leaps of reason are used to avoid the assertion that these tehsils incorporate all the principal Muslim-majority areas of Jammu and Kashmir as it exists, or that a communal sundering is being contemplated. "All these areas," the document asserts, "are imbued with Kashmiriyat, the cultural traditions of the Vale of Kashmir, and/or interact extensively with Kashmiri-speaking people." The document says: "In all but five of tehsils so designated, Kashmiri is the language of a clear majority of the population, while in three of these five problematic tehsils, Kashmiri is the single leading language."

At least two problematic elements exist in this discourse. For one, the implicit proposition that some areas in Jammu and Kashmir do not "interact extensively with Kashmiri-speaking people" is mystifying. State employees shuttle between Jammu and Kashmir's two provinces twice a year, and trade between the regions is vibrant. Then, while Doda's relationship with Kashmir is indeed an organic one, so are its ties south of the Chenab with Jammu. Indeed, the district has often agitated against the perceived hegemony of the Kashmir Valley elites. Finally, if language and culture are arguments for a sundering of the existing State, it is unclear why the KSG even considers the prospect of a single entity. Punjabi, not Kashmiri, is spoken across the LoC, and cultural traditions there have little to do with those of the valley.

The specifics of the KSG's problem give some insight into just how ill-founded its linguistic claims are. The three northern tehsils of Rajouri – Thana Mandi, Buddhal and Rajouri – themselves share language, culture and trade ties with the three southern tehsils – Kalakote,

Sunderbani and Mahore. Kashmiri is nowhere the dominant language here. Yet the KSG document argues that this "Sunni Muslim tract has had close links with Kashmir over many centuries and would likely opt for inclusion in a Kashmiri state if given the choice." Clearly, the KSG worldview is founded on the privileging of religious identity over culture and language. Nowhere in "Kashmir: A Way Forward" do its authors even explore the possibility that the relationship of Rajouri's Muslims with their Hindu neighbours could be more profound than those to the north in the Kashmir Valley.

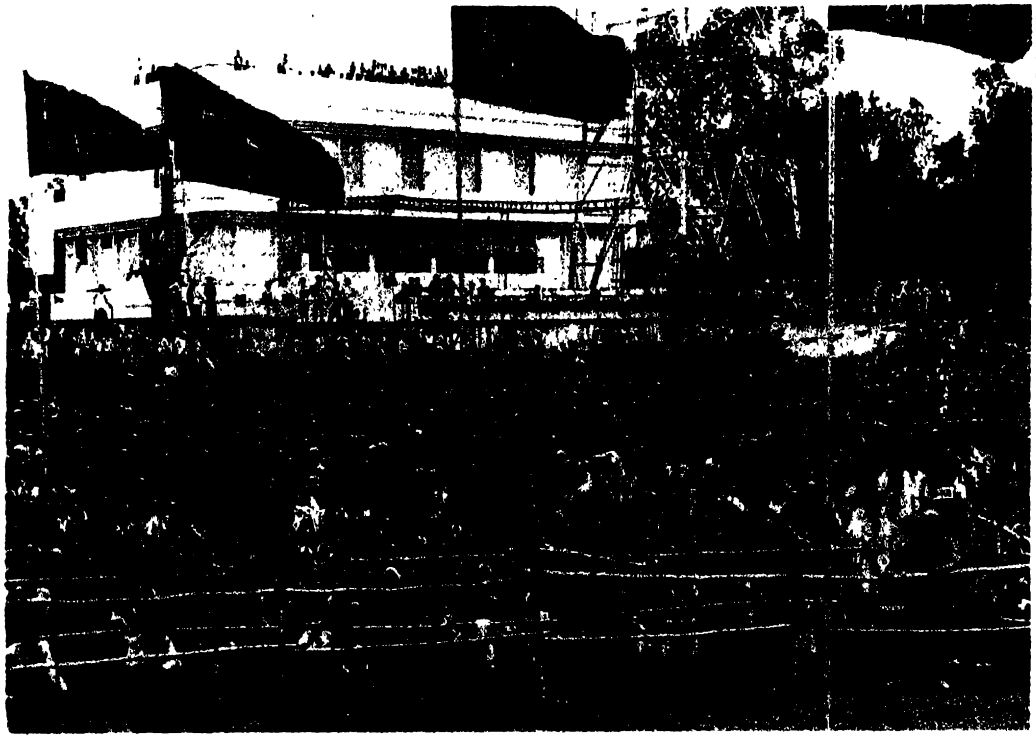
Similarly, in the 1981 Census just 3.2 per cent of the residents of Karnah and 31.3 per cent of the residents of Uri recorded their first language as Kashmiri. These tehsils, along with Gurez, recorded the highest turnout levels in the recent Lok Sabha elections in the Baramulla constituency despite calls by secessionist groups for a boycott of the exercise. Nonetheless, the KSG-conceived state is based on the assumption, clearly driven by communal premises, "that they would opt to join our hypothetical Kashmiri state". In both Ramban and Bhaderwah tehsils in Doda, as the KSG acknowledges, Kashmiri is not the principal language. Nonetheless, here too the KSG assumes that its residents would vote to join the new entity. This is again a communally driven supposition – one that terrorist massacres through these areas have done not a little to give body to.

S. SUBRAMANIUM

A 'full moon day' in Rajouri.

Similar premises drive the inclusion of what the KSG describes as the Gool-Gulabgarh tehsil in Udhampur, its sole Muslim-majority area. But there is no such tehsil, for both Gool and Gulabgarh were until recently parts of Mahore tehsil. Gool subsequently became a separate tehsil. Interestingly, the case for merging Mahore with Doda was first made in April 1999 by the controversial Regional Autonomy Committee of the Jammu and Kashmir Government (*Frontline*, July 30, 1999). The committee had recommended the sundering of the State into several new provinces, with the Mahore tehsil, along with Doda, becoming part of a new Chenab province. Informed sources told *Frontline* that the State Government was pushing ahead with these plans, with Riyaz Punjabi, an academic, presiding over their implementation.

Indeed, the dots on the page are starting to join together into a disturbing picture. Michael Krepon, head of the influential U.S. think tank, the Stimson Centre, gave more than a little indication of official thinking in that country on the future of Kashmir. "India's Kashmir policy," he told *The Indian Express* on November 28, "has been predicated on the passage of time theory and limited to counter-insurgency operations." He added: "The question that needs to be asked is whether or not this is working in India's favour because as time passes, Pakistan is becoming weaker." One senior Western diplomat explained to *Frontline* what this might mean in practice. "India as the stronger state needs to make concessions," the diplomat said. "It needs to agree to a one-eighth of the way house, if not a half-way house." The diplomat added: "That could mean soft borders in Kashmir, people-to-people contact, and free trade."



But the problem with a "one-eighth of the way house", as anyone familiar with South Asian cities will attest, is that they tend to get built eventually. Pakistani journalist Talat Hussain recently reported in *The Nation* that the back-channel negotiators during the Kargil War, Niaz Naik and R.K. Mishra, had discussed what was described as the "Chenab Plan" for Kashmir. The Chenab Plan, which according to Hussain's report was documented in a Pakistani proposal, an Indian response, and a second Pakistani proposal, suggested a recognition of the LoC as the border, followed by the grant of autonomy to the Kashmir Valley. The demands made by Chief Minister Farooq Abdullah for a restoration of the 1953 status of Jammu and Kashmir are also not distant from the KSG conception of a quasi-independent state.

Despite persistent U.S. denials that it wishes to mediate on the future of Jammu and Kashmir, the fact remains that it has emerged as a central player. The KSG proposals, read in the context of the Regional Autonomy Report, Krepon's argument and the Niaz Naik papers, suggest that some kind of disquieting enterprise to partition Jammu and Kashmir is being discussed under U.S. patronage. That the Government of India is even willing to engage in such dialogue, premised as it is on a sundering of Hindu from Muslim, says not a little about the lack of honesty with which the BJP's Kashmir policy has been conducted. Neither the participants in this dialogue nor its content is visible other than as shadows, and India's people, it seems probable, will be the last to be told what emerges from it.

It is unclear if the BJP will agree to plans for a new partition, howsoever it is packaged, or if it will succeed in selling it to India's people. Should such a sundering come about, however, the Rashtriya Swayamsevak Sangh vision of a Hindu India will be one step closer to being realised. In 1951, Sheikh Mohammad Abdullah had argued that the accession of Kashmir to India would help defeat the project of turning India "into a religious state wherein the interests of Muslims would be threatened". Just over 50 years later, at least some people would evidently like that small geographical obstacle, made up of just four Lok Sabha seats, removed. ■

On quantitative restrictions

THE World Trade Organisation (WTO) endorsed on September 23 the ruling delivered a month earlier by the Appellate Body asking India to dismantle certain kinds of quantitative import restrictions imposed in the interests of balance of payments (BoP) stability. The Appellate Body had only upheld the finding of the WTO Dispute Settlement Body (DSB) that the quantitative restrictions (QRs) maintained by India were inconsistent with the basic charter of the organisation and were not justified by the enabling provisions under Article XVIII.

These successive rulings emanated from a complaint filed by the United States in 1997. Following an adverse ruling by the DSB on India's regime of QRs, a series of bilateral negotiations had been undertaken with the complainants. A seven-year schedule for phasing out the QRs was mutually agreed with a number of countries, notably the European Union, Australia, Switzerland, Canada and Japan. The U.S. was, however, not appeased by the commitment to phase out all QRs by March 31, 2003, and it requested a fresh hearing in the DSB.

India told the DSB and the Appellate Body that the 'immediate removal of all restrictions' was bound to reduce (its foreign exchange) reserves below levels considered adequate by the International Monetary Fund (IMF). The argument was that the removal of all restrictions would have a destabilising effect unless it was replaced by 'macroeconomic policy instruments complemented by structural adjustment policies'. India submitted that this entire package of measures needed a reasonable time frame for successful implementation.

In taking up these matters, the DSB and the Appellate Body went by the IMF finding that India's external payments situation could be 'managed by using macroeconomic policy instruments alone". It concluded from this evaluation that "structural measures' which involved a change in "development policy' were not necessary 'for the preservation of India's external financial position".

India and the U.S. will now enter into a bilateral dialogue to work out a revised schedule for the removal of QRs. Meanwhile, official spokesmen of the Commerce Ministry argued that the WTO rulings still provided a reasonable period of time to phase out import restrictions.

India will now have to make a statement before the DSB at its next sitting on October 27 outlining an action plan on the implementation of its rulings. In a period of two months from the adoption of the report, both India and the U.S. would have to evolve a mutually agreeable schedule for the removal of QRs. Failing this, the matter will once again go for arbitration in the WTO. ■

IGNCA questions

THE Delhi High Court granted on September 23 clearance to the Union Government to proceed against the Indira Gandhi National Centre for Arts (IGNCA), run by a trust headed by Congress(I) president Sonia Gandhi. A Division Bench of the court, comprising Justice S.N. Variava and Justice S.K. Mahajan, did this while admitting a public interest petition filed by Naresh Pandey, an advocate. Additional Solicitor-General Kirit Rawal earlier told the Bench that the government was prepared to take appropriate action against the trust but that the pendency of such a petition in the court should not come in its way.

The petition challenged the May 1995 amendments to certain clauses contained in the original trust deed converting the trust into a private one, besides making Sonia Gandhi its life-president and all 21 trustees its life-trustees.

The trust was created in 1987 under Prime Minister Rajiv Gandhi as an autonomous body with appropriate government control in order to promote activities in the field of art and culture. Sonia Gandhi was made its president after Rajiv Gandhi's assassination in 1991. It is located in the Central Vista in New Delhi, on 8.5 hectares of prime land allotted by the Union Government. The government sanctioned it a corpus of Rs.50 crores, of which Rs.25 crores was released in 1987 and the balance between 1992 and 1995. The government had agreed to grant an additional Rs.100 crores for a building complex.

The Human Resource Development Ministry had in an affidavit (*Frontline*, July 30, 1999) questioned the validity of the amended deed. Pointing out that prior written approval had not been sought from the government for the changes, it held that the government would take necessary steps to protect its interests with respect to movable and immovable properties it had made available to the IGNCA. The affidavit, filed in response to the petition filed by Naresh Pandey, alleged that amendments to Clauses 7 and 8 (on the appointment of life trustees and a life time president), 9 (appointment of a member-secretary), 24 (power to amend the trust deed without reference to government) and 25 (denying the President of India the right to appoint a review panel on its functioning) were made without the government's approval.

The original deed had stipulated that any amendment to it would require the approval of the Union Government. It also had a provision which stated that the President of India, who officiates as Visitor to the IGNCA, would have the right to appoint a committee to review the centre's activities and that its recommendations as accepted by the government would be binding on the centre.

The Bench, which took note of the fact that the government had given the entity some Rs.133 crores and 23 acres of prime land in the New Delhi area, observed: "If it is a trust over which the government has no control, why should largesse be given to it? Why should the money not be taken back?" The Bench said: "Merely because some eminent people are involved does not mean that the trust should be given largesse."

The Bench also expressed its displeasure over Sonia Gandhi being made president of the trust. It asked "how being the widow of a former Prime Minister conferred (on her) any qualification of being an expert on art and culture and entitled her to be president of the trust without authority from the government." Responding to the IGNCA counsel's argument that five ex-officio members, including the Union Minister for Human Resource Development and the Minister for External Affairs, were authorised to check the functioning of the trust, the court observed that the Ministers could be overruled by the other members, who constituted a majority.

It appears that the IGNCA is not ready to enter into a confrontation. Counsel for IGNCA suggested that the trust was ready for a dialogue with the government. ■

How India Voted

HZL-
A RICH LIFE BEYOND ZINC

As a responsible corporate citizen committed to look beyond Zinc into ecological and environmental concerns, HZL remains ever-active

Installation of appropriate pollution control and environment monitoring systems through dust extraction plants, tailing ponds for solid waste disposal and waste water reclamation, represent meaningful thrusts in the right direction

At another level, attempting to improve the quality of life for the backward and tribal populace with a host of welfare schemes like rural health programmes, family welfare activities, adult education programmes, water supply etc – are on-going activities at HZL

Thus, India's market leader in Zinc– HZL continues to set new examples in its environmental & social aspects, for others to follow

VAJPAYEE AGAIN

The Bharatiya Janata Party gets power in New Delhi again, this time along with almost two dozen allies. And there is not a cloud of instability in sight – not at least for now.

SUKUMAR MURALIDHARAN
in New Delhi

THE Bharatiya Janata Party and its 23 allies got off to a brisk start as the counting of votes for the general elections to the 13th Lok Sabha got under way on October 6. By midday it was clear that the BJP had completed an unprecedented sweep of all seven seats in the National Capital Territory of Delhi. Observers looking for precedents went back to 1984, when the Congress(I) won all seven seats in Delhi as part of a nation-wide sweep. Other instances were the 1977 Janata Party triumph, which was again part of a political wave that brought it an unambiguous majority in the Lok Sabha.

By evening, though, it seemed more likely that far from sweeping the Lok Sabha polls, the BJP and its allies would only be gaining a slender parliamentary majority. Early results coming from the pivotal State of Uttar Pradesh bore clear evidence of a far more serious erosion of the BJP's position than had been predicted. From the point of view of the BJP, the day must have closed with grim forebodings of another phase of chronic political instability. It seemed the most likely outcome of general elections 1999 that the third Vajpayee Ministry would be no more secure than the first two.

Yet by dawn the next day, the situation had once again been transformed, pointing unequivocally towards a robust parliamentary majority for the BJP-led National Democratic Alliance (NDA). What it had lost in U.P., the BJP was more than making good in Bihar and other parts of the Hindi belt. Till the evening of October 6, the Congress(I) had held the belief that it would retain the position it had taken in the November 1998 Assembly elections in various northern States, and make a breakthrough in Uttar Pradesh. The latter half of the wish-list was fulfilled, though on a manifestly partial basis. The first assumption, though, proved thoroughly misdirected.

V. SUDERSHAN

SHANKER CHAKRAVARTY

Prime Minister A.B. Vajpayee with leaders of parties that are constituents of the National Democratic Alliance in New Delhi on October 8. (Left) L.K. Advani, George Fernandes and Rangarajan Kumaramangalam greet the newly elected leader of the NDA in the Central Hall of Parliament on October 10. There are few signals that Vajpayee's second tenure as Prime Minister will be any less turbulent or uneasy than his first, although the prospect of instability has been rendered somewhat remote by the arithmetic of the 13th Lok Sabha. (Right) Congress(I) president Sonia Gandhi. The party's poor performance has given an impetus to younger elements who are unconvinced about the credibility of the top leadership.

Apart from its gains in Delhi, the BJP gained ground in Rajasthan and gave little away in Madhya Pradesh. It lost

AJITH KUMAR AP

Punjab but swept Haryana and Himachal Pradesh. By the early hours of October 7, the writing on the wall was clear as far as the Congress(I) was concerned – far from emerging as the single largest party, it was headed for its worst-ever performance in elections to the Lok Sabha.

VERY much more remains to be analysed in the stunning reverses the Congress(I) suffered in the three States it swept as recently as November 1998. Contingent political factors, such as the disgruntlement of the Jats in Rajasthan – a traditional political constituency of the Congress(I) – explain some part of the outcome, though not all of it. Organisational failures and a lack of cohesion among the factions in the party have also been responsible for this to some extent, particularly in Madhya Pradesh and Delhi. But ultimately, the outcome in these three States can only be interpreted as a verdict on the direct contest between Atal Behari Vajpayee and Sonia Gandhi for the prime ministerial post. Between the hoary BJP veteran with close to half a century in public life and the claims of the political novice seeking to invoke public sympathy for the sacrifices her family had made in the past, the electorate seemed quite definitively to favour the former.

There had been an intriguing possibility held out towards the end of the election campaign – that the BJP by itself would end with a lower tally and in consequence become more dependent upon its allies for sustenance. The dramatic results turned in from Andhra Pradesh initially suggested that the possibility was being realised, not to mention the strong showing of the Dravida Munnetra Kazhagam (DMK), the NDA's senior partner in Tamil Nadu.

These in themselves would not have caused serious concern for the BJP, since the Telugu Desam Party (TDP) and the DMK are not prone to whimsical political conduct that could endanger the stability of the prospective ruling coalition. The newly unified 'socialist bloc' under

SHANKER CHAKRAVARTY

ANIL KUMAR AP

Tamil Nadu Chief Minister M. Karunanidhi drapes a silken shawl, a traditional rite of honour in Tamil Nadu, around Vajpayee; Telugu Desam Party president N. Chandrababu Naidu. Among the constituents of the NDA, the DMK and the TDP are not prone to whimsical political conduct, but Vajpayee may have to be on guard in respect of a few other alliance partners.

the leadership of George Fernandes was however, quite a different proposition The emergence of a new entente between the estranged sections of the Janata Dal had, first, seriously upset the BJP's election preparations in Karnataka Quite apart from this, there was also the prospect that once the Lok Sabha was constituted the so-called Janata Dal (United) would be an enduring hazard to governmental stability These apprehensions were only strengthened by reports that certain senior leaders of the Janata Dal (United) had conducted secret parleys with elements of the Third Force, to explore means of turning the prospect of an indecisive outcome to mutual advantage

THE Janata Dal(United) was also the most top-heavy party in the NDA in terms of leaders with ministerial ambitions An accretion to its strength would have brought forth a number of demands on the indulgence of its alliance partners That the NDA turned in a rather dismal performance in Karnataka, with the incumbency disadvantage of the J H Patel Ministry being transferred to it in full measure, could in a long-term framework be counted as an asset

Less certain are the consequences of the rather substantial Janata Dal(United) contingent from Bihar. The senior leaders who have arrived in the BJP camp after voting against the Vajpayee government last April – such as Sharad Yadav and Ram Vilas Paswan – may have to set aside their ministerial ambitions for the moment Accommodating them within the Ministry might engender serious misgivings among the BJP's older partners, it would also involve giving the Janata Dal(United) more berths than would be warranted by its parliamentary strength Nitish Kumar, though a BJP ally of longer standing, may also want to focus his attentions exclusively on the coming Assembly elections in Bihar His chief ministerial ambitions have been no secret, but while assigning berths in his Cabinet Vajpayee would have to acknowledge that the BJP would honour its tacit agreement to reserve the post for him Bihar has been in part responsible for the NDA's comfortable majority in the Lok Sabha But it is also the arena where the NDA is an alliance of equals, where disputes over who should enjoy primacy in a state-level contest are likely to be the most intense

The Janata Dal(United) remains the most likely source of instability for the new government under Vajpayee Other partners like Mamata Banerjee's Trinamul Congress pose a different set of problems Although MamataBanerjee too has her ultimate focus on the State Assembly elections in West Bengal, her regional ambitions are far more remote in terms of their realisation than those of the Janata Dal(United) Her intention to join the Ministry and secure portfolios of specific interest to West Bengal – such as Railways or Coal – could be accommodated, given some degree of indulgence from other partners in the NDA But her uncompromising political disposition and reputation for impetuous conduct mean that Vajpayee will continually have to be on guard for the slightest hint of restiveness in that quarter

MANY of the BJP's allies see themselves as staunch advocates of various kinds of sectional interests Om Prakash Chautala of the Indian National Lok Dal (INLD), for instance, is instinctively averse to any measure that could impinge on the fortunes of the farm sector He has been upset by the recent hike in high speed diesel prices – taken in line with a policy decision to maintain parity between domestic and global price levels in the case of petroleum products He is unlikely at this stage to press his opposition too far, both because a new government goes through a customary period of heightened public goodwill and because he is dependent on the BJP for his sustenance as Haryana Chief Minister. But the "tough decisions" that Vajpayee warned of immediately after his election as leader of the NDA parliamentary contingent

could cause some strains with INLD

The DMK and the TDP are both led by pragmatic individuals who are unlikely to dispute seriously the decisions that seem necessary on technical and administrative grounds Andhra Pradesh Chief Minister N Chandrababu Naidu and Murasoli Maran of the DMK would both want to reinforce their image as politicians who are deeply responsive to the philosophy of economic liberalisation But Chandrababu Naidu, for one, is hamstrung by serious fiscal imbalances in his State's finances His anxiety to see C Rangarajan, the economist who occupies the Raj Bhavan in Hyderabad, in the Finance Ministry was partly occasioned by this fact Failing to win generalised assent for his demand, Chandrababu Naidu then decided not to participate in the Vajpayee government The decision was arrived at after the careful deliberations and consultations that have become part of the TDP's style The party is likely, to ensure nevertheless, that its nominee continues as the Speaker of the Lok Sabha

The prospect of instability is further rendered remote by the arithmetical incoherence in the Opposition ranks Confounding early expectations, this Lok Sabha will have a rather substantial bloc of unaligned parties The Samajwadi Party, the Bahujan Samaj Party and the Nationalist Congress Party together account for 47 seats And the Left parties, despite suffering a marginal decline in representation, still number 41 in the Lok Sabha

Defections from the ranks of the NDA are likely to be deterred by the paltry numbers of the Congress(I) and its allies And even if any party should make bold to part company with the BJP and team up with the Congress(I), there is little likelihood of the unaligned parties joining the effort in order to form an alternative government

THE Left, for its part, is known to be seriously evaluating the options it has, after acknowledging very early on the sheer irrelevance of any effort to form a non BJP government The Communist Party of India(Marxist) went into a meeting of its Polit Bureau shortly after the results were declared, following which the Central Committee was called into session In retaining its strength, the CPI(M) has increased its relative influence within the slightly diminished ranks of the Left

The Communist Party of India, which has been a big loser this time, is known to favour a reassessment of the tactical line that the Left parties overall have adopted since March 1998, when with the exception of the Forward Bloc and the Revolutionary Socialist Party they tilted towards the Congress(I) in an effort to keep the BJP out of power The CPI also believes that the Left parties erred in April 1999 in endorsing All India Anna Dravida Munnetra Kazhagam leader Jayalalitha's misconceived effort to pull down the Vajpayee government and put an alternative formation in its place All these matters are likely to provide the Left parties food for thought, particularly since the politics of the 'third force' has been somewhat resuscitated by the performance of Mulayam Singh Yadav's Samajwadi Party in U P (see separate story)

THE Congress(I) seemed, in the immediate aftermath of the election results to be too deeply shocked to respond in a sensible manner Party morale had suffered a perceptible dent on Day One of counting, as the reality of Manmohan Singh's defeat in South Delhi began to sink in In the scheme of political revival that had been crafted by Congress(I) strategists, the former Finance Minister played the role of standard bearer His unique appeal as a competent, enlightened and totally untainted politician was expected to give him an easy passage to the Lok Sabha, and subsequently a crucial role in the refurbishment of the Congress(I)'s identity

Former Finance Minister Manmohan Singh's defeat according to a senior spokesman of the Congress(I), reflected poorly both on the party's organisational readiness and its level of factional cohesion At customary meetings with the media the party's official spokesman, Kapil Sibal, affirmed that appraisals of its entire election strategy would be carried out particularly with respect to the alliances it concluded in Tamil Nadu and Bihar

It has been a mortifying experience for the Congress(I) to see three members of its top executive body, the Congress Working Committee, being defeated in Delhi Manmohan Singh, R K Dhawan and Meira Kumar are all considered close in their own ways to party president Sonia Gandhi K Vijayabhaskara Reddy, another member of the CWC and head of the party's disciplinary committee, was defeated at Kurnool in Andhra Pradesh

Expectedly, the performance of the Congress(I) has given a new impetus to younger elements who have never been convinced of the credibility of the party's top leadership Expectedly again, there is an effort to protect the party president from any form of public interrogation The Congress(I)'s triumph in the Assembly elections in the northern region last year was unequivocally hailed as Sonia Gandhi's Defeat, though, has no parents

Samajwadi Party president Mulayam Singh Yadav, and Nationalist Congress Party leader Sharad Pawar. Contrary to early expectations, the 13th Lok Sabha will have a rather substantial bloc of unaligned parties.

EDITORIAL

A stronger mandate to govern

THE thirteenth general election – the third election in three years – has yielded a rather decisive mandate to the political party of the Hindu Right, the Bharatiya Janata Party, and its 23 regional allies of varied character and background, to govern India from the Centre. The close to 300 seats that the coalition headed by Prime Minister Atal Behari Vajpayee has won represents a striking reversal of the political trends that were witnessed for much of the period after the BJP assumed the reins, in April 1998, as head of a smaller coalition that included some of the more volatile elements in India's regional politics. No single big factor, or even a few factors, can help explain the 1999 outcome.

If there was a Kargil effect that unexpectedly boosted the stock of Vajpayee and the BJP across much of the country, this was clearly no Kargil election, as the results in the battleground States of Uttar Pradesh and Punjab underlined. Further, the Kargil effect was in visible decline during the latter part of a voting exercise spread over a whole month. If it was the 'able' Prime Minister's winning image that scored generally, then that image took a beating in a few States (Karnataka, Punjab and Uttar Pradesh) and elsewhere seemed less important than alliance arithmetic (Tamil Nadu, Bihar, Maharashtra) or the independent electoral clout of senior regional partners (Andhra Pradesh, Orissa, West Bengal). If there was a strong anti-incumbency factor at work at the State level (Bihar, Punjab, Karnataka, Orissa, Uttar Pradesh, and also Maharashtra), Andhra Pradesh seemed to witness the opposite, a pro-incumbency wave, the reversal of 1998 for the Dravida Munnetra Kazhagam in Tamil Nadu seemed to reward incumbency, and no overriding anti-incumbency mood could be noticed among the voters in the Left-ruled States of West Bengal and Kerala.

An analysis by the Centre for the Study of Developing Societies (CSDS) of how India voted in 1999, which is being carried in two parts by *Frontline*, calls attention to "the vagaries of our electoral system" that account for much of "what looks like a coherent majority". If in recent times political India has been hostage to instability, the vote for 'stability' this time is hardly robust. There has been no swing either towards the BJP (its vote share declined by 1.8 percentage point from 1998, although it must be noted that it contested 50 fewer seats this time) or towards the BJP and its current allies (their combined vote share declined by 1.5 percentage points from what they won in the twelfth general election). In fact, in 1999 the Congress(I) contested 20 fewer seats than in 1998, but improved its vote share by 2.7 percentage points. The triumph of the BJP-led alliance implies neither a polarisation of the votes in its favour nor the emergence of a bipolar national electoral process. In fact, the electoral space occupied by non-BJP, non-Congress(I) 'third force' parties has remained more or less intact. Further, in an election that saw some 360 million out of 605 million eligible voters cast their ballots, no correlation could be detected between the level of voter turnout and the success of any major party or grouping. Mid-term elections tend to produce a lower-than-average turnout of voters, but the 1999 voter turnout, while being nearly three percentage points lower than the turnout in 1998, was higher than in seven of the earlier general elections. Only the vagaries of the Indian electoral system (as Yogendra Yadav points out in his lead analysis of how India voted in 1999) combining with the self-inflicted split in the Congress vote in Maharashtra provided the BJP-led coalition its comfortable victory margin.

HOWEVER, there are two striking qualitative factors behind the thirteenth general election outcome. The first is the rather remarkable fact that the Vajpayee government proved more resourceful and popular in the *caretaker* mode than when it ruled for a year with the backing of a working majority in the Lok Sabha; this change in fortunes can be explained largely by Kargil and the response to it, coming on top of the sympathy that was generated by the fall of the government. And this change in fortunes is linked to the second factor: the BJP's main opponent at the national level, the Congress(I) led by Sonia Gandhi, can be said to have snatched defeat from the jaws of victory.

In November 1998, the Congress(I) won impressive victories in the Assembly elections in three battleground States, Madhya Pradesh, Rajasthan, and Delhi. In December 1998, an ORG-MARG public opinion survey published by *India Today* (December 28) predicted that if elections were to be held at that point, the Congress(I) and its few minor allies would win 45 per cent of the votes and 305 Lok Sabha seats compared with 26 per cent of the votes and 135 seats for the BJP and its numerous allies, and that potential voters favoured Sonia Gandhi over Vajpayee, by a four percentage point margin, for Prime Minister. From that point, it was downhill all the way for the main Opposition party.

The 1999 election is as much about Congress ineptitude under the helmswomanship of Sonia Gandhi as it is about the BJP's Kargil-assisted rally against the odds. The strategic miscalculation that came straight out of the September 1998 Pachmarhi session of the Congress(I) was based on an almost dogmatic belief that under Sonia Gandhi's leadership, the Congress(I) had managed to reverse its long-term decline, had no need of new allies or coalition partners, and was completely capable of powering its way back into the Central government at any time it chose. This belief was contradicted by various objective indicators and had an underlying arrogance to it; its sole virtue, it seemed, was the relative absence of opportunism compared with the BJP's re-emphasised willingness to accommodate all and sundry, major and minor regional allies, in the hunt for power. The strategic miscalculation led to implementing a game plan for the fall of the Vajpayee government without thinking through the nature of an interim secular and democratic alternative that could hold the reins until such time

as fresh elections could be forced. The Congress (I) 'high command' seems simply to have assumed that when the party chose to take charge, all secular and democratic parties in the system would fall in line, or be swept aside as irrelevant by inexorable historical forces.

In her first post-election statement, Sonia Gandhi acknowledged the major setback suffered by her party and called for "introspection, frank assessment and determined action". But the humiliation suffered by the Congress(I) in the thirteenth general election will serve some purpose only if an honest, objective and non-sycophantic assessment is made that begins with the high command's primary accountability for the debacle. The main opposition party must enter into serious discussion and consultation with potential cooperators and fellow-travellers on a broad and principled agenda of rolling back the advances made by the Hindu Right and its extraordinary assemblage of opportunist allies.

MEANWHILE, no illusions need be entertained about what the Hindu Right stands for and what its policies and practical actions are likely to be. Communalism as a political mobilisation strategy has made disturbing progress in the last decade and the forces of the Sangh Parivar are going to be enthused, not reined in, by the 1999 triumph of the BJP. The belief that the Prime Minister is a consummate moderate, and that the composition of the National Democratic Alliance will be an effective check on the hardline Hindu Right, could lead to serious political miscalculations among those committed to the core values of secular democracy. Prime Minister Vajpayee's government did not at all do well last time when it came to defending secularism and the interests of minorities against concerted attacks by RSS-controlled fanatical organisations. Will it be any different this time?

The second immediate area of concern is national security and nuclear policy. With nuclear weaponisation ushered in by the Hindu Right, the risks and hazards for the region have increased considerably. The draft Indian Nuclear Doctrine, which has been analysed in detail in the columns of *Frontline*, indicates the dangerous and economically burdensome path that the pro-bomb lobby wishes the government to take. In the hands of the BJP and the RSS, the idea that much more needs to be spent on national security and modernising the military machine is indistinguishable from militarism and the chauvinist logic of a subcontinental arms race. Handling troubled relations with Pakistan in this risky climate will pose a tough challenge to the new government.

The third area of challenge is the economy. There are three strikes against the economic liberalisation and globalisation policies as they have been developed by successive regimes since 1991. The first is that they erode and weaken economic sovereignty, India's pursuit of its own economic path and policies without external tutelage. The second objection is that the economic policies are anti-people, that is they hit the livelihood and basic conditions of the working people of India and increase mass poverty. The third is that they are retrogressive in terms of economics. Prime Minister Vajpayee has asserted, somewhat enigmatically, that the economic policies of the past have become hurdles to faster growth and need to be changed; he has also referred to a tremendous popular demand round the country for a faster and more equitable development. What this implies for the economic policy of the government will be watched closely.

Finally, a major challenge for the BJP will be to manage the tensions and contradictions within the 24-headed NDA. Many of the regional parties in the alliance, such as the Telugu Desam Party and the Dravida Munnetra Kazhagam, have their distinctive regional identities and aspirations. Conflicts, minor as well as major, could arise on agendas and interests within the coalition. Can the BJP, a party with a unitary and centralising vision, get used to the imperatives of, and demands made by, federalism in both the constitutional and political sense. How long can it manage the contradictions, both the contradictions between the hard-core Hindu Right and some of the major allies, and the internal contradictions within the Sangh Parivar? On the answer to this question essentially will depend the stability and longevity of the new Vajpayee government. ■

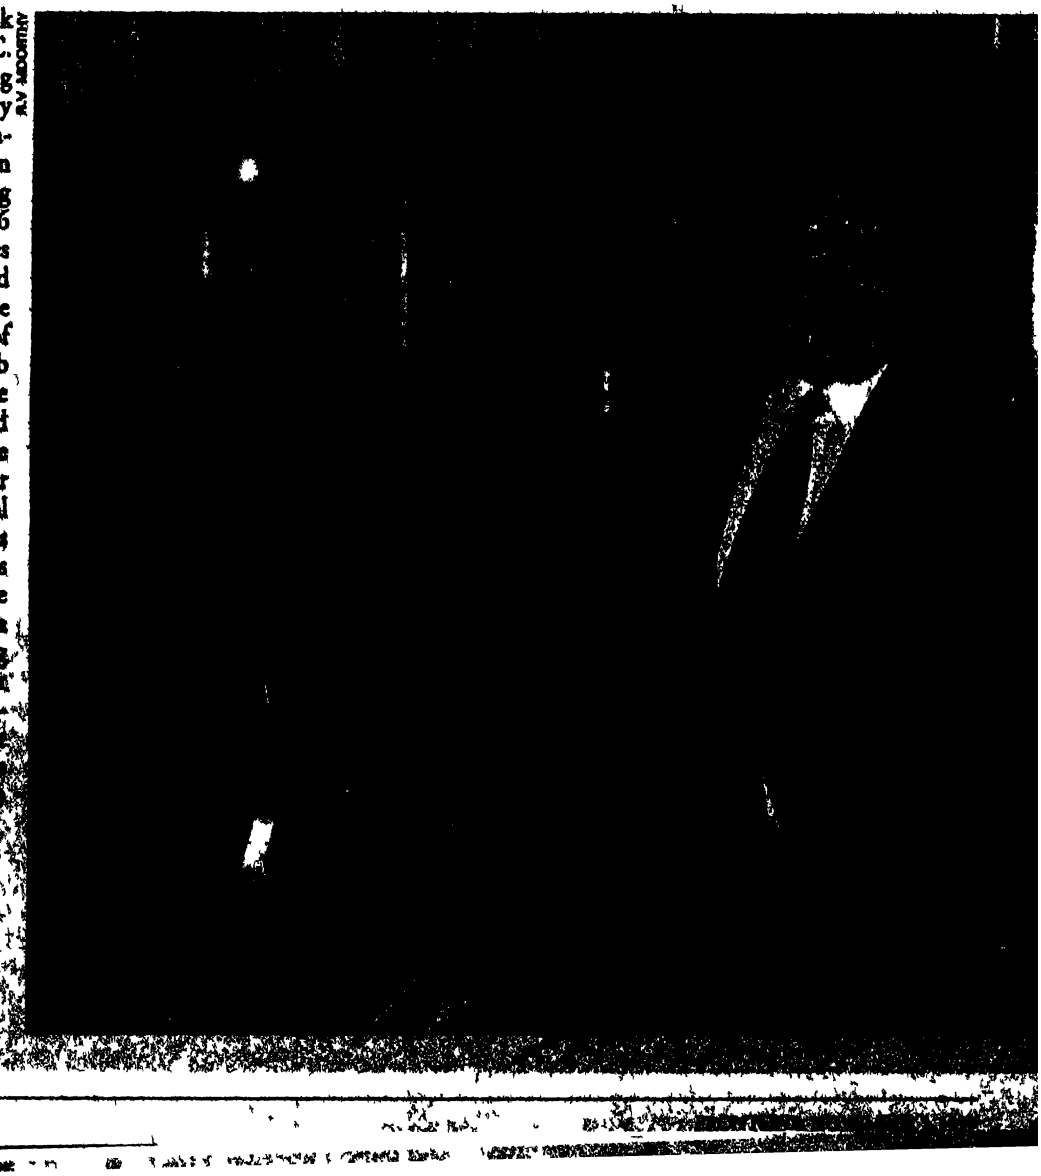
As long as Sonia Gandhi seemed capable of delivering the goods, there was little enforcement of accountability on the coterie that surrounds her and counsels her on every important political matter. Defeat today has changed all that, though the coterie is fighting a desperate rearguard by orchestrating a sequence of resignations by all the top office-bearers who were involved with planning for these elections.

The spectacle at the Congress(I) headquarters must seem altogether more unseemly since the party's relevance in Indian politics has perhaps received an

SHANKER CHAKRAVARTY

CPI(M) general secretary Harkishan Singh Surjeet. In retaining its parliamentary strength, the party has increased its relative influence within the ranks of the Left in general.

impetus of an entirely new kind in these elections. Victories in the Assembly elections in Karnataka and Arunachal Pradesh, and the prospect of regaining governmental authority in Maharashtra if it follows a course of sensible pragmatism, means that the Congress(I)'s influence in State-level politics is rapidly growing. Together with its three State governments in the northern region – which were elected to five-year terms only last year – the Congress(I) has a much more substantive position in State-level politics than the BJP can aspire to in the near future. This is a prospect that is further underlined by the waning fortunes of the BJP govern-



A challenging assignment

V. VENKATESAN

THE elections to the 13th Lok Sabha witnessed a massive exercise in mobilising human and material resources and were a stern test of the efficiency and fairness of the Election Commission (E.C.).

The E.C. had the responsibility of completing the election schedule and constituting the new Lok Sabha in time so that it met before October 21. (Under the Constitution, a new House should be constituted no more than six months after the last sitting of the previous Lok Sabha.) Simultaneously, the E.C. held elections to the State Assemblies in Andhra Pradesh, Karnataka, Maharashtra, Arunachal Pradesh and Sikkim and byelections for a few seats in some other States.

It was a challenging task in many ways, but the E.C. did succeed in conducting the process in a reasonably fair, free and efficient manner. Be it the introduction of electronic voting machines (EVMs) in 46 Lok Sabha constituencies spread over 17 States and Union Territories or the speedy dissemination of detailed results on its Web site and the Nicnet, the E.C. showed that it could put to good use appropriate high tech facilities in order to make the electoral process smooth. The results from the constituencies where EVMs were deployed were declared a few hours after counting began at 8 a.m. on October 6. Given the excellent communications network that had been put in place, the lead positions in the various

Chief Election Commissioner M.S. Gill hands over to President K.R. Narayanan a list of the newly elected members of the Lok Sabha.

constituencies were known across the country by the afternoon of October 6 through television and radio.

The E.C. had on more than one occasion to reckon with the limits placed on its authority by the courts. A Constitution Bench of the Supreme Court forced the E.C. to withdraw its ban on the publication of the results of opinion polls and exit polls during a specified time-frame during the election process. In another instance, the Patna High Court restrained it from declaring the result of the Lok Sabha election in Madhepura, where Rashtriya Janata Dal (RJD) leader Laloo Prasad Yadav faced Janata Dal (United) leader Sharad Yadav. The JD(U) had gone to court claiming that polling in the constituency had not been free and fair and seeking a direction to the E.C. to countermand the elections and order a repoll. The court refused to intervene in the election process but asked the E.C. to hear the JD(U)'s complaint before declaring the result. As there was no bar on counting, the E.C. permitted the counting to proceed.

Sharad Yadav complained that the RJD had resorted to large-scale rigging and that paramilitary forces had not been deployed in adequate strength. He went on an "indefinite fast" in Patna in protest against the E.C's refusal to order a repoll. However, Sharad Yadav changed tack when he learnt that he was leading by a comfortable margin. He presented his case before the E.C. on October 7, but did not ask for a repoll. Chief Election Commissioner M.S. Gill and Election Commissioner J.M. Lyngdoh permitted the Returning Officer to declare the results.

The E.C. faced another embarrassment when the Kerala High Court directed on October 4 the E.C. and the Chief

Electoral Officer of the State to conduct booth-wise counting of votes in the State. The E.C. had decided that where EVMs were not used, votes would be counted by mixing the ballot papers of the Assembly segments to prevent any intimidation and victimisation of voters by the losing candidates. This procedure was followed in the 1996 and 1998 general elections. The E.C. challenged the High Court's order in the Supreme Court and obtained a stay on October 5.

It was a challenging task in many ways, but the E.C. did succeed in conducting the process in a reasonably fair, free and efficient manner.

THIS was the first time that polling for Lok Sabha elections was held in five phases, spread over a month. The candidates and voters who figured in the earlier phases had a long wait until October 6 for the result in certain pockets. This dampened popular enthusiasm.

The E.C. opted for a long-drawn election process in order to give sufficient time for the paramilitary forces to move from one State to another. The demand for larger contingents of paramilitary forces came from the State governments; the E.C., in consultation with the Union Home Ministry, evolved a plan to meet the demand. Gill told a television channel that the E.C. could hold the next Lok Sabha elections on a single day if the political parties reposed confidence in the ability of the State police forces to ensure security on polling day.

There was violence on polling day in some States, including Bihar and north-eastern States, such as Tripura and Assam, during the last three phases. According to this, the E.C's critics said [illegible] objective of phasing out the elections [illegible] been achieved. Gill's [illegible] militant insurgency [illegible] the State's response [illegible] in Madhya Pradesh [illegible] to be the [illegible] and [illegible] 110 [illegible] eral places in Bihar; in most cases, the charges were directed at the ruling RJD. Repoll was ordered in booths from where serious complaints were received. The BJP-Janata Dal(U) combine, which made most of the complaints against the RJD, found, when the results favoured them, that their protest had been an exaggerated response.

The long-drawn election schedule perhaps had an unintended effect on voters who went to the polls in the later phases. Madhya Pradesh Chief Minister Digvijay Singh said that the exit poll results may have influenced the "floating voters" among them in favour of the BJP in his State. In some contexts, however, the poll schedule appears to have had little direct impact on the parties' prospects. For instance, Bihar and Uttar Pradesh went to the polls during the last phases but threw up vastly different results.

Did the E.C. meet its stated objective for scheduling the elections in September-October rather than immediately after the dissolution of the Lok Sabha, as preferred by the BJP and its allies? The E.C. gave the reason that it wanted to complete the revision of electoral rolls. However, it cannot claim that the electoral rolls were fully updated and that all eligible voters were duly enrolled. There were many instances of voters, including VVIPs, finding their names missing from the lists. In a few constituencies in Tamil Nadu, caste Hindus reportedly prevented Dalits from voting.

By hindsight, however, it is clear that the country could not have gone to the polls until July as Kargil war was on. Once the war was over, the E.C. announced the schedule, keeping in [illegible] needed to make administrative arrangements.

[illegible] did disrupt campaign [illegible] arrangements in some areas; [illegible] in constituencies [illegible] affected by floods – four in [illegible] one each in Assam and [illegible]

[illegible] the E.C. may [illegible] passed the test, putting [illegible] performance. ■

ment in Uttar Pradesh.

It is a new situation for the Congress(I) to enjoy growing authority in the States even as its influence in the Centre fades. It compels a reappraisal of the centralising tendency that has always been a powerful force in the Congress(I). In the process, it would seem that the authority of the Central leadership – which inevitably means the influence of the coterie that surrounds the party president - must yield to a principle of collective or federated leadership

ON the afternoon of October 11, Atal Behari Vajpayee called on President K R Narayanan and secured an invitation to form a new government. After a 13-day venture in 1996 and a 13-month venture beginning March 1998, Vajpayee seems to have developed a partiality for the number of supposed ill-fortune His swearing-in as Prime Minister for the third time was scheduled for October 13. He had two days to sort out a multitude of prickly matters involving the disparate parties and individuals in his coalition Soon afterwards he would have to get down to the substantive issues of policy formulation and governance

The possibility of a new round of negotiations under the World Trade Organisation, the appropriate attitude to adopt towards the Comprehensive Test Ban Treaty, the resumption of dialogue with Pakistan – the number of areas awaiting consensual and purposive action is limitless Overarching above all this is the reality of an economy that is badly out of joint and needs some novel ideas to retrieve it from a headlong plunge towards insolvency.

At the same time, the extremist fringe that the BJP cultivated and nurtured through the years of its ascent to power are unlikely to sit quiet The Vishwa Hindu Parishad has already begun stoking the flames of religious extremism in Gujarat. Its leader Giriraj Kishore has virtually laid out a charter of demands that the Roman Catholic pontiff, John Paul II, would have to meet before he is allowed to visit India in November. Clearly, there are few signals yet that Vajpayee's second tenure as a Prime Minister who has secured the confidence of Parliament will be any less turbulent or uneasy than his first. ■

PATTERNS AND POINTERS

A State-wise round-up of Verdict '99.

VENKITESH RAMAKRISHNAN

ONE clear loser; three winners. That is the story of the elections to the 85 Lok Sabha seats in Uttar Pradesh. The loser was the BJP-led alliance. Slumping from its 1998 best of 60 seats with 57 for the BJP alone, the alliance ended up with 32 seats, of which the BJP accounted for 29. Two seats went to the Uttar Pradesh Loktantrik Congress (UPLC) while the alliance backed-independent Maneka Gandhi retained the Pilibhit seat.

In contrast, the parties who covered themselves with glory were the Congress(I), the Bahujan Samaj Party (BSP) and the Samajwadi Party (S.P.). It is difficult to rate which triumph was the most spectacular although in arithmetical terms it was the Congress(I) that reaped the maximum gains by improving its position from zero to 10 seats. The Congress(I)'s alliance partner, Ajit Singh-led Rashtriya Lok Dal (RLD), bagged two seats – Baghpat and Kairan – from western Uttar Pradesh.

The BSP increased its tally from four to 14 and the S.P. added six more seats to its previous score of 20. Apart from this, the S.P. helped former Prime Minister Chandra Shekhar of the Samajwadi Janata Party (SJP) retain Ballia. The performance of both the parties was creditable, especially in the background of the poll projections that favoured the Congress(I).

In fact, the success of the S.P. and the BSP was in many ways much superior to that of the Congress(I). The Congress(I)'s improved performance was confined to a few seats in western U.P. and the Amethi-Rae Bareli-Pratapgarh belt, considered to be a stronghold of the Nehru-Gandhi family. The S.P. and the BSP, on the other hand, showed that they have a significant following in almost all parts of the State barring the four seats in the hill districts. The S.P.'s gains were significant also in the context of the series of political jolts it had suffered in the early stages of its campaign, when 12 MLAs including five belonging to the minority community resigned from the party and some them joined t Congress(I).

UTTAR PRADESH

Total seats	85
BJP	29
UPLC	2
Congress (I)	10
BSP	14
SP	26
RLD	2
SJP	1
Independent	1

Statistics illustrate t Congress(I)'s lack of pol ical reach and penetratio It came fourth in 49 sea while it held the seco position in eight seats a the third in 10. In cor parison, the S.P. was se ond in 21 seats and thi in 16. The BSP came se ond in 15 seats, third in and fourth in 15. The BJP came secor in 34 constituencies and third in 12.

In constituencies such as Sultanp and Pratapgarh in the Amethi-Rae Bar belt, the Congress(I)'s performance w below par. In Sultanpur, its candida Deepa Kaul was placed fourth wi 82,385 votes. The BSP won the se defeating the S.P candidate. The BJ which supported an independent since i official candidate's nomination was rejec ed, was placed third. In Pratapgarh, t party's winner scraped through by a ma gin of 4,000-odd votes.

The extent of the BJP's loss is evide even from the constituencies managed to retain. Many leade had their margins slashed by ha or more. In Lucknow, Vajpaye defeated Congress(I)'s Kara Singh by 1.23 lakhs; a far cry fro his last election's majority of 2.1 lakh votes. Ramesh Chand Toma who in 1998 won the Hapur se with a margin of approximately 1. lakh votes, could just scrape pa his nearest Congress (I) rival wit 11,958 votes. At Gorakhpu Mahant Adityanath, one of th prominent religio-political leade of the BJP, held on to his seat wit a majority of 7,200 votes.

In contrast, the S.P. won mos of its seats with comfortable mar gins of above 25,000. The bigge victory margin was achieved b Congress(I) president Soni Gandhi, who trounced the BJP

SUBIR ROY

BJP workers celebrating the victory of A.B. Vajpayee in Lucknow.

sitting MP Sanjay Singh by 3 lakh votes.

Five major factors contributed to the BJP's defeat: The strong anti-incumbency mood against the Kalyan Singh-led BJP coalition government; the shift in upper caste votes, particularly that of Brahmins and Jats, from the BJP to the Congress(I) and its alliance partner, the RLD; the anti-BJP, pro-S.P. campaign by former BJP MP Sakshi Maharaj, who was denied the ticket, and its impact on large sections of the Lodh Rajput backward caste community, who were BJP supporters; the vote arithmetic factor that is bound to give an edge to the party coming second in the previous elections; and the tactical voting of Muslims, who more or less successfully identified the secular party capable of defeating the BJP in each constituency.

While the benefit of the anti-incumbency mood was shared by the Congress(I), the SP and the BSP, the gains from the second factor went exclusively to the Congress(I). While, the shift of Brahmin votes towards the Congress(I) was evident in Kanpur, Shajahanpur, Rampur and Rae Bareilly, the shift of Jat votes came into play at Meerut, Muzzaffar Nagar, Baghpat and Kairana. All the seats were won by the Congress(I) alliance

In western U.P., the consolidation of Jat and Gujjar votes behind the Congress(I) alliance propelled Muslims to desert the S.P This is evident from the votes polled by the S.P. in Meerut, where its candidate Jagbir Singh ended up with 13,050 votes. In 1998 he had polled 2,70,363 votes.

This trend was not visible in other areas. Phulpur, Bhadohi, Mohanlalganj, Balrampur and even Sultanpur proved that when there was no shift of upper caste or other votes to the Congress(I), the minorities voted for the S.P.

The strong backward caste base and its growing influence among Thakurs and Banias stood the S.P. in good stead with the minorities. This is exactly why the party was perceived as capable of defeating the BJP. The augmentation of S.P.'s backward caste base through Sakshi Maharaj's campaign sent positive signals to the minorities. There was apprehension among sections of the S.P. leadership that Sakshi Maharaj's involvement in the Ayodhya Ram Mandir agitation would alienate the minorities. However, the results in Etawah, Etah, Agra, Ferozabad and Farrukhabad, proved this incorrect.

The tactical voting of Muslims and the second factor, which essentially came into play in seats where the S.P. and the BSP took the second position against the BJP in 1998 with a margin of less than 50,000 votes, and the third party (either the S.P. or the BSP) had more than one lakh votes, helped the BSP the most. The BSP's success in Amroha, Ghosi, Sitapur and Shahbad are attributed to this factor. The S.P. was helped by this factor in Aonla, Unnao and Maharajganj.

Over and above this, the alleged secret understanding between Kalyan Singh and S.P. president Mulayam Singh Yadav appears to have reflected in the BJP's gain in Faizabad, where Kalyan Singh's protege Vinay Katiyar won, and in Unnao, where the S.P.'s Deepak Kumar gained at the expense of the BJP's Devi Bux Singh who finished third. Notwithstanding denials from both the leaders, the backward caste politics is bound to extend beyond the elections in the State. ■

BIHAR

RJD	**7**

KALYAN CHAUDHURI

THE landslide victory of the BJP-Janata Dal (United) alliance in Bihar shows that it has succeeded in eroding former Chief Minister Laloo Prasad Yadav's vote base among the backward Yadav community and Muslims. The jolt suffered by the ruling Rashtriya Janata Dal (RJD) could have an impact on the March 2000 Assembly elections.

The RJD suffered its worst disaster in its backyard, north Bihar, where all the five Yadav candidates fielded by the BJP and its ally, the JD(U), defeated their Yadav rivals from the RJD – including Laloo Prasad. Laloo Prasad lost the Madhepura seat by 40,000 votes to Sharad Yadav of the JD(U). The Election Commission (E.C.) withheld the result until the winner withdrew his demand for a re-election. The result suggests that Yadav voters, disenchanted with the "Raja of Bihar", finally found an alternative. Laloo Prasad told mediapersons that the floods in north Bihar were one factor behind his defeat.

The results took the wind out of the sail of Laloo Prasad's much-vaunted Muslim-Yadav support. Among the RJD candidates who were elected, there was only one Yadav and one Muslim. The RJD lost ground to the JD(U) and the BJP in central Bihar and in his own bastion to the north of the Ganga where the Muslim-Yadav factor was considered invincible until recently While the anti-incumbency factor appeared to have affected his fortunes, his failure to strike the right alliance might well have been his undoing.

Of the 50 seats for which elections were held, the BJP and allies bagged 23 and 17 seats respectively. In 1998 the BJP won 20, while its ally, the Samata Party, before its merger with the JD(U), won 10. The RJD got seven, against a tally of 17 in 1998. The tally of the Congress(I), an ally of the RJD, has been reduced to three from five in 1998. In four constituencies – Purnea, Rajmahal, Bhagalpur and Khagaria – elections could not be held because of floods.

The RJD lost Chapra, which Laloo Prasad represented three times , as well as Darbhanga, Sitamarhi, Saharsa,

RANJEET KUMAR

Janata Dal (U) leader Sharad Yadav and Samata Party leader Nitish Kumar.

RANJEET KUMAR

Laloo Prasad Yadav. The RJD chief lost the Madhepura seat.

Ram Vilas Paswan at a victory rally.

Jhanjharpur, Ballia, Madhubani, Muzaffarpur and Rosera. This suggests that the BJP's decision to tie-up with the JD(U) was a masterstroke.

Apart from Sharad Yadav's morale-boosting win in Madhepura, Dinesh Chandra Yadav wrested the Yadav-dominated Saharsa seat from the RJD. The JD(U)'s Nawal Kishore Rai and Devendra Yadav snatched Sitamarhi and Jhanjharpur, both dominated by Yadavs, from the RJD and the BJP's Hukumdeo Narayan Yadav wrested Muslim-Yadav dominated Madhubani from the Congress(I).

Ram Vilas Paswan pulled his weight, bringing a sizable Dalit vote to the BJP-led alliance in north Bihar. In central Bihar – where the RJD won Vikramganj, Arrah and Chatra – Paswan was less successful because of the violent feud between the naxalites, who represent Dalits, and upper-caste landlords. In south Bihar, the BJP expectedly repeated its tally of 12 out of 14 seats. The RJD had left most south Bihar seats to the Congress(I). But the Congress(I) was handicapped by the alliance with the RJD, which is perceived as "anti-Jharkhand" because of Laloo Prasad's repeated announcements that a Jharkhand state would be formed "over my dead body".

The Lok Sabha result could be a threat to the RJD government. It is widely believed that a large number of RJD MLAs would now cross over to the BJP-JD(U) camp. JD(U) leaders Nitish Kumar and George Fernandes said on record that "dozens" of RJD MLAs are in touch with them. Fernandes was re-elected from Nalanda and Nitish Kumar retained his Barh [illegible]

"The Lok Sabha election was a semi-final. The Assembly election will be the final battle against Laloo Prasad Yadav," Ram Vilas Paswan announced soon after his fifth straight victory from Hajipur.

Laloo Prasad owned responsibility for the defeat of the RJD, but accused the BJP-JD(U) of "tricking" electors into voting against him.

The CPI deserted Laloo Prasad because he was not willing to give it more than three seats. With the CPI by his side, he might have pulled off victories in at least half a dozen constituencies. The CPI contested nine seats on its own but failed to win any. An electoral partner of the RJD, the Communist Party of India (Marxist) contested two seats and lost both.

The Jharkhand Mukti Morcha of the Shibu Soren group drew a blank even in the Jharkhand region of south Bihar. The JD(U) was the major gainer in this region along with the BJP. ■

GUJARAT

Total seats	**26**
BJP	**20**
Congress (I)	**6**

V.VENKATESAN

BY winning 20 of the 26 Lok Sabha seats in Gujarat, the BJP has puzzled poll experts. When Chief Minister Keshubhai Patel claimed even at the start of the campaign that the BJP would win all the 26 seats, no one took him seriously. It was because the mood of the people distinctly appeared to be against the ruling party. Even the BJP's ardent supporters expressed the view that the party might lose a few of the 19 seats it won in 1998. The Congress(I) which secured seven seats last year managed to win only six.

M. LAKSHMANAN

Kashiram Rana who retained the Surat seat.

The BJP conceded four seats it won in 1998 — Patan, Kapadwanj, Mehsana and Surendranagar – to the Congress(I). But it wrested five seats – Anand, Chhota Udaipur (reserved for Scheduled Tribes), Mandvi (ST), Dohad (ST), and Godhra - from the Congress(I). The party bagged all the three seats reserved for Scheduled Tribes, traditionally won by the Congress(I).

Interestingly, while the Congress(I) won the six seats with huge margins, the successful BJP candidates' margin was narrow in almost all the constituencies. In Patan (ST) Kanodia Maheshkumar Mithabhai, who defeated his nearest Rashtriya Janata Party rival by a huge margin in 1998, lost to Rashtrapal Pravinchandra Somabhai of the Congress(I) by 17,127 votes. The merger of the RJP led by the BJP rebel Shankarsinh Vaghela with the Congress(I) certainly helped the latter.

The victory of Vaghela in Kapadwanj was a foregone conclusion because the total number of votes polled by the RJP and the Congress(I) in 1998 exceeded the the BJP winner's by 20 per cent. Vaghela defeated Chauhan Jaysinghji Manshingji(BJP) by a margin of 1,65,381 votes.

For the BJP, its loss of Mehsana was a big setback. Its candidate, former Union Minister A.K. Patel, had held the seat for five consecutive terms. Although he had a 45.3 per cent vote share in 1998, the votes secured by the Congress(I) and the RJP added up to nearly 50 per cent of the votes polled. This time A.K. Patel was defeated by Congress(I)'s Atmaram Patel, who was a Minister in the Vaghela Government, by 55,740 votes. Spokesperson of the BJP, Bharat Pandya, attributed A.K. Patel's defeat to voters' quest for change. Party insiders, however, say that A.K. Patel had a clean image and Keshubhai Patel saw in him a potential rival; sabotage by a section of the party workers cannot, therefore, be ruled out. Keshubhai Patel's another major rival, Kashiram Rana, also a Union Minister, managed to retain Surat in South Gujarat, though with a reduced margin. Rana's popularity in the predominantly tribal region is so large that he and the other BJP candidates won with ease, despite the reluctance of a section of party workers to work for them.

The BJP's defeat in Surendranagar in

Saurashtra was only expected in view of the acute water shortage in the region. Here, Bhavnaben Dave (BJP) lost to Congress(I)'s Savshibhai Makwana, a new face, by 25,905 votes. The Congress(I)'s victory is significant in that it came in spite of dissension caused by denial of the ticket to party veteran Sanat Mehta, who contested unsuccessfully last year. The BJP, however, managed to retain the neighbouring Rajkot seat, which is also reeling under a severe water crisis. Bharat Pandya attributed the victory to the people's "appreciation" of the Government's steps to lay a long pipeline "within a short time".

While the Congress(I) lost Anand, Chhota Udaipur, Dhandhuka, and Kutch by a margin of only about 5,000 votes or even less, the BJP lost six seats by margins of over 14,000 votes. Union Home Minister L.K. Advani (Gandhinagar) and Haren Pathak (Ahmedabad) won by reduced margins. In 1998 Advani had established a lead of 2,76,701 votes, but this time defeated Congress(I)'s T.N. Seshan, former Chief Election Commissioner, by only 1,88,927 votes. There is also a substantial fall in Haren Pathak's victory margin in Ahmedabad. Vaghela told *Frontline* that this indicates the erosion of the BJP's support base.

Vaghela said that the Congress(I) lacked an efficient campaign machinery and its polling agents were not experienced enough. Personality problems and corruption were other factors that deprived the Congress(I) of victory in a few seats, he said. Vaghela, however, blamed the party's debacle mainly on the BJP's misuse of official machinery.

State Congress(I) president C.D. Patel said that the BJP won by overplaying the issues such as the need for a stable government and the Kargil war. He indicated that the Congress(I) and former RJP workers could not work together in many constituencies.

The Congress(I) debacle has raised questions about the relevance of the party's endeavour to revive its traditional KHAM (Kshatriya, Harijan, Adivasi, Muslim) constituency, once successfully mobilised by the former Chief Minister, Madhavsinh Solanki. Solanki's father-in-law Ishwarbhai Chawda lost the Anand seat to Dipakbhai Patel (BJP) by 3,661 votes. Solanki sought to revive KHAM by backing the merger of the RJP, led by Vaghela, who also held similar views, with the Congress(I). The rise of the Hindutva forces in the late 1980s and 1990s made KHAM somewhat irrelevant.

TAMIL NADU

Total seats	39
DMK	11
PMK	5
BJP	4
MDMK	4
MGR-ADMK	1
MGR-Kazhagam	1
AIADMK	10
Congress (I)	2
CPI (M)	1

T.S. SUBRAMANIAN

WHILE the Dravida Munnetra Kazhagam-led alliance in Tamil Nadu has reason to rejoice over its performance in the Lok Sabha elections, the All-India Anna Dravida Munnetra Kazhagam (AIADMK) has no cause to despair either. The DMK's performance has been creditable in comparative terms: it has won 11 seats, against six in 1998. The parties in the DMK alliance, the BJP, the Marumalarchi Dravida Munnetra Kazhagam (MDMK) and the Pattali Makkal Katchi (PMK) each won one seat more than in 1998: the BJP and the MDMK have won four each, and the PMK has won five. Two other allies, the MGR-ADMK and the MGR Kazhagam, got one seat each.

Although the AIADMK's tally has gone down to 10 from 18 last time, the party and its allies have together won in 14 constituencies including Pondicherry.

K. ANANTHAN

C.P. Radhakrishnan, the BJP winner from Coimbatore.

(In 1998 the alliance won 30). Also, in the two byelections to the Assembly, AIADMK candidate R. Viswanathan and Communist Party of India (Marxist) candidate J. Hemachandran wrested the Natham and Tiruvattar Assembly seats from the Tamil Maanila Congress (TMC) and the DMK respectively.

The "alternative front" headed by the TMC and its allies, the Puthiya Tamilagam (P.T.) and the Dalit Panthers, the Janata Dal (Secular) and the Indian Union Muslim League, drew a blank, although they had contested all the 40 seats. Former Union Finance Minister P. Chidambaram (TMC) was defeated in Sivaganga by Congress(I) candidate M. Sudarsana Nachiappan.

In a major upset, Tamilaga Rajiv Congress (TRC) leader Vazhapadi K. Ramamurthi was defeated in Salem; the TRC is part of the DMK-led alliance. Former AIADMK Minister T.M. Selvaganapathy defeated the former Union Petroleum Minister by 25,411 votes. In a hard-fought battle, T.T.V. Dinakaran (AIADMK), nephew of Jayalalitha's friend Sasikala, defeated P. Selvendan (DMK) at Periakulam, by a margin of 45,806 votes.

In 1998, the AIADMK and its then allies, the BJP, the MDMK, the PMK, the TRC and the Janata Party of Subramanian Swamy had won 30 seats. The break-up was: the AIADMK 18, the PMK four, the BJP and the MDMK three each, and the TRC and the Janata Party one each. The DMK-led alliance took the remaining 10 seats, with the DMK getting six, the TMC three and the Communist Party of India (CPI) one. This time, the BJP, the MDMK, the PMK and the TRC hived themselves off from the AIADMK and aligned with the DMK. The TMC pulled out of the DMK-led alliance and formed its own front.

After the DMK aligned itself with the BJP, it was worried about losing its traditional Muslim-Christian vote bank. In his campaign, DMK president and Chief Minister M. Karunanidhi took pains to convince these communities that his party would not compromise their interests and would shield them from all harm. Karunanidhi said the election results "proved that the minorities remain with the DMK." He attributed the victory of the DMK-led alliance to projection of A.B. Vajpayee as the man who could provide a stable government, and to the Kargil victory.

Jayalalitha described her party's performance as "neither a setback nor a defeat

for us".

THE defeat of Chidambaram did not come quite as a surprise; what was surprising was the victory of Sudarsana Nachiappan over him. The fight had been seen as one essentially between Chidambaram and BJP candidate H. Raja. As it turned out, Raja took the second place and Chidambaram the third.

The TMC's rout stems from its refusal to align with either the DMK or the AIADMK, the two major Dravidian parties. Its exit from the DMK-front proved costly not only for itself but for the DMK. The TMC made it a triangular fight in the process depriving itself and the DMK of many seats, as the voting figures show.

TMC general secretary Peter Alphonse said Sivaganga's large Muslim and Christian population voted for the Congress(I) candidate in order to defeat the BJP contestant. He said the TMC considered the Lok Sabha elections as a "stepping stone" to success in the 2001 elections to the State Assembly. Peter Alphonse said that the TMC formed an alternative front because it was opposed to both the "communalism" of the BJP-led front and the "corruption" represented by the AIADMK-led front.

As in 1998, the results again showed the consolidation of the Dalit votes in favour of the P.T. led by Dr. K. Krishnaswamy in the southern districts and Dalit Panthers led by R. Tirumavalavan in the northern belt. Their candidates polled more than one lakh votes in several constituencies. Among the P.T. candidates, Dr. Krishnaswamy polled 1,86,220 votes at Tenkasi; P.V. Bakthavatchalam got 1,12,941 at Tirunelveli; Nazira Parveen received 96,334 at Ramanathapuram and Mansur Ali Khan 87,429 at Periakulam. At Chidambaram (reserved), Tirumavalavan polled 2,25,768 votes, while the winner A. Ponnusamy of the PMK, got 3,45,331.

The AIADMK's string of successes in southern Tamil Nadu in the contiguous constituencies of Periakulam, Dindigul, Tirunelveli and Tenkasi reflected the consolidation of the Mukkulathor community's votes in favour of the AIADMK.

Vazhapadi Ramamurthi's defeat at the hands of Selvaganapathy (an accused in a case of corruption in the construction of cremation sheds) is attributed to his being denied the DMK votes in the Veerapandi Assembly segment (represented by Agriculture Minister Veerapandi S. Arumugam) and the PMK votes in the Gangavalli Assembly segment. He lost the plantation workers' votes in the Yercaud Assembly segment too. Besides, Jayalalitha campaigned for Selvaganapathy for three days in Salem.

Another surprise was the defeat of CPI candidate V. Selvaraj at the hands of A.K.S. Vijayan of the DMK at Nagapattinam (reserved).

At Madurai, P. Mohan of the CPI(M) defeated Pon. Muthuramalingam of the DMK; Karunanidhi's son M.K. Alagiri, based in Madurai, was in charge of Muthuramalingam's campaign. A.G.S. Rambabu of the TMC came third. Subramanian Swamy, the incumbent, came fourth and lost his deposit. ■

KARNATAKA

Lok Sabha

Total seats	**28**
BJP	**6**
Janata Dal (United)	**3**
Congress (I)	**19**

PARVATHI MENON

IN an election verdict strikingly at variance with the all-India trend, the Congress(I) won 19 of the 28 seats in Karnataka. The BJP won six and its electoral ally the Janata Dal (United) three.

This is a dramatic comeback for the Congress(I). In 1998 it won nine seats, while the BJP-Lok Shakti alliance won 16 and the Janata Dal three. The Congress(I) has re-established its presence in all the major regions of the State. In the north, it won from Gulbarga, Raichur, Koppal and Bellary. In south-central Karnataka, it won in Mysore, Mandya, Chickaballapur, Kolar, Kanakapura, Tumkur and Bangalore North. It has made major inroads into the BJP's traditional strongholds, winning the coastal constituencies of Udipi and Kanara and doing extremely well in Mangalore. Its candidate has been returned in Shimoga. It has won in Dharwad South, Bagalkot and Belgaum, and done well in Dharwad North. Some of its prominent winners include Congress(I) president Sonia Gandhi from Bellary, C.K. Jaffar Sharief from Bangalore North, R.L. Jalappa from Chickaballapur, former Chief Minister S. Bangarappa from Shimoga, Margaret Alva from Kanara and G. Puttaswamy Gowda, who defeated former Prime Minister H.D. Deve Gowda in Hassan.

The nature of the Lok Sabha verdict appears to have been dictated by voters' preferences in the Assembly elections where popular disenchantment with the performance of the Janata Dal government, combined with a rejection of the BJP, seems to have been the motivating factors.

H.D. Deve Gowda, the loser in Hassan.

Congress(I) spokesperson B.K. Chandrashekhar told *Frontline*: "I think the electorate decided a year or two ago to get rid of the J.H. Patel government. The mess made of the alliance with the BJP by George Fernandes and Ramakrishna Hegde reinforced their decision." Even though the Congress(I) campaign was Bellary-focussed with candidates elsewhere left to their own devices, the public was given the impression of Congress(I) unity.

"Despite their claims, the BJP in rural areas is still an idea rather than a well-knit organisation with traditional structures," Chandrashekhar said. It was evident that the BJP's project of using the Kargil and Vajpayee symbols had not made the desired impact on the voter.

The BJP has been quick to put the blame for its defeat on the alliance with the JD(U). But the sheer scale of the anti-BJP sweep, the losses for the party in its support areas, and the defeat of some of its stalwarts, suggest that the verdict should also be seen as a rejection of the divisive ideas of the party.

Margaret Alva, who won the Kanara seat in a tough fight, told *Frontline*: "Neither Kargil nor any other so called 'national' issue was of any consequence. The people want a candidate who they think will work for them, and they want peace". Alva lost the elections in 1996 and 1998, both times to Ananth Kumar Hegde of the BJP, an activist of one of the Sangh Parivar organisations, who flaunts his participation in the Ayodhya and Idgah Maidan campaigns like a badge of honour. ■

ANDHRA PRADESH

Lok Sabha

Total seats	42
TDP	29
BJP	7
Congress (I)	5
AIMIM	1

S. NAGESH KUMAR

THE Telugu Desam Party (TDP) hauled 29 of the 32 seats it contested in Andhra Pradesh to become the biggest party, next to the BJP, in the National Democratic Alliance (NDA). The BJP won seven out of eight seats it contested. The BJP's Badam Balreddy lost in Hyderabad to four-time winner Salahuddin Owaisi of the All-India Majlis Ittehadul Muslimeen

The Congress(I) suffered a drubbing. It won five seats, one less than its 1984 tally when the party was overwhelmed by the sympathy wave generated for N.T. Rama Rao after his ouster as Chief Minister. The TDP and its allies won 35 seats then.

The TDP owes its sweep to the last-minute pact with the BJP to avoid the splitting of the anti-Congress(I) vote. The pact helped the combine win the confidence of about 49 per cent of the electorate while the Congress(I)'s support base remained static around 39 per cent.

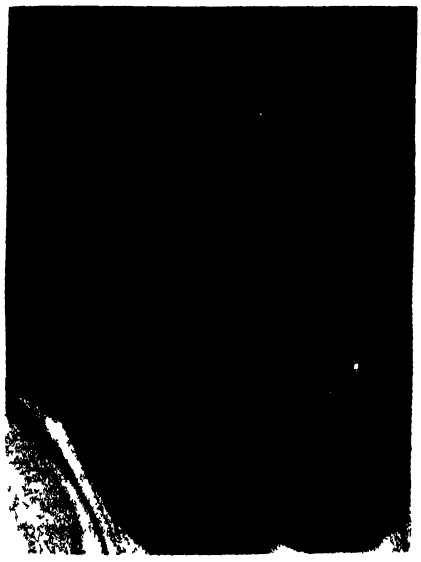
The Left parties drew a blank and fared badly even in constituencies such as Nalgonda where the CPI State secretary S. Sudhakar Reddy lost to the TDP.

The combine's candidates were elected from all the urban seats – Secunderabad, Visakhapatnam, Vijayawada, Tirupati and Guntur. Hyderabad was the only exception, but voting on communal lines has been the tradition in this constituency.

The Congress(I) victors are N. Janardhan Reddy (Narasaraopet) B. Satyanarayana (Bobbili), Y.S. Vivekananda Reddy (Cuddapah), and two last-minute entrants to the party, S. Jaipal Reddy (Miryalguda) and Renuka Chowdhury (Khammam). Party stalwarts such as K. Vijayabhaskara Reddy (Kurnool), P. Shiv Shankar (Tenali), P. Upendra (Vijaya-wada), N. Bhaskara Rao (Secunderabad), T. Subbarami Reddy (Visakhapatnam), G. Venkataswamy (Peddapally) and M. Baga Reddy (Medak) fell by the wayside.

S.M. Lal Basha, TDP general secretary, was defeated in Narasaraopet. All other prominent leaders of the alliance, including Lok Sabha Speaker G.M.C. Balayogi (Amalapuram), K. Yerram Naidu (Srikakulam), Bandaru Dattatreya (Secunderabad) and Ch. Vidyasagar Rao (Karimnagar), won. The TDP had fielded new faces and they succeeded: K. Srinivasulu, a journalist, was pitted against three-time winner Ananta Venkat Reddy in Anantapur; D.M. Vijaya Kumari in Bhadrachalam, Y.V. Rao, a tobacco baron, in Guntur and D. Rama Naidu, film producer, in Bapatla. ■

ORISSA



Lok Sabha

Total seats	21
BJD	10
BJP	9
Congress (I)	2

KALYAN CHAUDHURI

THE virtual decimation of the ruling Congress(I) and the emergence of the Biju Janata Dal-Bharatiya Janata Party combine as a main political force are the most significant aspects of the electoral verdict in Orissa. The BJD-BJP alliance has registered a massive win with its candidates capturing 19 of the 21 seats. Weakened by factionalism, the ruling Congress(I) seems to have been swept aside by an anti-incumbency sentiment. It won only two seats.

The BJD-BJP alliance had won 16 of the 21 seats in the 1998 elections while the Congress(I) had won five. The BJP, which made its first foray in the Lok Sabha elections from Orissa in 1998, won all the nine seats it contested this time. The BJD, which contested 12 seats, won 10. Congress(I)'s candidates Hema Gamang, wife of Chief Minister Giridhar Gamang, was elected from Koraput, defeating her BJD rival

Navin Patnaik, the BJD chief, was elected from Aska.

Jayaram Pangi, and K.P. Singh Deo from Dhenkanal, defeating Tathagat Satpathi of the BJD. Singh Deo benefited by the presence of a rebel BJP candidate.

A swing in favour of Prime Minister A. B. Vajpayee and the incumbency factor may have dealt a bodyblow to the Congress(I). The BJD-BJP alliance had also helped cement the Opposition vote, the split of which had earlier benefited the Congress(I). With the J.B. Patnaik faction virtually staying out of electioneering, the Congress(I) failed to carry out a concerted campaign against the combine.

Never before had the Congress(I) faced such a humiliating defeat in its strongholds such as Berhampore, Jagatsinghpur, Jajpur and Nawrangpur. In Berhampore, Jayanti Patnaik, wife of J.B. Patnaik, was defeated by BJP's Anadi Sahu by 50,000-odd votes.

In Jagatsinghpur, Ranjib Biswal, son of former Deputy Chief Minister Basant Biswal, lost to the BJD's Trilochan Kanungo by about 60,000 votes. In Jajpur, three-time winner Ramachandra Mallick was defeated by the BJD's Jagannath Mallick by a nearly one lakh votes. The BJP also won the Nawrangpur seat which the Congress(I) has always won.

In Bhubaneswar, BJD nominee Prasanna Patsani defeated his Congress(I) rival by a record margin of 2.32 lakh votes. The BJD president and Union Minister for Steel and Mines Navin Patnaik won from Aska defeating the CPI candidate Dwiti Krishna Panda by over one lakh votes. The Congress(I) left the seat to the CPI after its candidates refused to run against Patnaik. Aska registered the lowest turnout. The CPI alleged that the Congress(I) supporters had not voted for the CPI. The BJP State president Juel Oram was elected from Sundergarh defeating the Congress(I) rival Christopher Ekka. The State party president and former Chief Minister Hemananda Biswal was defeated by Union Minister of State for Surface Transport Debendra Pradhan of the BJD at Deogarh.

THE Congress(I) leaders are now preparing themselves for an intense stock-taking and witch-hunt, mentioning "sabotage" by rival camps. Hemananda Biswal told *Frontline* that he had received information about sabotage by party rebels from different parts of the State. He also hinted at a major reshuffle in the Ministry as well as the party organisation. Several Congress(I) leaders are of the view that the "great experiment" of imposing Giridhar Gamang as Chief Minister and nominating

Hemananda Biswal as State party president had failed. The central leadership seemed to have realised this after a harrowing experience during campaigning. The leaders feel that the party cannot face the Assembly elections under the present set-up. Hemananda Biswal has offered to step down owning responsibility for the party's poor performance.ing.

Navin Patnaik told *Frontline* that the people had "rejected the corrupt Congress(I) Government". He said the BJD's victory had "vindicated our contention that our party is the real inheritor" of Biju Patnaik's legacy. ■

MAHARASHTRA

Total seats	**48**
BJP	**13**
Shiv Sena	**15**
Congress (I)	**10**
NCP	**6**
BBM	**1**
Janata Dal (Secular)	**1**
Peasants and Workers Party	**1**
Independents	**1**

PRAVEEN SWAMI
LYLA BAVADAM

WITH horrible inevitability, Sharad Pawar's Nationalist Congress Party (NCP) has propelled secular political forces in Maharashtra to disaster. The NCP and the Congress(I) together won 16 of the 48 Lok Sabha seats. United they had taken 33 seats in 1998. The combined vote share of the NCP and the Congress(I) rose significantly from the 1998 level, illustrating the depth of public disgust with the Shiv Sena-Bharatiya Janata Party (BJP) alliance. The split in the Congress(I) allowed the right-wing alliance to win the bulk of the seats.

Most observers had anticipated that Pawar's decision to break away from the Congress(I) would benefit the alliance. Few, however, had predicted just how devastating its impact would be. Preliminary figures suggests that the NCP had won some 21 per cent of the vote, and the Congress(I) 29 per cent. Put together, this vote share is almost seven percentage points higher than what the undivided Congress(I) gathered in 1998.

Perhaps the character of the Shiv Sena-BJP triumph is best illustrated by the fact that its victories came despite a marked erosion in its vote share from 1998. Early figures suggest the BJP's share of the vote declined by some two percentage points from 22.5 per cent, and that of the Shiv Sena by three percentage points from 19.7 per cent. Despite a higher share of the vote in 1998, the alliance had been able to win a dismal 10 of the 47 seats it contested then. The reason for its debacle was the unity of the anti-alliance parties, with the Congress(I) standing united with the Samajwadi Party (S.P.) and most Republican Party of India (RPI) factions.

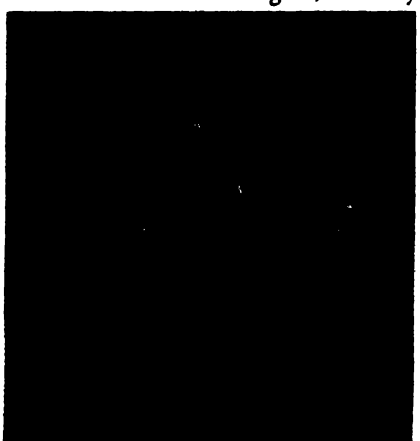
This time around, the chaos in the Congress(I) tore the winning combination apart. The powerful RPI factions of Ramdas Athvale and Prakash Ambedkar went with the NCP and the Congress(I) respectively. Other peripheral RPI factions went their own way, with one leader, Namdeo Dhasal, endorsing the Shiv Sena. The S.P. chose to ally itself with the NCP.

The sole factor in the Hindu Right's triumph was the division in the opposition's vote. Even in Pawar's Marathwada heartland, several constituencies won from the Sena-BJP in 1998, including Osmanabad, Aurangabad and Hingoli, were lost to the Hindu Right this time around.

Similar reverses took place in western Maharashtra. In 1996, the BJP-Sena alliance had signalled its rise, taking Sholapur, Satara and Kopargaon. The Congress(I) hit back last year, and the Shiv Sena won only one seat, Ahmednagar, while the BJP saw its 1996 gains completely destroyed. This time, the NCP had a significant impact in the region, taking along with Athvale, seven of the 12 seats. But in the process, the BJP was able to take Pune and hold on to Ahmednagar, vacated by the Shiv Sena in its favour. The Shiv Sena also won the Kopargaon seat.

Details of the impact of the split between the Congress(I) and the NCP votes were not immediately available, but the case of the Mumbai North-East constituency is instructive. Congress(I) strongman Gurudas Kamat surprisingly lost the constituency to BJP's Kirit Somaiya, polling 3,93,104 votes to Somaiya's 4,00,322 votes. It could well have been a comfortable victory for the Congress(I) had not the NCP candidate, journalist-turned-politician Ram Manohar Tripati, taken away 1,02,472 votes. Similar patterns have been repeated through the State.

The overwhelming majority of voters opposed to the Shiv Sena-BJP will not be this election's only casualties. Pawar's media-manufactured aura of invincibility has been shattered. The *raison d'etre* of setting up the NCP has thus been subverted. Both the NCP and the Congress(I) must engage in some serious introspection. ■



SUHRID SANKAR CHATTOPADHYAY

THE results in West Bengal indicate that although the ruling Left Front still retains a strong hold, it may be losing ground in some pockets to the Trinamul Congress-BJP combine. The Left Front won 29 seats, four less than it did in 1998. The Trinamul Congress won eight seats, against seven in 1998; the BJP too bettered its performance, winning two seats against only one last year. The Congress(I), which won only one seat in 1998, increased its tally to three.

The three Congress(I) leaders who won this time are A.B.A. Ghani Khan Chowdhuri (from Malda), Priya Ranjan Das Munshi (Raiganj) and Adhir Chowdhuri (Behrampur). Ghani Khan Chowdhuri defeated Sailen Sarkar of the CPI(M) by 24,853 votes and Das Munshi won by 75,255 votes. However, former Chief Minister Siddhartha Shankar Ray, attempting a political comeback, finished third in Calcutta North-West, behind Sudip Bandopadhyay of the Trinamul Congress, who won, and Rajdeo Goala of the CPI(M).

Tapan Sikdar, president of the State unit of the BJP, retained the Dum Dum seat, which came as something of a surprise. In another surprise result, Satyabrata Mukherjee of the BJP won in Krishnanagar, defeating CPI(M) candidate Dilip Chakroborti.

The Trinamul Congress, led by

Jyoti Basu, West Bengal Chief Minister.

SUSHANTO PATRONOBIS

Mamata Banerjee. The Trinamul Congress made many gains in West Bengal.

Mamata Banerjee, has made some inroads into what was and still is the Left Front's fort – rural Bengal. The party won in Barasat, Nabadwip and Contai and the BJP won in Krishnanagar. This is perhaps an indication that the Left Front has to step up its work among the rural masses. The defeat of Sudhir Giri, who had won four successive parliamentary elections in Contai, came as a stunner. Nitish Sengupta of the Trinamul Congress defeated him by 12,133 votes. CPI(M) State Secretariat member Biman Bose acknowledged that the Left Front was late in reaching out to the people and "convincing them about the danger of communal forces."

In Calcutta South, Mamata Banerjee won by 2.14 lakh votes, the highest in the State, over her nearest rival, Subhankar Chakraborti of the CPI(M). In Calcutta North-West, Sudip Bandopadhyay, one of the founders of the Trinamul Congress, won by 94,170 votes. Former Union Minister Ajit Panja of the Trinamul Congress, won in Calcutta North-East, defeating Mohammed Salim of the CPI(M) by 41,574 votes. In Jadavpur, once a bastion of the CPI(M), Krishna Bose of the Trinamul Congress won for the second time. The Trinamul Congress also captured Serampur.

Chief Minister Jyoti Basu admitted that the fact that the Left Front 's performance was a matter of "concern". He said that the party would see where it had failed and try and make rectifications.

However, the Left Front showed that its hold over North Bengal and Burdwan district continues to be strong. In Panksura, Gita Mukherjee of the CPI won by 46,858 votes, and CPI(M) candidates Sunil Khan, Bikas Choudhuri, Nikhilananda Sor and Mehboob Jahedi won in Durgapur, Asansol, Burdwan and Katwa respectively. Minati Sen and S.P. Lepcha, both of the CPI(M), won in Jalpaiguri and Darjeeling respectively. Noted parliamentarian and veteran CPI(M) leader Somnath Chatterjee won easily in Bolpur for the third consecutive time, by 1,86,389 votes over his nearest rival, Suniti Chattaraj of the Trinamul Congress. Another noted parliamentarian, Indrajit Gupta of the CPI, won in Midnapore, defeating M. Dutta of the BJP by 28,773 votes. Gupta's victory margin was far smaller than the 2,75,419 votes in 1988. The same is the case with Gita Mukherjee: in 1998, she won by 1,79,543 votes over her Trinamul Congress rival; this year, it was only 46,858 votes.

However, the Left Front scored a significant victory by winning back the Howrah constituency it lost in 1998. Swadesh Chakroborti of the CPI(M) defeated Kakoli Ghoshdastidar of the Trinamul Congress by 1,03,449 votes: the failure of the Trinamul Congress to nominate Bikram Sarkar, who had won in 1998, was a bit of a puzzle.

Byelections to five Assembly seats were held simultaneously on October 3. Of these, the Trinamul Congress-BJP combine won three, and the CPI(M) two. Badal Bhattacharcya became the first BJP member of the Assembly: he won the Ashoknagar seat in North 24 Parganas defeating CPI(M) candidate and All India Democratic Women's Association leader Rekha Goswami by 9,498 votes. ■

KERALA

Total seats	20
Congress (I)	8
CPI (M)	8
Muslim League	2
Kerala Congress (Mani)	1
Kerala Congress (Joseph)	1

R. KRISHNAKUMAR

KERALA surprised pollsters by not changing its verdict. The tally of the rival coalitions led by the CPI(M) and the Congress(I) remained the same as in 1998. The ruling CPI(M)-led Left Democratic Front (LDF) won nine and the Opposition United Democratic Front (UDF) 11 of the 20 seats.

A significant aspect of the results was, however, the impressive gain made by the CPI(M), which, for the first time secured eight seats. For the first time also, the Kerala Congress (Joseph) won as a constituent of the LDF. The party delivered a shocking defeat on the scandal-tainted Congress(I) veteran P. J. Kurien in Idukki.

The CPI was the loser within the LDF; its members in the previous Lok Sabha, V. V. Raghavan and Chengara Surendran, were defeated in Thrissur and Adoor respectively. The party's hopes of winning the Thiruvananthapuram seat were dashed by a combination of unlikely factors that conspired to favour a little-known lawyer V. S. Sivakumar.

For the Congress(I), the defeat of Kurien at Idukki, of five-times MP Mullappally Ramachandran in violence-hit Kannur and of P.C. Chacko at Kottayam in the Christian heartland was demoralising and took away the sheen off the victory of its candidates A.C. Jose (Thrissur), K. Muraleedharan (Kozhikode) and Sivakumar (Thiruvananthapuram).

The victory of the CPI(M) candidates in Kollam and Kannur was essential for the party, because during the seat-sharing exercises it had forced its alliance partners, the RSP and the NCP, to give up their claim over these constituencies. The split in the State unit of the RSP had weakened the LDF's chances to retain the Kollam seat and the NCP, despite contesting the politically-sensitive constituency Kannur seat several times in the past as Congress(S), had proved its inability to break the Congress(I)'s winning streak.

Former Union Minister K. Karunakaran and his twice-defeated son Muraleedharan had impressive victories in Mukundapuram and Kozhikode respectively. Karunakaran defeated E. M. Sreedharan, son of CPI(M) veteran E.M.S. Namboodiripad, by 52,463 votes. Muraleedharan's candidature looked almost like a gamble. However, the absence of his traditional rival M.P. Veerendrakumar of the Janata Dal facilitated Muraleedharan's handsome victory over Janata Dal (U)'s C.M. Ibrahim by 50,402 votes. Ibrahim, Rajya Sabha member from Karnataka, failed to woo minority votes for the LDF.

Congress(I)'s Ramesh Chennithala who had switched from Kottayam to Mavelikkara came out triumphant overcoming the antipathy that he experienced in his party. In Kollam, as in Idukki, the Congress(I) fielded a candidate who is facing allegations and paid the price. In Thrissur by fielding A.C. Jose it successfully rode on the wave of Christian sentiments.

The BJP had the satisfaction of record-

ing its highest number of votes in any election in the State from Thiruvananthapuram. The party's Rajya Sabha member from Madhya Pradesh, O. Rajagopal, secured 1,58,221 votes, making inroads into the vote banks of both the alliances. The BJP's overall vote share was only 8.08 per cent (it was 1.76 per cent in 1996).

According to reports, both the Congress(I) and the CPI(M) resorted to "unholy tactics" in their pockets. The UDF's pretension of being the sole victim of rigging and booth capturing did not cut much ice. Significantly, the CPI(M)'s youth leader A.P. Abdullakkutty wrested the Kannur seat from the Congress(I), despite a new bout of violence against its cadres by the BJP on the eve of the election.

The CPI(M) was the eventual winner in all northern constituencies except Kozhikode and Manjeri and Ponnani, both won by Muslim League. Of the eight seats won by the CPI(M), five – Kasargod, Kannur, Vadakara, Palakkad and Ottappalam – are in north Kerala with a sizable Muslim population.

In the constituencies in south and central Kerala, with the exception of Idukki and Kottyam, Christians generally favoured the Congress(I). In Chirayinkeezhu, which has a large Muslim population, the victory margin of 3,128 votes of the CPI(M) candidate Varkala Radhakrishnan against the Congress(I)'s M.I. Shanavas was the smallest in the State.

The LDF's allegations of the Congress(I) forging a secret understanding with the BJP by fielding a weak candidate in Thiruvananthapuram (in return for a similar favour in Mukundapuram where Karunakaran was contesting) did not have the expected effect in the constituency where Kaniyapuram Ramachandran (CPI) was expected to win.

Despite the CPI(M)'s party machinery going the whole hog in Alappuzha, cine actor Murali could not turn the tables on "Mr. Clean" V.M. Sudheeran. The Congress(I)'s two-time MP defeated Murali by 35,094 votes. In Kottayam, the Christian stronghold where the CPI(M) election apparatus was similarly active, its candidate Suresh Kurup scored an impressive victory over P.C. Chacko.

In a way, the Congress(I) in Alappuzha, the CPI(M) in Kottayam and to a lesser extent the BJP in Thiruvananthapuram proved that an efficient and "clean" candidate who truly represented the party's policies and a sincere party machinery could override considerations of religion and caste. ■

RAJASTHAN

Total seats	**25**
BJP	**16**
Congress (I)	**9**

SUKUMAR MURALIDHARAN

GOING into the polls in Rajasthan, there was a great deal of speculation over the prospect of a large-scale desertion of the Congress(I) by the Jat community, until now one of its most influential social constituencies. Jat ire had been aroused by the Ashok Gehlot Government's failure to deliver on a promise to extend the benefits of backward class status to the community. Jat influence had begun to wane considerably on account of the reservations for backward classes in the local bodies.

Gehlot as the State's first Chief Minister of backward class extraction was keen to see that the limited benefits available under reservations were not diluted. Unwilling to yield to the Jat demand, he gambled on two factors to retain and consolidate the gains that the Congress(I) had made in the parliamentary and Assembly elections of 1998. First, it was evident that the Congress(I) had by far the more credible Jat candidates, who should not have had great difficulty in the northern and western regions, where the community was especially numerous. And in other regions, Gehlot bargained on an accretion to the Congress(I) ranks of backward classes that were traditional BJP adherents in order to offset any possible desertion of the Jats.

As the results began to come in, it became evident that the gamble had not quite paid off. The Congress(I), which went into the elections with 18 seats won in 1998 and two added on through the induction of Buta Singh and Sis Ram Ola, was reduced to nine.

A preliminary reading of the results seems to indicate that the Jat factor, although important, was not decisive. Far from a swing of votes away from the Congress(I), what has really determined the course of this election has been an amazing consolidation of the BJP vote.

The aggregate figures convey some sense of the factors underlying the BJP's gain of 11 seats: it won 48.3 per cent of the popular vote as against 44.6 per cent for the Congress. This represents a fractional gain in the popular vote share of the Congress(I) and a solid accretion of 6.6 percentage points to the BJP's share. If the Assembly elections of 1998 were to be used as the benchmark, then the Congress(I) has suffered a marginal erosion of 0.3 percentage points in its vote share. The difference stems from the colossal gain of 15 points for the BJP.

The different agendas involved in national and State level elections undoubtedly account for a part of this dramatic switch. Another part is perhaps explained by the drop in voter turnout from 61 per cent in the 1998 elections to 54 per cent now. This has evidently hurt the Congress(I) more than the BJP. Apart from their direct vote, the Jats of Rajasthan have also been rather energetic in inducing the participation of other sections in the electoral process. The drop in the turnout of the Congress' traditional supporters could be partially ascribed to the alienation of the Jats.

The Jat Mahasabha fielded Vijay Punia in Nagaur on the Bahujan Samaj Party (BSP) symbol and Sumitra Singh in Jhunjhunu and Gopal Lal Jat in Bhilwara as Independents. In its effort to derive maximum capital from the prospect of genuine triangular contests in a State where bipolar contests are the norm, the BJP adopted a novel strategy. In both Jhunjhunu and Nagaur it fielded non-Jat candidates in the belief that a division of the dominant community's votes and a consolidation of other communities under its banner would propel it to victory. The strategy came a cropper with the Congress(I) candidates – Sis Ram Ola in Jhunjhunu and Ram Raghunath Chaudhury in Nagaur – winning with a fair measure of comfort.

A triangular battle did, however, hurt the Congress(I) in Sikar, although this had nothing to do with the BJP's strategy. Amra Ram of the CPI (M) took away more than 80,000 votes in Sikar in a contest which Balram Jakhar of the Congress(I) narrowly lost to Subhash Mehariya of the BJP. A fairly strong showing by Amra Ram was predictable though, and Jakhar's defeat had more to do with the lack of cooperation from two Congress(I) MLAs of the Sikar Assembly segments.

Rajesh Pilot's rather unconvincing victory in Dausa by less than 7,000 votes has again been ascribed to the subtle undermining of his campaign by a Jat legislator from the area.

Bharatpur also witnessed a strong third placed performance by the BSP's Nasru Khan – a candidate allegedly sponsored by the BJP leader Bhairon Singh Shekhawat with the specific intention of undermining the Congress' claims to the numerous Meo Muslim votes in this constituency. Jagat Singh of the Congress(I), son of former Union Minister K. Natwar Singh, lost in

the event by close to 100,000 votes. His fortunes obviously would not have been materially different even with the 80,000 votes that Nasru Khan cornered.

Notable winners from the Congress(I) included State unit president Girija Vyas (Udaipur) and Buta Singh (Jalore). From the BJP, Vasundhara Raje Scindia (Jhalawar) and Girdhari Lal Bhargava (Jaipur) won their fifth consecutive elections by margins in the vicinity of 1,50,000.

The essential character of Rajasthan as a two-party state has been reinforced in these elections despite the perturbations in individual constituencies. The two principal contestants this time around have taken 93 per cent of the votes.

Even when the Congress(I) was at its lowest ebb in Rajasthan, the Jat community was never quite comfortable in the BJP orbit. The Congress(I) under Gehlot will now have to make the strategic choice of either wooing them back to the fold or seek to diversify the party's base. ■

DELHI	
Total seats	7
BJP	7

S.K. PANDE

FOR the first time since 1977, when the Congress(I) was swept aside in Delhi by a tidal wave of popular anger following the imposition of Emergency, the party has lost all seven parliamentary seats in the national capital. This time, however, there was no perceptible swing one way or another, only voter fatigue, which manifested itself in the low voter turnout.

The Congress(I)'s prospects were substantially undermined by intense infighting and the absence of an election machinery to take on the well-oiled BJP machinery. Unlike in November 1998, when the BJP was done in by its poor record of governance and tussles between its senior leaders – most notably between Madan Lal Khurana and Sahib Singh Verma – the Hindutva party this time papered over all its cracks. The result left the Congress(I), which had hoped to get a majority of the seats, shell-shocked; in point of fact, even the BJP was more than surprised by the rout of the Congress(I).

Madan Lal Khurana on a victory procession in the Sadar area of Delhi.

SHANKER CHAKRAVARTY

The most stunning defeat for the Congress(I) was that of former Finance Minister Manmohan Singh, who lost to Vijay Kumar Malhotra of the BJP byover 29,000 votes in South Delhi. Manmohan Singh was being projected as one of the prime ministerial candidates. Manmohan Singh attributed his defeat to the low voter turnout; significantly, he fared badly even in the Assembly segments that are Congress(I) strongholds. Reports have surfaced of skullduggery by saboteurs within the party, but the more plausible explanation is that the party's election machinery just could not get going.

The one constituency where the Congress(I) did put up a fight was Chandni Chowk, where J.P. Aggarwal lost by less than 2,000 votes to Vijay Goel of the BJP. The presence in the fray of Shoib Iqbal of the Janata Dal-Secular, who secured over 52,000 votes, worked against the Congress(I). Congress(I) leaders suspect that some MLAs from the party queered the pitch for Aggarwal.

In Sadar, Khurana was pitted against Jagdish Tytler; in Outer Delhi, Verma was challenged by Deep Chand Sharma of the Congress(I). Khurana won by less than 14,000 votes; in fact, he was trailing for a while. In contrast, Verma won by over 2 lakh votes against a lightweight candidate who, many Congress(I) leaders admit, should never have been fielded.

In Karol Bagh, two-term winner Meira Kumar of the Congress(I) lost by over 12,000 votes to newcomer Anita Arya of the BJP. There was a palpable feeling among the electorate that Meira Kumar had not done enough to "nurse" the constituency. The daughter of former Union Minister Jagjivan Ram too appears to have been the victim of inner-party tussles.

In New Delhi, Union Minister Jagmohan of the BJP defeated Congress Working Committee member R.K. Dhawan by over 27,000 votes. In East Delhi, Lal Behari Tewari of the BJP easily defeated former Lt. Governor H.L. Kapur by over 90,000 votes. Kapur's campaign never really took off, being severely hamstrung by popular perceptions of him as an "outsider". This constituency was once a Congress(I) stronghold nurtured by among others, former Union Minister H.K.L. Bhagat.

The result in Delhi has come as a rude jolt for the Congress(I), particularly since it has fared badly even in the Assembly segments where it did well in November 1998. The Congress(I) then had won in 51 of the 70 Assembly constituencies. Except in Chandni Chowk – and to a lesser extent in Karol Bagh and Sadar – the Congress(I) did not even put up a reasonable fight.

The infighting in the Congress(I) has now intensified, with the organisational leaders targeting Chief Minister Sheila Dixit. Some changes may be in the offing. ■

PUNJAB	
Total seats	13
BJP	1
Shiromani Akali Dal	2
Congress (I)	8
CPI	1
Akali Dal (Mann)	1

VENKITESH RAMAKRISHNAN

THE National Democratic Alliance (NDA) in Punjab– the Akali Dal (Badal) and the Democratic Bahujan Samaj Morcha (DBSM) besides the BJP – suffered one of its worst defeats in the 13 constituencies and in the Union Territory of Chandigarh. The BJP-led alliance had won all the seats in 1998, but this time the NDA won only three. The Congress (I), which had drawn a blank last time, gained eight seats and its alliance partner, the CPI, took one. One seat went to the little-fancied Akali Dal (Mann). Its president Simranjit Singh Mann defeated Akali Dal(B) stalwart and Union Minister Surjit Singh Barnala in Sangrur by an impressive margin of 82,600 votes.

The results smashed the theory that an Akali Dal-BJP combination is invincible because it supposedly brought about the union of the two dominant communities, the Jat Sikhs and Hindus. According to initial estimates, the NDA's vote share dipped by a whopping 17 per cent as compared to 1998. Then, the NDA constituents had 45 per cent of the popular vote with the Akali Dal, the BJP and the DBSM accounting for 32.93 per cent, 11.67 per cent and 0.40 per cent respectively. The Congress(I) on its

Jagmeet Singh Brar. He defeated Sukhbir Singh Badal of the SAD in Faridkot.

own is presumed to have increased its vote share by approximately 7 per cent from its 1998 figure of 25.85 per cent. The vote share of other contestants such as Gurcharan Singh Tohra's All India Shiromani Akali Dal (AISAD) and its electoral partner the Bahujan Samaj Party (BSP), are not clear although this combination weaned away a significant chunk of the Akali Dal (B) votes.

The extent of the popular feeling against the NDA is illustrated by the results in Faridkot, Gurdaspur, Amritsar and Jullundhar. Akali Dal apparatchiks had billed the election in Faridkot as a prestigious contest. Sukhbir Singh Badal, Union Minister and son of Chief Minister Prakash Singh Badal, was pitted against Congress(I)'s Jagmeet Singh Brar here. Brar won, albeit with a small margin of 5,148 votes. At Gurdaspur, the NDA was represented by film star Vinod Khanna (BJP), rated as one of the most popular candidates of the NDA. Although Khanna managed to win against Sukhbans Kaur of the Congress(I), it was with a meagre margin of 1,399, a far cry from 1,06,833 votes in 1998.

In Amritsar and Jullundhar, where former Union Minister R.L. Bhatia and former MP Balbir Singh respectively were the Congress(I) candidates, the NDA had hoped to benefit from the dissidence within the Congress(I). Prominent local Congress(I) leaders such as Amritsar Mayor O.P. Soni and former MP Umrao Singh were critical of the choice of candidates. Despite this Bhatia defeated BJP's State president Daya Singh Sodhi by 31,999 votes and Balbir Singh beat Akali Dal (B)'s Prabhjot Kaur by 34,566 votes.

According to Narendra Modi, BJP's national general secretary in charge of Punjab, the anti-incumbency feeling against the Prakash Singh Badal Government and the split in the Akali Dal votes were the two principal factors that led to the NDA's reverses.

Congress(I) State president Amarinder Singh, while admitting that the reasons cited by Modi did play a role, said three additional factors had contributed to the final result. These are the absence of the Vajpayee and Kargil factors, the Congress(I)'s electoral adjustments with the Left parties and a significant shift of the Dalit vote from the BSP to the Congress(I). ■

Union Territory of Chandigarh	
Lok Sabha	
Total seats	**1**
Congress (I)	**1**

IN Chandigarh, what went against the NDA was the candidature of K.L. Sharma, senior vice-president of the BJP. Sharma, virtually unknown in the constituency, was given the ticket displacing S.P. Jain, who had won the seat twice in a row. This generated the "outsider effect" and in a seat which has only 5.5 lakh voters, this was bound to be burdensome, especially because the Congress(I)'s winning candidate Pawan Kumar Bansal was a local person with strong personal connections. ■

MADHYA PRADESH	
[redacted]	
Total seats	**40**
BJP	**29**
Congress (I)	**11**

V. VENKATESAN

THE BJP repeated its 1998 performance in Madhya Pradesh winning 29 of the 40 Lok Sabha seats. If Chief Minister Digvijay Singh's positive governance explained the Congress(I)'s victory in the Assembly elections last year, the A.B. Vajpayee factor (he hails from Gwalior) has once again favoured the BJP as in 1996 and 1998.

The ruling party, which had hoped to increase its last year's tally of 10, won the Guna, Khajuraho, Rewa, Sarguja (ST), Janjgir, Mahasamund, Chindwara, Khargone, Dhar (ST), Jhabua (ST) and Rajgarh seats. There are six seats reserved for Scheduled Castes and nine for Scheduled Tribes in the State. The Congress(I) lost three ST seats to the BJP by a margin of less than 10,000 votes. Kantilal Bhuria, former member of the Digvijay Singh Cabinet, retained the Jhabua seat. Khel Sai Singh was elected from Sarguja (ST), which was held by the BJP's Larang Sai.

Senior Congress(I) leaders who won the elections include former Union Ministers S.C. Shukla (Mahasamund), Kamal Nath (Chindwara) and Madhavrao Scindia (Guna). Madhavrao Scindia, who had earlier represented Gwalior, switched to Guna, a constituency which was represented by his mother Vijayaraje Scindia. He had a lead of 2,14,428 votes over his BJP rival. The surprise losses for the Congress(I) are party spokesperson Ajit Jogi from Shahdol and former Chief Minister Motilal Vora from Rajnandgaon. Pushpadevi Singh of the Congress(I) lost to Vishnudeo Sai of the BJP in Raigarh.

The BJP has uniformly done well in all the regions of the State. Among the key contests involving the party notables were Hoshangabad, Bhopal, Indore and Rajgarh. In Hoshangabad, former Chief Minister Sunderlal Patwa won by a margin of 44,447 votes. Uma Bharati won the Bhopal seat despite resistance within the party, defeating the Congress(I)'s Suresh Pachouri. The BJP's general secretary, Sumitra Mahajan, retained the Indore seat, defeating the Congress(I)'s Mahesh Joshi by more than 1,30,000 votes. Union Minister Satyanarayan Jatia retained the Ujjain seat. In Rajgarh, television star Nitish Bharadwaj lost to Digvijay Singh's brother Lakshman Singh by over 65,000 votes. The outcome established the fact that Rajgarh is Digvijay Singh's citadel.

The BJP's P.R. Khute wrested the Sarangarh seat from the Congress(I)'s Parasaram Bharadwaj. Jaibhan Singh Pavaiya, an erstwhile leader of the Bajrang Dal, won Gwalior defeating Chandra Mohan Nagori, Congress(I).

The Bahujan Samaj Party (BSP), which won two seats in the Vindhya Pradesh region in 1996, came second only in Rewa. The seat was won by Sunderlal Tiwari of the Congress(I).

If the results of the Lok Sabha elections are an indicator of Digvijay Singh's governance, the outcome of the three Assembly by-elections in Alirajpur (Jhabua), Manawar (Dhar) and Guna, provide a different picture. The Congress(I) won all the three seats with an increased vote share. ■

HIMACHAL PRADESH

Total seats	4
BJP	3
HVC	1

S.K. PANDE

THE Bharatiya Janata Party-Himachal Vikas Congress (BJP-HVC) combine won all the four seats in Himachal Pradesh, giving a jolt to the Congress(I). In the 1998 polls, the BJP had won three seats as against the Congress(I)'s one seat.

The results showed a marginal shift in voter preference in favour of the BJP. With both the key factions of the party, those led by Chief Minister P.K. Dhumal and former Chief Minister Shanta Kumar, having buried their differences, it was a relatively united BJP that went to the polls. Shanta Kumar won the Kangra seat, countering speculation of infighting in the party. The Mandi and Hamirpur seats were retained by the BJP.

A major upset was witnessed in the traditional Congress centre of Shimla (reserved) where Lt. Col Dhani Ram Shandil of the HVC defeated Gangu Ram Musafir of the Congress(I) by 49,000 votes. The BJP's decision to give the Shimla seat to the HVC paid off. The Congress(I) had in the last minute changed its candidate in Shimla, replacing K.D. Sultanpuri, who had won the seat several times in the past.

The results carry different messages for the Congress(I) and the BJP. What is significant is that the BJP has led in many Assembly segments in the Shimla region now represented by the Congress(I). Its alliance with Sukh Ram helped the BJP make a dent on the Congress(I) vote bank. The BJP had a better election machinery, and the patch-up between Dhumal and Shanta Kumar also helped matters. The Kargil factor also worked to the advantage of the BJP. In fact, it was more pronounced than in most other parts of the country.

The Congress(I) found the defeat all the more shocking as it lost in a direct contest. For Sukh Ram, it was sweet revenge against his arch-rival and former Chief Minister Virbhadra Singh, who was humbled in his stronghold of Shimla.

The defeat could lead to a change of leadership as many senior leaders have lost. The Congress(I) election machinery was largely ineffective. The apple-growers' lobby, which was close to the Congress(I) has also partly shifted its allegiance to the BJP. ■

ASSAM

Total seats	14
Election held	13
BJP	2
Congress (I)	9
CPI (M-L)	1
Independent	1

KALYAN CHAUDHURI

OF the 14 Lok Sabha seats in Assam, the Congress(I) won nine, two short of its 1998 tally. The election in Dhubri was suspended following the murder of the BJP candidate, Pannalal Oswal. The ruling Asom Gana Parishad (AGP) did not win any seat and finished only third in nine seats. The BJP, which emerged as the main rival to the Congress(I), won two seats, Guwahati and Nagaon, and finished second in seven seats.

In 1998, the BJP won only one seat, Silchar in the Bengali-populated Barak Valley. This time, however, the Congress(I) took the Silchar seat back from the BJP. Kabindra Purkayastha, who was a member of the last Union Cabinet, was trounced by former Union Minister Santosh Mohan Dev of the Congress(I) by over 1.7 lakh votes. The Congress(I) was able to get a majority of the seats because of the support it received from the minorities and tea garden labourers.

The AGP allotted two seats to the CPI(M) and one to the CPI. Jayanti Rongpi of the Communist Party of India (Marxist-Leninist) won in Diphu defeating Biren Singh Ingty of the Congress(I). Sansuma Khunggur Bwismutiary, an independent backed by the All-Bodo Students Union (ABSU) and the Bodo People's Faction, was elected from Kokrajhar.

RITU RAJ KONWAR

Bijaya Chakraborty, BJP MP from Guwahati.

The BJP, which won two seats from the Brahamaputra Valley – Guwahati and Nagaon – has benefited from the people's disillusionment with the AGP. The victory of the BJP's Rajen Gohain from Nagaon, from where Chief Minister Prafulla Kumar Mahanta hails, and that of Bijoya Chakravarty from Guwahati, shows that the AGP has lost votes to the BJP. Chakravarty is a leading figure in the anti-foreigner movement. By shifting to the BJP she appears to have won over the Assamese Hindus, who generally supported the AGP.

Similarly, Gohain's victory in another AGP centre is politically significant for the BJP as he is the first BJP MP from the Ahom tribal community, which accounts for about 23 per cent of the voters in the State. The BJP is all set to expand its influence among the community.

The overall poll outcome shows that the AGP has lost a substantial section of supporters to the BJP, especially in the urban areas.

The Congress(I) demanded that Mahanta should step down because he had lost the mandate. State Congress(I) president Tarun Gogoi said that Mahanta has lost the "moral right to continue in office". Gogoi, who has been re-elected to the Lok Sabha from Koliabor, said that the fact that the AGP had failed to win a single seat in two successive elections indicated the total erosion of its support base. ■

TRIPURA

Total seats	2
CPI (M)	2

THE outcome of the Lok Sabha elections in Tripura has reconfirmed the State's position as a Left stronghold in the region. The CPI(M)-led ruling Left Front has retained the State's two Lok Sabha seats. Bajuban Reang and Samar Chowdhury of the CPI(M) were re-elected from East Tripura and West Tripura constituencies respectively. Chowdhury won the West Tripura seat defeating his nearest Trinamul Congress (T.C.) rival and former Congress(I) Chief Minister S.R. Majumdar by nearly two lakh votes. Pijush Biswas of the Congress(I) polled only 83,384 votes. In East Tripura, CPI(M) candidate Bajuban Reang defeated his nearest BJP rival, Jishnu Debbarma, by over 1.5 lakh votes. Kashiram Reang of the Congress(I)

polled 83,789 votes. In the Shantir Bazar Assembly byelection, the CPI(M) candidate won by a margin of over 8,000 votes.

A notable feature of this election was the emergence of the BJP-Trinamul Congress-Tripura Upajati Juba Samiti (TUJS) combine as the main Opposition formation. A break-up of the Assembly segments results reveals that the Congress(I) lost ground throughout Tripura. In East Tripura the party failed to secure even the second position in many Assembly segments.

S.R. Majumdar claimed that the people had rejected the Congress(I). But the State Congress(I) president Gopal Roy blamed a section of party leaders for the debacle. "The result is undoubtedly disappointing, but we will assess the situation and take corrective measures," he said.

Despite poll-related violence and the poll-boycott call by the National Liberation Front of Tripura (NLFT) and the All Tripura Tiger Force (ATTF), more than 65 per cent voting was recorded. ■

MANIPUR	
Lok Sabha	
Total seats	2
Elections held	1
MSCP	1

FOR the third time in a row, Thounoujam Chaoba Singh of the Manipur State Congress Party (MSCP), a constituent of the BJP-led National Democratic Alliance, retained the Inner Manipur seat. He defeated Khaidem Mani of the Manipur People's Party (MPP) by 8,000 votes. Nimaichand Luwang of the Congress(I) came third. Chaoba Singh won the seat in 1996 on the Congress(I) ticket and in 1998 as the MSCP candidate.

The election in Outer Manipur was suspended following large-scale violence. Intimidation of voters, snatching of polling material, and firing between security personnel and outlawed National Socialist Council of Nagaland (Issac-Muivah) activists operating from the Nagaland-Manipur border, marred the election on October 3. Repolling in most of the booths where elections were disrupted by militants is scheduled to take place on October 28.

All the major political parties in Manipur had severed their ties with their alliance partners and fielded their own candidates. As a result, there was a multi-cornered contest. The NDA constituents in the State are the ruling MSCP, a breakaway group of the Congress(I), the Federal Party of Manipur (FPM) and the BJP, while the

RITU RAJ KONWAR

P.A. Sangma, elected from Tura for the seventh time.

Opposition Secular Democratic Front (SDF) includes the Manipur People's Party, the CPI, the CPI(M) and the Janata Dal (Secular). The Congress(I) was a constituent of the SDF initially, but pulled out during the seat-sharing stage because it sought both seats for itself.

Human rights activist-turned politician Kahidem Mani, who contested his first election, proved his popularity by emerging as the runner-up to Chaoba Singh. Mani was the consensus candidate of the SDF. ■

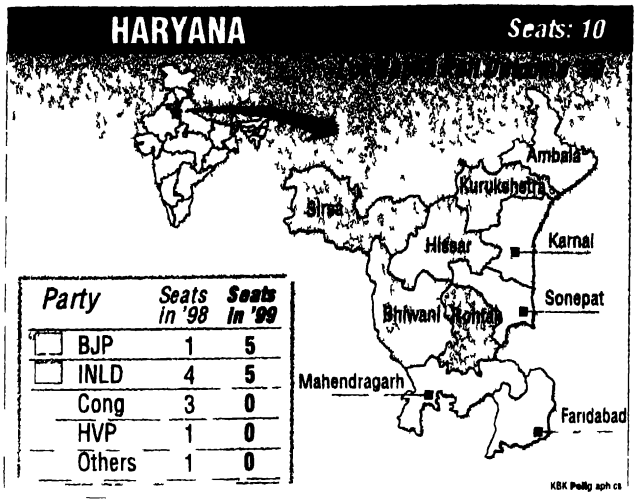
MEGHALAYA	
Lok Sabha	
Total seats	2
Congress (I)	1
NCP	1

TRUE to his claim of being the "uncrowned monarch of the Garos" former Lok Sabha Speaker and Nationalist Congress Party (NCP) general secretary Purno Agitok Sangma retained the Tura seat for a record seventh term. Sangma defeated Atul C. Marak of the Congress(I) by one lakh votes. P.R. Kyndiah of the Congress(I) was re-elected from Shillong. He defeated S.D. Khongwir of the United Democratic Party (UDP).

F. Marak, general secretary of the NCP's Garo Hills unit, told *Frontline* that Sangma's victory could prompt several Congress(I) legislators to join the NCP. For the Congress(I), the NCP leader's victory by a huge margin has been a "lesson" in electoral politics. Other Congress(I) leaders, however, admitted that they could not measure up to Sangma.

The ruling UDP is facing a revolt by its MLAs after its stunning defeat in Shillong by the Congress(I), which is its coalition partner in the State. Some UDP legislators consider the defeat to be a popular verdict on its current coalition arrangement with the Congress(I), a partnership which had turned sour even before the polls. ■

NAGALAND	
Lok Sabha	
Total seats	1
Congress (I)	1



THE Congress(I)'s victory in Nagaland has once again proved that the people of the State do not favour the growth and consolidation of regional parties. In a five-cornered contest for the Kohima seat, K. Asungba Sangtam of the Congress(I) defeated Shurhozelie, who was fielded by an alliance that included the NCP, the National Democratic Movement (NDM) led by former Nagaland Chief Minister Hokishe Sema and the Nagaland People's Council. The BJP's N. Bhesto was also in the fray.

An independent, Lima Yanger, won the byelection to the Alongtaki Assembly seat, which encompasses Chief Minister S.C. Jamir's home district of Mokokchung. Yanger, a retired engineer, defeated his nearest rival Nukshi Longkumar of the Congress(I) by 172 votes without any backing from the regional parties.

Unlike during the 1998 elections, the underground insurgent groups including the Khaplang and the Issac-Muivah factions of the National Socialist Council of Nagaland (NSCN) had not openly called for a poll boycott in Nagaland and in the predominantly Naga areas in Manipur. ■

MIZORAM	
Lok Sabha	
Total seats	1
MNF-MPC	1

AFTER the end of the decade-long Congress(I) rule under Chief Minister Lalthanhawla following the Assembly elections in November 1998, Mizoram seems to have turned into a playground for regional politics. The Mizo National Front-Mizo People's Conference (MNF-MPC) alliance had won more than three-fourths of the 40 Assembly seats. This time, Vanlalzawma, an independent supported by the MNF-MPC, was elected from the lone Aizawl constituency, defeating another independent, Rokamlova, who was backed by the Congress(I), the MNF (Nationalist) and the Janata Dal (Secular). The third candidate in the fray was H. Vanchhawang of the BJP, which has hardly any base in this tiny hill State. ■

Party	Seats in '98	Seats in '99
BJP	1	5
INLD	4	5
Cong	3	0
HVP	1	0
Others	1	0

T K RAJALAKSHMI

THE Indian National Lok Dal-Bharatiya Janata Party (INLD-BJP) combine, in what seemed an unexpected outcome, swept all the 10 Lok Sabha seats in the State Both parties secured five seats each leaving none to the Congress(I), the Haryana Vikas Party (HVP) and the Bahujan Samaj Party (BSP) For the BJP, which bagged just one seat in the last elections, it was a big leap forward The INLD, for its part, bettered its 1998 tally of four by one

For the BJP it was a tactical alliance that worked The combine established a more than comfortable lead in 85 of the total 90 Assembly segments The Congress(I) led in the remaining five – three in the Mewat region, one in Mahendargarh and one in the Tosham segment of Bhiwani constituency The leads in Tosham and Mahendargarh could be of some consolation to the Congress as the former is the home constituency of HVP leader Bansi Lal and Mahendargarh is represented by Ram Vilas Sharma, president of the BJP State unit The Congress(I) was expected not only to hold on to its three seats of Rohtak, Mahendargarh and Karnal but also win Faridabad and Hissar

The Congress(I) lost many of its stalwarts to what is unofficially attributed as the "Vajpayee image" factor as well as rabid infighting within its ranks The party, however, maintained that its initial support to the unpopular Bansi Lal Government had eroded its credibility

The BJP which shared power with HVP earlier, dumped it to escape the anti-incumbency factor. Forging an alliance with Chautala was one of its many strategic moves. Also, the fact that the maximum of casualties in the Kargil war were from this State especially from Rohtak and Mahendargarh areas, aided it

The INLD's strategy of fielding a retired serviceman and the wife of a slain Border Security Force (BSF) commandant paid dividends The crippling defeat of two Congress(I) "invincibles", Bhupinder Singh Hooda from Rohtak and Rao Inderjit Singh from Mahendargarh is unexplainable but for these factors The expected polarisation of the Jat versus the non Jat votes also did not take place in a manner beneficial to the Congress(I), though its vote share improved when compared to the last elections

Among other significant reverses for the Congress(I) was the defeat of party strongman and former chief minister Bhajan Lal by I D Swami of the BJP in Karnal with a margin of nearly 1 5 lakh votes In 1998, Swami had lost to Bhajan Lal by 50,000 votes

At Rohtak, Pradesh Congress Committee president Bhupinder Singh Hooda lost to a political greenhorn, Inder Singh, by a margin of 1,44,693 votes Hooda, who had trounced Devi Lal three times from here, was believed to be the only Congressperson capable of taking on the INLD, though in 1998 he had won by a wafer-thin margin of 383 votes The INLD's entry into certain Congress(I) bastions is not insignificant Congress(I) heavyweight and former PCC president Birender Singh, lost to Surinder Singh Barwala in Hissar by a huge margin of 1 6 lakh votes While Singh lost in all the nine Assembly segments including Uchana, which he represents in the Assembly, Barwala doubled his victory margin of the last elections

In Faridabad, which has a significant Muslim population, the Congress(I) hopes were foiled by Ram Chander Bainda (BJP) who won for the third time albeit with a small margin Other winners include Kailasho Devi (INLD) who defeated Congress(I) candidate O P Jindal in Kurukshetra, Kishan Singh Sangwan (BJP) defeated Congress(I) veteran Chiranji Lal by over 2 lakh votes, and Sushil Kumar Indora (INLD) defeated Om Prakash Keharwala of the Congress(I) by 2 19 lakh votes

The political consequences for the HVP are graver as it lost its lone seat in Bhiwani, held by Surinder Singh, son of Bansi Lal Not only was Surinder Singh deemed to be the political heir of Bansi Lal but his victory could have given a boost to the party's sinking political stature Surinder trailed in all the Assembly segments including Tosham, his father s Assembly segment as well as hometown Ajay Singh Chautala, son of Chief Minister Om Prakash Chautala, won the seat, Dharambir of the Congress(I) was runner-up Surinder came a poor third and the Communist Party of India (Marxist) which had put up a candidate for the first time, came fourth The HVP candidate in Faridabad lost his deposit

The victory margins on the whole, have been much better when compared to the last elections and the re-election of all the sitting INLD and BJP MPs indicates that there was no major anti-incumbency sentiment

The BJP has made substantial gains in Mahendargarh, Ambala Sonepat and Karnal even though it has done so with the help of the INLD The BSP's vote share in the Ambala seat was considerably reduced as compared to last year ■

GOA

Lok Sabha	
Total seats	2
BJP	2

RAVI SHARMA

A CONSOLIDATION of anti-Congress votes enabled the Bharatiya Janata Party to win both the Lok Sabha seats from this tiny coastal State for the first time The victory was not wholly unexpected For the ruling Congress however, which held both seats, the loss was a reminder of the topsy-turvy nature of Goan politics It also brought into the open the disgruntlement in the party towards Chief Minister Luizinho Faleiro There have already been demands, albeit privately, for his resignation

The BJP's win is a further indication of the party's growing strength in Goa It increased its tally in the Assembly from four to ten in the June 1999 elections Observers say the BJP has filled the void left by the Maharashtravadi Gomantak

Party (MGP) which was the main Opposition party during the last decade and a half. MGP stalwart and former Union Minister for Law, Ramakant Khalap, who had defected to the Congress shortly before the polls, lost to BJP's Shripad Naik in the North Goa (Panaji) seat by 36,721 votes. The Congress(I) managed a lead in just two of the 19 Assembly segments here

In South Goa (Mormugao), Ramakant Angle of the BJP defeated Congress(I)'s Joachim Alemao (brother of former Chief Minister and present State Industries Minister Churchill Alemao) by 14,457 votes. A notable casualty was former Goa Chief Minister Wilfred D'Souza who contested on the Nationalist Congress Party (NCP) ticket. The BJP cornered 48 per cent of the vote and the Congress 42 per cent. The NCP was a poor third with 4 per cent.

The BJP is indebted to the MGP in no small way. The surprise withdrawal of the MGP candidates – who reasoned that their presence would help Khalap - from both seats hours before the deadline for withdrawal helped garner anti-Congress votes for the BJP. The MGP has said that the people have taught Khalap a lesson for switching sides.

Congress leaders including Faleiro have blamed the party's patchy campaigning, inadequate time for campaigning and the anti-incumbency factor for the loss. Khalap, for his part, was highly critical of the way Congress MLAs and Ministers campaigned. ■

PRAVEEN SWAMI

"HE who casts the first vote will get the first bullet," read the Hizbul-Mujahudeen poster nailed on to an electricity pole at Tral, Anantnag. The 1999 Lok Sabha elections will perhaps be remembered for the curious unity of electoral interests it forged between terrorists and the National Conference (N.C.) establishment.

In some senses, no single party has got the upperhand in the elections in Jammu and Kashmir. Both the N.C., which took the three Lok Sabha seats in the Kashmir Valley as well as Ladakh, and the BJP,

AIZAZ RAHI/AP

Omar Abdullah, retains the Srinagar seat.

which beat back the Congress(I) in Jammu and Udhampur, are celebrating. But the real cost of this bitterly contested and controversial election are certain to become evident in the future. The N.C. and the BJP could well find their celebrations premature.

Low voter turnouts in the Valley, as observers had predicted, ensured an N.C. sweep in Kashmir. Chief Minister Farooq Abdullah's son and former MP from Srinagar, Omar Abdullah, retained his seat comfortably. The young Abdullah, marketed as the heir-apparent to the organisation built by his grandfather Sheikh Mohammad Abdullah, took 55,542 votes to the 19,879 polled by his closest rival, the People's Democratic Party's (PDP) Mehbooba Mufti.

The daughter of former Union Minister Mufti Mohammad Sayeed, Mehbooba Mufti had been widely expected to challenge the N.C.'s historic control of the Srinagar seat. But a combination of factors ensured the PDP's defeat. An election-eve formation, the PDP both lost votes to the Congress(I), whose candidate Aga Syed Mehdi polled 18,683 votes, and suffered because there was no apparatus to counter terrorist intimidation.

In Baramulla the defection of Sayeed's key ally Abdul Rasheed Shaheen to the N.C. meant that the PDP had little organisational backup. Shaheen took the seat with 84,243 votes, backed by high turnouts in N.C. pocketboroughs such as Uri and Gurez. PDP candidate Muzaffar Baig polled 46,130 votes, and former Union Minister Saifuddin Soz only 11,230.Anantnag saw the most violent run-up to the polling, witnessing a succession of attacks on candidates including one attack that claimed the life of a BJP candidate.

On polling day, one N.C. worker was killed and a Communist Party of India (Marxist) worker injured in a blast at a polling station. Widespread booth-capturing and poll malpractices, allegedly executed by the N.C., were reported from several areas, although no action was taken by the Election Commission. CPI(M) candidate Mohammad Yusuf Tarigami was attacked by N.C. workers when he attempted to stop a booth-capturing bid at Qazigund, and again while seeking to evict plainclothes police personnel from a counting centre in Anantnag town.

If the N.C. pulled out all the stops in Anantnag, its objective was simple: the defeat of Sayeed who snatched the seat in 1998. The N.C. succeeded in the attempt, and its candidate Ali Mohammad Naik polled 38,745 votes to the PDP's 25,253. Again, a low turnout helped the N.C. at least as much as alleged malpractice. Interestingly, the CPI(M), won some 17,000 votes, coming first in the Kulgam segment represented by Tarigami in the Assembly, and second in Noorabad, Wachi, Devsar and Homeshalibugh. Had turnouts been higher, results in Anantnag as elsewhere in Kashmir could well have been different.

South of the Banihal Pass, both the seats in the Jammu region were taken by the BJP with comfortable margins. Members of the dissolved Lok Sabha, Vaid Vishnu Dutt from Jammu and Chaman Lal Gupta from Udhampur, defeated their nearest Congress(I) rivals by over 1,10,000 votes.In the Ladakh seat, fought on communal lines between Buddhist Leh and Muslim Kargil, the N.C.'s Ghulam Hassan triumphed.

But the election results are bound to have other serious consequences. For one, PDP leaders are warning of unrest, pointing to the rise of terrorism in Kashmir after the controversial 1988 Assembly elections. By leaving unchecked the anti-poll campaign of the All-Party Hurriyat Conference, the State government has given the secessionist organisation credibility. Finally, poor security deployment during the election period – which inexplicably went down from 356 companies in 1998 to just six this year – showed that there is little chance of a fair electoral fight without support from New Delhi. The consequences of a wide erosion of faith in the democratic process are obvious. ■

Fractured mandate in Maharashtra

DESPITE the reverses it suffered in the State in the Lok Sabha elections, the Congress(I) has emerged as the single largest party in the Assembly in Maharashtra. Nationalist Congress Party (NCP) leader Sharad Pawar's image as a major national political figure, carefully built up and marketed through his years in politics by a friendly Mumbai media, has been shattered by the Assembly results. The NCP's failure to emerge as the stronger force has left Pawar with no option but to secure a suitably packaged deal from the Congress(I). The deal is certainly going to be an unpleasant one for the former Union Minister, for he has few cards to play.

With the Shiv Sena-BJP combine lobbying energetically to become the first group to be invited to form the new government in Maharashtra, Pawar is at a crossroads. A deal with the Congress(I) would mean accepting the reality of the NCP's status as a junior partner. Failing to do so, however, holds the even more embarrassing prospect of desertions from his new army.

Shiv Sena-BJP politicians have had little reason for delight in the Assembly results. Despite the break in the Congress(I), the right-wing alliance could gather only 125 seats, well short of a majority in a House of 288. Of these, the Shiv Sena took 69 seats, down two from its 1995 figure, and the BJP 56, dropping from 80 in the previous Assembly. The Shiv Sena-BJP alliance's performance represented a sharp decline from 1995, when it won 151 seats. The Congress(I), for its part, saw its representation in the Assembly decline by just five seats, from 80 to 75, despite competition for votes with the NCP, won only 58 seats.

Why did the Shiv Sena-BJP fail to replicate at the Assembly level its success in the Lok Sabha election? Some interesting facts are evident in the preliminary figures. Consider the case of the Ahmednagar Lok Sabha constituency, which the BJP won this time in place of the Shiv Sena which took it in 1998. In the 1995 elections, the Shiv Sena-BJP had won all the six Assembly seats that make up the Lok Sabha constituency. This time, despite its overall majority in the Lok Sabha seat, it lost the Shrigoda Assembly seat to the Congress(I) and Shevgaon to the NCP. A third segment, Ahmednagar (North), was taken by an independent. While a disunited Opposition could not wrest the Ahmednagar Lok Sabha seat, the depth of local resentment against the Shiv Sena-BJP formation expressed itself sharply at the Assembly level.

Similar realities expressed themselves in the Mumbai (North-East) Lok Sabha seat, where the BJP's Kirit Somaiya defeated the Congress(I)'s Gurudas Kamat with ease. The Shiv Sena-BJP had won all six Assembly segments here in 1995, but it lost Trombay and Kurla this time around. In 1995, the Shiv Sena-BJP had triumphed in all the six Assembly segments of the Kohlapur Lok Sabha constituency, but this time lost all but one. Clear mandates to the NCP in four segments here meant the party also took the Lok Sabha seat. By contrast, the NCP took only one Assembly segment of the Sangli Lok Sabha seat this time, while the Congress(I) captured four. Again, the Shiv Sena-BJP could not retain even one of the segments it won in 1995.

Thus, while the NCP-Congress(I) split enabled the Shiv Sena-BJP alliance to hang on to several Lok Sabha seats, public anger against its government ensured that this success could not be replicated in the Assembly elections. Assembly segments were lost even where the Shiv Sena-BJP managed to hang on to the Lok Sabha seat, reflecting the general decline in the right-wing alliance's vote share. Although it is too early to work out specific details, it seems probable that a united Congress challenge would have seen the Shiv Sena-BJP decimated in all but a handful of Assembly seats.

Given the fractured mandate, both the major formations in the State now have a shot at power. Broadly, the Shiv Sena-BJP's bid will depend on support from the 12 independents. The previous government of the alliance depended entirely on the backing of independents, 33 of whom came to power against a background of large numbers of Congress(I) dissidents fighting the official candidates. This time the situation is different. Feelers have also been sent to the newly elected Ulhasnagar MLA, Suresh 'Pappu' Kalani, who allegedly has underworld links. Kalani, after his recent release from jail, set up the Native People's Party.

Shiv Sena supremo Bal Thackeray argues that given the fact that it is a pre-poll alliance, the Shiv Sena-BJP combine should be called first to form a government. Governor P.C. Alexander's response to this argument will take a few days to

VIVEK BENDRE

Nationalist Congress Party leaders Sharad Pawar, Chhagan Bhujbal and others at a meeting with party MLAs on October 8.

come, but the numbers are clearly not promising in the case of the alliance. By contrast, a possible Congress(I)-NCP front could count on support from two Peasants and Workers Party MLAs, two Samajwadi Party MLAs, and probable outside support from two Communist Party of India (Marxist) MLAs. The two Janata Dal (Secular) MLAs could also follow suit. Several of the 12 independents are known to have some form of affiliation to either the Congress(I) or the NCP. All these make it possible to cobble together a government with a thin majority.

But will a Congress(I)-NCP alliance come about? Although elementary political sense dictates that it ought to, several personality-related obstacles lie in the way. Suresh Kalmadi, who was among Pawar's key associates in the not-too-distant past, demanded that there should be no alliance with the NCP until its leaders apologised for their opposition to Sonia Gandhi's leadership of the Congress(I). At an October 8 press conference Pawar in turn ruled out a rapprochement with the Congress(I) as long as it was led by Sonia Gandhi. Observers believe that these positions are at least in part polemical postures, a cover for the inevitable hard bargaining over seats and ministerial portfolios.

One possible deal some people within the NCP privately advocate is the appointment of an acceptable Congress(I) figure as Chief Minister, possibly Sushil Kumar Shinde, with representation in the Cabinet for both formations. The real danger is that if the mechanics of such an arrangement take too long to be realised, at least some elements in the NCP could head the Shiv Sena-BJP way. The principal problem with such a deal for Pawar is that it would amount to a public acknowledgement of the fact that the NCP experiment has failed. That, in turn, would only leave him the option of an embarrassing return to the Congress(I), with his authority and influence more than limited when he left the party.

History suggests that Pawar may, indeed, have to engage in precisely this kind of a retreat. The supposed centrepiece of Maharashtra politics, contrary to popular perception, has never led the Congress(I) or any other formation to an outright victory in an Assembly election. In 1978, he became Maharashtra's youngest Chief Minister by breaking the Congress(I) and forming the Progressive Democratic Front (PDF). Two years later, the Congress(I) routed the PDF, taking 186 of the 288 seats. In 1985, despite five years of scandal-ridden Congress(I) rule, which saw five Chief Ministers in as many years, it managed to win 162 seats although the entire Opposition united behind Pawar's Congress(S). Pawar returned to the Congress(I) only to lead it first to a minority government, in 1990, and then to disaster, in 1995.

Although Pawar has a significant power base of his own, it is far from adequate to secure an unequivocal victory in the State. The creation of the NCP may have come about as an immediate consequence of the frivolous issue of Sonia Gandhi's foreign origin; however, the development was driven also by the Congress(I)'s lack of inner-party democracy and tactical sense. What lessons both Pawar and the Congress(I) establishment learn from the experience of the 1999 elections could shape Maharashtra politics in the years to come. The party's one major success in the State, in the 1998 Lok Sabha elections, came after the shaping of a broad secular alliance, bringing together the Samajwadi Party and a spectrum of Republican Party of India factions. It ought now to move towards a revival of that alliance, and a healing of its own fissures.

Should the mainstream Congress(I) seek to impose a humiliating surrender on the NCP, it too shall suffer as a consequence. Whether it has the will to open itself up to allow a return of the NCP is, of course, altogether another question.

VIVEK BENDRE

VIVEK BENDRE

Maharashtra Pradesh Congress(I) Committee chief Prataprao Bhosle (centre) along with party leaders at the Raj Bhavan in Mumbai to stake their claim to form the government. (Below) Shiv Sena-BJP leaders celebrating the combine's victory at Sena Bhavan in Mumbai.

THE evening after the results were declared, Maharashtra Pradesh Congress Committee (MPCC) president Prataprao Bhonsale met the Governor to present a letter staking his party's claim to form the government. The letter said the Congress(I) was the single largest party in the State and should therefore be given a chance to prove its majority.

Bhonsale told mediapersons that he expected support from the Janata Dal, the CPI(M), some independents and some members of the PWP. He was, however, non-committal about a tie-up with the NCP, saying that Pawar has "insulted the Congress". Pawar indicated that since the chances of Sonia Gandhi becoming Prime Minister had faded, he was not averse to a tie-up with the Congress(I) in the State.

Former Deputy Chief Minister Gopinath Munde was elected the BJP's leader in the Assembly. On October 9, the Shiv Sena-BJP planned to elect an alliance leader as well as make a representation to the Governor to stake its claim to form the next government. However, these plans were shelved because that day was *amavasya*, (a day with moonless night), traditionally considered inauspicious. The parties decided to leave the matter of choosing the alliance leader to Bal Thackeray and Atal Behari Vajpayee. ■

Silent shift

PARVATHI MENON

KARNATAKA

Assembly	
Total seats	224
Congress(I)	133
BJP	44
Janata Dal (U)	19
Janata Dal (S)	8
AIADMK	1
Independents	19

THE Congress(I) made a spectacular comeback to power in Karnataka, winning over substantial sections of its traditional vote base which it had lost to the Janata Dal in the 1994 Assembly elections. It won 133 seats in the 224-member Legislative Assembly. The BJP, which had run a very confident campaign despite being saddled with an alliance partner it did not want, won 44 seats marking a marginal increase over its 1994 tally. Its ally, the Janata Dal (United) was all but wiped out. It won just 19 seats with former Chief Minister J H Patel and a large number of his ministerial colleagues defeated by large margins. The Janata Dal (Secular), led by former Prime Minister H D Deve Gowda, fared even worse winning just eight seats. Independent candidates won 19 seats.

Just as the 1994 elections brought the Janata Dal to power on a massive anti-incumbency wave, these elections have demonstrated the popular rejection of the Janata Dal government. In 1994, the Janata Dal won 115 seats and 33.56 per cent of the vote share, while the Congress(I) won just 36 seats and 27.4 per cent of the vote share. Today their positions stand reversed. The recent split in the Janata Dal, with the section led by J H Patel seeking an alliance with the BJP in a desperate attempt to shore up its eroding base, is a factor that had a great impact on the results. The BJP-JD(U) alliance, opportunistic as it was in its timing and motive, was no compensation for a tenure of virtual non-governance, especially in the last two years, by the Janata Dal in power.

The results also demonstrated the rejection of the BJP and its divisive ideology, which it sought to downplay in these elections. The BJP campaign was built around the Kargil and Vajpayee symbols for the Lok Sabha elections and local issues for the Assembly elections. The losses the party suffered even in constituencies that were considered 'safe' for it (Shimoga, Dharwad, Bangalore South, Mysore and the coastal constituencies) point to an erosion of its base quite independent of that in the case of its ally. The series of communal incidents that occured in small towns in some of these constituencies last year, in which members of the minority community were the victims of attacks by organisations belonging to the Sangh Parivar, could well have contributed to the alienation of people from the party.

Added to the poor overall performance by the BJP-JD (U) is the defeat of several prominent leaders of these parties. Among them are those who engineered cynical political alliances, those who did not meet popular expectations as Ministers, and even those such as State BJP president B S Yediyurappa who obviously held out no promise for the electorate of a constituency he thought would never desert him. Among those who lost were J H Patel who contested from Channagiri in Davangere district he lost to Vadnal Rajanna a BJP rebel candidate, by a margin of almost 30,000 votes. The other Cabinet Ministers who lost include K N Nage Gowda (Kirugavalu), M S Patil (Raichur), G Basavannappa (Holehunnur), K M Krishna Reddy (Chintamani), Anant Nag (Basavangudi), and M P Prakash (Hadagali).

Also among those who lost were former Deputy Chief Minister Siddaramaiah of the JD(S) in Chamundeswari constituency in Mysore district, the president of the Karnataka Lok Shakti Jeevraj Alva, from Jayamahal in Bangalore district and Deve Gowda's sons H D Revanna and H D Kumaraswamy in Holenarasipur and Satnur Assembly constituencies respectively. For the BJP the most stunning defeat was that of Yediyurappa in Shikaripura in Shimoga district, and those of senior leaders K S Eashwarappa and Premila Nesargi in Shimoga and Chamarajpet.

Among the prominent persons who won were S M Krishna of the Congress(I) from Maddur, former Congress(I) Minister Y K Ghorpade (Sandur), P G R Sindhia (Kanakapura) and B N Bacche Gowda (Hoskote) of the JD(U) and former Ministers Roshan Baig (Jayamahal) and Ramalinga Reddy (Jayanagar) of the Congress(I). Former Chief Secretary J Alexander, who had a controversial record in office, won on the Congress(I) ticket from Shantinagar in

T L PRABHAKAR

AICC observer Ghulam Nabi Azad greeting S.M. Krishna in Bangalore.

Bangalore city. Suresh Kumar of the BJP won the Rajajinagar seat.

S.M. Krishna, who was elected leader of the Congress Legislative Party on October 10, paving the way for his choice as Chief Minister, feels that the verdict was a positive one and not merely the consequence of an anti-incumbency wave. He told *Frontline* "We made capital out of the disastrous rule of the Janata Dal government of J.H. Patel, but I don't think that this played a major role. It was Sonia Gandhi's presence in Karnataka and the unity exhibited by the leadership that enthused our party workers and ensured our victory."

In the last three Assembly elections in Karnataka – 1999, 1994 and 1989 – the anti-incumbency factor was responsible for the decisive nature of the verdicts. In 1989, the Congress(I) won 178 seats with a vote share of 43.79 per cent. The Janata Dal had split prior to the elections after one of its periodic bouts of factionalism. Deve Gowda had left the party and joined the Samajwadi Janata Party (SJP). The Janata Dal won just 24 seats in 1989 and Deve Gowda lost in both the constituencies he contested, Holenarasipura and Hassan. The present situation is in many ways similar to the one at that time.

The 1999 elections in Karnataka followed the 1989 pattern in another respect as well. The last time the State saw elections to both the Lok Sabha and the Assembly was in 1989, and, as in 1999, the electorate voted overwhelmingly for the same party in both elections, and voted against the all-India trend. If the Congress(I) led in both the Assembly and Lok Sabha elections in 1989, the voting pattern ran counter to the all-India trend, which was against the party. This time too the verdict in Karnataka is very much at odds with that in the rest of the country which has, by and large, given the National Democratic Alliance (NDA) the mandate to rule at the Centre.

It is clear that in Karnataka a silent shift of the support base from the constituents of the Janata Dal to the Congress(I) has taken place, and this resulted in a sweep that surprised even the Congress(I). Kargil, the Vajpayee factor, and *swadeshi* versus *videshi* talk obviously meant nothing to the voters. People voted with their eyes on local issues, punishing individuals and parties who made promises but did not deliver on them. The voter decided that if a party is not fit to govern the State it is not fit to govern at the Centre.

The shift in the support base from the Janata Dal to the Congress(I), which will be better substantiated as more election data are available, has resulted in a considerable shift in voting patterns in some areas that were considered traditional strongholds of the BJP. For example, the Congress(I) has made inroads into the BJP base in the coastal belt, in Shimoga and in Bangalore city. Of the 24 Assembly segments that constitute the three Lok Sabha constituencies of Kanara, Udupi and Mangalore, the Congress(I) won 15 seats and the BJP seven. In Shimoga, the Congress(I) won six Assembly seats and the BJP only one. And in Bangalore city (North and South), the Congress(I) won 10 out of 16 Assembly seats whereas the BJP won only four. This happened despite the fact that the Congress(I) did not really run a coherent and well-planned election campaign. The party in fact ran a defensive campaign, which responded to issues raised by the BJP. For the Congress(I), the focus was Bellary, and all senior leaders were personally involved, at one level or another, in ensuring the victory of party president Sonia Gandhi.

To what extent the alliance of the BJP with the JD(U) transferred the anti-incumbency vote from the BJP kitty to that of the Congress(I) can be fully understood only when the details of the voting patterns are available. The alliance with the JD(U), which was forced upon the local BJP unit, came into operation only a day before the last date for the withdrawal of nominations. There was in fact no alliance on the ground. In almost 50 constituencies, BJP and JD(U) candidates fought each other; in a number of constituencies the committed BJP cadre did not work for the non-BJP candidate. Unlike in 1998, when Lok Shakti and BJP leaders conducted a joint campaign, this time there was no such show of unity even at the leadership level. In fact, resentments and accusations were openly expressed by leaders of the JD(U) and the BJP.

In its post-mortem of these elections, the BJP State unit will surely make the JD(U) the scapegoat for its own unexpectedly poor performance. It has already started to do so. Would the BJP have done better without the alliance, or would it have done even worse? The fact that there has been a significant erosion of its support in its traditional strongholds suggests that the blame for the BJP's losses cannot be laid entirely at the door of the JD(U). Veteran leaders of the BJP were defeated in these elections, and the reasons surely go beyond the alliance. ■

DASU KESAVA RAO

BEATING back a spirited Congress(I) challenge, N. Chandrababu Naidu steered the Telugu Desam Party-Bharatiya Janata Party alliance to a phenomenal victory in the Assembly elections in Andhra Pradesh. The combine secured a two-thirds majority in the 294-member House.

Chandrababu Naidu and 30 of his Cabinet Ministers were re-elected. The BJP improved its position, particularly in the Telengana region where it wrested seats from the Congress(I). The BJP held only two seats in the previous Assembly.

The TDP's massive mandate exceeded its own estimate. A seemingly reinvigorated Congress(I), under the leadership of Pradesh Congress(I) Committee chief Y.S. Rajasekhara Reddy, was widely expected to give a tough fight to or if not defeat the TDP. Favourable opinion poll and exit poll predictions notwithstanding, the success of the TDP was never taken for granted, more so in the context of the hype of near-invincibility built up around the party by the Congress(I) campaign managers.

Significantly, the TDP went to the polls on highlighting its performance in government rather than making attractive promises or by raising emotional issues. If an anti-incumbency factor existed, Chandrababu Naidu seemed to have overcome it.

Chandrababu Naidu sees the mandate as an endorsement of his government's performance in the four years it was in office, and the total support of women voters who responded to his repeated calls at election rallies to vote in good numbers. It is his conviction that people would reward good governance and credible leadership. With this in mind, he worked almost "18 hours a day, 30 days a month and 365 days a year" right from the time he assumed office on September 1, 1995. He said that the triumph of the TDP only strengthened his resolve to continue the work with greater vigour.

THE Congress(I), which had visions of a grand revival, was shell-shocked, although it improved its presence in the Assembly to 90 from a mere 26 (short of the minimum required for its leader to get recogised as the Leader of the Opposition) in 1994. The PCC(I) chief said that the party would accept the people's verdict, and attributed the defeat to the coming togeth-

A clear majority for TDP

er of the BJP and the TDP.

It was quite a setback for Rajasekhara Reddy and Congress(I) Legislature Party leader P. Janardhana Reddy who strengthened the organisation after the party's rout in 1994. The former had firmly set his eyes on the chief ministership. On the eve of the counting of votes, Rajasekhara Reddy said that he would embrace political *sanyas* if the Congress(I) failed to win and challenged the Chief Minister to do likewise. However, he backed out on the promise later on the grounds that Chandrababu Naidu had not accepted the challenge. He maintained that he was prepared to give up the party leadership but left the decision to the high command.

ANDHRA PRADESH

[illegible]	294
Elections held	293
TDP	180
BJP	12
Congress(I)	90
AIMIM	4
CPI(M)	2
Independents	5

The Congress(I) suffered major upsets in several constituencies. Janardhana Reddy lost to K. Vijayarama Rao, former Director of the Central Bureau of Investigation (who contested on the TDP ticket) in the Khairatabad constituency by a slender margin of 5,400 votes. Other Congress(I) losers include the legislative party office-bearers Gade. Venkata Reddy (Parchur) and M. Kodanda Reddy (Murshidabad), party spokesmen K. Rosaiah (Tenali), Gali Muddukrishnama Naidu (Puttur) and P. Veeranna (Mahabubnagar). Only two members of the earlier Chandrababau Naidu Cabinet – Patnam Subbaiah (Palamner) and Padala Aruna (who was fielded from the Bobbili Lok Sabha constituency) – suffered defeat. PCC chief Rajashekara Reddy was elected from the Pulivendla constituency.

The ruling party performed fairly well in the coastal districts of the Andhra region and in Rayalaseema, a traditional stronghold of the Congress(I), but lost ground in the Telengana region where it shared the honours with the Congress(I). Party leaders dismissed the view that by joining hands with the BJP, it had alienated Muslims and other minorities. In fact, TDP nominees were elected in some constituencies with a considerable minority presence. The fact that the TDP's term was generally free of communal incidents in Hyderabad stood the party in good stead. (Chandrababu Naidu had made 30 nearly surprise visits to the old city of Hyderabad, which has a predominant Muslim population.) In Hyderabad, the TDP won four seats and the BJP two, whereas the Congress(I) won only the Afifnagar seat. The TDP candidate polled 1,400 votes fewer than sitting MLA and Majlis Bachao Tehreeq chief Mohd. Amanullah Khan and about 14,000 votes fewer than the Majlis Ittehadul Muslimeen (MIM) winner in the Chandrayangutta constituency. In Charminar, the TDP took the second spot behind the MIM while the Congress(I) finished fourth and polled less than half the TDP votes.

The election witnessed setbacks to the Left parties, once trusted allies of Chandrababu Naidu, and the smaller players in the arena such as the NTR-TDP, the Anna-TDP and the Mahajan Front. The Left parties had a combined strength of 33 in the 10th Assembly. The majority of the sitting MLAs of the Communist Party of India (Marxist) and the Communist Party of India (CPI) were defeated. The CPI(M) won two seats and the CPI (Marxist-Leninist) one. The Communists' loss turned out to be the Congress(I)' gain.

The NTR-TDP leader Lakshmi Parvati, was defeated in both Sompeta and Eluru Assembly constituencies; she polled a mere 1,500 votes in the latter. Nandamuri Harikrishna, Anna TDP chief, finished third in the Gudivada Assembly constituency, the seat which was once held by his father N.T. Rama Rao.

The Congress(I) levelled several charges of corruption against the Chief Minister and even sought the Governor's permission to launch prosecution proceedings against him. The Left parties had launched an extensive campaign against the World Bank loans the State obtained on disadvantageous terms.

The Congress(I) promised free power supply to farmers. This had appeared to catch the imagination of the voters, particularly in Telengana. But the Chief Minister countered this by saying that he did not wish the painstaking reforms in the power sector to be jeopardised for political gains.

CHANDRABABU NAIDU has reason to feel happy about the outcome of the elections. This was the first time that his party faced simultaneous elections to the Assembly and the Lok Sabha under his stewardship. Further, there was no NTR charisma to fetch votes for the party.

His *Praja Deevena* (people's blessings) call to intellectuals, professionals and non-committed voters to evince interest in the elections as a matter of right had a good response. A case in point was the entry into the electoral fray of Vijayarama Rao and women functionaries of the Development of Women and Children in Rural Areas (DWCRA) and women college lecturers. (Andhra Pradesh has the highest number of DWCRA groups – about 2.5 lakh – which pooled savings to the tune of Rs.500 crores. Chandrababu Naidu promoted the DWCRA concept vigorously and covered the group members in the 'Deepam' – free cooking gas to rural poor women – scheme.) Industrialists such as T.G. Venkatesh (Kurnool) and 'Ambica' Krishna (Eluru) picked up seats for the TDP.

KR DEEPAK

Chief Minister N. Chandrababu Naidu.

The TDP's attempts to portray Rajasekhara Reddy as a faction leader with a criminal record – it described him as having the potential to extend the bomb culture of Rayalaseema to other parts of the State – was given up midway after a bomb exploded in the premises of the Panchayati Raj Minister and TDP candidate for the Narasaraopet Assembly seat, Dr. Kodela Siva Prasada Rao. The TDP's managers reverted to focussing on the party's policies and performance. Siva Prasad Rao won the seat.

With a solid mandate, Chandrababu Naidu plans to be back in the business of furthering the reform process, increasing the pace of development and pursuing the goal of 'Swarnandhrapradesh'. ■

Dual victory for SDF

KALYAN CHAUDHURI

SIKKIM	
Lok Sabha	
Total seats	1
SDF	1
Assembly	
Total seats	32
SDF	24
SSP	7
Independent	1

THE Sikkim Democratic Front (SDF) was swept back to power in the Himalayan State with a two-thirds majority in the 32-member Assembly. The SDF also won the lone parliamentary seat.

The SDF's dual victory not only shattered the hopes of Sikkim Sangram Parishad (SSP) chief Nar Bahadur Bhandari to regain power but also reaffirmed the domination of regional forces over a national party, the Congress(I). The Congress(I), which was responsible for the State's merger with the Indian Union 24 years ago, has never been elected to power in the State. It ruled Sikkim twice in the past by co-opting a ruling regional party into its fold.

The SDF, led by Chief Minister Pawan Kumar Chamling, which contested 31 seats, won 24 seats, and the SSP seven. The country's only non-territorial seat, the Sangha (monasteries), was won by an independent, Palden Lama, who was backed by the SDF. The Congress(I) and the SSP contested all the 32 seats. In 1994 the SDF won 19 seats but its tally increased to 25 when it admitted six SSP deserters.

The SDF's Bhim Dahal won the Lok Sabha seat for the third consecutive time by defeating his SSP rival, Satish Chandra Rai, by more than 20,000 votes. The Congress(I) candidate, Somnath Poudyal, got a little more than 9,000 votes.

Chamling was elected from his home constituency of Damthang for the fifth time in a row. However, two of his ministerial colleagues, D.P. Kharel (Health) and Ram Lepcha (Finance), lost to the SSP in the Central Pandam and Pathing constituencies respectively. Nar Bahadur Bhandari, who ruled the State with a iron hand for almost 15 years until 1994, made it to the House from Rhenock, a constituency dominated by upper-caste Nepalis. However, he was defeated in his native Soreng seat by the SDF's R.B. Subba, by 66 votes. His wife and former member of Parliament, Dil Kumari Bhandari, lost to State Tourism Minister Garajaman Gurung in Temi Tarku by more than 1,300 votes. The key Gangtok seat in East district went to the SSP's Narendra Pradhan for a second time.

Ethnic issues dominated the election scene. The 2,55,253 voters consisted mainly of the three ethnic communities of Bhutias, Lepchas and Nepalis. The SDF enjoys the support of the Other Backward Classes within the majority Nepali community. Nepalis constitute about 72 per cent of the State's population of nearly six lakh (upper castes 26 per cent, OBCs 38 per cent and Scheduled Caste 8 per cent). The remaining 28 per cent comprises of the minority Buddhist Bhutia-Lepcha tribal community and a fraction of the plains people.

THE results have indicated that the SDF's support base in the rural areas has remained intact. In a bid to win over the Bhutia-Lepcha community, the SDF had demanded that one more seat be reserved for Sikkim in both Houses of Parliament. The SDF had also demanded that Newars, Bahuns and Chhetries, or the NBC, and Jogis, Sanyasis and Thamis be included in the list of OBCs. This helped the SDF garner the electoral support of a sizable section of upper-caste Nepalis, in addition to that of Bhutias and Lepchas, who belong to backward communities. The fact that Chamling himself belongs to the OBC category, which constitutes the largest chunk of the electorate, helped the SDF win the support of voters of those communities.

Chamlings's hold over the Nepalis of Mongoloid origin was seen to be intact as he won all the 16 seats in the South and West districts. On the other hand, Bhandari, an upper-caste Nepali Kshatriya, and his candidates won six out of the 12 seats in the upper-caste-dominated East district. In the last Assembly elections, the SSP won eight seats in the district. Of the 12 seats reserved for Bhutias and Lepchas, the SDF won 10 and the SSP two. In the previous elections, the SSP had won six reserved seats. The SDF retained the two reserved seats of Reteypani Western Pandam and Khamdons.

Former Chief Minister Sanchaman Limboo and former Ministers, including Man Bahadur Dahal, Thukchuck Lachungpa and Taraman Rai, who contested on the Congress(I) ticket, were defeated. Former SDF Deputy Chief Minister P.T. Lucksom and former head of the Sikkim Ekta Manch Laxmi Prasad Tewari, who represented the Congress(I), were defeated in Renchinpong and Dentam constituencies respectively.

Unable to win a single seat, the Congress(I)'s game plan failed. The State party leadership was aware of the fact that it would not be able to win a good number of Assembly seats. But it tried to win at least three seats in addition to the four it has in the previous Assembly, in order to be in a position to strike a deal with the SDF or the SSP in the event of a hung Assembly. With the hope of capturing the tribal vote bank in the rural areas, the Congress(I) kicked off its poll campaign immediately after the announcement of poll dates by holding a rally in Gangtok.

The Congress(I) ruled the State for five years from 1974. It started losing strength after the 1979 elections. Bhandari quit the Congress(I) and formed the SSP, which was elected to power in 1979. He ruled for three terms, barring a brief break in 1984 when the State was under President's Rule. In the 1985 elections the SSP won 29 of the 32 seats. Its performance was astounding in the 1989 elections, when it won all the 32 seats. It was in 1993, a year before another round of Assembly elections was due, that Chamling, a Minister in Bhandari's Cabinet, broke away to form the regional party, the SDF. The party won an absolute majority in the 1994 elections. This time it has come to power with increased strength, marginalising the SSP and decimating the Congress(I). ■

SUSHANTO PATRONOBISH

P.K. Chamling.

Congress(I) sweep

KALYAN CHAUDHURI

IN a landslide victory, the ruling Congress(I) won the two Lok Sabha seats and 53 seats in the 60-member Legislative Assembly in Arunachal Pradesh, decimating the Arunachal Congress, led by Gegong Apang, former Chief Minister, and once again proving that the people of this hilly northeastern State are opposed to the growth of regional forces.

The main advantage for the Congress(I) was that the anti-incumbency factor had not come into play as the party came to power only in January this year, replacing the Arunchal Congress government headed by Apang. Four Congress(I) candidates, including Chief Minister Mukut Mithi, were elected unopposed.

In the East Arunachal Lok Sabha constituency, two-time winner Wangcha Rajkumar defeated the BJP's Tapir Gao by 41,403 votes. The constituency comprises Rajkumar's home district of Tirap and the five other districts of Changlang, Lohit, Dibang Valley and Upper and East Siang. In Arunachal West, Jarbon Gamlin won by 55,000 votes against Union Minister of State Omak Apang of the Arunachal Congress.

Mukut Mithi's gamble of dissolving the Assembly eight months ahead of the expiry of its term and opting for simultaneous polls paid off. Apang opposed the holding of Assembly elections along with the Lok Sabha elections, saying that the situation was not conducive to free and fair elections. He suggested that the State be put under President's Rule until the time was ripe for Assembly elections. Apang alleged that the outlawed National Socialist Council of Nagaland (Khaplang faction), active in Tirap and Changlang districts bordering Nagaland, had declared that only the Congress(I) would be allowed to contest. The elections were, however, held in a peaceful atmosphere, and the voter turnout was more than 65 per cent.

Of the 42 candidates fielded for the Assembly by the Arunachal Congress, only Gegong Apang was elected. He contested from his home constituency of Yingkiong in Upper Siang district. He, however, lost from Liromba, a second seat he contested.

The BJP, an ally of the Arunachal Congress, fielded 28 candidates but did not win a single seat. The two parties had reached an understanding on the parliamentary seats but not for the Assembly polls. In 10 constituencies they fielded candidates against each other thereby spliting opposition votes.

The fledgling Nationalist Congress Party (NCP) of Sharad Pawar fielded 18 candidates and won four seats.

The election process in this frontier State, which borders China, Myanmar and Bhutan, was a challenge for both the candidates and the poll officials. Candidates had often to trek for miles across jungles to reach remote villages. Twenty-five major tribes and 120 subtribes constitute the State's population.

Arunachal Pradesh is traditionally a Congress(I) stronghold. In the 1995 Assembly elections, the Congress(I) won an overwhelming majority and formed a government with Gegong Apang as Chief Minister. Apang left the party following differences with Prime Minister P.V. Narasimha Rao and formed the Arunachal Congress in September 1996 with the support of 54 MLAs. In the 1998 Lok Sabha elections, the Arunachal Congress allied itself with the BJP. Omak Apang was elected from Arunachal West and was later inducted into the A.B. Vajpayee Ministry.

Several leaders of the party, even Apang's close associates, were not happy with the way Gegong Apang pushed for his son's entry into the Ministry, depriving senior leader Wangcha Rajkumar, two-time winner from Arunachal East, of a chance to become a Minister. Rajkumar was angry, and a revolt followed. Five Ministers, including Mukut Mithi, who stood by Rajkumar, were dropped from the State Cabinet. Shortly thereafter the dissidents led by Mukut Mithi, formed the Arunachal Congress (Mithi) with 40 MLAs on their side. Mithi was installed as Chief Minister in January. In April, the Arunachal Congress (Mithi) merged with the Congress(I), which had only four MLAs, and formed the Congress(I) government.

Mukut Mithi, who has now led the Congress(I) to a resounding victory, said that the main task before him was the overall development of the State, which has hardly any industrial infrastructure. The State's primary problem is communications. "What I want to achieve is a peaceful and prosperous Arunachal with equal opportunities and gainful employment for all," Mithi said. ■

RITU RAJ KONWAR

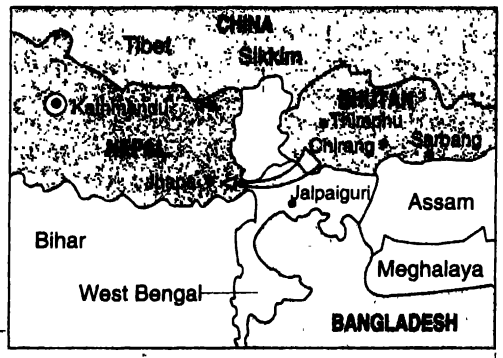
Mukut Mithi, leads the Congress(I) to a resounding victory.

RITU RAJ KONWAR

Gegong Apang. The lone winner for the Arunachal Congress.

An unsettled living

The situation in the refugee camps in eastern Nepal has become alarming as the governments of Nepal and Bhutan fail to find a permanent place of settlement for the homeless Nepalis.



KALYAN CHAUDHURI

AFTER seven years and several rounds of talks between the Bhutan and Nepal governments, the fate of thousands of Bhutanese of Nepali origin, who fled southern Bhutan to seek shelter in eastern Nepal, remains uncertain. The hope of finding a place of permanent settlement for these refugees has receded.

The conditions in the six makeshift camps set up by the United Nations High Commission for Refugees (UNHCR) in Jhapa and Damak districts of Nepal, close to the Indian border, are worsening. The camps are overcrowded, and there is an acute scarcity of food, drinking water and medicines. Several people are dying of hunger and disease. Despite the presence of international non-government agencies such as Lutheran World Service and Save the Children Fund, apart from the UNHCR, the situation has become unmanageable. To make matters worse, the influx of homeless Nepalis continues.

As the camps are full, shanties have come up on the dry sand bed of the Mahananda in Siliguri and Darjeeling districts of northern West Bengal. According to the figures provided by the Appeal Movement Coordination Council of the Jhapa refugees, the number of registered Nepali refugees in Jhapa and Damak was more than 86,000 as of August 1999. The number of unregistered refugees who stayed with friends and relatives in West Bengal is estimated at 30,000. Gastro-enteritis, typhoid and malaria, which at one stage broke out in epidemic form, have taken a heavy toll of lives.

WHAT forced the Nepali-speaking people, including Lhotsampas (Nepali immigrants in Bhutan who have been granted citizenship), mostly from the four southern districts of Sarbhang, Chirang, Samchi and Dagana, to flee? The exodus started in June 1991 when the Government of Bhutan took up a programme of "Bhutanisation" of the Nepali-speaking people (*Frontline*, October 9, 1992). According to the refugees, in the process security forces of the Drukpa

SAPNA BHATTACHARYA

Bhutanese refugees of Nepali origin marching from the Jhapa refugee camp in eastern Nepal in 1996.

Government resorted to repressive measures. The immigrants were forced to adopt in 1989 a dress code which prescribed the *kho* (a long robe tied around the waist by a belt) for men and the *kira* (an ankle-length dress) for women. Any resistance meant harassment, torture and even arrest. Orders from the Government were harsh, such as: "During preliminary checking some people are detected roaming around without wearing national dress. Therefore, they must be asked to report to the office of the local administration along with a fine of Nu 100 (the exchange rate prevailing then was Nu 1 = Re.1) per head without fail" or "Any Bhutanese national leaving the country to assist and help the Ngolops (antinationals, that is, Nepali immigrants) shall no longer be considered Bhutanese citizens... Such people's family members will also be held fully responsible and have to forfeit their citizenship."

For decades Nepalis have flocked to the tiny kingdom, seeking a better livelihood. Tensions between the native Drukpas and the Lhotsampas, many of whom had lived in Bhutan for decades, worsened in the early 1980s as the tide of impoverished immigrants from Nepal rose (as per estimates made at that time, Nepalis constituted about 35 per cent of Bhutan's population). In 1985, the government enacted a citizenship law, which said that anyone who came to Bhutan after 1958 would be considered an illegal immigrant. The law was largely ignored, and poor and jobless Nepalis continued to arrive. In 1988, the Government enforced the Citizenship Act, with strict speech and dress codes, ostensibly meant to preserve the country's socio-economic structure and cultural identity. Angry Nepalis began to organise themselves, and in 1990 formed the Bhutan People's Party (BPP), which is now banned.

As tensions between the two communities deepened, the Nepalis launched a militant movement under the banner of the BPP and the Bhutan National Democratic Party. Although the movement was concentrated in the southern districts, the Bhutanese Government was not ready to take chances. In July 1998, the 76th session of the National Assembly, which, for the first time in Bhutan's political history, elected a Council of Ministers as per King Jigme Singye Wangchuk's wishes, passed a resolution stating that "people who have emigrated from Bhutan should not be allowed to return to the country."

The fate of thousands of Bhutanese of Nepali origin, who fled southern Bhutan to seek shelter in eastern Nepal, remains uncertain. The hope of finding a place of permanent settlement for these refugees has receded.

Bhutan's Home Minister Lyonpo Thinley Gyamtsho stated in the Assembly that the Government's policy regarding "the people in the camps in Nepal claiming to be Bhutanese refugees" had always been clear. He pointed out that after several rounds of talks, the two governments had agreed that there were four categories of people in the camps: *bona fide* Bhutanese who have been evicted forcibly, Bhutanese who have emigrated, non-Bhutanese people, and Bhutanese who have committed criminal acts. Gyamtsho said that Bhutan had always maintained that if any citizen was found to have been evicted, it would take full responsibility for that. Such people would be recognised as genuine refugees and any person found responsible for evicting them forcibly would be punished, he said. The Minister said that the second category of people would be dealt with according to the citizenship and immigration laws of Bhutan and Nepal. Non-Bhutanese should return to the countries of their origin, and the repatriation of those who had committed criminal acts would be conducted as per the laws of Nepal and Bhutan. He said that they would be given an opportunity to prove their innocence in a court of law in Bhutan.

The Minister also told the Assembly that apart from holding bilateral official-level meetings, the King himself had conveyed Bhutan's stand on these four categories of people to successive Prime Ministers of Nepal.

Bhutan maintains that those people who left the country have been 'disenfranchised' and therefore cannot return. Nepal says it cannot recognise the refugees at Jhapa as Nepali citizens as they have been living in Bhutan for decades and have earned citizenship rights in that country. Bhutan has turned down Nepal's repeated appeals to take the refugees back.

THE homeless people organised a peace march in 1998 to Thimphu through Indian territory, only to be prevented by the West Bengal Police on the Darjeeling-Nepal border. The police arrested some leaders of the Appeal Movement Coordination Council and the Bhutanese Coalition for Democratic Movement.

The West Bengal Government did not want to allow any individual or group to use Indian territory to wage a movement against Bhutan, which has a special relationship with India. From the diplomatic point of view, the External Affairs Ministry's stand is not only pragmatic but in accordance with the values upheld by the country. India has maintained from the outset that the refugee problem is strictly one involving Nepal and Bhutan. Diplomatic compulsions have prevented India from looking at the humanitarian aspect of the problem.

The problem is of greater significance to the West Bengal Government as 30,000 Nepali refugees have infiltrated into the Darjeeling district. The State Government cannot bear the increasing burden of maintaining them.

THE plight of the refugees has generated sympathy and the Nepali-speaking people of Darjeeling are increasingly getting involved in the movement for their rehabilitation. Gorkha National Front (GNLF) leader Subash Gishing has not made any public statement on the matter; however, another Gorkha organisation, the All-India Gorkha League (AIGL), is actively involved in the rehabilitation work. The Communist Party of India (Marxist) and other Left parties have lent their support to the refugees' demands.

If the GNLF decides to take part in the movement, a possibility that is not ruled out, it will only vitiate the tense situation. The proximity of the area to the sensitive northeastern region has made the situation even more alarming, for the movement is likely to get the support of Bodo or United Liberation Front of Asom (ULFA) militants. Given up by Bhutan and Nepal, the refugees may ultimately find a safe haven in the Terai region of northern Bengal from where they may launch a direct movement against Bhutan. ■

A simmering dispute

The renewed dispute between Tamil Nadu and Karnataka over the sharing of Cauvery waters continues to simmer despite rainfall.

T.S. SUBRAMANIAN
in Chennai

RAIN in the Cauvery delta districts of Tamil Nadu last fortnight provided a breather in the State's war of nerves with Karnataka over the sharing of the river's waters. However, a row has erupted between the two principal parties in Tamil Nadu: the ruling Dravida Munnetra Kazhagam (DMK) and the Opposition All India Anna Dravida Munnetra Kazhagam (AIADMK).

The controversy related to over the deletion of a clause in the original draft scheme of May 30, 1997 which empowered the Centre to take over the reservoirs in Karnataka if it failed to implement the Interim Order of the Cauvery Water Disputes Tribunal. The Interim Order had required Karnataka to release 205 tmc ft of water to Tamil Nadu at the latter's reservior at Mettur every rain year (from June to May) on a prescribed weekly basis. If there was a shortfall in one week, Karnataka should make good the following week.

Raising the issue, AIADMK general secretary and former Chief Minister Jayalalitha criticised Chief Minister and DMK president M. Karunanidhi for agreeing to the deletion of the clause, which, she said, was vital in order to restrain Karnataka from transgressing the rule of law. She said the clause was in the "cardinal interest" of Tamil Nadu farmers. A verbal battle between the two leaders, through press releases and statements, followed Jayalalitha's criticism.

Jayalalitha asked: "Why did Karunanidhi in August 1998 agree to the deletion of the clause from the original draft scheme? Why was he hesitant to stand up for Tamil Nadu?" (On August 7, 1998, the Chief Ministers of the four riparian States – Tamil Nadu, Karnataka, Pondicherry and Kerala – signed an agreement on a scheme to implement the Interim Order.)

She described as a "toothless wonder" the Cauvery River Authority (CRA), which was formed under the August 1998 agreement and comprised the Prime Minister (as Chairman) and the four Chief Ministers. In her view, a monitoring committee consisting of officials and backed by an (expected, favourable) Supreme Court order alone would have forced the Karnataka Government to adhere to the interim order.

Karunanidhi replied that the CRA would not have become a reality if he had not agreed to the dropping of the clause in question. The Chief Ministers of both Karnataka and Kerala, J.H. Patel and E.K. Nayanar respectively, opposed the provision on the grounds that it was against the spirit of federalism.

Karunanidhi said that at the all-party conference held in Chennai on August 6, 1998 most of the parties, including the Communist Party of India and the Communist Party of India (Marxist), had expressed the view that there was no need for the clause.

Regarding Jayalalitha's preference for a monitoring committee, Karunanidhi argued that since the CRA comprised the Prime Minister and four Chief Ministers, it was a far more powerful body than a monitoring committee consisting of officials. "When the Karnataka Chief Minister and other Ministers issue statements refusing to accept the decisions of the CRA, headed by the Prime Minister himself, will they accept the decisions of committee consisting of only officials?" Karunanidhi wondered. He denied that the CRA was toothless. He pointed out that the Central Gazette dated August 11, 1998 had listed the powers of the CRA and said that its order was binding on the four States. He said that since the agreed final scheme came under Section 6-A of the Inter-State River Water Disputes Act, it had legal status. Karunanidhi said: "The Authority has constitutional validity and it definitely has powers to implement the Tribunal's orders." He accused Jayalalitha of politicising the issue.

Earlier, in the second fortnight of September, Karnataka had refused to release to Tamil Nadu its share of water. This was despite an appeal from Prime Minister A.B. Vajpayee to J.H. Patel and a recommendation of the monitoring committee of the CRA to the Karnataka Government to release 9 tmc feet of water to Tamil Nadu to save standing crops. A Central team headed by Union Water Resources Secretary Zafrul Hasan endorsed the recommendation after visiting the reservoirs in Karnataka and the Mettur dam. Karnataka's refusal jeopardised the *kuruvai* crop on 80,000 hectares and *samba* nurseries on another 20,000 ha.

According to a Tamil Nadu Government official, there was a shortfall of 30 tmc feet in releases by Karnataka up to September 30.

EVEN as this battle went on in the first week of October, the ground situation in the delta districts of Thanjavur, Tiruvarur and Nagapattinam underwent a dramatic change with rain drenching the area. S. Ranganathan, secretary, Cauvery Delta Farmers' Welfare Association, said on October 6: "The rain was very helpful; it saved *kuruvai* and *samba* from destruction."

Ranganathan said that "an encouraging sign" was the visit by a four-member team from the Karnataka Rajya Raitha Sangha (KRRS) to the delta region in Tamil Nadu. The team, which included V. Sesha Reddy, its vice-president, was deputed by its president M.D. Nanjundaswamy at the suggestion of Ranganathan. It saw crops withering in villages near Mannargudi, Needamanagalm, Thanjavur, Tiruvaiyaru and Tirukattupalli. (Even as the team began its visit, the rain started.)

Ranganathan told the team that 10 tmc feet of water was needed to save the *kuruvai* crop and another 25 to 30 tmc feet for the *samba* crop. At a press conference in Bangalore on October 3, the team said that 25 to 30 tmc feet was needed to save the *kuruvai* and *samba* crops in Tamil Nadu till rains came.

The rain and the announcement of the results of the Lok Sabha elections put a halt to the controversy, for now. ■

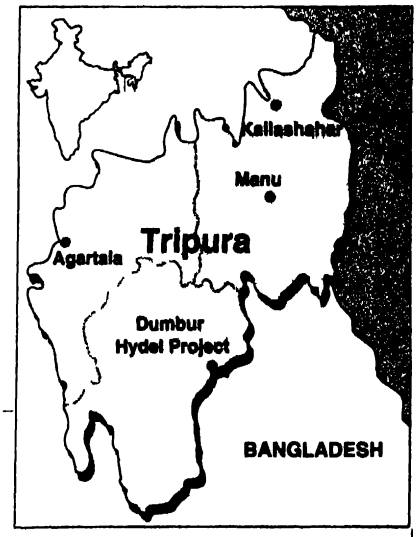
Reign of terror

Extremist outfits in Tripura resort to large-scale abductions and extortion in order to raise money to build up their arsenals and fund their leaders' lavish lifestyle.

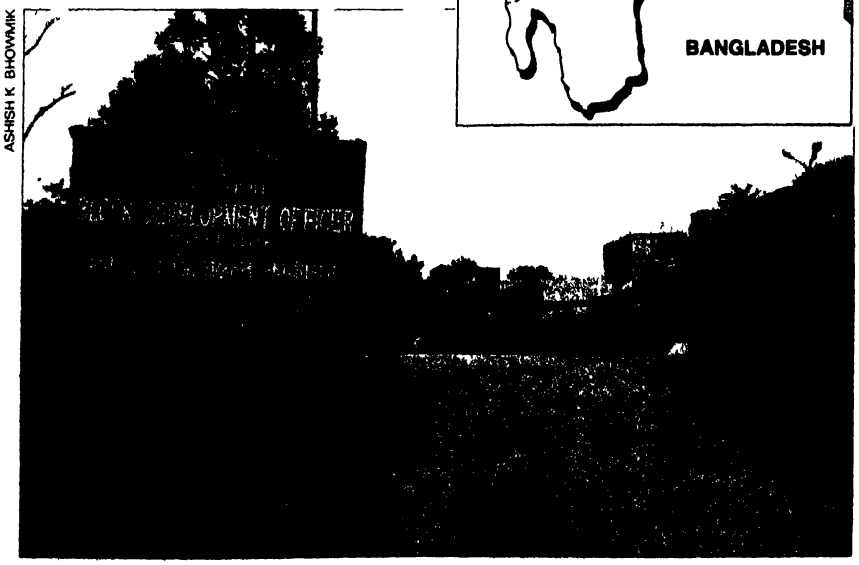
SYED SAJJAD ALI
in Agartala

PARTHAPRATIM MAJUMDAR, a government doctor, was on his way to the primary health centre at Burakha, 20 km from Agartala, the State capital, on a September morning last year. With him in a jeep were 20 passengers, most of them small traders and junior-level employees of government health centres and agricultural farms. Just as the jeep crossed Lalitbazar, four young men emerged from the bushes and stopped it at gunpoint. After seperating the other passengers, they attacked Dr. Majumdar with AK-47 rifles, hitting him on the ribs and the stomach. Minutes later, they tied him up with towels (*ghamcha*) and took him away. This was the beginning of a 12-day nightmare for Mujumdar. Although he emerged out of it unscathed physically, he remains shaken.

Recounting his experience Majumdar said: "They asked me to run. They were apprehensive that soldiers of the Maratha Light Infantry may catch up with the group. They told me, 'if the Marathas come, you will die with us'."



On the third day of his forced march through some of Tripura's toughest jungles, Majumdar found himself descending a hill into an undulating terrain full of tea gardens. "I knew they were taking me into Bangladesh," he said. "I knew that it was the Sylhet region from where my wife hails."



However, Majumdar is one of the luckiest among the nearly 3,000 people – mostly Bengali migrants – who have been kidnapped for ransom by insurgents in Tripura over the last few years. Soon after his abduction, his brother-in-law Subir Bhaumik, who is the BBC's eastern India correspondent and who has good contacts amongst the rebels, intervened. Upon this, the rebels, members of the All Tripura Tiger Force (ATTF), who had demanded Rs.25 lakhs from Majumdar's father, a retired police officer, backed off. Rebel groups such as the United Liberation Front of Asom (ULFA), which have a close relationship with the ATTF, pressured the ATTF to release Majumdar. Besides, several tribal leaders who were staying in Agartala reportedly received threats from unknown quarters that they would be killed if Majumdar was not released. (Most of Tripura's guerillas are impoverished tribal people who lost their land to Bengali migrants and feel marginalised by the continuous influx of people from Bangladesh. The influx has in fact changed the demography of the erstwhile princely state; tribal people, who were once a majority here, have now become a minority.)

Majumdar himself does not appear to be angry with his abductors. "The rebel soldiers are simple tribal folk, far too innocent to see through their leaders' propaganda," he said. "They gave me the best food they could find because I began to treat them medically."

According to political scientist Sabyasachi Basu Roy Choudhury, Tripura offers an example of the "sons of the soil becoming outsiders in their own land." The State has hardly any industry despite it being rich in natural gas (Tripura is in fact unable to meet its own power requirements.) Roy Choudhury says it is not surprising that tribal youth stray into crime, with the "kidnap industry" becoming a major money-spinner.

Bhaumik, whose book *Insurgent Crossfire: Northeast India*, a Lancer publication, 1996, is noted for the research it reflects on the northeastern region, says that what he finds unacceptable is that no rebel group raises the issue of land. "They do not demand restoration of tribal lands," he says. "They just come up with the empty rhetoric of independence.

ASHISH K. BHOWMIK

Outside the Block Development Officer's office at Manu, from where 16 government employees were kidnapped by the National Liberation Front of Tripura in September. The organisation has demanded a ransom of Rs. 1 crore for their release.

What they really do is to raise millions of rupees through abductions, which is then blown up in foreign countries by a small group of 'leaders'. They behave like mafias, not like guerillas with a cause." K.T.D. Singh, Director-General of Police, Tripura, says that leaders of the extremist organisations lure poor tribal youth and use them to carry out kidnappings. According to him, these leaders maintain lavish lifestyles with the ransom money.

Bhaumik is of the opinion that the State government should go in for a major power project using its natural gas so that the State's meagre electricity needs are meet (the current peak demand is 110 MW). He believes that since the Dumbur Hydel Project in south Tripura produces only 5 to 7 MW, the more than 40,000 hectares of fertile tribal land that was submerged for the project should be reclaimed and handed back to the 25,000 or so landless tribal families, whose *jhum* harvest lasts them for barely four months a year. These are the families from which the insurgents have emerged.

"Reorientation of development priorities is needed to solve the problem of insurgency," says Bhaumik. "It may sound old-fashioned, but it is this and not the Western market economy formula that can solve Tripura's ethnic insurgency problem."

Until such bold steps are taken, Tripura's two-decade-old insurgency problem will continue. The first phase of insurgency ended with the surrender of members of the Tribal National Volunteers (TNV) in 1988 after an accord with the Centre. "Those days we attacked security forces and Bengali settlements that had come up on tribal land. We did not go after money," says Bijoy Hrangkhawl, the TNV supremo, as he speaks derisively of the present crop of guerillas. His one-time deputy Dhananjoy Reang adds: "We had a system of raising taxes... people were not fleeced; they were asked to pay whatever they could. Now it is sheer extortion."

The ATTF and the National Liberation Front of Tripura (NLFT) are the main groups that indulge in kidnapping and extortion. Lesser known groups comprising small-time criminals also operate in the region. Often they kidnap a person and "sell" him to a bigger group for a price. Bigger groups such as the NLFT and the ATTF, according to reliable sources, demand as ransom double the amount they would pay the smaller groups. "It is a well-oiled trade," says Tripura's Police Intelligence chief Dilipjit Debbarma.

While the Assam government has cracked down on tea companies that "bought" peace by paying large sums of money to the ULFA or Bodo rebels, in Tripura the government is seen to have often fought shy of attacking the "finance line" of the rebels. Lieutenant-General H.R.S. Kalkat, Chief of the Army's Eastern Command, says: "In Assam, the government cooperated with the Army and struck against the rebels in every possible way."

In June 1996, the ATTF kidnapped Yugabrata Chakrabarty, one of the State's leading tea planters and chairman of the Tea Association of India's Tripura branch. His family paid a ransom of nearly Rs.30 lakhs – only to be told that Chakrabarty had died of renal failure at a rebel base in Bangladesh. ("The rebels told me that Chakrabarty had died on the same bed they gave me," says Majumdar. By all indications, Majumdar and Chakrabarty were held captive in Satcherri, 6 km inside Bangladesh's Sylhet region across Tripura's Simna area.) Chakrabarty's family requested the rebels to return his body. His brother Shantibrata Chakrabarty alleges that the rebels asked for an additional Rs.10 lakhs to do so.

Most of those kidnapped are neither as unfortunate as Chakrabarty nor as fortunate as Majumdar. Usually, the kidnapped persons are released after the families pay the ransom. But during the negotiation period, the victims are often beaten and denied food. The Dumbur Hydel Project's executive engineer, Durgapada Guchait, who was kidnapped by the insurgents in November 1998, was all skin and bones when he was released. The release took place after Amnesty International made an appeal, perhaps for the first time in the case of individual, to Ranjit Debbarma, the group's leader. "They gave me food only once in several days. I could hardly eat what they gave me. They were angry because my family had established contact with Amnesty through a friend in Calcutta," Guchait says. His wife Gayatri and brother-in-law Bhabatosh Roy say that they had to pay nearly Rs.7 lakhs before Amnesty intervened and forestalled further extortion.

In recent times, Amnesty has begun to condemn the senseless kidnappings. When the NLFT kidnapped 16 government employees from Manu in northern Tripura in September this year, Amnesty promptly appealed to the group to release the captives and asked it to "stop the kidnapping of innocent civilians". It sent a letter to an NLFT base in Bangladesh,

GOVERNMENT OF THE
PEOPLES REPUBLIC OF TWIPRA
LFD BY NATIONAL LIBERATION FRONT OF TWIPRA
MOTTO "SACRIFICE FOR LIBERATION"
REVENUE & TAX DEPARTMENT

Estd 1399 T E / 1989 A D

Ref No R 4 (1 R)/NLFT/_____ / _____ Date 11/1/98

To
Mr/Mrs/Mst [illegible]

Dear Sir/Madam,

The Government of Twipra of the Revenue & Tax department hereby notified that according to the assessment year of 199[illegible] 199[illegible] to pay as Taxes of Rs [illegible] (in word) [illegible] on your annual income of all sources the amount should be paid within 15/1/98. If any person is found to pay he/she shall be imposed violation act under sec 7(1) of the Revenue & Tax act 1989

Collector

(J. BOSONG)
Secretary
of Revenue & Tax Dept
NLFT

A "tax notification" issued by the NLFT. Those who do not pay up run the risk of being kidnapped or killed.

Kidnapping cases: 1993 to 1998

Year	No. of cases reported	Hostages released	Hostages killed	Hostages missing

ASHISH K. BHOWMIK

Durgapada Guchait, an engineer with the Dumbur hydel project, who was kidnapped by the ATTF.

Holding Tripura to ransom

SYED SAJJAD ALI

YUGABRATA CHAKRABARTY, a tea planter, was the first prominent victim of Tripura's extremist groups. He was kidnapped in June 1996. His family paid nearly Rs.30 lakhs for his release. However, after accepting the ransom, the All Tripura Tiger Force (ATTF), the organisation that kidnapped him, said that Chakrabarty had died of renal failure a few days earlier. According to Chakrabarty's family members, the outfit demanded an additional Rs.10 lakhs to hand over his body.

Mrinal Choudhury, another tea planter, was kidnapped by ATTF extremists. His son was shot dead while trying to resist the abductors. Choudhury was later killed and his body thrown into an abandoned well in a remote area.

Bimal Sinha, Tripura's Health Minister, was shot dead by NLFT extremists when he went to negotiate with them to secure the release of his brother Bikram, who had been kidnapped by them. (This was the first instance of a Minister being killed by extremists in insurgency-ravaged north-eastern India.) When the Minister refused to pay what the extremists demanded, he and another of his brothers, who accompanied him, were gunned down.

Three legislators – Debabrata Koloi of the IPFT and Pranab Debbarma and Purna Mohan Tripura of the Communist Party of India (Marxist) – were kidnapped by the ATTF in separate incidents in 1997. While Pranab Debbarma escaped from the ATTF hideout in Bangladesh, the others were released after the ransom amount was paid.

Mystery surrounds the kidnapping of Dr. Pradip Reang, a doctor belonging to the tribal community. He was kidnapped by unidentified men last year and is yet to be traced. The police suspect that he may have been killed.

In November 1997, two kidnapped persons died in an exchange of fire between extremists and the police and paramilitary forces that raided a NLFT hideout in the Fatikroy area in north Tripura.

Ethnic riots broke out in the sensitive sub-division of Khowai in west Tripura in February 1997 after a leader of the local Bengali community Upendra Das, was abducted. Over 100 people, mostly Bengalis, were killed in riots that raged for four days.

In the largest ever kidnapping incident in the State's two-decade-old history of insurgency, NLFT cadres kidnapped 16 government employees from the block development office at Manu in Dhalai district in September this year. They have reportedly demanded Rs. 1 crore for the safe release of the victims.

Suspected NLFT rebels kidnapped four Rashtriya Swayamsevak Sangh leaders from Dhalai district. In this case too the extremists demanded a ransom of Rs.1 crore.

* * *

Subrata Choudhury, 30, is one of the 16 government employees who were kidnapped from the block development office at Manu in Dhalai district of Tripura on September 6. Choudhury, who was posted at the Fatikroy panchayat office, was in the district town at that time to attend a meeting on development activities.

Subrata Choudhury is the sole breadwinner in his family of seven, which includes his three sisters, two brothers and widowed mother. The family, which lives in a small bamboo house in Kailasahar in north Tripura, is now going through an agonising time.

"We are very poor. It is difficult for us to raise even a few thousand rupees. How can we think in terms of lakhs?" asks Supta Choudhury, one of his sisters, referring to the ransom demand made by the National Liberation Front of Tripura (NLFT). The NLFT has demanded Rs.1 crore for the safe release of the 16 hostages. The amount works out to a little over Rs.6.25 lakh for each of them. Supta Choudhury met the Chief Minister and top government officials. She has been assured of all help.

State government officials say that the government is sparing no effort to secure the release of the employees. An Army helicopter was pressed into service to try and locate the NLFT base where the hostages are held. It flew over the dense forests and hills of Dhalai district for three days, but to no avail. Combing operations by the Assam Rifles, the Central Reserve Police Force (CRPF) and the Tripura State Rifles yielded no result.

"We can only appeal to our brothers (extremists) to release them unharmed and unconditionally," Supta said in a broken voice. ■

where the group's leader, Biswa Debbarma, stays. This created a furore because now it was known where the group's leadership was holed up. K.T.D. Singh said: "Many of those who were kidnapped said that they were kept in extremist camps across the border. However, we cannot go to another country to conduct a rescue operation. The authorities concerned may take this serious problem to the appropriate level".

Despite Amnesty's intervention, the NLFT has said that it will not release the employees unless the government pays Rs.1 crore. Lesser amounts have been paid to secure the release of government employees and relatives of Ministers and legislators (see box). The money came from the "untied funds" available to the State government. Economist Arunoday Saha says: "This is a deadly cycle. The rebels need money for weapons and equipment, so they kidnap government officials. They know the money will come from the untied funds. Thus, government money meant for development ends up developing the rebel forces' arsenal." Tripura's Industries Minister Pabitra Kar says: "It is important to deny the rebels the funds. Unless we stop that, the rebel forces will increase in numbers, there will be more guns, and the situation will become unmanageable."

ASHISH K. BHOWMIK

K.T.D. Singh, DGP, Tripura.

In the past two years, the number of kidnappings – and the ransom claims – have increased sharply. According to

Central intelligence agencies, the NLFT and the ATTF lost large amounts of money they had deposited in banks in Thailand and the Philippines in local currency funds during the economic crisis in South-East Asia two years ago. Speaking on condition of anonymity, a senior official of the Subsidiary Intelligence Bureau said: "These amounts were kept ready to fund arms purchases from smuggling syndicates in Ranong (Thailand), but their value plummeted during the crash. Rebel groups are desperate for fresh funds because they need to make up for the loss."

Mass kidnappings have therefore increased in Tripura. Mohan Reang, a surrendered NLFT leader, says: "It serves them well to kidnap 20 bus passengers at one time because they can negotiate for a big amount."

However, for every reported case of kidnapping, there are at least two that are not officially recorded because the relatives do not report the incident to the police. "Civil society in Tripura is on the verge of collapse," says human rights lawyer Subhashis Talapatra. Satya Debbarma, a village council chief, says: "This means that the tribal people suffer much more than Bengalis, who can afford to pay up or go outside the State for treatment or education. We have nowhere to go."

This explains why insurgents may have killed more tribal people than Bengalis during the current phase of ethnic insurgency, which began earlier in the decade. As Jaldiham Reang, a schoolteacher in south Tripura who is a tribal person, says: "They (the tribal people) cannot pay ransom, so they are killed. They are suspected of acting as informants to the security forces. They are even killed if they refuse to serve foods to guerilla groups."

Asked why kidnappings could not be contained, K.T.D. Singh said: "Most of the kidnappings take place in the interior areas. The terrain is very difficult. Extremists, who are mainly local people, are familiar with each and every corner of the area. The paramilitary troops deployed to counter insurgency find it difficult to track them down." He added: "The absence of adequate intelligence is also a major irritant." According to K.T.D. Singh, "added to this is the delay in getting information. For example, by the time information about kidnappings reaches the police or the security forces, the kidnappers would have moved out of that area." ■

A police force under pressure

The police firing in Surat and the subsequent action against certain police officials highlight the pressures faced by the police force in Gujarat under a BJP government.

V. VENKATESAN
in Ahmedabad and Surat

THE police firing on an irate crowd at Limbayat Nagar in Surat in Gujarat during the Ganesh idol immersion ceremony on September 24 has left the State's Bharatiya Janata Party Government and the State police confused about their respective roles. The BJP and the rest of the Sangh Parivar were faced with the embarrassment of the State police having fired at their supporters.

The Government reacted to the incident by transferring to Ahmedabad Vipul Vijoy, Additional Police Commissioner, Surat, who had ordered the firing, but did not to take immediate action against Manoj Aggarwal, Deputy Superintendent of Police, Surat (East), who was at the spot when the firing was resorted to. Seven persons were killed in the firing.

Later, faced with an aggressive demand by the Vishwa Hindu Parishad (VHP) and some local residents for punishment to the police officials concerned, the Government placed both Vijoy and Aggarwal under suspension. (The VHP and the Bajrang Dal, instead of trying to use the incident to launch an agitation against a party in power for allegedly betraying the cause of Hindutva, staged a mild protest and "pardoned" the Government after it ordered the suspension of the officers.)

The officers were suspended under Rule 3 of the All-India Services (Discipline and Appeal) Rules, 1969, which empowers a State government to place a member of the Central services under suspension if disciplinary proceedings are either contemplated or are pending against him or her. A one-man commission is headed by Justice S.D. Dave, who retired on September 30 from the Gujarat High Court, has begun investigating the incident.

The Government based the transfer order on the report submitted by Director-General of Police C.P. Singh, who visited Surat the day after the incident. C.P. Singh apparently told the Government that the situation could have been controlled with lathicharge and the use of teargas.

The Indian Police Service Officers Association in Gujarat has stated in its memorandum to the Chief Minister that C.P. Singh had in Surat congratulated the officers for their excellent work in handling the situation but that on returning to Ahmedabad he reported to the Government that they had resorted to firing although the matter could have been handled tactfully. Incidentally, Vijoy was awarded the President's Police Medal in January for 16 years of meritorious service. His meeting with the Governor to receive the award has not yet been fixed.

The Government has not taken any action against the Police Commissioner, Kuldip Sharma, although there were protests against his continuance. The association demanded that Sharma take the responsibility for the firing and move out of Surat in order to facilitate a fair inquiry. Union Minister Kashiram Rana and State Minister from Surat Narottam Patel demanded action against Sharma.

Sharma's style of functioning has earned him both admiration and criticism. While he claims to have brought down Surat's crime rate significantly, his critics, mainly supporters of Kanshiram Rana, blame him for ignoring them. Sharma attributes the campaign against his continuance to vested interests, who suffered setbacks since he assumed charge.

Keshubhai Patel's reluctance to shift Sharma from Surat has led to at least two theories. One is that the Chief Minister

wants an adversary of Kanshiram Rana to be at the helm of the police force in Surat. Another theory is that the Chief Minister has in mind the municipal elections slated for January next, when the strength of the party's factions would be on test. Leader of the Opposition Amarsinh Choudhury alleged in the State Assembly that Sharma had collected election funds on behalf of the ruling party and thereby earned immunity from any action against him. Whatever the truth, now it seems it will be difficult for Keshubhai Patel to let Sharma continue in Surat.

The VHP does not see eye to eye with the Keshubhai Patel Government on the law and order issue, but it is not yet ready for a confrontation with it.

Meanwhile, Vijoy and Aggarwal have obtained a stay on the government order (GO), which they had challenged in the High Court. They have since moved the Central Administrative Tribunal (CAT), after the Government raised a procedural objection against the matter being heard in the High Court.

The IPS Officers Association claimed that the suspension orders had demoralised the State police and that this could lead to poor handling of the law and order situation in future due to inaction on the part of officers. This was proved correct on September 27 when VHP and Bajrang Dal activists disrupted a beauty pageant organised in Vadodara by a local organisation, 'Cops Group'. A passive police force watched helplessly and the programme was abandoned amidst violence.

KULDIP SHARMA told *Frontline* that Vijoy and Aggarwal had no option but to open fire. Police officials, members of the Ganesha Utsav Samiti of Limbayat, and local politicians including C.R. Patil, Chairman of a State public sector corporation and two BJP corporators, Murlidhar Patil and Ravindra Patil, had met before September 24 to decide the route to be taken for the immersion procession. A proposal to avoid the Madina Masjid area came from the Marathi-speaking people, who suggested that the people of Sanjay Nagar in the Limbayat area take the idols through another route, avoiding the masjid area. Vijoy and Aggarwal approved of the idea and requested the Commissioner to allow a route other than the one followed every year.

The Commissioner was receptive to the proposal and felt that the new route would be safer. Clashes have been witnessed every year near the Madina Masjid and trouble was expected this year too. Muslims generally lock the mosque and give the keys to the police before the procession passed through the area. This year, however, the immersion of idols took place on a Friday, when many Muslims were expected to arrive at the mosque to perform *namaz*.

However, the leaders who had agreed to the new route failed to persuade the local people to change the route. Some idols passed through the Masjid area before 9.15 a.m., the deadline set by the police and as per the permit given to the organisers. At that time two processions remained in the Sanjay Nagar area. The processionists insisted that they would take the traditional route. This was resisted by Vijoy and Aggarwal, who pointed out that the permit period had lapsed and that they would have to take the alternative route. The crowd entered into an argument with the police.

C.R. Patil failed to convince the crowd. It began throwing stones either triggering or following a lathicharge. C.R. Patil was injured The police fired 150 teargas shells and requested the control room to send 500 more. The stock of shells having been exhausted, they resorted to firing, first in self-defence and later to disperse the mob. Vijoy claimed that the Commissioner was informed about the incidents on the mobile phone and that they had got the clearance to respond to the situation as they deemed fit. The Commissioner agreed that as senior officers they had the powers to respond to a given situation. Finding the force outnumbered (the strength of the mob was put at around 20,000, whereas the police force was 100-strong), the Commissioner asked Vijoy to let the two remaining idols take the traditional route if C.R. Patil could guarantee peace at the masjid area.

The crowd had by then started pelting the police with stones, injuring 15 of them. Drunken revellers in the crowd were in no mood to listen to the police. Both Vijoy and Aggarwal were injured. Vijoy claimed that the police went through the formalities such as issuing adequate warning over the public address system, before opening fire. It is said that the crowd challenged the police to shoot.

There are murmurs within the police force that precautionary measures such as taking potential trouble-makers into preventive custody had not been taken. The police apprehended trouble in the Limbayat area partly because of the deaths in encounters of two gangsters belonging to the Chhota Rajan group in mid-September. Further, they opened fire on a mob which protested against the encounter deaths of Asif Amdawadi and Dilip Maratha. The police claim to have shot Amdawadi in retaliation for his killing of Maratha. Muslims' ire was one reason why the police feared the possibility of a clash if the processionists took the traditional route in the Limbayat area.

MEANWHILE, the VHP denied that its activists burnt the effigies of the Chief Minister, the Home Minister and the Surat Police Commissioner in protest against the firing. In fact, in the days following the incident VHP units were more concerned about organising a protest march in Surat against the abduction of a few Rashtriya Swayamsevak Sangh (RSS) activists in the northeastern. The reason for the VHP's reticence is not far to seek. It does not see eye to eye with the Keshubhai Patel Government on the law and order issue, but it is not yet ready for a confrontation as it sees the BJP governments at the State and the Centre as being responsive to its interests. Although some of the VHP's recent actions have tarnished the image of the State Government, the VHP does not want to appear to be opposing the State Government, as only under a BJP Government can it enjoy sufficient freedom to pursue its sectarian agenda.

The Surat episode took place at a time when the credibility of the Keshubhai Patel Government and the Gujarat Police was low. Kantilal Amrutiya, the BJP MLA from Morvi, was arrested for his alleged role in the murder of the former BJP president of the Morvi Municipal Corporation, Prakash Revashia, in September. Gangaram Tapu, one of the main accused in the case, was allegedly close to Keshubhai Patel. Cases relating to the murder of a former president of Mandvi municipality, a BJP corporator from Surat, and a close associate of Industries Minister Suresh Mehta earlier this year in Kutch are yet to be solved. Involvement of BJP supporters or activists in these cases is either suspected or alleged. ■

"I thought I would be the last person on earth to be affected by the Y2K Bug."

Ajay Jadeja, [illegible]

"Why me? I'm not a business man. I'm not one of those hep-to-the-computer guys. Unfortunately, the Bug doesn't care. It affects me — and you. I use electricity, water, and telephones — so do you. All these services and more are, run on microchips, at some level. If the microchips are date dependent, they can be affected by the Bug. And that's bad news for all of us.

We need to become more aware of the problem. And help others become more aware. We're in the slog overs - there's not much time left. Only a team effort can do it."

LET'S MAKE INDIA Y2K OK.

Y2K ALARM!

Nature's fury

Floods leave West Bengal and Bihar ravaged.

SUHRID SANKAR CHATTOPADHYAY

HEAVY rainfall following the formation of a low pressure trough left large parts of West Bengal, Bihar and neighbouring Bangladesh flooded in the third week of September Of the three, West Bengal seemed to have been the worst affected

On the morning of August 24, West Bengal woke up to find itself almost submerged following a downpour that persisted for over 12 hours In Calcutta, the weather office recorded 247 mm of rainfall – second only to the level of 370 mm of rain recorded in September 1978 – from midnight until noon on August 24 Fifteen of the 17 districts in the State were declared flood-affect ed In the two following days, with the water level showing no sign of receding, over 1 5 million people in the State, including Calcutta, were rendered homeless There was a food crisis too The situation was especially bad in the districts of North and South 24 Parganas, Malda, Purulia, Burdwan, Midnapore, Howrah, Hooghly, Murshidabad and Nadia

For two days, w[illegible]logged roads b[illegible]ht life in C[illegible]cutta to a standstill. The intrepid few who had ventured out could be seen wading through waist-deep water, some of them pushing their cars The State-wide death toll which on the first day of the flood was 11, had risen to 54 at the end of the fourth day

An estimated five million people in the state were affected Around 260,000 houses were completely destroyed while over 67,000 houses were damaged There has been considerable damage to crops too, over one million hectares, approximately 20 per cent of the total agricultural land in West Bengal, was submerged

To combat the crisis, the State Government released funds to the tune of Rs 35 crores On September 26, the Army despatched two relief teams, comprising 150 jawans, officers and doctors, to the flood-hit districts Rescue work and distribution of relief materials were carried out with the aid of eight high-speed boats provided by the Civil Defence and the Army, and two helicopters provided by the Air Force

SUBIR HALDAR/AP

People wade through the flooded main road of Nabadwip in Nadia district of West Bengal.

The water level in the rivers crossed the danger mark Fears that incessant rain in the catchment areas of major reservoirs such as Mayurakshi and Kansabati and those of the Damodar Valley Corporation (DVC) would flood the neighbouring areas, led to over 90,000 cusecs of water being released from the Kansabati reservoir and 80,000 cusecs from the DVC reservoir on September 24 The water thus released, along with the rain water, ravaged large areas of South Bengal, washing away thousands of houses and leaving people marooned

On September 29, the DVC released 35,000 cusecs of water from its reservoirs while 26,000 cusecs were released from the Farakka barrage. Even after the flood situation was brought under control and

water started receding, rivers such as the Kulin, Atrayee and Tangon in north Bengal were flowing above the danger mark. In the temple-town of Nabadwip in Nadia district, the Bhagirathi rose to over 10.65 metres, inundating the area. Nadia district has been the worst affected. An area of around 3,080 sq km was submerged, about 700,000 people were affected and 39,000 houses were damaged. Food packets were air-dropped. While most areas in the State returned to normal by October 2, Nadia went to the polls still submerged in water. In many areas, people came to the polling stations in boats.

An aerial view in north Bihar.

In Malda, over 200 villages were submerged and around 400,000 people were affected. Murshidabad and Malda remained cut off from southern Bengal as large parts of National Highway 34 was submerged.

State Finance Minister Asim Dasgupta said that the West Bengal Government had asked for Rs. 250 crore from the National Calamity Fund. He estimated that with 15 States being declared flood-hit, and millions of people being affected, losses would have exceeded Rs. 1,000 crores.

The flood also brought in its wake gastro-enteric diseases. The government distributed oral rehydration solution packets and tablets, and deployed portable pumps in parts of Calcutta where drinking water shortage was acute. In many parts of Calcutta, the water level did not recede because outfall canals in the city could not cope with the flow. The full-moon tide in the Hooghly further complicated efforts to flush out the water.

IN Bihar the situation became serious when heavy rains, cyclonic winds and discharge of river water from Nepal made the Ganga and some of its tributaries submerge vast areas. Power generation was disrupted when the National Thermal Power Corporation (NTPC) plant at Kahalgaon was inundated. In Bhagalpur and Bankra districts, two of the worst-hit areas in Bihar, property worth an estimated Rs.10 crores was destroyed and more than 10 people were feared killed.

The water level in the Banka, Chandan and Kataria rivers rose, destroying several road bridges and disrupting road communication. The roads were also affected by subsidence and erosion. The Ganga crossed the danger mark at Hathidah and Kahalgao. The Burhi Gandak was above the danger mark by 86 cm at Khagaria, and the Baltara at Baltara and Kursaila by 64 cm and 150 cm respectively. Rail traffic came to a halt, as at places such as Ekchari and Ghogha, the tracks were submerged.

The flood situation resulted in the postponement of polling from October 3 to October 28 in the Lok Sabha constituencies of Purnea, Rajmahal, Bhagalpur and Khagaria. The Election Commission (E.C.) also deferred elections in the Assembly segments of Katba and Manihari in the Katihar constituency, to October 5.

PARTH SANYAL

SUSHANTA PATRONOBISH

(Top) A flooded street in south Calcutta; on their way to a relief camp in Shantipur, Nadia district.

IN flood-prone Bangladesh, day-long rain on September 22 resulted in extensive waterlogging in Dhaka as well as in the city's suburbs and villages.

In Comilla, two days of rain damaged standing crops and paralysed life. More than 150 mud houses collapsed and 4,500 ha of agricultural land was submerged. Relief materials and medical help could not reach all the flood-affected areas in time. In areas where aid was delayed, such as Lalmonirhat, the flood-victims were exposed to starvation and epidemics. Even in the relief centres, people found it difficult to cook their food owing to scarcity of fuel and firewood. According to district officials, of the 2.45 lakh victims in the Aditamri Thana area, it was possible to accommodate only 200 people in three relief camps. ■

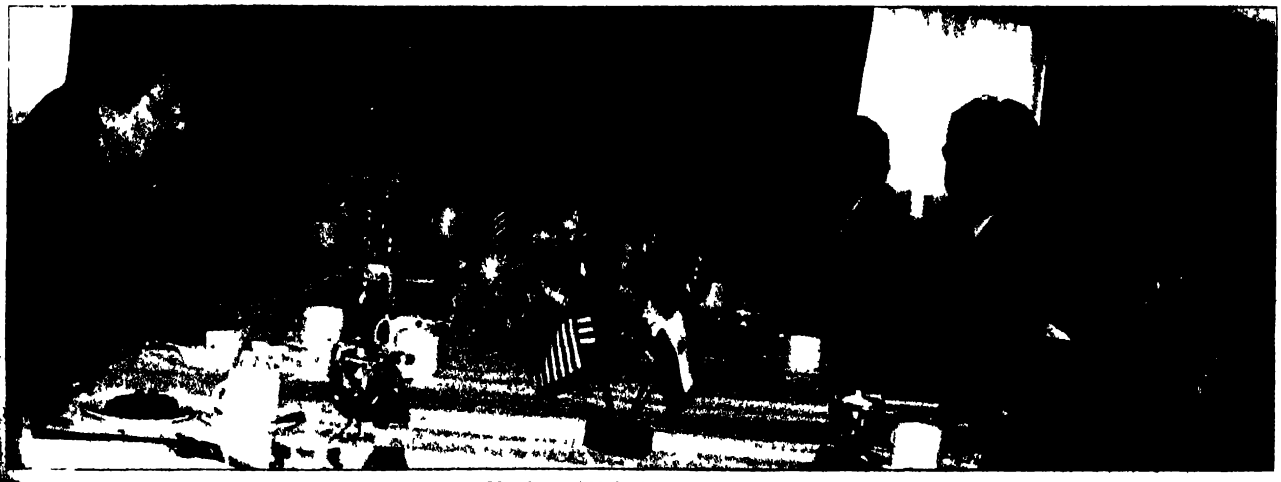
Diplomatic deals

India and the United States engage in a diplomatic exercise to minimise differences and discover new areas of cooperation.

JOHN CHERIAN

ALTHOUGH he represented only a caretaker government, External Affairs Minister Jaswant Singh was extraordinarily active in recent weeks as he focussed on strengthening the ties with Washington. There are indications that the Bharatiya Janata Party-led government would like President Bill Clinton to be the chief guest at the Republic Day parade in the year 2000. As part of the ongoing diplomatic exercises, senior officials from the United States have visited New Delhi to prepare the ground for the proposed visit, and the White House wanted to sort out a few details before it made a final commitment. The Clinton administration would meanwhile certainly like India to sign the Comprehensive Test Ban Treaty (CTBT).

Principal Secretary to the Prime Minister Brajesh Mishra recently said during a discussion on television that the U.S. administration had asked India to create a favourable climate for a visit by Clinton. He said that India was ready to sign the CTBT if there was a "political consensus" on the matter. He asserted that a "consensus" was emerging in support of the BJP-led government's stance. He said that concrete steps leading up to the initialling of the CTBT would be taken after the new Parliament was convened.



The Congress(I) and other Opposition parties expressed serious concern over the statements of the National Security Adviser. The Congress(I) said that Mishra's remarks smacked of "an element of irresponsibility". Jaswant Singh, at a meeting with U.S. Secretary of State Madeleine Albright in New York in August, had reiterated India's desire to see Washington create a better atmosphere that would enable India to sign the treaty.

Interestingly, counter-terrorism was one of the issues raised at the meeting. The chief of the Federal Bureau of Investigation's (FBI) counter-terrorism unit said that terrorism by Islamic radicals "was the greatest threat...domestically". He said that transnational groups were engaged in several theatres of war and mentioned Kashmir as being one of them. India and the U.S. expressed satisfaction at the two rounds of talks on counter-terrorism and agreed to make this an area of "serious and sustained consultations".

Jaswant Singh and Madeleine Albright noted the growing convergence of bilateral interests in battling international terrorism. In July, Clinton signed an executive order imposing financial and other commercial sanctions on the Taliban government in Afghanistan. The reason cited by the administration was the Taliban's support for Osama bin Laden, the billionaire fugitive from Saudi Arabia, who promotes terrorism by Islamic fundamentalists. In August, India imposed sanctions on the Taliban government. India stopped the Afghan national airline Ariana's flights from Amritsar to Kabul. Many of the passengers using the service were Afghan Sikhs.

Osama bin Laden is alleged to have named in mid-September the U.S. and India as the two major enemies of Islam. The Taliban government denied that he had made such a statement. The Taliban gave sanctuary to Laden on the condition that he desisted from political activity and remained inaccessible to the media. But for many countries Laden comes in handy as the most convenient symbol of Islamic terrorism worldwide. One of the reasons cited by the Russian government for its attacks on Chechnya (story on page 55) is the purported involvement of Laden and the Taliban in the region.

External Affairs Ministry officials say that they have not taken a simplistic view of the issue of terrorism. They say that Indo-U.S. cooperation on the issue flows from the recognition of the fact that terrorism today has become a complex activ-

Teams led by External Affairs Minister Jaswant Singh and U.S. Secretary of State Madeleine Albright meet on September 27 in New York.

Great expectations

SRIDHAR KRISHNASWAMI
in Washington

THERE was a lull in the dialogue between India and the United States during the Lok Sabha elections, but the momentum was expected to pick up once a new government was formed. One of the first items on the agenda here will be the visit of President Bill Clinton to India, along with Pakistan and Bangladesh.

In the immediate future, the Clinton administration's spokespersons will probably repeat the obvious, that irrespective of who comes to power in New Delhi, the U.S. will work with the new government on issues of common concern. However it will be interesting to see how New Delhi and Washington will cement their relationship, which was marred by the nuclear tests at Pokhran in 1998.

The new government in New Delhi, whatever its shape or constitution, must keep in mind the fact that the Clinton administration is on its last legs and Clinton can perform only limited tasks in his remaining months in office.

Politicians and bureaucrats in New Delhi must start looking at the post-Clinton phase and perhaps even beyond the Democratic Party, which has retained the presidency for eight years. Going by the current political environment in Washington, the Indian government may have to build bridges with the Republicans. Many frontrunners of the party, including George W. Bush, do not think beyond East Asia.

One argument projected of late in India and in the U.S. is that bilateral relations, in spite of frequent political changes in New Delhi, have been on the upswing because of the process of economic reforms introduced in the 1990s. While U.S. business houses have responded favourably to the changes and official and congressional circles have evinced an interest in the liberalisation agenda, the bottomline perception has been that much more needs to be done.

Politically, and in a strategic sense, it can be argued that India and the U.S. have come closer in identifying mutual interests, such as combating international terrorism. The convergence of interests on the issue of terrorism is only natural as both India and the U.S. have had to contend with this problem – regionally by the former and globally by the latter.

New Delhi has been able to hammer away at this topic more forcefully since Kargil. Washington has admitted that apart from the other problems from across the border, India has to deal with mercenaries and soldiers of fortune. One of the common links in this bilateral dialogue has been Osama bin Laden, the Saudi fugitive who is more than a nuisance to New Delhi and Washington. In a roundabout way, congressional circles accept that Pakistan must be branded a state that supports terrorism because, among other things, it has close contacts with the Taliban, which has sheltered Osama bin Laden.

J. SCOTT APPLEWHITE/AP

President Bill Clinton.

Senior officials of the Clinton administration have often made the point that bilateral relations will have to go back to the situation prior to May 1998 – that is, giving depth and substance to a relationship that could not be confined to any one aspect. It would seem that Washington is linking the future course of relations to progress on the dialogue on nuclear issues.

Given the geopolitical realities, Washington and New Delhi have to be careful about how they define a "partnership" in South Asia. Some hardliners argue that Washington must strike a closer relationship with India as a counterweight to China.

At the other end of the spectrum, the administration is being warned of the growing "nexus" among India, China and Russia and its implications to the U.S. Hardline elements inside and outside the political establishment in Washington point to the possibility of Moscow, Beijing and New Delhi coming together on a common platform, for instance in tackling Islamic fundamentalism, and feel that their combined nuclear arsenal would be a cause for worry.

A question to be asked following the "consensus" on the Comprehensive Test Ban Treaty (CTBT) in India after the elections is, what can be expected from the U.S. in return.

It is highly unlikely that Bill Clinton can cobble together a "package" that would entail substantial relaxation in the flow of high-end or dual-use technology to India. The main stumbling block would be Congress, which is in charge of "selling" this package to Capitol Hill. Given the political compulsions, Clinton's focus is going to be elsewhere. This is the presidential election year and First Lady Hilary Clinton is likely to contest the New York Senate seat vacated by Daniel Patrick Moynihan.

However, the Clinton administration could take some steps to set the right tone for the President's visit to South Asia. For instance, it could take a hard look at the Entities List, a rather unfocussed list that has been derided as meaningless in many quarters, including sections of Congress.

The administration could give useful inputs on the issue of sanctions, even though it is basically legislative business. The present one-year waiver was due to expire on September 30 but the deadline was extended. In any case, it is expected that the Conference Committee of the House and the Senate will pass a permanent waiver on the subject and in the process retain the Pressler Amendment, which some law-makers and the administration have tried to abolish.

The Clinton administration has said for a long time that the U.S. and India should work towards a positive environment leading to Bill Clinton's visit to India. After talking about this for about two years, the President is likely to visit India between January and March – the first visit by a U.S. President in more than two decades. But the real test will be whether the two countries will be able to foster a relationship that is anchored in the commonality of interests and not in any vague slogans that reiterate the obvious. ■

ity, which transcends national boundaries and is financed and supported by vested interests. According to Indian officials, Washington and New Delhi are keen to sustain the dialogue on terrorism.

IT was in this context that U.S. ambassador at large and State Department Coordinator for Counter-terrorism Michael Sheehan visited New Delhi in September. Indian officials say that the initiative had come from the Clinton administration. While in New Delhi, Sheehan called on top officials in the Home, External Affairs and Defence Ministries. He also called on Brajesh Mishra. Senior South Block officials say that both countries agreed to set up a joint working group (JWG) on terrorism.

There is no confirmation as yet from the U.S. side on the matter of about the JWG on terrorism but Indian officials expect the first JWG meeting to take place soon. External Affairs Ministry spokespersons told the media after Sheehan's visit that a "new chapter" in Indo-U.S. relations had opened. Two officials of the External Affairs Ministry were in Washington recently to discuss issues related to terrorism.

Sections of the Indian media reported that the FBI was setting up office in New Delhi. Indian officials, however, say that no decision has been taken on the matter so far. External Affairs Ministry officials say that cooperation between the two sides to counter international terrorism started in the mid-1980s when Rajiv Gandhi was Prime Minister. During Rajiv Gandhi's visit to Washington in June 1985, India and the U.S. discussed the international dimensions of terrorism. Both sides signed an extradition treaty in 1997. Bilateral military cooperation started in 1991, when the two countries held joint naval exercises.

A former Chief of the Army Staff, the late General B.C. Joshi, visited the U.S. in September 1994 and held substantive discussions with the U.S. Defence Secretary and the Chairman of the Joint Chiefs of Staff. A tentative Indo-U.S. strategic cooperation was initiated during P.V. Narasimha Rao's prime ministership. Joint defence planning and technology groups were set up. After the post-Pokhran sanctions, key aspects of the security equation were put on hold. Since the collapse of the Soviet Union, Washington has put its strategic global interest ahead of regional calculations. The pro-Pakistan tilt, which earlier characterised U.S. policy in the subcontinent, is a thing of the past.

Many Indian analysts warn that the U.S. posture during the Kargil War and on the Line of Control (LoC) should not be taken as reflecting a change of policy on Kashmir in general. The Clinton administration has not given up its position that Kashmir is a flashpoint in nuclear-weapons and missile terms. There are many people who believe that the West will use Kashmir as a lever to extract concessions from India in nuclear matters. In September, more than 60 U.S. legislators wrote to Clinton saying that "Kashmir is the most dangerous flashpoint in the world today" and demanded that the President appoint a special envoy to Kashmir.

Indian officials say that they have indicated to Washington that bilateral relations could improve if the U.S. becomes more receptive to Indian concerns on Kashmir and related security issues. India and the U.S., according to them, interact on a whole spectrum of issues. The issue of terrorism, they insist, would not have an overarching influence on India's relations with other countries.

External Affairs Ministry officials insist that India's neighbours have nothing to fear from it. India, they point out, has never been a part of a regional, political or military bloc. An official said: "India's relations are based on pragmatic considerations. On certain issues, India, China and Russia can also cooperate." They say India's focus on terrorism is aimed at convincing the international community about the culpability of some of its neighbours in acts of cross-border terrorism. India sought to highlight the Islamabad-Kabul nexus and the efforts of Islamic fundamentalists to destabilise governments in many parts of the world. The Pakistan government's support to the militant Harkat-ul-Ansar grouping engaged in cross-border terrorism, was cited as an example.

Meanwhile, the U.S. administration has started preparations for Clinton's visit to the subcontinent early next year. It expects significant concessions from New Delhi and Islamabad on the nuclear issue and Kashmir before the visit materialises The BJP-led government has made it clear that it has no serious reservations with regard to the CTBT. Officials said that a "positive environment along with a domestic consensus should be created" before signing the CTBT. The Clinton administration also expects India to be ready with a package of risk reduction measures on the nuclear front. ■

AMIT BARUAH
in Islamabad

GENERAL Pervez Musharraf has emerged the winner in a game of power politics in Pakistan. The General stood his ground in a virtually open confrontation with Prime Minister Nawaz Sharif when he declared recently that he would complete his term as the Chief of the Army Staff (COAS), which is to run until on April 8, 2000. Musharraf scored a victory when the government announced on September 29 that he had been appointed Chairman of the Joint Chiefs of Staff Committee (JCSC) and that his term would be coterminus with his new responsibility, until October 6, 2001.

There had been intense speculation that with the appointment of Musharraf as the JCSC Chairman of the JCSC, a largely ceremonial post, Nawaz Sharif planned to instal a man of his choice as the COAS. An official announcement, however, hoped that "this step (giving Musharraf the additional responsibility) will once and for all set at rest the uncalled (for) rumours and speculation about the change of command in the Army that certain vested interests were fanning in pursuance of their political agenda." Whether that happens or not, the statement from the Prime Minister's Office confirmed that speculation did exist about the appointment of a new COAS. The candidate being mentioned was the Director-General of the Inter-Services Intelligence (ISI), Lt. Gen. Khwaja Ziauddin.

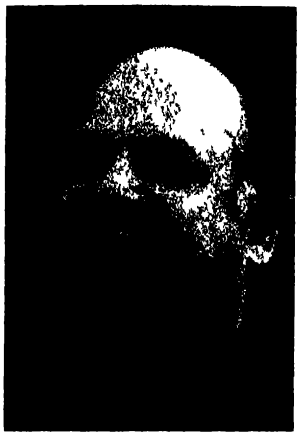
Two statements set the tone for the confrontation between the COAS and the Prime Minister. On September 13, former Foreign Secretary and "secret diplomat" Niaz Naik stated that Sharif had come to know about the intrusion in Kargil only on April 26; that is, the same day that the Government of India became aware of it. By doing this, Naik locked horns with Musharraf, who had stated on July 16 that "everyone was on board" the Kargil operation. Secondly, the United States warned on September 20 of a possible Army coup in Pakistan if Kargil's can of worms was opened.

While there is no definitive evidence of how much the Prime Minister knew or did not know about Kargil, the fact remains that had he been kept in the dark, action against Musharraf would have

A face-off averted

Nawaz Sharif avoids a confrontation with his Army chief over the Kargil issue by extending his term.

been initiated much earlier. Further, if he was really unaware of it, then that would raise serious questions about who actually takes decisions in Pakistan. In a situation where Sharif has consolidated his power base and position, he would have hardly tolerated a *suo motu* initiative by the Army.



While the debate on Kargil continues, the fact remains that differences of opinion between Musharraf and the Prime Minister do exist. Needless to say, it is Kargil that was responsible for the souring of their relations. At best, the September 29 announcement will serve to improve them temporarily.

Unlike his predecessor, General Jehangir Karamat, who resigned when he was asked to do so by Sharif in October 1998, Musharraf made it clear that he would not be the "fall guy" for Kargil. Musharraf superseded two senior Generals on his way to becoming the COAS last year. Sharif presumably chose Musharraf for two reasons: he was a Mohajir, and he did not have a "base" in the largely Punjabi-Pathan Army.

THE speculation of a possible "intervention" by the Army was triggered by the U.S. warning, which was a clear message to the khaki-clad armed forces against effecting any "extra-constitutional change" in Pakistan. Washington's statement followed meetings between the Prime Minister's younger brother and "special envoy" Shahbaz Sharif (he is the Punjab Chief Minister) with U.S. Deputy Secretary of State Strobe Talbott. Yet it is not known why the U.S. issued the warning when it did.

Writing about the tussle between Sharif and Musharraf, Ayaz Amir, a columnist for the newspaper *Dawn*, argued:

"On the domestic front this is the first check Nawaz Sharif has received since the beginning of his tenure. He had his way over the 13th Amendment which stripped the President of his powers to dismiss the National Assembly and appoint the Service chiefs. He saw off (Farooq) Leghari and Chief Justice Sajjad Ali Shah when the fight with the Supreme Court erupted in the latter half of 1997. General Jehangir Karamat left as Army chief when his statement in support of a National Security Council received wide publicity. But he has not been able to have his way in the present instance. This should act as a salutary check on Nawaz Sharif's marked preference for riding roughshod over everything. Provided of course that he has learnt his lessons. Otherwise there is likely to be more of the same.

Prime Minister Nawaz Sharif.

P K BANGASH AP

General Pervez Musharraf, the Chief of the Army Staff.

"It can well be asked as to why the Government had to dither for so long before putting an end to the uncertainty clouding its relations with GHQ (General Headquarters, Rawalpindi)? But for the Government to have acted in a timely and sensible fashion would have been to betray its own hallowed style of working. Right from the start this Government has displayed an unquenchable desire to first manufacture a crisis and then, when the damage is truly advanced, to be struck by doubt and vacillation."

According to Ayaz Amir, the U.S. need not have issued the statement as no coup was being planned.

GENERAL Musharraf and the Prime Minister may have agreed on an informal ceasefire for the present, but the tensions are far from over. Already the Army chief has started expressing his views on the domestic situation; he has described the law and order situation as being bad and hoped that it will improve soon.

On signing the Comprehensive Test Ban Treaty (CTBT), he has repeatedly stated that the decision should be taken in the best interests of the nation. Clearly, he would have expressed his opinion on the issue directly to the civilian government. The COAS was quoted as saying, denying that the Army was putting pressure on the government not to sign the CTBT: "No, there is no such pressure. But the armed forces strongly believe that the Government should take a decision about signing the Treaty in the best national interest."

Ruling out an inquiry into the Kargil events, the General told the media on September 30 that the two meetings he had had with Shahbaz Sharif and Petroleum Minister Nisar Ali Khan were held in order to settle the modalities relating to the setting up of the office of Chairman of the JCSC.

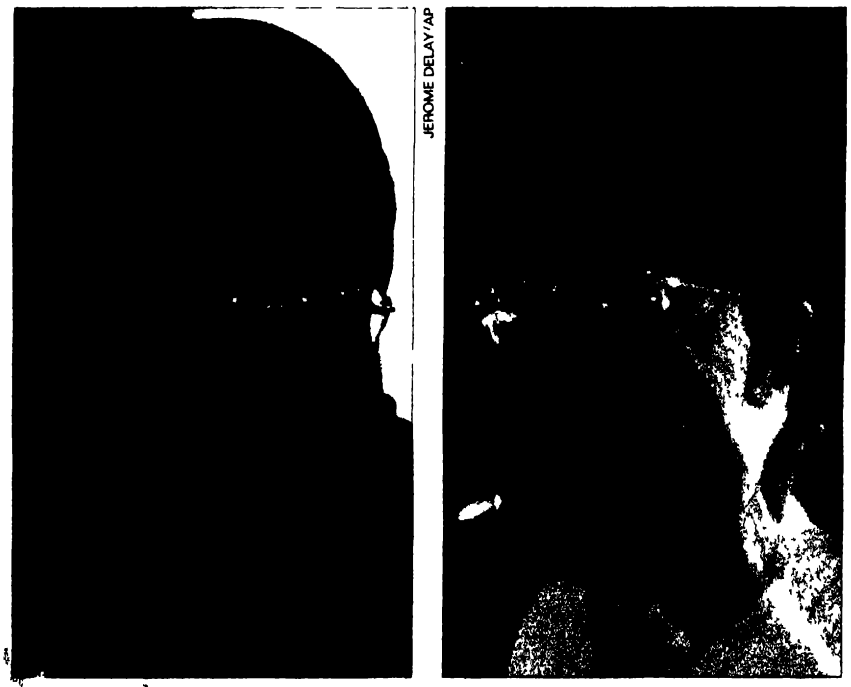
On the country's economic situation, the General was quoted as saying: "There is a need to improve the economic scenario and I hope the Government will do its best in this regard."

Although he has not spoken about Pakistan's relations with India in the post-Kargil phase, it would be interesting to see what, if any, is the public response to the resumption of dialogue between New Delhi and Islamabad. With a new government assuming power in New Delhi, and with both Islamabad and New Delhi making the right noises about the resumption of dialogue, it is only a matter of time before the discussions resume.

Given the Kargil experience, India will have to watch its step at every stage of the dialogue. The ground reality must necessarily govern the process. At least in the past Sharif has publicly stressed the need for a dialogue with India. For Pakistan essentially this means a dialogue to resolve the core issue of Kashmir while for India it has been a multi-faceted engagement. ■

Iranian rumpus

The conservatives and the reformers step up their confrontation.



KESAVA MENON
in Bahrain

OVER most of the Muslim-majority belt in West Asia and North Africa, the quest to build a civil society is being led by the adherents of Islamic movements. In Iran, where the Islamic movement reached its apogee, the building up of civic institutions is regarded as the necessary means whereby the clerical regime can be moderated. If the efforts now under way in Iran succeed, it might have just as profound an effect on West Asia and North Africa as the 1979 Islamic Revolution.

Hojatolesslam Syed Mohammed Khatami became President of Iran two years ago with the promise that he would strive to build a civil society and establish the rule of law. In the context of the Iranian situation it was easy to interpret what this promise meant in concrete terms. The essence of the post-revolutionary Iranian situation was the concept that the state and society would be run according to Koranic principles and that a core group of believers would define and apply these principles. Khatami, and the pro-reform faction of which he became the symbol, recognised that such a dispensation could not meet the people's aspirations. They also recognised that those who had a vested interest in the given dispensation had multiple levers by which their control could be perpetuated.

Since Khatami and his supporters also believe in the broad ideals of the Revolution, they have no desire to overthrow it *in toto*. A counter-revolutionary upsurge could also have unforeseeable consequences. Therefore, what Khatami and his followers chose in order to take Iran out of its predicament was that of calibrated reform. Since the entrenched conservatives had access to multiple levers to exert their power, the reform process could only progress if a multiplicity of civic institutions – the press, an impartial judiciary, students' and women's organisations, political parties and so on – were created or given fresh life. Once these institutions began to make an impact on Iranian society, all the institutions, old and new, could be confined to their legally defined spheres of activity – that is, the whole system would operate under the rule of law.

On the surface, such a reform process might not appear to be a very radical one since it does not envisage an overthrow of the existing order. Considering, however, that the conservatives had a grip on almost every aspect of Iranian society – controlling everything from dress codes to strategic affairs – the Khatami experiment aims at wide-ranging emancipation. If youth, student and women's bodies, trade unions and chambers of commerce are able to establish their norms in their respective spheres on rational grounds and unclouded by theological considerations, then the sphere left to the clerical establishment would be a considerably circumscribed one.

JEROME DELAY/AP

President Mohammed Khatami and, right, Ayatollah Syed Ali Khamenei. It is as yet unclear whether Khamenei and Khatami are working in tandem or have just worked out an accommodation with each other.

KHATAMI formally took up the office of President in August 1997 and the two years since then have witnessed a spate of minor and major struggles between the conservatives and the reformers. Viewed incident by incident this has been a ding-dong struggle with one side or the other alternatively enjoying supremacy. If a broad trend is considered, however, it is possible to venture the assessment that the tide has run slowly but steadily in favour of the reformers. At every successive stage the conservatives have fought back from a more withdrawn position, and pro-reform elements have been able to widen steadily the envelope in respect of the issues they have challenged. There is the alternative assessment that Khatami and his cohorts are not able to keep pace with the subaltern pressure for reform, but at this stage that remains a hypothesis.

One ironic indicator of the advances made in the reform process is provided by the fact that the conservatives have already resorted to the most powerful weapon in their rhetorical armoury. They have levelled the charge of blasphemy

JEROME DELAY AP

Students on the Teheran University campus. Students and youth in the country are determined to agitate in favour of the norms they prefer to live by.

against two young playwrights who published a satirical piece in a students' magazine. This satire is based on the familiar theme wherein a historic figure, in this case the Twelfth Imam of the Shia line, Mohammed al Muntazar, returns to earth only to find that those who mouth his words behave in manner directly contradictory to his preachings. The satire was directed at the conservatives, but in a peculiar twist conservative ideologues made out as if the play lampooned the Twelfth Imam, declared it a blasphemous act and demanded that the playwrights be sentenced to death.

Iranian security services let it be known that they had already taken the two playwrights into custody and this was followed by another leak that a third person had also been arrested in this connection. Then came the bomb-shell. Ayatollah Syed Ali Khamenei, the Wali Faqih (Supreme Religious Jurisconsult), chose the late Imam Ruhollah Khomeini's centenary celebrations as the occasion to make a pronouncement on the matter. The Supreme Leader, who is vested with powers vaster than Presidents, warned that he would not permit any "arbitrary, individual or overly emotional reaction" to the satire. News agencies quoted Khamenei as saying: "Nobody has the right to react on the basis of feelings and assume the right to defend the values of Islam. I legally and religiously forbid any act against the authors of the offence against the Twelfth Imam. It is down to the judiciary to examine and assess the offence and to nobody else. I would like to warn the various political factions against exploiting such topics for their own interests."

The immediate effect of Khamenei's pronouncement is that the question of whether the playwrights committed blasphemy will be examined strictly according to rules. Conservatives will not be able to run away with the trial and whip up emotions to discredit the entire reform process. Their campaign that such blasphemous acts could only be committed because the reforms had prepared the conditions and that the reform process should therefore be reversed, has been killed off before it could get going. A more stunning blow to the conservatives has been dealt by the fact that when Khamenei chose to come out of the shadows he did not come out in their favour but against them.

Till now most observers of the Iranian scene had believed, even in the absence of firm evidence, that Khamenei headed the conservative camp against Khatami's reformers. Khamenei has indeed spoken out against some of Khatami's initiatives, notably on rapprochement with the West, but he has also backed the President on as many occasions. Since operations at the highest echelons in Iran are not transparent, it is not possible to determine whether Khamenei and Khatami are working in tandem (in the "good cop, bad cop" format) or have just worked out an accommodation with each other. The texture of their personal relations might not be very relevant if Khamenei has recognised, as indeed he appears to, that the reform agenda is necessary and should be supported.

A conclusion that the conservatives have been decisively defeated on the blasphemy issue and that this has provided the crucial breakthrough for the reform process is probably premature. It would, however, be pertinent to make a sector-wise appraisal of the advances that have been made by the reformers. The one sector in which significant advances have been made is in the area of freedom of expression. The fact that some young Iranians are now showing the temerity to question the religiosity of the conservatives provides one benchmark. Another was provided by a newspaper called *Neshat* which challenged two very important tenets of the post-revolutionary scheme.

In articles published in September, *Neshat* dared to challenge the omnipotence of the Wali Faqih. It also simultaneously questioned the validity of the law of retribution (the provision in Islamic criminal jurisprudence that the victims of an aggression, and not the state, are the ones who can demand retribution on or recompense from the aggressor). *Neshat*, like a slew of other pro-reform newspapers, was shut down by the conservative-dominated courts which supervise press matters. But its publishers have challenged the court ruling. Pro-reform newspapers shut down earlier have been very prompt in re-launching their publications under new names, thus demonstrating that they are deriving so much support that they are not easily deterred by the conservatives. The uproar over the satirical play was closely followed by the closure of a publishing house, Narenj, which printed a book which Shia Muslims consider blasphemous to Shia Islam. According to an official at the Culture and Islamic Guidance Ministry, the book *Divaneh-ye-Dovvom* (The Second Lunatic), written in a "cryptic style", disparaged the Twelfth Imam, whose arrival is awaited by Shias. The case was sent to a State Publications Board for a final review.

As can be seen from the episodes concerning blasphemy and the *Neshat*'s challenge, the courts have been the main bastions of the conservatives' fight-back.

One blow had been struck for judicial reform early in Khatami s term when the government ensured that the trial of the former Teheran Mayor Gholamhussein Karbaschi was televised in its entirety At least for that one stand-out case, the government ensured transparency in judicial proceedings In September, Khatami took another major step towards judicial reform when he appointed a moderate to head the judiciary following the retirement of a conservative incumbent

The new head of the judiciary was hardly able to get his act together when a conservative judge in the lower echelons threw down the gauntlet by proclaiming that he had sentenced to death four persons who were said to have been active in the student riots of July No one knew when these four had been arraigned, tried or sentenced and there are reports that the new head of the judiciary, Mahmoud Hashemi Shahroudi, had no knowledge of the trial There have been no further developments on this issue after the initial pronouncement, but it could provide the next arena for combat between the conservatives and reformers

While judicial reforms are still in an early stage, Khatami and his associates have made progress in their efforts to introduce party-based politics into the Iranian system Several parties have been registered under a months-old law and even Khamenei has acknowledged the existence of parties and the validity of the system when he referred to the existence of "factions" in his address at the centenary celebrations The real test of whether a party-based political system has begun to take root in Iran will come in the parliamentary elections to be held in February next year

Students and youth are already determined to agitate in favour of the norms they prefer to live by The student riots in July in protest against the closure of a liberal newspaper was one instance An earlier one was the manner in which thousands of Iranian youth, including many young women, came out to greet the Iranian football team members when they returned after the last World Cup in which they beat the U.S team. The wild welcome given to the footballers was clearly in defiance of the conservatives.

So far under Khatami's dispensation the institutions of a civic society have slowly begun to emerge. If and when they begin to push back the bounds of conservative restraint they would begin a new chapter in the politics of the Muslim world. ■

Towards democracy

Indonesia moves forward to a long-awaited presidential election.

P.S. SURYANARAYANA
in Singapore

BY design or otherwise, the latest visit to Jakarta by United States Defence Secretary William Cohen set the juggernaut of democratic hopes and aspirations moving again in Indonesia By early October, Indonesia's new People's Consultative Assembly (MPR) had advanced the date of the country's presidential election – the long-awaited defining event in the country's search for a new identity as a resurgent democracy The MPR is the electoral college that chooses the country's highest constitutional office in a system of non-Gaullist executive presidency with Indonesian characteristics

In the run-up to the October 20 presidential election, leaders have begun to lobby for the support of the 700 members of the MPR The presidential aspirants were quick to acknowledge the significance of the election of Amien Rais, an Islamist leader with a modernist view about religion in politics, as the MPR's presiding officer after a secret ballot on the night of October 3. The message was clear· the country, which is within striking distance of becoming the world's third largest democracy after India and the U S , cannot do without "political Islam".

In practical terms, the election of Amien Rais as Speaker or Chairman of the MPR could boost the presidential hopes of his ally, Abdurrahman Wahid, whose political dynamism has to be seen to be believed, especially in the light of the fact that he suffers from vision impairment brought on by a stroke As head of the Nahdlatul Ulema, an Islamist organisation which wields considerable influence both within and without the political arena, Wahid said that he would be willing to stake his claim to the presidential office in the event of dissension, within the pro-democracy camp over the candidature of Megawati Sukarnoputri (It is to be noted that Wahid made his

Residents of Dili in East Timor line up before a food distribution centre.

SETH MYDANS

TWO weeks after the arrival of the first of the 7,500 international peacekeeping troops, the burning, looting and killing have tapered off around East Timor. But the toll of the wave of terror is still unclear. The United Nations is moving rapidly to open an investigation into the atrocities committed, but although bodies are beginning to be discovered in small, scattered groups, the extent of the killings is still not known. For many people here, the time for tears has arrived as the urgency of terror and hunger recedes and the pain emerges. Most of them do not have homes. Many of the people here do not know the fate of family members who were herded across the border into West Timor, which is still under Indonesia's control.

"My position as a professional investigator is that we should deal with facts and that until we have facts to go on we should be very cautious in accepting unconfirmed reports," said Alan Castle, a top police official with the U.N. "We had reports of up to 70 bodies found in a well," he said. "I was there when the investigators went to look and I saw what they found, which was one corpse."

In their initial assessments, foreign aid officials are also finding little evidence of the starvation that had been feared, with as many as half of East Timor's population of 800,000 driven from their homes. "The surprising story for us is how healthy people are looking in Dili and Dare, a nearby hillside refuge," said Abby Spring, a spokeswoman for the World Food Programme. "The huge unknown for us is how bad things are for the people who are still in the mountains." Officials said that more than 6,000 tonnes of rice is available in Dili, with more arriving every day. Foreign relief agencies planned the first large-scale handout of rice in the first week of October to as many as 100,000 people in the city, even as relief convoys spread supplies further across the territory.

With the city coming back to life, refugees are returning from the hillsides to organised encampments or to the shells of their homes. As the first brief downpours of the rainy season begin, many people trudge through the streets carrying what is now one of the most urgent commodities: tin roofing material stripped from burned-out buildings. Although there is still virtually no commerce in Dili, men and women with brooms are sweeping debris from the burned-out central market. The air is still tinged with the smell of smoke, but now the smoke comes not from burning buildings, but from cooking fires and smouldering refuse as a difficult clean-up operation begins in a city where hundreds of buildings lie in ruins. The most notable of these ruined buildings is Belo's residence, where more than 1,000 people took refuge when the terror began. On September 6, armed men drove the refugees from the compound, sending most of them to West Timor.

There were other small signs of the reconstruction that must precede the creation of an independent East Timor. Over the blue ocean, transport helicopters ferried supplies from cargo ships. And along the seafront road, a convoy of new white vehicles drove past, filled with food and medicine. Inside the courtyard of Bishop Carlos Filipe Ximenes Belo, two ducks walked among the feet of worshipers, pecking at the stony ground for food. They were a reminder of the belligerent graffiti that is found on vandalised buildings, telling the East Timorese people that freedom will bring privation: "A free East Timor will eat stones." It is a slogan one man in Dili remembered hearing soldiers shout from the back of a truck as they withdrew from the territory. ■

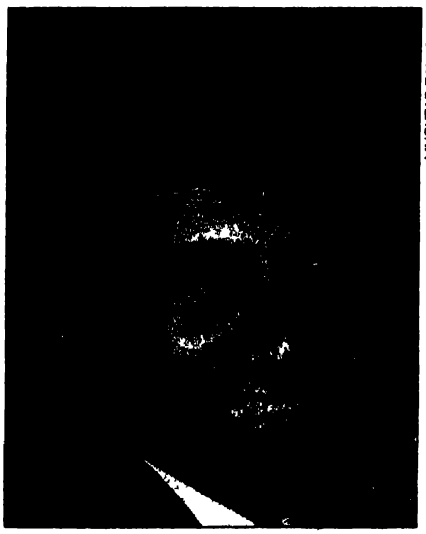
New York Times Service

plans abundantly clear even before Amien Rais' success on the floor of the MPR.) No less significant was Wahid's statement – made shortly before the election to the chairmanship of the MPR was held – that the doctors treating him had indicated that he would soon make a total recovery and would be able to take part actively in politics. In his view, there is an urgent need to galvanise pro-democracy sentiments and keep out the protagonists of the Suharto era despite their attempts to mould themselves according to the changing political situation – a reference to the ruling Golkar Party and its presidential nominee B.J. Habibie, the incumbent head of state.

At another level, Megawati, as leader of the party that secured the largest percentage of votes in the June 7 parliamentary elections, made no attempt to conceal her claim to the presidency. Her Indonesian Democratic Party of Struggle (PDI-P) did not secure the kind of parliamentary majority that would have made her an automatic choice for the post.

In spite of some reforms instituted in the Indonesian constitutional system, the electoral college for the presidency consists of nominated members of the MPR – who represent special interests, the military's non-elective mandarins, regional power-brokers, and so on – besides the newly elected members of Parliament, known as the House of Representatives or DPR. This political ground reality is *ipso facto* a catalyst to gamesmanship. Not surprisingly, Megawati had discovered by early October that her presidential dream was under threat, given her relative inexperience in politics and tendency to let events unfold instead of trying to shape them.

For his part, Gen. Wiranto, Indonesia's military chief, has been watching the political scene closely, aided in some ways by his image as a democracy-friendly soldier, especially since the fall of Gen. Suharto from power in May 1998. As a result, by the time the new MPR began its countdown to the presidential election, it became clear that the political battlelines for the contest could in some ways be determined by him. After all, the decisive role played by Wiranto in the high drama that led to Suharto's exit from power is already part of Indonesia's political folklore.



It was in this milieu that Habibie, who succeeded Suharto with Wiranto's support, remained firm in his resolve to contest the presidential polls despite the fact that doubts were raised within his own party about whether he would, under such volatile circumstances, be suitable for the post.

CHARLES DHARAPAK/AP

Megawati Sukarnoputri, leader of the Indonesian Democratic Party of Struggle.

The political cross-currents were further complicated by the failure of some sections of the Golkar Party and supporters of Megawati to strike an alliance during the election of the Speaker and to split the Islamist political space represented by the "central axis" of Amien Rais and Wahid.

MUCHTAR ZAKARIA/AP

Amien Rais, the newly elected Speaker of the People's Consultative Assembly.

At the start of the presidential race, while no one ruled out the eventual emergence of Wiranto as a last-minute consensus candidate, Habibie had other plans. He portrayed himself as a leader who took all the steps required to revive democracy. However, more controversial than this claim was his presidential act of granting United Nations-sponsored self-determination to the people of East Timor (see box).

When the U.N.-mandated and Australia-led international force for East Timor, INTERFET, consolidated its security grip over that territory by early October after the Indonesian military made a parallel exit from there (except for a token presence, for technical reasons), many Indonesians viewed this as a denouement of Habibie's misconstrued democratic impulse. They protested against Australia's realpolitik U-turn in derecognising Jakarta's mid-1970s annexation of East Timor and in ignoring Indonesian sensitivity by making haste to lead the INTERFET.

It was under these circumstances that William Cohen visited Jakarta on September 30 after having more or less endorsed the "Howard Doctrine", the latest affirmation by Australian Prime Minister John Howard that Canberra would henceforth play the role of a "deputy" to the U.S. military in the southern part of the Asia-Pacific region.

In an attempt to overcome the Indonesians' anger over the "Howard Doctrine", Cohen told the country's military and civilian leaders that their political and economic future would be determined by the U.S.-articulated international perception of official Jakarta's responses to East Timor's transition to an independent state. Cohen spoke of "economic consequences" and "diplomatic isolation" in the event of any mess-up in East Timor. At the recent Auckland summit of the forum for Asia Pacific Economic Cooperation (APEC), U.S. President Bill Clinton spoke about the equal importance of East Timor's transition to independence and Indonesia's own much larger march towards democracy. This was the same point that Cohen stressed on. It is anybody's guess whether the attempts to fine-tune Indonesia's march towards democracy can be linked to Cohen's Jakarta visit. When he was asked about this during a visit to Singapore on October 2, Cohen avoided taking credit for the developments but stressed the merits of the message he had delivered. ■

Air strikes against Chechnya

Russia resorts to air strikes at military and economic targets of importance to the Islamic militias in Chechnya and plans to divide the republic and set up a security zone around the areas controlled by the militants.

JOHN CHERIAN

RUSSIAN jets pounded targets in the breakaway republic of Chechnya incessantly in the last week of September, and it was clear that Moscow wanted to deal firmly with the government in Grozny and with the Chechen warlords running rampant in the northern Caucasus The latest round of the conflict started with an attempt by some Islamist militias based in Chechnya to move into neighbouring Dagestan and spread the message of secession After the militias were repulsed from Dagestan by Russian forces, a series of explosions rocked Moscow and other Russian cities and claimed the lives of more than 300 civilians Moscow was quick to blame the bombings on the militants

The refusal of the Chechen Government to condemn the Islamists for the bombings and the attempt to destabilise Dagestan gave Moscow an additional reason to rectify the constitutional aberration of an "independent" Chechnya within the Russian Federation Chechen President Aslan Maskhadov refused to condole with the families of the victims of bombings Maskhadov is considered a moderate in the Chechen context, and his refusal to condemn the activities of the militias is dictated by political exigencies. He has only about 6,000 armed presidential guards under his command while militant leaders such as Shamil Basayev and Khattab together have around 15,000 hardcore fighters Moscow is keeping its lines of communication with Maskhadov open As of now, he is the only Chechen leader of stature Moscow can do business with

After the air strikes against targets of military and strategic importance to the militants, Moscow is preparing to send ground troops into the breakaway republic Some Russian troops have already entered Chechen territory and captured villages about 15 km inside the border. But the emphasis is on air strikes: Russian authorities claim that they are following the 'Kosovo scenario", using high-precision weapons to minimise civilian casualties The Chechen Government has claimed that more than 100 civilians have been killed Russian jets are targeting industrial complexes, especially those in the petroleum sector, which generates revenue for the Chechen Republic

According to Russian media reports, the air strikes have virtually destroyed the oil industry The Russian authorities say that the militants use revenues from the petroleum industry to purchase weapons and to maintain foreign mercenaries Having learnt its lessons during the full-scale war with the separatist forces between 1994 and 1996, in which an estimated 80,000 people died, the Russian Government now appears to be going in for a limited war with specific objectives

STR/AP

Atop an armoured personnel carrier, Russian soldiers heading for the Chechen border.

General Anatoli Sitnov said recently that the Army had enough resources for a ground operation. A full-scale attack on Grozny is unlikely. Instead, Russia will in all likelihood partition Chechnya. the Russian plan is to occupy initially the flat areas of Chechnya, north of the Terek river

Russian military officials believe that victory was snatched from them in 1996. According to some of those who participated in the Chechen war, every time the Army was on the verge of establishing full control over the region, orders came from above either to withdraw or to stop fighting. Influential sections of the Army are once again for a military solution but the political leadership seems to be veering towards the idea of dividing Chechnya and forming a *cordon sanitaire* around the area that is under the control of the separatists. Russian public opinion is solidly behind the government's tough military stance. The average Russian has supported the air strikes, for only Chechens are getting killed. An invasion, on the other hand, would result in the deaths of Russian soldiers too. One reason why Russia withdrew from Chechnya in 1996 was the high rate of death of conscripts, who were unprepared for the kind of vicious warfare resorted to by the militias.

ALEXEI KONDRASHKIN/ AP

Refugees flee Chechnya as air strikes intensify.

Another sign that Russia meant business this time was the announcement in early October that Moscow no longer adhered to the Khasavyurt peace agreement of 1996. The Russian Government has instead indicated that it will soon set up north of the Terek a Chechen government comprising pro-Moscow deputies who were elected to the Chechen Parliament in February 1996. Russian Premier Vladimir Putin said recently that he wished to discuss the future of Chechnya directly with the representatives of the Chechen people.

MEANWHILE, Chechnya is all set for another war. The government has mobilised 30,000 reservists to defend the borders. The Russian Government and media allege that the Chechen government is recruiting mercenaries from Afghanistan and Iran. Shamil Basayev announced in Grozny recently that he was forming a "kamikaze" unit of 400 to 500 men "capable of fulfilling any, even the most complicated, task". For good measure, Russia has dragged the name of Osama bin Laden into the conflict. It suits the authorities to paint their military offensive as a war against Islamic militants. The United States has, however, indicated to Moscow that it is against the use of excessive force against Chechnya.

In their earlier fight for secession, the Chechens were helped by the U.S' allies, including Turkey and Saudi Arabia. The Islamists, like their counterparts in Afghanistan, owe a lot to the West. But the Chechens' military success in the mid-1990s was to a great extent facilitated by the Russians themselves. The Chechens launched their secessionist bid with the aid of arms left behind by the Russian federal troops who fled from the territory in June 1992. According to the Russian newspaper *Trud* the Russian Army had left behind 42 tanks, 38 infantry vehicles, 14 armoured personnel carriers and as many armoured vehicles of the landing troops, 31,738 assault rifles, 12,813 handguns, 1,021 grenade launchers, several dozen aircraft, and other military hardware.

The Russian media have reported that 50,000 Russian troops are already massed on the borders. However, Defence Minister Igor Sergeyev has said that there are several options and that the final choice will depend on the prevailing situation. "The aim of the ground operation," the Minister said, "is to destroy the bandits and set up a security zone of adequate depth around Chechnya." Defence analysts point out that it will be difficult to maintain 50,000 troops in full fighting order at the border for long. They argue that a full-scale offensive would be less expensive.

The conflict in the northern Caucasus is raising the political temperature in Russia. The maverick politician and former General, Alexander Lebed, has alleged that the explosions in Moscow were masterminded by certain elements in the Kremlin in order to torpedo the coming elections. Lebed, who was responsible for the 1996 peace pact, said that the bombs were planted by bandits and mercenaries (who have no nationality) on orders from Moscow's "federal structures".

Former Prime Minister Yevgeny Primakov, the most popular politician in Russia today, has criticised the offensive. The leader of the Fatherland-All Russian bloc said that such an operation could escalate into a full-scale war. "The Chechnya question is to a large degree a Russian question because the arms which are being used by the fighters and the terrorists are solely Russian weapons," he said.

By early October, 88,000 refugees from Chechnya had fled to Ingushetia to escape the bombing. The exodus is bound to increase as the air raids continue and ground fighting escalates across the borders. ■

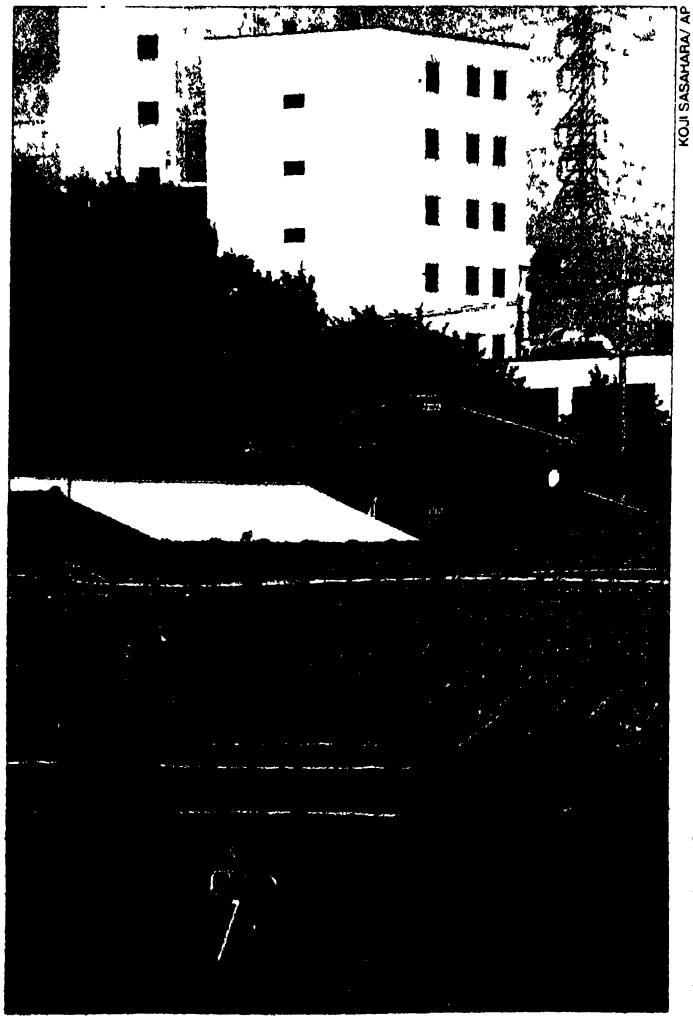
A nuclear accident in Japan

A Japanese uranium-reprocessing plant spews radiation after a serious accident.

HOWARD W. FRENCH
JOHN NOBLE WILFORD
MATTHEW L. WALD

UNDER pressure from the management, workers at the nuclear plant in Tokaimura, 140 km northwest of Tokyo, reportedly skipped critical safety steps in order to increase the production of uranium fuel and provoked in the process the worst accident in the country's history of atomic energy in Japan. The accident, which took place on September 30, critically injured three workers and exposed 52 others to radiation.

A report carried by the newspaper *Asahi Shimbun* and attributed to police investigators contradicts assertions by officials of JCO Co., a subsidiary of the Sumitomo Metal Mining Co., and the operator of the plant that they had not encouraged production shortcuts. Initial reports appeared to blame negligence by the workers rather than a more systematic, company-driven violation of procedures. The police have indicated that they will pursue criminal charges against the plant's operators. The Chairman of the Nuclear Safety Commission, Kazuo Sato, announced on television that his agency would investigate whether there was "lax supervision by the central government."



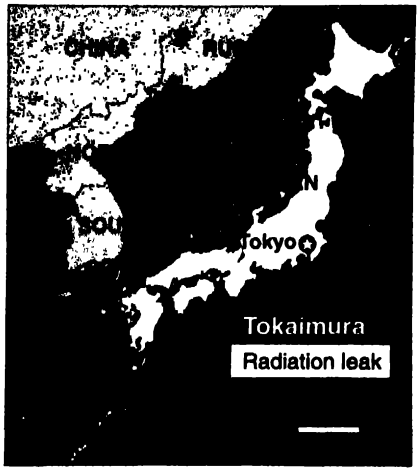
According to *Asahi Shimbun*, police investigators said that "there seemed to be a complication within the company that forced the employees to hasten the production of nuclear fuel." Under normal circumstances, the factory produces 0.77 tonnes of purified, highly enriched uranium trioxide powder a day.

If borne out, this report could add yet another devastating detail to a picture of a plant out of control. When the accident occurred, the workers were not only pouring uranium fuel from steel buckets with their hands rather than with measuring machines, but were using more than three times the appropriate concentration of the radioactive material.

The workers are also known to have poured more than 35 pounds (about 16 kg) of uranium fuel into a nitric acid solution, instead of 5.2 pounds, which is the norm. This excess quantity triggered a chain reaction involving the fission of nuclear materials. It was brought under control on October 1.

The newspaper *Yomiuri Shimbun* quoted plant officials as saying that the accident occurred after procedures had been ignored for the second consecutive day, suggesting a broader pattern of procedural infractions.

Sumitomo Metal's president was quoted by *Mainichi Shimbun*, another newspaper, as saying that they "never told JCO to increase fuel production." Similarly, JCO officials blamed the accident on "lack of sufficient expertise". They denied that workers were asked to employ shortcuts but admitted that recently the plant faced intense competition from foreign firms, notably from Siemens AG, to supply fuel to Japan's nuclear power plants.



KOJI SASAHARA/ AP

The uranium processing plant at Tokaimura, four days after the accident.

AT the time of the accident, the plant was producing fuel for Japan's controversial Joyo experimental fast-breeder nuclear reactor. Despite accidents, technical setbacks and international expressions of concern about safety and nuclear proliferation, Japan has been developing fast-breeder technology for three decades. Fast-breeder reactors offer the promise of producing more plutonium than they consume, through processes that convert uranium fuel into fissionable plutonium.

Plutonium is the raw material used in most modern nuclear-explosive devices. Although Japan has legally forsworn nuclear weapons, its neighbours – many of which were victims of its aggressive military expansionism earlier in the century – have often expressed opposition to its handling of plutonium tech-

A worker of the nuclear plant being shifted to a hospital in Mito specialising in radiation sickness.

nology, which easily lends itself to weapons building.

There have been worries that such technology could be subject to terrorist attack or theft. An additional concern is that Japan's nuclear industry is dependent on long-range, lightly guarded shipments, mostly to and from Europe, of highly fissionable materials needed for its power industry.

But Japan, which is almost completely dependent on imported oil and uranium for its energy needs, has firmly stayed the course of fast-breeder reactor development. The accident will bring renewed pressure that the country reconsider its nuclear power strategy.

In the past, Japan has compounded nuclear accidents with slow and often misleading information. The confused emergency response has been matched by a political one, with rival agencies alternately seeking to dismiss concerns about the country's vast nuclear energy programme, or calling for a sweeping re-evaluation.

The chief of the Natural Resources and Energy Agency, Hirobumi Kawano, ruled out the idea that an uncontrolled reaction could occur at a nuclear plant in Japan and told reporters that he did not intend to instruct power companies to re-examine their safety measures, the news agency Kyodo reported.

A top official of the Ministry of International Trade and Industry, however, said that the accident was serious enough to lead Japan to reconsider its nuclear power policy.

IT is too early to determine what exactly happened at the plant. Hans Meyer, a spokesman for the International Atomic Energy Agency (IAEA) in Vienna, said that the uranium involved was from ore and was being cleaned in a chemical process.

Some experts said that if, as reported, the tank was filled with uranium in the form of uranyl nitrate, this implied that the uranium came not from the ore but from uranium that was being reprocessed after a prior use.

According to several reports, the uranium that was being reprocessed had been enriched to 19 per cent, meaning that 19 per cent of the atoms were uranium 235, the form that splits readily.

A breeder reactor, a type intended to produce more fuel than it consumes, needs the richer form of uranium. But in most commercial reactors, uranium enrichment levels are 3 per cent to 5 per cent. The higher the enrichment, the less the uranium needed to form a critical mass, the minimum amount needed for a chain reaction.

Dr. Peter Parker, Professor at the Nuclear Structure Laboratory at Yale University, U.S., said that the workers had apparently been mixing too much uranium in a small vessel. "That made the density of the uranium so high that the neutrons didn't get absorbed by the other material around," he said. This led to an out-of-control reaction, according to him.

JAPAN operates about 51 nuclear power plants. Tokaimura, a town of about 33,000 residents, is home to more than a dozen nuclear-type plants. The Tokaimura plant, which was completed in 1973 and which began commercial operations nine years later, is the second Japanese uranium-reprocessing plant to suffer a serious accident. The town was the site of Japan's worst previous nuclear accident, which took place in 1997. In that incident, 37 workers were exposed to radiation after a fire in one of the plants was improperly extinguished it and caused a small explosion. That plant, of the state-run Nuclear Fuel Development Corporation, has been petitioning the government for permission to resume operations. Experts have speculated that as a result of the latest accident, the plant may never reopen.

Japan, which has no crude oil of its own, pushed the development of nuclear energy in the 1970s after a sharp rise in oil prices. The country is now dependent on nuclear power for about one-third of its electricity needs, one of the highest ratios anywhere in the world. The fuel generated at the JCO-operated plant is used in the nuclear reactors nearby.

This familiarity with nuclear power has not helped the country avoid accidents. In July, radiation estimated to be 11,500 times higher than normal levels leaked out of faulty pipes in a reactor in Tsuruga, about 320 km west of Tokyo. Following the accident, a reactor owned by the Japan Atomic Power Company was forced to shut down; it had lost 51 tonnes of its radioactive coolant. The Tsuruga plant remains closed for repairs. ■

A grand festival in China

Celebrations to mark the 50th anniversary of the founding of the People's Republic of China get under way in China.

SETH FAISON
ERIK ECKHOLM

CHINA celebrated the 50th anniversary of Communist rule on October 1 with a nationwide festival of patriotic pride that presented a seamless-looking display of political unity and popular happiness.

With a grand parade rolling into central Beijing, China's leaders put together an event intended to project a jubilant manifestation of national strength and harmony. The parade was cheered on by hundreds of thousands of onlookers.

The celebration was so huge – with 500,000 participants – and was perceived by the authorities as so critically important that it became a significant political event in itself. President Jiang Zemin presided over the festivities, which might as well have been called "Jiang's Show." After months of groundwork, the parade crowned Jiang's efforts to lift himself to the same historical plane as China's two great modern leaders, Mao Zedong and Deng Xiaoping.

ZHAO JIANWEI / XINHUA

The grand parade at Tiananmen Square on October 1; (below) President Jiang Zemin (second right) and other top leaders, (from left) Vice-President Hu Jintao, Premier Zhu Rongji and National People's Congress Chairman Li Peng, review the parade.

Among the 90 floats in the parade – a remarkable collection highlighting China's achievements – were separate portraits of Mao, Deng and Jiang, the first time the current leader has been placed on a par with his predecessors in such a public way.

Jiang stood alone in an open-backed limousine that reviewed a miles-long line of military hardware. "Comrades, hello!" Jiang yelled to the assembled troops, who included camouflage-green-clad marines, blue-suited air force officers and militia women in red mini-skirted uniforms. "You are working hard!" Jiang said.

On display at the parade were mobile short- and medium-range ballistic missiles that are nearly impossible to counter effectively. The parade also featured the recently tested DF-31 intercontinental ballistic missile, which is capable of reaching parts of the United States. Unlike China's existing, vulnerable nuclear forces, this one can be moved about, lending it far greater protection from a surprise attack.

"The military parade is intended to show confidence and strength, especially domestically," said Zhang Yunding, director of Asia-Pacific Studies at the Chinese Academy of Social Sciences. "It's to give the people a sense that we have a new China, to let people feel proud of that."

Jonathan Pollack, a China specialist at the Rand Corporation in California, said: "The leadership wants to signal that it's not standing still and that it can display this prowess – at least as much to its own citizens as to the world at large."

As he stepped to the rostrum at Tiananmen, Jiang was clearly meant to appear firmly in charge. Alone among the top leaders, Jiang wore a Mao suit.

October 1 will long be remembered in China for the day 50 years ago when Mao stood atop Tiananmen – the imperial Gate of Heavenly Peace – and proclaimed that the Chinese people had finally stood up, after decades of civil war and foreign invasion. The previous major October 1 celebration had been staged on the 35th anniversary, in 1984, to celebrate Deng's rule and his programme for economic growth; October 1 was clearly intended to mark Jiang's turn in the top array.

"After 50 years of trials and tribulations, all the people of the country must unite even more tightly around the Party centre with Jiang Zemin as its core," said the Beijing *Youth Daily*.

In China's media, the 50th anniversary has been an occasion to highlight the positive aspects. "The course of 50 years of struggle tells us that only socialism can save China," said the Communist Party newspaper *People's Daily* in an editorial. ■

New York Times Service

In cold blood

After 50 years, the truth about a massacre committed by U.S. troops in Korea seeps out.

CALVIN SIMS

FOR decades, Jeon Eun-yong tried, with no success, to convince the United States and South Korean governments that U.S. soldiers had fired at his wife, young children and hundreds of other civilians in 1950 during the early days of the Korean War.

So when word broke in Seoul on October 1 that in an Associated Press article published that week former U.S. soldiers spoke about the killings, neither his arthritis nor the heavy rains could keep Jeon, a 77-year-old retiree, from attending a demonstration in front of the U.S. Army base at Yongsan, Korea.

"You can't begin to imagine the pain and anger I have felt all these years," Jeon said, addressing a cheering crowd of about 50 protesters who chanted anti-American slogans and carried placards calling for justice.

"Now that the facts have been established, I want an apology," Jeon said. "If America is to live up to its role as leading nation of the world, it must uphold the human rights of the survivors of the massacre as well as the deceased."

Although small in number, the protesters expressed the sentiments of many South Koreans, who sharply criticised the U.S. for long ignoring the claims of massacre survivors and called on their own government to conduct an independent investigation.

The Pentagon announced that it would undertake a new and thorough inquiry into reports that U.S. soldiers killed hundreds of refugees under a bridge near No Gun Ri in South Korea at the start of the war. That new investigation was prompted by the Associated Press article, in which some of the U.S. soldiers at No Gun Ri said they had been ordered to fire on the refugees because their commanders believed that North Korean troops, disguised as peasants, had infiltrated a refugee column and were shooting at the Americans.

Jeon, who became separated from his family as they fled the war's early fighting, said that his son and daughter, aged five and two, were killed by U.S. gunfire as they took cover with his wife under the bridge at No Gun Ri. Although his wife, Park Sun-yong, survived the attack, she was critically wounded. She was not at the protest but said from her home: "Now, some of the burden from 50 years of rage and sadness seems to be easing. Now I can die in peace. You see, my children's lives were taken away so unjustly. They died such vicious deaths – their bodies were ripped apart right in front of my eyes. The U.S. Secretary of Defence can conduct all the investigations he wants to, but he'll find that our memories of the event are still the same."

Park Sun-yong, now 73, said that she harbours no bitterness toward the U.S., noting that after the attack a U.S. medic discovered her bleeding and unconscious and saved her life.

The Rev. Moon Bae-gol, director of a group, the Committee to Stop Crime by the United States Military, called on the U.S. to prosecute the soldiers who took part in the massacre and to compensate the relatives of those who perished. He demanded that the South Korean government and Parliament form a special commission to investigate the incident. Sohn Woo-hyun, a Korean government spokesman, said that the government is currently gathering evidence on the attack.

The protesters at the military base said that violence by U.S. soldiers in South Korea is not just a thing of the past but continues today. They said dozens of crimes, including murder, theft and assaults by U.S. soldiers, had gone unpunished in recent years. There are more than 37,000 U.S. troops based in South Korea. On a wall just outside the gate of the Yongsan Army Base, the protesters hung graphic posters of battered South Koreans that they said were victims of violent crimes by U.S. military personnel.

An Army base official claimed that the incidence of crimes committed by U.S. military personnel in Korea was no higher than in society at large. The official said that the protesters had held a weekly rally in front of the base for many years and that their claims of widespread military violence by U.S. soldiers in Korea were exaggerated. ■

AHN YOUNG-JOON/AP

Relatives of victims gather under the railway bridge near Yongdong where American troops opened fire on South Korean refugees in late July 1950.

Tasks of transformation

The centrality of race in the South African system and society remains even under democratic rule, and a real change on this front will evidently take time.

M.S. PRABHAKARA
in Cape Town

ANY political transition entails both continuity and change. This is so of transitions of the most uncompromisingly revolutionary kind as of those marked by negotiations and deals – not to speak of long-anticipated transitions such as the one from President Nelson Mandela to President Thabo Mbeki in South Africa.

The completion of a hundred days of the Thabo Mbeki presidency has provided the occasion for many analyses, each trying to discover and delineate the points of departure from the policies laid down in the first five years of democratic government in the country. As always, implicit in such analyses is the conviction that the democratic credentials of the new President, who continues to be portrayed in the liberal English language print media as a secretive and vengeful Africanist, in sharp contrast to the supposedly benevolent Mandela, are suspect. In this perspective, the jury is still out on Thabo Mbeki. This, despite the fact that throughout the Mandela presidency, Thabo Mbeki was closely involved in every aspect of the crafting and implementation of the policies of the government and of the African National Congress (ANC).

The fundamental tasks facing the new government remain substantially the same as faced by the first democratic government; and arise out of the same history that the people of South Africa have inherited. In the context of the immediate and urgent needs of the people, these are: reduction in what is oddly described as 'unacceptable levels of crime' – as if there are or ought to be 'acceptable levels of crime', and the related problem of corruption; economic growth and a more equitable distribution of the results thereof; creation of jobs to mitigate the problem of around 30 per cent unemployment, also causally related to the problem of crime; and service delivery – drinking water, electricity, housing, education, primary healthcare, social services. At a more fundamental level, and less easy to measure either in terms of its nature and magnitude or its implementation is the transformation, meaning the genuine deracialisation of South African society, going beyond the legal dismantling of apartheid laws structures; and the entrenchment of a democratic culture.

PETER DEJONG AP

President Thabo Mbeki with Nelson Mandela in June 1999. The fundamental tasks ahead of the Mbeki Government remain substantially the same as were faced by the Mandela administration.

While all these are inter-linked, the most serious task is the control of crime. Even for a society and a state long inured to cruelties and horrors, the recent incident in Bez Valley in Johannesburg where a young woman was gang-raped over two days and, further, had her face disfigured by hot iron, presents moral and administrative challenges with which it appears simply unable to cope. Crime, the one activity that has been totally deracialised, touches all, even the seemingly highly-placed and the powerful. Two Members of Parliament became victims recently. In the first case, the MP was shot in an apparent 'car-jacking' attempt. But he foiled the attempt by shooting back. (It is not uncommon for people to carry a personal weapon.) In the second incident, another MP was a victim of car-jacking. Rape and murder, molestation of children, murders on farms, taxi wars, bank heists, unless involving high-profile victims or very large sums and numbers of victims, have long ceased to be news. White-collar and commercial crime involving millions of rands, too, has ceased to be news.

None of this is new. Nor is the problem in any way related to the onset of the democratic dispensation. However, of late there is a growing perception that the democratic and constitutional order is 'soft on crime'; and that by favouring the criminals it is victimising the victims of crime further. While this perception is widespread among the people, not all of them diehard supporters of the old order, there are other nuances suggesting that some in authority too may share such perceptions.

Indeed, the government appears to have been caught in its own rhetoric of taking the hardest line on crime The new Minister for Safety and Security, admiringly nicknamed by those seeking instant solutions as 'Fix-it' Steve Tshwete, has adopted a no-nonsense, hands-on' approach (the description is borrowed from media coverage of the Minister's initiatives) and take the war to the criminals While such determination is welcome, rather more problematic is the apparent attempt to see links between crime and vagrancy, or crime and street trading, crime and shacks and other necessarily unattractive features of urban life, reinforcing the worst middle class prejudices

One such initiative that is fore doomed to fizzle out is the ongoing 'clean-up' of the pavements of Johannesburg that are crowded by hawkers and vendors, to reclaim them for the use of pedestrians Such exercises are planned for other cities as well There have been such initiatives earlier, with squatters evicted from lands they had illegally occupied protesting with futile rage or mutely watching the destruction of their hovels It is entirely possible that behind such squatters and street traders are organised rackets controlled by criminals But no one seems to consider whether such zealous initiatives which necessarily involve the destruction of the livelihood of many poor people, forcing them to take to crime and add to the already large number of criminals, are a realistic option to solve the very real problem of urban decay, especially in the city centres No one seems even to consider the factors and the motives that initially led to the abandonment of the city centre by business and industry

The approach is integrally related to the broader perspective on economic growth, employment and distribution adopted in mid-1996 – the so-called Gear (Growth, Employment and Redistribution) Although the bitter polemics surrounding Gear between the ANC and its allies in the tripartite alliance, the South African Communist Party (SACP) and Cosatu, during the last two years, which were openly manifest both at the ANC's Mafikeng Conference in December 1997 and the SACP's Congress in Johannesburg in June 1998, appear to be now muted, differences on micro-economic policy persist

The recent strike action by 12 public sector unions, not all of them affiliated to Cosatu, protesting against the government's decision to break off negotiations on the annual demand for inflation-linked wage increases, is only one manifestation of such differences The unions demanded an average increase of 7 3 per cent (with an additional one per cent for teachers) while the government would not resile from its offer of a 6 3 per cent increase

However, the dispute goes beyond a difference over a one per cent gap The government simply could not afford to appear to be climbing down to the unions demands because of its conviction that only such a hardline attitude towards the unions would reassure the foreign investors' – that amorphous and indefinable community which, despite all evidence to the contrary, is presumed to be anxious to bring in large investments into the country

Underlying this approach is the conviction that only large foreign investments can ensure Growth, which in turn would generate Employment, which in turn would lead to Redistribution – together forming that near divine triumvirate of the policy anagramatised as Gear This is a perspective with which the unions profoundly disagree both out of political conviction and as a matter of experience of what such a perspective has done to the economies of other countries that have followed such prescriptions

Given its near-total commitment to the orthodoxy of the market, the progressive reduction of fiscal deficit and to the perfectly-balanced budget, it is unlikely that pressures from its allies in the tripartite alliance will lead to any basic changes in this commitment, though Cosatu general secretary Zwelinzima Vavi has said that Cosatu would throw its weight behind the public sector unions when they launch their strike action in November Equally, given the logic of the tripartite alliance and the fact that its historic necessity is recognised on all sides, these confrontations, howsoever bitter, are unlikely to lead to the break-up of the alliance For the government's macro-economic policy is contested not merely by the Communists and the unions, it is an area of contestation within the ANC as well.

Above all is the complex task of transformation Superficially one sees evidence of transformation all around. Leaving aside Parliament which since it became genuinely representative reflects the ethnic and racial demography of the country, blacks are prominently present in many other structures and institutions, though some sectors such as banking,

R. KRISHNAKUMAR
in Thiruvananthapuram

SEATED under a life-size painting of Mahatma Gandhi in the Durbar Hall of the State Secretariat in Thiruvananthapuram, Winnie Madikizela Mandela looked very much the survivor that she is today in her own country.

"We know him as a man wearing the English gown. You remember him in the image of a frail old man wearing a loincloth and holding a walking stick. He is ours, as much as he is yours," the unlikely guest in Kerala during this year's Gandhi Jayanti celebrations, was reminding Indians of Mahatma Gandhi.

The setting seemed tailor-made for the South African MP and president of the Women's League of the African National Congress (ANCWL), whose bold and vitriolic leadership had triumphed over years of political and racial harassment, controversy and personal pain to make her a symbol in her own right in the new South Africa.

"South Africa is as much our homeland as it is yours. But there is very few of you there," she said, speaking at a reception hosted by Chief Minister E.K. Nayanar and his Cabinet colleagues and senior State officials at the Secretariat.

In many ways, Winnie Mandela's comments during her three-day visit to Kerala last fortnight, her first to India, to inaugurate the Millennium Festival (a four-month educational and cultural programme organised by the Kerala Children's Film Society), were reflections on the role she played in defiance of the apartheid regime, her fall from the heights of popularity to controversy, censure and criticism, and an indication of the role that she was possibly evolving for herself in the new South Africa, after her divorce from Nelson Mandela.

Winnie Mandela, who was on one occasion at the centre of a virulent controversy over a speech she made supporting "necklacing" (burning suspected government collaborators to death by putting a blazing tyre around their neck) and arguably the most powerful and poignant voice against apartheid during the worst years of the racist regime, said she had no regrets about the violent course the freedom struggle had to take in her country. The South African [illegible]

From South Africa, with feeling

and had great respect for Gandhian principles. But the racist government had tried to deal with it with an iron hand. That was why the country's path to freedom was one of pain and violence. The ANC resorted to violence because peaceful means had taken it nowhere. Violence was the only language that the enemy understood, she said.

Speaking at the local Press Club, she said that South Africa was today reeling under the after-effects of apartheid, which had devastated the economy. "Apartheid was a very expensive system to maintain with its need for separate institutions, schools for example. The new government inherited a legacy of extreme poverty and unemployment. The crisis in the gold market also affected South Africa."

While seemingly conceding that she was not in the political mainstream anymore, Winnie Mandela claimed that she continued to represent the voice of millions of black south Africans who are yet to benefit from the country's transition to democracy. According to her, revolutionary slogans alone could not help the new government bridge the gap between the poor and the rich. "One had to be realistic and practical. The ANC had promised a million homes in five years, free education and health care – but it could not deliver because of the state in which the country's economy found itself in." She said that South Africa was therefore inviting multinationals to improve its economy and to bridge the gap between the rich and the poor, to create jobs and improve the lot of its people.

According to her, the legacy of apartheid was a big gulf between races of people in her country and there would be racial tension in South Africa for a long time to come. It was not easy for those who enjoyed privileges to relinquish them. But the government today does not discriminate between its people in terms of language, nationality or race. There is no such thing as South African Indians. There are only people of South Africa."

Winnie Mandela spoke with no bitterness but with deep emotion on some of the controversial chapters of her life – the kidnapping and murder of 14-year-old Stompie Seipei in the months before Nelson Mandela's release from prison, and her divorce from the President. On the killing of Stompie she said that the truth had been established that a police informer had killed the child in order to tarnish the image of the ANC. She said she was not aware of any other allegation against her other than that she had fought the apartheid regime physically and politically, and she was never going to apologise for that.

Winnie said in answer to a question that she would have very much liked to drop her surname 'Mandela', but that the people of South Africa would not let her to do that. "They want me to drop my maiden name instead," she said. She described her relations with Mandela as "good", even though the patriarchal society of which she was part of made women lose their individuality. Women were overshadowed by their husbands. "It occurred to me that I have to be an individual. The political worker that I am today is not Mandela's creation. I am a product of the struggle against apartheid and the ANC. I would love to be me." She said she still respected Mandela as a leader of the freedom struggle, and he was indeed the symbol of the South African struggle. But it was Mandela who should explain why their divorce had come about, she said.

Addressing separate audiences in Thiruvananthapuram, Winnie Mandela expressed her concern for issues of women's empowerment, crimes against women, unemployment, education, housing and the threat of Acquired Immune Deficiency Syndrome (AIDS) as a consequence of the erosion of cultural values. She said that though she was impressed by Kerala's achievements in the matter of empowering women, it was clear that India had a long way to go in this field even after so many years of freedom. She said women all over the world faced similar problems.

At the Gandhi Jayanti celebrations organised by the KCFS and Asianet, she told a gathering of children: "Do you know what racism is? Do you know how lucky you are? You have education. You have freedom. In South Africa, the racist government had denied education to our children. We did not have even the right to sit near a white man. The colour of the skin decided which school you will study in. Children were separated from their mothers. Thousands of mothers were sent to jail. We were not even allowed to walk freely. Before 1990, I was not even allowed to leave the country. The racists had considered me as their enemy. South Africa's history was rewritten by children who had sacrificed their childhood."

She said she was fulfilling a cherished desire by visiting India for the first time. "When Nelson Mandela was awarded the Jawaharlal Nehru Award, Indira Gandhi had told my friend Fatima Meer how wonderful it would have been if I had come to India to receive the award. But I too was a prisoner then and could not get a passport," she said. ■

C RATHEESH KUMAR

Winnie Mandela in

OBED ZILWA / AP

Members of the Pan Africanist Congress of Azania, who were absorbed into the South African National Defence Force, carry the coffin of Lt. Sibusiso Madubela at the funeral in Umtata in Eastern Cape on October 2. The massacre at the Tempe military base near Bloemfontein has triggered a soul-wrenching debate over the racial transformation of the SANDF.

advertising, mining and higher research institutions remain racially exclusive, with an insignificant black presence. The financial papers keep mentioning the increasing share of black-run companies in the market capitalisation of shares on the Johannesburg Stock Exchange. The Governor of the South African Reserve Bank, Tito Mboweni, is a veteran of the liberation struggle and a former Minister of Labour in the Mandela government. Society pages in the glossies now routinely carry pictures of black, upwardly mobile professionals of both sexes, glowing with good life and mingling with apparent confidence with whites of their ilk. Black economic empowerment is a shrine at which everyone wants to worship, or at least make a genuflectory gesture. Indeed, the rage now is African Renaissance, an idea and an objective enunciated by Thabo Mbeki and now taken over by others, some genuinely convinced and others simply on to a good thing.

AND yet, in the midst of this flowering of black self-confidence and pride and optimism, an incident like the one that occurred at the Tempe military base of 1 SA Battalion near Bloemfontein on September 16 jolts one to the harsh realities of South Africa. On that day, Lieutenant Sibusiso Madubela of the South African National Defence Force (SANDF) shot dead seven of his brother officers and soldiers, as well as a civilian, all white, before he was himself shot dead. Sib[illegible] Madubela, needless to say, was black. He was part of the component of the Azanian People's Liberation Army, the armed wing of the Pan Africanist Congress of Azania, which had been absorbed into the SANDF. Similarly, components of the Umkhonto weSizwe, the ANC's armed wing, have been absorbed into the SANDF. This process was supposed to be part of the transformation of the old South African Defence Force into the SANDF.

The transformation of the defence forces, given their rigid and ordered culture of discipline and obedience to authority, not to speak of the *esprit de corps*, should have been a relatively smooth affair. The latest incident and, even more so, its aftermath, shows how difficult and problematic the task is. The soldiers he killed were given military burials unless the family preferred otherwise. Madubela, evidently, could not qualify for such honours even though the PAC and his relatives requested for one.

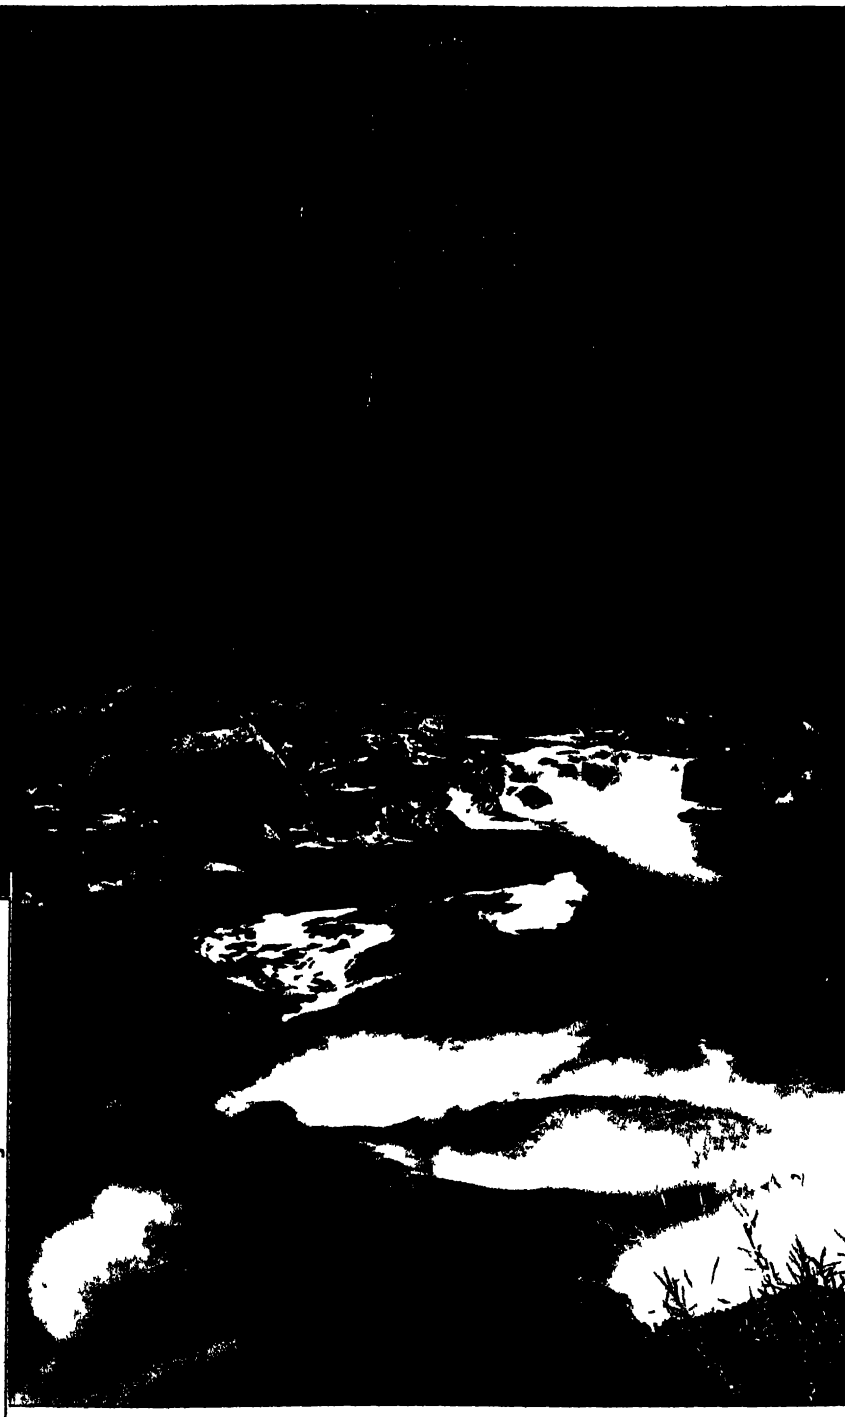
However, when the body was taken to Umtata in Eastern Cape for burial, about 40 fellow-soldiers from Tempe, all black, attended the funeral. They had been permitted to do so by the authorities on condition that they did not wear their uniforms and did not carry weapons. Nevertheless, a salvo of shots was fired there. Present at the funeral was the APLA's former chief of operations, Letlapa Mphahlele, who gave the order for a 'ten shot salute'. Many of those attending the funeral, going by the pictures that have appeared in the media, wore their old APLA uniforms. Madubela may have died in the course of committing a crime (which disentitled him to a military funeral); but for those who attended the funeral, he was 'a soldier, a hero', one who "offered his life in the struggle against the oppression of the black soldiers in 1 SA Battalion". One of the reports on the funeral quoted a relative of Madubela as saying that she wished he had killed more whites.

It would be facile to dismiss such openly expressed hatred and bitterness as an aberration, related to the peculiar history and political pathology of the PAC. Indeed, political and army leaders have underplayed the all-too-evident racial dimensions to the incident. While such caution is, perhaps necessary, the incident only underlines the complexity of the task of transformation. Rumours and inspired leaks that the officer who had overstayed his leave had 'gone berserk' because his salary had been withheld, cannot explain the enormity of the outrage. Only less inadequate are other factors recounted by friends and relatives – that Madubela had been frequently ill-treated and marginalised, that he constantly felt diminished as a person and as a soldier by the dominant culture of the armed forces.

What the incident does show is the centrality of race in South Africa. To argue that this should not be the case 'even five years after the democratic transformation' is to be blind to reality. As in India where decades after caste has been 'abolished' as a category in collection of census data, it remains a crucial social and economic indicator, so in South Africa where despite the dismantling of apartheid laws, race remains a crucial indicator.

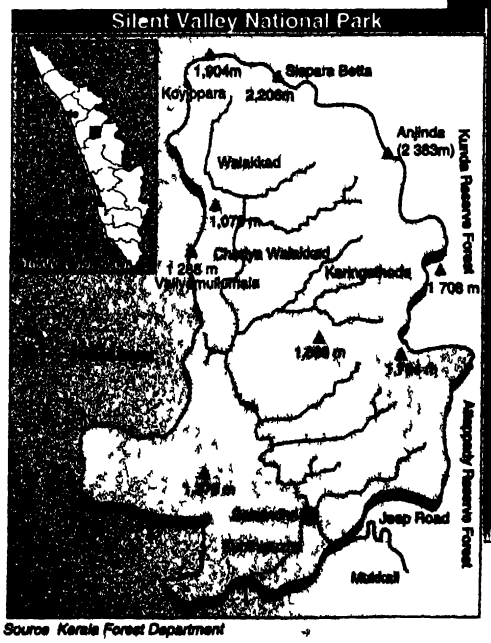
What should really disturb those committed to democratic transformation is not the persistent reality of race as a factor affecting every area of economy and society, or an alleged 're-racialisation' of South African society, but that there seems to be a deliberate shift from the perspective of a genuinely non-racial democratic South Africa, a defining feature of the ideology of the liberation movement, to creeping multi-racialism. ■

The Silent Valley story



The Kerala Forest Department documents in a lavish commemorative volume the natural wonders of the Silent Valley and the campaigns that helped preserve them.

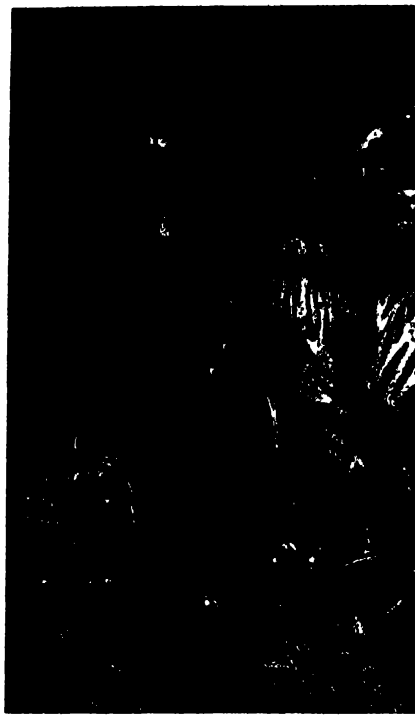
ANAND PARTHASARATHY



IT is agony, having to leave the warm comfort of the sleeping bag before daybreak and face the damp chill of the forest, but a sharp tap on my shoulder tells me this is no time to tarry Wild Life Warden K V Uthaman is already putting on his jungle boots His local "watcher" has located a nest of the Malabar whistling thrush a few hundred metres from where we are camping at Sairandhri, in the heart of the Silent Valley There is no time to lose

Ever since the science teacher in the upcountry school I attended described the bird, also known as the "idle schoolboy" because of its boyish whistling notes, and pointed out the colour plate in his tattered copy of Salim Ali's *Book of Indian Birds*, it was my ambition to hear the bird in its natural habitat, the rainforests of Malabar But I have been unlucky on every earlier visit Now, as we slide down the rain-washed rocks to the bed of the Kunthipuzha, the deafening sound of a monsoon waterfall drowns out all conversation The nest is in a crevice

SURESH ELAMON



Not-so-silent flows the Kunthipuzha. The river forms the life-line of the Silent Valley, which was the focus of a major environmental campaign for almost a decade until it was notified a national park in 1985.

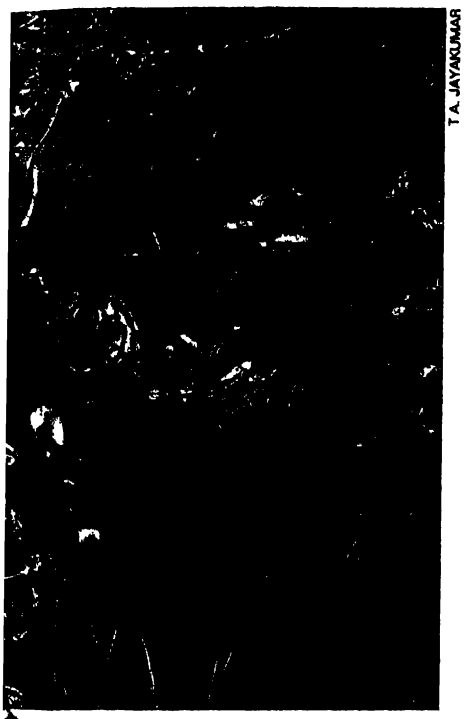
Source Kerala Forest Department

T.A. JAYAKUMAR

The sheer variety of mammals and arboreal animals present in the Silent Valley is impressive. A bull gaur; a tiger; the lion-tailed macaque; a tusker in musth; a jungle cat.

on a dizzy ledge, overhanging the river bank – and it will take a better climber than I to get anywhere near it.

But I don't have to. Day breaks as we wade along the river bank, and suddenly a loud musical whistling call, astonishingly human-like, pierces the air above the roar of the water. It is a delectable sound, worth waiting half a lifetime to hear, and I am lucky to catch it on my fifth trip in 10 years to the Silent Valley. To cap a glorious day, we see the male thrush, a flash of cobalt blue, as it whizzes out of the nest in quest of food.



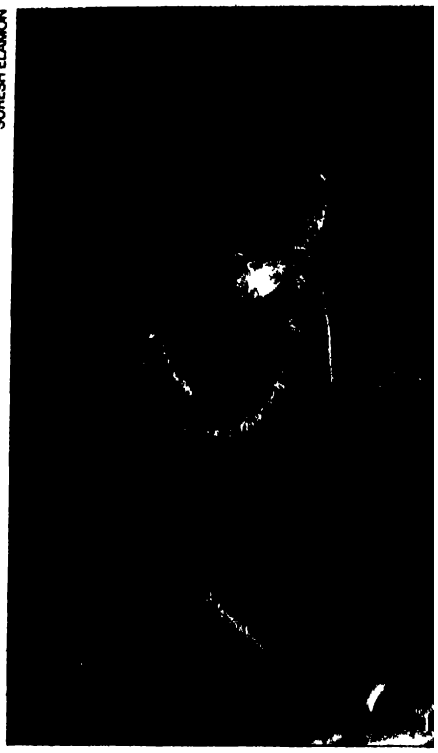
Visitors to the Silent Valley, which possibly represents India's most precious environmental heritage, usually go back with a fund of fond memories. "Snakewallah" Romulus Whitaker remembers a speckled cobra he was trying to photograph dart straight at him, only to slide between his legs into the bushes behind. Naturalists V.S. Vijayan and M. Balakrishnan, who carried out the first systematic scientific survey of the Silent Valley in 1977, said recently that they had less to fear from the forest's four-legged denizens – the wild boar, the leopard, the panther and so on – than from the employees of the Kerala State Electricity Board who are posted to deal with "intruders" when there was considerable conflict between the Board and environmentalists who opposed the proposal to build a hydroelectric project in the Silent Valley. They travelled by day wearing *mundu* and vest, and ate rice gruel, in order to merge with the local population. Suresh Elamon, the wildlife photographer, trekked for weeks on end on the fringes of the Valley, trying to catch a glimpse of the rarest of rare butterflies: the Travancore Evening Brown, which was last sighted in 1930 and is thought to be extinct. Elamon rediscovered the butterfly in 1993 in the Periyar Tiger Reserve. Does it occur in the Silent Valley? He is searching.

SURESH ELAMON

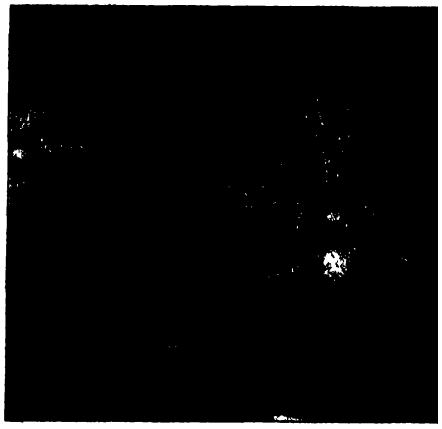
The saga of Silent Valley is made up of such individual quests, which have helped preserve this unique crucible of nature virtually intact. The annals of environment conservation efforts are replete with many a *cause celebre* – harrowing tales of destruction, sometimes prevented. Tehri, Narmada, Kaiga... we have no dearth of them. The truly impressive success story comes but rarely; the Silent Valley is one such.

PROMPTED by the widespread interest shown by conservationists during a seminar organised to mark the first decennial of the Silent Valley National Park in 1995, the Kerala Forest Department brought out in the second

T A. JAYAKUMAR

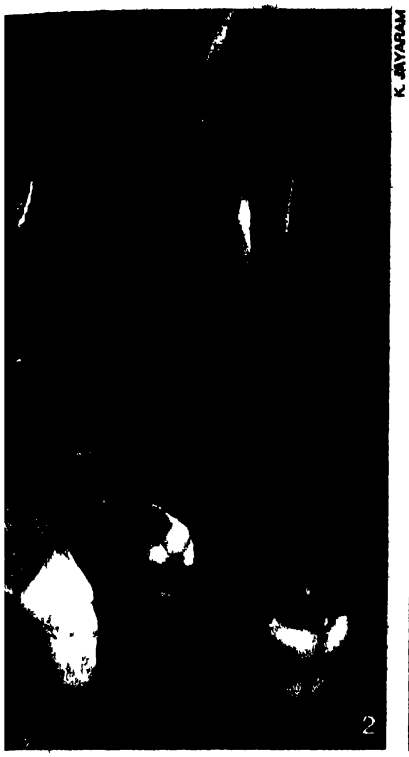


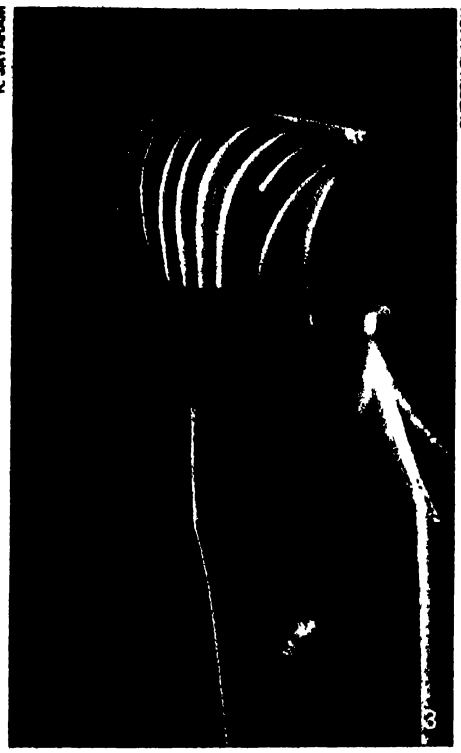
T N A PERUMAL



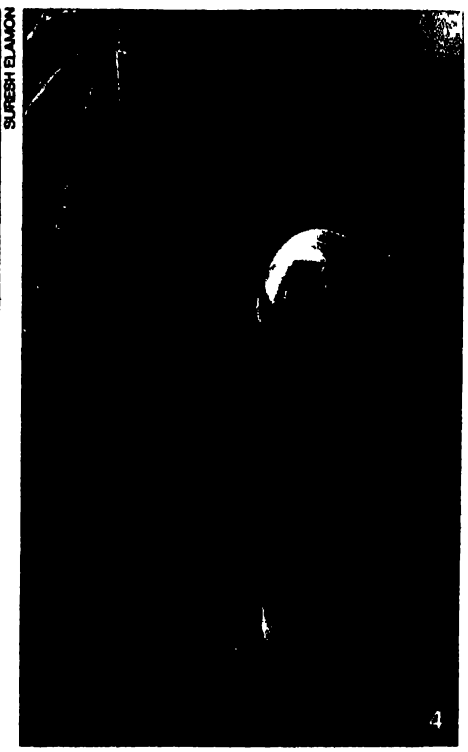
week of October an anthology of 38 articles, which together record the history of the Silent Valley, the struggle by non-governmental organisations (NGOs) in India and abroad to save it from being overwhelmed by a hydel project, its regeneration in a period of a decade as a protected national park, together with a hard core of authoritative documentation by naturalists and scientists on the Valley's unique flora and fauna. *Silent Valley Whispers of Reason* (Editors. T.M Manoharan, S D Biju, T S. Nayar and P S Easa, published by the Kerala Forest Department, Vazhuthacaud, Thiruvananthapuram; pages 421+XVII, Rs 1,200) also brings together half a dozen Kerala-based photographers whose painstaking work over many treks has helped capture the essence of what the Silent Valley holds, through stunning portfolios of colour photographs. Its sponsorship by the State Government notwithstanding, it is no mere *sarkari* tome: the editors wisely recognise that the core contributions to knowledge about the Silent Valley have come from "outsiders" and have invited them to narrate their experiences The mix of the anecdotal and the coldly scientific in the same volume might appear odd but it works because the subject is all-encompassing. The clinically exact documentation of every sub-species of wildlife will be useful to naturalists, while the more personal reminiscences of those who were involved in the "Monkeys or Man" debate concerning the valley will provide the human touch for more casual readers.

SURESH ELAMON





SURESH ELAMON



An evergreen patch. A total of 124 species of vascular epiphytes, which include ferns and fern allies and orchids, have been observed at the Silent Valley.

EVEN with a major hydel scheme like Idukki already committed, Kerala's northern districts faced a bleak power scenario in the late 1960s. The gorge of the Kunthipuzha as it tumbled down the Western Ghats to Mannarkkad, before joining the Bharathapuzha, seemed an ideal location for a dam. The Silent Valley was a dense tableland of tropical evergreen forest, approximately 90 square kilometres in area and hemmed in on all

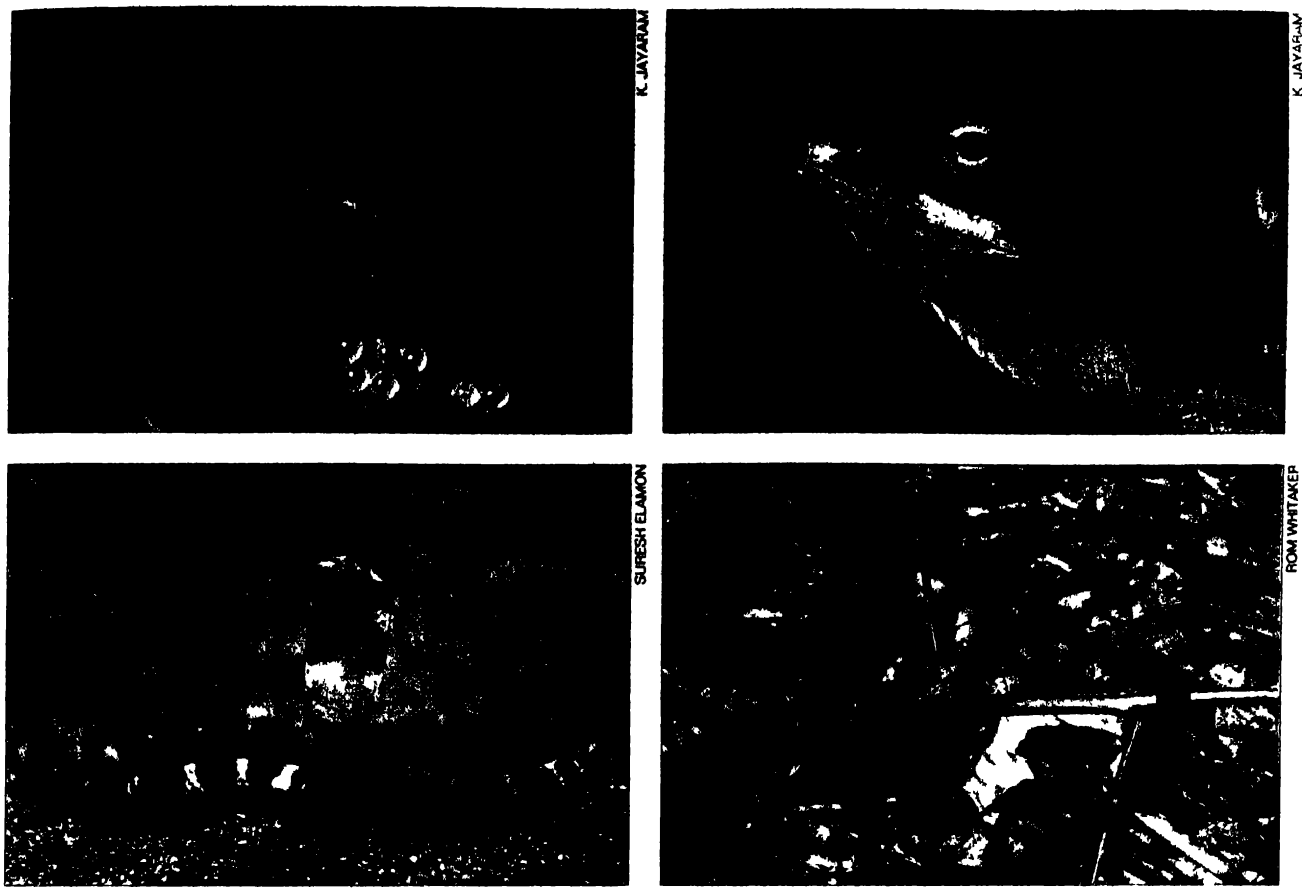
sides by the steep hills of the Nilgiri ranges. The Kunthipuzha traversed it from north to south, descending 1,500 metres in the process. It rained here almost throughout the year, often recording over 3,000 mm of annual rainfall, with nearly 900 mm in July alone when the south-west monsoon is at its peak. Temperatures were rarely above the lower 20s, and 6° or 7° C in the winter months was quite common. The sheer inaccessibility of the valley preserved it from human incursion for over half a century



A blue mormon, the second largest butterfly in South India, sharing a meal at a dropping site with a blue bottle; a damselfly male; the tinkling frog; the Malabar gliding frog, whose goggle eyes bulge out at night for better sight.

after the British rulers of Malabar notified it as a reserve forest in 1914. The suitability of the valley for a hydel project was one of the worst kept secrets of British India – but survey parties penetrated the jungle only in the 1950s. Finally, in February 1973, the Planning Commission approved a 240 MW Silent Valley Hydro Electric Project, with an initial outlay of Rs.25 crores. Those were days of ecological naivete: it was only a year since Indira Gandhi had articulated at the Stockholm Conference the developing world's special concern for the environment.

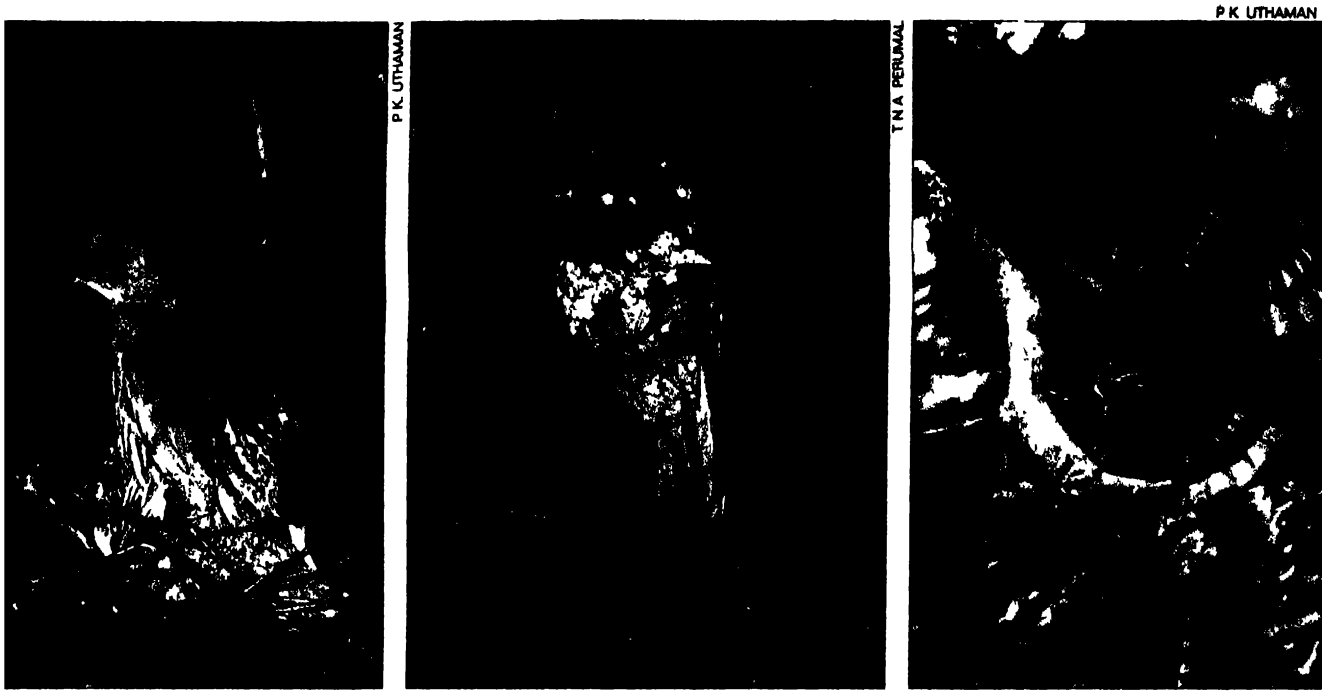
But if government agencies were ignorant of what the Silent Valley held, individual naturalists, especially botanists and zoologists from colleges in northern Kerala, who had been trekking the valley for years in search of rare specimens, were appalled at the developments. Around them grew the spontaneous moves to 'Save the Silent Valley'. M.K. Prasad, a botany lecturer in Kozhikode, as the convener of the Environmental Brigade of the Kerala Sastra Sahitya Parishad (KSSP), brought the organisation into the campaign. Dr. S. Sathis Chandran Nair and Prof. M.P. Parameswaran carried the message across the State's borders to scientific societies in Chennai. Malayalam poet Sugathakumari, inspired by some of the KSSP's pamphlets, led a parallel movement among Kerala's literati, which soon attracted well-known figures including writers such as Vaikkom Mohammed Basheer, O.N.V. Kurup, N.V. Krishna Warrior and Dr. Sukumar Azhikode. As both Prasad and Sugathakumari recall in their contributions, the Silent Valley '*samrakshana*' (protection) campaign spread rapidly largely owing to the involvement of an academic-literary combine. Meanwhile, nature-lovers outside the State were networked – Dr. Salim Ali and Dr. Zafar Futehally from Mumbai, Dr. Madhav Gadgil; and M.A. Parthasarathy of the World Wide Fund for Nature-India (WWF-I) from Bangalore, and Romulus Whitaker from Chennai. They helped add a national (and soon afterwards international) dimension to the issue. Flooded with telegrams from nature-lovers and international organisations such as the International Union for the Conservation of Nature and Natural Resources (IUCN) and the WWF, and buoyed by a helpful on-the-spot study by the Principal Secretary in the Ministry of Agriculture, Dr. M.S. Swaminathan, Indira Gandhi took the political route out of this potential development versus environment crisis: she appointed a committee, headed by Prof. M.G.K. Menon, Secretary, Department of Science and Technology, to carry out an appraisal of the issues involved.

Whispers of Reason includes the reminiscences of both Swaminathan and M.G.K. Menon and describes the nebulous fate of the valley following the swift political changes in New Delhi (the governments of Morarji Desai, Charan Singh and Indira Gandhi, which came in quick succession, had to take decisions on the valley in less than two years). T.M. Manoharan, the book's main editor, who is the Managing Director of the Kerala Forest Development Corporation, was the Divisional Forest Officer in charge of the area that encompassed the valley during those troubled days. He was known to be sympathetic to all efforts at saving the valley, though the Forest

A pentatomid bug with burnished gold armour and pearly eggs; a scale-by-scale portrait of a southern green lizard; a young King cobra with its distinctive yellowish-white bands on a dark body, and a large-eyed bronzeback tree snake.

Department's stance was officially neutral.

Meanwhile, the Save Silent Valley campaigners took their struggle to the courts (arguing the landmark suit filed by Joseph John on behalf of the Kochi-based "Friends of Trees" was K. Sukumaran, now a retired judge of the Kerala and Bombay High Courts). The legal route, however, failed.



Indira Gandhi chose to read in the M.G.K. Menon Report, which was presented in 1983, a clear message against the hydel scheme. In a swift order, the State Government was asked to call off the project and declare the valley a national park. Indira Gandhi, who took the crucial administrative decision, did not live to see the latter part of the order implemented. The national park was formally inaugurated by Rajiv Gandhi in September 1985. Like the multiple accounts of the same crime in Kurosawa's *Rashoman*, the recollections of these events by those who helped make them are sometimes self-seeking and the dates and other factual details are often repetitive or at variance with one another. The editors explain that they chose to retain these angularities in order that the book would reflect authentic documentation.

AFTER the 'Storm over the Silent Valley' had blown over, a decade of intensive stock-taking was launched. Many institutions led by the Kerala Forest Research Institute (KFRI) got down to documenting the heritage of the valley in detail. In the process, they help debunk many myths:

★ Contrary to the belief that the Indian peninsula is poor in orchid wealth, with only a couple of dozen varieties, botanist K.S. Manilal says that the Silent Valley harbours at least 108 varieties, many of them spectacularly large. In his article on 'Orchids of the Silent Valley', C. Sathish Kumar of the Tropical Botanical Garden and Research Institute (TBGRI) near Thiruvananthapuram lists every one of these species. Some, like the bicolour Acanthephippium, are found only in South India and Sri Lanka.

★ That Silent Valley is a repository of medicinal plants is brought out in the review by Sathish Kumar alongwith P. Pushpangadan, Director of the National Botanical Research Institute (NBRI) in Lucknow. Nearly 80 per cent of the drugs listed in standard pharmacopoeias and 66 per cent of the spices and aromatic plants used the world over are found in India. The Silent Valley is a valuable source of some important genetic variants. At least 21 flowering plants discovered in the valley are new to science, the authors report. The TBGRI is currently using tissue culture techniques to multiply some hybrid orchid varieties.

The 21 plants unique to the Silent Valley are described and illustrated by S.D. Biju (who is the production editor of the book). His search took him back in time over a century, to accounts by Robert Wight, surgeon and botanist, who was the first foreigner to traverse the valley. Between 1840 and 1853, Wight published six volumes of his records, entitled *Icones plantarum Indiae orientalis*, documented in over 2,000 plates drawn by two Indian artists. Others who recorded the unique flora included W.G. McIvor (he created the Ooty Botanical Gardens). After Independence, the Botanical Survey of India led efforts to collate information on the valley. Several people, including

A total of 211 species of birds have been recorded in the Valley. Thirty of them are rare. The elusive tiger (Malay) bittern and Ceylon frogmouth are two such; the crested serpent eagle.

Professors B.K. Nayar and K.S. Manilal of Calicut University, helped publish detailed documents on the flora. Biju's paper provides an interesting account of his discovery: his search took him to the Royal Botanic Gardens at Kew in London. There he found Wight's original sample of the rare *Impatiens munronii*. The plant was not seen thereafter, not until Biju located it in 1997 in all its blazing pink at Sispara, on the northern edge of the valley, where Wight had first sighted it in 1883.

Another interesting fact revealed in the book is the existence in the valley of wild varieties of nearly 120 crops. Sheltered from pesticides, fertilizers and other artificial substances, these varieties have evolved new and robust strains, say K.S. Velayudhan and his colleagues from the National Bureau of Plant Genetic Resources. They have made a special study of the valley's "wild relatives" of pepper and plead for the establishment of a gene sanctuary for these wild strains here, just as the Garo Hills in northeastern India have been declared a gene sanctuary for citrus.

REGULAR surveys by the Forest Department and some of its sponsored students have established that the valley's animal population has thrived in the years since it was notified as a national park. The valley's most famous resident, the lion-tailed macaque, according to the KFRI estimates, now have around 275 members spread out in 14 troops (1996 figures), and an abundance of their favourite food, the fruit of the *Cullenia exarillata* tree, has ensured that they do not migrate.

Larger mammals – the elephant, the tiger, the leopard, the sloth bear and the wild boar – are also reported on the fringes and in the adjacent forests. The dense vegetation does not support many of these animals in the core of the valley, where lesser carnivores such as the civet, the jungle cat and the mongoose thrive.

When it comes to birds, the book dramatises the wonder that is the valley, by allowing P.K. Uthaman, Field Publicity Officer by job title and ornithologist by inclination, to recall his special connection with the valley. With the aid of a set of stunning photographs Uthaman describes his quest to capture the nesting of the rare Malay bittern, the shy Peninsular bay owl resting among reeds, the crested serpent eagle on a deadly diving mission... Mere listing of species cannot substitute such painstaking efforts. But R. Sugathan's precise listing of the valley's avifauna, 211 bird species and their current status, is a valuable record and reflects years of research. George Mathew's study of the butterflies and moths, admits that his records, detailed as they are, only scratch the surface.

Census results such as these give the book value and weight. They also highlight one fact: the Silent Valley holds on to its own. In its cool dark embrace, a variety of wildlife thrive unseen and often unknown to humankind. Some animals are so small or so scarce that the only evidence of their occurrence is the presence of traces of their droppings.

Will the Travancore Evening Brown flutter again? Does the valley shelter that rare owl, the Ceylon frogmouth? Is this the last home of the Malabar civet? One does not know, but one hopes that they will be rediscovered in the silence of the valley. ■

An anatomical point

WILLIAM SAFIRE

A FULL-PAGE colour advertisement in respectable newspapers for the movie *American Beauty* zeroed in on a female abdomen. Staring out at the reader, like the inescapable single eye of a Cyclops, was the model's *umbilicus*.

Showing that portion of the anatomy was not in bad taste because *umbilici* are omnipresent these days. Fashion models sashay down the midway with the smooth flesh of their flat stomachs proudly exposed, and nubile shoppers parade through malls with breezes causing goose bumps on their midsections. And at the centre of attention is the rounded depression, or the sometimes slight protuberance, the dialectical synonymy of which we examine today.

We're talking *bellybuttons*, the focus of fashion at the *fin de millenaire*. A post-monokini shock was needed. If the display of nipples no longer titillated, designers asked one another, could the showing of bottoms be far behind? But when even the thong lost its shock value, fashion's eye landed on the centre of it all.

"Between the emotion and the response," wrote the poet, "Falls the Shadow." Between the *halter* and the *hip-hugger*, or between the *cropped top* and the *low-slung pants*, Falls the *Navel*.

The Romans called the point at which the cord connecting the foetus with the placenta was cut and tied off the *umbilicus*, from *umbo*, "knob, projection." Speakers of Old High German and Old English preferred a Greek root, *omphalos*, which led to *nabalo* and *nafela*, and then popped up in Shakespeare as "he unseamed him from the *naue* to the chops," and developed into Sir Thomas Browne's 1646 observation, "The use of the *Navell* is to continue the infant into the mother." From there to James Russell Lowell's 1873 poetry: "He lifted not his eyes from off his *navel*'s mystic knot."

That notion of self-absorption was picked up by the playwright Eugene O'Neill: "I had a mental view of him regarding his *navel* frenziedly by the hour," and by the BBC's *Listener* in 1966: "One sits in a New York traffic jam, contemplating, as it were, the city's *navel*." Those who do this religiously are called omphalopsychic, from a sect of quietists who induced hypnotic trances by gazing at their navels.

TODAY, many continue the introspective study. "*Bellybuttons* – there are two kinds," said a character in the 1973 *Odd Couple*, "the kind that go in and the kind that go out. I want an *outie*! No, no! I want an *innie*!" But today, many more of us are contemplating the navels of other people, forcing synonymists to consider the varied nomenclature.

Bellybutton was first noted by John Bartlett in the 1877 edition of his Dictionary of Americanisms. Rudyard Kipling liked that noun in 1934, scorning fights with those "who do not come up to your *bellybutton*."

Although Aldous Huxley preferred *tummy-button*, J.B. Priestley in 1946 minted a nice trope with this sign of stomach-tightened nervousness: "with your *bellybutton* knockin' against your backbone." (It's two words in Merriam-Webster, one word in Webster's New World. I go with the analogy of *bellyache*, not *belly dancer*.)

Dialect-delighting Americans, however, have worked out a variety of names for the same anatomical place. Thanks to the editors of the Dictionary of American Regional English (now hard at work at the University of Wisconsin at Madison on their fourth volume, covering the letters P to S), we can examine a few answers to their Question X34/1, "What are some other names and nicknames for the *navel*?"

One-eyed Mabel was one response, probably derived from the popular *nabel*, a variant of *navel* recalling the Old High German *nabalo*. *Button* and *buttonhole* were frequent choices, and a fair sampling called it a *belly-hole*. *Chicken butt* and *chicken peck* were noted. Those interested in content preferred *lint-catcher*, *lint-getter* and *lint-strainer*. Perhaps a Greek influence can be found in one respondent's *oompalikis* and several *piko* answers. The midriff midrash includes the Yiddish *pupik*.

Many responses to DARE's survey began with the word *where*. In the South, it was *where the Yankee shot you*; in the West, *where the Indians shot you*, and across the country, *where I got shot in the war*. Two interviewees eschewed the violent gunfire-bullet-hole metaphor and replied with the less bellicose *where you got hit with a pick*.

AUTHORS of historical fiction worry about anachronism. "And now the clock strikes one," says Dromio of Syracuse, but it was a Shakespearean comedy of error. Mechanical clocks, not invented until the 14th century, were not available in ancient Ephesus.

I had the same problem writing a novel set in Federal period, and wondered what phrase a man of that era would have used for what we now call *hush money*. (Turns out Thomas Jefferson used the words *hush money* in a letter, nearly a century after Steele and Swift.)

Thus it was when I came to the word *Chicom* in Seymour Topping's *Peking Letter*, a riveting novel of the Chinese civil war, I wondered: was that word – a portmanteau of "Chinese Communist" – in use in the late 1940s?

The earliest citation in the OED is 1966; the Random House Historical Dictionary of American Slang found a 1964 use by Robin Moore in his novel *The Green Berets*. So I called Top, a longtime *New York Times* colleague and now administrator of the Pulitzer Prizes, and put it to him. He was the Associated Press correspondent in Peking (now spelled Beijing) reporting on that war; was the word in use at the time?

"You bet it was, and it was no derogation," he recalled. "The truce teams of our Military Advisory Group referred to the Nationalist Chinese as the *Nats* and the Communist Chinese as the *Chicoms*. I can hear it now – 'The *Chicoms* took Mukden, and the *Nats* didn't put up much of a fight.'"

Such is the value to political etymology of the historical novel. Years from now, our descendants will be reading dramas about the struggle between today's *Chicoms* and their rivals on politically free Taiwan, the *Chidems*. ■

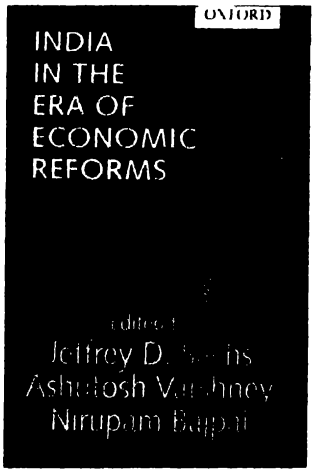
Reforms as ideology

C. T. KURIEN



India in the Era of Economic Reforms edited by Jeffrey D. Sachs, Ashutosh Varshney and Nirupam Bajpai; Oxford University Press, New Delhi, 1999; pages 312, Rs. 525.

THIS volume is based on the deliberations of a conference on India's economic reforms held at Harvard University in December 1996. While there have been many assessments of the reforms by Indian and foreign scholars during the past few years, practically all of them have concentrated on the economic aspects. This book's attempt to go beyond economics and to relate the reforms to the political processes makes it of special interest.

For this reason, I shall only briefly comment on the economic issues dealt with in the volume although five of the eight chapters (including the Introduction) are on economic aspects. Montek S. Ahluwalia's chapter making an overall appraisal of the reforms is quite comprehensive. So is the chapter on fiscal policy by Nirupam Bajpai and Jeffrey Sachs. There is some overlapping in these two chapters dealing primarily with macro-economic aspects. Ashok Kotwal and Bharat Ramaswami consider the impact of the reforms on agriculture and the rural economy. The central argument is that liberalisation of trade can lead to diversification of the rural economy and to an increase in the demand for labour and thus to raising of rural incomes. The chapter on labour gives an account of the structure of the labour market but relies on the experiences of other countries to speculate on what is likely to happen in India.

The chapter on exports deserves special mention because it deals with three of India's leading export industries – diamond cutting, garments and software. In the case of diamond cutting and polishing, the paper shows how the industry is coming under the grip of the international diamond cartel, De Beers, and its common marketing agency, the Central Selling Organisation that control the supply of gems. India's many small diamond-polishing establishments have to deal with these global giants. Garment exports come under the Multi-Fibre Agreement which restricts garment imports by quotas in the U.S., Canadian and West European markets. And the software industry has to reckon with the fact that while its performance has been very satisfactory, its export performance depends on the fact that the skilled labour it requires is much cheaper in India than in the countries it is exporting to, but it is likely to be outdone by Russia and China where skilled labour is even cheaper. These cases show some of the parameters on which actual market performance depends.

While the papers on the economic facets of reform deal with many aspects (most of them quite familiar by now), some issues that they do not touch may be worth noting. Practically all the papers admit that the proximate background to the reforms was the balance of payments crisis of 1991. It is shown that the opening up of the economy and the flow of foreign capital that followed resolved the crisis fairly soon, but there is no discussion of the manner in which the external crisis is linked to the internal reform measures insisted upon, such as the reduction in the fiscal deficit. Second, while it is clearly shown that the reduction in the fiscal deficit when it was achieved was done by drastically reducing the government's *capital* expenditure, there is virtually no discussion about the impact of this measure on the development of infrastructure on which market performance critically depends. Third, the papers written before 1996 did not anticipate the industrial recession that set in fairly soon afterwards, and even Ahluwalia's paper written after 1996 and dealing with statistical material up to 1998-99 does not deal with that problem, a rather uncomfortable one to those who are mainly interested in pushing the reforms.

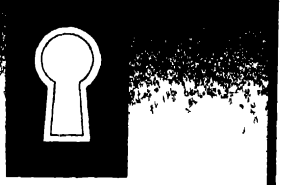
NOW on the two papers dealing with politics. The late Myron Weiner examines the role of State governments in the implementation of the economic reforms. Overlooking the fact that when the reforms were launched in 1991 it was a decision taken entirely by the central government and that many crucial aspects of reforms were thus suddenly thrust upon the State governments, the author provides three reasons for the tardiness of the States in implementing the reforms. One reason is that State political leaders have short time horizons and in the debate on reforms the short-term drawbacks and losses of reforms get greater attention than the long-term advantages. Secondly, many organised interests opposed to one or other aspect of economic reforms have considerable clout at the State level. And thirdly, politicians and officials in the States are more reluctant than others to give up the patronage and rents that are acquired through the regulatory system.

What I consider the lead paper in the volume, Ashutosh Varshney's examination of "elite politics" and "mass politics" in the context of economic reforms, deals more elaborately with the role of politics and ideology in the implementation of reforms. The macro aspects of reforms – devaluation of the currency, restructuring of public finance and capital markets, liberalisation of the trade regime and so on – are elitist in nature. According to the author, the discussions on these aspects are "confined to the English language newspapers, the country's graduates, the discourses on the Internet, the Bombay stock market and Delhi's India International Centre and its economic ministries". They hardly enter into mass politics where the issues are either emotional ones such as religion, caste and ethnicity or down-to-earth matters such as prices, employment and job security. The issue of economic reforms hardly ever penetrates mass politics.

Varshney is of the view that the peripheral role of reforms in mass politics

can go to the advantage of reformers. He uses this observation to explain one of the paradoxes in the recent Indian political scene in relation to economic reforms. How did P. V. Narasimha Rao, heading a minority government, succeed in putting through radical economic reform, while Rajiv Gandhi, with a massive majority in Parliament, was forced to go slow with his modest reform programme? And the answer? "Economic liberalisation became a victim of its splendid solitude on the political agenda in 1985-86. In 1991, economic reforms were crowded out of mass politics by issues that aroused greater passion and anxiety about the nation. Because they were crowded out, reforms could go as far as they did."

It would appear that between the time Varshney wrote his paper for the Harvard conference and became a member of the team that wrote the Introduction to the conference volume, there was something of a change in perception. In the paper the position was that where mass politics is concerned with emotive issues, elitist bureaucrats can successfully implement economic reforms; a rather different position is taken in the Introduction. "There has been an absence of ideological thrust in India's reform programme, which is arguably one of the causes behind the moderate speed of post -1991 reforms ... Political leaders and parties are implementing reforms, but not making clear ideological arguments in favour of reforms ... Economic reforms are yet to be boldly presented on the ideological platform of political parties. They are yet to be made into the centrepiece of electoral campaigns."



WHAT accounts for this change in perception? It may be recalled that (most of) the papers for the Harvard conference were prepared while the economic reforms of the Narasimha Rao government were making progress, and the Introduction was prepared perhaps early in 1999, by which time there was concern that the reforms were beginning to stall. The cheer leaders of reform, therefore, must adapt themselves to the new reality. They are concerned that in the parliamentary elections of 1996 and 1998 economic reforms did not receive adequate attention and the ideological support they deserve. The Congress party, they say, did not turn its economic policy breakthrough into a theme for electoral campaigns in 1996 and 1998. And the BJP, in spite of its traditional support for freer internal business and trade, also failed to canvass for a more market-driven economy. This theme had become the new slogan for the authors that they boldly state: "In the 1998 election manifestos of the BJP and Congress considerable space was given to economic policy but the electoral battle was over whether Sonia Gandhi, the ace campaigner of the Congress party, was an Italian or an Indian ..."

That Sonia Gandhi played a relatively minor role in the parliamentary elections of 1998 (and that the question of her nationality was not a major issue then) would have made no difference to the argument because the approach of the authors to economic reforms is essentially ideological. They are convinced that a greater role for the market in an economy will lead to more competition, more efficiency and more growth and that these will be beneficial to all, at least in the long run. That the restructuring of the economy in this manner will adversely affect the lives and livelihoods of millions of people, those least likely to be able to face such problems, appears to be of no concern to the authors.

True, they concede that "deeper and quicker reforms in India will require not only assuming, but also demonstrating, that they are positively linked to mass welfare." If they had taken this seriously, though, the themes discussed in the book and the facts assembled and analysed would have been different. They would have also noticed that the masses are not ignorant of and indifferent to reforms. They would have noticed too that while the masses do not enter into academic discussions about economic reforms, they do react to how the reforms are being implemented. They would have observed that in the elections to the State Assemblies held in 1994-95 and in the parliamentary elections of 1996 the masses punished the Congress party for the adverse effect the reforms had on them though the reforms had opened up a richer and more varied life to the elites. And that even the BJP faced the wrath of the masses in the Assembly elections of late 1998 because that party's economic policies had resulted in an exceptionally high price of onions!

The fact is that economic reforms have entered very much into the real politics of India, but perhaps in a manner that elites and ideologues do not approve of because they do not understand the logic and language of the masses. ■

The real story. Every time

Biography or historical fiction?

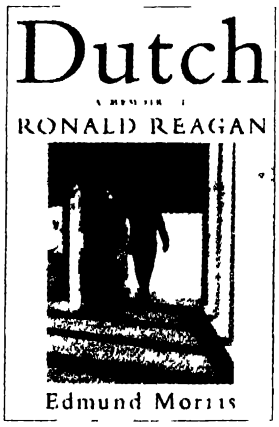
CHRISTOPHER LEHMANN-HAUPT

Dutch: A Memoir of Ronald Reagan by Edmund Morris; Random House, September 1999; pages 874, $35.

IT comes as a shock at first, on page nine of Edmund Morris' long-awaited *Dutch: A Memoir of Ronald Reagan* you read, in a chapter called "The Land of Lost Things", that the author was born in the American Midwest on August 9, 1912.

This would make him 87, which does not square with the Edmund Morris we know from the book's publicity material, who is much younger, was born in South Africa and could therefore not have had the American parents he gives himself in the text, even footnoting them as being cited in several reference works.

On closer inspection you realise that Morris is coyly telling you that he is fabricating, when he writes of his birth that it "more or less coincided with the archeological furore over Piltdown Man, while other scientists were finding that genes could be lined up along a chromosome." He continues: "Who knows, the latter discovery may prove as fraudulent as the former. The past is delusion, the future illusion; one locates one's centre where one can. (Or in cases such as that of Reagan's, where one wishes.)"



So why, you find yourself asking, should you believe any previously unreported details in this authorised biography, the first one ever written by someone invited to observe a sitting President? What is the difference between Dutch and, say, Oliver Stone's film *J.F.K.* or Joe McGinniss' *The Last Brother*, a biography of Senator Edward M. Kennedy? Why should Morris' memoir not be treated as historical fiction?

But as you read on – and such is the force and fascination of Morris' narrative that you cannot help reading on – you begin to see the benefits of his highly unorthodox technique, which turns out to be a conjoining of invention and reality.

Since Morris' partly fictional persona was born only a year later than Reagan and crossed paths with him at various points in their early careers, the author can make use of directly contemporaneous commentary instead of having to resort to speculative "must haves" and "may wells".

The fluidity of the resulting viewpoints frees Morris to liven up his narrative with the devices of oral and documentary history, employing dialogues, interviews, film scenarios, epistolary sections and so forth.

For instance, as a schoolmate of Reagan's at Eureka College, he reviews his subject's first known stage role, the shepherd Thyrsis in Edna St. Vincent Millay's verse drama *Aria da Capo*, which, prophetically, centres on the building of an artificial wall between two friends, although not until 57 years later would President Reagan say, in Berlin, "Mr. Gorbachev, tear down this wall."

FINALLY, Morris' inventions lend at least the first half of Dutch a faint air of make-believe, which seems entirely fitting for Reagan's rise to prominence. (In a brilliant description of his first film role, as the radio broadcaster Andy McCaine in *Love Is on the Air*, it is difficult to tell for a while whether what he is describing is the movie or Reagan's experience.)

One might of course dismiss Morris' technique as committing the fallacy of imitative form, matching an artificial narrative with an unauthentic subject. But some would argue that Reagan's rise to fame was the contradiction of that fallacy.

Above all Morris seems at pains to animate a life that in an earlier treatment, that of Reagan's autobiography, *An American Life*, produced what Morris himself calls "the most boring book of its kind since Herbert Hoover's *Challenge to Liberty*."

Certainly *Dutch* is very far from boring. As gossip it hypnotises: Morris has come up with the ultimate "Hi, I'm Ronald Reagan, who are you?" anecdote when he tells how Reagan failed to recognise his own son Michael at his high school commencement. Treating such delicate issues as Reagan's shift to the right politically, his conduct during the Red-hunting era in Hollywood, his relations with his wives, Jane Wyman and Nancy Davis, and the dating of his decline into senescence, the book manages to be both balanced and sensitive.

In its coverage of the Reagan presidency it makes an often-told tale exciting and at times even inspiring, particularly in its vivid accounts of the various summit conferences with Soviet leader Mikhail Gorbachev. Couldn't all this have been accomplished without Morris' narrative abracadabra? Perhaps, but I can think of few conventional political biographies that bring their subjects' pasts so richly alive

Had Morris used a more conventional form, one finds it hard to imagine how he could have so effectively evolved his narrative voice from the wise-cracking irreverence of the narrator's youth to the stunned admiration of his maturer years. (Here he undetectably slows his aging process, turns himself into the middle-aged Edmund Morris we recognise from the voice of his prize-winning biography, *The Rise of Theodore Roosevelt*, and thereby provides internal evidence of his deception, which he nowhere mentions overtly.)

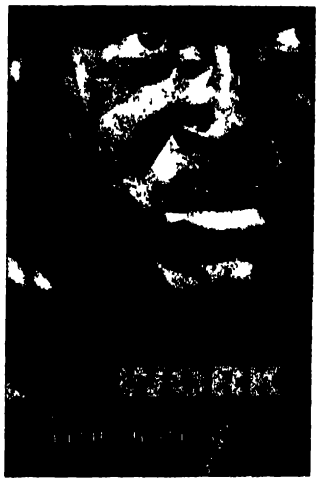
IS *Dutch* then finally flawed by Morris' technique? To judge from the book's extensive notes, it in no way distorts the record of Reagan's life, only the viewpoint from which it is told. It is difficult to approve the technique in theory; in less skilled hands it will doubtless prove a disaster. But it certainly succeeds in this case. So call *Dutch* a literary work instead of a biography. But does *Dutch* finally penetrate the mystery of Ronald Reagan, explain the calculated spontaneity, the cold warmth, the absent presence? No, yet in passage after passage it certainly captures the paradoxes he comprised. Just one example of many. ■

New York Times Service

On work as human condition

EDWARD ROTHSTEIN

The Oxford Book of Work edited by Keith Thomas; Oxford University Press, 1999; pages 618, $35.



THE word for "work" in French – *travail* – is derived from the Latin *trepalium*, an instrument of torture. And is there any doubt that in the course of the nasty, brutish and short lives of humankind, work has often been indistinguishable from torture? But the word "labour" derives from the Old French word *labeur*, meaning "ploughing", an activity that, however difficult, is also a declaration of victory over natural forces. Ploughing cultivates; it reflects a plan; it organises both time and space; it creates culture. And is there any doubt, that work also has this quality? If work is, as we now commonly say, "dehumanising", it is also distinctly and deeply human.

There may be no reconciliation between work as torture and work as cultivation, judging from *The Oxford Book of Work*, a massive anthology of writings compiled by Keith Thomas, the president of Corpus Christi College of Oxford. "What a dreary subject!" he recalls his friends saying when he announced his ambitions to gather literary and historical material on the theme of work. But also, in all its contradictions and variety, what an astonishing one.

Once the subject is unleashed, it seems to have no bounds. Mark Twain's Tom Sawyer teases his friends into trading their most cherished trinkets for the right to whitewash his fence. Tolstoy's Levin, beginning to doubt the foundations of his urban life, works with the peasants in the fields. A professional sword swallower in 1850 recalls how he began at his trade, forcing the first stick down his throat into his stomach. possible to grow rich."

Labour also regularly inspires advice. An Egyptian homily from the 14th century B.C. warns the reader about the host of tribulations facing the mason, the gardener, the weaver and the bird-catcher, only to offer a rather questionable occupational recommendation: "See, there's no profession without a boss,/Except for the scribe; he is the boss." A more realistic homily of corporate efficiency appears in the familiar law formulated by C. Northcote Parkinson in 1958: "Work expands so as to fill the time available for its completion."

It also expands under contemplation. In 1980, the British government listed 23,000 different occupations. Walt Whitman celebrated manual labour in cascading lists: "Leather-dressing, coach-making, boiler-making, rope-twisting, distilling, sign-painting, lime-burning, cotton-picking... " But there are also the horrors of such manual labours as those of the "fur-pullers" of London.

SO what is one to make of this anthology's phantasmagoric mixture of wit and witness? Some attempt is made to organise the selections in grand thematic categories, like "The Primal Curse," "Compensations and Rewards," or "Women's Work and Child Labour." But the organisation is often arbitrary, and within each category the sequence is neither chronological nor clearly thematic. And why should the reader have to do the work of turning the pages to find its author and date when that information should precede each selection? It also would have been helpful to limit the number of repetitious examples in favour of more expansive selections from Dickens, Dreiser, Hardy or Zola. It might even have been useful to have a section on the history of labour unions, or one on the philosophy of work, in which Hobbes, Marx and more recent economists and political thinkers could have outlined contrasting interpretations of labour and its discontents.

But in his brief introduction, Thomas provides some hints about what sort of shape might be given to a history of work, a subject that has inspired a small academic industry in recent years. The abstract concept of work, he points out, is a modern one. In the pre-modern world, slaves and prisoners often made up the bulk of workers; labour was also associated with particular classes. Until labour became a "commodity", as Hobbes put it, and was traded for wages, it hardly seemed worth analysing in itself. It was simply a condition of life, having all the natural force of God's punishment of Adam in Eden.

THE anthology's selections show, though, just how important a transformation took place in the 19th century. Factories and coal mines are horrifically described in novels; the hypocrisies of the office are skewered. Marx placed the experience of work at the centre of human consciousness; Engels considered labour an evolutionary shaper of the body as well as the mind. This may not have been because the workplaces themselves were more brutal than any ever constructed (they probably were not), but because, perhaps for the first time in history, it was possible to imagine that things could be different. Work could create a surplus, so why could not the surplus alleviate work? On a wide scale, work began to promise the possibility of non-work. Labour offered the prospect of leisure.

So it may be that the reform of the workplace, the transformation of the household, the beginnings of labour laws and the formation of unions were in part reflections of this change, not just causes of it. Marx wrote that labour "produces culture, but also imbecility and cretinism for the worker". The question some future anthologist might think about is what happens when work's tortuous claims weaken and when the goal of work is to make non-work possible – the welcome situation now for many in the Western world. Is culture then also remade, in the image not of cultivated labour but of pleasurable leisure? It sometimes seems so. ■

A growing concern

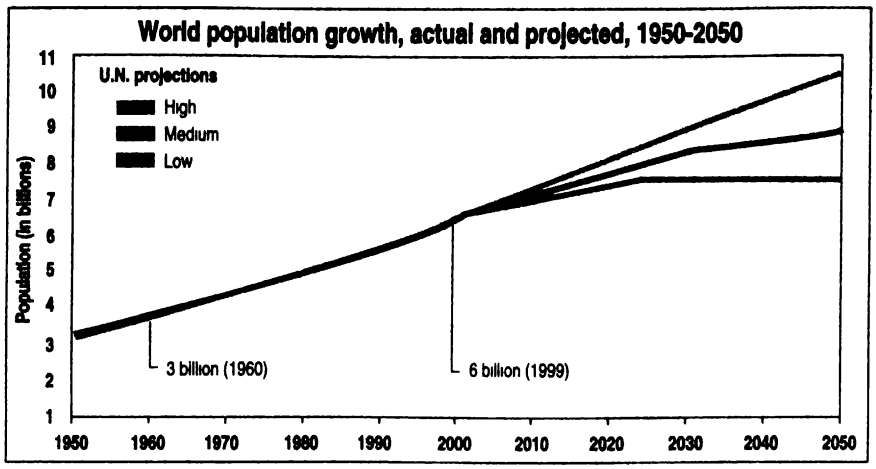
The State of the World Population Report 1999 presents an alarming account of burgeoning numbers, but does not adequately emphasise the causes of such population growth.

T.K. RAJALAKSHMI

FOR demographers, October 12, 1999, was a date of special significance as the world's population was expected to have reached the six billion mark on that day. A billion people were added to the planet's population in the last 12 years, according to the latest report of the United Nations Fund for Population Activities (UNFPA) on the state of the world's population. Every report on population has acted as a reminder that more than 95 per cent of the population growth takes place in the developing countries – a significant one of which is India.

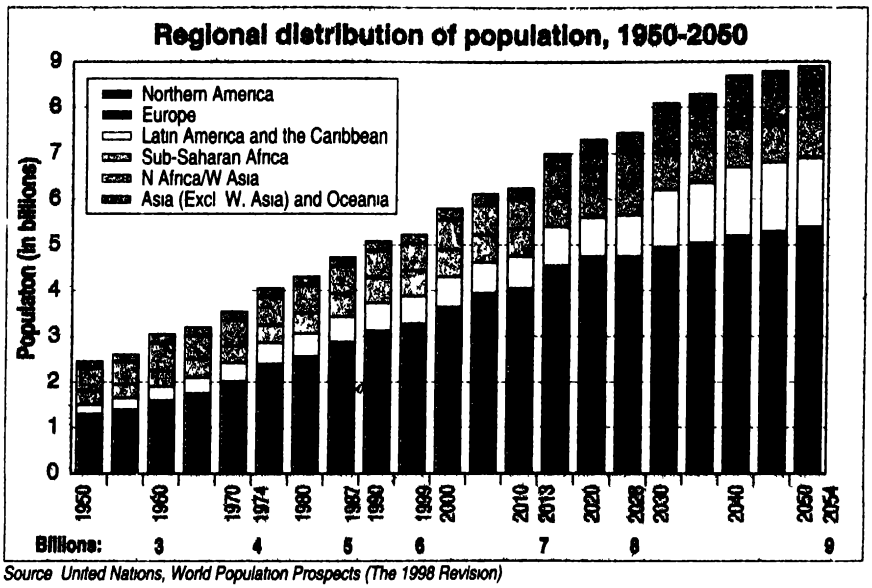
The report, which is the outcome of a painstaking "head counting" exercise, shows that population growth has slowed in Europe, North America and Japan. The United States is the only industrialised country that still registers significant increases in population, and that is, largely as a result of immigration.

The State of the World Population Report 1999 reviews the early experience of the 20-year-long programme of action launched in 1994 as part of the International Conference on Population and Development (ICPD). The ICPD spelt out the resources needed for a basic package of reproductive health and population programmes and also indicated that investment should flow towards schemes that empowered women, reduced mortality rates and provided basic education, particularly to girls and women.



It is alarming that developed countries such as the U.S. and Germany have not met the international target for development assistance, which is currently set at 0.7 per cent of the Gross Domestic Product (GDP) while most Scandinavian countries meet this target. In human terms, any shortfall in international development assistance would affect the poor in developing countries, particularly women. The report mentions that international assistance for development has fallen from a peak of $61 billion in 1992 to $48 billion in 1997.

A population report, or more specifically a population and development report, has to go beyond presenting an alarming account of burgeoning numbers. The UNFPA report is fair in parts, particularly when it cites socio-economic and political reasons for the increasing numbers, but often it relies on truisms to make a point. It also rules out a "tight statistical link" between development indicators and fertility rates, which in effect dilutes the role of the "development pill". While development is still considered an important factor, it remains unclear why fertility transitions occur earlier in some places than others, states the report. The pace of development does not appear to affect the initiation or the rate of fertility transition though once a transition has begun, fertility declines more rapidly in countries with higher levels of development. It is evident that when there is unequal development or when the benefits of such development are not available to most people, fertility decline will be slower and other related problems will emerge.



The report establishes a link between economic crises or insecurity and development progress and studies its impact on reproductive health and migration patterns. A telling point is the South-East Asian crisis, which began in 1997 and as a consequence of which there has been an increase in poverty and unemployment, lower educational participation and reduced funding for social programmes, including programmes for population control and reproductive health. Evidence suggests that the region's remarkable development gains over three decades have been reversed, and this affected mostly women and children. Falling real incomes and rising food prices have stepped up the incidence of malnutrition among infants and young children in parts of Indonesia. The commercial sex industry has seen a boom as rising poverty forces women to enter this sector. Reproductive health programmes continue to suffer as budgets give priority to alleviating hunger and poverty and tackling unemployment and social disruption.

The facts are stark but make little impact when stated out of a socio-economic context. For instance, the report states that the poorest countries often have the highest population growth rates. It also says that they have the worst reproductive health, the highest rates of maternal mortality and the lowest implementation rates for family planning methods – often under 15 per cent, a level the average developed country had reached by 1969. Indicators such as low status for women and income inequalities, which determine access to the state's resources, are not given adequate priority. Even the issue of the gradual withdrawal of the state from the social sector has not been emphasised enough.

The report states categorically that the slowing of population growth is not inevitable and that it is dependent on the choices made and the action taken in the next 10 years. It will depend on the success of population and development policies, in particular the right to health, including reproductive health. That this goal is still a distant one is evident from statistics relating to limited access to modern, safe and acceptable methods of family planning, setbacks to health due to complications related to pregnancy and disorders, deaths resulting from pregnancy and abortions, the growing vulnerability of women to the

Source United Nations, World Population Prospects (The 1998 Revision)

human immunodeficiency virus (HIV) and so on.

The dramatic increase in the demands of peace-keeping and emergencies, the pressures of globalisation, the widening gaps between wealthy and poor nations, and between the rich and the poor within nations and the retreat of donors from development assistance are some of the new realities that find a place towards the end of the report. The last chapter, titled "Finding the resources", focusses on economic and financial crises and sweeping "structural adjustment" in developing countries that have had an impact on public expenditure, especially on education and health.

The report cautions that food security will be a critical issue in the coming years. Since 1987, when the world population crossed the five-billion mark, wasteful and unbalanced consumption patterns along with growing numbers had affected the global climate, the report states. Whether this unbalanced consumption affects the quality of life of the disadvantaged people or merely affects the global climate, as stated, reflects a bias in perception. Rapid population growth is only one among many concerns, but it contributes to environmental damage, pressure on land and water resources and political instability, notes the report.

Demographic trends indicate that population is growing at the fastest rate in the poorest countries, those that are the least able to provide for basic needs and create opportunities. Within countries, the poorest families also tend to be the largest ones, but poverty of choices may be as important as poverty of means in determining family size. To say that poverty of means is what determines all choices, including that of family size, may not be entirely correct. The low status of women in hierarchical and patriarchal societies as a determining factor in choices, such as that of family size, is understated. This is not to say that the report has completely glossed over the role of developed countries. Shorter life spans and rising death rates have affected the population profile of countries facing the AIDS (Acquired Immune Deficiency Syndrome) epidemic. They too have become heavily dependent on external aid to combat the epidemic.

The report touches upon migration patterns in many countries and regions and their impact on the environment and on service delivery systems. But it fails to discuss the issues at length. The reasons for migration are many and developing countries have limited employment opportunities and offer fewer choices for livelihood. A serious question that arises is whether migrating populations have a right to basic survival or whether they should sacrifice their existence to prevent environmental stress. Besides, several environmental stress factors can be traced to the wealthiest one-fifth of the world's population, which consumes more than 66 times the materials and resources of the poorest one-fifth. The report mentions these figures but does not apportion responsibility on the affluent sections within nations or on the affluent nations However, it does state that economic development raises prices as well as incomes. The last to benefit from these are the poorest, who spend most of their incomes on essentials such as food and housing and depend the most on public services, especially in matters such as health, education and transport.

Access to family planning has increased dramatically in some countries, including Nepal and Bhutan, the report states; it also mentions that studies in some eight countries have revealed that the side-effects of certain contraceptive methods were more of a problem for women than had been realised. A sustained campaign by public health activists and experts drew attention to the issue. Also, a survey in Nepal found that the decision to seek care for pregnant or postpartum women was made often by husbands, followed by mothers-in-law; the women themselves were seldom involved in the decision. Evidently, access to family planning services is not the only issue. Apart from prevalent trends, the causes for demographic transitions as well as the consequences of such transitions need to be highlighted. The cure, it would appear, should be found in the causes and not in the consequences. ■

Another indictment of communalism

SUKUMAR MURALIDHARAN

AMONG the many recommendations that the New York-based advocacy group, Human Rights Watch, makes in a recent report on violence against Christians, one is particularly worthy of note. The impunity that the perpetrators of violence against minorities have so far enjoyed, it demands, should end. This means among other things the prosecution and punishment of "all those responsible for murder, rape, assault, and destruction of property during the post-Ayodhya violence of December 1992 and January 1993".

The suggestion is interesting in that it reaffirms a point that has been made by successive inquiries since violence against minorities became a problem in India as far back as the mid-1960s. The Raghubar Dayal Commission, after concluding a prolonged study of the communal violence that rocked Ranchi, Rourkela, Jamshedpur and Ahmedabad in the second half of the 1960s, proposed energetic enforcement of the provisions of the law as a credible deterrent against rioters.

Since this perfectly sensible suggestion has remained unimplemented for well over three decades, there clearly is no reason to expect a change of heart today. It may be far more rewarding to enquire into the sources of the impunity that the agents of communal violence have come to enjoy – how the state has, over time, ceded its monopoly over legitimate violence to elements that periodically tear the fabric of communal peace.

A useful conceptual distinction has been worked out by political scientists to differentiate the "pragmatic communalism" of successive Congress regimes from the "programmatic communalism" that the Bharatiya Janata Party embodies. Measures to deter violence can only follow a credible official investigation. Targeting a minority community is often a useful political device in consolidating a sense of majority communal identity. When a party's pursuit of political power is premised on this manner of communal mobilisation, it may prove both incapable and unwilling, once it is in authority, to check the forces that it has itself unleashed.

Politics By Other Means is the title of the HRW report on the violence against Christians. And the basic diagnosis is sharply stated: the causes underlying the attacks on the small and vulnerable religious minority "are the same as those promoting violence against Muslims, Dalits and other marginalised groups in the country – political and economic power struggles linked rhetorically to the creation of a Hindu nation". The violence against Christians is, in other words, "part of a concerted campaign of right-wing Hindu organisations, collectively known as the Sangh Parivar, to promote and exploit communal tensions to stay in power".

HRW documents how the ten-day long rampage in Dangs district of Gujarat, beginning on Christmas day last year, met with little effort at restraint by the district administration. The December 1998 attacks, it concludes, "were at least a year in the making". The Vishwa Hindu Parishad and affiliated bodies like the Hindu Jagaran Manch and the Bajrang Dal had begun a series of public meetings and rallies in Dangs, Bharuch, Valsad and Surat districts on Christmas Day, 1997. Each such gathering featured public announcements and invitations which spoke darkly of the threat to Hindu culture and civilisation from Christian proselytisation.

PRIOR to the December 1998 rally, HRW records, a number of representations had been made to the local authorities warning of a serious breach of peace. The Dangs District Collector did not act, except to state that "appropriate arrangements" would be made to ensure that no untoward incident took place. Ominously, the top police official in the district had been placed under the direct supervision of the Superintendent of Police from a neighbouring district just prior to the rally.

Official connivance at the local level was, in HRW's reading, considerably aggravated by an attitude of benign neglect at the national level and a tendency by State-level leaders to blame the victims. Keshubhai Patel, the BJP Chief Minister of Gujarat, blamed the violence on an "international conspiracy" and claimed that it only began when participants in the Dangs rally were attacked. VHP spokesmen were even more brazen in their response.

HRW also turns its attention to the callous official response to the rape of four nuns in Madhya Pradesh and the manifest infirmities of the Wadhwa Commission of Inquiry into the Graham Staines murder in Orissa. For reasons related to its almost obsessive concern for human rights to the exclusion of other considerations, HRW has never been the most popular institution among official circles in India. But there is no denying that the context for the HRW intervention in this particular case has been created by a virtual abdication of responsibility by the government.

HRW records a rather neat summation of the nature of the linkages within the Sangh Parivar, as provided by a former activist of the Rashtriya Swayamsewak Sangh: "The RSS is the soul. The BJP is the body and the Bajrang Dal is the hand that administers the punishment to those who threaten Hinduism." Given these intimate and organic relationships, it may be futile to expect a government headed by the BJP to implement the detailed recommendations of the HRW report. The global signals though are acquiring an unmistakably threatening character.

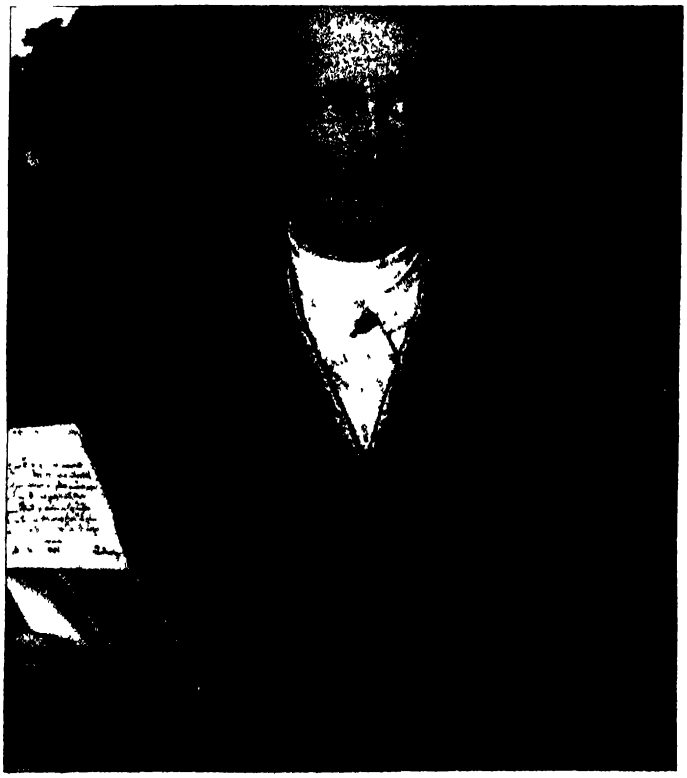
On September 9, the U.S. State Department released its annual report on religious freedom, criticising the BJP and its ideological fraternity for fostering an environment of fear and insecurity for minorities (*Frontline*, October 8, 1999).

HRW has urged India's donors and trading partners to "pressure the Indian government to implement the recommendations of the Srikrishna Commission on the 1992-93 Bombay riots, and the recommendations of the National Commission for Minorities on attacks against Christians." This recommendation will undoubtedly rankle. But a government that disregards the authority of statutory institutions and threatens the delicate system of countervailing powers on which a democracy rests, clearly cannot invoke arguments of sovereignty to fend off global scrutiny. ■

The genius of Goethe

Wolfgang Goethe's 250th birth anniversary is being celebrated this year.

LOTHAR EHRLICH



THE 250th birth anniversary of Johann Wolfgang von Goethe is being celebrated world over this year. The intercultural endeavours of the poet, who in the context of his communicative concept of universal literature had engaged himself intensively with Indian literature and art, have been in focus, among other things, on this occasion. In Chennai, for instance, international conferences in connection with the event were held at the end of September 1999. These conferences were conducted by the Goethe Society of India and the Goethe Institute (Max Mueller Bhavan) in collaboration with the German Academic Exchange Service(DAAD).

This is a special moment in Goethe's rich literary and scientific creations. Goethe did not consider himself just a German author; he considered himself a European and above all a Universal Citizen and he actively engaged himself in the cultural and political events that took place in the world around him. His constantly developing attitude towards world events was alive to important universal tendencies, and it was confined not just to Europe but to Asia and America. Goethe's works can be studied from a universal cultural horizon: for example, Goethe's reception of Kalidasa's *Shakuntalam* illustrated his pronounced interest in the East and his holistic understanding of nature.

Goethe was born in Frankfurt on the Main in 1749. From 1775 until his death in 1832, Goethe lived in Weimar, now considered the cultural city of Europe. He studied at the universities of Leipzig and Strasbourg. Goethe received universal training in the sense that he learnt several languages and read the important works in world literature – works of ancient authors as well as Italian, French and English writers. Greek tragedies as well as the works of Shakespeare impressed him deeply. His first novel, *Sufferings of Young Werther*, was translated into many languages immediately after it was published. This was because the novel touched the younger generation in Europe of that time and its awareness of life. This work of literature has remained successful to this day. Even the nature and love poems of his "Storm and Stress period" (until 1775) brought a new tone to the literature of his times. Goethe became totally committed to the ideas of the Age of Enlightenment in Europe which, following the period of the Renaissance, opened further avenues for individual development. Intellect became the decisive factor in the social existence and development of the human being.

What one now knows as the Weimar classic was a universal cultural attempt, at the centre of which was Goethe. An attempt was made to realise the ideals of the Age of Enlightenment through pedagogic, artistic, scientific and political creativity. During the first ten years of his stay in Weimar, Goethe as a friend of the ruling prince even held the post of a minister. In the subsequent decades many cultural, scientific and artistic works were conceived, though these endeavours could not be realised owing to social constraints. These works established and determined the fame of classical German literature. One should not forget the fact that during this time authors such as Wieland and Herder were also actively pursuing their literary careers in Weimar.

Owing to Goethe's multifaceted political engagements, not many literary works were created during this decade. In the autumn of 1786 he set out for Italy to reflect on his personal ambitions. Italy provided for Goethe the most decisive of his educational experiences. He remained there for two years, studied intensively the art of the classical Greek antiquity and the Renaissance, experienced the landscape, drew from it, and above all completed wrote the plays *Egmont*, *Iphigenie auf Tauris*, *Torquato Tasso* and *Faust*. Thereafter the ancient culture acquired an intrinsic meaning for the Weimar classic as a plan for the development and education of the human mind in the spirit of the Age of the Enlightenment.

On his return to Weimar in 1788, Goethe, who was responsible for the scientific and cultural institutions of the Duchy (its university, theatre and so on), concentrated on the long-term improvement of its people and States through aesthetic experiences which literature, art and theatre could offer. Goethe therefore rejected the French Revolution of 1789 and the

subsequent military disputes; he considered them repulsive as they stood in contrast to his progressive intentions for the gradual advancement of humanity, in particular, of the middle class. Along with poet Friedrich Schiller (until the latter's death in 1805) Goethe unfolded through his poetic and scientific works his universal and evolutionary concept of education. The demands of world history – upto the French Revolution of July 1830 – forced him to examine critically again his experiences, which he constantly reflected upon. During moments of resignation Goethe felt that European history, which in his view was predominantly chaotic, would ultimately take a humane course.

It was therefore not a coincidence that during the European war of Independence against Napoleon (1812 - 1815) Goethe started taking an interest in the history and culture of the East – from Persia to India, China and Japan. The experience of the unknown "was to revive the known, and thereby become a vehicle of communication between the East and the West as also the Old (Europe) and the New (America)". This idea was developed upon and poetically translated. From 1814, stimulated by a translation of the Persian poet Hafis Divan, many excellent poems were written, which linked the strange and the known elements with one another. These poems were published as *West-Ostlicher Divan* (Divan of the West and the East) and was supplemented by Notes and Treatises for a better understanding, which exemplified the applied synthetic experience of transmitting various cultures past as well as contemporary. In the 1820s,

Goethe developed on the idea of an integrated and communicative world literature, which he translated into reality both in his home (through the numerous visitors from all over the world) and in his poems. He expounded on European and non-European literature, and made attempts also to translate some of the works. The horizon of his poetic and thought process transcended Europe completely, and this resulted in a form of universal literature.

In later years, some of the most important works – in the context of the vision of universal literature – were created by him. Among them mention must be made of the novel *Wilhelm Meister's Journeyman Years* or the *Renunciants* (1821/1829), the *Gesamtkunstwerk* (Complete Art Work); *Faust, The Tragedy, Part II*(1832); his autobiography Poetry and Truth as well as his works on natural sciences and arts, Maxims and Reflections about nature and the universe, about philosophy, art and literature.

Goethe's works depict a style that is original, symbolical and allegorically interpretative. This style symbolises the acquired universal spirit and globality in an extraordinarily, poetically complex manner. Goethe's creative methods rule out rigidity. He dwelt upon the unresolved and inscrutable contradictions of the history of the human race which is nevertheless influenced by religion and

The real and the make-believe

JAN OTAKAR FISCHER

POSTCARDS of the most famous building in Weimar look different this year. The little pale-blue cottage is still depicted in its verdant setting in Ilm Park, but an identical twin structure is featured in some images. A provocative bit of text appears, too: "Echt?" ("Real?")

The building is Goethe's Garden House, a national shrine in Germany. Weimar has been enjoying a year as the European Union's "cultural capital," a designation prompted by Goethe's 250th birth anniversary, in August. Rather than simply polish up the city's many landmarks, the organisers challenged their visitors with an experimental conjuring trick. They built an exact copy of the Garden House some 100 metres from the original.

The project was the brainchild of Lorenz Engell, dean of media studies at Bauhaus University and a man eager to provoke essential questions about authenticity. The intricacies of determining what is "real" have particular relevance in this post-War landscape, where great tracts of the German national heritage were destroyed and have had to be rebuilt.

Engell persuaded the organisers that a second Garden House would be a valuable challenge to the cult of the original. The resulting architectural *pas de deux* has forced everyone – Weimar residents, tourists and intellectuals alike – to ponder modernist issues of reproduction and originality. Some have been bruised.

GOETHE was a man of tremendous energy, curiosity and engagement, not only the spur of German humanism, creator of the epic drama *Faust* and unsurpassed poet of his age, but also government minister, botanist, geologist, painter, designer and philosopher. Almost from the moment he arrived in Weimar in 1776 until his death in 1832, his favourite place was his modest house by a bend in the Ilm River, a short stroll from the centre of what was then a tranquil provincial capital with 5,000 inhabitants. For Germans, the Garden House represents the blossoming and pure spirit of German classicism, its simplicity and intimacy accessible even to those who have never heard of *Egmont*.

The writer was 26 and already famous when he was summoned to the court of Grand Duke Carl August, who immediately raised him to a peerage, made him a minister and bought him a temporary house to live in, at a cost of 600 taler (about Rs. 43,000 now). The house dated back at least to the end of the 16th century, when it served as a wine shed.

Goethe engaged 26 workers for the renovation, including the Duke's own cabinetmaker, J.M. Mieding. The paved rooms of the ground floor included a foyer, a kitchen, a dining room and servants' quarters, while the upper floor became Goethe's private realm – a tiny suite of library, writing room, parlour and bedroom. Goethe was most interested in the garden, a labour of love that engaged him until the end of his life. What was a tangle of weeds and brush became a charming network of terraces, pebbled pathways, lanes of vegetables and flower beds rife with hollyhocks, violets and roses.

Many years later, Goethe moved into a sprawling mustard-coloured mansion with its own garden on the Frauenplan. But he kept his Garden House. There, embedded in nature, he heard the muse most clearly, and he arranged his writing room just so, to hear her call. Improbably perched high on a suede saddle chair of his own design, his feet dangling and his back to a conical sheet metal stove, he wrote

many of his finest works.

In the garden he pondered whether there might have been a primal plant from which all others evolved. In the dining room he talked theatre with Schiller and philosophy with Herder. In the parlour he received his friend the Grand Duke and discussed the advent of Napoleon, and in the bedroom he found unexpected passion with Christiane Vulpius, a young woman with whom he lived for 18 years before they were married.

WEIMAR'S cultural events are not all devoted to the writer, of course; the highs and lows of the 20th century are also being deeply scrutinised. But Goethe's second Garden House may be the most quietly subversive provocation of the year.

Volker Laier, its planner and construction manager, reproduced everything, including the patina and traces of use, "from the threshold to the roof ridge," he said recently. The second house has the same pale-blue plastered walls, narrow shuttered windows and weathered gray shingles. The beige sandstone paving of the foyer and dining room looks scuffed and pitted. On the threshold of Goethe's dining room, the doors have scratched minute concentric circles into the stone during centuries of pivoting. The same circles are under the impostor's hinges.

Laier explained that the second Garden House was designed in 73 prefabricated sections. "You can take it on tour," he said. "It all fits into containers." The precision is uncanny. The wooden staircase and the wide floorboards look raw and rounded, as if pounded by the boots of four generations. The plain interior is replicated down to Goethe's rostrum writing table, smoothed by a waxy polish that might have come from the poet's own sweaty palms. The wear and tear of 200 years is, impossibly, everywhere evident: 200-year-old grime was simulated in nooks and crannies with green umber pigment and linseed oil.

Even the most hurried tourist will notice the only two major differences: the second Garden House has no guards and no garden. Everything can be touched. You can sit on Goethe's copy saddle and see if you are inspired. But nature is harder to reproduce. Wooden gates, pebble mosaics and benches are there, but none of the glorious flora that give the house its name.

Laier now believes that "the copy has become an original," a critical folly outside the bounds of history. To Engell, paradoxically, the original is itself a copy, since it represents only the way people understand the house at this point in time. Authenticity is always open to interpretation; the various restorations and re-restorations of the Garden House – imperial, communist, democratic – is evidence enough for academics. But judging the real is no esoteric matter in Germany.

Few other countries have such expertise in reconstruction. Gutted ruins like the Charlottenburg Palace in Berlin and the Wuerzburg Palace were immaculately restored to glory, as if the bombing had never happened. Dresden is turning the blackened rubble that was once the Frauenkirche into a reassembled phoenix. There are proposals to rebuild Berlin's Royal Palace, whose ruins were demolished by the Communists in 1950. Aside from questions about the cost, some have asked whether the resulting palace would still be the palace. To what extent would visitors feel the "aura", as the German philosopher Walter Benjamin famously described the emanation of reality, while visiting what they know to be a fraud?

And this line of questioning extends to the darkest focus of reproduction restoration: Buchenwald, whose rusting gates are almost visible from the window of Goethe's writing room. Is there not an irony involved in the retrieval of history with a simulation? Is memory served at a concentration camp when the very methods used to preserve it inevitably lead to the diminution of the "real"?

The people of Weimar, surprisingly, have embraced the replica of their chief cult object in the same way that federal politicians eventually decided that Christo's wrapping of the Reichstag was not so bad an idea after all. Seventy per cent of Weimar citizens want to keep it after the birthday year is over. At least half the nearly 1,000 people who visit the second Garden House daily know that it is a copy and are eager to see just how precise it is. The unsuspecting other half pay their 5 marks (about Rs. 115) for a quick tour and leave, feeling the perhaps false glow of a brush with the German bard. Others are confused or angry upon suddenly seeing the original house across the way, with its garden and 4 marks' admission. They too have been an essential part of the experiment.

Most of Weimar will soon nestle under the comforting blanket of a World Heritage Site designation. But the Sparkasse bank has not decided what to do with the second Garden House when it is removed at the end of October. Perhaps it will tour the world, as Laier designed it to do, a floating signifier without a context, a shrine in search of new pilgrims.

Most people seem satisfied that, come what may, the appeal of the original will remain mysteriously palpable. As Walter Benjamin's age of mechanical reproduction becomes digital and genetic, it is no wonder that many crave the intimacy and peace of identity, the smell of leather and creak of wood, the nearness to something that happened long ago and only once. As a German woman clutching two wriggling children prepared to leave the custom-built sleight of hand, she discovered that she had been conned.

"What do you mean 'copy'?" she barked at a man behind the desk. "I want the real thing!" Laier just smiled and patted the lintel on his way out. ■

New York Times Service

traditions, belief, love and hope as well as usefulness and efficiency. One cannot overlook the irony and scepticism in them. His later works offer plenty of scope for reflection. Their modernity has been universally established and could be an incentive for reading. This is particularly true of the Mephistophelian problems that limit humanity and yet carry beyond the dialectic of good and bad. This is captured in *Wilhelm Meister* or in *Faust II* in a paradoxical triumph of true humanitarianism.

Goethe has presented a problem that will necessarily assume greater topicality, in "Reflections in the Spirit of the Wanderers" in *Wilhelm Meister*. He writes as follows: "I consider it the greatest misfortune of our time, which lets nothing mature, that people consume the moment that has just gone in, the one that is just coming(...), everything at great speed. This is a problem not only in the West but also in the East." ■

'Empower gram panchayats'

Interview with Arthur Bonner, author and journalist.

Seventy-six-year-old **Arthur Sebastian Bonner**, who has spent much of his life writing or talking about India, introduces himself as "a self-taught journalist". Bonner started his career in journalism with the Columbia Broadcasting System (CBS) when he was 19, after dropping out from school. Since then he has accumulated vast experience in radio, television and the print media. Over the last five decades, his main interest has been studying social movements and the institution of democracy in the United States, India and some other countries.

Bonner, who considers himself a Gandhian, has been a vegetarian since he came to India first in 1953 as a foreign correspondent for the National Broadcasting Company (NBC) and lived on in the country for eight years. His love for India was so great that he decided to return to the country in 1986 after retiring from NBC. Such is his family's bonding with India that one of his two sons (both were born in India) was named Rahul. Rahul is doing research work in Sanskrit.

Recently in Chennai to collect material for his proposed seventh book, to be titled "Deconstructing India", which deals with the changing caste system, Arthur Bonner spoke to **Asha Krishnakumar** about his perceptions of India over the last five decades and reminisced about the India of the 1950s. Excerpts from the interview:

► *What has been the nature of your relationship with India?*

I came to India first in 1953 as a radio and television correspondent for CBS. I was always interested in coming to India and I took the first opportunity I got. Unfortunately, I landed here a few years after Gandhiji died but was lucky enough to tour the country with Jawaharlal Nehru. Being also a photographer, I went with him to cover many important places and events. I was there when (E.M.S.) Namboodiripad was sworn in the first elected Communist Chief Minister of Kerala, and when major dams were commissioned, and Nehru gave the famous speech of how 'Dams are the temples of modern India'. I walked with Vinoba Bhave across the country. That was a truely revealing experience. I saw India first hand, at the grassroots level.

In the 1950s, there were a large number of foreign correspondents in India. Maybe over 20 – six Americans, six Englishmen, a Japanese, Germans, French and so on – practically every nation was represented. This was largely because Nehru was an international personality. He was always glad to meet the press.

The 1950s was the period of "Nehruvian consensus". The whole nation was represented in Nehru's Cabinet. It was not a coalition, but all States were well represented. And any Cabinet member could pick up the telephone and speak to Nehru. So too could J.K. Galbraith or Daniel Patrick Moynihan (both were U.S. Ambassadors in India). Nehru was very approachable and scholarly.

The problem with Nehru was that though he preached secularism and socialism, he never really concretised them. The failure to have a clear policy on many issues, such as on secularism, has led to the problems that India is facing now. Thus, even at that time opinion was divided on Nehru. Some compared him to Stalin while others spoke of him as Charlemagne, the great, brave king of medieval Europe.

I was in India from 1953 to 1961. Then for about a year I worked with a television network in New York and came back to India in 1962 to cover the India-China war for NBC. But the battle was over by the time we went there.

For 20 years I worked for NBC, covering events in the U.S. I also worked as a television producer. I took early retirement when I was 62. At that time I met *The New York Times* editor A.N. Rosenberg and told him that I would like to be a foreign correspondent. He said: "You dare become a foreign correspondent at 62." But I said I would go where nobody else would, to Afghanistan. He said: "We can't send anybody there as we fear they would be killed". But I insisted and he let me go. Then I went to Afghanistan several times between 1984 and 1986, each trip lasting six to seven weeks. I did detailed coverage of how th majority of the people there lived. I als wrote a book, *Among the Afghans* (Centra Asia Book Series; Duke University Press 1987). This was my second book. (Th first was on *Evangelism, Jerry McAula and His Mission*, revised in 1990).

I came to India on my own, with m retirement funds, in 1986 to study socia movements in different parts. I wanderec all over India and studied the emergence working and significance of the loca social movements:

One started by a man, whose name forget, in a match factory in Tami Nadu's Sivakasi area. He strived tc release, educate and rehabilitate workin children;

A movement started by J.P. Ryan tc help the fishing community in an Utta Pradesh village along the Ganga, where owing to the drastic fall in the catch women were turning to prostitution tc eke out a living;

A movement to rehabilitate tribal people in south Mumbai;

An education movement in a remote rural Andhra Pradesh village, started by an American, who set up a school with community help. This was really fantastic. Everyone pitched in, each with Rs.5 or Rs.10;

SEWA (Self Employed Women's Association) in Gujarat, which worked for women's development.

Contrary to my expectation, Gandhism was dead in all these places. They all had the spirit of Gandhiji in them – simple living, humility, non-violence and so on – but they denied it. This is because while they liked Gandhiji's humane nature, they did not like his religious or political approach.

The major factor about Gandhiji, and the thousands of people of his generation who died for the nation in the 1930s and the 1940s, was that they were not politicians who fought on the basis of caste or class, but for principles. I found some of that spirit in these people. So I thought there was some hope. But, then, these people need to be empowered. Grassroots democracy is crucial, especially at a time like this when there is political instability.

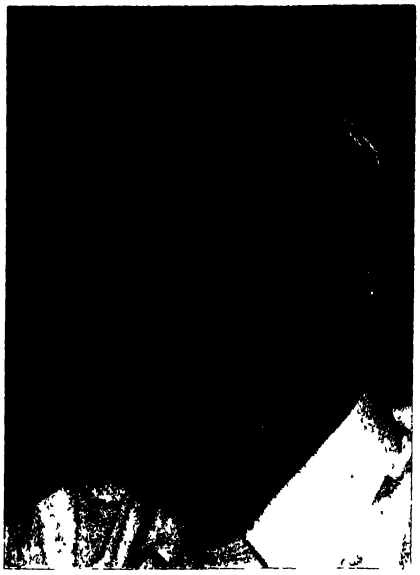
My experiences of the social movements in India led to my third book, *Averting the Apocalypse: Social Movements in India Today* (Duke University Press; 1990). It discusses 30 social movements in India. I concluded the book saying that these experiences are not widespread but need to be projected on a large scale for them to become broad-based and real.

▶ *You came to India in 1986 after a gap of 25 years and have been in touch with the country since then. Do you see many changes?*

Certainly. Inequalities – economic and social – among the people have increased and basic infrastructural facilities such as education and health have become inaccessible to most. That is why I feel that India needs more broad-based social movements of the kinds I described.

I also felt that the idea of euologising India as the biggest democracy in the world was a myth. This concern led me on to edit a book, *Democracy in India: A Hollow Shell*, along with Kancha Ilaiah and Suranjit Kumar Saha (American University Press; 1994). This book exposes Indian democracy. It has contributions from Asgar Ali Engineer on secularism and Kancha Ilaiah on the Dalit movement in Hyderabad. There are also articles on RSS' activities in Madhya Pradesh, the growth of the BJP, the growth of the Dalit movement over the years and a comparison of racism in the U.S. and casteism in India. There is also an article on the anti-liquor movement by the women of Andhra Pradesh.

▶ *Why do you say democracy is a hollow shell in India?*



Because caste masks it. Most people, academics in particular, deny what I believe is the reality. It is caste that determines everything in India. And that is a real bane.

▶ *What are you now working on?*

I am working on a book that I have named "Deconstructing India". India is changing so rapidly, especially in terms of caste hierarchy, that its leadership is unable to keep pace. Democracy is used as a mask by the leaders to cover up many things. They talk about democracy all the time. Democracy in India cannot copy the European system. There has to emerge a democratic structure that is *sui-generis* – that which suits India.

▶ *How would you describe the sui-generis system for India?*

That is where I would bring in the role of all the social movements. There is a big difference now. A caste awakening

N BALAJI

has happened. You can see this in the increasing number of caste clashes in southern Tamil Nadu, Andhra Pradesh and in several northern States. Empowering gram panchayats is very important. People should be given the power. Only then would they see to it that everyone goes to school, that teachers get paid. There should be someone people can go to if they do not have drinking water, or a school within one kilometre of their village. So the panchayats should be empowered. It is precisely this that the politicians do not want to do because they do not want to give up their power.

Talking to many people across the board, my perception is that the solution to most of India's problems lies in giving power to the people... to the panchayats. And you need to have women in them. I realised this when I was working on the book, *Averting the Apocalypse*. All the people who spearheaded the social movements were willing to sacrifice their lives. For instance, this woman in Mumbai who was working with the people engaged in charcoal-making had decided not to have a child so that she could dedicate her life for these people. These are the people who need to be empowered. This kind of dedication and sacrifice is what I was referring to when I said the spirit of Gandhiji was still alive.

▶ *What is the role of the government in these kinds of social movements?*

It is important. But I do not know anything about how it works because I have not studied it in any detail. But what I see now is that in Indian villages if people have problems – of drinking water, of schools, of getting minimum wages and so on – they go to the people who spearhead social movements. Politicians are by and large busy with other things – they do not have time for the people. It is their (the politicians') work that some selfless people are doing. This is the change I see in India now.

▶ *Would you say that the emergence of these social movements in large numbers is the change you see now?*

There were social groups even then. But what I now see is their greater acceptance by intellectuals. They now feel that there need to be panchayats. You may ask when you would see proof of this change. Unfortunately, you have crooks breaking down governments (excuse me for using the word 'crooks'). You have a situation in Bihar where the wife is made the Chief Minister. This is not democracy. So, it may take longer than necessary for these kinds of changes (brought about by social movements) to make a difference to the common people.

▶ *What do you think of the future of India?*

I am not really sure. But I think there must be much greater autonomy for the States – never separation, but greater autonomy. This is one of the many errors Nehru committed. There should have been greater autonomy for States such as Punjab, Assam and (Jammu and) Kashmir. But Nehru suppressed all of them. Its price we are paying now. We no longer have people who came from the national freedom movement, but we have those working for a regional cause.

▶ *What are your other interests, apart from studying India?*

I have worked on many social issues in the U.S. My primary interests have been studying racism, the tribal people and the lives of the downtrodden and vulnerable in general. I have written a book on the history of the Chinese in New York (*Alas! What Brought Thee Hither?: The Chinese in New York - 1800-1950*; Fairlaigh Dickinson University Press; 1996), which is an examination of racism in the U.S. The Chinese (there) have been tremendously hit by racism.

I am also interested in Mexico. Recently I studied the tribal people of southern Mexico who converted from Catholicism to Protestantism. The plight of the tribal people in Mexico is similar to such people in India – they speak their own languages and are isolated from the mainstream. I studied why they got converted and what difference it made to their lives. Based on this study, I wrote a book, *We Will Not Be Stopped: Evangelical Persecution, Catholicism and Zapatismo in Chiapas, Mexico*; Upublish.Com; 1999. ■

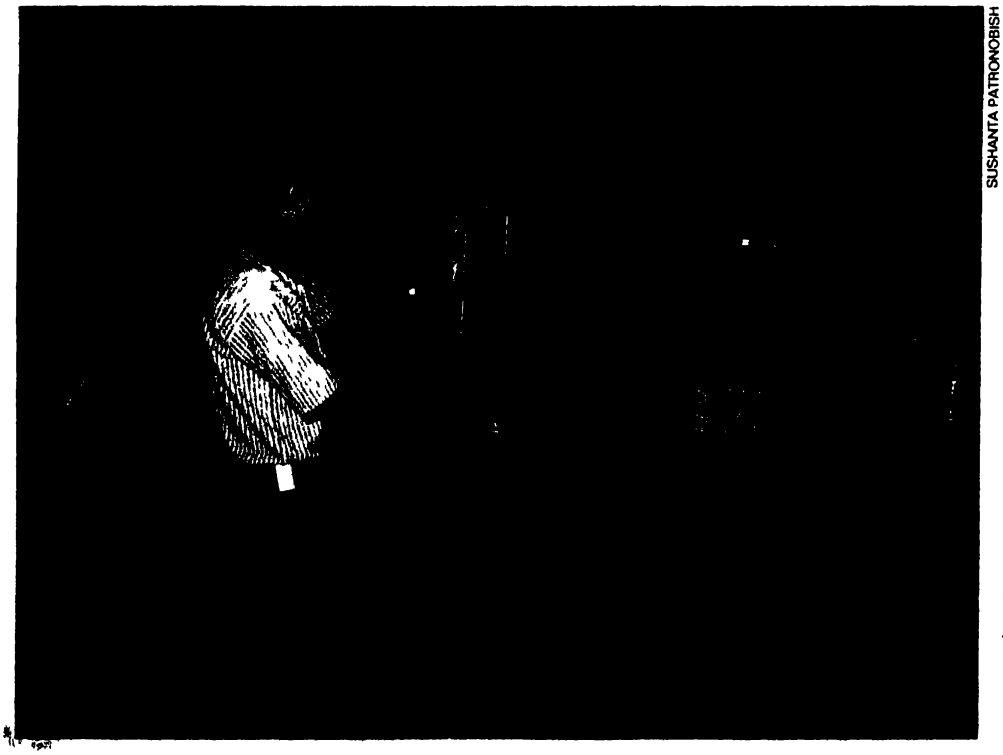
Novel cyclotron ventures

Scientists at two pioneering institutions are working to build the country's first medical cyclotron and a superconducting cyclotron. They will also be involved in a unique nuclear science experiment in Geneva.

T.S. SUBRAMANIAN
SUHRID SANKAR CHATTOPADHYAY
recently at Bidhan Nagar

FOR scientists at the Variable Energy Cyclotron Centre (VECC) and the Saha Institute of Nuclear Physics (SINP) at Bidhan Nagar in Salt Lake, a suburb of Calcutta, the months ahead promise to be eventful. The two institutions, which come under the Department of Atomic Energy (DAE), will be partners in building India's first medical cyclotron and a superconducting cyclotron; they have also been chosen, against stiff global competition, to participate in the world's largest and most sophisticated nuclear science experiment to build a Large Hadron Collider (LHC) in Geneva. The VECC and the SINP will provide trained manpower and equipment valued at $25 million for the LHC project, to be implemented by the European Centre for Nuclear Research or CERN, the world's largest laboratory for nuclear research, using accelerators.

According to Dr. Bikash Sinha, Director of the VECC and the SINP, the medical cyclotron will help produce radio isotopes, which are used to diagnose and fight various kinds of cancers and heart diseases. The process of land acquisition had begun and the facility would be commissioned in 18 months, he said.



The superconducting cyclotron, which will be built on the campus of the VECC/SINP, will signal a quantum leap in basic and applied research. Apart from its use in basic sciences, it will find applications in cryogenic technology, radiation damage related to reactor materials, and storage of surplus power, among other things.

Officials at the SINP are also preparing for the golden jubilee celebrations of the institute in January 2000. The Institute of Nuclear Physics, as it was originally called, was founded by the pioneering scientist Meghnad Saha; in 1958 it was named after Saha, who died in 1956.

MUCH of man's knowledge of nuclear physics has accrued from research done using cyclic accelerators called cyclotrons. These are huge devices in which the energy levels of charged particles are boosted under the combined action of crossed electric and magnetic fields. The velocities attained by the accelerated particles correspond to energies from kiloelectron volts (keV) to millions of electron volts (meV). These highly energised particles – protons, deutrons, alphas and heavy ions – are then used to bombard various nuclei to produce nuclear reactions.

One of the uses of cyclotrons is in the production of radio isotopes. Radio pharmaceuticals are the diagnostic tools of the atomic age, and the active ingredient in a radio pharmaceutical is a radioactive isotope. The new discipline of nuclear medicine deals with the use of radio pharmaceuticals and radiation for diagnosis and treatment of various diseases. Primary radio isotopes are produced by irradiating suitable materials, known as targets, either in a nuclear reactor or in a cyclotron.

A company, the West Bengal Radio Pharmaceuticals Ltd, has been formed to execute the Rs.42-crore medical cyclotron project. It is a joint venture of Ion Beam Applications (IBA), Belgium, the world's leading manufacturer of cyclotrons; banks; and the Science and Technology Departments of the Union Government and the West Bengal Government.

A landmark in cryogenic technology

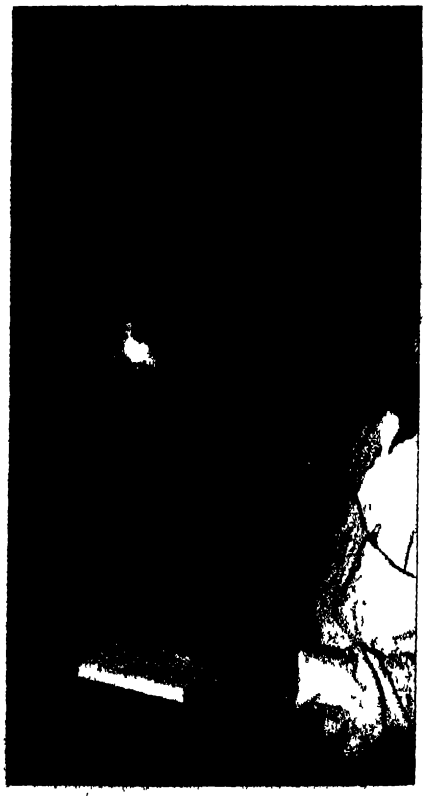
T.S. SUBRAMANIAN
SUHRID SANKAR CHATTOPADHYAY

THE project to build a superconducting cyclotron, a sophisticated accelerator, is one of the most important ventures that the Variable Energy Cyclotron Centre (VECC) has on hand. The project will bring into play advanced technology in cryogenics and other areas. West Bengal Chief Minister Jyoti Basu laid the foundation stone for the building to house the project on June 18, 1997.

According to Dr. Bikash Sinha, Director of the VECC and the Saha Institute of Nuclear Physics (SINP), "It will be a landmark in the country's progress in advanced cryogenic technology."

There are only five superconducting cyclotrons in the world: at Chalk River, Canada; at Michigan State University and East College Station, Texas, both in the United States; at Groningen, the Netherlands; and at Catania, Italy.

Dr. Rakesh K. Bhandari, Project Manager, Superconducting Cyclotron, said the device would be installed at a cost of Rs.55 crores. "The design is from the U.S., but we shall set it up ourselves. Work on assembling it will start in a year," Bhandari said.



The cyclotron's operation would extend from 30 million electron volts (MeV)/nucleon to 200 MeV/nucleon. Sinha said it would usher in a new era in experimental nuclear science and technology, facilitating a quantum leap in basic and applied research. The technological spin-offs would be immense and would provide Indian scientists with expertise in, among other things, fusion research, superconducting magnets for medical diagnosis and storage of surplus power, he said.

The fabrication of the mechanical structure of the radio frequency system has been taken up by the central workshop, Bhabha Atomic Research Centre (BARC), Trombay, Mumbai. An exclusive programme for computer simulation has been initiated at the VECC. The massive magnet, weighing 262 tonnes, will be made by the Heavy Engineering Corporation Ltd, Ranchi. The 42,000-km-long superconducting coil will be immersed in 300 litres of helium inside a cryostat, which will be manufactured in the country.

Another development that has excited engineers and scientists of the VECC, the SINP, and other institutions is the Department of Atomic Energy's (DAE) participation in the project to build a Large Hadron Collider (LHC) near Geneva.

The largest of CERN's existing accelerators, the Large Electron Positron Collider (LEP), is circular, with a circumferance of 27 km; it accelerates electrons and positrons to energies of 45 gigavolts (GeV). The LHC will be even larger and will make it possible to research some fundamental issues in physics such as the definitive signatures of quark-glucon plasma (QGP).

On March 29, 1996, a protocol to an earlier agreement was signed by CERN and the DAE for India's participation in the project. Since then, the Centre for Advanced Technology (CAT), Indore; BARC, Mumbai; Tata Institute of Fundamental Research, Mumbai; and the VECC and the SINP have been interacting with CERN.

A model of the superconducting cyclotron that is being built at the VECC, and Dr. Rakesh K. Bhandari, Project Manager, Superconducting Cyclotron.

Under the protocol, India will make a contribution, valued at $25 million, in terms of manpower and supply of hardware and software. Of this, CAT will supply two 50,000-litre liquid nitorogen storage tanks, high-technology items such as six prototypes of superconducting sextupole corrector magnets, various other types of magnets and manpower to conduct magnetic measurement tests.

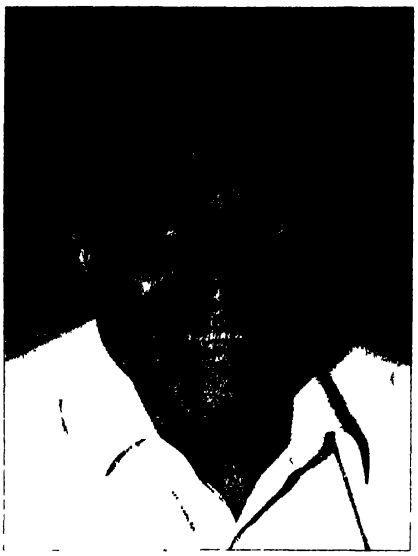
According to Dr. Ashok Mohan, Technical Adviser (International Relations) to the Atomic Energy Commission Chairman, the LHC is being built underground across the France-Switzerland border, and visitors to the facility will require visas from both countries.

According to VECC scientists, collision of two heavy nuclei, like that of gold, moving at speeds close to that of light may create conditions of sufficiently high temperature and density for hadrons to dissolve into a plasma of quarks and gluons, very much like the state that existed in the early universe a microsecond after the Big Bang. The study of this "mini bang" in the laboratory is one of the most important fields of research for nuclear and particle physicists, astrophysicists, and cosmologists all over the world.

In a breakthrough, Sinha, Dr. Janee-Alam, senior scientist, VECC, and Prof. Sibaji Raha, senior nuclear scientist, J.C. Bose Institute, have found the answer to one of the most mystifying scientific questions: what comprises the cold, dark matter that survived the Big

found the theoretical answer, the three scientists are now attempting to provide evidence of these "strangelets" or the dark matter. Success on this front will not only point to how galaxies were formed but help find new sources of safe nuclear energy. Sinha said their findings had excited scientists participating in the recent International Conference on Quark Matter, Torino, Italy. ■

According to Sinha, Belgium has provided the Indian Government an interest-free loan of Rs.15.6 crores for the medical cyclotron project; the DAE has given the SINP Rs.3.2 crores, and the Union Government's Department of Science and Technology (DST) has provided a loan of Rs.3 crores. The Department of Science and Technology, West Bengal, has contributed Rs.10 lakhs. The West Bengal Industrial Development Corporation (WBIDC) has provided two acres (0.8 hectare) of land nearby. The IBA will instal the medical cyclotron, which will cost Rs.31 crores.



Sinha said, "Earlier, we used to produce radio isotopes from reactors. All over the world cyclotron-produced isotopes are abundantly used. They are much cheaper."

THE medical cyclotron, named Cyclone-30, is a compact machine of advanced design, producing an intense beam of 30 MeV protons. By bombarding various targets, different radioactive isotopes are created. Some of these isotopes are invaluable in the treatment of serious diseases. Thallous chloride, made out of an isotope of thallium, is used in the diagnosis of heart diseases. This is now imported from the United Kingdom, and hence costly. Sinha said:"The medical cyclotron will make advanced diagnosis more accessible to the common man."

In cancer treatment, precise diagnosis is vital: determining the exact location of the tumour is important, as otherwise healthy cells will be killed. Sinha said that an isotope called palladium "is a sure cure for prostate cancer, if diagnosed early." Palladium radio isotope is a "biological bullet: it seeks out cancerous cells and kills them," Sinha said.

It took 10 years for the project to become a reality. Sinha said that several Indian enterprises were asked to take up the commercial aspect of the cyclotron venture, including the product distribution, but none of them wanted to participate in the project. The radio isotopes produced will be sold to hospitals in the country and will also be exported to China, South Asia and West Asia. An all-India survey of possible buyers showed it would be a commercially viable venture.

The VECC has set up a Regional Radiation Medicine Centre (RRMC) at Thakurpukur, West Bengal, in collaboration with the Cancer Centre Welfare Home. It uses gamma cameras and radio immuno assay for the diagnosis of diseases and a 4 MeV medical linear accelerator for cancer therapy. Every day about 200 patients from the eastern and north-eastern regions visit the RRMC.

SUSHANTA PATRONOBISH

Dr. Bikash Sinha, Director of the VECC and the Saha Institute of Nuclear Physics.

According to Sinha, the variable energy cyclotron at the VECC is unique. In 1964, Homi Jehangir Bhabha, the architect of India's nuclear energy programme, decided to set up a cyclotron. The project was sanctioned in August 1969 and work began three months later. Fabrication of the key component, a massive magnet weighing 262 tonnes, began at the Heavy Engineering Corporation, Ranchi, Bihar, in August 1970 and was completed five years later. On June 16, 1977, the first internal beam of alpha particles was obtained from the cyclotron.

According to Dr. Rakesh K. Bhandari, head of the Accelerator Physics Group and Project Manager of Superconducting Cyclotron, the basic purpose of a cyclotron is to study the structure of the nucleus. The world's first cyclotron was installed at Berkeley, U.S., in 1937. Its inventor, E.O. Lawrence, won the Nobel Prize.

Bhandari said the variable energy cyclotron was so called because "we can vary the energy of the proton beam from six million electron volts to 60 million electron volts. This will enable scientists to do experiments at different energies."

In a cyclotron, the aim is to energise charged particles such as protons and alpha particles to high velocity, as much as half the velocity of light. When these energised particles are used to hit a target, the nucleus breaks, a nuclear reaction takes place, and scientists study the structure of the nucleus, that is, the structure of matter in general. While the magnetic field in a cyclotron makes the particles go in a circular path, the electric field imparts a high velocity.

Bhandari explained: "When we accelerate them from low energy to high energy, they must be in a vacuum... The charged particles are just like light beams. The magnets act as lenses. With the help of the magnets, we can bend the charged particles. Particles themselves are used for doing experiments. Once they hit a particular target, they are lost."

Scientists at the VECC are excited also by the prospect of working on the Radioactive Ion Beam (RIB) project in collaboration with SINP. The technology needed to develop an RIB facility is very complex. RIBs will support experiments in nuclear astrophysics and material sciences and basic and applied research in condensed matter physics, biology, chemistry and medicine.

ADJACENT to the VECC is the SINP, which was founded by Saha and which focusses on fundamental research. In 1938, when Otto Hahn and Fritz Strassman discovered nuclear fission, Saha, who at that time held the Palit Chair of the Physics Department of Calcutta University, sensed the urgency of initiating nuclear research in India. He secured from Sir Dorabji Tata Rs.40,000 for the founding of the Institute of Nuclear Physics, which came up around a baby cyclotron, which was indigenously built, on the Rajabazar campus. Madame Joliot-Curie formally inaugurated the Institute on January 11, 1950. From January 1, 1972, it became a unit of the DAE, and in the 1980s it moved to its present location.

According to Sinha, the SINP now has one of the largest nuclear science groups in the country and a string of laboratories with state-of-the-art equipment. Besides nuclear physics, the SINP carries on research in fields as varied as string theory, protein structure, high temperature super conductivity, high intensity magnetic field, quark gluon plasma, surface physics, astrophysics, biology and cosmology.

Important experiments are being done on protein engineering in the protein crystallography laboratory. These are directed at deciphering the structural and functional relationship of medicinally important proteins, especially enzymes and their inhibitors. ■

AIDS and some concerns

As international agencies pour in funds for AIDS programmes in India, doubts are raised in some quarters about the priorities.

LYLA BAVADAM
in Mumbai

MAHARASHTRA has the highest reported incidence of Acquired Immune Deficiency Syndrome (AIDS) cases among the States of India. As of August 31, 1998, according to the National AIDS Control Organisation (NACO), 417,844 persons were screened in the State and 45,864 of them were confirmed sero-positive or infected with the Human Immunodeficiency Virus (HIV), which causes AIDS, and 3,251 had full-blown AIDS. The State also has the only known cases of infection by HIV-II, a mutated form of HIV, of which there are only two other reported cases in South Asia – in Sri Lanka. According to a 1997 World Health Organisation (WHO) report, the estimated number of people infected with HIV in India are 2.5 million.

On September 28, Maharashtra received $41.5 million from the United States Agency for International Development (USAID) for an AIDS control project to be implemented by NACO in collaboration with the State government. The project, which will receive the USAID funding over a period of seven years, seeks to increase the use of effective and sustainable means to reduce the rate of transmission and mitigate the impact of HIV and other Sexually Transmitted Infections (STIs) and related infectious diseases in the State.

While NACO will implement the project, many more agencies will be involved in the field work. The donor agencies will work closely with the Maharashtra AIDS Society, the Mumbai District AIDS Society, non-governmental organisations (NGOs), private health care providers, municipal authorities and community-based groups. A Health Department official said: "The role of NGOs is crucial because they can operate more freely than government agencies and I admit that they also have better credibility than government medical bodies."

Pramod Nigudkar, Deputy Director of the Mumbai District AIDS Society, said. "We will be the facilitators and provide both technical and financial support." Nigudkar believes that AIDS control is possible only through a multi-sectoral response from society since AIDS has to be treated primarily as a social rather than a medical problem, especially considering the fact that there was no known cure for the syndrome.

In the red light district in Mumbai.

There are three known routes by which HIV spreads and the project would look into all three. The commonest route is sexual intercourse, homosexual and heterosexual. A WHO publication has said that the nature of the virus makes women more vulnerable than men to AIDS because the transmission of HIV from male to female is more efficient than from female to male. Women are more vulnerable also because of their low status in society which limits their choices. It has been noticed that persons suffering from STIs were susceptible to HIV infection. In Maharashtra, STIs figured among the top five diseases for which adults sought medical help. The project planned to vigorously target this group.

The second route of HIV transmission is through infected blood and blood products and contaminated needles and syringes, including those used by injecting drug users (IDUs). The rate of HIV transmission is highest in the northeastern States.

The third route is from an infected mother to a child during pregnancy, at birth or after birth. The possibility of HIV transmission at these stages is believed to be 30 per cent. The trend seen in many countries is that the virus spreads quickly to the general population. Women are increasingly infected, and the number of instances of pregnant women passing on the infection to babies has risen. The programme aims to treat pregnant women. This would involve the use of anti-retroviral drugs – as yet an expensive and controversial method of treatment.

Nigudkar outlined the main target groups of the project as long-distance truck drivers, migrant workers, street youth, commercial sex workers (CSWs) and their children, patients with STIs and IDUs. In essence, the programme will follow the IEC

strategy – Information, Education and Communication – propounded about 12 years ago when the first phase of the battle against AIDS in India was taken up with funding from the United Nations Programme on HIV/AIDS (UNAID) and the World Bank. Although the programme projected the goal of AIDS control, it was generally known that the initial seven-year period was one of learning rather than implementation. "Now we will put into practice what we learnt between 1992 and 1999," said Nigudkar.

Government agencies and NGOs agree that the most effective way to control AIDS is to influence sexual behaviour. "The only way we can do this is by educating them and by implementing complementary programmes to ensure the detection and cure of STIs and tuberculosis (TB), safe blood transfusion procedures and safe injecting behaviour," said Nigudkar.

One success story of the IEC approach is the NACO-WHO project implemented at Sonagachi in Calcutta's red light district in 1992 (Frontline, December 29, 1995). The project initiated an STI-HIV intervention programme for CSWs. The baseline survey revealed a high percentage of women with STIs. A clinic was established in the area. After a year another survey showed that the number of STI cases had dropped by 30 per cent and the awareness on STI and HIV increased by almost 100 per cent.

FOREIGN funding was increasingly becoming a source of controversy in the field of AIDS control and care. Earlier this year the World Bank sanctioned funds totalling $250,000 for the second phase of another all-India AIDS control programme. For the first phase, from 1992 to 1997, the Bank had allotted $84 million. And UNAID is expected to release an as yet unstated amount for the same programme soon.

Many social workers have objected to the estimates on AIDS cases in India. Requesting anonymity, a worker with an organisation that has received foreign funding insisted: "There is no AIDS pandemic. This is just a big scare." Another social worker described the vast foreign funding as "a dollar-driven agenda with the final goal of using people with AIDS in India as guinea pigs for vaccine trials. Just look at the figures these funding agencies throw at us. Four million! Elleven million! It is unrealistic to put a number on AIDS or HIV-infected cases."

The 1997 UNAIDS Report on the Global HIV/AIDS Epidemic and the World Health Organisation said: "In India, infection rates, at under 1 per cent of the total adult population, are still low by the standards of many countries, although it is well over 10 times higher than in neighbouring China. Surveillance is patchy, but all indications are that between 3 and 5 million people in India are living with HIV. Even at the bottom of that range, India is the country with the largest number of HIV-infected people in the world. Testing on pregnant women in Mumbai showed infection rates of around 2.4 per cent in 1996."

On a global scale, the same report estimated that 30.6 million people lived with AIDS at the end of 1997, of whom six million were in South Asia and South-East Asia. The report also said: "Nine out of 10 infected people in the world do not know their HIV status. At current estimates, that would suggest there are over 27 million people in the world today who have no idea that they are infected."

In April this year in New Delhi, the parliamentary Standing Committee on Dreaded Diseases said in its report that one in four HIV-positive persons worldwide is in India.

Another common complaint is that funds should be spent for the control of TB and malaria, diseases for which there are cures rather than spending on what one social worker called "a lost hope". Social workers allege that the figures of TB are inverted and projected as possible AIDS figures and that the blood samples that are taken into account are largely from people who practised high-risk behaviour, such as CSWs and truck drivers, and the test results projected as being representative of the general population.

Workers spoke of the desperate need to change the attitude of the medical profession towards AIDS patients, both in terms of doctors turning away AIDS-affected people and families being informed of person's status *vis-a vis* AIDS without the consent of that person.

Some social workers feel that funding is not sufficiently oriented towards care and relief of AIDS patients. "The need of the moment is relief from AIDS. We have seen women who were thrown out of their homes because their families suspected they had AIDS. People have lost their jobs because of social stigma and fear. What about this segment of people?" asked a social worker who says that hardly any funds have been spent to provide relief to AIDS patients.

Health activists and workers say that any AIDS control programme should extend its reach to encompass safe management of blood and sperm banks, management of hospital waste, precautionary measures in hospitals, availability of drugs, provision of counselling and terminal care services and sensitisation of the medical profession. ■

A complex case

LYLA BAVADAM

THE Human Immunodeficiency Virus (HIV) is a complex one which rapidly changes its structure. This is a reason why it has been difficult to find a cure or develop a vaccine for Acquired Immune Deficiency Syndrome (AIDS). HIV is part of a closely related group of viruses known as retroviruses. As the name suggests, this group goes against the natural order of things: instead of following the biological rule in which genetic commandments flow from the master molecule deoxyribonucleic acid (DNA) to ribonucleic acid (RNA), retroviruses reverse the process. The effect of the reversal of genetic hierarchy is catastrophic. Simply put, it enables HIV to incapacitate the white blood cells to fight disease.

It is important to distinguish between full-blown AIDS cases and an HIV infection. People infected with HIV may take between seven and ten years to develop AIDS. Other factors such as malnutrition and poor health could speed up the progression of the disease.

Tuberculosis (TB) and HIV form a deadly duo with the latter riding piggyback on the passive TB bacterium. The bacterium is supposed to be present in one-third of the world's population but it gets activated only if the immune system is weak. The presence of HIV not only severely affects a TB carrier but results in the mutation of the bacterium, which becomes resistant to known TB cures. The prevalence of multi-drug resistant TB (MDR-TB) is worldwide. The World Health Organisation (WHO) estimates that the rate of MDR-TB in India is on the increase, especially in Mumbai, where HIV infection rates among [illegible] is estimated to be above 40 per cent. ■

Roadblocks in Asia

Unstable governments, insurgency, border conflicts and similar factors prove to be roadblocks to the development of the 90,000 km-long Asian Highway network.

SUDHA MAHALINGAM

FORTY years after the Asian Highway Project (AHP) was conceived, the network, which would stretch over 90,000 km between Istanbul in the west and Beijing in the east and connect 25 countries, remains on paper. Although internal highway networks in most of these countries are already in place and what remains to be done is only the upgradation of this network to international standards and the opening of national borders to provide connectivity to passenger and freight traffic, realpolitik has rendered the exercise formidable. Thus the idea of free flow of trade and tourists across geographical and political boundaries has been hit by ground realities – unstable political regime, insurgencies, tensions on the borders, not to mention the growth and spread of drug trafficking in the entire region.

Originally the project was aided by the United Nations Development Programme (UNDP). Now the Economic and Social Commission for Asia and the Pacific (ESCAP) coordinates and monitors ITS implementation. At its 48th session held in 1992, ESCAP endorsed the integrated Asian Land Transport Infrastructure Development (ALTID) project comprising the AHP and the Trans-Asian Railway Project. Of the 90,000-km-long AHP, five international routes comprise 40,000 km and 37 subregional routes, 50,000 km. The highway will cover the whole of Asia from Turkey to China, except Bhutan, the Korean Peninsula and the Russian Federation.

The basic principle behind the network is to make the most of existing infrastructure. The route criteria emphasise capital-to-capital links for international transport and connection to main industrial and agricultural centres, "growth triangle zones", major sea and river ports, and inland container terminals and depots.

A pre-requisite for the operationalisation of the highway network is harmonised transport facilitation measures at the national and international levels. For this, the ESCAP session recommended that the member-nations accede to seven international conventions. These include the Convention on Road Traffic, 1968; the Convention on Road Signs and Signals, 1968; the Customs Convention on the International Transport of Goods under Cover of TIR Carnets, 1975; the Customs Convention on the Temporary Importation of Commercial Road Vehicles, 1956; the Customs Convention on Containers, 1972; the International Convention on the Harmonisation of Frontier Control of Goods, 1982; and the Convention on the Contract for the International Carriage of Goods by Road, 1956. The two international transit conventions that ESCAP wants member-nations to accede to include the Convention and Statutes of Freedom of Transit, Barcelona, 1921 and the Convention on Transit Trade of Land-locked States, New York, 1965.

J.B. Mathur, Chief Engineer in the roads development wing of the Ministry of Surface Transport, told *Frontline* that in addition to these conventions, protocols relating to contraband, especially those related to checking for arms at land borders, would have to be finalised before the project could be implemented. According to him, the progress of the project has been rather slow mainly because of the reluctance of nations to open up their borders to traffic, especially in these times of heightened border tensions. After the Kargil war the prospects for the smooth flow of traffic through the Indo-Pakistan border have receded. Although the New Delhi-Lahore bus service, which was opened following Prime Minister Atal Behari Vajpayee's initiative, remains operational, only non-Pakistanis are allowed access into and passage through India from the Pakistan border. Myanmar and Afghanistan, both with unstable political regimes, are perceived to be major stumbling blocks to operationalising the highway network in the South Asian region.

INDIA, one of the initiators of the project, has consistently called for the cooperation of the countries of the region in the development of land transport infrastructure and facilitation of international transport and travel, in order to promote regional trade and tourism. After the 48th session of ESCAP, the Asian Highway routes in India underwent some changes. The project now envisages a road length of 11,662 km providing international connectivity – at Atari to Pakistan, at Banbasa to Nepal, at Barhi to Bangladesh, at Imphal to Myanmar and at Dhanushkodi to Sri Lanka.

Two priority routes pass through India – A1 and A2.

According to Prafulla Kumar, Director-General, Roads Development, and Additional Secretary to the Government of India, major works of development and improvement on A1 are over. Of the total length of 1,995 km, 722 km is already four-lane and the rest will be upgraded similarly during the next few years. A 375-km stretch of A2 passes through India. Upgrading has been completed in the last of the 28-km stretch from Delhi and the work on the remaining part is on. On the other routes, the Bangalore-Hosur, Anakapalli-Bhubaneshwar and Indore-Tumkur sections have been made four-lane.

The government has decided to undertake major improvement work along four major corridors linking the metropolitan cities of Delhi, Mumbai, Chennai and Calcutta and aggregating a length of 5,000 km. The National Highways Authority of India has initiated feasibility studies and construction activities along this corridor, which will cover a major portion of the Asian Highway network.

India will present a status report on its efforts to implement the project at the World Roads Congress to be held at Kuala Lumpur this month. Officials in the Ministry of Surface Transport are of the view that despite all the obstacles, the completion of the network, which will form the lifeline of the region, is unstoppable. ■

Double-talk on subsidies

The case of agricultural subsidies in global trade negotiations.

BIPLAB DASGUPTA

ONE of the paradoxes of world trade is that the richest and the most industrialised countries, which enjoy no comparative advantage in agriculture, dominate the world export market for wheat and several other primary products. Given their relative labour situation and natural endowments, one would expect, on purely economic grounds, that they would specialise in the production and export of industrial goods, leaving to the poor agricultural countries the production and export of agricultural goods. But the fact is that despite the high costs of labour and machine, they supply wheat to the world market at a price that is lower than that quoted by Third World exporters.[1]

The paradox is quite easy to resolve. The rich countries have succeeded in "creating" comparative advantage for their agricultural exports by way of subsidies to their very small number of agriculturists. The subsidy is of such an unimaginable scale that it has turned what is costly and non-viable and should not be produced in developed countries into one of their most lucrative export items. The "cheap" wheat is used both to make agriculture a profitable business for the farmers of the United States and West Europe and to attain the diplomatic goals of their governments. From the days of PL 480, food diplomacy has been one of the major components of the foreign and defence strategies of the U.S.[2] Organisation for Economic Cooperation and Development (OECD) countries (taking the European Community, or E.C., the U.S. and others together) account for 80 per cent of the world cereal trade; more than 55 per cent of these cereals are sold to less developed countries.[3]

While the high subsidy, coupled with rigorous import control and high tariff, helps to explain this paradox – of highly industrialised countries capturing the world agricultural market – this in turn gives rise to yet another paradox. How countries that advocate a "no subsidy" world trade order and pressure poor countries to withdraw agricultural subsidies in all forms – including those given to the Public Distribution System (PDS) and for price support and export – could give subsidy to their own agriculturists? Again, this paradox can be explained easily:

TOWARDS SEATTLE

because they dominate the world politically, militarily and economically and frame the rules for world trade in their own interest. These rules allow them to continue, even after the 1994 Marrakesh Agreement, with their own large subsidies, *albeit* in some diluted form, while the markets of the poor countries are forced open and flooded with subsidised "cheap" wheat exports from the rich countries. Defying economic logic and their own market-based theology, both the U.S. and western Europe, the greatest champions of an open-house policy, continue to protect and subsidise their own agriculture and, by all accounts, will do so for many years to come. "Do what I say, don't do what I do" seems to be their motto.

How large a subsidy do they give their less-than-10-million agriculturists? Compared with the equivalent of $1 billion that India gives its 600 million agriculturists, the U.S. Government provided farm subsidy to the tune of $32 billion even in 1989 according to one calculation while the corresponding figures for western Europe and Japan were $53 billion and $33 billion.[4] The total subsidy given annually by OECD countries to their agricultural producers reached a staggering figure of $240 billion.[5] One OECD study in the early 1990s estimated production subsidy equivalents (in percentage of producer prices) in 1991 at 66 per cent for Japan, 49 per cent for the countries of the E.C., and 30 per cent for the U.S.[6] There cannot be the slightest doubt that if such subsidies and import control are withdrawn by the E.C. and the U.S., the direction of trade would radically change overnight. These markets would be flooded by wheat exports from the Third World. In that changed world scenario, not a single grain of their wheat would be exported, not to speak of their exports dominating the world wheat market. These subsidies have artificially kept world wheat prices at a level that is between 8 per cent and 17 per cent lower than what would have been the case otherwise, and this has deprived agriculturists in the Third World of their due share from trade.[7]

The issue of agricultural subsidy, which exposes the double-talk of the rich world more than on any other subject and explodes the myth of world wheat prices being rational and objective, will come up for discussion in the four-day Ministerial Conference of the World Trade Organisation (WTO) in Seattle from November 30. According to a 1993 estimate, a reduction by 30 per cent in the average level of protection in the OECD

countries would produce a gain of $195 billion for the world economy, which is greater than the entire income of the countries of Sub-Saharan Africa. Of this, about $90 billion would accrue to less developed countries, an amount that is twice the annual quantum of official development assistance given to these countries. Complete abolition of protection would entail a global welfare gain of $475 billion, according to this estimate.[8]

We must do what all countries of the world, rich or poor, large or small, socialist or capitalist, usually do – to examine carefully cases where subsidy and control are necessary to augment domestic production and seek self-sufficiency.

Historically, until the Uruguay Round, U.S. government policy on agriculture had been highly protectionist. It began with the objective of import substitution, which arose from a concern for national security and the consequent urge for self-reliance in food. But this is grossly overdone. In time, the astronomical level of subsidies catapulted the country to its present position as the leading exporter in the world. Along with subsidies, a ridiculously large agricultural administration has come into being in the U.S. It is difficult to believe but true that there is now one bureaucrat for every five farmers and the budget of the U.S. Department of Agriculture exceeds the net income of all farmers.[9]

In western Europe, a food-deficit region until the 1970s, the subsidy is given under what is known as the Common Agriculture Policy (CAP) of the Common Market, which has been operating since 1962 as a component of an import substitution strategy. Under CAP, high support prices are maintained for major crops, and a *variable levy system*, which ensures that foreign agricultural goods are always priced higher than their local counterparts, is imposed. Further, export subsidies (referred to as *export refunds* or *restitution*) are given to agricultural producers to dispose of their surplus. The massive subsidies, under what is known as the Export Enhancement Programme (EEP), radically transformed the agrarian economy of essentially food-deficit Europe. In 1970 the E.C. imported agricultural goods but, thanks to the subsidies, by 1980 it was self-sufficient in food, and by 1986 its agricultural exports – cereals, beef, sugar, and dairy products – surpassed those from the U.S.

Naturally, both the U.S. and western Europe were opposed to making agriculture a major item of the General Agreement on Tariffs and Trade (GATT) negotiations until the Uruguay Round, as their agricultural policies were clearly at variance with known GATT prescriptions. In 1955, in an extraordinary manner, again defying all sense of fair play, the U.S. was given a waiver from normal GATT prescriptions, and this allowed it to continue with high levels of protection for its agriculture.[10] In Europe's case, the justification for the protection and subsidy was that CAP was an essential element needed to bind its members together and without this Europe would lose its political cohesion.[11] So much for the principles of free trade and the "fundamental" economic principle of unhindered flow of goods and services across international borders.

However, over time, as a consequence of ever-increasing pressure from various lobbies, agricultural subsidies, continued to rise steeply, even faster than what even the richest countries could afford. Sixty to seventy per cent of the E.C's common fund was spent on subsidies, leaving lesser and lesser funds for other equally demanding needs. The E.C. budgetary support for agriculture rose from 4.7 billion ecu out of the 6.2-billion ecu overall budget in 1975 to 46.3 billion ecu out of the 58.4 billion budget in 1991.[12]

The level of agricultural subsidies proved too high even for an economic giant like the U.S., particularly when the U.S. budget showed enormous deficits,[13] thereby seriously threatening the country's macroeconomic balance. In 1986, U.S. agricultural exports slumped to $26 billion, but the government handout to farmers, at $30 billion, exceeded the export earnings. In this situation, one alternative actively promoted by the U.S. government to reduce production prompted by subsidy, ridiculous though it may appear in the global context, was to induce farmers to leave the land fallow, for which they were rewarded with subsidy. Thus the farmers were paid not to produce in a desperate bid to reduce the scale of subsidy.[14]

Once the U.S. Government, facing chronic budget and balance of payment deficits, decided to reduce its own level of subsidy, it was in its own interest to make the rest of the world conform to its policies. This explains the 180-degree turn in the policy of the U.S. on agriculture, its advocacy of lower agricultural subsidies, and its pushing of agriculture as a major item for trade negotiations in the Uruguay Round.

However, the U.S. did not propose complete elimination of producer subsidy in the Uruguay Round discussions; it wanted only the part of subsidy tied to output-increasing incentives to go. The U.S. safety regulations in relation to internal food supply were not sacrificed. In the Marrakesh Agreement on agriculture, under *reduction commitments*, members were expected to reduce from 1986-90 levels their budgetary outlay on agricultural subsidies, by 36 per cent and their volume by 21 per cent, over a period of six years. For the less developed countries, a 24 per cent cut in value and a 14 per cent cut in volume in 10 equal annual instalments were ordained. It is important to notice that subsidies were only subjected to proportionate cuts, not to any absolute ceiling, or per-agriculturist or per-beneficiary ceiling. Given that subsidy levels were already high in the U.S. and western Europe, even after such percentage reductions, the actual levels of subsidy given to their agriculturists remain extraordinarily high, compared

with those in less developed countries. It will take generations for this to be whittled down to the levels of subsidy in India.[15]

The very high subsidies given by rich governments were to be cut as a percentage of their steep levels, but, by a suitable manipulation of definition, they managed to take most of their subsidies out of the way of these cuts. This they managed to do by classifying subsidies into "goodies" and "baddies", so to say, and made only the "trade-distorting subsidies" illegal. However, what is trade distorting in its effect on production and what is not is a matter of judgment. The rich countries, which frame the rules, decided that most of their own subsidies had no trade-distorting effect on production and, therefore, were not subjected to cuts. The *deficiency payments* of the U.S. and *compensation payments* of the European Union were exempted, as also a long list of their other subsidy programmes.[16]

WHILE the provisions in the Marrakesh Agreement are grossly unfair, the attitude of successive Indian governments since 1991 on this question has been despicable and demeaning. In their servile attempt to please the rich countries they have withdrawn more subsidy than was necessary. Although no new export subsidy on products is permitted, the GATT-permitted Aggregate Measure of Support (AMS) by the state to its agriculture is calculated in value terms as a global measure and not as specific to products, and is expected to be reduced by 20 per cent in six years, at an aggregate level, allowing flexibility in shifting support between products. Further, a *de minimis* provision allowed a country to exclude from the AMS calculation any support that did not exceed 5 per cent of the value of production of that commodity, and for non-product-specific support where it did not exceed 5 per cent of the value of the country's total agricultural production. For the less developed countries, *de minimis* level was fixed at 10 per cent, and specified agricultural input subsidies were excluded from the AMS.[17]

For every individual product the Marrakesh Agreement requires a minimum of 15 per cent reduction in tariff, but for the less developed countries the figure is 24 per cent. It also permits *special safeguards* to allow temporary duties during the six-year period, when sudden movements, above trigger levels, in prices and the volume of imports make that necessary. However, any such subsidies and duties are subjected to a minimum amount of access to be given to foreign competitors – of 3 per cent initially, rising to 5 per cent in six years.[18] These provisions were not used to protect our subsidies, nearly all of which were well within the limits prescribed by the Marrakesh Agreement on Agriculture. The Government of India, however, went out of its way to reduce subsidies to levels that were not strictly warranted under the Marrakesh Agreement.

Moreover, the Marrakesh Agreement allows import control for some specific purposes, for example sanitary and phytosanitary measures in order to "protect human, animal or plant life or health". It has been left to the country concerned to work out its own acceptable level of risk, but the controls are to be used on a non-discriminatory basis. In fact the E.U. used this provision to ban the import of hormone-fed beef from the U.S.[19] In India's case, rather than the country using this provision favourably, it has been used from time to time by the European countries to impose bans on shrimp exports from India.

The very generous implementation of the GATT subsidy rules in India has adversely affected Indian agriculture and has led to a decline, compared with the figure for 1991 when the reform was initiated, in per capita food availability and in the rate of growth of agricultural output. This was despite the very unusual favourable occurrence of 11 successive good monsoons, a significant increase in the flow of capital to agriculture via cooperatives, substantially higher support prices and a highly supportive adjustment programme. The main reasons for the poor performance of agriculture were a drastic curtailment in public investment in agricultural infrastructure, and an increase in the prices of potassic and phosphatic fertilizers, following subsidy reduction, with a consequent disporportionate increase in the consumption of nitrogenous fertilizers.[20] The decline in public sector investment in agriculture and rural infrastructure, particularly in irrigation and power, has not been compensated by a corresponding rise in private investment that was expected by the International Monetary Fund-World Bank establishment. The idea that the public sector was "crowding out" the latter and that the withdrawal of the public sector would create space for the private sector for investment has been completely discredited in India and other poor countries.

Furthermore, despite generous state support since 1991, agricultural exports from India have not made any significant impact either domestically or in the world as a whole. To give an example, according to Fund-Bank theology, if shrimp is tradeable and rice is not, it would make sense to bring saline water to paddyfields and discard paddy production in favour of export-oriented shrimp farming. However, experience with shrimp production and exports shows how vulnerable it can be to cyclical diseases, to cheaper and better production possibilities in other countries from the point of view of multinational companies (MNCs) controlling agri-business, to periodic bans and the rigorous imposition of hygiene standards, to various trade restrictions that are characteristic to developed country economies particularly in the field of agriculture, to the whims and caprices of developed countries' administrators, and to the rise and fall in world demand and supply on which India's indigenous producers have no control.

It cannot be that India would allow the free import of subsidised foreign agricultural goods and invite the destruction of domestic agricultural producers who cannot be subsidied, or subsidised to that level, while the rich countries would continue to follow protectionist policies in support of their own high-cost producers, accounting for a very high proportion of their public expenditure. There cannot be one set of rules for them because they are rich and powerful and another for those who are poor and weak.

That the Marrakesh trade rules, now implemented by the WTO in the name of globalisation, have been framed to favour western MNC interests is recognised by the highly researched literature emanating from institutional sources in rich countries themselves. The following is an interesting quote from an important OECD document on technology and globalisation, which was published in 1992.[21]

"Globalisation represents a new phase in the process of internationalisation and the spread of international production. It refers to a set of emerging conditions in which value and wealth are increasingly being produced and distributed within worldwide corporate networks. Large multinational firms operating in concentrated supply structures are at the hub of these conditions."

As for the consequences, this document states categorically: "The first concerns the marginalisation of developing countries within the globalisation process. The second concerns concentration as a world process and whether a global competition policy is needed and how it might be implemented. The third relates to the problems posed by support given by governments to firms engaged in global competition and the need for new rules and codes of behaviour. The fourth relates to standards and norms in a context of rapid and pervasive technological change, corporate concentration and globalisation."

UNFORTUNATELY, documents such as these are not read by the policy makers in India, or, if read, are immediately swept under the carpet. Subsidies of all kinds – on procurement, the PDS, export, interest on agricultural loans, and so on – are seen by the Indian government as distortions that make production inefficient and misallocate the resources according to optimality rules. According to this view, the prices of inputs, whether fertilizers, water or power or what have you, should fully recover their costs. This new approach is also manifested in the policies adopted in other areas. For instance, the Narasimhan Committee on the financial sector, which recommends doing away with priority area lending and subsidised interest rate and the pruning of non-profit making branches of banks in remote and backward rural areas. The fiscal policy backs the acquisition of wealth, and hence that of land in the rural areas, and does not favour taxes on these. While the new fiscal policy, based on the recommendations of the Raja Chelliah Committee, attempts to widen the tax base, rural wealth tax is not on its agenda. The new industrial policy frowns at the location of industries in backward agricultural areas, and the general policy thrust is opposed to such and other measures that aim at reducing inter-regional disparities.

The GATT opposition to subsidies is based on the view that a project or economic activity should cover its costs and provide returns within a given timeframe. A broad social cost-benefit analysis, recognising the linkages of projects with the rest of the economy and taking a long-time horizon into account, would go beyond such time-bound and project-bound framework. A subsidy can be treated as an investment for creating viability at a future date, or even as a measure that protects the interests of the future generation or of the environment. Optimality rules deployed by the World Bank, the IMF and the WTO, the global trinity that rules the poor countries, to justify their theology hold for full and free global integration, not for the partial and piecemeal ones noticed in world trade today. If integration is less than total and free, the optimality rules break down. Subsidies can be justified on many grounds, even using the analogy of the functioning of the MNCs and other non-government organisations that subsidise many of their activities from the profits made from other activities. In many cases such subsidy or short-term loss is in the nature of an investment with a long-term profit goal. For example, foreign insurance companies planning to enter the Indian market are prepared to make losses for six years before their balance sheet would turn white. A government can take a wider view – for example, that loss-making branches of banks are creating more social benefits than costs despite conventional losses, compared to private companies which are motivated only by profit can, by providing an alternative to money sharks, by augmenting agricultural production and thus reducing food imports, by helping to mobilise saving, and by inculcating the saving habit.

"Crop insurance" is not an area where any private insurance company, Indian or foreign, would be interested, but the government can go beyond the concern for profitability in the insurance business and subsidise crop insurance in order to stabilise agricultural earnings and make investment in agriculture less risky and more attractive. Similarly, no private electricity company would be even remotely interested in distributing power to widely diffused rural settlements. This is a task that only a state enterprise would undertake, maybe at a loss initially, and with a generous subsidy; but if it helps the local economy to bloom, maybe in the long run, it will help make profit. There is also the question of the interests of future generations. A private company motivated only by profit and discounting the present value of future earnings at the current rate of interest, would not see anything beyond 15 years, as the present value of earnings beyond that period would be nearly zero. Only the government can protect the interests of future generations and save the environment from degradation that is not discernible at one point of time but accumulates over decades – for example, the depletion of the ozone shield.

This is not to argue for mindless subsidies or controls to keep foreign competition away forever. This is simply to suggest that we do what all countries of the world, rich or poor, large or small, socialist or capitalist, usually do – to examine carefully cases where such subsidy and control are necessary to augment domestic production and seek self-sufficiency. One should note that the call by the global trinity to abandon self-sufficiency in food and to attain "food security via the global market" has been dismissed with contempt by the Japanese, who can buy anything from anywhere at any price, who are determined to maintain food self-sufficiency no matter what the cost is.

One of the first things that the Indian delegation should do in Seattle is to raise at least some of the issues discussed here. The main thrust of its argument should be why the rich countries would be allowed to subsidise their agriculture on such a big scale and continue with rigorous import control on Third World agricultural exports when, going by their own rules based on comparative advantage, agricultural production and export should be left with the poor countries. ■

21 OECD, op.cit, p. 209.

CONSTANCE L. HAYS

AS Coca-Cola's share price dropped below $48 in trading in the last week of September, from a high of over $88 last year, investors were wondering: Can it get any worse?

It is pretty bad, and not just for Coke, whose recent track record was described during that week as "the most significant underperformance versus the S&P 500 in the history of the company" by Andrew J. Conway, an analyst at Morgan Stanley Dean Witter.

Pepsico's share price was languishing at $31.375, well below the company's 52-week high of $42.563. And Cadbury Schweppes, trading as American depository receipts, was at $27.4375, down from a high of $35.0625 within the last year. Bottlers such as Pepsi Bottling Group, the Whitman Corp. and Coca-Cola Enterprises were getting clobbered, too.

What has happened to the soft-drink stocks? The answer is part global cautionary tale, part facts of life in the consumer products business.

MUCH of the downturn can be traced to the state of affairs at Coke, which began a sharp decline 14 months ago. "It starts at the top," said Caroline Levy, an analyst for Schroder & Co. "If Coke is weak, it's very hard for Pepsi as well as the bottlers."

Coke's frailty is rooted in macroeconomic conditions around the world that have gnawed at profits in a system designed when emerging markets were booming. In countries such as Germany, Japan and Brazil, Coca-Cola's sales have been flat or falling for several years, largely because consumers in those countries do not feel they have the money to spend on what they perceive as a relatively expensive American product.

So second-tier brands have been cutting into Coke's market share. In the United States, volume fell when bottlers raised prices by 5 per cent to 6 per cent earlier this year. The idea was to regain profits lost during the last three years, when Coke and Pepsi waged a price war in the supermarket aisles.

"Now, rather than having the stimulus of lower prices, we're going to have the drag of higher prices," said Marc Cohen, an analyst at Goldman Sachs. Sales of store-brand soda have been creeping higher, too

Some of the investor retreat from Coke's stock can be attributed to concern over the profitability of the two engines behind the Coca-Cola system. Coke's return on invested capital – 35 per cent – is far higher than that of its biggest bottler, Coca-Cola Enterprises, which is about 5.2 per cent. But even Coke's return on invested capital has been falling lately.

"We think, in the long run, it's a great company with great management, a great franchise and a great business model," said David Garza, an analyst at Roxbury Capital Management, which has sold most of its two million Coca-Cola shares since the beginning of the year. "The issue is the economics in the short run." He added, "Earnings growth is the worst it has been in decades." Coca-Cola's recall of 17 million cases of its products in France and Belgium some months ago has had more extensive repercussions than the company publicly anticipated. Sales are still shaky in Italy, Germany and Poland as a result of the recall, several analysts said. There are also worries about the effects of currency devaluations in some countries. And the company halted its share-repurchase programme earlier this year.

Coke has said that it will increase volume next year by 7 per cent to 8 per cent worldwide, and increase its earnings by 15 per cent to 20 per cent. But analysts – who are assiduously coached by Coke, but have been burned in recent months as the company has failed to meet its own earnings targets – say that is an unreasonable expectation. They believe volume will grow 6 to 6.5 per cent, and earnings per share will be up 13 per cent.

Coke's once-hallowed executive suite is also coming in for criticism. "What people are worried about is why they are missing their numbers," Levy said. "The question is, is that global economies? Or is that management?" The falling stock price reflects worry about whether Coke and other global consumer products giants will ever again post the kind of profit growth they did through most of the 1990s.

"The emperor has fewer clothes now than I thought," said Daniel Peris, an analyst for Argus Research. He predicts that Coke's share price will return to a more traditional valuation, closer to the 71 per cent premium to the S&P 500 price-to-earnings multiple that it averaged over the last seven years. In 1997, the premium was 96 per cent, and in 1998, it rose to 106 per cent. So far this year, the premium is about 83 per cent, he said.

IN the case of Pepsico, management difficulties in the soft-drink division are one cause of the stock's slide. But analysts say some investors' worries may be exaggerated, since the bulk of Pepsico's earnings are generated by its snack-food business. "Frito-Lay is easily one of the strongest consumer packaged-goods companies that can be found," Cohen said.

The unexpected departure in September of Philip A. Marineau, the former chief executive of Pepsi-Cola North America, sapped confidence in Pepsico and its recently spun-off bottler, Pepsi Bottling Group, analysts say. "Part of PBG's selling proposition to Wall Street was that Pepsi-Cola was under more solid management," Cohen said. "And the management decided to leave."

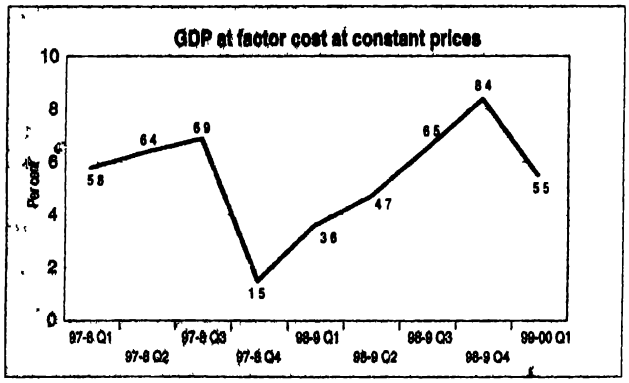
The bottling company opened at $23 on March 31, rose to $25.25 in early July and was trading at $17.4375 on October 1. Whitman, a major Pepsi bottler based outside Chicago, is down by 44.5 per cent for the year. It hit a 52-week low on October 1, trading at $14 a share.

Cadbury Schweppes has fared better, but is still down 20.6 per cent for the year.

The soft-drink sector has experienced what Conway calls "a mini-implosion" in recent weeks. "The question is," he said, "when will volumes return?" ■

New York Times Service

One more upturn?



If at all there has been a turnaround in the economy, it is not because of the successful implementation of the reform programme but because of the failure to implement fiscal stabilisation.

C.P. CHANDRASEKHAR

THE Indian economy, it is being argued, is on the mend. The most recent evidence quoted in support of this view is the Central Statistical Organisation's (CSO) estimate of GDP growth during the first quarter (April-June) of 1999-2000. According to the CSO, though agriculture grew at just 2.8 per cent during April-June as compared with the corresponding period of the previous year, robust growth rates in manufacturing (6.2 per cent), construction (6.7 per cent) and various services (7.8 per cent), have helped raise the overall rate of GDP growth from 3.6 per cent during the first quarter of 1998-99 to 5.5 per cent during the first quarter of financial year 1999-2000. Encouraged by these figures, observers have declared that the Indian economy is witnessing a turnaround.

The CSO's practice of issuing quarterly figures of GDP is, of course, recent. It started with the release of figures for the fourth quarter (January-March) of 1998-99 in June. But at that time, for purposes of comparison, figures for all quarters of financial years 1996-97 to 1998-99 were also issued. Any judgments relating to the first quarter of 1999-2000 must therefore be based on such a comparison. The accompanying chart presents the quarterly rates of GDP growth since the first quarter of 1997-98. As should be clear, after having registered creditable rates of quarterly growth of between 5.8 and 6.9 per cent between April and December 1997, growth slumped to 1.5 per cent in the first quarter (January to March) of calendar year 1998. This was not so much a consequence of the South-East Asian crisis as it was of a collapse in the rate of agricultural growth. GDP generated in agriculture fell by 7.4 per cent during that quarter. However, as agriculture recovered in the subsequent months, the quarterly rate of GDP growth rose continuously from a low of 1.5 per cent to 8.4 per cent during the fourth quarter of 1998-99.

Seen in the context of that performance, growth during the most recent quarter for which figures are available is indeed disappointing. The consistent recovery during 1998-99 was in fact reversed during the first quarter of 1999-2000, when growth stood at 5.5 per cent. The tendency on the part of many commentators to ignore this and focus instead on the fact that growth during April-June 1999 was higher than during the corresponding months of the previous year is indeed surprising.

One reason could be that manufacturing seems particularly buoyant, having notched up a quarterly growth rate of 6.2 per cent. But even this is merely a return to a rate of growth which prevailed a year back after what, on the basis of the CSO's figures, appears to be a minor dip in production. In fact, an indication that all is not well in the manufacturing sector is the trend in non-oil imports, which registered a fall of 4.07 per cent during the first five months (April-August) of the current fiscal year.

Given this background, the tendency to make much of the recent GDP growth figures appears to be a peculiar instance where the oft-discussed "feel good" factor applies not to how economic agents behave but how economic analysts read reality. With the post-reform boom during the years 1993-94, 1994-95 and 1995-96 having petered out, especially in the manufacturing sector, advocates of reform are desperately in search of indicators which can be taken to suggest that liberalisation and reform have indeed delivered their promised results. The current mood, illustrated by periodic surveys of an ostensibly upbeat business leadership whose expectations rarely materialise, seems to be that if you cannot find those indicators you could invent them.

THE most recent effort based on the CSO's quarterly GDP estimates is, however, the last straw. Making much of those figures is particularly pathetic, given the trends in a range of other variables. For example, though it is eight years since India's economic reforms programme began, exports are virtually stagnant. Exports in dollar terms registered a growth of just 4.4 per cent during the first five months of fiscal 1999-2000. While this is an improvement on the negative growth rates reported a few months back, it is still inadequate to provide the stimulus to growth that exports were expected to deliver in the wake of liberalisation. On the other hand, with the reversal in the collapse of international oil prices, India's oil imports rose by 56.5 per cent during these months. Hence, but for the sluggishness in non-oil imports, India's trade and current account deficits would have widened substantially.

It is not just that exports are doing badly. There are indications that foreign direct investment (FDI) inflows, which, rightly or wrongly, were seen as a major trigger for growth in the wake of liberalisation, are also drying up. According to the World Investment Report of the United Nations Conference on Trade and Development (UNCTAD), in 1998 FDI flows into India fell from $3.35 billion in 1997 to $2.26 billion. More recent figures released by the Reserve Bank of India indicate that during April-June 1999, inflows stood at $454 million. If inflows remain at this level over the rest of the fiscal year, the annual inflow

would be around $1.8 billion. These figures compare with India's FDI inflow target of $10 billion a year and an actual inflow of $45.46 billion into China in 1998, up from $44.23 billion in 1997. All of this has not told on India's reserves position partly because of large remittance inflows and partly because of a growing external debt.

India embarked on an accelerated programme of reform in 1991 in response to a balance of payments crisis. The principal benefit of reform was to be a process of balance of payments adjustment. Such adjustment was to be ensured through an improvement in exports facilitated in part by relocative foreign investment which was expected to use India as a production source for world markets. Eight years later, it is clear that liberalisation has not delivered on that front.

Nor has it for that matter ensured the fiscal adjustment which was the other area of emphasis in the reform programme. Failure on the fiscal front has been the result of tax reductions and concessions associated with reform. To quote the Annual Report of the Reserve Bank of India: "The large shortfall in tax collections during 1998-99 needs to be viewed against a decline of over 1 percentage point in the ratio of the Centre's gross tax revenue to GDP between 1991-92 and 1997-98 (from 10 per cent to 8.9 per cent). Excluding trade taxes, revenue from domestic taxes as a percentage of GDP fell by 0.4 percentage point during this period. This trend has been reinforced in 1998-99, with the overall tax GDP ratio declining further to 8.5 per cent and domestic tax-GDP ratio to 6.0 per cent."

This shrinking tax base has meant that even with modest increases in expenditure the fiscal deficit on the Centre's budget rose to 5.7 per cent of GDP in 1997-98 and 5.9 per cent in 1998-99. Expectations are that this would further rise substantially this financial year, partly because of the expenditures associated with the Kargil War. It is this persistence and increase in recent times of the fiscal deficit that accounts for the buoyancy in domestic demand and the growth, however moderate, in manufacturing. Thus, if at all there has been a turnaround in the Indian economy, it is not because of the successful implementation of the reform programme but because of the failure to implement what was considered its crucial plank, namely, fiscal stabilisation.

But for advocates of reform desperately in search of indicators of success, these details do not matter. Any positive sign, however weak and transient, is swooped upon to herald what now seems the indefensible. ■

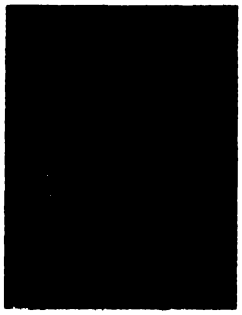
Universities and the law

The decision by the authorities of a major national university to go to court against its own student body raises a number of issues.

THE Oxford English Dictionary defines a university as "the whole body of teachers and students pursuing, at a particular place, the higher branches of learning; such persons associated together as a society or corporate body, having the power of conferring degrees and other privileges, and forming an institution for the promotion of education in the higher branches of learning." The use of the word 'corporate' in this definition should not be misunderstood; it is used in the more traditional sense of guild or community.

Indeed, the fact that it is a community, rather than just any association of people for a common purpose, may be one of the more important defining characteristics of a university. In India, as in many other countries, universities are set up by Acts of Parliament (or Legislative Assemblies). These Acts lay down a framework for the functioning of the university not only academically but also in terms of community life and the relations between its various constituents. The basic purpose of this is to make it clear that a university, being a community, should be in a position to sort out its matters internally, and so a legal framework exists for this.



But a university is not just any old community – it is a very special community, and enlightened citizens have known over several centuries that maintaining the special character of such institutions is essential for a healthy and vibrant society. As Jawaharlal Nehru acknowledged, "a university stands for humanism, for tolerance, for reason, for the adventure of ideas and the search for truth... If the universities discharge their duties adequately, then it is well with the nation and the people."

What makes universities so special is that, ideally, they provide time and space for both research and reflection; they become a means, therefore, for society to reflect upon itself. For such reflection to occur and to be productive, it is necessary that it takes place in an environment that allows not only discussion but indeed fierce debate, where disagreements are encouraged because they can be fruitful in terms of generating new ideas. But it is also necessary that such debate takes place in an atmosphere of mutual respect, and in the absence of intimidation or outside interference.

GIVEN the sorry state of many of our campuses today, many would find it hard to recognise the ideal picture of the university that has just been described. And this too is not unexpected because, even while they stand apart in some sense from the rest of society, universities inevitably become microcosms of society, with many of the tensions, contradictions and positive impulses mirrored within its own activities. Even so, it is absolutely crucial that universities offer a congenial atmosphere for teaching and research while retaining their autonomy and special space, and their internal democracy.

And, indeed, there are still some universities where the pursuit of academics coexists with an active political life, without the culture either of gun-toting students or Vice-Chancellors appointed from the IAS, the IPS or the Army. For example, New Delhi's Jawaharlal Nehru University is still a beacon which attracts students from all over the country for its academic reputation, and it continues to have as Vice-Chancellor an eminent scientist. Here, intense political differences among students are sorted out by democratic processes more peaceful and less subject to money or muscle power than

PREOCCUPATIONS

elsewhere in the country.

IN this situation, the recent move by the administration of this university, that is JNU, to move the court to limit and curtail the actions of members of its student body, including elected union representatives, is of very great significance. Whatever be the merits and demerits of this individual case, it may set a precedent which could change not only the internal functioning of universities but also society's relationship to them. And this in turn would be bad news for the larger society as well.

The special nature of universities makes a minimum level of autonomy of functioning necessary. And also it means that there are structures within the university that can typically deal with the problems that must inevitably ensue when there are situations of contradiction or conflict. There is a hierarchy and a chain of command which establishes and maintains order, and obviously such an order must also be based on democratic norms. Thus, issues of discipline, maintaining order and ensuring smooth functioning can all be tackled from within the university structures.

When the administration of a university decides to approach a court of law to deal with such issues, it in effect abdicates the responsibilities it already has under the Act of Parliament which governs it. Not only does it externalise what are really internal issues which should be dealt with internally, but it declares that the administration is incapable of resolving an internal dispute, is not willing to exercise the disciplinary powers that it already has, and wants an external agency to do the job for it.

Besides being in some sense an admission of failure or abdication of responsibility, such an action can also lead to perverse or irrational outcomes. In this specific case, the university administration asked the court to set a code of conduct for the student body, which also limited the specific areas in which protest actions (including sit-ins and hunger strikes) could be held. This meant that on a campus occupying an unusually large geographical space, student demonstrations were sought to be limited to a single relatively small spot, and students who had already been fasting for more than a week were told to remove themselves from a shaded portico at the side of the entrance to the administration building to a part where they would be exposed to the elements.

When the administration of a university decides to approach a court of law to deal with such issues, it in effect abdicates the responsibilities it already has under the Act of Parliament which governs it. It externalises what are really internal issues.

This could happen because the court clearly had no knowledge either of the background to this particular struggle, or of the physical conditions involved, and of course such lack of knowledge is only to be expected. By contrast, a university administration exercising its powers in full consultation with other members of the university community would be more aware of the specific circumstances and therefore less likely to make such decisions.

Indeed, this also raises questions of judicial activism, of why the court even entertained a matter which falls very clearly under the jurisdiction of the university administration. When there are a number of methods for both conflict resolution and disciplinary action within a university, the fact that a court feels it can intervene and set the terms for behaviour and functioning, is itself a matter of concern.

Another problem with this entire matter becoming the preserve of the court is that when meting out disciplinary action or limiting the context and possibilities of agitation by any particular group, it makes no distinction between different types of action. Thus, group action pressing for certain demands, in this specific case for more adequate hostel facilities, which are by nature impersonal, directed not at any individual

person but at a certain office or authority, is different from acts of personal aggression, and cannot be treated on a par.

PERHAPS the most problematic implication of all in this matter is the fact that such an action of going to court effectively destroys the basis of trust and mutual respect on which a university community is based. It therefore makes the internal resolution of conflicts even more difficult, and, especially *vis-a-vis* students, is likely to escalate tension rather than contain it. This became obvious in this particular case, where, far from resolving the problems, the episode of going to court actually contributed to a worsening of relations between the students and the authorities, and eventually culminated in a most unfortunate situation in which large numbers of police personnel entered the campus and arrested many students, including their elected representatives.

Once universities are deprived of their special status which allows for substantial internal democracy and autonomy, then their basis as communities becomes substantially eroded.

What all this suggests is that, once universities are deprived of their special status which allows for substantial internal democracy and autonomy, then their basis as communities becomes substantially eroded. But there is unfortunately also the alternative view increasingly expressed in many quarters – that democracy and autonomy is too tolerant of indiscipline and must be circumscribed by the coercive powers of the state. It should, however, be remembered that not only is this idea at variance with the very definition of a university but it is one that has been repeatedly attempted elsewhere in this country with the overall impact being adverse both for academic achievements and for campus peace. This is a major issue of concern not only for universities themselves, but for any society that values intellectual and creative development. ■

Stifling dissent and debate

Under attack from NGOs for its communal orientation, the BJP seeks to browbeat them and also impose indirect forms of censorship.

EVERY political party has a distinct, characteristic, style which is as important as the substance of what it stands for. Any reasonable description of the Bharatiya Janata Party's style must prominently mention crudeness, brazenness and a certain kind of daring to do what many would think is unthinkable: the Babri Masjid demolition, the nuclear tests, the wanton attacks on Christians, the telecom scam, the Kargil fiasco, the gutter-level electioneering.... This pattern has been on display in two actions of the BJP-led "caretaker" government. The first is its attempt to restrict and censor scholarly and activist debate. The second is the BJP's vicious attack on a number of civil society organisations (CSOs), which joined or endorsed the Communalism Combat campaign exposing Hindutva (*Frontline*, October 8, 1999).

Rather than counter the allegations that were levelled as part of the campaign with facts, the BJP first maligned the signatories, accusing them of (what else?) having taken "foreign money", and then stooped even lower by activating the state machinery and getting it to issue notices under the Foreign Contributions (Regulation) Act (FCRA) to the CSOs concerned. Both the actions display a paranoid, venal, mindset, a mortal fear of criticism, and contempt for elementary norms of democratic functioning.

TO take the second issue first, BJP spokesperson M. Venkaiah Naidu and general secretary Narendra Modi on September 25 launched a vitriolic attack on Communalism Combat and associated CSOs, accusing them of being "anti-national and anti-BJP". Venkaiah Naidu alleged that they were campaigning for the Congress(I) and the Left. Asked how this could make them anti-national, he said they had also criticised the Pokhran-II tests "and this is anti-Indian".... "Naidu clarified that [his] objection was to foreign funds being used for political propaganda. If they were using their own money they had every right to do whatever they saw fit, but the FCRA prohibited use of foreign funds for political activity" (*The Hindu*, September 26). Among the organisations were some of our best known and most respected women's groups, such as Forum against Oppression of Women, Ankur, Women's Centre, National Alliance of Women's Organisations, Awaaz-e-Niswan, Asmita, Kali for Women, Nirantar, and Shakti Shalini.

Meanwhile, Narendra Modi in Lucknow urged the government to inquire into the matter of the funds received by 13 non-governmental organisations (NGOs) from foreign sources and prosecute them for violating FCRA. He claimed that the NGOs had used the funds for propaganda "which amounted to interference in the country's electoral process by foreign money power and constituted a serious threat to its sovereignty". He cited sections of the FCRA which prohibit political donations.

BEYOND THE OBVIOUS

PRAFUL BIDWAI

Exactly two days later, with exceptional alacrity, the Foreigners Division of the Home Ministry issued identical notices to the 13 organisations, to Communalism Combat (CC), the Indian Social Institute (ISI), and Voluntary Action Network India (VANI). The notices cited Section 5(1) of the FCRA which stipulates that no organi-

sation of a political nature, not being a political party, shall accept any foreign contribution except with the prior permission of the Central Government. The letter said: "It has come to the notice of the Central Government that, in the run up to the ongoing general elections, your association has been associated with the release of certain advertisements in the press and with certain documents the contents of which are in the nature of comments of a political nature", and then demanded that the CSO concerned show cause why it should not be required "to obtain prior permission of the Central Government before accepting any foreign contribution; and notified as an organisation of a political nature.... under Section 5(1) of the Act."

There could be no clearer circumstantial evidence of collusion between the BJP and the Home Ministry, or rather its misuse by the former. The official letter parrots the BJP functionaries' precise argument and illogic. It too wrongly characterises as "politics" and "comments of a political nature" the factual charges made in the Communsalism Combat-led advertisements about the BJP's callous, discriminatory, attitudes towards women, its endorsement of *sati* and dowry and its assault on the minorities. The charges were primarily based on quotes from BJP leaders' own past statements.

It can be convincingly argued that the Communalism Combat campaign was a strong defence of the constitutional values of democracy, secularism, pluralism and equality. The right to life and to non-discrimination is a fundamental right of all citizens. The campaign was fully consistent with the fundamental duties of the citizen under Article 51(a), including the duty to promote social and religious harmony and renounce practices derogatory to women.

Such rights cannot be abridged, leave alone violated, by recourse to technical provision of some enactment like the FCRA. There is nothing improper at all about CSOs or NGOs issuing advertisements on broad social issues on which certain political parties have taken a retrograde stand. That is perfectly in order. It is either presumptuous of the Ministry to hold, as does the BJP, that the CSOs concerned were in breach of the FCRA insofar as the advertisements were funded with foreign money, or else, that their content was "political".

Yet, this charge cannot possibly apply to CSOs such as the Indian Social Institute, VANI and the Centre for Women's Development Studies, which were not even signatories to the advertisements released by Communalism Combat, but some of which endorsed the "People's Agenda for the General Elections 1999". Now the People's Agenda too is a critique of the governance under the BJP-led coalition and an appeal to defend cultural plurality and progressive values on the basis of a broad secular-democratic agenda.

Although the show-cause notice only speaks of "certain documents", it does not specify which. Nor does Sanjay Datta, director in the Foreigners' Branch, who has signed all the show-cause notices which are identical to the point of faithfully mis-spelling "contrinbution" and "poilitical". If it is the People's Agenda that the Ministry has in mind, it will be hard put to defend its description as "political" without distorting the meaning of the word and obliterating the distinction between the political and the social.

The CSOs and institutes concerned, including the ISI and P3 women's groups, and Communalism Combat itself, have refuted the Government's tendentious charge-sheet fairly convincingly, denying that foreign funding had a role in the campaign, and showing why their defence of women's and minority rights does not constitute "political" activity.

The more fundamental point is this. The BJP and, at its behest, the government, are trying to use the FCRA to browbeat progressive CSOs. They are not only making a false connection between the secular commitment of these organisations and the fact that they have clearances under the FCRA to receive contributions. Worse, there is a suggestion that secularism in this country is intimately linked to foreign sources!

The FCRA's rationale could never have been to create an instrument with which to harass social activists. It is the Home Ministry's responsibility to issue FCRA clearances in each individual case. It usually takes a couple of years to scrutinise the application and applicant, inquire into its antecedents and so on. It has no business to turn around suddenly and hound the CSOs just because they have done something the ruling party does not like. However, according to Combat editor Teesta Setalvad, it has recently cancelled FCRA clearances of more than a dozen CSOs.

BEHIND this harassment of CSOs is the deep-seated prejudice that "foreign money" is evil, and that it is causing political and social havoc through religious conversion, especially to Christianity, through the spread of "subversive" ideas. This is dangerously wrong. Foreign contributions to Church-based organisations in India only account for a small fraction of the total. For instance, according to John Dayal, of the United Christian Forum, Church-based groups accounted for a mere 4 per cent of European Union contributions received last year. It is reasonable to assume that a lot more money goes to non-Christian, especially Hindutva-oriented, organisations.

This money is poorly, inadequately, audited. According to scholar Amrita Basu of Amherst College, Amherst, Massachusetts, the VHP-USA, the Vishwa Hindu Parishad in the United States, remitted about $1.25 billion between 1977 and 1993 to India. That is what its records show in the U.S. However, much of this money – which works out to a huge Rs. 5,300 crores – was probably transferred clandestinely. At best only a tiny proportion surfaces in the accounts of the VHP, the BJP and affiliated organisations in India. Their books would be an auditor's delight – or nightmare – as taxman Vishwa Bandhu Gupta has repeatedly discovered. The VHP in India cannot account for a huge proportion of its income. Its books are one vast mess. But there is an attempt to dress them up and remove officials who ask awkward questions.

By contrast, genuine CSOs/NGOs are subjected to relatively rigorous audit on the basis of institutionalised transfers. The funds they receive are not easily-divertible donations, but typically earmarked for specific projects. They have to be accountable to the government, to donors, and to their own members on how they spend their money.

The Sangh Parivar, with all its shady but strong foreign connections, is accountable to no one. The Vajpayee government has turned a blind eye to the Sangh organisations' foreign funding. In the process, it has immensely strengthened the super-hawkish forces within the Hindutva camp, which feel encouraged to continue to attack the religious minorities and human rights and secular activists.

It is significant that some of India's most radical and committed CSOs have been victimised in the second wave of notices sent out by the Home Ministry. Many of them, like the ISI, the CWDS, Kali, FAOW, Women's Centre, and Communalism Combat, are the greatest

Relive the sensation

allies of progressive forces fighting for justice and human dignity. They have a superb record of supporting worthy causes. Earlier, many Christian organisations were targeted. According to Dayal, this was a signal to Parivar fanatics that Church-based groups are fair game.

FCRA notices are only one method of harassment. Others include police interrogation and virtual stalking of some CSOs in order to dig out information about their contacts and links with other groups. For instance, in recent weeks, Women's Centre and Akshara in Mumbai have had numerous instances of queries about and interference in their work by all kinds of unidentified agencies and individuals. At least two women's CSOs in Delhi too have been similarly harassed. Similarly, a Dutch private aid organisation has also had persistent inquiries about the "Christian groups" it might fund, as if this were illegal, shady or improper.

This Hindutva campaign against "foreign" funds would have sounded a little less biased and outrageous had the BJP, its cohorts, and its government, had consistent standards. As it happens, they do not. The Vajpayee government could not even countenance not being dependent of World Bank and IMF subventions. In the 1990s, the bulk of India's economic policies tended to be written by forces and agencies that represent foreign, indeed big, multinational capital. Attracting foreign capital – the most concentrated expansion of "foreign" funds – is part of the core agenda of India's policy-makers. Indeed, many of India's social programmes have become heavily dependent on foreign aid – for example, those relating to primary education, literacy, drinking water supply and reafforestation.

It is thus thoroughly duplicitous and hypocritical for those who have willingly surrendered economic sovereignty to foreign capital and become dependent on international finance, to be ranting about minuscule amounts of audited, largely project-specific, institutionalised and non-profit oriented fund flows to CSOs. This shows more than a paranoid fear of things foreign. It is a cynical device to try to isolate progressive CSOs in a vindictive manner.

THE same logic has been at work in imposing and tightening totally unreasonable restrictions on who can be invited by institutions, including universities and CSOs, to conferences and seminars. This is essentially a form of censorship and physical curfew on independent scholars. Since the middle of this year, the Home Ministry has been issuing instructions that any voluntary organisation/NGO planning to hold an international meeting/seminar must first get clearance from the Ministry of External Affairs (MEA), from the nodal Ministry dealing with the issue, and finally itself. Only then will the names of the participants be forwarded to the Indian embassies in the countries concerned. It is only after following this process that the participants can get their visas.

Strangely, the MEA has no basis on which to screen any application for such clearance. Nor are there written guidelines. When VANI took up the issue with the MEA, it was told by Under Secretary Manmohan Singh that "the instructions regarding foreigners attending seminars etc. are formulated by the Ministry of Home Affairs" and that the MEA "merely complies" with them.

Demanding prior approval is a method typical of the crafty, devious, bureaucrat: delay clearances until they become infructuous and thus victimise the CSO whose face you do not like or who is independent-minded. This is exactly what happened to a number of prospective participants in at least three recent civil society conferences. Indian embassies refused to grant them visas and they were told that "all conferences to do with the voluntary sector and which appear to be government/politically sensitive have to get clearance for participants from abroad."

Similar restrictive conditions are increasingly being applied to universities organising seminars, and to teachers who might be invited to conferences abroad. This is dangerous. Such restrictions are an assault on academic freedom, on genuine debate and critical inquiry. They must be stoutly resisted.

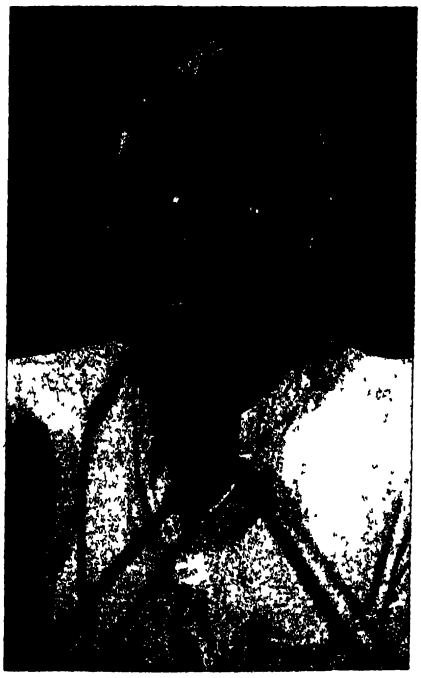
What the BJP regime is doing is turning India into an even more authoritarian replica of Pakistan, where too university professors must get a no-objection certificate from various authorities before they can go abroad. Indeed, they cannot board an aircraft without the NOC. This shameful form of high-handedness and anti-democratic regulation is calculated to stifle dissent and intimidate secular scholars and activists in an Emergency-type operation. The government must be forced to retrace its steps. ■

The meaning of George Fernandes

A critique of the man and the Minister.

A. G. NOORANI

A COLLEAGUE in his Samata Party, Jaya Jaitley, said before the votes were counted, that George Fernandes does not aspire to be Prime Minister of India. That comment tells us a lot about him and, incidentally, about Jaitley herself. It is astonishing that such a thought should have crossed their fevered minds at all. In the entire front rank of public figures today, there is not one person who is more discredited than he as a politician, a Minister and as a person. He has been ideologically fickle, politically unreliable and a disaster as Defence Minister.



Two constants, however, stand out – unbounded ambition unmatched by aptitude and exhibitionism in the service of opportunism. No one can tell *what* he stands for. Why did he demand peremptorily of Prime Minister A. B. Vajpayee, at the swearing-in of his Ministers on March 19, 1998, the Defence portfolio and not Labour, having flourished as a trade unionist all his chequered life? Why did this noisy champion of the downtrodden and the deprived, this denouncer of economic and social inequalities, adopt silence on these themes and prefer to exercise his lungs on matters of national security on which he had kept his expertise so well concealed all these years?

The Samata Party's election manifestoes of 1996 and 1998 provide a clue. The 1996 document had two pages on "foreign policy". It rejected the Nuclear Non-Proliferation Treaty (NPT) but said "the country will keep her options open" – not *exercise* it.

Also, the "party firmly rejects the theory of dominance *and deterrence*" (emphasis added, throughout). Both formulations were repeated in 1998. Even a few weeks before Pokhran-II, there was no pledge to acquire nuclear weaponry. The concept of "deterrence" was lumped with "the theory (sic) of dominance" for a joint burial. Both manifestoes urged the "active involvement of India in international movements to ban research and development in the weapons industry."

But an altogether new section on "national security" was added in 1998. It began with an attack on all previous governments "irrespective of the parties that led them, to put national security on their high priority agenda." This, a favourite refrain, is repeated at the beginning of the Foreword he wrote (on December 17, 1998) to the Penguin reprint of D. R. Mankekar's book *The Guilty Men of 1962*: "National security and defence of our territory have not been priority items on the agenda of India's governments, starting with that of Jawaharlal Nehru's."

The 1998 manifesto of his party proceeded to dilate on China's "threat" to India and its liaison with "Burma" (sic). The old nomenclature was used three times. It said: "By refusing to take up the cause of the Bhutanese people who are agitating through peaceful means to establish a democratic polity with a constitutional monarchy in Bhutan, India is further *weakening its defences in its northern frontiers*." Fernandes' recipe, if adopted by the Government, would understandably annoy the King of Bhutan, impair India's existing close relations with that country and weaken India's defences in a strategically important region. The sheer arrogance of this simplistic, ignorant plea is amazing.

ANU PUSHKARNA

George Fernandes.

It is a man with such an outlook and intellectual equipment to whom Vajpayee entrusted the Defence portfolio. The results are there for all to see. Fernandes single-handedly damaged India's friendly relations with China. It took a year to repair the damage. He politicised sections of the armed forces, wiped out a decade's record of progress on the Siachen issue with Pakistan, undermined the morale of the entire armed forces by sacking the Chief of the Naval Staff, Admiral Vishnu Bhagwat, and acted with egregious incompetence in the Kargil crisis. Consistent prevarication provided constant company to an unsteady and destructive hand. It is grossly unjust to compare him with an ill-starred predecessor. For all his flaws V. K. Krishna Menon was an educated man. More, till the very end, he remained true to his ideological beliefs. Fernandes is pitiably ignorant and fickle in his ideological commitments.

"The demolition of the Babri Masjid and the events that followed it have created conditions which threaten to strike at the very basis of our nationhood," the 1996 manifesto of the Samata Party declared. These strong words were not followed by denunciation of the perpetrators of the crime but by the plea: "The political leadership must encourage the two communities involved to find an amicable solution to all outstanding issues in a manner acceptable to all and in keeping with the dignity and self-respect of each community." The formulation was repeated in 1998. The evenhandedness is spurious. In effect it urges condonation of the crime of 1992.

BY 1996, Fernandes had become an open ally of the Bharatiya Janata Party after a phase of tacit liaison. The cover was blown in 1993. As Christophe Jaffrelot records in his classic *The Hindu Nationalist Movement in India* (page 472), on July 29, 1993, the P. V. Narasimha Rao Government introduced the Constitution '80th Amendment' Bill, along with a Bill to amend the election

law, designed to delink religion from politics. "George Fernandes (Janata Dal), in a dissenting note to the Joint Committee Report, objected that no change in the law was needed; rather, a political response to the challenge of communalism had to be worked out" – presumably the kind of response enunciated in his manifestoes. *Elections in India* 1952-96 by J. C. Aggarwal and N. K. Chowdhry (Shipra; 1996, page 71) mentioned Fernandes as a "prime-mover" for the BJP-Samata pact, but added that Jaya Jaitley "has also been involved in bringing Fernandes close to the BJP. Quite a turnaround anyhow."

Against this background, none should be surprised at the improprieties which Praveen Swami records in his book *The Kargil War* (Leftword Books; 1999). He writes: "The rise of the Hindu right to power was anticipated by the systematic infiltration of the highest levels of the Army apparatus. While the bulk of the Army leadership remains avowedly apolitical, the BJP has made methodical efforts to subvert this tradition, dragging a section of senior officers on to expressly partisan terrain. The decision of Director-General of Military Operations M.C. Vij and Air Vice-Marshal S. K. Malik to brief the BJP National Executive on the Kargil War on May 6 is just one example of this process. 3 Infantry Division commander Lieutenant-General V.S. Budhwar helped provide logistical support for the RSS-organised Sindhu Darshan festival at Leh in 1998. Advani and RSS ideologue Tarun Vijay were among those who attended. In 1999, he again attended the Sindhu Darshan, organised with official aid, and graced by Vajpayee, Fernandes and Advani."

No wonder that Fernandes so readily gave a clean chit to the Sangh Parivar for the Staines murders after a hurried trip to Keonjhar on January 27, 1999. "There does not seem to be any motive," he asserted in New Delhi the next day. Even the flawed Wadhwa Commission Report holds that motive there, indeed, was.

THIS is where blind ambition has landed him. Fernandes was never content to be a player. He aspired to be captain and craved for applause by theatrical performances. If the 1974 railway strike led by him sought to bring Indira Gandhi to her knees by paralysing the strategic junction at Moghulsarai, the quixotic venture with dynamites during the Emergency had the same objective – "to transport the explosives from Baroda to Varanasi". The sheer ineptness of the operation and the consistent misjudgment of chosen associates reflect utter incompetence as a leader of men (C.G.K. Reddy; *Baroda Dynamite Conspiracy*; 1977). Two socialist leaders, S.M. Joshi and N.G. Goray, who were no less opposed to the Emergency, spoke of the "so-called rebels who talked the language of violence. We tried to tell them that theirs was not the right path; they must act more maturely and sanely if they wish to win back democracy in the country."

Fernandes became Industries Minister in the Janata Party Government but did not figure in Janardhan Thakur's portraits of *All the Janata Men* (1978). Fernandes defended the Government in the Lok Sabha on the motion of no-confidence in July 1979 and then deserted it.

The National Front Government of V.P. Singh provided him with a fine opportunity when he was made Minister for Kashmir Affairs in addition to the charge as Railway Minister. This brought him into conflict with another V.P. Singh appointee, Jagmohan, the Governor of Jammu and Kashmir. In his memoirs, *My Frozen Turbulence*, Jagmohan excoriated Fernandes; not least, for "establishing contacts" with the militants. "Given to a sense of drama he showed no sensibility to the administrative requirements." Last year, as Defence Minister, Fernandes rejected unconditional talks with them. Jagmohan, in turn, was denounced by Jaya Jaitley in her review of the memoirs (*The Telegraph*; November 1, 1991). Among the epithets she showered were "a megalomaniac" and "intellectual perversity", qualities which Fernandes possesses in rich abundance. The duo's presence as colleagues in the Vajpayee regime is a sight for the gods.

It was frustrated ambition which drove him into the BJP's arms. In 1998 *he emerged as a player whose votes were vital to the regime's survival.* His skills as a manipulator were freely deployed by Vajpayee. Jayalalitha's interest in national security was one of her better kept secrets. She denounced him on March 27, 1999 on the Bhagwat issue clearly because the operator had failed to deliver on his promises to her (*The Hindu*, March 28, 1999).

As unsuccessful were his forays in Bihar. The vendetta against Laloo Prasad Yadav, a former colleague never in awe of Fernandes, yielded poor returns. The latest episode, the clash with the Election Commission, reflects familiar disdain for proprieties and for institutions whether from the refusal to be frisked by securitymen at the Delhi airport in 1978 or the politicisation of the army. There are strict procedural rules for soliciting the assessment of the Intelligence Bureau (I.B) or, for that matter, the opinion of the Attorney-General. It is not open to any Minister to do either unless his request is routed through the "proper channels". But, on September 17, Fernandes telephoned Chief Election Commissioner M.S. Gill from Bihar to allege a conspiracy between the governments of Bihar and West Bengal to print in Calcutta excess ballot papers for the election in Bihar. "He said he had spoken to the Director of the Intelligence Bureau in Delhi, who had confirmed this from his sources." Gill, very properly, asked him to put it in writing. The next morning the three Election Commissioners met together and asked for an explanation from the Home Secretary with a copy of the I.B's information to Fernandes. "Back came the report in the afternoon – the DIB had given no such report to Mr. Fernandes" (*The Times of India*; September 21, 1999). Union Home Minister L.K. Advani confirmed this on September 23. Earlier, on September 18, Nitish Kumar said that Fernandes had told him that the DIB, Shyamal Datta, "had made an inquiry and confirmed the report". The E.C. made its own inquiries and roundly accused Fernandes on September 20 of using the DIB "by his own written admission ... to disturb the constitutional electoral process". This is the first time ever that a Union Minister has been censured by the Election Commission.

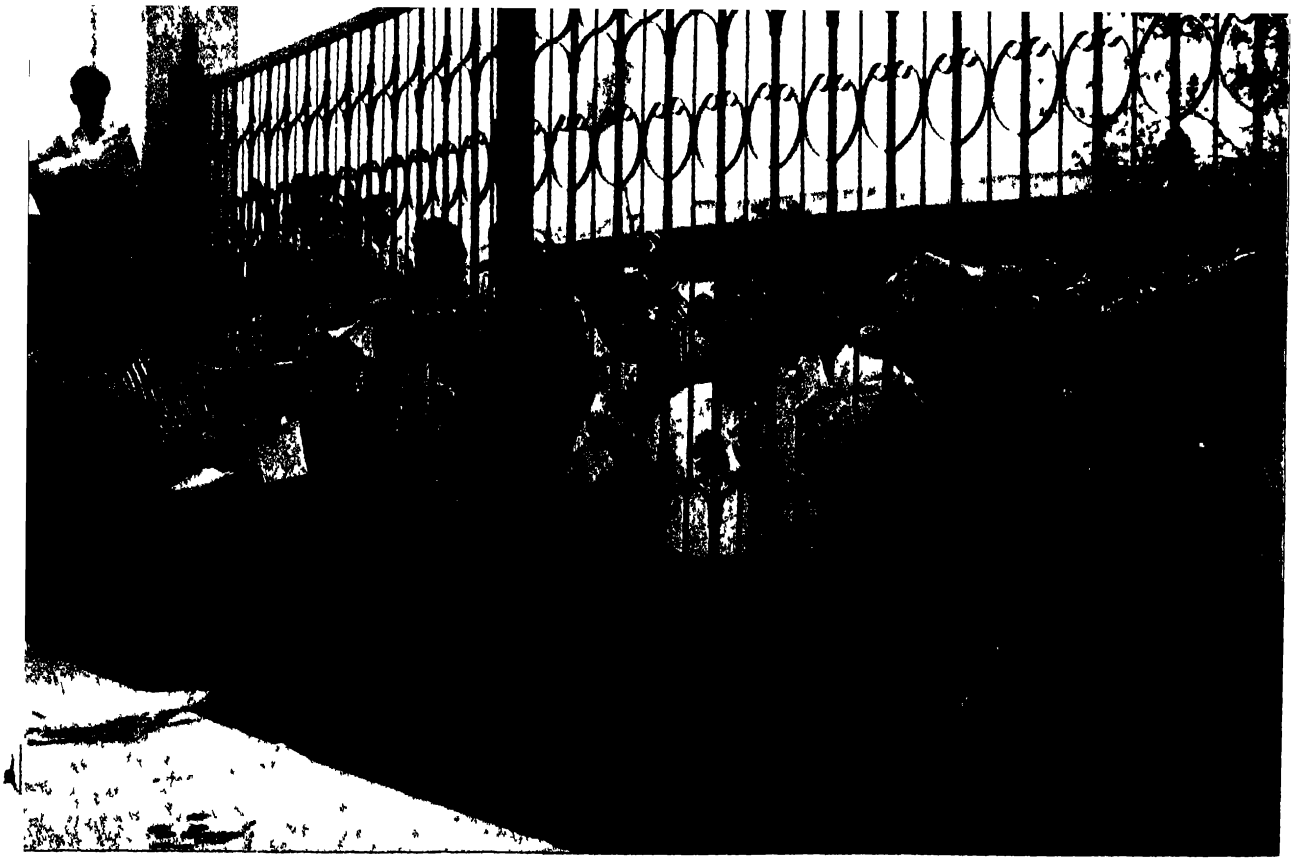
The blemished record is not mitigated by any achievement worth the name. What *has* he to show as Defence Minister, bar the dramatised trips to Siachen? The organisational set-up, with its anachronistic linkage between the Ministry and the Army Headquarters, cries for change. It was promised in January to allay public disquiet over Bhagwat's dismissal. Not one step was taken in the direction.

A. B. Bardhan, the soft-spoken leader of the Communist Party of India (CPI), was outraged by Fernandes' conduct. Bardhan remarked on January 3, 1999: "It has become apparent that every time he opens his mouth he tells a fresh lie which is not proved and cannot be proved".

All in all, this is a record of recklessness unrelieved by talent and braggadocio barren of achievement. By now, even the egotism has ceased to amuse. ■

The mobile for the masses

MTNL's new offer creates a flutter – and raises some questions.



SUDHA MAHALINGAM
in New Delhi

IRONY underlies the controversy surrounding the launch of mobile telephone services by the state-owned Mahanagar Telephone Nigam Limited (MTNL) with tariffs comparable to those for land line telephones, and much lower than those charged by other cellular mobile services. MTNL offers mobile telephony based on Code Division Multiple Access (CDMA) technology at a monthly rental of Rs 600 (to be reduced to Rs 475 from November 1 as per the recent tariff notification applicable to all mobile licensees) and a per call charge of Rs 1.40 as against the Rs 6 charged by other cellular operators.

There has been an overwhelming response to the offer with people queuing up at the MTNL office in Delhi to obtain connections. Yet, the service has been launched without the approval of the Telecom Regulatory Authority of India (TRAI), and is seen to deny a level-playing field to private cellular operators.

MTNL's perceived disregard for the regulator's authority may be a bad precedent, yet TRAI's own conduct in this matter has not exactly been exemplary. In fact, it is of a piece with its earlier rulings which did not favour MTNL's entry into the field of cellular telephony. The regulator has been sitting on MTNL's tariff proposals for its mobile service since August 23. It sent three sets of queries to MTNL, replies to which were furnished. A fourth set of queries was answered by senior MTNL officials on September 29. Yet, far from welcoming a proposal that is beneficial to the consumer, TRAI appears to have adopted an adversarial response, prompted by imaginary concerns over the lack of a level playing field for private licensees who offer mobile telephony at much higher rates.

HOW valid are TRAI's concerns? Will MTNL cross subsidise its mobile telephone services from the revenues of its basic telephone services? A.K. Bhatnagar, Chief General Manager of MTNL in Delhi, told *Frontline* that its service launched at a cost of Rs 17 crores (for 10,000 lines) will pay for itself. He assumes a cost of Rs 20,000 a line (including Rs 3,000 towards operating costs), against which rental alone will bring in Rs 5,825 a year. If 400 calls of two minute duration each a month are made by each subscriber, call charges will net in approximately Rs 4,000 a year. The government has stipulated that MTNL will pay to the Department of Telecommunications

People wait outside the MTNL office in New Delhi to buy application forms for cellular phone connections.

T. LAKSHMANAN

The MTNL office in Delhi.

(DoT) identical interconnectivity charges besides sharing 15 per cent of its revenue with the DoT just as in the case of the private operators. MTNL's entry into mobile telephony is conditional on these stipulations. MTNL officials believe that even after accounting for these charges, MTNL will be able to make profits from the service in less than three years, which is the normal lead time even for private licensees.

Bhatnagar believes that the cost per line will come down since the equipment that is to be sourced has become cheaper. "We purchased some of our equipment one and a half years back when the prices were higher," he says. In fact, as the subscriber base expands, MTNL will reap the benefit of larger volumes. MTNL hopes to expand its subscriber base for mobile telephony dramatically in the next few months – and it may well do so, going by the response.

MTNL is being accused of undercutting private licensees, but the truth may be that private cellular operators are charging more than they should. Bhatnagar said: "GSM (Groupe Speciale Mobile, the standard European digital cellular system) technology which is offered by the private licensees costs even less than CDMA. At $120 a line, and a customs duty of 40 per cent, the total cost comes to less than Rs.8,000 a line. Yet, the private licensees are charging Rs.6 per call."

This calculation is countered by the Cellular Operators' Association of India (COAI) on the plea that the sum of Rs.8,000 covers only switches and base stations. "then there are investments in microwave stations, optic fibre, real estate and so on. MTNL, with its huge infrastructure and manpower size, can utilise its existing resources, but private operators have to incur these costs," said T.V. Ramachandran, executive vice chairman, COAI.

BUT that is precisely the point. Since competition has forced MTNL to utilise better its existing infrastructure and manpower in order to be able to lower the tariffs, privatisation should be deemed to have achieved its objective. Even if there is an element of cross-subsidy involved in the initial years, is it so bad? To the extent that MTNL is utilising its profits from land lines to expand the mobile network and increase teledensity rather than pay dividends to the government (which is its owner) and income tax, both of which go to the exchequer, the new service should be welcomed. At Rs.1.40 a call, MTNL's service can no longer be considered an elite service, but just a functional one affordable to the common man. In any case, MTNL has agreed to separate the accounts of its mobile service from its land line and other value-added services as a prelude to setting up a full-fledged subsidiary company.

Although private cellular licensees are alarmed by MTNL's entry into the sector, the COAI has not formally opposed the decision since migration to the revenue-sharing regime was conditional on allowing MTNL entry into mobile telephony. The COAI, which had appealed against the decision of the Delhi High Court to allow MTNL to offer mobile services, has since withdrawn its appeal in order to facilitate the migration.

Claims by private cellular operators that they are already making losses and that they would be wiped out by the entry of MTNL, appear to be exaggerated. MTNL's CDMA technology does not offer some of the features available in the GSM technology used by the private licensees, and therefore there should still be demand for the GSM service. Besides, even with GSM technology, cellular operators in Chennai have lowered the tariff to Rs.3.75 a call, indicating that there are comfortable margins already available to the private operators. In fact, estimates of the private operators' balance sheets in the post-migration period show healthy profits, especially for the metro operators. The private operators would now do well to look into their own cost structure and offer a better deal to the subscribers if they do not want their market snatched away by MTNL.

THE overwhelming response from the public to MTNL's mobile service resulted in a fracas outside the MTNL office in New Delhi where windowpanes were broken by some people who were unable to get application forms. So far, MTNL has energised 400 connections and is in the process of energising 500 more. It has only 2,000 handsets available and Bhatnagar says another 3,000 sets are being imported. But that will not meet the demand. MTNL has evidently been taken by surprise by the demand level.

Interestingly, there is a scramble for connections from the top echelons of the government and the bureaucracy as well. It is learnt that the Prime Minister's Office (PMO) asked for at least ten connections, the Delhi Government for as many, and many other government departments and Ministers are sending their emissaries to obtain connections.

MTNL's decision to launch the service without waiting for approval of its tariff proposals by the TRAI has put the latter in a piquant situation. Having indulged in delaying tactics, the TRAI now finds itself driven to the wall. Any ruling that scuttles the service will now be seen by the public as being against the common person's interests. ■

Standing up for a right

Organisations representing the Scheduled Castes and the Scheduled Tribes have chalked out a programme of agitation aimed at protecting their constitutional right to reservation.

VENKITESH RAMAKRISHNAN
in New Delhi

THE failure of the executive and the judiciary in recent years to uphold in its entirety the constitutional right of the Scheduled Castes and the Scheduled Tribes to reservation in educational institutions and in employment has led to intense resentment among these disadvantaged social groups. The movement seeking to protect this right is set to intensify, and moves are afoot in this context to forge a broad unity of members of Parliament belonging to the S.Cs and the S.Ts, who will participate in agitations both inside Parliament and outside.

In the past two years, the reservation issue has sparked off mass struggles by various organisations representing the S.Cs and the S.Ts. These were rooted in the perception that the executive was denying the S.Cs and the S.Ts opportunities under their entitlement for reservation under various pretexts, including the pretext that judicial orders were being implemented (*Frontline*, January 29, 1999).

Ram Raj, chairman of the All India Confederation of S.C. and S.T. Organisations, told *Frontline* that the mass struggles that had been planned had two objectives. "On the one hand, we have to expose and oppose the apathy and indifference of and deception by the government in the light of its failure to fulfil its promises in respect of reservation for the S.Cs and the S.Ts." On the other hand, he said, the agitations would draw attention to the fact that some recent rulings by the Supreme Court had had the effect of "depriving" the S.Cs and the S.Ts of their right to reservation.

Office-bearers of organisations representing the S.Cs and the S.Ts point to the August 10 judgment of the Supreme Court, which struck down reservation for the S.Cs, the S.Ts and the Other Backward Classes (OBCs) in "super speciality" courses in medical and engineering colleges. The organisations petitioned the President of India and sought his intervention in the matter; on September 1 they also staged a protest demonstration in front of the Supreme Court.

Leaders of these organisations complain that the S.Cs and the S.Ts continue to be discriminated against. Ram Raj said: 'Speciality and super speciality posts in government have been kept beyond the purview of reservation in a large number of departments such as defence, space and nuclear science, science and technology and engineering. All this is done by reasoning that reservation militates against merit. Now that argument is being advanced to deny us reservation in higher education too."

Office-bearers of the Confederation of S.C.-S.T. Organisations say that developments on the reservation front in recent years have been particularly disheartening for the disadvantaged social groups. The Supreme Court's judgment on the Mandal Commission recommendations; the issue of controversial Office Memorandums (O.Ms) by the Department of Personnel and Training (DoPT) between January 30, 1997 and August 1, 1998, when the United Front was in power; and the failure of the Bharatiya Janata Party-led coalition government to honour its assurance that it would withdraw these O.Ms – all of these, in the perception of these representatives, conform to a pattern of discrimination.

Leaders of S.C. and S.T. organisations say speciality and super speciality posts in government have been "kept beyond the purview of reservation in a large number of departments such as defence, space and nuclear science and science and technology. All this is done by reasoning that reservation militates against merit".

The O.Ms issued by the United Front Government violated not only the overall guidelines governing reservation for the S.Cs and the S.Ts but also a constitutional amendment that was aimed to overcome the adverse effect of the Supreme Court judgment on the Mandal Commission recommendations.

When the Mandal Commission recommendations reserving 27 per cent of Central government jobs for OBCs were adopted in August 1990 and later in September 1991, the move was challenged in the Supreme Court by a group of activists opposed to the recommendations. The Supreme Court ruled that reservations did not go against the principle of merit but held that the recommendations were applicable only for the initial appointment, not for promotions. It also held that reserved posts that were not filled in a particular year would not be carried forward. The apex court further ruled that reservations would not apply to technical posts in research and development organisations as also specialities and super specialities in medicine, engineering, defence services and nuclear and space applications.

Although the petitioners in the case had referred only to reservation for the OBCs, the Supreme Court *suo motu* made the judgment applicable to reservation for the S.Cs and the S.Ts.

The judgment triggered widespread protests, and in June 1995 the government was compelled to bring forward a constitutional amendment bill to remedy the situation. That legislative measure, the Constitution (77th Amendment) Bill, stipulated that reservations for the S.Cs and the S.Ts would be applicable even for promotions and at all classes and levels of employment.

However, on January 30, 1997, the DoPT came out with the first of its controversial O.Ms: it stated that a person

Fluentzy:

The FLUENCY Development Course

In 3 months | By Post...✔

You know English. But can you speak it — *fluently*?

Conventional methods *don't* work...

You know.. Knowing English is quite different from being able to speak it fluently... And *writing* skills **WON'T** make you fluent in ***speech***. Nor will translating skills. Nor ready-made sentences. Nor cassettes. No... So we use *new*, research-based, techniques.

A *world-class* course...

- Our course teaches you specialised **fluency techniques**... By **Post**. We help you break free of hesitations — and speak English. With a high degree of fluency. Smoothly. Continuously. With your words **flowing** out.
- Our course removes the fluency-blocking factors... And promotes the fluency-producing factors... And helps you speak English — at length. In detail. Discuss. Explain. Describe. Argue. With a *stream-like* flow... In social situations. At meetings. Interviews Group discussions.

Pioneers & leaders...

This is the world's **first** fluency development course. Since *1982*. Designed by *KevNair* – the **father of fluency development** himself.

Our learners...

✔ We have learners from all over India. And from *abroad*. Our past learners include All India Service & Civil Service Officers, Judicial officers, Company & Bank Managers, Advocates, Doctors, Engineers, Civil Service candidates... And **MBA & MCA** candidates.

Act *now*...

People judge your quality and worth... from how ***fluently*** you speak English. So act NOW...

For **Prospectus**, send us Rs. 15/-... by MO or PO — **TODAY**...

Adult Faculties (Since 1982)

World's 1st fluency developers

who had secured a promotion under the quota for the S.Cs and the S.Ts would lose his seniority to a candidate in the general category even if the latter was promoted in a particular grade at a later date. The second O.M., issued on July 2, 1997, changed the system of roster maintenance from a vacancy-based one to a post-based one; this had the effect of slowing down the process of filling up reserved posts. The third O.M., of July 22, 1997, withdrew certain concessions and relaxations that had been provided to the S.Cs and the S.Ts to enhance their promotional opportunities. This too was seen to be in violation of the provisions of the Constitution.

Three other O.Ms, issued on August 13 and August 29, 1997 and July 1, 1998, were equally discriminatory. The first of these had the effect of barring government departments from

The leadership and rank and file believe that only through an intense campaign can they force the "high class rulers" and leaders of various parties to take note of the just demands of the S.Cs and S.Ts.

extending reservation to all classes and posts; this was a blatant transgression of the provisions of the 77th Amendment. The second had the effect of discontinuing the special recruitment drive for the S.Cs and the S.Ts. The third laid down that S.C. and S.T. candidates who qualified on merit would be considered as candidates in the reserved category, not in the general category.

As with the Supreme Court ruling on the Mandal Commission recommendations, the O.Ms led to protests by the organisations representing the S.Cs and the S.Ts. The O.Ms of January 30 and August 13, 1997 were challenged in court. Members of Parliament belonging to the S.Cs and the S.Ts raised the issue in the House. In response to these representations and demands, Prime Minister A.B. Vajpayee stated in the Lok Sabha on March 18, 1999 that the government would take steps to withdraw the controversial O.Ms.

Vajpayee gave a more specific assurance to a delegation comprising Ram Raj, former Union Health Minister Dalit Ezhilmalai and *Dalit Voice* Editor V.T. Rajashekhar. He told them that the O.Ms of July 2, July 22 and August 29, 1997 would be withdrawn and that the O.Ms that had been challenged in court would be abrogated after complying with the legal formalities. The government did file an affidavit in the Supreme Court in the cases relating to the O.Ms but did not deliver on its assurance.

According to Ram Raj, organisations representing the S.Cs and the S.Ts had hoped that all political parties would address in their election manifestoes the problem arising from the failure of the executive and the judiciary to uphold the constitutional right to reservation of underprivileged sections. "However," he said, "apart from the Congress(I) none of the parties has raised the issue." Disheartened, representatives of the organisations have resolved to step up their agitation. The leadership and rank and file believe that only through an intense campaign can they force the "high class rulers" and leaders of various parties to take note of their just demands. ■

Polluted Palar

"Along the polluted Palar" (October 8, 1999) rightly stated that apart from highly toxic effluents, tanneries generate sludge, which also causes environmental pollution.

The monograph, "Treatment Technology of Tannery Effluents," prepared by S. Rajamani, W. Madhavakrishna and G. Thiagarajan of the Central Leather Research Institute (CLRI), Chennai, which was referred to in *M.C. Mehta Vs Union of India and Others*, stated: "In the case of chrome tannery waste, the dried sludge should be buried or disposed of suitably as per the directions of regulatory agencies in local bodies." Dr. G. Thiagarajan, who later became the Director of the CLRI, stated that there was no viable method by which tannery sludge can be disposed of without causing health hazards.

In connection with the writ petition filed by the Vellore Citizens Welfare Forum, the Supreme Court referred to the report of the Tamil Nadu Agricultural University Research Centre (TNAURC) in Vellore (now at Virincheepuram), dated March 6, 1992. The TNAURC had observed: "The preliminary survey of tannery pollution has revealed that nearly 35,000 to 40,000 hectares of valuable agricultural land have become partially or totally unfit for cultivation." A similar point has been made by the author of the article. The TNAURC had also stated: "The people in the tannery belt are found to suffer from skin rashes, diarrhoea and heaviness of head." It added that tannery effluents "cause abortion in cattle".

In the light of such evidence, the question is whether we need the leather industry at all. It is pointed out in the article that the leather industry fetches Rs.2,000 crores in foreign exchange. But at what cost? In its judgment in the case filed by our forum, the Supreme Court observes: "Though the leather industry is of vital importance to the country as it generates foreign exchange and provides employment avenues, it has no right to destroy the ecology, degrade the environment and pose a health hazard. It cannot be permitted to expand or even to continue with the present production unless it tackles by itself the problem of pollution caused by the said industry."

I do not agree with the author's view that pollution in the State has been checked to a great extent with the help of the effluent treatment plants.

P.S. Subrahmanian
Honorary Secretary,
Vellore Citizens Welfare Forum

* * *

The tanneries may have spent crores of rupees to show the government and society that they are serious about treating effluents. However, many effluent treatment systems currently in use are faulty and do not meet the norms laid down by the pollution control boards (PCBs).

A new type of effluent treatment system can be used for tanneries and dyeing units that are clustered in one place. The basic aim of the design is to solidify and burn the contaminants. In the first stage, the effluent is collected in a tank. Then saw dust, agricultural waste, paper waste and municipal waste – 5 to 10 per cent – are added to it. These biodegradable materials absorb many chemical contents such as salts, colours and impurities.

In the third stage the solids are removed by centrifuging, dried and pelletised for use in boilers or to be burnt.

The effluent is then drained and filtered further with a micro filter in order to remove the remaining solids.

In the next stage, the effluent is treated with activated carbon to remove colour and odour. In the last stage it is subjected to a process of reverse osmosis in order to remove dissolved salts. After this the waste water can be disposed of safely.

This ETP unit can be operated independently by qualified technicians. Investment and operational cost can be levied from the tanneries that use it.

Coimbatore

Vikram Sarabhai

It is said that adversities bring out the best in a person. The same seems to be true of a nation as well. For more than a century, our country remained under British rule. From being a rich and prosperous nation, it descended to total financial and economic ruin owing to the exploitative policies of the foreign rulers. In was under these circumstances that men like Mahatma Gandhi, Jawaharlal Nehru and Vallabhbhai Patel emerged.

Nehru, who went on to become the maker of modern India, orchestrated the scientific and technological revolution of the country. He was lucky to have people like J. Homi Bhabha, C.V. Raman, J.R.D. Tata and Vikram Sarabhai by his side. While Bhabha became the founder of the country's atomic energy programme, Vikram Sarabhai contributed uniquely to the field of space science.

Dr. Sarabhai, scion of a well-known industrial family and a man of style, became a cult figure. His contribution to the nation included the Physical Research Laboratory and the Indian Institute of Management in Ahmedabad, and Uranium Corporation of India Ltd at Jaduguda.

In addition, as Chairman of the Atomic Energy Commission and Secretary to the Government of India in the Department of Science and Technology, he contributed to the all-round development of atomic energy and space programmes.

Like his predecessor Homi Bhabha, Sarabhai too died early. India needs someone as charismatic, talented and dedicated as Bhabha and Sarabhai.

Your magazine's tribute to Sarabhai ("Remembering Vikram Sarabhai", *Frontline*, October 8, 1999) was most appropriate.

Amitabh Thakur

Deoria, Uttar Pradesh

Healthcare and education

The September 24 issue of *Frontline* had good coverage of the state of Indian politics. But it deserves special compliments for carrying a feature on healthcare and education in Karnataka.

Health and education form the backbone of society, and the main reason for India's increasingly poor performance in the social, economic and political spheres is that these areas have been neglected and the media have failed to highlight these issues.

Some of the articles that appear in *Frontline* on the political scene reflect the intensive study and research that the magazine does. "A Kargil election?" and "Slander campaign" (*Frontline*, September 24, 1999) deserve special mention.

Dr. Vinay Prasad Sahu
Imphal

Kargil and the Falklands

It is not quite correct to say that Margaret Thatcher won the 1983 general elections in the U.K. because of the successful war against Argentina over the

Against secular NGOs

I am writing in response to an item which has appeared in several newspapers, including *The Asian Age* (Rezaul H. Laskar), regarding a series of "show cause" notices which have apparently been issued to several prominent non-governmental organisations (NGOs). *The Asian Age* report, titled "Home Ministry singles out anti-BJP NGOs", lists some of the best known and most active groups – groups that have been working for over three decades in fields covering the most critical areas of social development, including education, health, gender issues, rural development, tribal development, and Dalit and human rights issues across the country.

I as a founder-director of Ankur, one of the several groups that have chosen to associate themselves with the advertisement campaign initiated by Communalism Combat, and we as citizens who have always appreciated the democratic space provided by our Constitution and our polity, view with alarm and concern the present actions, which point to increasingly unhealthy trends to harass, choke and silence all dissent and the right to freedom of expression. The dark days of the Emergency apart, there are few precedents to this kind of action to stifle the voice of civil society. Whether it was in the post-1984 riots period or the post-Babri Masjid demolition period, the right of citizens' groups and NGOs to exercise their "watchdog" role was never in question or under assault as it is today.

It is important to analyse and open up to public debate the notion of what constitutes "political activities" and who has the right to decide and determine these definitions in an allegedly open and democratic society. Here again, the role of the organs of the state in defining and determining the parameters of "patriotism", of "nationalism", and now of "political activity", must be subject to scrutiny and widespread critique.

It is not only the prerogative but the duty of civil society organisations – the globally accepted terminology for a range of organisations and groups, including NGOs – to provide information and facts and to create awareness among and educate the public. Most of us joined social movements precisely to be better able to reach out to the unreached, oppressed and exploited masses through education and other programmes, and with a clear, overtly stated objective of empowering people who had been denied all access to human rights through oppressive, systemic, social, economic and political structures.

The role of NGOs and CSOs in bringing about a universal recognition for the language of people's empowerment is well accepted today by groups and institutions across a wide spectrum.

In a country which pioneered and spearheaded structural and constitutional changes by way of the 73rd and 74th Amendments to the Constitution in order to enable the practice of grassroots democracy, and in a land which takes pride in calling itself the "largest democracy in the world", it is appalling to see the highhanded use of power and authority to curb and limit precisely these voices and institutions of democratic participation and opinion. This is the sure path to fascism – and it is up to every right-thinking Indian to speak out against the actions of the Home Ministry (if these are true) and to stand up for the freedom and the right to form and propagate opinions. Quoting Foreign Currency Regulation Act (FCRA) provisions and other interpretations of the laws governing social institutions as grounds for such action is nothing short of harassment and should be condemned without hesitation.

Falklands ("A Kargil Election", *Frontline*, September 24, 1999).

Rather more important was the fact that there had been a breakaway party from Labour – the Social Democratic Party. Many Labour MPs defected to this party and it entered into an alliance with the Liberals, a so-called centrist party. At the same time, the Labour Party lurched dramatically to the left – its manifesto has been described as the "longest suicide note in history" – and proposed withdrawal from the European Union. These two factors were much more important than Kargil.

The implications for progressive forces in India are actually good. Kargil, or a rattling of the jingoistic military drum, are less important than unity and credible, coherent policies.

Stirling Smith
Bolton, England

Army's views

In "Changing strategies" (September 10), Praveen Swami has brought to fore certain aspects of the concept paper on "Management of Internal Conflict" that has been prepared by the Army Training Command, or ARTRAC, as known in defence circles. They do sound logical at times, when he tries to throw light on the so-called biased and lopsided view of the Army on solving or managing its burning internal conflict. Neverthless, given the present state of affairs in the country, be it in Jammu and Kashmir or in the northeastern States, it is high time that we stopped countering somthing that is constructive and innovative and that might go a long way in helping solve crises. The article seems to be reactionary and it appears that the author, like the Government, seconds *status quo* policies and discourages any meanigful step to solve the crisis.

The paper, as presented by ARTRAC, does warrant a serious thought by the Establishment since it brings out the problem as seen through the eyes of the armed forces. As has been seen by us, the price of the proxy war as also of various "Kargils" is apparently going to be borne by the Army in terms of men and machines.

The feature gives no weightage to the views of the organisation that ultimately faces the immediate consequences of the proxy war. How can we expect our soldiers to tick unless the Government gives an ear to what they say and take steps that will have their acceptance in letter and spirit?

Seeing the Army's views in the correct perspective – rather than just use the men in uniform as "cannon fodder" for insurgents, militants and infiltrators – would be an appreciative step on the part of the Government and our intelligentsia.

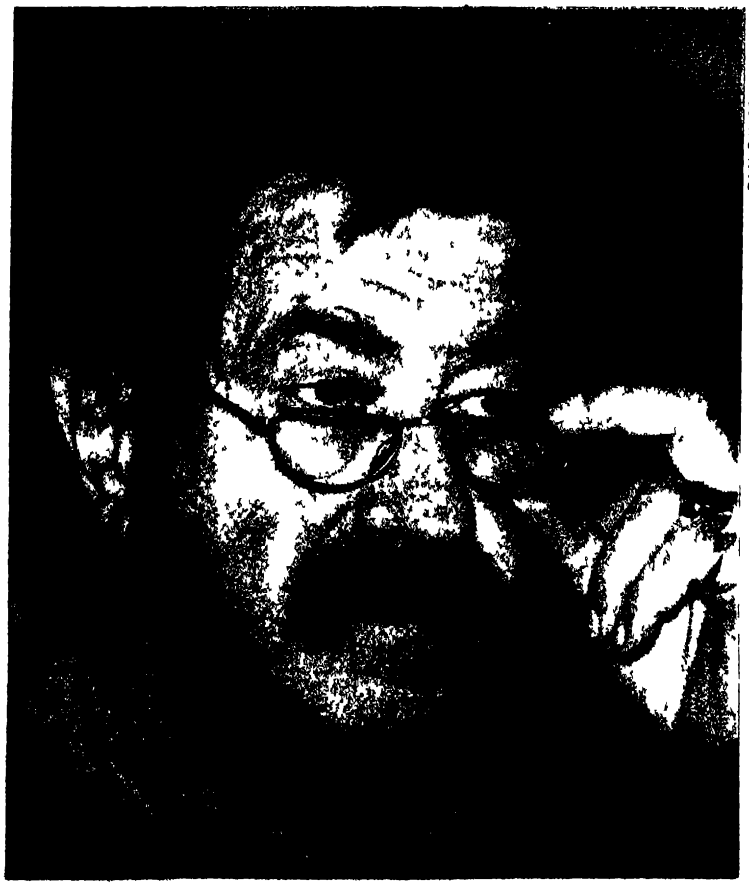
UNTER GRASS, the winner of this year s Nobel Prize in Literature, probed the development of Germany from Nazism through Cold War division to unification with a relentlessly vivid eye

He was uncompromising in his political stances, often headily evocative in his rhythmic prose The 71-year old Gunter Grass became the first German to receive the prize since Heinrich Boll in 1972

He was the fifth successive European to receive the prize after Josi Saramago of Portugal in 1998, Dario Fo of Italy in 1997, Wislawa Szymborska of Poland in 1996 and Seamus Heaney of Ireland in 1995 From 1929 to 1998 the prize had been bestowed upon only three German authors, Thomas Mann, Boll and Nelly Sachs (he shared it with S Y Agnon in 1966)



In its citation the Swedish Academy said Grass "frolicsome black fables portray the forgotten face of history" It praised his gift for "reviewing contemporary history by recalling the disavowed and the forgotten the victims, losers and lies that people wanted to forget because they had once believed in them " Grass' first epic novel, *The Tin Drum*, tackled the theme of Germany's agonised identity, which he has examined from various angles throughout his life. Of all the 20th century's fictional characters, perhaps few are as memorable as Oskar Matzerath, the boy with the tin drum and glass-shattering voice who stopped growing and so passes largely unnoticed as he observes the horror of the Nazi years with an unwavering gaze

'An entire credulous nation believed there s faith for you, in Santa Claus But Santa Claus was really the gasman, ' Oskar observes in *The Tin Drum* as he contemplates Germany s pious infatuation with Hitler The raw power of such writing propelled the book, published in 1959, to worldwide fame and helped revive German literature after what the Swedish Academy called ' decades of linguistic and moral destruction "

Grass was en route to the dentist in Lübeck, his home town in northern Germany, when he was informed of the honour Later, he said "It s a great joy for me, not just for myself but for all German literature, which is honoured with me It was an uncharacteristically patriotic remark from a man who was bitterly critical of German unification in 1990, describing it as another Anschluss and insisting that Auschwitz should have made united Germany forever impossible because it demonstrated that such a country was a danger to the world

Solidly built his face dominated by mischievous eyes and a drooping walrus-like moustache Grass has never shied away from challenging what he has often seen as his country s bourgeois complacency

He explored his anger and angered many of his countrymen in his major novel of the 1990s *Ein Weites Feld* Published in 1995 and translated as *A Broad Field* the book was widely criticised in Germany for its portrayal of ignorant and vicious business tycoons taking over the people s property' of the former East Germany But the work whatever the criticism captured the mutual incomprehension that had plagued Germany s attempts at integration throughout the 1990s, and the academy said that it confirmed 'the author's position as the great prober of the history of this century"

RAJNI PKOSTERMEYER AP

Grass, whose passionate engagement in German society is utterly removed from the minimalist introspection of some modern literature, said 'A writer must fulfil not only literary obligations, but also those of a citizen by being involved politically I hope that young writers remember this in the future "

The admonition came from a man who has repeatedly found inspiration in the turbulence and tragedy of 20th-century German life Among Grass' best-known books

all published in the United States, are *Cat and Mouse* (1961) and *Dog Years* (1963), which with *The Tin Drum* made up "The Danzig Trilogy". In 1977 came *The Flounder*, a bustling and mischievous yarn woven from world history in which the destructiveness of men is contrasted with the achievements and sanity of women. This year Grass published *My Century: A Novel of Stories*, which is a running commentary on his times.

"The prize was long overdue," said Martin Walser, a prominent German writer. "Grass deserved to win the Nobel Prize for *The Tin Drum* alone." In a speech last year, Walser said that he was impatient with constant reminders of the Holocaust, remarks that prompted debate in Germany and revealed the uneasy conscience and uncertain national identity so often examined by Grass.

BORN on October 16, 1927 in Danzig, now Gdansk, Poland, Grass saw the rise of Nazism as a child and was drafted into the army in 1944. He narrowly escaped death when many 17-year-old members of his company were ripped to shreds by shelling. Later, when Germany surrendered, he was captured by the United States Army and held briefly.

Grass worked on a farm, in a mine and as an apprentice stonemason before studying sculpture and beginning to write poems and plays in the 1950s. He also worked as a journalist, and he illustrated some of his books. His marriage to a Swiss dancer, Anna Margareta, ended in divorce after the birth of four children; Grass married Ute Grunert in 1979.

He was indelibly influenced by his youth, which was shaped by War, the loss of a home in Danzig that became part of Communist Poland after the Second World War, and involvement with a Nazi convulsion for which he was too young to bear any responsibility but whose guilt he could not escape.

He was just too old for what Helmut Kohl, born in 1930, later called "the blessing of late birth".

Grass turned his wounds into powerful literary and political expression. With a handful of other writers, including Boll and Hans Magnus Enzensberger, he fought relentlessly after the war against German amnesia, what Enzensberger once called the "nice contented grave" of the post-War economic miracle.

It was in this context of post-War authoritarianism, of an American-assisted German reconstruction so successful that it served to blanket memory of past crimes, that *The Tin Drum* burst upon the national consciousness with all the power of a thunderbolt. Grass did not hesitate to remind his compatriots of precisely the history from which they had emerged. Gdansk might be in Communist Poland, solidly within the Soviet bloc, but little Oskar had seen what had happened there.

In the novel, the author mocked Germans looking for Poland with "Leicas and compasses, with radar, divining rods, delegations and moth-eaten provincial students' associations in costume."

He continued: "One of these days they will go searching for Poland with rockets. I, meanwhile, conjure up Poland on my drum. And this is what I drum: Poland's lost, but not forever, all is lost, but not forever, Poland's not lost forever."

Nor, as it happened, was Germany's Nazi past, the thugs whom Oskar observes after they have ransacked the toy shop of Sigismund Markus, a Jewish merchant in Danzig: "One had drawn his dagger. He was cutting dolls open and he seemed disappointed each time that nothing but sawdust flowed from their limbs and bodies."

In the 1960s, under the moral persuasion of writers like Grass and the protests of the post-War generation, this history returned to form a central part of Germany's modern consciousness, a reference point and a warning to which the country is now painfully vigilant.

The language of Grass was so pungent, even overwhelming at times, that it left Germans with no escape from the world it evoked.

Grass has never been entirely satisfied that the monsters are tamed. Through his writing and political stands, he has always attacked any indications of a re-emergent German satisfaction or smugness.

Always a man of the Left, although his relations with the Social Democratic Party have been stormy, Grass has repeatedly criticised what he once described as the "closet racism" of Germans, evident, he argued in 1997, in their attitude towards the country's large Turkish population.

"I am a Social Democrat because socialism without democracy is worthless to me and because an unsocial democracy is no democracy," Grass once said. He later left the party, and has been critical of Chancellor Gerhard Schrorder's attempts to shift Social Democracy towards a more pro-business stance.

THE No
about $1 million and is to be presented to Grass at a ceremony in Stockholm later this year.

The Swedish academy concluded its citation by saying that Grass goes "deeper than most and he unearths the intertwined roots of good and evil." Perhaps in no other country but Germany, home to Goethe and to Goebbels, to Heine and to Hitler, is this intertwining so intense. The author's authority has lain in his power to imbue his prose with a matching intensity.

As Grass writes in *Dog Years*, "While God was still at school, in the heavenly playground he came up with the idea of creating the world, together with his schoolmate, the talented little devil."

This devil, moreover, was powerful, seductive to a conformist nation, and often cleverly disguised. "He's coming. He's coming. Who is coming?" Grass writes in *The Tin Drum*. The Christ Child, the Saviour? Or is it the heavenly gasman with the gas meter under his arm, that always goes ticktock?" ■

New York Times Service

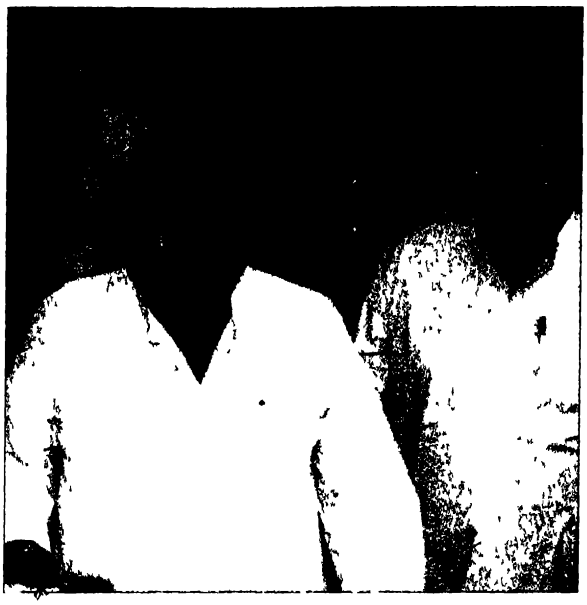
Grass' works: a selection

Some of the better-known works of Gunter Grass are:

The Tin Drum (1959)
Cat and Mouse (1961)
Dog Years (1963)
The Plebeians Rehearse the Uprising (1966)
Four Plays (1967)
Speak Out: Speeches, Open Letters, Commentaries (1969)
Local Anesthetic (1969)
From the Diary of a Snail (1972)
In the Egg and Other Poems (1978)
The Meeting at Telgte (1978)
The Flounder (1977)
Headbirths: or, the Germans Are Dying Out (1980)
The Rat (1986)
Show Your Tongue (1987)
Two States - One Nation? (1990)
The Call of the Toad (1992)
A Broad Field (1995)
My Century (1999)

Consolidation in Uttar Pradesh

The results in Uttar Pradesh, where the Samajwadi Party and the Bahujan Samaj Party fared exceedingly well, show that, contrary to speculation, "Mandal politics" may not have run out of steam.

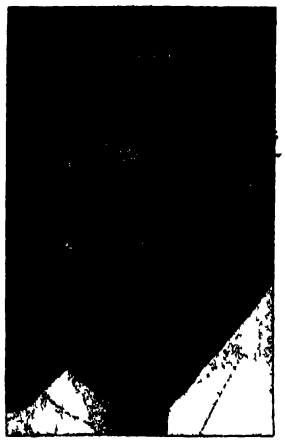


VENKITESH RAMAKRISHNAN

THE remarkably good performance by the Samajwadi Party (S.P.) and the Bahujan Samaj Party (BSP) in the Lok Sabha elections in Uttar Pradesh proves two things. First, that the politics of backward classes-Dalit assertion has not waned despite conjectures to the contrary. Second, the tendency among Muslims to see the prominent political forces representing the backward classes and Dalits as their natural allies and to forge tactical alliances with them to defeat the upper-caste-oriented Bharatiya Janata Party has become sharper.

The voting pattern in U.P. shows that substantial sections of Dalits and members of the backward classes and minorities continue to be committed to the politics of social justice – or Mandal politics, as it is termed – and will settle for nothing less than a real share in power. Their message is that attempts to accommodate them in systems that serve only to perpetuate the hegemony of the upper castes are doomed to fail.

In the run-up to the elections, many media commentators claimed that with the revival of the Congress(I) in the State, the practice of "umbrella politics", which ensured a measure of external harmony among the various castes and communities, had re-emerged; in their perception, the "caste politics" of the S.P. and the BSP would not be as successful as it has been in the past. This theory had it that the Congress(I)'s revival was being made possible by a shift in allegiance of Muslims, Dalits, Brahmins and backward castes from the S.P., the BSP and the BJP to that party.



But what U.P. ultimately witnessed was a reassertion of caste politics as practised by the S.P. and the BSP. So much so that even within the BJP and the Congress(I), supporters from among the backward classes ended up supporting S.P. candidates at the local level. Former BJP member of Parliament Sakshi Maharaj, who was denied the party ticket, campaigned for the S.P. There were indications that this campaign, conducted under the auspices of an organisation that represented Lodh Rajputs, a backward community, was supported by backward class leaders within the State unit of the BJP, including Chief Minister Kalyan Singh, who belongs to that community.

RAJEEV BHATT

Samajwadi Party leaders Mulayam Singh Yadav, Amar Singh and Raj Babbar. The results in Uttar Pradesh are an indication that the influence of the politics of backward classes-Dalit assertion, as practised by the S.P. and the BSP, has not waned.

Although S.P. president Mulayam Singh Yadav and Kalyan Singh denied that they were working in tandem, the voting pattern in at least 15 constituencies point to a measure of cooperation between them. Kalyan Singh's refusal to campaign in the Mathura-Farukhabad region, where Sakshi Maharaj canvassed extensively for the S.P., was telling. In fact, in many constituencies people belonging to the backward classes claimed that both Kalyan Singh and Mulayam Singh Yadav were their leaders. "Mulayam Singh Yadav for Prime Minister, Kalyan Singh for Chief Minister", was their slogan. Across the State, in meeting after meeting of these groups, one point was reiterated over and over again: that the struggle between backward classes and upper castes was far from over, and that people belonging to the upper castes in the BJP and the Congress(I) were out to undermine the influence of politicians from among the backward classes.

K. RAMESH BABU

ANU PUSHKARNA

BSP leaders Kanshi Ram and Mayawati. The BSP's good showing is a vindication of Mayawati's theory that the party would fare well, even without alliances, on the strength of Dalit-Muslim consolidation.

In Unnao, the BJP's candidate, Devi Bux Singh, complained that the official administration helped members of the backward classes to rig the polls in favour of the S.P. She later claimed that her complaint had not been acted upon following instructions from a senior BJP leader – an obvious allusion to Kalyan Singh.

This backward class consolida-

Pollsters proved wrong

Interview: Mulayam Singh Yadav

Every time the media and political pundits predicted stunning reverses for the Samajwadi Party (S.P.) in elections in Uttar Pradesh, the party has confounded them by coming up with an improved performance. The story has been no different this time. The S.P., which had increased its tally to 20 seats in 1998 from 16, won an all-time high of 26 seats in 1999. Yet, when **Venkitesh Ramakrishnan** met **Mulayam Singh Yadav**, the S.P. president was not happy. Surrounded by admirers and party workers who had come to congratulate him, Mulayam Singh Yadav said that adverse media projections and exit polls had deprived his party of at least 15 seats. Expcerpts:

▶ *Throughout the election campaign you emphasised the importance of rebuilding the Third Front as an alternative to the Congress(I) and the BJP. You said there was an anti-Congress(I), anti-BJP mood among the people. How do you now analyse the Lok Sabha election results?*

I had emphasised this point and even made some moves in that direction by aligning with forces such as the Nationalist Congress Party (NCP). However, many of my old friends from non-BJP, non-Congress(I) parties did not understand this. The fundamental problem with many of them was that they had lost confidence in themselves. Hence they played second fiddle to the Congress(I), thinking that it would stop the BJP's march. I warned them that the Congress(I) was in alliance with the BJP and would only help it come back to power. The elections have shown that the Congress(I) is the single most important factor that helped the BJP's return to power. It is evident that the Congress(I) cannot stop the BJP. It needs a vibrant force like the Samajwadi Party. This is evident from the results in Uttar Pradesh, where the S.Ps organisational might is at the maximum. While my old friends failed to read the anti-communal, anti-dynastic-rule sentiment among dominant sections of the population we saw it early and tapped it well. Now that the results are out, I am sure that all those who pooh-poohed the Third Front concept have realised their mistake.

▶ *You had claimed that you would win around 35 to 40 seats in Uttar Pradesh.*

I would have won 40 to 50 seat, had it not been for the media pundits and the exit pollsters. Then, the BJP would not have been able to return to power. They went on campaigning that I would end up with three to five seats. They confused the minorities by propagating that Muslims across the country were deserting me and joining the Congress(I). This created a negative impression on the undecided voters. Most of these pundits and pollsters belong to the elite and they do not understand Bharat at all. They do not know about the rivers, hills, roads and forests of this great country. They do not know how people live here. They do not know what hardship poverty and lack of nutrition can cause. These are the people who reduced the S.P. to five seats. These are the people who always say that I am losing in my constituency even when I am winning by over a lakh of votes. There are television channels that say that I am trailing even after I have got the certificate of victory. I am sure that an inquiry as to how these media pundits underestimate the S.P's strength in every election would make an interesting study. Some shocking facts might come out of that.

▶ *Are you indicating a political conspiracy?*

I am only saying that an inquiry into this repeated underestimation would make an interesting study.

▶ *During the election campaign it was said that the S.P. had struck a secret understanding with the BJP.*

Three types of people made this baseless allegation. First, those who wanted to abuse me personally and politically. Second, those who pursued devious political designs, like some Congress(I) leaders. The third type of people who make

tion helped the S.P. get near-total support from Yadavs and Lodhs and substantial backing from other backward classes such as Kurmis and Keoris. Members of certain Scheduled Castes such as Pasis and Malhas also joined hands with the S.P., swayed by the influence of dacoit-turned politician Phoolan Devi. Yadavs and Lodhs are estimated to account for nearly 10 per cent and 6 per cent respectively of the State's population. Mulayam Singh Yadav wields near-total influence among Yadavs and Kalyan Singh over Lodhs.

Muslims evidently supported this combination wherever it seemed capable of defeating the BJP. The apprehension that the support extended to the S.P. by Sakshi Maharaj, who had been identified with the Ayodhya Ram temple movement, would drive away Muslim voters was found to be misplaced. In Agra, Farrukhabad and Firozabad, Sakshi Maharaj's supporters and Muslims made common cause with the S.P. Clearly, Mulayam Singh Yadav's political gamble paid off in this region.

However, the S.P. did not make uniform gains across the State. For instance, in western Uttar Pradesh, the Jat belt that includes Meerut, Muzaffarnagar, Kairana and Saharanpur constituencies, the S.P-led backward class combination was not the natural choice of the minorities. In earlier elections the S.P. had derived its strength in this region solely from the minorities, and that was clearly insufficient to defeat the BJP. This time the minorities backed the resurgent Congress(I), which drew support also from among Jats, Gujjars and a section of Brahmins. Evidently, a section of the minorities was unhappy over the S.P's failure to back a Congress(I)-led government following the collapse of the Vajpayee government in April.

The S.P's support base among Muslims in this region was seriously eroded, as was evidenced in Meerut where it polled only 13,050 votes this time against 2,70,363 votes in 1998. In Saharanpur too the S.P. finished fourth, polling over a lakh votes fewer than it did in 1998. In Meerut, the Congress(I) benefited from tactical voting by the minorities. Such wholesale shifts of support from the S.P. in some constituencies brought down its vote share from 28.69 per cent to 24 per cent.

THE BSP improved its strength by retaining its support among Dalits and winning over support from a few other communities in some constituencies. The new votes were won by means of a judicious choice of candidates. As it did in two previous elections, the BSP won the votes of even Brahmins in constituencies where

his allegation are those who are ignorant of the political realities. I have answered all of them through the election results.

▶ *But BJP Chief Minister Kalyan Singh is on record as having said that the bitterness between him and Mulayam Singh Yadav is a thing of the past.*

I never had any personal animosity towards Kalyan Singh. Perhaps he was bitter at times but I took care never to say anything personal against him. This time he also did not make personal allegations. But our political rivalry continues.

▶ *How far did former BJP MP Sakshi Maharaj's campaign under the auspices of the Lodh Swabhiman Sabha help the S.P.?*

The BJP leadership humiliated Sakshiji and he wanted to get them defeated. He realised that only the S.P. could undertake this task. He campaigned for the S.P. without any conditions. In fact, throughout the campaign I had not even met him. It was only after the announcement of results that I saw him.

▶ *Do you think that the Lok Sabha results would make an impact on U.P. politics? If so, will it lead to a realignment of forces, especially between you and targeting the Chief Minister?*

How can anybody predict the future? We will have to see how the situation develops. ■

it fielded Brahmin candidates.

The BSP's vote share has gone up steadily in the past decade – from 8.32 per cent in 1991 to 20.60 per cent in 1996 to 20.90 per cent in 1998 and further to about 22 per cent this time. Studies conducted by the Centre for the Study of Developing Societies show that alongside this, the BSP's share of vote among upper-castes voters is also going up – it went up from 3.6 per cent in 1996 to 10.2 per cent in 1998. This may have gone up further, by three or four percentage points in this election.

In Amroha, Basti, Saharanpur and Shahbad constituencies, the BSP gained from the perception among Muslims that it stood the best chance of defeating the BJP. According to party supremo Kanshi Ram, the BSP finished a close second to the BJP in nine constituencies this time and will win these next time. ■

COVER STORY

Managing to lose

The Congress(I) slumps to its worst-ever electoral performance, despite regional gains and an increase in its overall vote share. An analysis of the factors behind the debacle.

VENKITESH RAMAKRISHNAN

REPORTS that poured into the All India Congress(I) Committee (AICC) office from various States as campaigning for the 13th Lok Sabha elections came to an end suggested a major downswing in the National Democratic Alliance's prospects. Congress(I) leaders, convinced of the party emerging as the single largest party in Parliament, even put forward to President K.R. Narayanan the demand that the single largest party, and not an alliance, be invited to form the government. Discussions within the Congress(I) focussed on whether Sonia Gandhi would be the Prime Minister or whether she would nominate Manmohan Singh for the job. There was unanimity on the view that it was Sonia Gandhi's leadership that had revived the party at the national level.

However, it was clear by October 8 that the party had slumped to its worst-ever electoral performance: it had won just 112 seats, a decline of 29 seats from its 1998 tally, which in itself was the poorest showing ever by the party. In fact the Congress(I) and its alliance partners – the All India Anna Dravida Munnetra Kazhagam (AIADMK), the Rashtriya Janata Dal (RJD), the Indian Union Muslim League (IUML) and the Rashtriya Lok Dal (RLD) – could together muster only 134 seats.

Yet, the Congress(I) was placed in a unique position, of having increased its vote share to 33.8 per cent, almost six percentage points more than in the previous elections, while the vote share of the BJP dropped. Congress(I) spokesperson Kapil Sibal pointed out that it was clear from the

AJITH KUMAR/AP

A dejected Congress(I) worker listens to the radio for election news.

votes polled that the Congress(I)'s organisational network had improved during the last 17 months under Sonia Gandhi's leadership although the party could not convert this factor into Lok Sabha seats.

Owing to this gain and the perception that there is no alternative to a member of the Nehru-Gandhi family, the party may not witness the kind of upheaval that characterised the post-election situation in 1998. (In 1998, party president Sitaram Kesri was unceremoniously replaced with Sonia Gandhi, who went on to become the leader of the Congress(I) Parliamentary Party (CPP) without being an MP). However, Congress(I) Working Committee (CWC) member Rajesh Pilot has decided to contest for CPP leadership in order to assert the "democracy principle".

THE Congress(I) had hoped to improve its strength in Madhya Pradesh, Gujarat, Uttar Pradesh, Karnataka, Punjab, Tamil Nadu and Kerala. It was estimated that the total gain from these States would be 45 seats. The party leadership thought these gains would offset the loss of between 30 and 35 seats in Maharashtra, Rajasthan and the northeastern States, which accounted for 64 of the 141 seats the Congress(I) won in 1998, and leave the party with a net gain of 10 to 15 seats. However, during the last phase of the campaign the leadership revised this estimate, saying that the losses in Maharashtra, Rajasthan and the northeastern States would not be as substantial as anticipated and hence the party could actually improve its position. This perception got firmly established as party leaders from Andhra Pradesh claimed that there was an unprecedented shift of Muslim votes towards the Congress(I). They said that the party would improve upon its 1998 tally of 22 seats out of the 42 in the State. In Rajasthan the party had won 18 out of 25 seats in 1998; State party leaders reported to the central leadership that it would retain at least 15 seats in spite of the anti-incumbency factor.

It was estimated that a minimum of 100 seats would come from Gujarat, Karnataka, Kerala, Punjab, Uttar Pradesh and Madhya Pradesh, while the losses in Maharashtra, Rajasthan and the northeastern region would amount to less than 35 seats. Overall, a gain of 65 seats was projected.

In the event, the total gain from the areas mentioned was just 51 seats and the loss suffered in Maharashtra and Rajasthan alone added up to 30. Andhra Pradesh returned only five party candidates as opposed to the expected figure of 25. In Madhya Pradesh, the net gain was of just one seat although the expected number was 20. Rajasthan witnessed a decline of nine seats, from 18 in 1998. In Gujarat the party's tally dropped to six, one less than that in the previous Lok Sabha. In Bihar, its strength declined to three seats from five. Only Karnataka did not belie the leadership's expectations: the party won 18 seats and emerged victorious in the Assembly elections. Yet, the net loss was 29 seats.

ALTHOUGH the Congress(I) is yet to undertake a comprehensive post-election analysis, five factors are attributed to its debacle. First, lack of an imaginative approach on the part of Sonia Gandhi's coterie, which called the shots in the selection of candidates and in evolving the campaign strategy. What is regarded as the worst misadventure of the coterie was the decision to put up Sonia Gandhi for the Bellary seat and the way she filed her nomination. According to a senior leader, the negative effect of this on the rank and file was never fully overcome despite the confidence exuded by the leadership in the latter stages of the campaign. The Bellary episode strengthened the public perception that associated Sonia Gandhi's names with secrecy and inaccessibility; it also highlighted her dependence on the coterie.

The second factor is the contradictory statements that Congress(I) leaders made on the question of coalition government versus single-party rule. Sonia Gandhi, it is felt, did not adopt a clear line on this. She talked about single-party rule most of the time but occasionally lapsed into accepting the possibility of a coalition government. This deprived the party of an effective campaign strategy. The failure to project a prime ministerial candidate is also identified by certain Congress(I) leaders as a reason for the defeat. Many senior leaders now feel that in order to give the campaign a cutting edge, the party should have boldly projected either Sonia Gandhi or Manmohan Singh as its prime ministerial candidate.

Thirdly, the assessment is that the party failed to counter effectively the NDA's campaign on the Kargil war, particularly ahead of the first two phases of polling.

The fourth factor is the lack of concrete moves to repair the damage caused to the organisation by the revolt led by Sharad Pawar and to neutralise the effect of the faction fights in various State units. The results from Maharashtra, Andhra

Pradesh and Orissa indicate the failure of the organisational set-up in these States.

The failure to implement the special organisational plans in Maharashtra, the northeastern States and certain parts of Rajasthan, and the fielding of candidates with doubtful credentials – such as alleged mafia don M.K. Subba in Assam – are highlighted in this context. Attempts to perpetuate dynastic politics in the form of allotment of seats to party leaders' relatives – among them were former Kerala Chief Minister K. Karunakaran's son, Punjab Congress(I) president Amarinder Singh's wife, Uttar Pradesh Congress(I) president Salman Khurshid's wife, Orissa Chief Minister Giridhar Gamang's wife and former Union Minister K. Natwar Singh's son – have been cited as representing an unhealthy trend.

Lastly, the alliances with the AIADMK and the RJD and the lack of coordination with the allies are seen as having had negative effect. In order to emphasise this point, critics mention the unrest in the Bihar unit of the party during seat adjustment talks between Sonia Gandhi and RJD chief Laloo Prasad Yadav as well as the snub that AIADMK leader Jayalalitha handed to Sonia Gandhi by skipping her first election rally in Tamil Nadu.

THE question now is whether the outcome of the elections will give rise to a threat to Sonia Gandhi's leadership. According to a senior leader, the elections were characterised by the continuation of a plethora of mistakes Sonia Gandhi committed since November 1998, after the Congress(I) scored a major victory in the Assembly elections in Delhi, Rajasthan and Madhya Pradesh. Yet it is unlikely that her position will be challenged. However, the attack against the coterie, which consists of CWC member Arjun Singh, Sonia Gandhi's secretary Vincent George, and party general secretaries Pranab Kumar Mukherjee and Oscar Fernandes, would gain strength. Mukherjee and Fernandes have already resigned their party posts.

Whatever Sonia Gandhi's immediate fate as Congress(I) president, there has been change in the way she is described: hailed not long ago as the person who transformed the Congress(I) from a moribund and direction-less establishment into a vibrant organisation capable of leading the country, her position today is that of a leader who led the Congress(I) to one of its worst defeats. That is bound to diminish her stature in the party. ■

Whose agenda?

Tasks before the new government.

VENKATESH ATHREYA

AS the National Democratic Alliance (NDA) Government in New Delhi settles down, attention should shift to the question of the agenda before it.

There has already been considerable discussion in the print and electronic media on the agenda. The overwhelming focus has been on economic issues. The captains of industry, speaking through various industry associations, have been especially vociferous in spelling out the economic agenda.

The concern with economic issues, and the sense of urgency about them, is understandable. During the election campaign, the two main formations in the fray – the NDA and the Congress(I) – pushed economic issues into the background.

The NDA campaigned almost solely on the plank of A.B. Vajpayee's virtues, and the fact that he was "able and stable" prime ministerial material, while the Congress(I) claimed that it alone had in the past provided a stable government, and it alone could do so again. It was only the Left parties which projected economic issues, both in their manifestoes and in their campaign. However, the Left had accorded primacy to the issue of secularism even while attacking the economic policies of the BJP, which constituted both the continuation and intensification of neoliberal policies pursued by the earlier Congress(I) and United Front governments. Given this fact and the limited reach of the Left, economic issues did not figure prominently in the election campaign. Of course, the telecom scam hit the headlines, but was not sustained as a campaign issue in a big way.

It is now obvious that the new government will have to contend with several urgent economic issues. The National Council for Applied Economic Research (NCAER) has described the fiscal situation as "...a source of grave concern".

The incongruence between the people's agenda and that of the NDA/BJP is bound to have implications for economic and political stability.

The pressure on the government's finances is coming from both the revenue and expenditure sides. While revenues have grown by only 13 per cent as against the projected 19 per cent, the additional expenditure on the Kargil war alone is estimated by some sources at more than Rs.5,000 crores. The Central government's net borrowings in the first two quarters of the current financial year at Rs.50,331 crores amount to 87 per cent of the amount budgeted for the entire financial year 1999-2000. The fiscal deficit is expected to reach 6 per cent of GDP and will exceed the figure if public sector disinvestment does not generate the budgeted provision of Rs.10,000 crores.

The current rate of inflation is quite low, this being the result of a very high base created by the extraordinarily rapid increase in primary product prices earlier. However, with 'normalcy' in primary product prices getting restored, and several new inflationary pressures emerging – witness, for instance, the sharp rise in petroproduct prices – the rate of inflation is expected to reach 7 to 8 per cent by the end of the year. In fact, a feature of the neoliberal policy regime of the 1990s has been the coexistence of a high inflation rate with sustained recession. The average annual rate of inflation for the decade of the 1990s is close to 9 per cent.

These emerging economic issues apart, there is also an air of expectancy among the corporate sector leaders of some quick and decisive action from the NDA government, now that its parliamentary majority is not as precarious as that of the previous regime. The industry bodies – the Federation of Indian Chamber of Commerce and Industry (FICCI), the Confederation of Indian Industry (CII) and so on – have put forward the following agenda.

★ Clearing, within two to three months, the backlog of economic legislation pending before Parliament including the Companies Bill, the Insurance

Regulatory Authority (IRA) Bill and the Foreign Exchange Management Bill;

★ Privatisation of the public sector by bringing down government holding below 51 per cent;

★ Allowing 74 per cent foreign equity in the car, auto component, bulk grain handling and tourism sectors;

★ Financial sector reforms including privatisation of banks;

★ Easing of price controls in the pharmaceutical industry;

★ Approval of the new telecom policy;

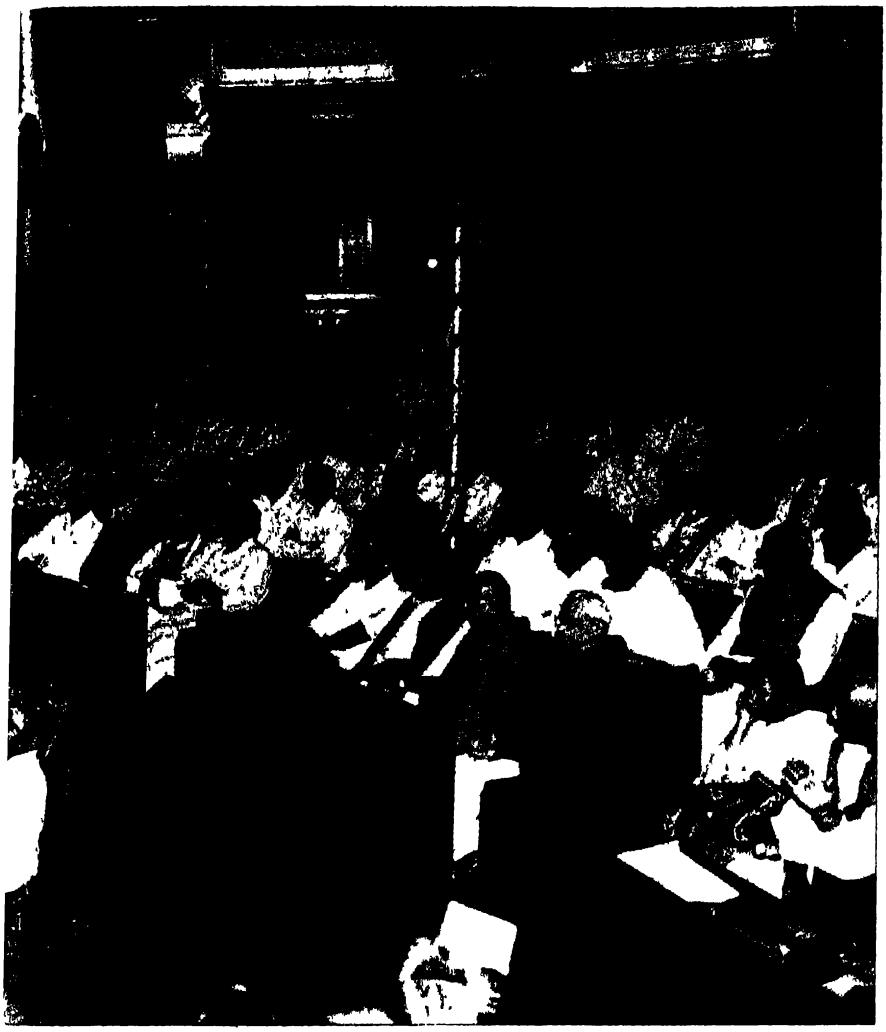
★ Focussing on intellectual property rights, and the agricultural and services sectors at the World Trade Organisation (WTO) coming up in Seattle.

The corporate agenda is quite in line with the policies of the previous BJP-led government. During its 13-month rule, the BJP-led government had pursued neoliberal policies with greater vigour than all its predecessors. It opened up the economy to foreign investors in a big way, pushed hard the agenda of privatisation of public sector undertakings, provided several tax concessions to the corporate sector, and substantially raised the issue prices of rice, wheat and sugar provided through the public distribution system (PDS), besides hiking other administered prices and tariffs.

Interestingly, in anticipation of its return to power, the caretaker government had been busy making plans for the pursuit of an economic agenda largely consistent with what the corporates have now sought. Thus, the core group of Secretaries of the Government of India have finalised plans for the sale of several public sector undertakings including the Indian Petrochemical Corporation Limited (IPCL), the India Tourism Development Corporation (ITDC) and the Gas Authority of India Limited (GAIL). Close on the heels of the sharp rise in diesel prices announced by the caretaker government a day before counting of votes began on October 6, the Petroleum Ministry mooted proposals for hikes in the prices of kerosene and liquefied petroleum gas (LPG). The Prime Minister himself was quoted as saying that once the new government is in office, the IRA Bill will be passed in three days' time.

It is interesting to note, however, that while the NDA manifesto had spoken of continuing with the reform process, it also claimed that it would "... give it a strong *swadeshi* thrust..." and reappraise and revitalise reforms through giving primacy to removal of unemployment.."

It is clear that the economic agenda of the new government will largely be in line with the needs of the demands of the corporate sector, Indian and foreign, and that there would be a fair degree of consensus among NDA partners on the matter of the agenda. The socio-political agenda of the new government is, however, an issue on which consensus will be less easy to forge.



S ARNEJA

Prime Minister A.B. Vajapayee addresses NDA leaders and MPs in the Central Hall of Parliament on October 10. It is obvious that the new government will have to contend with several urgent economic issues.

During the election campaign, while the NDA manifesto steered clear of the contentious issues of Ayodhya, Article 370 and a uniform civil code, this was not necessarily true of the actual campaign itself. In communally sensitive constituencies (such as Coimbatore in Tamil Nadu), a clear effort was made by the BJP to consolidate the 'Hindu vote', with a not insignificant degree of success. It would, therefore, appear somewhat naive to assume that the presence of such parties as the DMK or the TDP would ensure that the dominant partner BJP will abjure communal mobilisation and stick to the parameters agreed upon among the NDA partners. In fact, the rather evasive remarks of senior BJP leader L.K. Advani, to a question on whether the Ayodhya issue was being postponed or given up, provides a clue to the dilemmas facing the BJP leadership as well as the NDA. Clearly, the BJP's agenda is not the same as that of the NDA's, and equally pertinent, the RSS/VHP/Bajrang Dal agenda is not in every instance (though it is in the main) necessarily identical to that of a BJP in government.

In an important sense, this election has shown that communal mobilisation is not always efficacious even in electoral terms. Where clear alternatives to the BJP's communal-plus-neoliberal agenda were present, they have received popular support. The performance of the Left forces in Kerala, West Bengal and Tripura and that of the S.P. and the BSP in Uttar Pradesh bear this out. On the other hand, as

already noted, communal mobilisation has helped the BJP win in several constituencies. The political and social forces which seek to fight for a secular and democratic polity will need to keep this complexity in mind, and hence also the need to retain the focus on the three inter-related goals of secularism – social justice and economic equity and self-reliance.

An issue of which much was made in the NDA manifesto is that of constitutional reforms. The NDA sought to make the 'stability' of an elected government – and guarantee of its continuity throughout the five-year term of the Lok Sabha – the focus of such reforms.

Leaving aside the essentially undemocratic proposals that seek to ensure a five-year term for an elected government at all costs, an issue that is of longstanding importance and is bound to come up is that of Centre-State relations. Going by the record, both the BJP and the Congress(I) have tended to ride roughshod over elected State governments, and have sought to utilise Article 356 to bring them down. In the present coalition dispensation, that would be rather more difficult. Be that as it may, a well-thought-out overhaul of Centre-State relations in order to ensure a genuinely federal, democratic and pluralist polity, which strengthens the Union as well as the States, should certainly be on the nation's agenda. To this, one should add further decentralisation of power and authority to elected local bodies, as well as reservation for women in Legislative Assemblies and parliament as issues to be addressed urgently.

FINALLY, does the BJP/NDA agenda correspond to the needs of the people of India? It unfortunately does not, in most respects. Its agenda of continuance and intensification of the reform process, including the carrying out of the so-called second generation of reforms, flies in the face of people's experience with the neoliberal economic policy regime for nearly a decade now. These nine years of economic reforms have not led to accelerated growth, nor to significant reduction of poverty or unemployment. There have been no major breakthroughs in such areas of human development as education or health, despite lip-service to such goals as part of the official rhetoric on reforms. The economy today is far more vulnerable to external shocks and the policy makers find themselves increasingly constrained by the need to attract foreign investors and keep them happy. The failure of the state to mobilise resources for development is evident in the decline in the tax-to-GDP ratio and the sharp decline in government capital formation, a decline not compensated by private investment. The erosion of the PDS imperils the people's food security. India's weakness at the WTO forum weakens the nation's economic sovereignty. The economic agenda really ought to address and reverse these developments, rather than pursue neoliberal economic policy as the panacea for all ills.

Similarly, on the socio-political front, securalism, and commitment to India's socio-cultural, linguistic and religious plurality are essential to ensuring political stability, which can hardly be guaranteed by mere parliamentary arithmetic.

There is, of course, the all-important question of nuclear policy. In the months to come, the consequences of Pokhran-II will come to haunt India repeatedly, as they have already done in Kargil. The pressures to sign the Comprehensive Test Ban Treaty (CTBT) will be strong. The straws in the wind – witness Murli Manohar Joshi's statement to the effect that India was ready to sign the CTBT, all that remained was to get the NDA partners to agree – indicate that the NDA partners, many of whom have in the recent past held forth on the inadvisability of signing the treaty, would have to be vigilant.

Finally, there is the larger issue of India's foreign policy, its role in a unipolar world and its relations with major countries as well as its neighbours. The complex questions of foreign policy need a far more nuanced discussion than would be possible here. Suffice it to say that cozying up to the United States, allowing it to intercede in the Kashmir issue in the hope that it will favour India as a regional power or announcing China as the country's main enemy – these hardly constitute an inspiring record.

As the nation faces a complex agenda, the incongruence between the people's agenda and that of the NDA/BJP is bound to have implications for economic and political stability. ■

The Centre for the Study of Developing Societies (CSDS), New Delhi, has been undertaking post-poll surveys of a sample of 16,000 respondents since the general elections of 1996. According to the CSDS, the surveys are considered by political analysts as an ideal source of data on voting behaviour. Unlike in the case of a pre-poll survey, there is no possibility here of the voter-respondent eventually changing his or her mind or not voting at all. And, unlike in the case of an exit poll, these surveys offer an opportunity to do a random selection of respondents and ask them a wide range of questions, the CSDS points out.

Investigators of the CSDS have gone back to the same respondents after the 1996, 1998 and 1999 elections. According to the CSDS, this technique is considered the most precise and reliable way of measuring change over time, for it eliminates the possibility of change in two readings occurring simply as a result of differences in sample selection. The CSDS surveys have followed a rigorous technique of selecting a strictly random sample from the electoral rolls. As a result, the sample is known to match all the known attributes of the Indian electorate within a margin of 1 per cent, the CSDS says.

The sample involves 108 Lok Sabha constituencies spread over 20 States and Union Territories: it consists of 216 Assembly segments and 432 polling stations. The total sample size is 16,000, but since the survey does not make any substitution it normally achieves a target of between 9,000 and 10,000 respondents.

In the current elections, three of the target constituencies of the CSDS sample will go to the polls only on October 28. The survey has hence been conducted in 105 Lok Sabha constituencies, covering 210 Assembly constituencies and 419 polling booths. The achieved sample is thus 9,069.

The CSDS survey has been supported in part by *Frontline*.

Interpreting the mandate

YOGENDRA YADAV
SANJAY KUMAR

IF elections are only about who gets the right numbers to form the government, there is no doubt that the Bharatiya Janata Party and its numerous allies have emerged winners in the 13th Lok Sabha elections. Unlike on the previous two occasions, there is little uncertainty this time about who will form the government. For the first time in the last decade a pre-electoral alliance has crossed the majority mark. And it is not a wafer-thin majority. Once elections are held to the remaining six seats, the BJP can hope for a situation in which no single ally of it will be able to bring down the government, not even the Telugu Desam Party (TDP). The new government will not be susceptible to blackmail by small allies. No wonder there is palpable relief in those circles within and outside the country for whom government stability is the predominant concern. So much so that no one stops to notice the fact that this is the fifth election in a row to have thrown up a 'hung parliament'.

But if election results are to be seen as anything more than the score in a numbers game in Parliament, if the larger political signs of a popular mandate are to be read, then the signals sent by the latest verdict are far from obvious. The winning coalition has increased its parliamentary strength by 50 seats. But that is mainly because the BJP acquired new allies, rather than having won greater mass support. If the current score of the BJP and its allies is compared to what the current allies had in the previous Lok Sabha, they have gained very little. In the previous Lok Sabha, they had 265 seats based on 42.3 per cent of the popular vote. The final picture for the new Lok Sabha shows that the current alliance has 296 seats based on 40.8 per cent of the popular vote. In other words, they have gained 34 seats and have lost 1.5 percentage points of the popular vote. The figures will surely dampen the enthusiasm of BJP strategists once the celebrations are over.

The BJP on its own has not been able to increase its tally in the Lok Sabha. It might, once the six remaining constituencies also go to the polls. But the fact remains that there is no substantial gain for the party at the end of a dream campaign. In terms of vote share too, the BJP has lost almost two percentage points, from 25.6 per cent last time to 23.7 per cent this time. It is true that this loss can be accounted for by the fact that the BJP contested 50 seats fewer than last time. But it cannot be denied that the BJP's almost unstoppable upward march has come to a halt. However, there is a silver lining for the BJP: it has for the first time made inroads into new territories, thus taking another step towards becoming an all-India party. The BJP's victories in Goa, Assam and the Andaman Islands may not contribute very much to its kitty, but they are crucial to its nation-

Lok Sabha election results 1999: Group-wise analysis

	Seats	Turn-out 1999	Change over 1998	Cong(I)+ Seats	Gain /Loss	Vote share

Phase I	148	57.4	-2.4	50	-13	39.8
Phase II	124	60.7	-0.7	36	-9	40.4
Phase III	79	54.8	-4.5	13	+1	30.5
Phase IV	72	59.1	-1.9	18	-1	35.5
Phase V	116	66.2	-0.9	19	-6	31.1

l ambitions. Elections 1999 have thus ompleted one phase of the BJP's rise to ower. In this period the party underwent geographical, social and political expan- on. It has now reached a plateau of elec- oral success and is now subject to the normal cycle of success and failure. While he BJP's ascent to power at the Centre llustrates one face of this process, its lefeat in Uttar Pradesh shows the other ace.

The only real victors of this election seem to be some of the allies of the BJP, such as the TDP, the Biju Janata Dal(BJD) and the Trinamul Congress, which have added to their votes and seats. The TDP on its own has 3.7 per cent of the national vote share, besides 29 seats. It is too early to say whether the gains of its allies would necessarily strengthen the BJP. It is an important point, since the BJP's share of the combined seats of the ruling alliance has declined from 73 per ent at the time of the constitution of the 2th Lok Sabha to 61 per cent at the eginning of the 13th Lok Sabha. The decline in its share of seats is bound to lead to a reduction in its clout within the reconstituted National Democratic Alliance (NDA).

FOR the Congress(I) too, the results are ambiguous. After successively losing its vote share in every round of elections since 1984, the Congress(I) seems to have staged something of a recovery. Its national vote share now stands at 28.5 per cent, an improvement of 2.7 percentage points over the last elections. If its allies are included, the gain is nearly five percentage points. The Congress(I) is back in power in Karnataka and Arunachal Pradesh and may well share power in Maharashtra. The recovery in Uttar Pradesh must be the best news the Congress(I) has had in quite a while. Much of the party's rise in vote share nationally is owing to the upswing in U.P.

Notwithstanding these consolations, the Congress(I) must confront the harsh reality that with a tally of 112, its contingent in the 13th Lok Sabha is the smallest ever. It is the third successive round of elections, and the second in which Sonia Gandhi campaigned, that the party has lost decisively. This defeat must be particularly hard to take, for less than a year ago it seemed that the 13th Lok Sabha was the Congress(I)'s for the asking. The BJP had lost three crucial Assembly elections – in Delhi, Rajasthan and Madhya Pradesh – and nationwide opinion polls had predicted swing of between six and seven percentage points against it. If that potential swing could not be translated into actual electoral victory, the Congress(I) has no one else to blame. The defeat in this round of elections has long-term implications for Sonia Gandhi's leadership, the party organisation and the very survival of the party in its present form.

THE Left Front has lost six seats and added a tiny fraction to its votes. Given its organisational problems in Kerala and the slowly rising dissatisfaction in West Bengal, its seems to have got away lightly. Even the slightest swing of votes away from it would have resulted in lots of red faces.

The Bahujan Samaj Party (BSP) looks like an obvious winner with a three-fold increase in its number of seats. While 14 parliamentary seats will no doubt give it a visibility that it did not have earlier, the fact that the BSP is shrinking into an only-U.P. phenomenon cannot be overlooked. Its nationwide vote share dropped by 0.4 percentage point, about 10 per cent of what it had last time, though there has been a 1.2 percentage-point gain in U.P. It lost its only seat outside U.P. and dropped votes in the crucial State of Madhya Pradesh where it once hoped to become the third major player. Even in U.P., its gain in seats is owing to a very small swing of votes and tactical voting, a temporary phenomenon.

The same can be said of the Samajwadi Party (S.P.). Its remarkable achievement in this round of elections was to defy its obituaries once again. But its gain in seats has come despite a loss of 4.7 percentage points in its vote share in U.P. and one-fifth of its all-India votes. Like the BSP, it has disappeared from States other than U.P.

Sharad Pawar's Nationalist Congress Party (NCP) has proved to be only a Maharashtra phenomenon. While he showed that he can ensure the defeat of the official Congress, Sharad Pawar was unable to dislodge the Congress(I) the way Mamata Banerjee did in West Bengal. With 22 per cent of the votes in Maharashtra, he trails the official Congress(I) by 12 percentage points.

In other words, while this round of elections has produced what looks like a coherent majority, much of it is owing to the vagaries of the electoral system. The attainment of a majority in Parliament does not imply a polarisation of voters in favour of the winning combine. Nor does it indicate any effective bipolarisation of the party's political space. The seats occupied by the two leading alliances have not increased compared to the 1998 elections.

*Elections not held in six constituencies: Bihar (Rajmahal, Khagaria, Purnea, Bhagalpur), Assam (Dhubri) and Manipur (Outer Manipur)

**Independents supported by the LDF (in Kerala), and by the BJP (in Uttar Pradesh).

BJP+ allies: BJP, JD(U), Trinamul Congress, TDP, Biju Janata Dal, Loktantrik Congress, Shiv Sena, Jantantrik BSP, DMK, PMK, MDMK, Lok Dal Rashtriya, Himachal Vikas Congress, Shiromani Akali Dal, Sikkim Democratic Front, Tamizhaga Rajiv Congress, Democratic Bahujan Samaj Morcha, MGR-ADMK, MGR-Kazhagam, Arunachal Congress, Manipur State Congress Party, Independent (Maneka Gandhi).

Congress(I) + allies: Congress(I), Rashtriya Janata Dal, AIADMK, Muslim League, Rashtriya Lok Dal, Kerala Cong (Mani).

The third space, occupied by the various non-Congress, non-BJP formations, has not shrunk in any significant way. What has declined, of course, is the vision and organisational capacity of those wanting to create a Third Front in national politics. At the State level, though, there appears to be a movement towards bipolar competition in Karnataka and Bihar. At the same time, Maharasthra and Tamil Nadu moved away from the two-party competition to triangular contests.

From 1998	To 1999				Total
	BJP+	Cong+	Left+	Others	
BJP+	157	60	2	27	245
Cong+	95	53	1	12	161
Left+	6	4	37	—	47
Others	41	18	2	23	84
Total	299	134	42	62	537

All this might create the impression that this verdict produced no difference. A quick look at the seat tally of the parties is likely to reinforce an impression of everything having come back to square one. In fact, nothing could be farther from the truth: such an impression is created because one looks only at the national aggregates. If one looks instead at the State level or below, one would discover evidence of enormous churning having taken place. Most of the States witnessed major political shifts and reversals in this round of elections. So much so that one has to look for exceptions such as Gujarat, Kerala, West Bengal and Orissa, which did not see any major shifts in political preferences. Elsewhere it has been an election full of upsets. Since these upsets did not go in the same direction, they tended to cancel out one another, thus creating the impression of there being no change. An analysis of seat retention figures shows that of the 537 seats for which results are available, only 281 returned the same party that won in 1998. This ratio has been very low throughout the 1990s: 264 between 1991 and 1996 and 263 between 1996 and 1998. The figure will go down further for constituencies that returned the same member. Clearly, one is looking at the rejection of the incumbent at the ground level.

A detailed analysis of how seats changed hands between 1998 and 1999 shows that the BJP and its allies have been able to hold on to 157 of the 245 seats they held last time in these 537 seats. The Congress(I) and its allies retained only 53 of 161 seats. In other words, the BJP and its allies have retained two-thirds of the seats they won, while the Congress(I) holds only one-third. These figures indicate that the Indian elections continue to produce greater upheavals than elections in most other democracies. Even parties on the upswing tend to lose a lot of seats. The BSP could retain only Mayawati's seat while the S.P. lost 10 of the 20 seats it won last time. As many as 50 of the 85 seats in U.P. changed hands this time.

An analysis of the verdict based on the urban or rural nature of the constituencies does not throw up any such clear pattern. The gains for the BJP and its allies have mainly come from rural constituencies this time, perhaps because the BJP had already reached the saturation point in the urban constituencies. It is a comment on the expansion of the BJP that with its allies the party controls the majority of rural parliamentary constituencies as well. The Congress(I) gained votes both in rural and urban seats, but it incurred net losses in terms of seats in rural and semi-rural constituencies.

A comparison of the final picture of seats and vote share between reserved and general seats shows some interesting shifts. The Congress(I) and its allies, which made gains overall in terms of votes, have acutally lost about three percentage points in constituencies reserved for the Scheduled Tribes (S.T.). Their tally came down from 18 to eight in these constituencies. Since these seats are invariably in pockets where there is a concentration of the S.T. population, the decline indicates an erosion of S.T. support to the Congress(I). The BJP and its allies picked up nine of these seats and gained more than four percentage points in vote share. For the first time, the BJP and its allies won the majority of the seats reserved for the S.Ts. It is equally significant that the BJP alliance increased its vote share by 6.1 percentage points and seat share by 14 seats in the case of constituencies reserved for the Scheduled Castes (S.C.). This may not directly indicate any shift of S.C. voters towards the BJP, but it does point to a social expansion of the BJP's base alongwith that of its allies. The Congress(I) got far fewer votes in the constituencies reserved for the S.Cs than in general constituencies or constituencies reserved for the S.Ts. Interestingly, nine of the 14 BSP MPs were elected from non-reserved seats. Perhaps this is the first indication of limited acceptance of the BSP among the sarva samaj that the party has begun speaking of.

DID the fact that voting was done in five phases influence the results? An analysis of the final results confirms the popular impression that it did. If the number of seats won by the BJP and its allies across different phases is compared, no clear pattern emerges. They did better in the third and the fourth phases than in the second. But a pattern begins to emerge when the numbers of seats in terms of gains or losses are compared to the seats won in the same set of constituencies in 1998. The BJP and its allies gained by 26 and 21 seats in the first and second phases respectively. In the third phase there was a gain of only six seats, while there was a loss of three and six seats respectively in the fourth and fifth phases. An analysis of the phase-wise swing confirms the picture of a steady decline of BJP gains in every subsequent phase of polling. However, the opposite is not quite true for the Congress(I) and its allies. They lost seats in the first two phases but did not quite gain in the last three. The gains went to others. In terms of vote, the gains were more or less evenly spread across all the phases, except the last one in which the Congress(I) and its allies did badly.

This clear evidence of the effect of the timing of the polls on the outcome shows that something of a Kargil effect cast its shadow over the first two phases. As the nation moved further into polling, that effect wore thin, and it was back to normal elections in their local settings. This finding raises the question whether the final outcome would have been different if the elections were held a little later, or for that matter a little earlier. It also questions the wisdom of staggering elections over such a long period.

THE evidence about the phase-wise voting also provides us a clue to understanding the big picture of the electoral verdict. It points to the possibility of a nationwide effect of the Kargil conflict and its aftermath on voting. The findings need to be corroborated by survey analysis, but it seems that the BJP staged a recovery after its decline towards the end of last year. The manner of the dissolution of Parliament

nd the inability of the Opposition to form n alternative government, the Sharad 'awar-led split in the Congress(I), and the 'argil conflict made for conditions in which the BJP won back some of the votes had lost. Yet all these factors put togeth- r did not create anything like a national vave of the kind the BJP hoped for. It just reated a favourable climate in which the BJP's claim to power was considered by he people. But the claim was finally set- tled on the terrain of State politics, the basic unit of political choice-making in this decade.

This combination of State and national-level trends meant that the BJP could get a verdict against incumbent non-BJP regimes, particularly in States such as Orissa and Bihar which has had unpopular governments in power for a long time. West Bengal and Kerala, which have Left-led governments, and small States such as Arunachal Pradesh and Sikkim were the only exceptions.

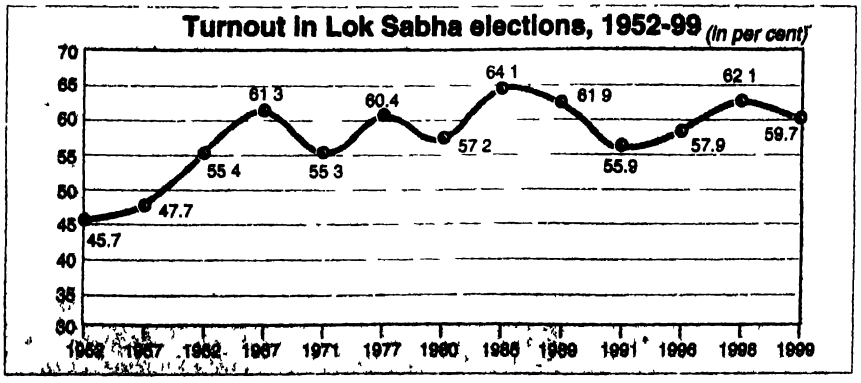
The logic of incumbency, or rather poor governance, worked against the BJP and its allies too, as in U.P., Punjab and Karnataka, but only when the regime was very unpopular. In the rest of the States, a slightly favourable national climate and a redrawing of alliances enabled the BJP to escape severe punishment. Its alliances in Tamil Nadu, Haryana and Andhra Pradesh helped it reap rich electoral harvest. By splitting the Congress(I), the NCP made the task of the BJP-Shiv Sena easy in Maharashtra.

In this sense the 1999 elections do not represent a fundamental break from the new kind of electoral system inaugurated in 1989. This phase of electoral politics put an end to the wave elections of the 1970s and 1980s. Elections are no longer decided solely on any national issue or personality. State-level politics has emerged as the primary arena of poltical choice-making. The fundamental question at the beginning of this round of elections was whether the 1999 polls would retain this character. One possibility for the BJP was to turn this into a national election in the sense in which the results of 1971 or 1984 was nationwide verdict. The other path was to accept the nature of political choice in the 1990s and work out a unique solution to the situation in each State. The BJP pursued both paths. The verdict makes it clear that the BJP did not succeed in changing the ground rules of poltical choice in the 1990s. It has won the game, at least for the time being, but by following rules that will not favour it in the long run. ■

ELECTION ANALYSIS

The turnout factor?

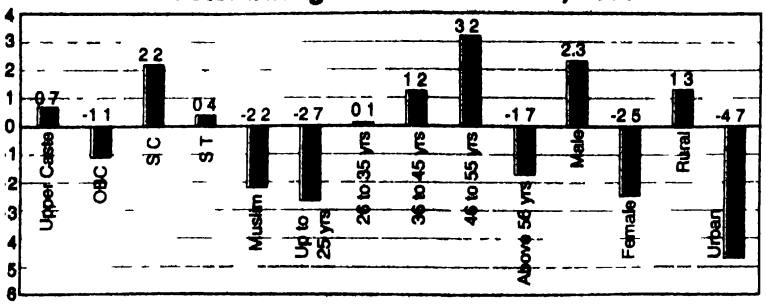
OLIVER HEATH



DESPITE widespread media reports of a dismal voter turnout owing to 'election fatigue', the overall polling figure for the 1999 Lok Sabha elections was higher than in many previous years. It was higher than not only the 1991 and 1996 elections, but seven previous elections.

Mid-term elections are generally likely to produce lower turnouts than elections held after a government's full term in office. The mid-term polls of 1980 and 1991 both registered noticeable drops in voter participation. Bearing in mind then the fact that this was a second consecutive mid-term election, taking place barely one year after the last one, the voter apathy was not nearly as pronouced as might have been expected. Besides the long-drawn-out nature of the campaign and unfavourable weather conditions in many States, the electorate had many reasons to stay away from the polls. Indeed, seen in this light the turnout of 59.5 per cent shows the commitment of the Indian voter to democracy.

Despite a slight drop in the overall participation compared to the previous election, there were in fact many States in which the turnout increased. As is to be expected, the States that had simultaneous Assembly elections were amongst those that registered an upturn. With the exception of Andhra Pradesh, where the figure fell a little from 1998, Arunchal Pradesh, Sikkim, Karnataka and Maharashtra all surpassed their previous marks in the 1990s.



There is little evidence of any correlation between the level of the turnout and the success of a party. Despite the media's fascination with the hypothesis that the level of the turnout is directly related to the success or failure of the BJP, the results show that the turnout did not favour either of the two main formations, and that incumbent State governments were just as likely to do well as they were to do badly in states that witnessed a low turnout. In States where the turnout fell, there were some major reversals. In Punjab the Akali Dal was routed and in Rajasthan the Congress(I) lost a lot of ground. Conversely, the BJP extended its control over Delhi, Haryana and Madhya Pradesh, all of which recorded a drop in turnout over 1998.

The CSDS post-poll survey data show how turnout figures have varied among respondents from different social backgrounds. The categories are for community, age, sex and locality. The plus or minus figure indicates by how much the group in question is above or below the national average. Of the different communities the Scheduled Castes were the most likely to vote, as their turnout was 2.2 percentage points higher than the national average. The community least likely to vote were Muslims, whose turnout was 2.2 percentage points below the national average. The figures for the upper castes and the Other Backward Classes (OBCs) were roughly 1 percentage points over and under respectively of the national average, but the biggest increases are in the case of the Scheduled Tribes, the figures in respect of whom is a fraction more than the national average, which marks a significant increase in participation by a community that has traditionally been the most reluctant to turn

ALISTAIR McMILLAN

Voter background and turnout, 1999

out to vote. Previous CSDS research has shown that there is a participatory upsurge in the 1990s, as citizens from the lower orders enter the political arena. Similarly, the gap between the turnout in the general constituencies and the reserved (S.T.) constituencies has also narrowed. In 1977 the gap was 12.9 per cent, which by 1998 had come down to just 2.3 per cent. The same level was maintained in the 1999 election.

There is a strong age effect at play. The data show that voting seems to be mainly a middle aged activity, with both the young and the old falling well short of the national average.

Men are more likely to vote than women. The biggest differential is found between urban and rural respondents, where the turnout for town and city dwellers is 4.7 percentage points lower than the average, and 7.2 percentage points lower than in the case of rural voters. The same conclusion emerges from an analysis of turnout by the urban or rural nature of constituencies. Since the mid-1980s, the rural constituencies have overtaken the urban ones in the matter of turnout. The gap increased this year from about 6 percentage points to 9 percentage points, as the urban centres recorded a turnout of 51.6 per cent compared to 60.6 per cent for the entirely rural constituencies.

Surprisingly, education counts for very little in determining whether people vote or not. Figures for both illiterates and graduates are similar here.

Although there is a certain amount of variation in the social profile of those who vote, there is enough evidence to refute one of the commonly held assumptions about electoral participation. Conventional wisdom from the West states that it is the most dominant sections of society, such as the educated, the upper caste, the urban, and the men who are the most likely to vote, as it is they who have the highest stakes in the system. This view is supported by data from many other democracies around the world. However, the case in India seems to indicate the reverse, and India is possibly the only country that upsets the pattern. It is now the lower sections of society that have over taken the elite in this respect. The fact that the most disadvantaged members of society have not become disillusioned with the system and still actively participate in political choice-making proves that the democratic revolution set in motion by universal adult franchise still works. ■

State-wise turnout in Lok Sabha elections, 1991-1999

	1991	1996	1998	1999
Andhra Pradesh	61.4	63.0	66.0	67.6
Arunachal Pradesh	51.3	55.0	59.2	72.4
Assam	75.3	76.5	61.1	76.5

Pondicherry	67.8	77.2	77.2	77.2
All India	56.9	57.9	61.9	60.6

NOW that the final results are available, we have the opportunity to look back at the accuracy and influence of the opinion and exit polls that proliferated during the campaign. The 1999 election brought the science of psephology into the realm of public debate as never before. Although competition over poll forecasting by the media is by now an established feature of the Indian elections, never before have we seen so many polls and so much heat over what they said. The Election Commission's ban, the hearing in the Supreme Court, the subsequent withdrawal of the ban and the Chief Election Commissioner's call for a national debate on this question brought pollstering into public arena.

The debate focussed on two issues although the participants were not always conscious of the fact that these are two independent questions: how reliable are these polls? and, how right is it to allow them during the electoral process? The battle lines were drawn in a rather simple fashion. Those who thought that these polls should be banned said that these were unreliable and *vice versa*. Unfortunately the intervention of the political parties in this debate resulted in a misplaced focus on the motivations of the pollsters rather than any informed debate on the methodology of forecasting. Now that the dust has settled down, perhaps we can look at both these questions less dispassionately.

The verdict on how the various poll forecasts have fared is not difficult to sum up: good on the national aggregates but poor on the State-wise disaggregates. And also, generally less than transparent on their methodology and less than careful in cautioning the public. Any reputable pollster makes it clear that the prediction is subject to error, and that therefore the results cannot be taken as given, even when the poll is conducted at the time and place of voting as in the case of exit polls. But what are we now to make of Narasimha Rao's prediction in the *Times of India* (September 23, 1999) that "the Samajwadi Party (S.P.) may end up as a marginalised force in this election and be relegated to fourth place (in Uttar Pradesh), with its seats in single-digit figures" (it won 26 seats to finish a close second to the BJP) or that the BJP in Madhya Pradesh "is likely to end up with 15 seats" (it won 29). Like him many others could do with some caution.

Exit polls and all that

The two tables here present in summary form some of the forecasts made by pollsters and carried by the media. Table 1 carries those forecasts that confined themselves to national aggregates or at the most zonal break-ups. Most of these were based on pre-poll surveys, although *India Today*'s forecast based on post-poll survey also falls in the same category. Some of the early forecasts based on pre-poll surveys had clearly over-estimated the BJP and allies. Both the *India Today*-Insight poll and the two rounds of the *Outlook*-CMS poll overestimated the BJP and allies by at least 25 seats. It is not clear if this was a mistake on the part of the pollsters or it reflected the mood as it stood then. The predictions brought down their figures for the BJP and allies by the time elections drew closer.

Even when results are not presented as State by State predictions, as in the polls published during the campaign by *India Today*, it is clear from the regional groupings that there was a similar bias, with the prediction for the Southern States underestimating the Congress(I) seats, and for the North over-predicting the number of BJP seats by 21. The *India Today* polls also presented their data in a rather disingenuous manner: not making their estimate of the vote share explicit, but implicitly giving the NDA between 47 and 48 per cent of the vote (it is easy to estimate this, since they claim that the NDA received 49.3 per cent of male votes and 45.4 per cent of female, and we know that slightly more men vote than women). Their suggestion that 19.5 per cent of Muslims were voting for the BJP-led alliance is also extremely suspect. Overall, their prediction is not particularly wide off the mark, but these internal discrepancies suggest that this was more by luck than design.

Table 2 presents the second category of forecasts, which chose to reveal their hand at the State level, and compares it to the final outcome. All the polls in this category except the *Times*-DRS poll are exit polls. It must be noted that this kind of disaggregated forecast of seats is an unusual phenomenon in election forecasting. Pollsters all over the world would be reluctant to make this kind of disaggregated forecast for seats in a first-past-the-post system. The fact of small sample size at the State level and the vagaries of our electoral system in non-bipolar contests makes it a psephological nightmare. The final results have once again proved that the conventional wisdom on this score is not off the mark. Perhaps the pollsters would have been better off not attempting State-wise seat forecast.

In overall terms all the exit poll forecasts except the one carried by *Lokmat* seem to have got the aggregate seats for the BJP alliance within a reasonable margin of error. But it is not clear if it is not the function of a verdict that leaves ample room for

Predictions in respect of major alliances

the errors to cancel each other out. Everyone overestimated the Congress(I) and its allies, while underestimating the rest. The record leaves much to be desired at the State level. The DD-DRS forecast was widely off the mark in Andhra Pradesh, Bihar, Karnataka and of course U.P. The STAR-Insight poll opted for much bigger sample size, the kind one would require to make State-wise forecasts. They must be credited with getting the Andhra Pradesh forecast closer than anyone else did. But big samples did not help them get Bihar, Karnataka, Punjab or U.P. right. As in 1998 when no one predicted the huge change in Tamil Nadu, the pollsters have appeared to have made collective errors which must cast doubt on their methodology. No one appears to have predicted the Congress(I) victory in Karnataka, although the difference in votes was some five per cent, and no one saw how badly the BJP was really doing in U.P. These failures serve to remind us that making disaggregated seat forecast is indeed a very demanding if not an impossible task. None of the pollsters was willing to divulge exactly what methods they used for converting their vote estimates into seats, but the expectation is that some estimate is made of the vote share and distribution in each State, then this estimate is used to make a seats forecast for each State and finally the predicted seats for each State are totalled to get an overall picture. If the overall picture was all that was revealed then the pollsters would be justified in arguing that their model is built to cope with inaccurate forecasts for the individual States. If pollsters are going to predict results on a State by State basis in future, they should re-examine their methodology.

TABLE 3 presents the phase-wise predictions of the DD exit poll and compares it to the phase-wise outcome. As in the case of the State-wise break-up, the forecast does not do very well in terms of the phase-wise break-up. But it needs to be noted that its figures actually underestimated the wave in favour of the BJP and its allies in the first phase of voting. It also overestimated the Congress(I) and its allies in all the phases. Clearly, accusations of manipulating the actual outcome in favour of the BJP combine are hard to substantiate.

NOW to the second question. At the core of the debate about exit and opinion polls is the question of whether they influence voting – after all, if the opinion polls have no effect on how people vote, there is little point in trying to manipulate them. The main argument against the publication of opinion and exit polls is that they create a bandwagon effect, with voters seeing that a party is doing well and adjusting their voting decision. If this were the case we would expect to see some shift in voting patterns in favour of the NDA, front-runner in all these polls, as the election progressed. The contrary hypothesis is that there is an underdog effect – that voters see one party or alliance doing well, and as a result vote against them.

Looking at the election results it is very difficult to distinguish any clear trend which stands out above the fluctuations determined by which States were voting. To look for a clearer picture it is possible to look at individual States in which polling was over a number of phases. Again, there is a problem that the different phases occurred in different regions within the States and so can be expected to show different patterns of voting. In the CSDS post-poll survey, we asked our sample of the electorate whether they had either read or heard of the forecasts based on the opinion or exit polls, and if they said yes, whether it had affected their voting decision.

Of the sample of over 9,000 electors some 9 per cent said that they had read about the polls, and 21 per cent that they had heard about them. It is interesting to note that the polls respondents who did know about the polls were more likely to vote for the NDA, a consequence of the BJP alliance having supporters with more access to the media and a higher educational profile. The pattern of responses shows little variation across the polling phases, slightly higher in the first two phases and the last phase, and lower in the third and fourth phases. Again, it is hard to make much of the phase-wise pattern because it is so dependent on which part of the country the polling was taking place – the first and second phases include the highly literate Southern States, the third and fourth phases were largely in U.P., Orissa and Bihar where exposure to the media is limited, and the final phase was dominated by West Bengal, again where literacy and media exposure are high. What is apparent is that the cacophony of polling analysis and debate during the polling did not reach out to where the voting was actually going on, and throughout the election most voters were unaware of the polls.

Of those who had heard about the opinion polls, 15 per cent said that their voting decision had been influenced by them. This figure, just over three per cent of the total in our survey, is potentially extremely politically significant – a shift in votes of this magnitude could have completely changed the outcome of the election. The proportion of those who were influenced by the polls also increased slightly in the last three phases, suggesting that the exit polls from those States voting early in the election could have influenced those voting later on. But there does not seem to be any clear systematic effect. People who said that they were influenced by the polls were more likely to have voted for the NDA, but this appears to be because the NDA voters are more likely to have heard about the polls. And when we compared the voting decisions of this group with how they said they had voted in the last election, the responses suggested that there were only a very small proportion who had actually changed their voting behaviour. This does not mean that there was actually no effect: they may have been intending to switch sides but been persuaded not to, after reading an opinion poll, but suggests that there is not any great systematic effect that could change the overall outcome.

A further way that the opinion polls published during the election could change voting is by encouraging tactical voting. The results from U.P. are a startling reminder of the fact that in a first-past-the-post electoral system how the votes are distributed is almost as important as the sheer numbers. In 1998 the BJP and allies won 71 per cent of the seats in the State with just 37 per cent of the vote: this year it won just 37 per cent of the seats with 31 per cent vote. The S.P. saw its vote fall by four per cent from last year, but picked up six more seats, and the BSP picked up 10 more seats from just a two per cent rise in vote share. It seems that the anti-BJP voters shifted to whichever party put up the strongest fight in each particular constituency, and with the Opposition less divided the BJP suffered significant losses. Did the opinion polls help make voters who wished to vote out the BJP decide whom to vote for? The evidence is not clear, and the main problem is that State-wise opinion polls do not help someone who wants to vote tactically very much because the decision depends on the voting patterns at the constituency level rather than at the State level. The idea that the pro-NDA polls solidified the anti-BJP vote in U.P. cannot be given any support.

Inaccurate opinion and exit polls can hardly help the democratic process. And when the voting process is dragged out over such a long time, a decision the Election Commission must surely regret, the uneasy sensation that the fairness of the election can be undermined arises. But the evidence from the 1999 election shows that the voter is more likely to be influenced by the regional dynamics of political power than national issues and media punditry. ■

Testing times

The U.S. Senate is holding out on the ratification of the Comprehensive Test Ban Treaty, while India seems set to sign on.

JOHN CHERIAN

IN the last couple of weeks, the Clinton administration has been mounting pressure on the governments of India and Pakistan to sign the Comprehensive Test Ban Treaty (CTBT). The United Nations also got into the act in the last week of September when Secretary-General Kofi Annan invited India to attend the Conference on Facilitating the Entry into Force of the CTBT. The conference was held in Vienna from October 6 to 8 at the request of the states that have ratified the treaty. Its stated purpose was to consider and decide on measures, consistent with international law, to facilitate the early Entry into Force of the CTBT.

Until September 1999, 154 states had signed and 45 had ratified the CTBT. Opened for signature on September 24, 1996, the treaty will enter into force only when it is ratified by all the 44 nuclear-capable states listed in it. So far 41 of these have signed it and 21 have deposited the instruments of ratification with the UN Secretary General.

The Indian government politely declined Annan's invitation. Indian officials emphasised the fact that only 21 countries had ratified the CTBT. The Bharatiya Janata Party-led government anyway has indicated that it has no significant objections to signing it. Brajesh Mishra, National Security Adviser and Principal Secretary to the Prime Minister, went to the extent of indicating on television that signing the CTBT would be in India's interests. He claimed that enough "expertise" had been gained from the nuclear explosions at Pokhran. According to Mishra, all that was now needed was a national consensus on the matter and 'a proper environment'. After the election victory, Prime Minister Atal Behari Vajpayee said that India should be ready for 'hard decisions' in the larger interests of the country. Signing the CTBT is likely to be one of such decisions to be taken early.

One reason why India may go ahead and sign the CTBT is that it will ensure that President Bill Clinton's proposed visit to New Delhi early next year will take place as per schedule. In the first week of October, U.S. Assistant Secretary of State Karl Inderfurth said in Washington that Clinton 'made it clear that he intends to travel to South Asia soon'. Inderfurth expressed the hope that "there will be no further unexpected occurrences between now and early next year" so that Clinton could go ahead with his proposed visit to India, Pakistan and Bangladesh. Significantly, Inderfurth said that the U.S. had "received clear signals from India's National Security Adviser that India is moving towards signature on CTBT. We are hopeful that Pakistan would then sign as well."

INDICATIONS are that the Indian government does not seek to exploit the opportunity offered by the Republican Party dominated U.S. Senate's refusal to ratify the CTBT. Ratification by the Senate would have allowed the Clinton administration to occupy the moral high ground. Now, owing to the standoff in the Senate, there is a real threat of the CTBT itself unravelling. While arguing for Senate ratification of the treaty Secretary of State Madeleine Albright said that the CTBT's prohibition on nuclear explosives would 'have the practical effect of constraining China and Russia from developing with high confidence more advanced and dangerous weapons". Besides, Albright emphasised, it was the commitment of the nuclear weapons states expressed at the 1995 Nuclear Non-Proliferation Treaty (NPT) review conference – to conclude a CTBT in 1996, which was instrumental in achieving an indefinite and unconditional extension of the treaty.

U.S. Defence Secretary William Cohen (left) and Gen. Henry Shelton, Chairman of the Joint Chiefs of Staff. Owing to the stand-off in the U.S. Senate, there is a real threat of the CTBT itself unravelling.

Of secrets and sensors

A MYSTERY unfolded on May 13, 1998 when India announced that it had set off a pair of nuclear blasts. The global network of seismometers – sensitive devices buried deep in the earth to monitor shock waves from distant earthquakes and blasts – recorded no faint rumbles emanating from India's underground test site in Pokhran in Rajasthan. There was no blip, no twitch of pen or meter suggesting that the awesome power of the atom had just been released.

Had India faked the explosive tests? Were they flops? Or had small blasts eluded the eavesdroppers? And if they had, what did that mean for a global ban on nuclear blasts in which compliance was to be assiduously verified? These questions have a strong bearing on the bruising battle in Washington over whether the Senate should bless the United States' participation in the Comprehensive Test Ban Treaty (CTBT).

Friends and foes have engaged in a war of words, with arms control experts from the Central Intelligence Agency (CIA) and the Department of Energy warning Congress that the U.S. would have a hard time knowing if foreign states were secretly setting off small blasts. But two of the world's top groups of earth scientists weighed in heavily on the side of the backers of the treaty, saying technology could easily police the ban.

The test ban supporters say that even current sensors are up to the job and that the network called for by the treaty will be even better. Moreover, this official network will be augmented by the rapid global spread of all kinds of private sensors, including seismometers and spy satellites. All this, treaty advocates say, will make it hard to hide all but the smallest blasts.

Though opponents of the treaty point to the Indian claim as a test-ban embarrassment, the emerging consensus among nuclear experts is that what failed that day was not global monitoring gear but the pair of explosive devices.

"The Indian claims were exaggerated," said George Perkovich, author of *India's Nuclear Bomb* (University of California), to be published soon. The problems were so great, he added, that India had another nuclear device in the ground that it left undetonated.

The emerging consensus among nuclear experts is that what failed on May 13, 1998 was not global monitoring gear but the pair of explosive devices.

To police the globe for clandestine blasts, the nuclear test ban treaty calls for 321 monitoring stations – 170 to detect underground shock waves, 80 to sniff the air for telltale radioactivity, 60 to listen for revealing sounds and 11 to track undersea booms.

"If a suspicious occurrence cannot be resolved through consultation and clarification," says a treaty document, "each state party has the right to request an on-site inspection." This array of monitoring devices should be be able to detect nuclear blasts as small as a kilotonne, or equal to 1,000 tonnes of high explosives. On recording gear for earthquakes, experts say, such a blast would measure about magnitude 4, like a minor tremor.

In the bomb business, 1,000 tonnes is indisputably small. The weapon that levelled Hiroshima had a power of about 15,000 tonnes, and the first hydrogen bomb was about 700 times as powerful, enough to cause the Pacific isle of Elugelab, one mile in diameter, to vanish.

The American Geophysical Union and the Seismological Society of America, in a joint statement released recently in Washington, said that when arrays of sensors called for by the treaty are all switched on worldwide, "no nation could rely upon successfully concealing a programme of nuclear testing, even at low yields" in which blasts are

Inderfurth went on to say that if the Senate failed to ratify the CTBT it would produce "negative consequences, jeopardising our interests in South Asia". In his speech at Johns Hopkins University on October 6, he said that since the 1998 nuclear tests in South Asia the U.S. had made "substantial progress on the nuclear testing aspect of our dialogue with India and Pakistan". Both countries have declared moratoria on further testing. "Rejection of the CTBT may cause them to question the wisdom of their moratoria, if not now, then later," said Inderfurth.

As of now, the Clinton administration faces an uphill task in its efforts to convince the Republican Right on the question of ratification. In fact, many Republican Senators plan to go to the other extreme of demanding an immediate vote so that the CTBT can be formally rejected. Ratification of the treaty has been a cornerstone of the Clinton Presidency. If it fails to convince Congress on this issue, it will be a public relations disaster for the White House and could trigger the unravelling of the whole edifice of non-proliferation which the West has so painstakingly put up.

Clinton is making a last-ditch effort to convince the Senate about the urgency of ratifying the CTBT. General Henry Shelton, Chairman of the U.S. Joint Chiefs of Staff, said that the American military establishment unanimously favoured ratification. But the die-hard opponents of the CTBT organised a letter from six former Defence Secretaries, opposing the CTBT on the ground that it would "reduce the credibility of America's nuclear deterrent". With both sides hardening their stands, there is a growing likelihood that the vote on the CTBT would be delayed indefinitely.

Trent Lott, the Senate Majority Leader, said that a vote on ratification could be cancelled only if Clinton gave an assurance that he would not seek a vote on the treaty before he left office in January 2001. If the CTBT is put to vote in the Senate, it is doomed to defeat as the Democrats have attracted very few Republicans to their side on this issue. Both Republican and Democratic Senators are urging Clinton to shelve the CTBT rather than face the embarrassment of seeing it rejected by the Senate.

Clinton is expected to make one more effort to bring the Senate round to his point of view. Trying to bail him out were his fellow statesmen and close allies. Tony Blair of Britain, Gerhard Schroeder of Germany and Jacques Chirac of France jointly wrote an article in *The New York Times* on October 8 urging the U.S. Senate to ratify the treaty. "Rejection of the treaty in the U.S. Senate would remove the pressure from other states still hesitating about whether to ratify it," they wrote.

ery small.

Gregory E. van der Vink, an earth scientist at Princeton University who helped draft the statement, said existing instruments already exceed the treaty's monitoring goals. In fact, for such places as the underground test sites in China and Russia, Van der Vink added, the sensitivity of existing seismic detectors is already up to hundreds of times better than necessary.

The scientists said that the treaty's own 170 seismic stations will be augmented and strengthened by thousands of private ones run by universities and research institutions worldwide.

Most private seismic sensors track earthquakes. But for decades such detectors have also been used for monitoring arms control treaties and nuclear blasts, whose characteristic signatures in most cases are easy to distinguish. "We've had 40 years to work on this and we've done quite well," Jeffrey Park, a Yale university geologist who helped draft the scientists' statement, said.

The scientists cautioned that no verification system can be perfect. But they added that treaty monitoring would be good enough to detect all but the most egregious cheating, which would require not only great cost and skill but would probably be exposed anyway by satellite photographs or atmospheric sampling. Some of the trickiest spots to monitor are old underground nuclear test areas – like Novaya Zemlya in Russia's northern archipelago, Lop Nor in China's northwestern desert and the Nevada test site in the American West – where the treaty allows non-nuclear tests, including the detonation of conventional explosives to compress nuclear fuels short of firing.

Such tests are considered vital for checking weapon safety and reliability. Although it can be hard to distinguish their seismic effects from those of very small nuclear blasts, nuclear blasts emit certain radioactive isotopes of xenon, a colourless, odourless, highly unreactive gas – gas that invariably percolates up through the ground. Sniffing for such gas is to be a main job of atmospheric surveillance.

Lawrence Turnbull, a top CIA seismologist, has long warned of clever ways to evade detection of nuclear explosions. In 1995, he briefed industry executives on how foes could use large mines or caves for small clandestine blasts. The surrounding air would soften the bomb's shock waves, in theory making them so diminutive as to be undetectable.

But Lynn R. Sykes, a seismologist at the Lamont-Doherty Earth Observatory of Columbia University and an authority on detecting nuclear blasts, dismissed the CIA's fears as groundless. "Testing in a cavity is portrayed as easy, when in fact it is exceedingly difficult," he said. And experts say even deft clandestine tests would still emit telltale xenon gas, in theory allowing the cheats to be exposed.

What of small blasts that somehow managed to escape detection? After the Cold War, official disclosures made clear that the superpowers had occasionally done very small tests underground. Most of these small explosions – all below 1,000 tonnes – were done after the superpowers had mastered the art of producing big blasts. The intentional making of tiny nuclear explosions can be difficult for a novice.

"The chance of a beginner doing anything under a kilotonne is zilch," said Dr. Ray E. Kidder, a scientist at the Lawrence Livermore National Laboratory in California and a former bomb designer. Besides, he noted, there would be strong incentive to progress to larger blasts more useful for bomb design.

But Frank J. Gaffney, Jr., a former Pentagon official in the Reagan administration who now directs the Centre for Security Policy, a private Washington group that opposes the test ban, said tests below 1,000 tonnes were sufficient to investigate some aspects of the atomic triggers used to ignite hydrogen bombs.

"That can be very valuable militarily," he said in an interview. "And from such a successful test you can extrapolate." Small blasts, he added, echoing the view of some intelligence officials, "can escape detection." Gaffney concluded that the treaty is a bad thing. "Our hands are tied," he said. "And everybody else does what they want." ■

New York Times Service

They also said that such rejection would "give great encouragement to proliferators. Rejection would also expose a fundamental divergence within the North Atlantic Treaty Organisation". The European leaders believe that ratification of the treaty by Washington will lead to similar moves in Moscow and Beijing which in turn will put pressure on India and Pakistan to sign it. As things stand, only about half the states whose signatures are needed for entry into force have done so.

THE Clinton administration's dilemma on the CTBT should have been welcome news to the Indian government. But the BJP-led government seems to have given a commitment to the administration that it would sign the CTBT, regardless of its fate in the U.S. Senate. Signing the CTBT, Indian officials feel, could pave the way for an "unprecedented relationship" with the U.S. Indian officials say that signing the treaty is a good idea irrespective of its fate in the U.S. and elsewhere. People who push for a close strategic relationship with the U.S. argue that since India has made a commitment that it would desist from further nuclear testing, signing the CTBT is of no great significance and will not hurt its interests.

But the Vajpayee government may find it difficult to create a "national consensus" on signing the CTBT. Addressing the U.N. General Assembly, External Affairs Minister Jaswant Singh said that signing the CTBT "requires the creation of a positive environment as we work towards the widest possible consensus domestically". With the U.S. Senate refusing to play ball with Clinton, a "positive international environment" is absent. Besides, a national consensus on the issue has never been there. Prakash Karat, Polit Bureau member of the Communist Party of India (Marxist), said that India's decision taken in 1996 not to sign the CTBT was the correct one. "That decision should not now be reversed. The reasons for not signing are still valid today," he said. According to him, the Vajpayee government had given a commitment to the Clinton administration last year that it would sign the CTBT. "But now that a new government has taken over, Vajpayee should discuss with all political parties what it intends to do on the CTBT and seek their opinion on the matter." ■

The BJP-led government seems to have given a commitment to the U.S. administration that it would sign the CTBT, regardless of its fate in the Senate.

The final verdict

The Supreme Court reconfirms the death sentence awarded to four accused persons in the Rajiv Gandhi assassination case.

T S SUBRAMANIAN

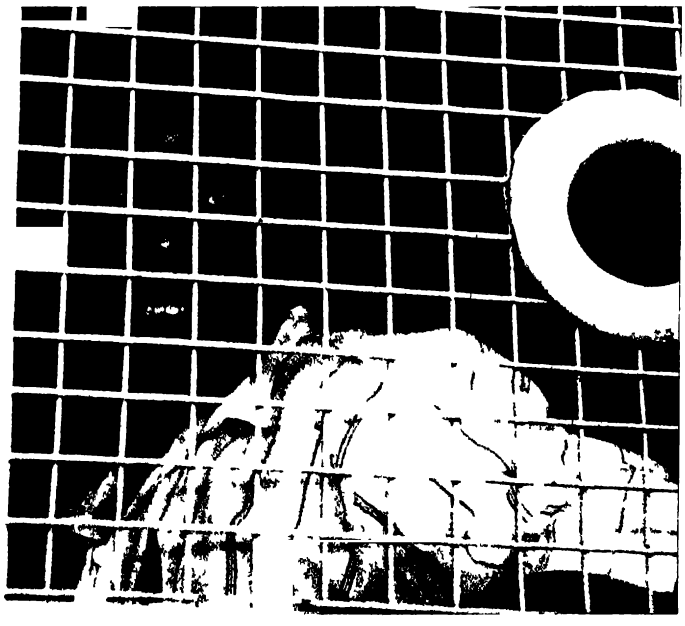
BRINGING the curtain down on the Rajiv Gandhi assassination case, the Supreme Court on October 8 reconfirmed the death sentence awarded to Nalini, Santhan, Murugan and G Perarivalan alias Arivu. A three-Judge Bench comprising Justice K T Thomas, Justice D P Wadhwa and Justice Syed Shah Mohammed Quadri dismissed the petitions, by a two-one majority, of the four accused seeking a review of its judgment of May 11 this year sentencing them to death for their participation in the conspiracy to murder former Prime Minister Rajiv Gandhi (*Frontline*, June 4, 1999). They had been sentenced to death under Section 120 B (conspiracy) read with Section 320 (murder) of the Indian Penal Code (IPC).

Justice Thomas, who gave the dissenting judgment, said Nalini's review petition "should be allowed and her sentence should be altered to imprisonment for life". (He had given a similar dissenting judgment with regard to Nalini on May 11.)

The three Judges rejected a petition from the Union of India, through the Central Bureau of Investigation (CBI), to review its May 11 conclusion that all the 26 accused in the case had committed no offence under the Terrorist and Disruptive Activities (Prevention) Act, 1987, or TADA.

Senior advocate N Natarajan, who appeared for Nalini, Murugan, Santhan and Perarivalan, said the four accused would seek presidential mercy; they would also move the Supreme Court to stay the death sentence until the President acted on their mercy petitions, he added. The four prisoners are lodged in Central Prison, Vellore. Nalini is in the women's prison.

RAJIV GANDHI was assassinated on May 21, 1991 at Sriperumbudur, about 50 km from Chennai, by belt bomb assassin Dhanu, who belonged to the Liberation Tigers of Tamil Eelam (LTTE), a few minutes before he was to address an election meeting. A Special Investigation Team (SIT) of the CBI was constituted to crack the case with D R Karthikeyan (he went on to become CBI's Director) as its head. After a meticulous investigation, the SIT filed the charge-sheet on May 20, 1992 before the Designated Court at Poonamallee near Chennai. The charge-sheet named 41 persons as the accused and said that the LTTE was behind the assassination. Of the 41, three persons were "absconding": the LTTE's chief V Prabakaran, its intelligence wing chief Pottu Amman, and deputy leader of its women's intelligence wing Akila. Twelve of the accused including Dhanu and Sivarajan, who was the chief of the assassination squad, and Subha, a member, had died by the time the case reached the trial stage. The remaining 26 stood trial. Nalini's mother Padma, and brother Bhagyanathan were among them. On January 28, 1998 Designated Judge V Navaneetham awarded death sentence to all the 26 accused. All of them went in appeal to the Supreme Court.



The apex court disposed of the appeals on May 11. Justice Thomas, Justice Wadhwa and Justice Quadri held that it was the LTTE that was responsible for the killing. They confirmed the death sentence awarded to Nalini, Santhan, Murugan and Perarivalan.

Justice Thomas, in a dissenting judgment with regard to Nalini, said: "One gets the impression, on reading her confession, that she was led into the conspiracy by playing on her feminine sentiments. She became an obedient participant without doing any dominating role. She was persistently brainwashed by A-3 (Murugan) who became her husband and then the father of her child. She realised only at Sriperumbudur that Dhanu was going to kill Rajiv Gandhi. But she would not have dared to retreat from the scene because she was tucked into the tentacles of the conspiracy. She knew how Sivarasan and Santhan had liquidated those who did not stand by them."

Justice Thomas said it could not be overlooked that "she is the mother of a little female child who would not have experienced maternal cuddling as that little one was born in captivity". "Since the death sentence had been confirmed on the father (Murugan) and since the child had to be saved from "imposed orphanhood", Justice Thomas said, "the sentence passed on her is altered to one of imprisonment for life".

The death sentences given to Robert Payas, Jayakumar and Ravichandran by the trial court were also "altered" to life imprisonment.

Of the remaining 19, the three Judges cleared 18 of taking part in the conspiracy. Although the

SRIDHARAN

Murugan, one of the four on whom the death sentence has been reconfirmed.

udges confirmed the entences under sections f the Arms Act, the xplosive Substances Act, the Passport Act and on, the 18 persons vere released from rison because they had erved out their terms S hanmugavadivelu, who was charged only under TADA, was acquitted Thus, 19 of the appellants were freed

Nalini, also on death row.

An important feature of the May 11 judgment was that Justices Thomas, Wadhwa and Quadri set aside the conviction and sentence by Designated Judge Navaneetham under Sections 3(3), 3(4) and 5 of TADA and acquitted all the 26 of charges under this Act This signalled a victory for Natarajan

Nalini, Santhan, Murugan and Perarivalan filed petitions seeking a review of the death sentences The Union of India, through the CBI, also filed petitions seeking a review of the finding that the offence was not committed by the accused with an intent to strike terror in the people or any section of the people, and that on that account no offence under Section 3(3) of TADA had been made out

Normally, a review petition in the Supreme Court is heard by the same Judges who gave the original judgment Since the Judges had already heard the case fully and thoroughly, they do not give the right of audience to review petitioners However, as an exceptional case, Justices Thomas, Wadhwa and Quadri thought it fit to allow arguments by both the parties So arguments were advanced in the open court on September 28

In his main order on October 8, Justice Wadhwa said advocate Natarajan did not challenge the guilt of the petitioners but sought a review on the question of award of the death sentence. Natarajan said the evidence that had been led to prove the charges under TADA could not be used while appreciating evidence regarding commission of offences under the IPC He also pointed out certain errors in the judgment in recording the names of the accused, which, he said, could have a bearing on the award of the sentence Natarajan contended that the planners and perpetrators of the crime were dead, three of the seven accused had been sentenced to life imprisonment, and the remaining four could also be given life imprisonment

Additional Solicitor-General for India Altaf Ahmed, who questioned the maintainability of the review petitions, said that no error that could have led to a miscarriage of justice had been pointed out Only after examining the role of the accused from all angles did the Judges confirm the death sentences on the four, he contended

Justice Wadhwa said it was difficult to accept Natarajan's arguments The errors pointed out by Natarajan were not even contradictions, and they were inconsequential, he observed After examining the role of each of the accused on the basis of evidence on record, the roles of the four were found to be different from those of the three others, who were earlier sentenced to life imprisonment

In the review petitions filed by the Union of India, Attorney-General Soli J Sorabjee said that relevant considerations had not been taken into account to hold that the accused did not commit the offence with the intent to strike terror in the people or any section of the people Sorabjee submitted that in the present case where several innocent persons had been killed, the impression could be gathered that the accused had committed the crime with the intent to strike terror in the people or any section of the people

Natarajan replied that *mens rea* was vital in a criminal trial and that the three judges had concluded on evidence that the accused did not commit the crime with the intention to strike terror in people or any section of people He agreed that if the state's view was accepted, then the contingency might arise that all the other accused, acquitted of charges under TADA and other offences, were likely to get at least life imprisonment

In his main order, Justice Wadhwa said We do not think Mr Sorabjee is right in his submission '

IN his separate order, Justice Thomas said he had a dissent' with regard to sentencing Nalini The Constitution Bench in *Bachan Singh vs State of Punjab* (1980) had narrowed down the scope for awarding the death sentence to 'the rarest of rare cases where the lesser alternative of life imprisonment was unquestionably foreclosed Of three Judges, when one Judge favoured life imprisonment to death penalty for any accused, 'I think it would be a proper premise for the Bench to review the order of sentence of death in respect of that accused That fact was sufficient to treat the case as not falling within the narrowed ambit of "rarest of rare cases"

N SRIDHARAN

Chinna Santhan (left) and Perarivalan (right) sentenced to death with Ravichandran, who has been awarded life imprisonment.

Natarajan, Advocates N Chandrasekaran, Sunder Mohan and V Ramasubramanian appeared for the accused E Jacob R Daniel, Deputy Legal Adviser, CBI, Chennai, assisted Soli Sorabjee in his arguments Altaf Ahmed opposed the plea to reduce the death sentence on the four accused to life imprison-

Monsanto's retreat

THE recent announcement by the gene giant Monsanto that it would not commercialise its sterile seed technology, popularly called the terminator technology, has been received with scepticism by Third World governments, farmers organisations, non government organisations, and scientists, who have waged a campaign against it.

In an open letter to Gordon Conway, the president of the Rockefeller Foundation, Monsanto's chief executive officer Robert B Shapiro, said that the company was making a public commitment not to commercialise sterile seed technologies, such as the one dubbed terminator. He said this was being done after the company undertook a thorough, independent review of gene protection systems following the concerns expressed over the potential impact of gene protection systems in developing countries and after consulting a number of international experts and development leaders. Monsanto's decision follows that of the United Kingdom based Astra/Zeneca which announced this June that it would not commercialise seed sterility technology.

A specimen of Bollgard Bt, the genetically altered cotton variety from Monsanto.

Monsanto has been forced to make this public retreat owing to the world wide revulsion generated against a technology that cuts at the root of sustainable agriculture, food security and environmental health. The Company finally realised that Terminator will never win public acceptance, said Hope Shand, Research Director, Rural Advancement Foundation International (RAFI). He said (Terminator) has become synonymous with corporate greed, and it was met with intense opposition all over the world. (RAFI is the Canada based NGO that first uncovered the patent for this technology acquired by Delta and Pine Land, a company Monsanto has acquired.)

However, as RAFI was quick to point out, Monsanto has said that it will continue with research into another track of the terminator technology that RAFI has called "Traitor" technology. Here the specific genes responsible for value-added biotechnology traits can be activated or deactivated. "The technology for seed sterilisation and trait control are on the same trajectory, said Pat Mooney, RAFI's Executive Director, in his reaction to Monsanto's announcement. At some point, either through a corporate takeover or a change in management, trait control could easily be transformed back into genetic seed sterilisation."

Monsanto's pledge has not convinced those opposed to the company's presence in India. "Looking at their past record they are not honest and may smuggle in sterile seeds," M D Nanjundaswamy, the president of the Karnataka Rajya Raitha Sangha told *Frontline*. 'We would like the Government to strengthen seed laws and quarantine systems."

Concerns have been expressed by farmers' organisations, scientists, NGOs and sections of the media, over Monsanto's expanding presence in India, and in particular its agreement with the Indian Institute of Science, India's premier centre of public-funded research ■

Parvathi Menon

Hostage drama in Bangkok

IN early October, five heavily armed gunmen calling themselves the vanguard of the "Vigorous Burmese Student Warriors staged a 25 hour seizure of the Myanmarese embassy in Bangkok after storming into the premises. The hitherto unknown group held 89 persons hostage, threatened to kill them, resorted to gunfire in a random show of force, and finally negotiated with the Thai authorities their safe passage by helicopter before releasing all the captives unharmed.

Apart from embassy officials and their family members who live in the premises, people who had gone to the consular office to collect visas were taken captive. The gunmen, disowned by Aung San Suu Kyi's National League for Democracy (NLD) despite her sympathy for their stated cause and by the various groups of Myanmarese dissident exiles in Thailand made unrealistic demands – a dialogue between Myanmar's military junta and Suu Kyi, the release of political prisoners by Yangon and the constitution of a parliament. Thailand, responsible for the inviolability of the embassy, was in no position to address any of the demands. Nor did it denounce the gunmen as terrorists keeping the safety of the hostages in mind. In the end, the captors settled for a helicopter ride to the Thai-Myanmar border and a guaranteed escape into the jungles there.

The gunmen passed through a safe air corridor and Thailand's Deputy Foreign Minister Sukhumbhand Paribatra flew with them as a proxy hostage even as the last of the captives were released. This soured ties between Thailand and Myanmar even as the captors escaped unimpeded. A top Myanmarese Minister, Brigadier General David Abel, indicated to this correspondent during the hostage crisis that Yangon would not regard Suu Kyi's NLD as a spent force despite its failure to set off a much-advertised big bang of protest for democracy on September 9.

The Bangkok episode has given Myanmar's pro-democracy movement a new and qualitatively less endearing dimension. The question now is whether it presages a new trend of violence or whether it was just a fleeting aberration ■

How to plan a happy future for your child?

By a panel of experts

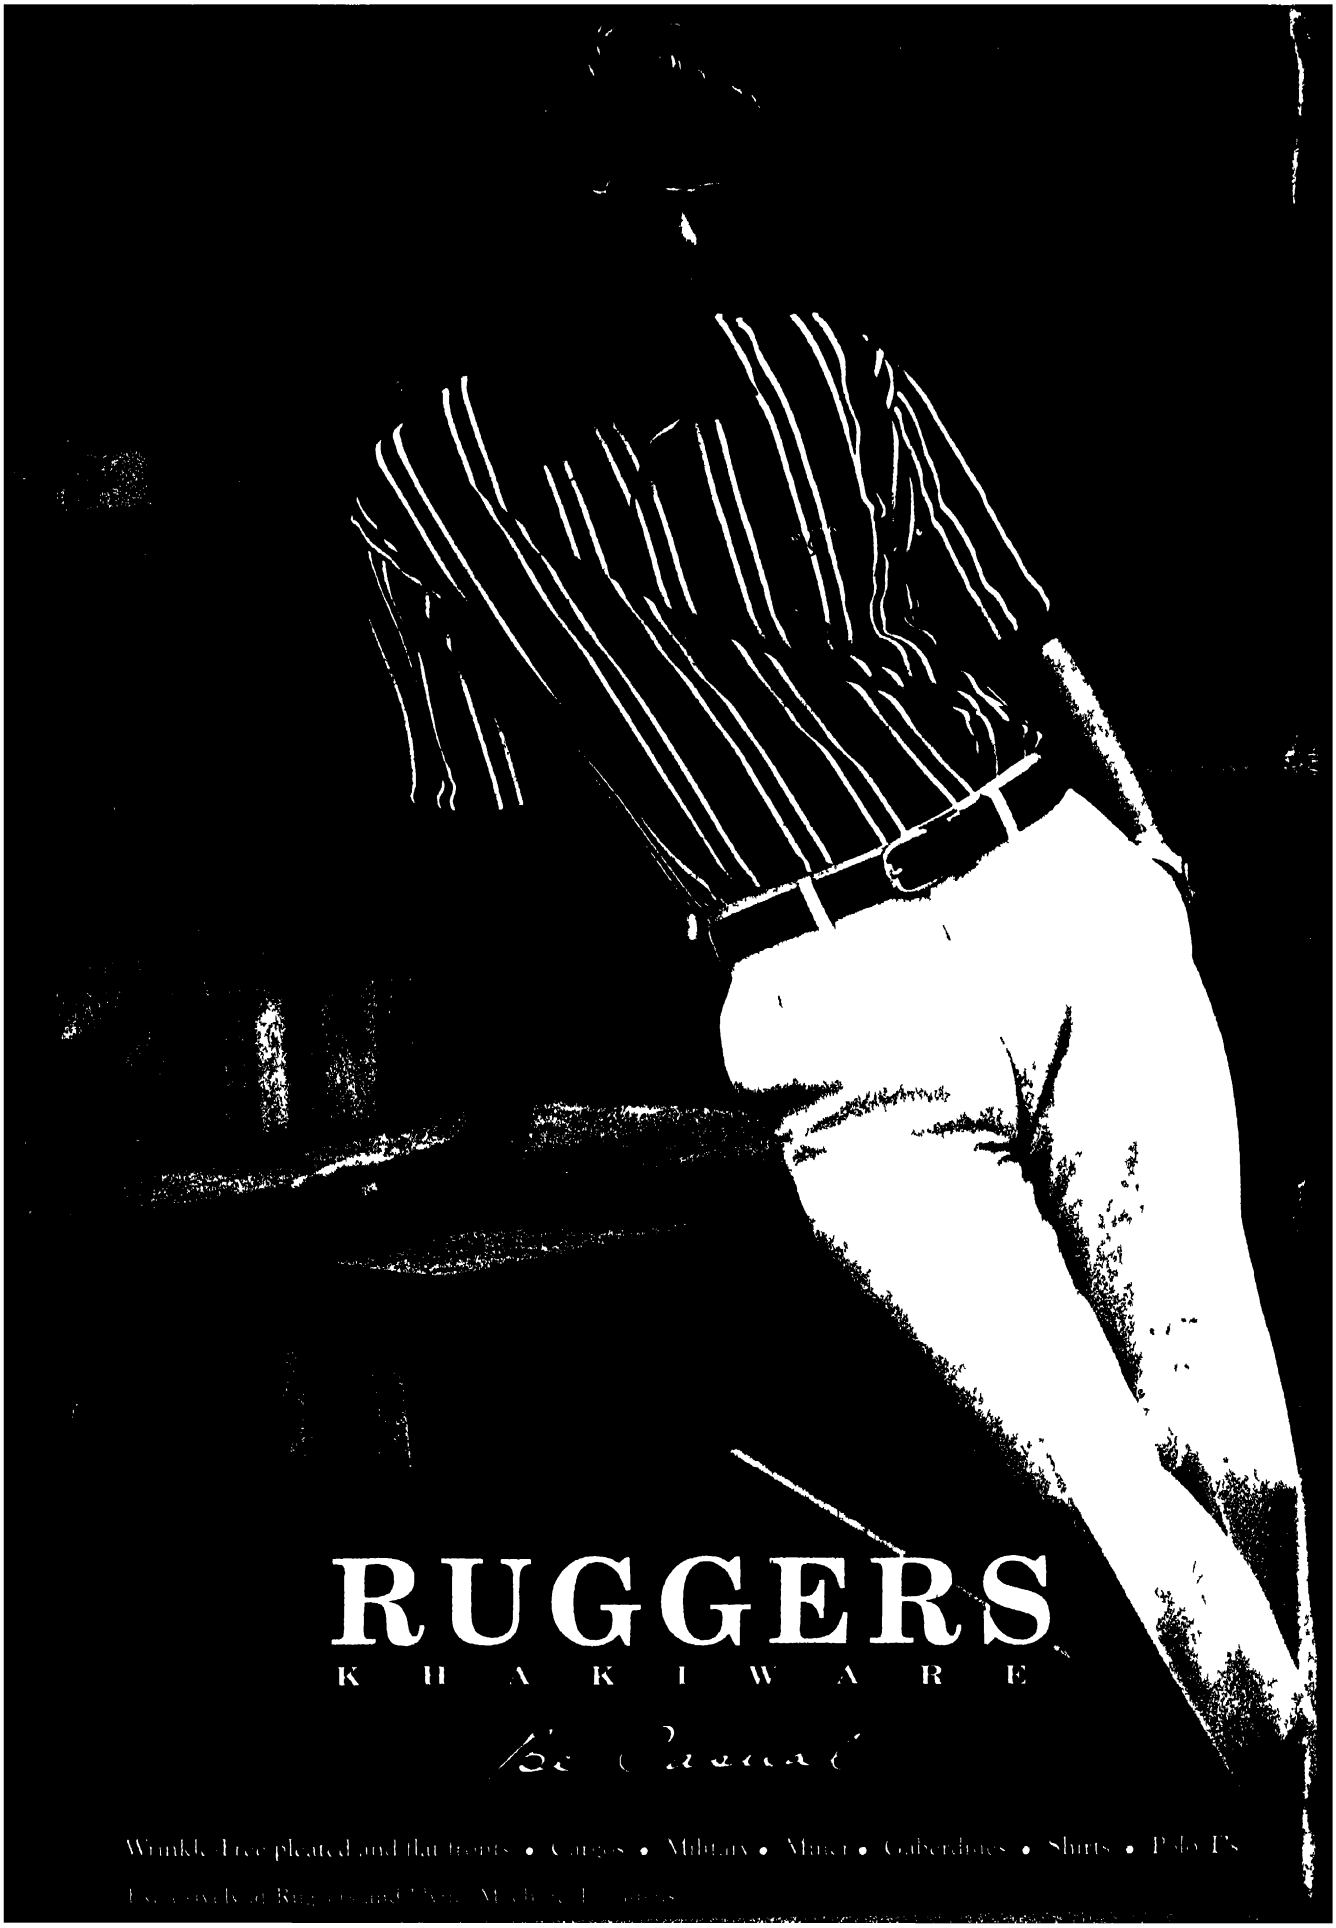
Today we shall look at how you can plan for your child's happy future. The sole major hurdle to financial planning for your child (below 18 years of age) is the provision of clubbing of the minor's income with yours. Clubbing means that any income arising or occurring to your child, including stepchild or adopted child, is included in the total income of that parent whose income is higher.

What are the provisions you can benefit from?

1. Under Sec. 64(1A) basic exemption of Rs.1500 p a. is available for each child.
2. The income of a child totally blind, mentally retarded or physically handicapped as specified under Sec. 80U is exempted from clubbing.
3. Under Sec. 10 interest from Public Provident Fund (P.P.F), Relief Bonds(Rahat Patra), specified tax free bonds, share dividends etc. is tax free to all. Such income of a child is not clubbed.
4. The income of your child arising form manual work or through the application of its skill and talent is not clubbed with your income.

How can you plan your child's future?

1. Open a separate Bank Account for each child whose name will be first, with joint names of parents who will operate the account on Either/ Survivor basis. Make sure to note where the money has been received, to ascertain whether the amount is taxable or not.
2. Develop capital for your child through gifts. Invest in shares or put it in his/ her P.P.F. account. (Gift Tax on gifts given after 1st October 1998 is abolished.)
3. Establish your child's ownership of shares by paying for them from his/her Bank account. Get the share-broker's bill in your child's name The dividend for such shares will be in the name of the parent whose name appears first on the share certificate. Deposit such dividends in your child's bank account, since the account has also the parents' joint name(s).
4. Open a P.P.F. Account for child. Under Sec. 88, the parents will get the benefit of tax



rebate of 20% on their contributions to this account, subject to a maximum of Rs. 60,000 p.a. per individual in aggregate (the total of contributions to Companies' P.F., P.P.F., N.S.C., Life Insurance Premium etc.). This apart, every deposit of Rs. 1,000 p.a. in a P.P.F. account grows to Rs. 40,000 at the end of 15 years.

5. For a child, insurance is purposeless. Ignore the lure of low premium and the emotional appeal to "do something for your child" through insurance.
6. The law does not require submission of Income Tax Return unless the basic exemption limit of Rs. 50,000 p.a. is crossed. You have to declare your child's income in the I.T. return of that parent whose income is higher. Deductions under Sec. 80L up to a maximum of Rs. 15000 p.a. in respect of eligible incomes from bank deposits, NSC, UTI and Mutual Fund dividends etc. are available from the incomes of parent and child. Nevertheless, once your child reaches 18 years of age do submit a separate I.T. return for him/her, to establish the major child's capital and source of income.
7. Plan for your child's thread ceremony, education, marriage, start - in - life etc. through either Bank/ Post Office deposits/ Insurance policy (where the sum assured would be paid back to the family in the event of untimely demise of the insured parent)/other long term instruments.

The planning for your child's future must ensure the availability of funds at the right time and make adequate provision for inflation.

Are you aware of bonds as an investment option?

Part - I

By a panel of experts

Life-cycle financial planning divides your adult life into four phases, identifies objectives typical to each phase and offers matching financial strategies. Adopt those that suit your chosen life-style, life goals, needs and attitude to risk.

The hallmarks of disciplined saving and wise investment are safety, adequate returns, liquidity - for easy encashment, growth - to counter inflation and tax shelter - to reduce your tax-bite.

Consider strategies that have all these hallmarks distributed across them and select a suitable mix.

Phase 1 : Age Group 25 to 30 years

Objective: Funds for an emergency

Maintain about three months' income in Bank Savings, as a constant cash reserve. If you keep very large amounts, inflation will erode your capital.

Objective: Income protection & provision for larger expenses in later life

Your income must be protected to replace the loss of earnings in the event of your disability, untimely demise, or premature retirement.

Insurance Plans that offer periodic return s can, besides protecting your income, meet large cash requirements such as those for your children's education, marriage and augmentation of your retirement income.

Objective : Tax shelters

Take judicious advantage of: i) N.S.C., Units. M.F. etc. for fully tax-exempt incomes under Sec.80L ii) P.P.F., share dividends etc. for fully tax-exempt incomes under Sec.10 iii) P.P.F., L.I.C. premium, N.S.C. - 20% of your contribution (maximum Rs.60,000), is deductible under Sec. 88. iv) Infrastructure bonds. Here, up to Rs.70,000 of your contribution attracts 20% deduction under Sec.88.

Objective : Hedging against inflation

While evaluating all investment products, you must take care to compute the "real" return, net of inflation and tax. Investment in equity-based funds is the safest recommended means of overcoming inflation in the long run.

Phase II : Age Group 31 to 44 years

The four objectives and their accompanying strategies above continue in this phase. In addition, the following three emerge.

Objective: Health insurance

Health Insurance policies of leading insurance providers which also give tax breaks.

Objective: Home ownership provision

Loans from Employers, P.F. and financial institutions. Secure the prepayment of loan (against your untimely demise) with a mortgage redemption policy.

Objective : Development of capital and generation of income for spouse & children.

Give money as gifts to your family. Now that Gift Tax has been abolished, income from gifted amounts invested in shares for spouse and children or deposited in their P.P.F. accounts is tax-free (i.e. not clubbed to your income).

We all desire a comfortable present and a secure future. And you know that proper utilization of your assets now is the only way to attain this goal. For this, financial planning is necessary and action to implement your plan is essential.

Phase III and IV will be discussed next week.

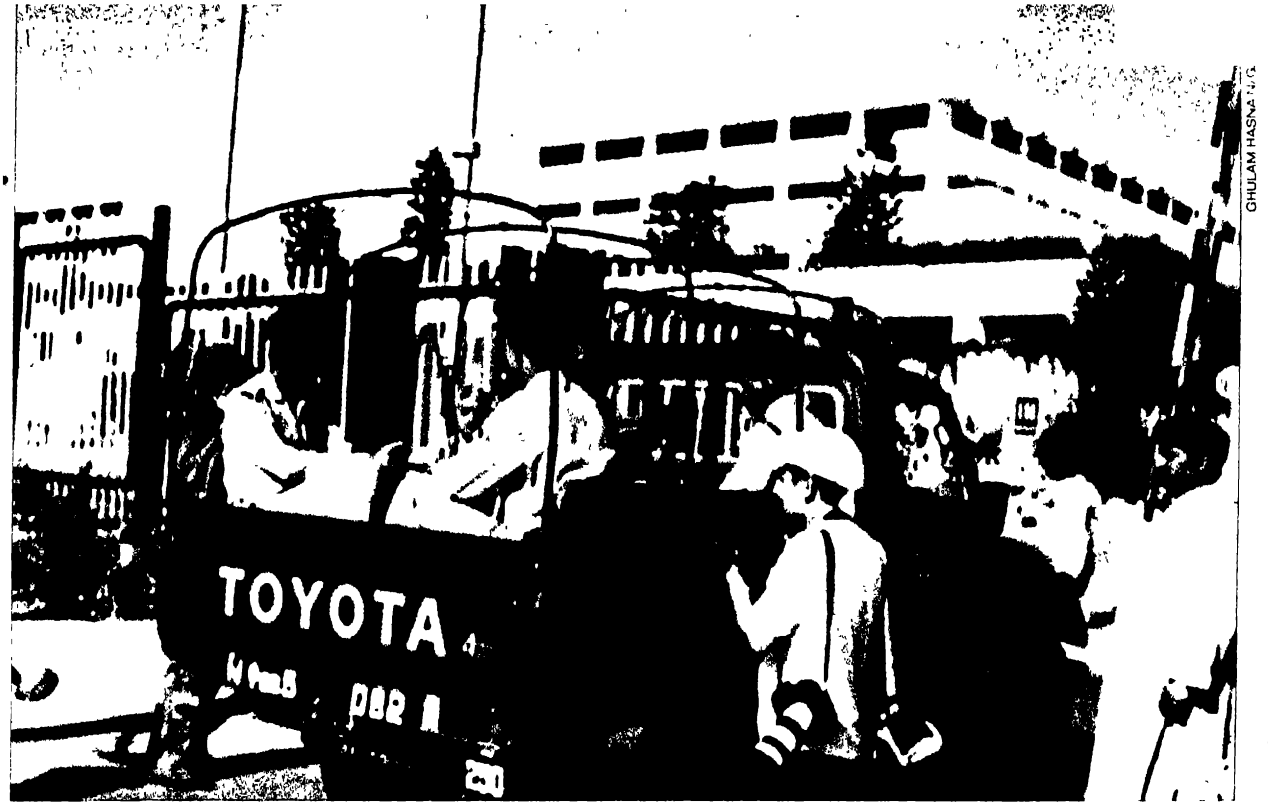
BACK IN BUSINESS

Pakistan is back in the military mould, although 'Chief Executive' Pervez Musharraf talks of the path to democracy. Where does the country go from here?

AMIT BARUAH
in Islamabad

> What is the Constitution? It is a booklet with 10 or 12 pages. I can tear them up and say that from tomorrow we shall live under a different system. Is there anybody to stop me? Today, the people follow wherever I lead. All the politicians, including the once-mighty Mr. (Zulfiqar Ali) Bhutto, will follow me with their tails wagging. But is that good for the country? No, I have no political ambition personally.
>
> – Pakistani dictator Gen. Zia-ul-Haq, quoted in *Working with Zia* by General (retd) K.M. Arif.

ON October 12, General Pervez Musharraf's troops went about their business in a cool, clinical manner. Not a single shot was fired as the khaki-clad men moved into Islamabad, took over strategic locations, and confined Prime Minister Nawaz Sharif and his key associates to their houses. As the Pakistan International Airlines (PIA) aircraft in which Musharraf was returning from Colombo neared Karachi, troops under the command of the X Corps Commander based in Rawalpindi, Lt. Gen. Mahmud Ahmad, announced by their presence on the streets the "ouster" of the Nawaz Sharif Government. They met with no resistance. The coup was indeed a bloodless one.



However, a mid-air drama unfolded in the skies above Karachi. According to Musharraf, who had gone to Colombo to attend the 50th anniversary celebrations of the Sri Lankan Army, instructions had been given to the Karachi airport authorities to deny permission for the plane carrying him to land in Pakistan and to divert it elsewhere. The aircraft was low on fuel, and the order imperilled the lives of the passengers, he said. According to reports, Musharraf immediately took charge of the situation. Using the in-flight radio transmission facility, he ordered the Karachi control tower to allow the plane to land since it was running short of fuel. Permission was accorded, and the plane eventually touched down at 6.50 p.m. with hardly any fuel left. Musharraf's troops were by then in command of the airport building.

Gen. Pervez Musharraf takes the salute at the Pakistan Military Academy in Kakul on October 18.

It is apparent from the sequence of events that the X Corps Commander did not await instructions from Musharraf, who had only hours earlier been "retired" by Sharif, before taking over key installations in Islamabad. His motive was to prevent a rebroadcast of the news of Musharraf's dismissal, which had been put out by Pakistan Television at 5 p.m.

In the 6 p.m. English bulletin, only Chechnya and Kashmir were in focus. Suddenly, the programme went off the PTV World channel, but continued on PTV's main terrestrial channel. Shaista Zaid, the newscaster made famous by the fact that it was she who "broke" the news of the coup, read on. This time, the information put out at 5 p.m. – that Gen. Pervez Musharraf had been "retired" with immediate effect and Lt. Gen. Khwaja Ziauddin, chief of the Inter-Services

GHULAM HASNAIN

Security forces outside the National Assembly building in Islamabad after Musharraf took over on October 12.

Intelligence, appointed the new Army Chief – was not repeated. After the weather report, however, the dramatic announcement was repeated: Gen. Musharraf had been dismissed by Sharif.

All this gave sufficient indication that something was up. As this reporter rushed to the PTV station, scores of people had gathered outside it. Khaki-clad Army personnel were at work inside the station.

Inside the newsroom, another drama had been played out. PTV Chairman Pervez Rashid reached the station to ensure that the news of Musharraf's dismissal was duly announced. A few Army personnel, led by a Major, entered the newsroom just as Shaista Zaid was reading the bulletin. However, the Prime Minister's Military Secretary, Brig. Javed Malik, disarmed the Major.

Only then, the weather report over, did Shaista Zaid repeat the announcement that a new Army chief had been appointed. Only PTV's main channel carried the news; PTV World had by then passed into the control of troops loyal to Musharraf.

From the PTV station it is only a two-minute drive to the Prime Minister's residence ,,but access to it had been blocked with trucks. A young Army officer and a few soldiers stood at the end of the access road.

At this point, it was unclear as to whom the troops were loyal to. Soon enough came the information that the Prime Minister was at home and that no one was allowed to enter or leave the premises. In a few minutes, another piece of reliable information trickled in: the troops had moved in on the orders of the chiefs of the three wings of Pakistan's armed forces.

Nawaz Sharif, who was dismissed as Prime Minister.

SHARIF'S plan to divert the plane carrying Musharraf, arrest him using the Sindh police and instal Gen. Ziauddin as the Army chief was doomed to failure. For of the nine corps commanders, Sharif could muster the support of only two: Lt. Gen. Salim Haidar (Mangla) and Lt. Gen. Tariq Pervez (Quetta). Haidar had been shifted to General Head Quarters, Rawalpindi, by Musharraf, and Tariq Pervez retired on October 9 for having had an unauthorised meeting with Sharif.

Sharif was evidently misled by advice from his cronies into thinking that he could carry out the plan to dismiss Musharraf. Sharif perhaps thought that he could repeat what he did in December 1997 to Supreme Court Chief Justice Sajjad Ali Shah: with the support of other judges, he forced Shah to withdraw from the scene. The Army did nothing when Shah sought its protection. The then Army chief, Gen. Jehangir Karamat, merely marked to the Defence Secretary his letter seeking security.

American scholar Stephen Cohen made a prescient observation in an epilogue to the 1998 edition of his book, *The Pakistan Army*: "It (Sharif's attack on the judiciary in 1997) may, however,

AP

Musharraf with President Rafiq Tarar in Islamabad a day after the coup.

have brought the next civilian-military crisis closer if Nawaz Sharif ever attempts to pack the upper reaches of the Army with his followers as he attempted to pack the Supreme Court with sympathetic judges

However, Sharif's plan came unstuck this time because seven of the nine Corps Commanders stood solidly behind Musharraf

Musharraf had made it clear on September 23 that he would complete his term as Army chief For the Sharif Government, that obviously set the alarm bells ringing Sharif, who had extended Musharraf's term as Chairman of the Joint Chiefs of Staff Committee (JCSC) on September 29, retired him on October 12

Informed sources told *Frontline* that another reason for Sharif's worries was that Musharraf had replaced the commander of the 111 Brigade some time ago with his own man Brigadier Salahuddin Considering that Sharif sees conspiracies where none exists, this appointment served to heighten his sense of insecurity

It was, however, Kargil which brought to the fore the differences between Musharraf and Sharif There are reports that the Kargil operation was planned in October-November 1998 and that the first infiltrators moved in at the time, if so, the operation was planned by Musharraf soon after he took over as Army chief on October 7, 1998 Approval from the Prime Minister was, possibly, obtained in due course

However, Musharraf was not prepared to take the rap for Kargil If anything, both he and Sharif are responsible for the misadventure which led to the death of some ₹,000 Pakistani and Indian soldiers

Political analyst Ayaz Amir wrote in the newspaper *Dawn* on September 17 'Kargil has dealt a blow to the unity of the governing class, driving a wedge between the heavy mandate (of Sharif) and Rawalpindi While both have had their fingers burnt, both are trying to put the blame for this fiasco on the shoulders of the other This is the real cat-and-mouse game being played " Amir warned that the mood in Rawalpindi was dark, even dangerous"

It is clear, therefore, that the strains in the relations between the Army chief and the Prime Minister were no secret

ON October 12, public uncertainty continued to mount as the PTV channel remained off the air Finally, transmission resumed at about 11 p m with an announcement that the Nawaz Sharif Government had been dismissed and that the JCSC Chairman would address the nation

Musharraf began the brief addressat 2 50 a m on October 13 He said " I wish to inform you that the armed forces have moved in as a last resort, to prevent any further destabilisation " He accused the Sharif Government of trying to "politicise the Army, destabilise it" and create "dissension" within its ranks.

Late on the night of October 15, Musharraf issued an emergency proclamation in "pursuance of deliberations and decisions of Chiefs of Staff of the armed forces and Corps Commanders of Pakistan Army." It said the Constitution was kept in abeyance, the elected Assemblies and the powers of

Pakistan came under military rule on three previous occasions, under (from left) Gen. Mohammad Ayub Khan, Gen. Yahya Khan and Gen. Zia-ul-Haq.

the presiding officers were suspended, the Prime Minister, Federal Ministers and provincial functionaries ceased to hold office and the 'whole of Pakistan' came under the control of the armed forces of Pakistan' The General proclaimed himself Chief Executive

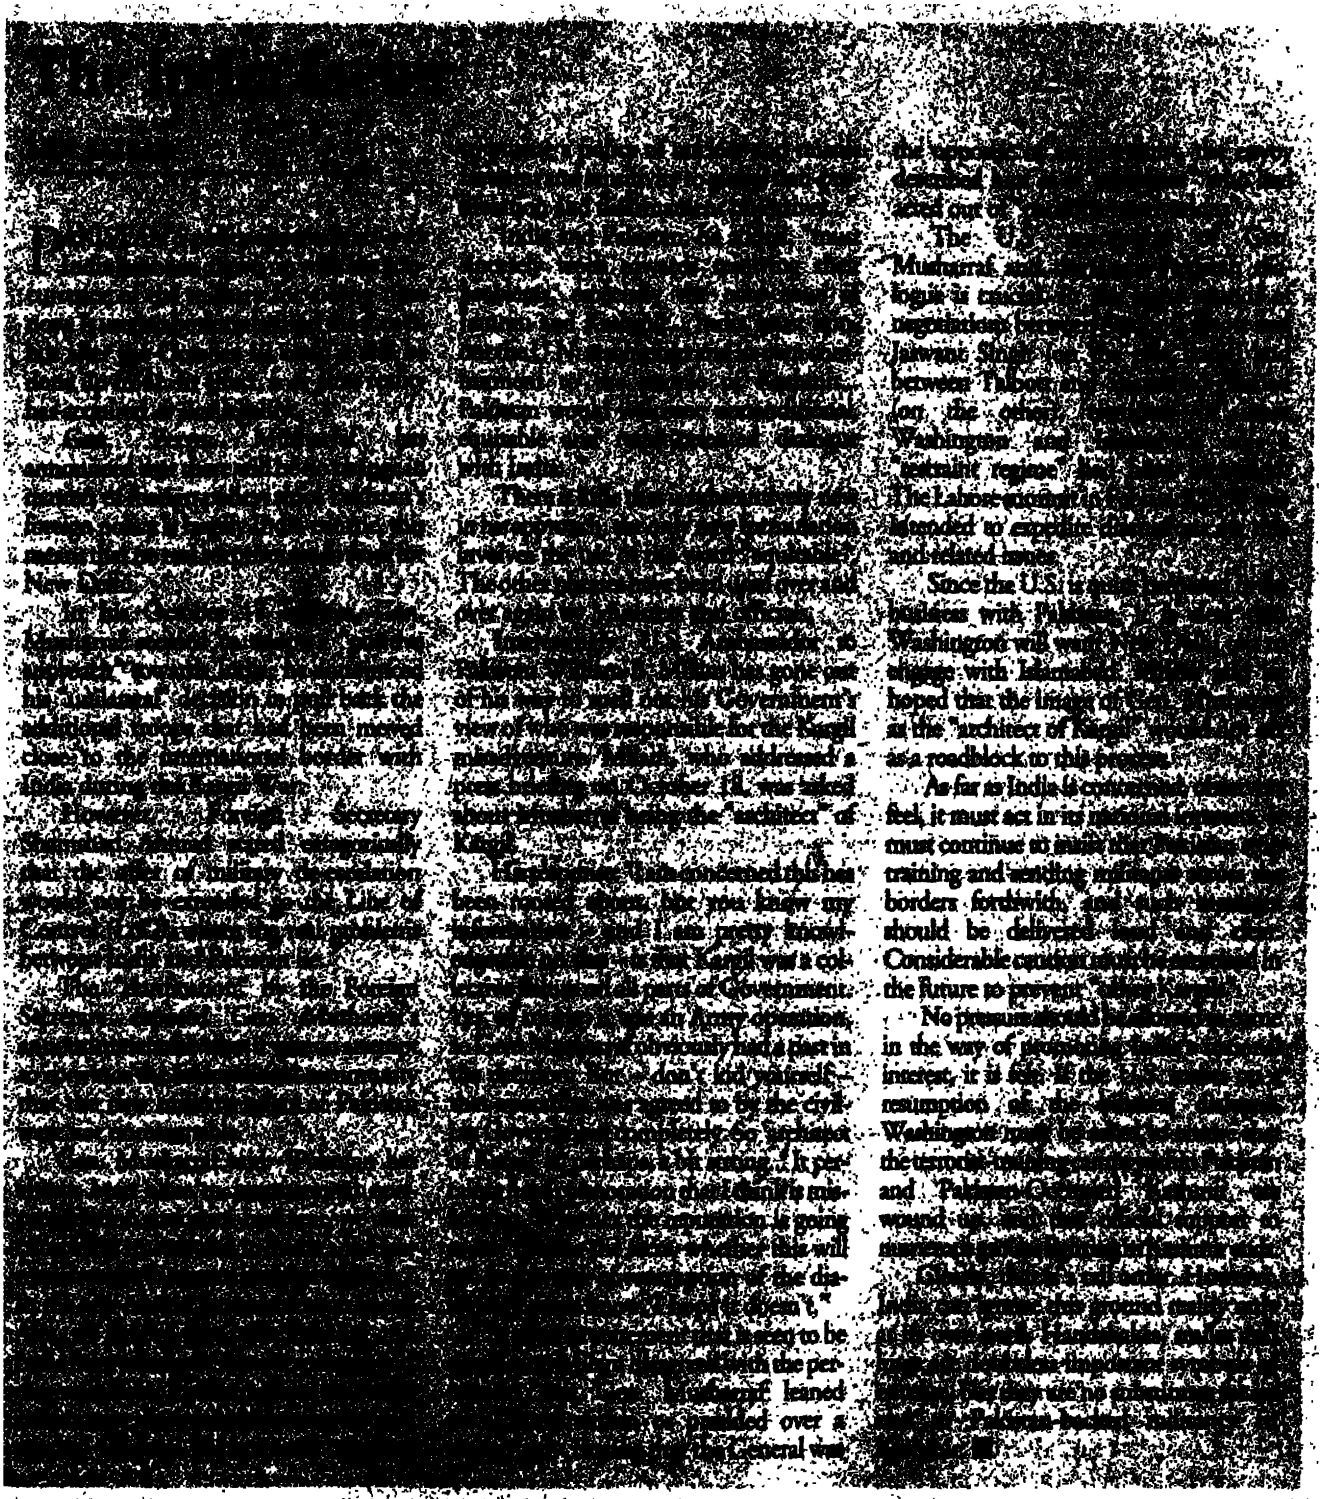
Along with the proclamation Provisional Constitution Order No 1 of 1999 was issued, it allowed civil courts to function but prohibited courts from issuing any writ against the Chief Executive or persons acting on his directions The order stated "The fundamental rights conferred by Chapter I of Part II of the Constitution, not in conflict with the Proclamation of Emergency or any Order made thereunder from time to time, shall continue to be in force

Unlike Gen Zia-ul-Haq who dissolved the elected Assemblies, imposed martial law and suspended the fundamental rights Musharraf appears to have attempted to soften the blow Just as significant, unlike Zia ul Haq, Musharraf did not designate himself Chief Martial Law Administrator

In a policy address on October 17, Musharraf said This is not martial law, only another path towards democracy However, going by the dictionary meaning of martial law – the exercise of military power by a government, etc in time of emergency (war, riot, etc) with the temporary suspension of ordinary administration and policing" – Pakistan is under military rule

Announcing that a six member National Security Council (NSC) with himself as its chief would head the new structure of governance, Musharraf said that a think-tank would act as an adjunct to the NSC while a Cabinet of Ministers will work under the guidance of the NSC The NSC is to comprise the Air Force and Navy chiefs and a specialist each in law, finance, foreign policy and national affairs

The Chief Executive laid down six objectives for his regime – rebuilding national confidence and morale strengthening the Federation, removing inter-provincial disharmony and restoring national cohesion reviving the economy and restoring investor confidence, ensuring law and order and dispensing speedy justice, de-politicising state institutions, devolving power to the grassroots level and ensuring swift and across the board accountability



Musharraf attempted to give an account of the problems facing Pakistan There is despondency and hopelessness surrounding us the slide has been gradual but has rapidly accelerated in the last many years Today, we have reached a stage where our economy has crumbled, our credibility is lost, state institutions lie demolished, provincial disharmony has caused cracks in the Federation and people who were once brothers are now at each other s throat '

"In sum," Musharraf said, "we have lost our honour, our dignity, our respect in the comity of nations Is this the democracy our Quaid-e-Azam envisaged? Is this the way to enter the new millennium? Quite clearly, what Pakistan has experienced has been merely a label of democracy, not the essence of it. I shall not allow the people to be taken back to the era of sham democracy but to a true one. And I promise you I will, Inshallah."

Clearly, the General has set

A souped-up truck bearing merchandise lumbers across the Khyber Pass in North West Frontier Province, close to the Afghanistan border. Musharraf has identified the revival of the economy as one of his priority areas.

himself a formidable agenda. So far no Pakistani government – civilian or military – has succeeded much in these areas. Whether Musharraf can reverse this trend remains to be seen.

In a review, Musharraf has to deal with Zia-ul-Haq's legacy, Imtiaz Alam wrote in *The Nation* October 10:

"General Zia-ul-Haq brought us the [illegible] ... well-

great communism, institutional decay, corrupt politicians of the local body variety, the Sharif model of governance, Talibanisation, Kalashnikov culture, massive corruption, millions of narcotics, besides a criminal neglect of physical and social infrastructure and a debt trap...

"One may trust Gen. Musharraf's sincerity and integrity. But that is not a sufficient justification to take the burden of an agenda that requires tremendous effort for decades and essentially by civil society and not the least by the garrison." The shorter the intervention, the greater would be its success, Imtiaz Alam argued.

Alam further said: "If extended, the democratic process and civil society that has never been allowed to flourish in an ideological nation-state, will suffer and the citizens will remain without a constitutional status... The central question is: can the armed forces rise above their institutional

Musharraf with his parents, wife Saiba and granddaughter Mariam.

interests and let the forces of civil society in a fragile Federation respond to overall challenges of political and economic survival? If so, can they play the role of a neutral broker, help evolve a national consensus and leave it to the people to decide a new social contract and their future?"

Pakistanis await the answer to that question, as they get used to a new military regime, which has so far not placed restrictions on the freedom of the press, a litmus test of tolerence for any regime, military or civilian. So far the overall approach has been correct even though the information flow has been "controlled".

FEW Pakistanis have shed a tear for the Sharif Government, which had undermined every institution, including the press. The arrest and detention of journalists was a frightening pointer to the state of mind of the civilian rulers. Ordinary Pakistanis are doubtless pleased that Sharif and Co., who faced serious charges of corruption, have been deposed. However, having heard and seen enough over the years, they have a disdain for words and promises that do not mean much yet.

Conversations with people from various walks of life reflected a popular expectation that the Army would now have to deliver on its promises. The recovery of national wealth, in their view, was crucial to restoring the economic health of the country. The people want the Army to deliver – and deliver quickly. However, optimism is tempered by realism. The people are aware that Zia-ul-Haq gave precious little to the people, nor did he put in place any process of accountability. His sole aim was to hold and accumulate power – a legacy he passed on to his civilian "successor", Nawaz Sharif.

If Pakistan's history holds any lessons, it is that controlled and directed democracy will not work. The Army is a homogeneous institution, but part of the problem in Pakistan is that the Army's political ambitions (and corrupt practices in the past) have led to acts of blatant intervention in electoral politics.

A variety of leaders, including Imran Khan (former captain of Pakistan's cricket team), have argued that the Army should hold power for a two-year period and then hand over power to a civilian government. But if the people of Pakistan do not today have politicians they can trust, what is the guarantee they can produce them in, say, two years?

Not a single member of the Pakistan Muslim League (Nawaz), the erstwhile ruling party or its government moved the Supreme Court seeking restoration of the civilian regime. That, in a sense, said it all: that section's faith in democracy is only skin-deep and fear of the military is deep-seated. After a full week, some members of the former ruling party made a meek demand for the immediate release of the ousted Prime Minister. There was no condemnation of the military for overthrowing a civilian government.

It is not as if the people of Pakistan do not like democracy. The fact is that they have been deprived of democracy and democratic practices by a state that is all-powerful and which controls and watches closely individuals who matter. Note the fact that no Pakistani politician with a military background has ever been given an electoral mandate.

In her book, *The State of Martial Rule*, Ayesha Jalal, one of Pakistan's finest scholars, wrote about the challenges that lay before Prime Minister Benazir Bhutto in 1988: "The greatest challenge to the largest political party, however, stemmed from the lingering imbalance between elected and non-elected institutions in Pakistan's history..."

Jalal further wrote: "To survive and succeed, an elected Prime Minister in the Pakistani context has almost to play the role of the leader of the Opposition upholding the case of the political process against the pre-existing state structure..."

Benazir Bhutto twice failed to make the grade democratically and rein in super-powerful institutions; her successor, Nawaz Sharif, more than matched her. For its part, the Army intelligence network resisted any extension of true democracy.

Nawaz Sharif, who was once the Army's blue-eyed boy, thought he could consolidate his own personal power by bringing the military to heel. In a country where the Army has either ruled directly or never been far from the levers of power, that proved to be a disastrous miscalculation.

To return to Ayesha Jalal's thesis, can Gen. Musharraf do what four successive civilian governments failed to do since 1988? Can he play the role of the "leader of the Opposition" from within? Or is that too much to expect from a man in uniform? ■

Correction: In the report "A face-off averted" (November 5), the opening paragraph should have read: "The Nawaz Sharif Government announced that Pervez Musharraf, the Chief of the Army Staff, had been appointed Chairman of the Joint Chiefs of Staff and that he would hold the dual posts concurrently until October 6, 2001." It was erroneously stated that his term as COAS is to run until April 8, 2000.

Treading slowly

India's cautious approach to the developments across the border and the rush of initiatives from the military rulers does not make for much movement on the bilateral front in the immediate context.

JOHN CHERIAN
in NewDelhi

IN the past three years, successive Indian governments had found a degree of comfort in doing business with the civilian government in Pakistan led by Nawaz Sharif. The thaw set in when I.K Gujral was in charge of Indian foreign policy from 1996 to 1998. Both governments indicated at that time that they were willing to discuss substantive issues, including Kashmir. When the Bharatiya Janata Party-led coalition came to power in 1998, relations between the two governments were initially frosty. Then the political heat generated by the nuclear explosions in May 1998 took time to dissipate. When Prime Ministers Atal Behari Vajpayee and Sharif met during the summit meeting of the South Asian Association for Regional Cooperation (SAARC) in Colombo, the bad vibes were manifested in the their body language. But matters improved in a few months.

Indian policymakers may not have anticipated a military takeover in Pakistan at this juncture: military coups have become unusual worldwide, and Sharif's party had an overwhelming majority in Parliament. India initially responded to the coup by taking the high moral ground. External Affairs Minister Jaswant Singh said that the events in Pakistan "by themselves are a deadly comment on the situation in that country". He added that India's commitment to democracy had been vividly put across to the international community. "It is ironic that on the eve of the swearing-in of the Vajpayee government, coup leaders took control of Pakistan and the country went under martial law," Jaswant Singh said.

The Indian government then decided to send National Security Adviser Brajesh Mishra to Washington to discuss, among other things, the latest developments in Pakistan with U.S. State Department officials. This was not surprising considering the fact that Indian government leaders, from the Prime Minister downwards, had characterised the U.S. as a "natural ally" of India. However, there were surprises in store for them.

Although the world's most powerful democracy was quick to criticise the coup, it made it clear that it would continue to do business with Islamabad. Washington also wanted New Delhi to do likewise. In a telephonic conversation with Vajpayee, President Bill Clinton suggested that India and Pakistan resume talks at the earliest. It is known to discerning observers that successive U.S. administrations have practised double standards in respect of their dealings with military regimes. In the case of countries with which it has had historically close ties – such as Pakistan, Turkey and Indonesia – the U.S. connives at overt or covert military interventions. The Clinton administration, as in the case of previous U.S. administrations, reckons that in certain circumstances the military could prove more sensitive to Washington's concerns.

The armed forces in Pakistan, Turkey and Iran were partners in many important Western enterprises during the Cold War. It is therefore no surprise that Washington has concluded that General Pervez Musharraf is "a man you can do business with". Musharraf, for his part, has advertised to the world his admiration for Turkey's "military democracy" and indicated that he would prefer a similar model for Pakistan. In much the same way as the Turkish military, Musharraf has taken a tough stance in respect of Islamic parties. So far only Islamic parties such as the Jamaat-e-Islami have dared to protest openly against military rule.

SHANKER CHAKRAVARTY

Prime Ministers A.B. Vajpayee and Nawaz Sharif at the Wagah border on February 20.

Senior U.S. officials have now begun to exert pressure on the Indian government to restart the stalled dialogue process. Indian officials have, however, dismissed Musharraf's announcement regarding the withdrawal of Pakistani troops along the international border as a gimmick. India said that for the withdrawal to be meaningful, Pakistan should simultaneously withdraw troops from the Line of Control. Pakistan insists that the situation along the LoC is qualitatively different as it has been volatile with heavy concentration of troops and firepower on both sides of the border.

However, the U.S. claims that Musharraf's gesture is an

KAMAL NARANG

At the height of the Kargil War, an Indian artillery gun booms in the Batalik sector.

important confidence-building measure (CBM) and that reciprocal action from New Delhi would help ease tensions. The Indian side, however, insists that no progress is possible in the dialogue process unless Islamabad gives a "commitment" that it will stop cross-border terrorism. The new military regime in Pakistan has regretted India's "negative response" to its offer of unconditional resumption of dialogue.

Indian officials are evidently not as impressed as their U.S. counterparts are by the rush of initiatives from the military rulers. Musharraf reiterated the Pakistani offer of a dialogue on Kashmir and other issues. In recent days, the Indian Foreign Office has toughened its stance on Kashmir, asserting that Kashmir is the key to India's territorial unity and that there can be no compromise on this. In the third week of October, a spokesman for the Indian External Affairs Ministry said on condition of anonymity that it was "imperative" that Islamabad stopped cross-border terrorism in Jammu and Kashmir and the rest of India. The official said that there were as yet no signs that Pakistani support for cross-border terrorism had abated. Jaswant Singh said in late October that it was "too early" to consider a resumption of the dialogue with Islamabad. He dismissed concerns expressed by some Western nations about the danger of the recent events triggering a nuclear flare-up in the region.

In Washington, Brajesh Mishra expressed India's concerns about the military takeover. India's initial interpretation was that the coup was intended to negate the Pakistan Prime Minister's efforts to clamp down on terrorists in that country. Musharraf was portrayed as an officer who was influenced by the concepts of militant Islam and it was even alleged that he had close links with the Taliban regime in Afghanistan. In support of this charge, Indian officials pointed to the transcripts of a telephone conversation between Musharraf and a senior Army officer during the early stages of the Kargil war; intelligence agencies had secured tapes which, they said, "proved" Musharraf's early role in the Kargil intrusion. Copies of the tapes had been handed over to Nawaz Sharif through secret envoys.

Both Sharif and Vajpayee seemed to want to convey the opinion that Musharraf was the "architect" of Kargil. U.S. officials were less than convinced and were willing to give Musharraf the benefit of the doubt. They, however, assured Mishra in Washington that the U.S. was as keen as India was to see civilian government restored in Pakistan and that they would use their influence on Pakistan to address Indian concerns over cross-border terrorism. The Clinton administration also announced that for the present it would not waive the Pressler Amendment, as proposed, which would lead to the resumption of arms supply to Pakistan.

At the same time, U.S. officials in Washington and those who were recently in New Delhi want India to keep the door open for talks with the new regime in Islamabad. U.S. Assistant Secretary of State for South Asia Karl Inderfurth said recently that Washington was optimistic of convincing the generals to end state support for cross-border terrorism. Inderfurth said that he would meet Jaswant Singh in early November, and that at the top of the agenda for discussion would be the recent developments in Pakistan and adherence to the Comprehensive Test Ban Treaty (CTBT). Inderfurth told mediapersons in Washington that both the U.S. and India would "closely" watch Musharraf's actions, rather than his words. He conceded that the prospects of "renewing the Lahore process did not look well".

Inderfurth, however, stressed that the U.S. "cannot walk away because Pakistan is important – because stability or the lack thereof in Pakistan will have an impact on Pakistan's neighbours." Bruce Reidel, Senior Director for South Asia in the National Security Council, who was in New Delhi in the fourth week of October, let it be known that Washington viewed Musharraf as a man with "moderate" political views and admitted that Gen. Anthony Zinni, who is in charge of U.S. forces in the Gulf, had a long discussion with Musharraf on security-related issues. New Delhi is not happy at what it feels is only a muted response from Washington to the events in Pakistan.

The Commonwealth, on the other hand, took a tough stance; it suspended Pakistan from the organisation, barely a month before the scheduled Commonwealth Heads of Government (CHOGM) summit in Durban. Members from the Commonwealth Ministerial Action Group took the decision at a meeting in London, stating that the suspension would be effective "forthwith" and would remain "pending the restoration of democracy in the country". In a statement released after the talks, the Ministers unanimously condemned the overthrow of the democratically elected government in Pakistan.

The European Union set a November 15 deadline for a return to civilian rule. Failure in this regard would invite punitive action. The Indian government, especially a BJP-led one, cannot afford to take such an open stand on an issue that involves the question of democracy. Vociferous support for the restoration of democratic rule could be misconstrued as support for the ousted Sharif government.

Vajpayee will however have an occasion to interact with the new military strongman of Pakistan at the SAARC summit to be held in Kathmandu in late November. That occasion could well provide the opportunity for the resumption of the stalled dialogue process between the two countries. ■

Changing tack in Washington

The United States is evidently set to continue the game and engage the Generals.

SRIDHAR KRISHNASWAMI
in Washington

A POLITICIAN as astute as Nawaz Sharif should have known that when it comes to dumping those who have outlived their utility and shedding crocodile tears for them, there is none to beat administrations in Washington. And that the Clinton administration would be no different in this matter. When push came to shove and the men in uniform forcibly entered the political process in Pakistan, Washington was looking for rationales to continue the game and engage the Generals.

It took the Clinton administration a few days to determine, officially and legally, that a coup in Pakistan had indeed taken place.

For Sharif, the only solace was that senior officials in the Clinton administration were ready to hand out commendation certificates; but this was in some ways intended to "protect" the political establishment in Washington – in the unlikely event of the deposed Prime Minister returning to power.

It should come as no surprise that Washington will continue its dialogue with Islamabad. In fact, it would have been naive to assume that the Clinton administration would close all the avenues just because Pervez Musharraf took over the reins of power. It was keen to maintain the dialogue because the bottom line was that there are tangible interests for the U.S. in Pakistan – strategic, political and economic.

But domestic politics in the U.S. being what it is – and what it will always be – the appropriate noises had to be made. And the officialdom at the White House and in the State Department did an excellent job of it; its job, of course, was made a lot easy by the popular reaction within Pakistan to the turn of events.

The U.S. administration subsequently found it easy to list all the shortcomings of the deposed Sharif Government. However, few in Washington are making the point that the Kargil factor – in particular, Sharif's orders (under U.S. pressure) to his troops to pull back from the Indian side of the Line of Control in July – was a principal reason why Sharif lost the power game.

The Clinton administration then began parroting the line that Gen. Musharraf must restore civilian democracy at the earliest, that the U.S. could not do business with Pakistan until then, but that, on the other hand, the U.S. could not "walk away" from Pakistan. This line has been articulated fairly routinely at the State Department, the White House and at congressional hearings.

It is unlikely that the broad contours of this policy line will change in the short term; it will probably be amended suitably over a period of time if the General gets "more comfortable" in his new outfit.

The coup in Pakistan could not have come at a worse time for Washington: just after Congress had passed legislation authorising comprehensive and permanent waivers of the sanctions imposed on India and Pakistan following the nuclear tests of May 1998. And upon the President signing the Defence Authorisation Bill, the administration would have started reviewing and lifting most, if not all, of the sanctions (story on sanctions on page 120).

What will happen now is that while sanctions against India will merit immediate attention, President Bill Clinton cannot do anything for Pakistan until an elected government has been restored. And analysts in Washington believe that that could be a long way off. There is talk that about .wo years will be needed for the situation to stablise and for elections to be held in that country.

One of the key backers of the move to lift the sanctions was Republican Senator Sam Brownback from Kansas; he pointed out that his amendment at this point of time only amounted to a "structural change in the law" that would help the President after a democratically elected government is in place in Pakistan. He also lashed out at the administration for "dumping" Sharif; such an action only sent a "terrible message" to the world, he said.

Brownback was one of the first to argue that no one was giving Pakistan a "pass" on the military coup; he pointed out that the administration had invoked Section 508 of the Foreign Assistance Act, which mandated blanket sanctions on any country where the duly elected leader was deposed in a coup. There may not be much sympathy for Sharif's way of doing business in his country, but Section 508 does not give the administration much leeway in the matter.

There was another unintended fallout of the coup: the U.S. administration was forced to make its intentions known on the scope of the waivers on the Glenn and Pressler amendments. In response to some close questioning by Congressman Gary Ackerman, the Co-Chair of the Congressional Caucus on India and Indian Americans, in the House Asia-Pacific Sub-Committee Hearing, Assistant Secretary of State for South Asia Karl Inderfurth said that the administration had neither the plan nor the intention to resume supplying arms to Pakistan.

AP

U.S. Ambassador to Pakistan William Milan (right) calls on Musharraf.

The Clinton administration has for long been pressing Congress for a "level playing field" in respect of legislation that is perceived as restrictive; it argued that such legislation was preventing the U.S. from fully pursuing its foreign policy goals. When Congress was debating the future of the sanctions on India and Pakistan, the Senate adopted through the Brownback Amendment a permanent waiver but took the Pressler law from the books. The House version spoke of waivers for one year but did not tamper with the Pressler law. The Conferees of the House and Senate went in for comprehensive and permanent waivers; as a result, not only the Glenn Amendment but also the Pressler Amendment were taken off the list.

For all its expressions of "sympathy" and invocation of national security interests, the Clinton administration will have a difficult time explaining to Congress just why certain relaxations would have to be made. For instance, it is fairly common knowledge that Pakistan's economy is in deep trouble. In fact, the conviction in the U.S. is that Pakistan has for quite some time been tottering on the brink. A formal meltdown of the Pakistani economy will have an impact in the immediate neighbourhood and on Washington's policies in the region.

This is the reason why the Clinton administration will not anymore lean heavily on Pakistan. Washington has said, for instance, that Islamabad has problems with the International Monetary Fund and that the disbursement of the third tranche of IMF loans, $280 million out of the total package of $1.6 billion, was in jeopardy much before the Army emerged from the barracks.

The Clinton administration will also look to India to a certain extent to ease things in Pakistan. And it will expect India to respond meaningfully to the olive branch extended by Gen. Musharraf. Senior officials are also aware of the problems from an Indian point of view: aside from a perception of being let down or "cheated" after the Lahore summit, New Delhi has made it plain that it cannot negotiate so long as Islamabad was fully involved in a state-run terror campaign across the border.

But the hope in official and private quarters in Washington is that the Lahore process will be restarted and that India and Pakistan will settle down to talk about contentious issues in a serious manner. If Gen. Musharraf can be taken at face value – given that he is believed to have initiated and presided over the Kargil debacle – something positive could still come of the ominous developments. ■

■ COVER STORY

Return of the Generals

The takeover of a country by military leadership in the face of failures by civilian governments only leaves the country in a worse state than before. Pakistan's is a case in point.

AZIZ SIDDIQUI

IMPOSITION of military rule for the fourth time in the country's brief history is bad enough. What makes it gloomier is that the action is by all accounts, widely popular. It has not only been welcomed by a wide swathe of common citizenry, it also seems to enjoy an embarrassing measure of acclaim among the intelligentsia. Even long-time democrats and human rights activists are averse to sounding a note of dissent. "Do you want us to go back to Nawaz Sharif?" they ask testily.

That is at the core of the current dilemma. If it is not one it has to be the other. If it is not to be an extra-constitutional public-spirited benevolence, as presumed, it can only be a constitutional self-serving despotism, as experienced. The historical factors that have created this stark choice, the experiences of the past, and the fact that weighing the alternatives on the basis of the accepted norms may still be the best course for the longer term, is lost sight of in this initial euphoria.

There is, of course, no question about the gargantuan failures of the Nawaz Sharif Government. What official publicists are busy reeling out on the official media is, for once, largely true. During his 32-month stint, Nawaz Sharif not only failed to catch the popular imagination – despite his Z.A. Bhutto-like bids to win the personal support of the masses in the interior of Sindh, Punjab and North West Frontier Province (NWFP) – he also came to be regarded as a bit of a disaster by the educated elite in the cities. His intellectual limitations had become the stuff of popular jokes. Z.A. Bhutto's brilliance was barely a mitigation of his offensive *wadera*ism. But Nawaz Sharif was bereft even of that.

People find it hard to dispute Pervez Musharraf's contention that what he rolled back was not democracy, it was a sham. Nawaz Sharif had made sure that every potential check on his freedom to do his will was effectively gotten out of the way – extra-constitutionally if necessary, and let the chips fall where they may.

Nawaz Sharif first thought up a series of constitutional amendments to fortify himself against possible challenges to his rule and to invest himself with powers few constitutional rulers ever enjoyed. The first of his amendments dispensed with the President's power to dismiss a government and dissolve Parliament in a situation he thought was one of constitutional breakdown. That power had been written into the Constitution by President Gen. Zia-ul-Haq, who had wished to retain with himself the ultimate leverage over the Prime Minister. The provision went on to cause the downfall of four elected governments and Parliaments in eight years, the first of those at Gen. Zia's own hands. This power, therefore came to be regarded as a destabilising and undemocratic weapon in the hands of a head of state meant to be only a figurehead. For that reason, its repeal by Nawaz Sharif was generally welcomed. But there was more to come.

Nawaz Sharif's next amendment bonded parliamentary parties to the will of their party leader. It required every member to vote strictly in accordance with his or her party's (which meant the party leader's) decision. Even abstention, let alone dissent, would cause the member to forfeit his or her seat. That had the effect of completely neutering the National Assembly. The Opposition, being minuscule in the House turned into a pen of sheep. There was rarely a Parliament as dull as this one.

The ultimate in constitutional despotism, however, came with Mian Nawaz Sharif's third amendment, meant as a measure to enforce Islam in the country. The original draft placed before the National Assembly gave the government (read the Prime Minister) total power to decide what was prescribed and what was prohibited in Islam, and to go ahead and enforce it regardless of what the Constitution or the courts said. He could,

B K. BANGASH/AP

Troops on alert at the main gate of the Parliament building in Islamabad on October 15.

for instance, decide that Islam did not permit leadership by a woman or a multiparty system of government, and nothing could stop him from making that into a law. Any functionary of the state (including obviously an officer of the courts or the armed forces) who was considered tardy in the implementation of such a decree was liable to severe penalisation. An even more remarkable provision was that any future constitutional amendment considered necessary for the purpose would need only a simple majority to be passed – simple majority not even of the total membership but of just those present at the time and voting! In other words, an amendment could sail through even without the Opposition participating, and even in the face of opposition by the smaller three of the country's four provinces. Clearly, it took a sinister mind to think up the whole design.

The proposal was so plainly outrageous that a few members even of the ruling party gathered courage to demur against it in a party meeting (they came to know of the Bill only after it was presented in the National Assembly). The objectors were immediately asked to resign, which they did, whereupon they were conceded a part of the ground. In the second draft, the last two elements were removed. The Bill, not the less offensive for the revision, got more than the needed two-thirds of the votes in the Lower House. However, since the Muslim League did not have that kind of majority in the Upper House and the others had joined in opposing it, it was kept pending on the calculation that with threats of divine wrath from the mullahs and the re-election to half the Senate seats due in March 2000 the requisite numbers would become available.

NAWAZ SHARIF and his men were active outside of the Constitution as well. The so-called Accountability Cell had throughout his tenure, concentrated on just the Opposition leader Benazir Bhutto and her imprisoned husband Asif Ali Zardari. That pretty much took care of the principal Opposition. The other party occupying considerable political space that the Muslim League coveted was the MQM, Mottahida (formerly Mohajir) Qaomi Mohaz, which had begun as, and still largely remains, the party of the first- and second-generation migrants from India settled mainly in Karachi. At first, the Muslim League joined up with it to form the government in Sindh and keep out the PPP, the single largest party in the province. However, after it had a national Emergency declared following the nuclear tests, and had that measure endorsed by the supreme court, the Muslim League thought that it no longer needed the MQM – it could impose Governor's rule in the province and rule from Islamabad without giving anyone a share in power. Not believing in half-measures, it did not just ditch its former coalition partner, it also cracked down heavily on it in the name of fighting terrorism.

The bid to tame the judiciary also started early. It succeeded so well that the Chief Justice of the Supreme Court (and the then President) were made to resign, following a raid by party goons on the Supreme Court building while the court was in session. Official criticisms against the judiciary continued after that on the supposed grounds of its dilatoriness and its not awarding sentences that were prompt and stiff enough. This was seen as a bid to warn the judges against assuming too much independence. On the eve of Atal Behari Vajpayee's visit to Lahore, the world media that was on hand to witness the occasion huddled around the available television sets when it was announced that Nawaz Sharif was to address the nation. The expectation was that the speech would be about the event that was on the minds of most people – the first visit by an Indian Prime Minister to Pakistan in close to 40 years. However, as it happened, there was not a word about that. The address was a tirade against the judiciary and the judicial system.

The list of the ousted government's bids to undermine the democratic and federal principles, institutions and sentiments is long despite the relatively brief spell in power. It includes a series of actions against the media and mediapersons, a campaign of vilification against independent-minded non-governmental organisations (NGOs) by name and drawing up a law to limit the freedom of the NGOs and enhance the official say in their affairs, moves that made the predominance of Punjab increasingly felt in the three smaller provinces, and the extravagant sallies into populist economism at a time of virtual bankruptcy.

THE bill of indictment against the Nawaz Sharif Government can go on and on, but that still does not prove that one wrong can be made good by another. Pakistan has had prolonged experience with military rule. Nearly half of its 50 years has been spent thus, with each bout coming in the midst of similar public euphoria and a sense of good riddance for the ousted order. But each such spell left the country, when it was made to leave it,

ZIA MAZHAR/AP

M ZIA/AP

Jamaat-e-Islami leader Qazi Hussain Ahmed addresses a rally in Karachi on October 4.

in an even worse mess than it found it in.

The rule of gen. Ayub Khan, among a number of other things, started the process of alienation in East Pakistan, which Gen. Yahya Khan after him carried to completion. Between them they saw half the country break away, the only occurrence of its kind in current history.

Zia-ul-Haq's gifts were similarly manifold and far-reaching. He put the country on the map of drug traffic. Drug addiction spread widely within the country too: from being negligible at the start of the 1980s, the numbers shot to upwards of three million at the close of the decade. The country also became the site of the busiest cross-border arms trail since the Vietnam war, with parts of the weaponry meant for Afghanistan trickling sideways, deep into the country, and creating the phenomenon of arms proliferation in private hands. This in turn led to the birth and spread of terrorism within, with gruesome incidents rocking the country. Zia-ul-Haq also acted as a midwife in the process of introducing religious fundamentalism into the body politic. It has since made deep inroads into the corpus of laws and the administration of justice. The pressure has continued to mount. There is an unrelenting bid to enhance its influence and its embrace.

Perhaps the most baneful of the long-term effects of the earlier spells of military rule was that they robbed constitutionalism of much of its sanctity. The Constitution was either abrogated or suspended, replaced or overhauled at the convenience of the dictator of the time. With all that happening – and happening unfortunately with the endorsement of the country's judiciary – the way was opened for political governments too to press against constitutional constraints. A country that was already a bit difficult to rule was thus made even more ungovernable.

The length and nature of past military rules had yet another effect: they made the military's presence loom large even when it was not in power. The political governments that have come in between have felt obliged to keep looking over their shoulders – or, like Mian Nawaz Sharif, to try and create personal loyalties in that camp.

There is little evidence so far that Gen. Musharraf's tenure in power will be very different from those of his predecessors. The objectives he has spelt out for himself make a full enough agenda. The approach is soft for the present. The term martial law has been strictly avoided this time, as a nod no doubt to world opinion. Fundamental rights are also promised to be generally respected. But on past evidence it is hard to be optimistic even about small mercies. As the regime exhausts its ingenuity and innovativeness and public euphoria begins to dissipate, it may find even a relatively free press, independent judiciary and active elements of civil society a bit of a spoilsport.

The Chief Executive has already given himself the authority to act outside of the suspended Constitution in pursuit of the aims he has set out. He may have to make structural changes in such areas as devolution of powers to the grassroots and strengthening the federal bonds, in case he takes those objectives seriously enough. The proposed National Security Council headed by himself and including the two other service chiefs seems particularly likely to become an organic feature as the supreme governing body. The armed forces had long favoured a constitutional role for themselves in governing the country. Now that they have the opportunity to give it to themselves it is unlikely that they will not make sure it stays for all forseeable future.

When asked about his new responsibilities, Gen. Musharraf remarked that it was "nice to be in charge". This candour was amusing. It can also be ominous. ■

The coup and the Indian nuclear theology

Who controlled the nuclear button in Pakistan as the coup was under way? An assessment of the implications of the coup vis-a-vis nuclear weaponisation.

T. JAYARAMAN

THE interest that the international media have evinced in the coup in Pakistan is undoubtedly in part owing to the fact that it involved the spectacle of a military takeover in an era when such political transitions have become somewhat passe. In the post-Cold War years, the ruling classes in most other nations have discovered far more effective and superficially democratic means to contain dissent or manage internal crises. But the other major reason for the interest undoubtedly stem from the serious concern that is generated by political instability in any state which has nuclear-weapons capability. Who controls the nuclear button at a time when the normal chain of political and military authority of a state is actively disrupted is a question of more than passing interest to most governments and international public opinion.

But, curiously, in India the question of the nuclear dimensions of the coup in Pakistan has not yet triggered a debate on the dangers posed by nuclear weaponisation when there is endemic political instability in at least one of the nuclear-armed states of South Asia. The Indian media have been flooded with self-congratulatory commentary on the swearing-in of a democratically elected government in India at the same time that the coup got under way in Pakistan; little attention has been paid to the coup's implications for the nuclear issue and the evolution of an Indian nuclear doctrine.

The fact that India's leading nuclear theologians have maintained a studied silence on this issue should, however, be entirely unsurprising to those who have read the recently released draft Indian Nuclear Doctrine (dIND). The crux of the matter is that events such as the coup in Pakistan deal a body blow to some of the fundamental assumptions of the nuclear doctrine enunciated by the high priests of Indian nuclear weaponisation.

As is evident from even a cursory analysis of the dIND, India's nuclear weaponisation programme is Pakistan- and China-specific. In this context, a key assumption of the dIND is that peace and security in South Asia can be ensured by the possession of nuclear weapons that act as a deterrent. In other words, it is the balance of terror between India and Pakistan, when both nations are nuclear-weaponised, that will guarantee peace and stability. The dIND says as much, with its entirely unoriginal invocation of the basic principles of deterrence theory. To be sure, the document does not refer to Pakistan directly but the implications *vis-a-vis* that nation are obvious. The question that is important for any objective analysis is whether the assumptions of deterrence theory will hold when there is deep political instability in one of the states that is a player in the game.

The Achilles heel of deterrence theory, the hyperrationality of which often makes it beguilingly acceptable to many, is the fact that it presupposes that one's opponent will read one's actions and events in the realm of nuclear weapons in the manner that one intends the opponent to. The second problem is that the actual operationalisation of deterrence, when nuclear weapons are really deployed, leads inevitably to situations where the command and control of nuclear weapons is compromised and the dangers of accidental or unauthorised launch become very high. Deterrence theory presupposes perfect command and control since its stated aim is to prevent a nuclear exchange. But the danger of deterrence is that such a level of command and control is never achieved in practice – as the experience of even the most advanced nuclear weapons powers has always shown.

WHO controlled the nuclear button in Pakistan while the coup was under way? Who had the authority to launch nuclear weapons when Nawaz Sharif was attempting to prevent Gen. Pervez Musharraf from returning to Pakistan? Would it have been the orders of the Prime Minister or the orders of the Chief of the Army Staff that would have prevailed with the individuals who physically controlled the arming, the launching and the delivery of nuclear weapons? What are the political inclinations of these individuals, and would they have been susceptible to the enticements of fringe extremist political elements in a short period of extreme instability during a forced political transition? Obviously, India's nuclear hawks have no clear answers to these questions. But in a nuclear-armed environment, the security – indeed, the very lives – of millions of Indians hangs on precise answers to these questions, now and in the future.

Undoubtedly, the nuclear theologians will attempt to dismiss these questions as unduly alarmist in the current context. It certainly appears that currently in Pakistan it is the Army that has physical control of the weapons. But according to reports in the Pakistani media, quoted by *The Times of India* (August 22, 1999) for instance, the political authority to launch nuclear weapons was to rest with the Prime Minister, while the Chief of the Army Staff was to be the strategic commander. In the event of a conflict between the political authority and the military, whose will would prevail and how would that affect the control of nuclear weapons? Did Pakistan have a mechanism in place whereby the strategic commander could not override the political authority or *vice versa*? Hardly likely, considering the technical difficulties involved in Pakistan acquiring such a capability and given the internal political constraints. It is also true that the armed forces were solidly behind Gen. Musharraf in the current coup and were hardly disposed to listen to Nawaz

Sharif. Gen. Musharraf also moved rather rapidly to assure the world that his regime would exercise nuclear restraint. But is it guaranteed that such a situation would always obtain even in the future?

It is obvious that command and control of Pakistan's nuclear weapons will always be a chancy affair. The compromising of command and control will always be a possibility that cannot be excluded. Indeed, in more extreme crises, a split in the Army would render the situation even more dangerous. If, as was the case with even the current coup, part of the internal conflict was precisely on the question of how to deal with Pakistan's disputes with India, who controls the weapons becomes a matter of great concern. Can an endemically politically unstable state, as Pakistan has been for the last few decades, endure the pressures of a crisis of the proportions of the Cuban missile crisis, scaled down no doubt to subcontinental dimensions, without its command and control giving way? The inescapable conclusion is that the lives of millions of Indians are only as secure as the weakest link in the Pakistani chain of command for its nuclear weapons. Only in the fevered imagination of India's Strangeloves, dedicated to the pursuit of nuclear weapons, could this be construed as security.

The correct first Indian response to its troubled neighbour, post-Pokhran and post-Chagai, remains the acceptance of Pakistan's oft-repeated offer to consider the non-deployment of nuclear weapons in the subcontinent.

THE oft-repeated claim that India's command and control will be more secure because of the civilian control of nuclear weapons cannot also be taken at face value, even if it soothes various representatives of Track II diplomacy from the United States. Apart from being an insult to India's armed forces, this argument suppresses the fact that the most vociferous and hawkish pressures in favour of India's nuclear weaponisation have always come from its civilian sector. The blithe disregard of strategic realities in South Asia by the pro-weaponisation lobby, whether in government or outside, is undoubtedly partly due to the virtual exclusion of the Indian armed forces from both the final decision-making loop as well as the long internal debate that led to the nuclear tests and the handling of the aftermath. And even if ultimate political authority rests with the Prime Minister, it makes command and control no more secure if the physical control of nuclear weapons lay with men in civilian clothing rather than those in the varied uniforms of the defence forces.

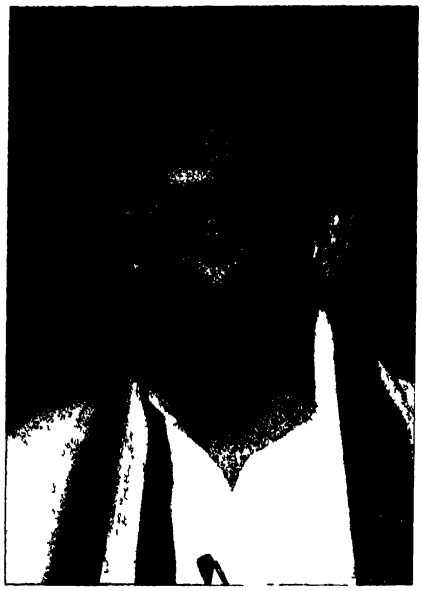
But even more disturbing considerations emerge if one tries to analyse more carefully the business-as-usual attitude of the nuclear hawks in India towards the implications of the coup in Pakistan. This attitude in fact has its genesis in the manner in which the Kargil conflict, a classic case of the damage done to India's security by Pokhran-II, was ultimately brought to an end. In Kargil, India's chestnuts were pulled out of the fire partly by the intervention of the U.S. As Pakistan, hoping for international intervention, prolonged the conflict beyond the time period that intelligent political and strategic considerations would have indicated, it was the pressure brought to bear by the U.S. that eventually led to a Pakistani withdrawal. This happened at a time when clearly the Indian government foresaw a long-drawn-out conflict, with high losses in terms of men and material, to regain final control of the territory occupied by the Pakistani intruders. Clearly it was also international pressure that prevented Pakistan from explicitly bringing the nuclear factor into play even though threatening noises did emerge from some quarters.

It is the self-deluding and mistaken reading of these events as a triumph of Indian diplomacy and strategy, in utilising the U.S. to contain Pakistan in the Kargil conflict and force its withdrawal, that has partly emboldened the nuclear hawks in India to produce the aggressive dIND, unmindful of its destabilising effects in the subcontinent. One of the key underlying assumptions of the doctrine is that the five permanent members of the United Nations Security Council (P-5) would automatically intervene if Pakistan attempts to raise the nuclear threat in the subcontinent. The gamble is that deterrence will work partly because the international community will not countenance any destabilisation of deterrence by Pakistan. And this is also the reason why the nuclear hawks view the coup with relative unconcern, depending on the U.S. to intervene to ensure that Pakistan continued to exercise nuclear restraint. What if the intervention of the P-5 does not work or that they are unable to intervene decisively on some occasion in the future. These are, of course, questions that only 'naive' anti-nuclear weapons campaigners would ask.

It is clearly this view that finds its echo in an editorial in *The Times of India* (October 21) calling upon the "international community, and particularly the U.S.", to "emphasise to the Pakistani military what the consequences of any nuclear adventurism are likely to be." The editorial smugly concludes: "It is to cover contingencies of this type that the Indian nuclear doctrine authored by the National Security Advisory Board talks of 'punitive unacceptable retaliation' in case of a nuclear first strike on India." Undoubtedly P-5 intervention against the offender and an Indian second strike would bring considerable cheer to the ghosts of those Indians who would have been vapourised by a first strike.

The fact that this strategy, even in the short term, would require the offering of substantial *quid pro quo* measures to the U.S., or that it opens the door to worrisome possibilities such as international intervention on the Kashmir question, has been lost sight of in the blind pursuit of nuclear weaponisation. That this attitude is at least partly official is evident from the alacrity with which the newly-elected government has resumed its dialogue with the U.S. on a broad range of issues that have been left somewhat unspecified but appear definitely to include India-Pakistan relations. Indeed, it is National Security Adviser Brajesh Mishra who is the first representative to visit Washington.

It certainly appears unlikely that the serious problems that beset India-Pakistan relations can be settled in the short term. There is a huge gap that divides the two nations that it seems will be difficult to bridge without considerable patience and intense and prolonged effort. And undoubtedly the continued instability of democracy in Pakistan complicates the picture. But introducing nuclear weapons into the subcontinent or the production of aggressive nuclear doctrines based on the false assumptions of nuclear deterrence theory seems hardly the way to go about securing peace. The correct first Indian response to its troubled neighbour, post-Pokhran and post-Chagai, remains the acceptance of Pakistan's oft-repeated offer to consider the non-deployment of nuclear weapons in the subcontinent. ■

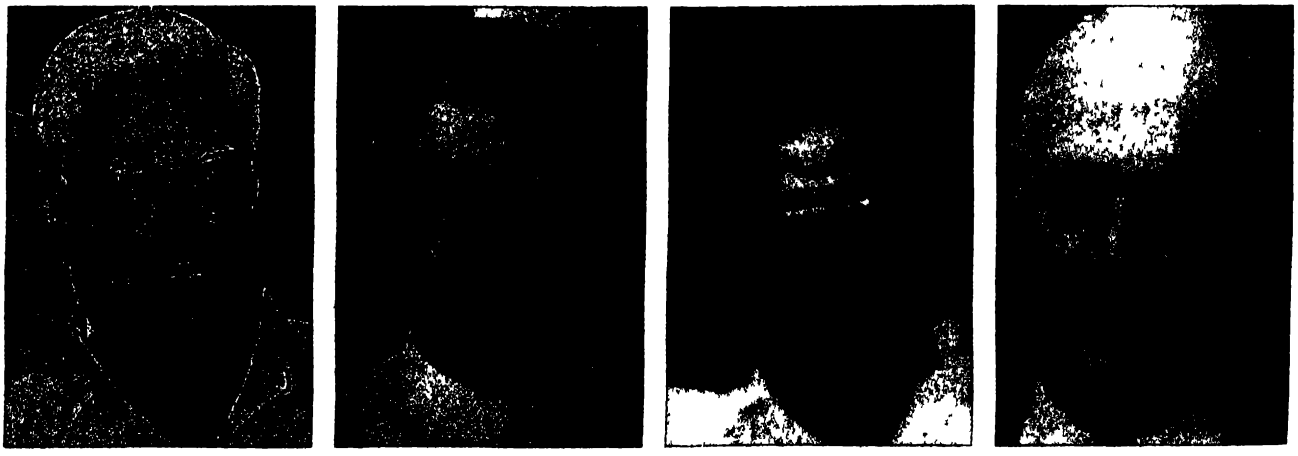


Into Act Five

The Central Bureau of Investigation files its first charge-sheet in the Bofors howitzer deal case, which is now set for trial.

SUKUMAR MURALIDHARAN
in New Delhi

IT has fallen to the lot of the Central Bureau of Investigation (CBI) to debunk one of India's most sacred political icons, whose residual aura provides all the legitimacy that the Leader of the Opposition in the Lok Sabha today possesses. The sensitivities connected to the Bofors pay-offs scandal being so acute, any decisive movement forward in the official investigation would inevitably be construed as politically motivated, irrespective of its specific content and purpose. Prudence demanded that the CBI should, for this reason, go through a rather prolonged period of cooling off before the first charge-sheet in the case was filed. The work of preparing the first set of indictments had begun immediately after sanction to prosecute the public servants implicated in the scandal was received from appropriate quarters in April. But the intervening general elections compelled the CBI to wait, since any action taken during an intensely fought political campaign could have easily been interpreted as being partisan in its motivations.

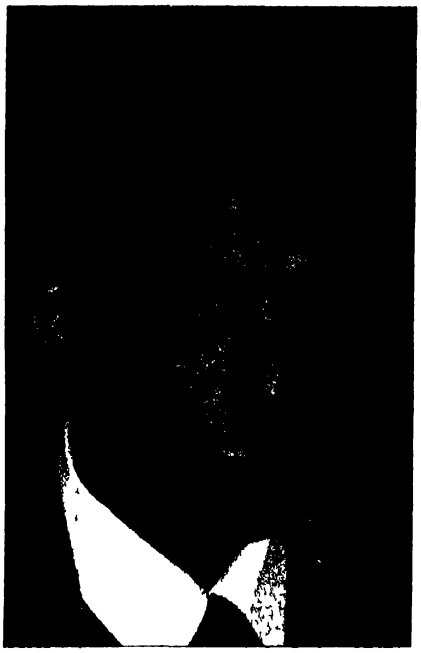


The charge-sheet that was filed before Ajit Barihoke, Special Judge for CBI cases, on October 22 is closely modelled in its essence on the report that the agency had submitted to its administrative Ministry in May 1997. The then CBI Director, Joginder Singh, had insisted in February that year – as he took delivery of the first set of secret bank documents released through the Swiss judicial system – that his investigations would be completed by the end of April. He missed the self-imposed deadline by a few days, but that can hardly be considered a serious deficiency in an investigative process that has often been dragged out for the most unsavoury of reasons. CBI officials intimately connected to the investigation today acknowledge the debt they owe to the brief period of autonomy the agency enjoyed under Joginder Singh, during the tenure of Prime Minister H.D. Deve Gowda.

Former Prime Minister Rajiv Gandhi. He figures in the CBI charge-sheet as an accused whose name was not sent up for trial as he is no more.

For no evident reason, the mandatory sanction required for the prosecution of public servants was delayed till April this year and finally granted only selectively. Sanction was sought for the indictment of three individuals who had been public servants when the putative offences were committed – S.K. Bhatnagar, Defence Secretary in the Rajiv Gandhi Government, G.K. Arora, Principal Secretary in the Prime Minister's Office during the same period, and Madhavsinh Solanki, Minister for External Affairs in the P.V. Narasimha Rao Government. In the case of Bhatnagar and Solanki, sanction was granted in April by the appropriate authorities. The case of Arora remains indeterminate, according to CBI sources – neither has sanction been granted, nor has it been explicitly denied.

In the professional assessment of CBI



The other accused in the case are (from left): Former Bofors agent Win Ch businessman Ottavio Quattrocchi; former Defence Secretary S.K. Bhatnagar; former Bofors President Martin Ardbo.

investigators, Arora's indictment is not really essential to ensuring the integrity of their case. And Solanki's alleged offence, though serious, is of a different nature. He stepped into the fray when the judicial process in Switzerland was already well advanced and sought rather maladroitly to divert it off course by passing an anonymous note to his counterpart in that country. This makes him a party to the criminal conspiracy in its later phases. It is learnt that his indictment is imminent. He does not feature in the charge-sheet now filed, since this pertains to the earlier phases of the scandal.

PERCEPTIVE observers and chroniclers of the howitzer deal have analytically sought to interpret it in terms of four stages, each characterised by a specific mode of action. The first relates to the decision-making process on the choice of howitzer guns for the Indian Army. The second comprises the arrangements made for the receipt of illicit pay-offs from the Swedish arms vendor. The third is the official cover-up and crisis management effort by a small group in the Prime Minister's Office. The fourth is the journalistic expose and the CBI's criminal investigations, which were assisted by the Swiss Federal Police and the judiciary in both India and Switzerland.

In terms of this conceptualisation, Arora and Bhatnagar were deeply implicated in the first three phases of the scandal, though their specific roles would be simply incomprehensible if the guiding hand of Rajiv Gandhi were not reckoned with. It is not ill-will or political partisanship that impels the CBI to name Rajiv Gandhi as one of the accused in the charge-sheet, but the undeniable requirement of logical and legal completeness. As Joginder Singh aptly put it shortly after his investigation report was completed in May 1997, Bofors without Rajiv Gandhi would be like Hamlet without the Prince of Denmark.

Expectedly, the Congress(I) has responded with unconcealed fury to the charge-sheet. There was no evidence implicating Rajiv Gandhi in the scandal, claimed Congress(I) spokesman Kapil Sibal, shortly after briefing the party's highest executive body, the Congress Working Committee, on the legal background and implications of the CBI's move. Even the supposed proximity between the Rajiv Gandhi family and Ottavio Quattrocchi, the Italian businessman who was a long resident in India, is far from establishing an established fact, he

ANU PUSHKARNA

CBI Director R.K. Raghavan.

claimed. More ominously, a statement issued by the Congress(I) headquarters denounced the charge-sheet as an effort at "vilifying and maligning the late Rajiv Gandhi" – an action that would not be tolerated by "millions of Congressmen and women".

The emotive appeal fails to carry credibility since the legal evidence that has been marshalled by the CBI is unambiguous. Quattrocchi is known to have elbowed his way into the howitzer contract in November 1985, in the guise of a shadowy company called A.E. Services. To all appearances, this company had no previous existence, far less any knowledge of the armaments business. But for a concern with such obvious limitations, it was willing to take on onerous responsibilities. Its agreement with Bofors promised to deliver the howitzer contract signed and sealed to the Swedish firm before April 1, 1986. Failing this, its entitlement to an agreed percentage of the contract value would be rendered void.

A.E. Services' sense of self-assurance was obviously underwritten by high-level connections in the Indian government. Between November 1985 and March 1986, the Indian Army was prevailed upon to revise its preference ordering of howitzer guns that were on offer. The Bofors weapon, which featured as the second preference to a French product until November, was catapulted to the premier position. And a contract in favour of the Swedish manufacturer was signed on March 24, 1986.

In March last year, Quattrocchi had in his quest for legal exculpation played his last card. Pleading that the CBI's arrest warrant and the Interpol red-corner alert issued against him amounted to a gross infringement of his right to free movement, Quattrocchi petitioned the Delhi High Court for remedies. The CBI's counter-affidavit, based in essence on the May 1997 investigation report, frontally took on this plea, recording in graphic detail all the available evidence on the Italian businessman's culpability.

Crucial in this regard has been the deposition before an examining magistrate in Geneva by Myles T. Stott, Director of A.E. Services, whose essential function was to act as a fiduciary agent in the operation of the company's Swiss accounts. According to Stott, the "initial approach" for the Bofors-A.E. Services agreement "came from Mr. Ottavio Quattrocchi", who he surmised had "a consultancy role". A.E. Services, in turn, in Stott's understanding, was a wholly-owned subsidiary of Quattrocchi's firm CAV, and acted in the Bofors matter purely as a "trustee".

This reading is corroborated by the Swiss bank documents in the CBI's possession, which show a remittance of just over 50 million Swedish kroner (then equivalent to over $7.3 million) into A.E. Services' newly opened account at Nordfinanz Bank in Zurich on September 3, 1986. A few days later, the bulk of these funds was again transferred to an account maintained by Colbar Investments Ltd – a company registered in Panama – at the Union Bank of Switzerland in Geneva. Colbar was then controlled by Quattrocchi and his wife Maria – both of whom were in Switzerland at the time the account documents were signed. In July 1987, the funds in the Colbar account were moved to the credit of Wetelsen Overseas at the Union Bank of Switzerland. After a further transit through Guernsey in the British Channel Islands, the monies were lodged in Switzerland and Austria.

Quattrocchi's entry into the deal and his subsequent exertions in shifting vast sums of money through a tortuous course of secret bank accounts would be incomprehensible if cognisance were not taken of his proximity to the Rajiv Gandhi family. The CBI's averments in the Delhi High Court record that "the families of the then Prime Minister of India and Mr. Ottavio Quattrocchi were on very intimate terms and they used to meet frequently." Certain family photographs collected during the investigation, the CBI further claimed,

bore testimony to this proximity.

THE first hearing of the Bofors case is scheduled for November 3, when the court will be requested to take cognisance of the charges and issue summons to all the accused. It is learnt that the CBI has secured assurances of cooperation from Myles Stott, an Englishman who often takes up fiduciary management responsibilities on the basis of the impeccable reputation he enjoys. The CBI could also consider summoning a senior Delhi-based lawyer, who was instrumental in recruiting Stott's services for the Bofors deal. The diary of Martin Ardbo, president of the Swedish armaments manufacturer all through that stormy period, bears a few enigmatic references to a certain "Gandhi Truste lawyer" he was sporadically in touch with during the crisis management phase. It seems a reasonable surmise from the CBI's point of view that this could be the same lawyer who brought Stott into the deal as trustee for the A.E. Services funds.

Of the five accused in the October 22 charge-sheet, three are in relatively safe havens overseas. Quattrocchi fled the country and has been resident in Malaysia since he was identified in July 1993 as one among seven individuals who had filed appeals in the Swiss Federal Court against a lower judicial order transferring key bank documents to the CBI. W.N. ("Win") Chadha took flight in 1988, even before Rajiv Gandhi was ousted from power. As a long-serving agent for Bofors in India, Chadha had reason to feel done out of a fair share of the pickings from the deal on account of Quattrocchi's late entry. His early retreat from the arena was a recognition that he was badly exposed both by virtue of his long association with the arms manufacturer and his relative remoteness from the centres of political power. From his sanctuary in Dubai, he has repeatedly indicated his willingness to submit to CBI interrogation. But the Indian investigators have been equally insistent that they will not conduct any part of their inquiries on foreign soil.

Martin Ardbo remains a resident of Sweden and could benefit from the legal immunity conferred by the statute of limitations. CBI officials are not very clear about the pertinent legal provisions and are working on the premise that they will deal with any such encumbrance when it crops up.

Among the witnesses who could be summoned in the hearings is Arun Singh, who was Minister of State for Defence in the Rajiv Gandhi regime and a close confidant of the then Prime Minister. He and General K. Sundarji, then Chief of the Army Staff, are known to have repeatedly affirmed that the threat of cancelling the Bofors deal would quickly bring the recalcitrant arms manufacturer around to naming the beneficiaries of the illicit pay-offs. On every occasion, this seemingly reasonable position was thwarted by Defence Secretary Bhatnagar, obviously on the instructions of Rajiv Gandhi.

VIVEK BENDRE

Former CBI Director Joginder Singh.

Viewing the matter from the other side, B.M. Oza, who was India's Ambassador to Sweden during that stormy period, has recorded how he had gone out of his way to issue visas for a group of Bofors officials to visit India early in 1987, to depose before an inquiry into bribery allegations. Again, the effort at uncovering the truth behind the burgeoning scandal was scuttled by a direct intervention from the office of the Prime Minister. Oza too figures as an important witness in the case.

Frontline Editor N. Ram is another witness listed by the CBI; the series of articles that he ran in *The Hindu* between 1988 and 1989, laid open the sordid inner workings of the nexus between international arms merchants and politics. Ram has been closely tracking the official investigation since it was launched by the CBI under the directorship of Rajendra Shekhar in 1990. His inputs and expertise were extensively utilised by the agency when Joginder Singh was its Director.

OCTOBER 22 could be justifiably viewed as the inauguration of Act Five in the Bofors drama. A relatively minor theme – perhaps Scene Two in Act Five – will commence when the indictment is served on Madhavsinh Solanki for his effort to defeat the process of the law through an anonymous note of dubious provenance. But another major Act could commence when the Swiss judiciary finally disposes of a batch of appeals pending before it, relating to another set of bank accounts where the Bofors pay-offs were lodged.

It is known that the appellants in this case are the Hinduja brothers – Gopichand and Srichand – enormously influential businessmen of Indian origin, settled in London. They were identified as interested parties in the Bofors scandal as far back as July 1993, when the Swiss Ministry of Justice released the names of the individuals who were contesting the order transferring the Bofors documents to the CBI. But unlike Quattrocchi who seemingly had exhausted all his legal options by then, the Hindujas managed to take the matter further up in appeal. From the examining Magistrate's Court, they took it up to the Cantonal Court. Losing the case there, they appealed to the Federal Court. Again having suffered a mortifying defeat, they are learnt to have taken their plea to the Federal Councillor – a higher judicial official whose jurisdiction is invoked only in the rarest of cases. The CBI is confident that the Hindujas will win no sustenance from this quarter. But being unsure of the time-frame involved, it has decided to proceed with one round of indictments and file additional charge-sheets when further evidence becomes available.

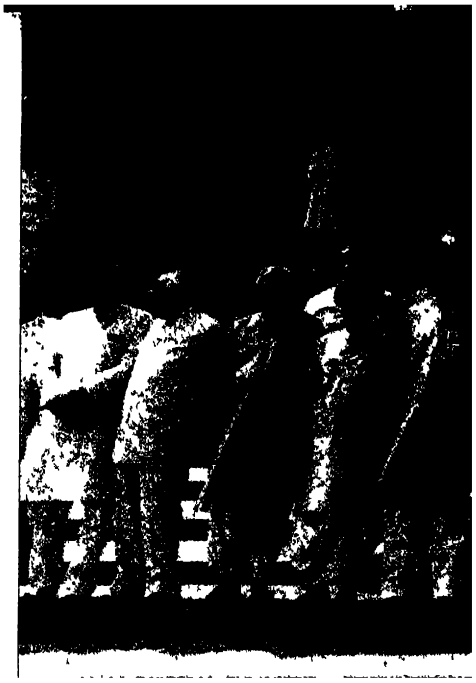
Indian politics may have plumbed fresh depths since Bofors exploded on the scene as a powerful metaphor for corruption in public life. But the Swedish arms manufacturer's name – since effaced on account of a series of corporate takeovers and supplanted by the relatively untainted appellation of Celsius – continues to evoke deep resonances. Above all, Bofors is about the democratic principle of accountability. It is about a democratically elected leader squandering an enormous fund of public goodwill through sheer arrogance of power, trampling upon every process of accountability and subverting institutions in his effort to evade responsibility.

L'affaire Bofors still remains far from its final consummation. But the mere fact that it has been committed to trial represents a much needed affirmation of the resilience of the rule of law in India. ■

■ GOVERNMENT

A balancing act

Among the several factors that influenced the constitution of a 70-member Ministry at the Centre, the most important one is the need to strike a balance between regional representation and political aspirations within the ruling coalition.



V. VENKATESAN
in New Delhi

THE swearing in of Prime Minister Atal Behari Vajpayee and 69 members of his Council of Ministers by President K.R. Narayanan on October 13 at Rashtrapati Bhavan stretched into nearly three weary hours. Despite the weariness, however, for senior leaders of the ruling coalition, the day marked the celebration of a successful democratic exercise, especially, as some of them pointed out, in the light of the fact that in neighbouring Pakistan, a military coup had replaced a democratically elected government the previous day.

The Prime Minister's advisers appeared to have more faith in numerology than in the arithmetic of the 13th Lok Sabha in the matter of ensuring Vajpayee's longevity in office. Even though it was believed that the number 13 had proved unlucky for Vajpayee during his earlier tenures – his first term in office lasted 13 days, his second lasted 13 months – he chose October 13 for the swearing-in ceremony since his close aides assured him that 13 would prove lucky for him this time.

Leaders of the National Democratic Alliance (NDA) met the President on October 11 and apprised him of Vajpayee's election as the leader of the alliance. They informed him that the alliance's own strength in the House of 543 was 275 and that since the Telugu Desam Party (the TDP is not a constituent of the NDA) had conveyed its decision to support Vajpayee, its 29 members should also be taken into consideration while determining the parliamentary support for Vajpayee. The President, after ensuring himself that Vajpayee would command majority support in the Lok Sabha, appointed him Prime Minister and invited him to recommend the names of other Ministers.

The NDA's 275 members come from both pre- and post-poll allies of the Bharatiya Janata Party. Its pre-poll constituents are: BJP (182 seats in the Lok Sabha), Biju Janata Dal (10), Dravida Munnetra Kazhagam (12), Marumalarchi Dravida Munnetra Kazhagam (4), MGR Anna Dravida Munnetra Kazhagam (1), Pattali Makkal Katchi (5), Indian National Lok Dal (5), Janata Dal (United) (20), Trinamul Congress (8), Shiromani Akali Dal (2), Shiv Sena (15), Loktantrik Congress (2), Himachal Vikas Congress (1), and one independent, Maneka Gandhi. The post-poll constituents are: National Conference (4), Manipur State Congress Party (1), Sikkim Democratic Front (1) and Mizo National Front (1). Two of the BJP's pre-poll allies, the Tamizhaga Rajiv Congress and the Jantantrik Bahujan Samaj Party, failed to win any seats.

SHANKER CHAKRAVARTY

Prime Minister A.B. Vajpayee being sworn in by President K.R. Narayanan in the forecourt of Rashtrapati Bhavan on October 13.

FOR Vajpayee, putting together a viable governing formation was no easy task. The TDP, with which the BJP had seat adjustments in Andhra Pradesh, decided to support the NDA government from the outside. This turned out to be a blessing in disguise for Vajpayee, who was already under pressure from his own party as well as its allies in the matter of ministerial berths. He made no attempt to persuade the TDP to reconsider its decision although many of its 29 MPs did have ministerial ambitions. Being the second largest party in the ruling coalition, the TDP would have had to be allotted important portfolios.

When asked to comment on the size of his Ministry, Vajpayee maintained that it.

Vajpayee with his Council of Ministers outside Rashtrapati Bhavan.

was not huge; he said that he had constituted a 70-member Ministry because he was prompted by the compulsions of coalition government and because he wanted to give representation to as many of his coalition partners and as many regions of the country as possible. The BJP's coalition partners have increased in number from 13 in the previous Lok Sabha to 18 now (including Maneka Gandhi). Home Minister L.K. Advani defended the size of the Ministry by saying that it conformed to the ceiling recommended by the Administrative Reforms Commission. Way back in the 1960s, the ARC had recommended that the size of the Union Council of Ministers not exceed 11 per cent of the combined strength of the two Houses of Parliament, which is 793.

Vajpayee went about his task of ministry formation in a confident manner since he believed that his 30-plus majority in the Lok Sabha would discourage any recalcitrant ally from challenging him. He sought the allies' views on who should be included in the Cabinet but told them to accept whatever was offered to them finally. During the run-up to the ministry formation, leaders of the BJP and its allies told the media that it was the Prime Minister's prerogative to choose the Ministers and that they would accept whatever was offered to them. However, some of them did canvass for particular portfolios.

Vajpayee, who initially planned to start with a 50-member Ministry, was subsequently forced to increase the size.

Under the guise of ensuring representation to all regions and classes, the BJP itself sought berths for several of its veteran leaders, including O. Rajagopal and Bangaru Laxman, both of whom lost the Lok Sabha elections. Vajpayee was forced to make an exception to the norm that those who lost the elections should not be inducted into the Ministry. Both Rajagopal and Bangaru Laxman are members of the Rajya Sabha and thus they qualify for appointment as Ministers. They were inducted as Ministers of State.

However, Sushma Swaraj, formerly Delhi Chief Minister, Union Minister and party spokesperson, failed to make it to the Cabinet. Sushma Swaraj lost to Congress(I) president Sonia Gandhi in Bellary. The BJP did not find it necessary to treat her defeat as an exception, as it did in the case of Rajagopal and Bangaru Laxman. Sushma Swaraj had apparently been told by the party leadership that if she lost in Bellary, she would be considered for a Rajya Sabha seat. However, she is now being considered for a senior party post. Although an obviously aggrieved Sushma Swaraj was present at the swearing-in ceremony, her subsequent meeting with Ramakrishna Hegde, another disgruntled leader, has raised questions about her future plans.

Arun Jaitley, the BJP's spokesperson during the recent elections, has been inducted as Minister of State with independent charge although he is not a member of either House. The elevation of Jaitley, who hails from Delhi, is attributed to the fact that he played a crucial role in the party's victory. He is rated highly within the party. (Jaitley will, in all probability, be elected to the Rajya Sabha within the next six months.)

Surprisingly, only one of the seven BJP MPs from Delhi, Jagmohan, has made it to the Cabinet. This has caused consternation since the BJP's victory in all the seven seats in Delhi was impressive. Indeed, even on October 10, former Chief Minister of Delhi Sahib Singh Verma claimed that he was a "sure" entrant into the Ministry. Vajpayee's decision to keep him out is attributed to certain "compulsions".

While Sahib Singh Verma and another aspirant for a ministerial berth from Delhi, V.K. Malhotra, who defeated the Congress(I)'s Manmohan Singh, attended the swearing-in ceremony and gave expression to their disappointment, Verma's former rival and veteran leader Madan Lal Khurana chose to stay away. Khurana held a Cabinet berth in Vajpayee's Ministry after the 1998 elections, but resigned after the BJP's rout in the November 1998 Assembly elections in Delhi. Vajpayee chose to retain Jagmohan despite media reports that he was unhappy with Jagmohan's style of functioning during his earlier tenure, as Communications Minister. Apparently, Vajpayee's decision to retain him and drop Rashtriya Swayamsevak Sangh baiters such as Khurana and Sikander Bakht was a result of pressure from the RSS. (It is rumoured that Sikander Bakht, whose term in the Rajya Sabha is likely to end shortly, may be offered a gubernato-

rial posting.) The exclusion of Bakht, the only Muslim Minister in Vajpayee's previous Cabinet, however, has led to misgivings. Significantly, he neither attended the swearing-in ceremony nor spoke to the media about the issue.

THE big surprise, however, was the exclusion of Ramakrishna Hegde, senior Janata Dal (United) leader and former Commerce Minister. The J.D.(U) won three seats from Karnataka. Only one of the three winners, V. Srinivas Prasad, who belongs to the Hegde group, was inducted into the Ministry, as a Minister of State. Hegde's name was in the list of probables drawn up by the Prime Minister's Office (PMO) initially. However, Hegde's detractors in the ruling alliance appear to have ganged up against him and forced the Prime Minister to drop him. The BJP's Karnataka unit had not taken kindly to Hegde's success in enabling the entry of the J.D.(U) into the NDA, which forced the former into a losing combination in the State. This cost the BJP dearly in Karnataka as seen from the results of both the Lok Sabha and Assembly elections. Although the BJP's Karnataka unit opposed any understanding with the JD(U), Advani, who initially stood by the State unit, gave in to pressure from Hedge and Defence Minister George Fernandes. It appears that while the BJP was thankful to the J.D.(U) in Bihar for helping it win more seats, it was in search of scapegoats for its debacle in Karnataka. Hegde was an obvious choice.

An angry Hegde alleged that Fernandes had not consulted him before forwarding to the Prime Minister the list of party nominees for ministerial berths. "It is not the question of my non-inclusion I protest against, but the way I was treated. That is what has hurt my followers," he told *Frontline*. He claimed that he would have gladly abided by the Prime Minister's decision if he had been consulted while finalising the list of the Ministers. "Neither the Prime Minister nor Fernandes has contacted me so far," he said, when asked whether they had sought to assuage his feelings. Hegde, however, reiterated his support to the Prime Minister and said that he would not destabilise the Government. According to Hedge, Srinivas Prasad refused to accept Vajpayee's offer. "He did not want to go to the swearing-in ceremony," said Hegde. "It was I who persuaded him to go, as otherwise it would send the wrong signals."

Four of the 17 J.D.(U) MPs from Bihar – Ram Vilas Paswan, Fernandes, Nitish Kumar and Sharad Yadav – have been given Cabinet berths. Another member, Digvijay Singh, has been made a Minister of State. Yet the J.D.(U) is unhappy. Prabhunath Singh, who represents Maharajganj in Bihar, held a press conference and voiced his unhappiness over not being included in the Ministry. Claiming that the four senior leaders had conspired to deny due representation to Rajputs, he threatened to cause a split in the J.D.(U), even while supporting Vajpayee. He was backed by Jai Narain Prashad Nishad, another J.D.(U) MP from Bihar and who was a Minister in the United Front Government. (Prabhunath Singh was a dissident leader in the Samata Party before it merged with the J.D.(U).) He has since met Hegde and made common cause with him. The J.D.(U) Ministers have failed to pacify Hegde and Prabhunath Singh. Leaders of the BJP, for their part, washed their hands of the J.D.(U) muddle, claiming that the Prime Minister simply went by the list submitted by the J.D.(U) leader in the Lok Sabha, Fernandes. Fernandes, however, refused to accept responsibility for the discontent and said that Ministry formation was the Prime Minister's prerogative.

The Vajpayee Ministry has 11 Ministers from Bihar (five of Cabinet rank and six Ministers of State), the highest representation for any State. The high level of representation given to the J.D.(U) in order to pacify its senior leaders has caused tension within and without the J.D.(U) in the State where Assembly elections are due in six months. Of the 11 Ministers, six belong to the BJP; only one of them has been given Cabinet rank. It remains to be seen whether the high representation given to Bihar will aid or mar the alliance's prospects in the Assembly elections.

Tamil Nadu is represented by eight Ministers, three of whom are of Cabinet rank, two are Ministers of State with independent charge, and three Ministers of State. For the ruling coalition, which has as many as six parties of Tamil Nadu, which together account for 26 MPs, there appears to be no option but to recognise the important role played by the State in making or breaking Union governments. The Prime Minister seems to have constituted the entire Ministry in one go rather than promise future expansions to accommodate other claimants. This has seemingly satisfied the MPs from Tamil Nadu although there is some dissatisfaction over the allotment of portfolios (see separate story).

There are two Ministers of State representing the Muslim community: Syed Shahnawaz Hussain, the only Muslim candidate of the BJP to win in this election (he won from Kishanganj in Bihar), and Omar Farooq, the N.C. representative from Srinagar.

There are eight women in the Ministry, including one of Cabinet rank, Mamata Banerjee.

VAJPAYEE has more or less succeeded in rewarding MPs from States in which the NDA fared better this time. Party-wise, he has rewarded those with more than four MPs in the Lok Sabha. Parties that have fewer than four seats, such as the Himachal Vikas Congress and the MGR ADMK, have not been allotted ministerial berths. However, one of the Rajya Sabha members of the Shiromani Akali Dal, which has only two seats, was offered a berth. The party declined the offer owing to opposition from its senior leader Surjit Singh Barnala, thus depriving Punjab of representation in the Ministry. The Manipur State Congress' lone MP, Chaoba Singh, has been inducted as Minister of State on the recommendation of Mamata Banerjee. The Scheduled Castes and Scheduled Tribes have been given a fair representation, apparently in acknowledgment of these sections' support to the NDA.

The INLD, led by Haryana Chief Minister Om Prakash Chautala, did not evince interest in joining the Union Government despite winning five seats. Both Chautala and Punjab Chief Minister Prakash Singh Badal are critical of the recent increase in the price of diesel, announced by the Centre. One of the BJP's five MPs from Haryana, I.D. Swami, has been made a Minister of State. The INLD-BJP alliance won all the 10 Lok Sabha seats from Haryana, each taking five. Subhash Maheria, a Jat from Rajasthan, who defeated senior Congress(I) leader Balram Jakhar in Sikar, has been inducted as a Minister of State.

APART from Vajpayee there are 25 Cabinet Ministers, seven Ministers of State with independent charge, and 37 Ministers of State. As many as 46 of the 70 Ministers belong to the BJP: despite their sizable presence, its allies have got only one-third of the berths.

The Ministry-making exercise appears to have been undertaken with a view to consolidating the gains made by the BJP and thereby seeking to expand its reach. It remains to be seen whether the BJP's allies will help the party take its agenda forward. ■

A cautious approach

The composition and character of the new Council of Ministers reflect the Prime Minister's decision to play it safe despite the fact that the National Democratic Alliance enjoys a majority.

V. VENKATESAN

THE 1999 elections will be remembered for two things. One, it was the first time since Indira Gandhi's election in 1971 that an incumbent Prime Minister has been returned to power. Second, it was the first instance when Lok Sabha elections were fought predominantly on the strength of prime ministerial candidates.

Although the comfortable majority secured by the National Democratic Alliance (NDA) has freed Prime Minister Atal Behari Vajpayee from pulls and pressures from various quarters as was the case during his previous term in office, he does not seem to want to take undue risks. The composition and character of his new Ministry, in which he has chosen to retain most of the Ministers in his previous Ministry, reflect his cautious approach. The only obvious risk he took was the dropping of his previous Ministers for Industry and Commerce, Sikander Bakht and Ramakrishna Hegde respectively. This time around, Heavy Industries, Public Sector Departments and Small-Scale Industries have been separated from the Industry portfolio. The Heavy Industries and Public Enterprises Ministry has been allotted to former Maharashtra Chief Minister and Shiv Sena Member of Parliament Manohar Joshi, a first-time Cabinet Minister at the Centre. Vasundhara Raje Scindia, who was the Minister of State in the External Affairs Ministry in the previous government, has been elevated as Minister of State with independent charge of Small-Scale Industries. She will also assist the Prime Minister in handling the Ministries of Personnel, Public Grievances and Pensions, the Department of Energy and the Department of Space. The Industry portfolio has been given to Dravida Munnetra Kazhagam (DMK) nominee Murasoli Maran. Maran, who also holds the Commerce portfolio, will have two Ministers of State, Omar Farooq Abdullah and Dr. Raman, to assist him.

Several of the senior Ministers in Vajpayee's previous government have retained their portfolios. They are: Home Minister L.K. Advani, Human Resource Development Minister Murli Manohar Joshi, Defence Minister George Fernandes, Urban Development Minister Jagmohan, Power Minister P.R. Kumaramangalam, Textiles Minister Kashiram Rana, External Affairs Minister Jaswant Singh, Finance Minister Yashwant Sinha and Minister of State for Social Justice and Empowerment with independent charge Maneka Gandhi.

Among the Ministers of State, Bandaru Dattatreya (Urban Affairs), Debendra Pradhan (Surface Transport) and Babulal Marandi (Environment and Forests) have retained their portfolios.

The Rashtriya Swayamsevak Sangh (RSS) was apparently keen that the Defence Ministry be given to a BJP leader, preferably Advani. Vajpayee overruled the suggestion, perhaps because he felt that moving George Fernandes from the Defence Ministry at this juncture – in the backdrop of India's victory in the Kargil War – would send out wrong signals. Ministers of State have been appointed in both the Home and Defence Ministries. While there are two Ministers of State for Defence, Hiren Pathak (BJP MP from Ahmedabad) and Bachi Singh Rawat (BJP MP from Almora, Uttar Pradesh), one Minister of State, Vidya Sagar Rao (BJP MP from Karim Nagar, Andhra Pradesh), has been appointed to the Home Ministry.

Senior Ministers including George Fernandes (left) and L.K. Advani have retained the portfolios they held in the previous Ministry.

Both the Telugu Desam Party (TDP) and the DMK vied for Finance, the most coveted portfolio. Although TDP chief N. Chandrababu Naidu did not want his party to join the Government, he was apparently keen on Andhra Pradesh Governor and former Governor of the Reserve Bank of India C Rangarajan getting the portfolio. However, this suggestion was not accepted since business houses and various industries associations, such as the Federation of Indian Chambers of Commerce and Industry (FICCI) and the Confederation of Indian Industry (CII), apparently told the Prime Minister that they were keen on Yashwant Sinha continuing as Finance Minister. The RSS too backed Sinha.

The DMK, which initially showed an interest in the Finance portfolio going to Maran, withdrew when it realised that Yashwant Sinha was the favoured choice within the coalition. Maran and Tamil Nadu Chief Minister M. Karunanidhi later pointed out that since the incumbent Finance Minister had won from Bihar, he was the obvious choice. The DMK apparently believed that Maran would, as compensation for not getting the Finance portfolio, be asked to head a high-profile Ministry, probably titled Economic Affairs. Instead, Maran got a revamped Industry and also Commerce

M. Kannappan of the Marumalarchi Dravida Munnetra Kazhagam (MDMK) was made Minister of State with independent charge of the Non-Conventional Energy Sources Ministry, while N.T. Shanmugham of the Pattali Makkal Katchi (PMK), also a Minister of State with independent charge, was entrusted with the Health and Family Welfare portfolio. The DMK's T.R. Baalu was made a Cabinet Minister, in charge of Environment and Forests, while A. Raja, the party's youth wing leader, was appointed Minister of State for Rural Development.

Petroleum and Natural Gas, a portfolio the DMK wanted for one of its nominees, was given to BJP MP and former Minister of State Ram Naik, who was elevated to Cabinet rank. E. Ponnuswami of the PMK was made a Minister of State under Ram Naik, while Ginjee Ramachandran of the MDMK a Minister of State under Kashiram Rana. Although Vajpayee was willing to make Vaiko a Cabinet Minister, the latter declined the offer and let his juniors in the party assume charge as Ministers.

There is a latent feeling among the MPs from Tamil Nadu that the State has failed to secure important portfolios. (In the previous Government, the All India Anna Dravida Munnetra Kazhagam, which was then an ally of the BJP, held the portfolios of Law, Justice and Company Affairs, Banking, Personnel, and Surface Transport.)

Rangarajan Kumaramangalam lost the Parliamentary Affairs portfolio to Pramod Mahajan. The Information and Broadcasting portfolio, which Mahajan held in the previous Ministry, was given to Arun Jaitley, with independent charge. Pramod Mahajan has two Ministers of State under him: Shriram Chauhan and Faggan Singh Kulaste. Besides, he is assisted by the Biju Janata Dal's (BJD) Dilip Ray (Minister of State for Steel with independent charge; he is a Rajya Sabha member) and Santosh Gangwar (Minister of State for Science and Technology). Apart from the Parliamentary Affairs Ministry, Mahajan has also been allocated Water Resources. Bijoya Chakravarty is the Minister of State for Water Resources. As Information and Broadcasting Minister in the previous Vajpayee Government, Mahajan was embroiled in a controversy over his alleged misuse of government-controlled media. Because of his high-profile image and his proximity to Vajpayee, it was believed that he would retain the Information and Broadcasting portfolio. Vajpayee's decision was apparently aimed at clipping his wings.

Ananth Kumar, who held the Civil Aviation portfolio in the previous Vajpayee Ministry and has now been given Culture, Youth Affairs and Sports, is seemingly disappointed. Sharad Yadav of the Janata Dal (United) has got Civil Aviation. Other JD(U) leaders have also been rewarded: Nitish Kumar and Ram Vilas Pawan have been given Surface Transport and Communications respectively.

THE Ministry of Steel and Mines has been bifurcated. Despite opposition to his continuance in the BJD, Dilip Ray has managed to become the Minister of State with independent charge of Steel, while BJD president Naveen Patnaik has been left with Mines and Minerals. Coal was taken away from Ray; Patnaik had to give up Steel.

The allocation of the Railways portfolio to Mamata Banerjee was not unexpected since she had openly asked for it when her party, the Trinamul Congress, decided to join the previous Vajpayee Ministry just before its collapse. She shares her responsibilities with Digvijay Singh of the J.D.(U), who is Minister of State for Railways. Another Trinamul Congress leader, Ajit Panja, has been appointed Minister of State for External Affairs.

Manohar Joshi and Suresh Prabhu of the Shiv Sena have been given Cabinet berths, while Balasaheb Vikhe-Patil, another Sena leader, has been made a Minister of State. Suresh Prabhu has been moved from the Ministry of Environment and Forests, which he headed in the previous government, to the Ministry of Chemicals and Fertilizers, which was previously headed by Surjit Singh Barnala. Vikhe-Patil will report to Yashwant Sinha in the Finance Ministry. The Shiv Sena Ministers did not take charge on October 14, apparently under instructions from their chief, Bal Thackeray, who wanted to put pressure on the BJP. The Shiv Sena-BJP combine fell 20 seats short of a majority in the Maharashtra Assembly elections. The BJP did not evince any interest in the alliance staking its claim to form the government before tackling the numbers issue, and this apparently annoyed Thackeray. However, following the BJP's decision to go along with the Shiv Sena in Mumbai, the Ministers took charge on October 15. The Shiv Sena's spokesperson in Mumbai, however, said that his party was dissatisfied with the portfolios allotted to its nominees.

There are a number of first-time Ministers in the Cabinet. Juel Oram, the BJP's Orissa unit president, has been made a Cabinet Minister and put in charge of Tribal Affairs, a new Ministry carved out of the Social Justice and Empowerment Ministry. Oram, who belongs to a Scheduled Tribe, has been instrumental in mobilising the support of the Scheduled Tribes for the BJP in successive elections. Sunderlal Patwa, former Madhya Pradesh Chief Minister, who won from Hoshangabad, has been made Minister for Rural Development. Shanta Kumar, former Chief Minister of Himachal Pradesh, is Minister for Consumer Affairs and Public Distribution. This is the first time that Himachal Pradesh, which has only four Lok Sabha seats, has received Cabinet-level representation at the Centre. The BJP-HVC alliance won all the four seats in the State. Shanta Kumar will be assisted by Ministers of State V. Srinivasa Prasad, a J.D.(U) member from Karnataka.

The Prime Minister's Office had decided to announce the portfolios on October 14, a day after the Council of

Ministers was sworn in. However, when it learnt that the proposed delay had given rise to rumours and confusion, it released the list on the night of October 13.

ONCE again the BJP had to give up the post of the Speaker of the Lok Sabha in favour of a party that is part of the coalition but is not part of the government. G.M.C. Balayogi, TDP MP and Speaker of the 12th Lok Sabha, was the unanimous choice of the ruling coalition and the Opposition Congress(I). The post of Deputy Speaker was likely to go to the Congress(I)'s P.M. Sayeed, who held the post in the 12th Lok Sabha, following a consensus reached among all political parties. The BJP had hoped that in the event of the Speaker's post going to a party that is not part of the government, it would be able to win the post of the Deputy Speaker. However, when it saw that its allies, particularly the Trinamul Congress, were not in favour of this idea, it resigned itself to endorsing Sayeed's candidature once again.

INSTEAD of settling down to serious business, the newly formed government still seems to be obsessed with the issue of Sonia Gandhi's foreign origin. The NDA had in its election manifesto promised to amend the Constitution suitably in order to prevent persons of foreign origin from occupying high constitutional posts. Constitutional amendments need the support of two-thirds of the members of the Lok Sabha. The NDA is, however, way behind the two-thirds figure. In order to overcome this hurdle, Law Minister Ram Jethmalani has hinted at an amendment to the Citizenship Act, which can achieve the same objective and can be passed with a simple majority in the Lok Sabha.

Similarly, sections of the NDA have suggested that the stability of the new Government can be ensured by amending the Lok Sabha Business Rules to ensure that a motion expressing lack of confidence in an incumbent Prime Minister can be admitted only if it is accompanied by a constructive vote of confidence in an alternative leader. Both have to be passed simultaneously. Otherwise, the incumbent Prime Minister will continue in office. The NDA manifesto also promised an amendment to the Constitution to ensure a full five-year term for the Lok Sabha.

These are serious issues that can be addressed only by evolving a consensus across the political spectrum. It needs to be seen how far the new Government will succeed in its efforts in this regard. ■

POLITICS

A leadership consolidation

Sonia Gandhi's decision to lead the Congress(I) in the Lok Sabha is perceived as a move to make her control over the party complete.

VENKITESH RAMAKRISHNAN
in New Delhi

ON October 19, a day before the 13th Lok Sabha began its first session, the Congress(I) announced that Sonia Gandhi would be the Leader of the Opposition in the House in addition to her being the chairperson of the Congress(I) Parliamentary Party (CPP). With this, the latest flag-bearer of the Nehru-Gandhi family gave out two distinct political messages. First, she was ready to lead her party in the battles in the country's highest legislative body in spite of her oft-highlighted lack of experience in parliamentary practice. Second, despite carrying the opprobrium of having led the Congress(I) to its worst ever electoral performance (of winning only 112 seats in the Lok Sabha against the previous strength of 141) she was determined to wield control over all sections of the party, including its parliamentary wing.

Before the October 19 announcement there was a suggestion in the party that Sonia Gandhi confine herself to the role of the CPP chairperson, which does not involve active participation in day-to-day parliamentary proceedings, and leave the Lok Sabha leadership to a veteran like Narain Dutt Tiwari. Advocates of this line pointed to the possibility of many contentious issues coming up before the new Lok Sabha. These issues, they feared, might throw up personal questions involving Sonia Gandhi and her family – such as the Bofors howitzer scandal and a bill to bar citizens of foreign origin from holding the posts of President, Vice-President and Prime Minister – and cause embarrassment to her. According to them, it would have been a different story had the Congress(I) come to power and Sonia Gandhi led the government. In such a situation, it was argued, the leader, though "inexperienced", could have faced Parliament with the help of many an experienced ministerial colleague.

Evidently, Sonia Gandhi has decided to ignore this advice and take the bull by the horns. The merit or otherwise of this step would be clear only eventually. Undoubtedly, her performance will be watched and scrutinised by her political opponents as well as by her own partymen. Her style of functioning and her dependence on a coterie have come under criticism from a number of partymen, including Congress(I) Working Committee (CWC) members. They fear that her functioning as the Leader of the

SHANKER CHAKRAVARTY

Congress(I) president Sonia Gandhi.

Opposition will expose her limitations.

Any failure on the part of Sonia Gandhi to match the leaders in the Treasury benches, led by Prime Minister Atal Behari Vajpayee, would only discredit her and cause dissidence in the party. Several senior leaders, some of them CWC members, fear that failure in the House could even lead to her eventual ouster from vantage positions in the party.

According to a non-political person considered close to 10 Janpath, Sonia Gandhi herself is fully aware of these possibilities. The same source added that this could well be the beginning of a process that would enable her to distance herself from the coterie of persons such as CWC member Arjun Singh, party general secretaries Pranab Kumar Mukherjee and Oscar Fernandes, and her personal secretary Vincent George. The source said that Sonia Gandhi is keen to "shed the image of being a prisoner of the coterie". In his perception, as Leader of the Opposition Sonia Gandhi would be impelled to have greater day-to-day involvement with party activists and members of Parliament. This in turn would help bring down her dependence on the coterie.

Sonia Gandhi's rejection of Manmohan Singh's resignation as the leader of the party in the Rajya Sabha is seen by sections of the party as a beginning in this direction. It is no secret in party circles that several leaders close to 10 Janpath were unhappy about the choice of Manmohan Singh as a candidate for the Lok Sabha polls and the way he was projected an alternative prime ministerial candidate. Reports submitted to the All India Congress(I) Committee by many local party units in Manmohan Singh's constituency of South Delhi have alleged sabotage by a couple of MLAs close to Arjun Singh. According to a Delhi Congress(I) leader, the alleged saboteurs' motive was to finish the former Finance Minister politically because he had announced during the run-up to the elections that he would resign from the Rajya Sabha whatever the South Delhi verdict. "By rejecting his resignation Sonia Gandhi has put paid to their plans," the leader said.

It is becoming increasingly clear that sections of the Congress(I) leadership are no longer ready to accept Sonia Gandhi's acquiescence to the activities of the coterie. The first indication of this came from former party president Sitaram Kesri, who minced no words in blaming what he called an Arjun Singh-led clique for the party's debacle. Kesri told *Frontline* that this group was basically responsible for thrusting the no-coalition idea on the party, which was unrealistic. He added that the coterie rode roughshod over the party organisation and systematically violated inner-party democratic principles. A case in point, according to Kesri, was the expulsion of former CWC members Sharad Pawar, P.A. Sangma and Tariq Anwar. These leaders were not served with show-cause notices as ordained by the party constitution, nor were they given an opportunity to explain their stand. Kesri said that he and A.K. Antony had opposed this "violation of democratic principles" at the time of the expulsion but to no avail.

Kesri, however, absolved Sonia Gandhi of any responsibility for the party's poor showing and said that with the emergence of Priyanka and Rahul Gandhi the coterie's influence over the party was on the wane. Kesri's stand finds support from a large section of senior leaders, particularly CWC members Rajesh Pilot and Antony.

However, Kesri's hope that Priyanka and Rahul would emerge as political entities strong enough to free the leadership from any influence could be misplaced. For, Sonia Gandhi herself has given sufficient indications that she does not foresee an immediate political career for any of her children. This is clear from her decision to retain Amethi and resign her Bellary seat. Had Sonia Gandhi retained Bellary and vacated Amethi, it would have led to Priyanka or Rahul contesting from the constituency, considering the affinity that people of Amethi have for the Nehru-Gandhi family.

Sonia Gandhi has also initiated a process of analysing the reasons for the party's election debacle. According to CWC member Madhavrao Scindia, the attempt would be to find out why the party failed to improve its tally in spite of the increase in its vote share. He said that it was clear that the party failed to capitalise on what he called improvements in the organisational network, brought about by Sonia Gandhi's leadership during the last 17 months.

The exercise, which was scheduled to begin at the CWC meeting on October 22 and continue at State-level discussions, could lead to a reorganisation of the AICC and some State committees before the organisational elections, which are due next year. Already the general secretaries of the AICC have resigned, paving the way for reorganisation. The efforts will undoubtedly be aimed at enhancing Sonia Gandhi's control over the party. ■

PRAVEEN SWAMI
in Chandigarh

IN an appropriately medieval style, the warlords of the Shiromani Akali Dal (SAD) establishment are gathering around the ruins of Chief Minister Prakash Singh Badal's political empire, surveying what might be plundered from its remains. In the wake of the SAD's humiliating defeat in the Lok Sabha elections, the immediate threats to Badal's position come from senior party figures furious with his perceived poor leadership, and corruption. But even more serious are the signs of a renewed struggle for control of the SAD's political apparatus by the Golden Temple's religious establishment, one that could have serious consequences for the State in the months to

Akal Takht Jathedar Puran Singh sparked off the battle in the second week of October, as news of the SAD debacle began to sink in. On October 9, Puran Singh attended religious rituals marking the deaths of General A.S. Vaidya's assassins, Harjinder Singh Jinda and Sukhdev Singh Sukha. Sukha and Jinda were hanged seven years ago for the murder. Addressing a congregation at Gadli village near Amritsar, Jinda's home-town, the Akal Takht Jathedar described the two assassins as *quami shaheed* (martyrs for the faith). They were, he claimed, "the pride of the community". "Instead of appealing for mercy, they went to the gallows with smiling faces."

If Puran Singh's political position left anything to the imagination, his choice of company during the rituals did not. Newly elected MP and SAD (Amritsar) faction leader Simranjit Singh Mann was by the Jathedar's side. Mann claimed that the voters of Sangrur had brought him to power to punish the Shiromani Gurdwara Prabandhak Committee's (SGPC) decision not to allow a remembrance at the Golden Temple of Operation Bluestar. Bluestar, described by the Sikh Right as *ghallugara divas* (holocaust day), was at the centre of both Puran Singh's and Mann's polemic, with both loudly endorsing revanchist preacher Jarnail Singh Bhindranwale. Bhindranwale, Puran Singh said, was a "true follower of Sikhism who fought bravely to defend the Golden Temple".

The gathering at Gadli was joined by the massed ranks of the Sikh Far Right.

Battles in Punjab

The ruling Shiromani Akali Dal's electoral debacle has spurred the Akal Takht into renewing its struggle to control the State apparatus.

Baba Thakur Singh, the head of Bhindranwale's Damdami Taksal seminary, Bhindranwale's wife Pritam Kaur, her son Inderjit Singh, and relative and former Akal Takht Jathedar Jasbir Singh Rode were all present. Representatives of human rights organisations associated with communal organisations in Punjab, notably former Punjab and Haryana High Court Judge Ajit Singh Bains and Major-General (retd.) Narinder Singh also came to the meeting. Interestingly, however, Puran Singh's predecessor in office, Ranjit Singh, and his key political rival, Gurcharan Singh Tohra, chose to stay away from the commemoration meeting.

Signs of the SAD's political decline had pushed the Golden Temple establishment into a series of skirmishes with the political apparatus that supports it. Shortly after Om Prakash Chautala took over as Haryana Chief Minister in August, an arcane theological dispute broke out over the practice of granting *siropas*, the ceremonial honours bestowed upon devotees at the Golden Temple. SGPC president Jagir Kaur had presented a *siropa* to Chautala in the sanctum sanctorum of the Golden Temple, provoking outrage among a cross-section of the religious establishment. Such honours had in the past been available to any devotee for a sum of Rs.101, but the practice had reportedly been terminated by the SGPC after worshippers objected to the idea that religious honours could be made available for a price.

Following Chautala's *siropa*, a cross-section of the Sikh religious establishment wrote to Jagir Kaur, on October 7, demanding to know what rules governed the grant of such honours in the Golden Temple's sanctum sanctorum. It was the first time the Akal Takht had ever sought an explanation in writing from the SGPC president. It is not clear why the clergy waited until reports of Badal's dismal showing were in to express their anger, but it is unlikely that the two events were unrelated. Even more significant, Badal's trusted lieutenants in the religious establishment, notably the Jathedar of the Keshgarh Sahib Takht (seat), Manjit Singh, also signed the letter.

Puran Singh's decision to attend the Gadli meeting, and the skirmishes that preceded it, mark a clean break between the Akal Takht, the supreme seat of Sikh religious authority, and the SAD establishment – and it is not, it might be noted, happening for the first time. SGPC president Jagir Kaur, a former Tourism and Culture Minister in the Badal Cabinet, took office after the Badal-controlled SGPC deposed Tohra on February 10 this year. The decision was made in the wake of a series of battles against Badal which were initiated by Ranjit Singh, with Tohra's evident blessings. Ranjit Singh himself was removed from the Jathedar's post by the SGPC in mid-March. Tohra bitterly attacked Ranjit Singh's sacking, claiming that the Jathedar could only be removed by a Sarbat Khalsa, a general assembly of believing Sikhs.

The dominant Badal faction, however, paid little attention to these protests, leading to a split in the SAD. Tohra was left loudly, but ineffectually, decrying Badal as a reincarnation of both Duryodhana and Kansa. For centrists in the SAD, Ranjit Singh's removal from office marked the end of one of the most difficult confrontations ever with the Golden Temple establishments. Ranjit Singh had presided over a theocratic subversion of the relatively liberal cultural ambience that Badal's ascendancy was premised on. Akal Takht edicts banned the conduct of marriages in hotels and wedding halls, opposed Sikh women riding motorcycles and scooters wearing crash helmets, and attacked an assortment of supposed heretics. In some cases, bloody attacks were made on people perceived to be opponents of the Akal Takht.

M. LAKSHMANAN

Punjab Chief Minister Prakash Singh Badal.

One problem, however, remained. Watchful of the consequences of defying the Sikh Far Right, nobody was willing to step into Ranjit Singh's shoes. Puran Singh alone was willing to take up the job. A one-time close associate of Bhindranwale, Puran Singh had been sacked along with five other high priests in May 1988 on the basis of a terrorist-sponsored Sarbat Khalsa. The Sarbat Khalsa also saw the removal of the then Jathedar, Rode, and marked the appropriation of direct control over Sikh religious institutions by armed groups. Puran Singh, like Ranjit Singh, had considerable appeal to Far Right groups in Punjab, and his choice was clearly shaped by Badal's desire to ensure that religious fundamentalists did not group themselves behind Tohra.

But the forces that drive Akali communal politics ensured that matters did not end there. For one, centrists in the SAD were themselves driven by the need to establish their religious credentials. On January 30, Badal shared a platform, for the first time since taking office, with a group associated with the Khalistan movement, the Sikh Students Federation (SSF). At the meeting, Badal lavished praise on SSF leader Harminder Singh Sandhu – a top terrorist close to Bhindranwale – who was killed in a police encounter in 1990. The SSF returned the favour to Badal, by issuing a resolution attacking Tohra. Jagir Kaur, for her part, stunned students at a Women's Day function in Jalandhar by asserting that the answer to sexual violence was for women to dress conservatively and keep their heads covered.

Puran Singh, however, was hard-pressed to establish that by taking over from Ranjit Singh he had not disowned his core constituency. This April, audiences attending festivities to mark the ter-

Giani Puran Singh offers prayers at the Akal Takht on February 15, the day he took over as Jathedar of the Akal Takht.

centenary of the founding of the Khalsa order were witness to the riveting spectacle of the Chief Minister and his Cabinet members having themselves baptised as Amritdhari Sikhs, true believers in the eyes of the conservative religious establishment. Puran Singh's baptism fiat provoked not a little anger from some SAD centrists, but there was little they could do about it. The move came amidst allegations by Tohra that Badal and several other SAD leaders drank liquor, violating party rules which mandate that its president and all working committee members be Amritdhari Sikhs.

While most observers were only mildly amused by the incident of Badal and his cabinet seeking absolution after confessing their sins, a prerequisite for the baptism ceremony, its real implications were far wider. Badal had shown himself to be subservient to the Akal Takht's authority, and Puran Singh had established his supremacy over the SAD's political establishment. The ground had been laid for a renewal of the hostilities which [illegible] with Ranjit Singh's elevation to as Akal Takht Jathedar. Most [illegible]tant, since the collective baptism [illegible]n the wake of Tohra's allegations, the SAD centrists had conceded that the religious Right, despite the former SGPC chief's eviction from office, could continue to shape the terms of political discourse in the party and outside it.

WHERE do events go from here? With Badal enfeebled by his crippling Lok Sabha defeat, he is unlikely to be able to force a confrontation with the Akal Takht and win as he did just seven months ago. Although Tohra made no significant electoral gains, the Lok Sabha results established that the Sikh Right can draw away just enough votes to inflict crippling losses on the SAD. Badal and the SAD establishment he commands are therefore likely to seek some form of accommodation with the religious Right. Politicians like Mann, in turn, could seek to bring about such an accommodation to their own benefit. The fact that Tohra chose not to attend the Gadli meeting could be an indication of a possible rapprochement on such lines. Mann's own election-time moderation is also unlikely to be an abiding one, as his renewed endorsement of Bhindranwale illustrates.

Enfeebled by his crippling Lok Sabha defeat, Badal is unlikely to be able to force a confrontation with the Akal Takht and win as he did just seven months ago.

One decisive test, it seems probable, will be the coming elections to the SGPC; Jagir Kaur has announced that it will be held before November 30. While SGPC elections in the past have often been held behind schedule, Kaur has promised that legal mandates requiring of both executive committee and its president to seek a mandate in November will be respected. Already enfeebled by the none-too-well-disguised discontent of top SAD leaders, the SGPC elections will be a key test of legitimacy for Badal. Should Tohra put up a serious challenge to Badal's authority, the Chief Minister could respond by protecting his flanks through either covert or overt alliances with chauvinist organisations such as Mann's SAD(A). What consequences that will have for Punjab is not difficult to imagine. ■

The BJP's new social bloc

An analysis by CSDS based on the electoral outcome and the findings of a nation-wide post-election survey.

YOGENDRA YADAV
with SANJAY KUMAR
and OLIVER HEATH

THE results of the 13th Lok Sabha elections mark the completion of a process that has brought about the Bharatiya Janata Party's rise to power, a process that began with the 10th Lok Sabha elections in 1989 and has continued uninterrupted since

As was argued in the first part of this analysis *(Frontline,* November 5), the results of the recent elections do not point to a clear victory for the BJP, or for that matter for any other national party Yet in more than one sense the BJP has completed one leg of a remarkable political journey Its performance in Goa, Assam and a few other States at the geographical periphery symbolises the geographical expansion that the BJP has gone through, at the end of this round of elections, there are very few States – Kerala, for instance – where the BJP or at least one of its allies is not one of the main competitors in the electoral arena Its alliance with the Dravida Munnetra Kazhagam (DMK) in Tamil Nadu completed the process of its political expansion from a party that was once considered a political 'untouchable" to one that is acceptable to everyone across the ideological spectrum, except the Congress(I) and the Left parties

Both these expansions were preconditions for the third process of social expansion the BJP's changeover from being seen as a party of the urbanised and of the Bania-Brahmin to becoming a party with a wider social base The journey was not without its share of problems and retreats its uneven performance in this election testifies to that fact. More important the BJP did not carry out this journey on its own terms Quite early on, it realised that it was on a new turf It was forced to come to terms and negotiate with a regionalised polity and the democratic upsurge of the "shudras" That negotiation process is far from over and its outcome is still an open question But the BJP s arrival as a party that today heads a coalition that is seen to be less frag-

About the survey

THE findings reported in this article and the State-wise analyses that follow are based on a post-election survey conducted by the Centre for the Study of Developing Societies (CSDS), Delhi and co-sponsored by *Frontline* The survey formed part of the National Election Study series conducted by the CSDS, a unique nationwide survey based on a strict selection of sample from the electoral rolls

In this series, the same group of electors, comprising a national representative sample, were approached after each of the last three general elections and face-to-face interviews conducted to find out their voting behaviour and political opinions and attitudes. Retaining the same sample, after making minor adjustments to accommodate new voters and factors such as migration, makes it possible to study change over time by comparing the results

The survey was carried out in 105 parliamentary constituencies – it covered 419 polling stations in 210 Assembly segments in 20 States and Union Territories. A total of 9,111 electors were interviewed in their homes in the week after each phase of polling The last round of the survey was completed on October 5, the day before the counting began The constituency-wise results of the Lok Sabha and Assembly elections have been taken from the Web site of the Election Commission and recomputed by the CSDS data unit.

In order to promote greater transparency in survey reporting, the CSDS and *Frontline* would like to share with readers some background information about the survey

The social composition of the respondents in this survey is as follows 49.3 per cent women, 18 3 per cent Dalits, 7.9 per cent Adivasis, 10 3 per cent Muslims, 77.8 per cent rural voters, 41 per cent uneducated voters and 6.7 per cent graduates. There is thus an over-representation of rural voters and an under-representation of Muslim voters. In terms of reported voting, the sample percentages (actual results in brackets) are: the BJP and its allies 38.8 (40.8), the Congress(I) and its allies 36.7 (33.8), the Left 7.6 (8 0) and the Bahujan Samaj Party 3.1 (4.2). The sample size for each State and significant discrepancies, if any, have been mentioned in the analysis for each State.

The survey was designed and coordinated at the national level by Prof. V.B. Singh (Principal Coordinator), Sanjay Kumar (National Coordinator) and Yogendra Yadav, all from the CSDS A network of scholars worked with the CSDS in designing and executing the survey in different parts of the country: Dr. K C Suri (Andhra Pradesh), Prof A.K. Baruah and Dr. Sandhya Goswami (Assam and other Northeastern States), Rajendra Ravi (Bihar), Prof. Peter deSouza (Goa), Dr. P.M. Patel (Gujarat), Dr Jitendra Prasad (Haryana), Prof. T.R. Sharma (Himachal Pradesh and Punjab), Dr Sandeep Shastri (Karnataka), Prof. G. Gopa Kumar (Kerala), Dr. Ram Shankar (Madhya Pradesh), Prof. Suhas Palshikar (Maharashtra), Dr. S. N. Misra (Orissa), Dr Sanjay Lodha (Rajasthan), Prof. G. Koteshwar Prasad (Tamil Nadu and Pondicherry), Dr. Pradeep Kumar, V.K. Rai and Dr. A.K. Verma (Uttar Pradesh) and Prof. A.K. Chaudhuri (West Bengal) The members of the central team at the CSDS are: Himanshu Bhattacharya, Mona Gupta, Oliver Heath, Sudhir Hilsayan, K.A.Q.A. Hilal, Bhaskar Jha, Angad Kumar, Kanchan Malhotra, Anindya Saha and Chitrali Singh. ■

ile than at least four previous governments perhaps occasions stock-taking to get a long-term view of what this journey has meant for India's democratic polity.

The BJP's rise to power is related to a fundamental process of change that goes beyond routine electoral victories and defeats and the mechanics of government formation and alteration. In its multi-pronged attempts to win an electoral majority and create for itself a somewhat stable support base, the BJP has created a new social bloc, a new coalition of various social groups, that now lays claims to political power. The BJP's attempt to become the 'natural party of governance' has resulted in a new kind of majoritarianism, which is deeper and subtler than what both its spokespersons and its critics would allow for. It is not a simple Hindu majoritarianism. Although religious symbolism has been a trademark of the BJP's mobilisational strategy, and religious exclusions continue to mark the boundaries of the new social constituency, religion is not one of the principal faultlines in the creation of this new social bloc. The new social bloc is formed by the convergence of traditional caste-community differences and class distinctions. It may be an exaggeration to say that the BJP represents the rebellion of the elite, but it is nevertheless true that its rise to political power has been accompanied by the emergence of a new social group that is defined by an overlap of social and economic privileges.

It is important to interpret the signals of the 1999 verdict in the light of this process. For an obsession with the game of numbers or the business of alleged vote banks can draw attention away from the larger picture. Since the official data on the elections are not very helpful in learning about the social basis of the voters' choices – of who voted for whom – we shall mainly use here the post-poll survey conducted by the Centre for the Study of Developing Societies and co-sponsored by *Frontline*. This survey is part of a longer series of National Election Studies conducted by the CSDS and is one of the few sources of reliable data with a social science perspective and which allows one to see the current picture in a historical perspective.

All the major formations retained most of their votes, more than in the past

From-To	Cong(I)+	BJP+	Left	BSP	NF/UF*
1998-99	79	76	77	81	23
1996-98	53	63	61	41	36
1991-96	53	65	68	56	53

*The National Front / United Front vote of the earlier elections is compared to that of its constituents who are not aligned today either with the Congress(I) or the BJP

The Congress(I)'s and BJP's allies gain votes from all directions, while the United Front loses to all

From votes in Lok Sabha 1998	To vote Lok Sabha 1999 (figures as percentage of 1998 votes)						
	Cong(I)	Cong(I) allies	BJP	BJP allies	Left	BSP	Regional parties
Cong(I)	78	2	6	4	2	—	6
Cong(I) allies	16	63	—	13	—	—	6
BJP	11	—	81	3	1	—	3
BJP allies	7	12	1	56	1	—	3
Left	4	1	3	13	77	1	—
BSP	8	—	2	1	—	81	4
UF	15	3	7	44	—	1	23

BJP depends more on its allies down the Hindu social order

	Cong(I)+	BJP	BJP allies	Left	BSP	Regional parties
Hindu upper caste	21	46	14	7	1	2
Hindu-dominant peasant caste	31	30	22	4	1	10
Hindu upper OBC	35	21	23	2	2	12
Hindu lower OBC	36	19	23	10	1	6
Adivasi	49	19	12	7	0	3
Dalit	40	12	10	11	13	5
Upper Muslim	59	6	9	9	1	14
Lower Muslim	58	2	9	12	3	11
Sikh	17	9	44	0	1	4
Christian	64	10	14	9	0	0

BEFORE one looks at the precise shape and nature of the new social bloc, let us first take a look at the overall picture of flow of votes between the 1998 elections and the latest round. In the 1990s, elections in India have witnessed a high level of churning of votes. While the overall vote shares of the major parties do not undergo any dramatic change, a very large number of voters change their voting preferences from one election to another. In this respect, however, Elections '99 have proved very different from the previous two elections. All the major parties have been able to retain the support of a large chunk of those who voted for them in 1998.

But one must not read too much into these figures. These are provisional 'recall'-based figures that are liable to being scaled down after checking out carefully. Also, the recent round of elections were held within 20 months of the previous elections and without any major change in the pattern of electoral alignments at the all-India level. Yet the figures do indicate a greater crystallisation of voter preferences. It is not clear if this phenomenon will endure and lead to a deeper institutionalisation of the party system in the face of the social churning that is taking place. But it does suggest that the process of creation of a social bloc may have reached a certain stage of completion.

A closer look at how votes changed hands between 1998 and 1999 does not support the suggestion made by some commentators that voters are drifting towards a bipolar choice. Most of the gains made by the BJP-led front came from the erstwhile United Front and the allies of the Congress(I). But these votes did not flow directly to the BJP: they accrued to its allies. If anything, in a direct exchange of votes, the Congress(I) gained from the BJP more than it lost to it (11 percentage points gained, 6 percentage points lost). The Bahujan Samaj Party and the Left parties retained the support of a very high percentage of their voters, but largely because their base is not expanding to a considerable extent. The U.F's votes were fragmented and went either to the BJP's allies, the Congress(I) or to several regional parties. This fragmentation prepared the ground for the creation of the new social bloc by the BJP.

A look at the division of votes along caste and community lines gives one an idea of the shape of this new social bloc. The ten-fold classification used here is not the most refined one, and certainly does not do justice to State-level configurations, but it does give a more elaborate description of the community basis of voting than is usually available.

The first point to note is the difference between the support base of the BJP and that of its allies. Together, the BJP and its allies secure the support of 60 per cent of upper-caste Hindus and 52 per cent of the dominant Hindu peasant castes (which are not classified as Other Backward Classes) such as Jats, Marathas, Patidars, Reddys and Kammas. But between the BJP and its allies, the relative share of the allies goes up as one moves down the social hierarchy from the upper castes to the lower OBCs. This is a new pattern, as compared to 1998 and earlier elections. Since the 1998 elections, the BJP-led alliance's share of votes from among the second, third and the fourth categories has gone up by nearly 10 percentage points each. And the BJP's own share among these "middle castes", as compared to those of its allies, has declined from about two-thirds to one-half or even less. The lower the category, the lower the BJP's contribution to the vote share of the alliance. It is not that voters have shifted from the BJP to its allies in the 1999 elections. It is just that regional and political expansion has brought in new middle-caste parties such as the DMK, the Janata Dal (United) and the Telugu Desam Party and clarified the tendency inherent in the BJP's rise to power.

The vote share of the BJP-led alliance drops among Adivasis and Dalits. Although both these figures are higher this time as compared to the 1998 elections, it is clear that these groups are not the primary constituents of the new social bloc. The figures go down even further when one turns to the minorities. The BJP has maintained a fair share of the votes of Sikhs ever since the community became disillusioned with the Congress(I) following the anti-Sikh riots in 1984; but the BJP inspires little confidence among Muslims and Christians.

One needs to look at subtle changes here. Throughout this decade, the vote share of the BJP-led alliance among Muslims has grown, even if only slowly; in the 1999 elections, the share reached a two-digit figure. At the same time, the BJP's own share of votes of Muslims has declined compared to 1998, and is concentrated among Ashrafs. The increase in the alliance's vote share among Muslims is entirely owing to allies such as the TDP, the Trinamul Congress and the DMK. Similarly, in the BJP-led front, the allies account for more than half of the votes of Christians.

The Congress(I), on the other hand, improves its vote share as one moves down the social hierarchy. It has the support of only 21 per cent of upper-caste Hindus, but its vote share among the dominant peasant castes is about 31 per cent. Its vote share declines among the OBCs, but its allies' support base among these sections makes up for it. Compared to 1998, the Congress(I) has lost support among the dominant peasant groups such as Jats and Marathas, but has gained greater support among both the categories of OBCs. The Congress(I) gets the biggest share of the votes of Adivasis, Dalits, Muslims and Christians. Compared to 1998, the Congress(I)'s vote share among Adivasis has declined by four percentage points; there appears to have been a decline in its vote share among Dalits as well, but its allies make up for this.

Among the two sections of Muslims (upper biradari and lower biradari), the vote share of the Congress(I) and its allies has gone up by about 10 percentage points; the Congress(I)'s gains are principally among the upper biradari Muslims, while much of the gains from among lower biradari Muslims came from allies, mainly the Rashtriya Janata Dal (RJD). This indicates a general return of the minorities' faith in the Congress(I); this is confirmed by the fact that the party's vote share among Christians and Sikhs has increased by about eight percentage points. A small but significant section of the Sikh community has returned to the Congress(I) after a long time.

However, the Congress(I) has not been able to consolidate the support of the lower sections (except in the case of Muslims and Christians) the way the BJP and its allies have consolidated the sup-

Among Hindus, religiosity has very little relationship to vote

port of the upper castes The Left parties and the BSP challenge the Dalit vote of the Congress(I), while a host of regional parties such as the Samajwadi Party, the Nationalist Congress Party and the Tamil Maanila Congress challenge the OBC and Muslim vote of the Congress(I)

While religion is a marker of social community especially for the minorities political loyalties in India are not defined by religious practice This stands in sharp contrast to several European democracies where church-attendance or otherwise explains political and ideological cleavages A classification of Hindus in these surveys by their religious practice or otherwise does not give very firm clues to their voting pattern The vote for both the BJP and the Congress(I) shows a mild and positive relationship to the regularity of worshipping, while it is the other way round for the Left parties and the BSP But then that is also because there is a relationship between belonging to the upper and middle castes and worshipping regularly Interestingly, 41 per cent of the Hindus who vote the Left worship regularly The same figure is substantially lower for the BSP

From caste-based and community-based cleavages, we can now turn to the economic dimension of the emerging social bloc, its class structure The table shows how clearly the BJP's vote is related to class The poorer the voter, the lesser are the chances of voting for the BJP The BJP vote share among the poorest of the population is about one-third of what it gets among the upper classes The BJP's allies do not share this profile, for they tend to do better among the middle category In that respect there is no significant difference in the BJP's support base as compared to 1998

It is back to old days, Congress(I) enjoys a big lead among women

	Cong(I)+	BJP	BJP allies	Left	BSP	Regional parties
Men	34	23	17	7	4	7
Women	38	20	17	8	3	7

If the Congress(I) and its allies are taken together, it appears that their profile is the opposite of that of the BJP But when the allies are seen separately, it is clear that two of them, the All India Anna Dravida Munnetra Kazhagam (AIADMK) and the RJD, have a pronounced lower class support base, while the Congress(I) support to them does not make for any clear pattern This absence of any pattern is owing to the fact that the class patterns of Congress(I) voting in different States go in different directions and eventually cancel each other out at the national level As is to be expected, the Left parties and the BSP enjoy greater support among the poorest voters

Till now we have seen the caste effect and the class effect independent of each other But as every student of Indian society knows, there is a considerable convergence of the two systems of stratification at the top and the bottom In other words, the upper caste people tend to be mainly upper class and people belonging to the lowest caste in the Hindu social order tend to be among the poorest Yet it cannot be said that there is complete overlap here Class and caste cleavages represent two independent yet overlapping principal cleavages of the Indian social order We have seen that the BJP tends to attract the voters from the upper segment of both these divisions

The data also shows that the caste hierarchy and the class hierarchy reinforce each other in contributing to support for the BJP Among the upper castes or the dominant peasant castes, for example, the vote share for the BJP goes down as we move from the upper classes to the lower classes The same is true for different classes among Adivasis and Dalits The pattern for the OBCs is not very neat at the lower ends but supports the basic reading offered here Conversely, if we focus on the lower classes and move from Dalits to upper caste, the vote share for the BJP tends to go up Accordingly, the highest chances of voting for the BJP obtain in the group that is both upper class and upper caste, and the lowest among the lowest class Dalits.

This convergence of class and caste in voting for the BJP can be understood more clearly by drawing a diagonal line across the caste-class divide. The line sep-

arating those who vote BJP in greater numbers than average and those who do not is also roughly the line separating the socially and economically privileged from the underprivileged. Those included in the "upper strata" of this caste-class divide include all the upper caste Hindus irrespective of their class. As we come down the social ladder, we exclude the lowest class and then the lower classes as well from the "upper strata" thus defined. Among the Adivasis, only those who belong to the two upper classes qualify for the "upper" caste-class strata, and among Dalits, only the highest quality thus. This line excludes all the minorities irrespective of their class. If we divide the entire electorate along these lines of "upper" and "lower" caste-class strata, we can see a composite picture of the new social bloc.

The table presents the proportion of each party's voters from the two strata, rather than the vote share for different parties as in all other tables. In all, 45 per cent of our electors fall in the "upper strata" and 55 per cent in the "lower strata". The BJP, however, draws as much as 69 per cent of its votes from these 45 per cent voters. Its allies are a little less lop-sided, but they also draw more than a proportionate share of votes from this privileged group. All the remaining parties depend more on the lower strata for their votes. This is, of course, more true of the Left parties and the BSP than of the Congress(I) .

This social bloc formed by the two principal cleavages of caste and class is reinforced by several auxiliary divisions that more or less overlap with the caste-class divisions. A look at the educational background of the voters shows that the education effect works in the same direction and to a similar degree as class. As one goes up the educational ladder, the odds of voting for the BJP go up very sharply. The votes for the BJP's allies are fairly evenly distributed while there is a clustering in the middle for the Left parties. This pattern had already been established before the last elections and has remained more or less unchanged. While a good deal of the education effect is accounted for by the social class factor, for education is largely a function of the class someone is born in, there seems to be a milder and independent education effect after controlling for caste-class. In both the upper and the lower strata, the Congress(I) vote falls and the BJP vote rises with increase in levels of education.

The effect of reading newspapers, listening to the radio and watching television is very closely related both to education and to class. No wonder, the BJP does better among those who are more exposed to the media. In this case the BJP's allies too seem to be gaining significantly from media exposure. As in the case of education, the media exposure effect is not entirely explained by caste-class background. Within the upper stratum, differences in media exposure produce significant differences in voting for the BJP and its allies. Clearly, greater education and greater media exposure by themselves seem to be drawing voters away from the Congress(I). The same is not true of the Left parties, the BSP and other regional parties, who also get more than the average level of vote among the under-privileged.

Right from its inception, first the Jan Sangh and then the BJP has drawn greater support from the urban areas. The same pattern continues, although the gap has kept changing from four percentage points in 1991 to 12 points in 1996, before plateauing to six points in 1998 and seven this year. This gap does not indicate, however, that the BJP has no rural base. On the contrary, of every hundred votes it gets, as many as 73 come from the villages, only slightly below what the Congress(I) draws from the villages. Earlier, the Congress(I) used to get a higher level of votes in rural areas. In this decade, however, Congress(I) has also done marginally better in rural areas. The main political base of the Left parties is in the rural areas. But over the years, the gap between their rural and urban votes has increased because of their shrinking urban appeal in West Bengal. Urbanity by itself does not seem to introduce a new dimension to political preference. Within the upper and lower strata, the vote for BJP does not vary much.

The sudden rise of the BJP in the early 1990s had opened for the first time a noticeable generational divide. Among the youngest of voters, the BJP secured four percentage points more votes than among the oldest. The Congress(I) showed a contrary pattern. By 1996 the gap had narrowed to 2.5 percentage points and this time it virtually disappeared. It seems the gap was more a result of the BJP's newness than any generational divide.

Unlike in Western democracies, age or generation identity has not been a significant factor in Indian elections. The sudden rise of the BJP in the early 1990s had opened for the first time a noticeable generational divide. Among the youngest of voters, the BJP secured four percentage points more votes than among the oldest. The Congress(I) showed a contrary pattern. By 1996 the gap had narrowed to 2.5 percentage points and this time it virtually disappeared. It seems the gap was more a result of the BJP's newness in many parts of the country than any generational divide. The BJP does marginally better among the youngest and the Congress(I) among the middle aged. The Left has consistently done a little worse among young voters as compared to the middle aged.

Traditionally, the Congress(I) used to witness a fairly big gender gap, with support for it among women being five to six percentage points more than among men. The sudden decline of the Congress(I) and the rise of the BJP had reduced that gap considerably by the beginning of this decade. The gap started increasing again in 1996 when the Congress(I) enjoyed a 1.2 percentage point lead. By last year the gap had doubled to 2.7 points in favour of the Congress(I) and 4.7 points against the BJP. While in the case of the BJP the gap has decreased a little, the gender gap for the Congress(I) and its allies stands at five percentage points, as high as during the good old days of Congress(I) dominance. In the case of the Communist Party of India (Marxist) and the BSP, the gender profile has not undergone any change all these years.

It is not clear how the revival of the gender gap should be interpreted. It is all too easy to read it as conclusive evidence of a revival of the Congress(I) or to dismiss it as yet another sign that the Congress(I) gets the votes of the uninformed and the less politicised. At the

same time, it may be too premature to link it to women's attitudes to the policies of the Congress(I) or the BJP. It calls for more careful research, especially because this is happening at a time when women's political participation is growing. At this stage we can only view it as another independent dimension of social hierarchy, where the privileged section supports the BJP.

To sum up, the 1999 electoral verdict points to a fundamental reworking of the social basis of party politics in India. The first four decades of the Congress(I) system in one form or the other were characterised by political mobilisation that cut across fundamental social cleavages. In its various incarnations and local variants, the rainbow social coalition of the Congress(I) did not include all the sections quite equally. But it did not follow any one faultline of society. The decline of the Congress(I) and the rise of the BJP to power created the possibility of a new kind of cleavage-based politics, one that draws on the overlap of cleavages based on caste and class. It is not caste-based or class-based in any simple sense: it is woven around the ideology of nationalism and involves a reworking of *Jati* and sectional divisions. Nonetheless, it is built around a "master cleavage" of caste-class privileges. Its end-product is a new social bloc, one with soft edges and blurred boundaries. Verdict '99 marks the arrival of this new social bloc.

To be sure, the arrival does not guarantee its durability or even survival, let alone its continued electoral success. The new social bloc is still quite fragile and yet to jell. In many ways it is a very artificial product, more a result of a highly skillful working of the logic of our electoral system and caste-community configurations in their regional setting by the BJP leadership than a harmonious coming together of various groups. As noted above, there is a definite tension among the social profiles of the BJP and its allies. But at present it helps the BJP bring groups to its new social bloc that would not have otherwise come its way. It is not clear how well the BJP will be able to manage this tension. It is also not clear if the party will succeed in mobilising enough numbers from outside this group so as to ensure the creation of an electoral majority out of a numerical minority.

This analysis naturally begs the question: if the privileged can form a bloc, why not the underprivileged? Do the recent elections and political indicators point in that direction? In a sense the decline of the "catch-all" Congress umbrella opened up the possibility of the political consolidation of the underprivileged as it did for the privileged. This decade has enriched that possibility, for we have witnessed a participatory upsurge of the lower orders of society. One needs to take note of the extraordinary fact that India is perhaps the only contemporary democracy where the poor and the socially underprivileged participate in politics more than the elite.

At the same time, various factors have worked against the realisation of this potential and resulted in the fragmentation of what could have become a counter-bloc. First, it is always more difficult to consolidate the underprivileged, for their access to information and action is limited. Second, the regionalised nature of our polity works against the coming together of these sections on a national political platform, leaving it open for the BJP to incorporate a group like the Pattali Makkal Katchi through localised negotiation. Finally, the absence of an organised party-political nucleus that would initiate such a consolidation prevents the potential from turning into a reality.

Can the Congress(I) perform that role? On the face of it, the findings presented above might suggest that the Congress(I) is already well on its way to creating a counter-bloc. It is after all the party that gets the largest support from among the underprivileged. At the same time we need to remember that the Congress(I) does not draw the lower strata of caste-class as fully as the BJP does for the upper class-caste. The national level figures for the Congress(I) hide various contrary trends at the State level. The Congress(I) draws the underprivileged towards it in Karnataka, has an unclear profile in Andhra Pradesh and represents the better-off in Kerala. Besides, when the Congress(I) gets the votes of the lower strata it comes more by default than by design.

There is a residual quality to the Congress(I) vote. The social support it gets is more often than not merely the mirror image of the social profile of its opponent. The creation of a counter-bloc of the underprivileged would need more than a happy coincidence. It would require a painstaking building of social alliances and political coalitions, within or without the party. It would also require forging a new vision and overhauling the organisation to allow it to act as the vehicle of this historical process. For the existing Congress(I) party, it is a very tall order indeed. ■

CSDS Team

Uttar Pradesh: Party Position 1999

Party	Contested	Won	Vote share (%)
Cong(I)	76	10	14.8
BJP	77	29	27.6
BSP	85	14	22.1
Ind.	610	1	3.6
LKD(Ajit)	7	2	2.5
L.C.	4	2	1.5
S.P.	84	26	24.0
SJP(R)	2	1	0.5

THE verdict in Uttar Pradesh surprised the pollsters and political analysts, and it continues to surprise the psephologists even after the final figures are in. There is a paradox in the verdict: the BJP and its allies have secured 31.2 per cent of the votes, some nine percentage points down from last year but only a fraction below what they secured in the 1991 and 1996 parliamentary elections. Yet the BJP won only 29 seats (32, if the allies' seats are added) compared to between 50 and 60 seats it has secured in the past. For the Samajwadi Party, the result is even more paradoxical: it lost nearly five percentage points in terms of its vote share since the 1998 elections, but its seats tally has gone up from 20 to 26. The BSP recorded only a marginal increase in its vote share, from 20.9 to 22.1 per cent, but its seats tally rose from four to 14. The surprising element about the Congress(I) is that normally under the Indian electoral system one would not expect a party securing 17.3 per cent of the votes (including its allies) to win any seats. However, the Congress(I) romped home with 12 seats (including the tally of its ally, the Rashtriya Lok Dal). The first-past-the-post system that normally rewards the biggest party and punishes the rest does not seem to have worked that way in U.P. The party with the highest vote share, the BJP, won only 30 seats; the second and third highest-vote-share parties, the S.P. and the BSP, made major gains in terms of seats. In fact, even the fourth and lowest seat-share-party, the Congress(I), won a significant number of seats.

Conventionally, such a paradox would be explained by the Index of Opposition Unity (IOU). It was assumed that an increase in the IOU against the BJP would explain the sharp decline in its seats tally.

A paradoxical verdict

But nothing of that sort took place in U.P. this time. There were no Opposition alliances, barring a minor seat adjustment between the Congress(I) and the RLD. In fact, the State-wide IOU came down from 53 per cent to 49 per cent between the 1998 and 1999 elections. It is not true to say that the BJP won big victories but lost narrowly. Its average margin of victory is smaller than its average margin of defeat. It is also not the case that the BJP accidentally lost a large number of seats by a very small margin. If anything, luck favoured the BJP: it won 12 seats by less than 10 per cent of the votes, while the S.P. and the BSP won only six seats each in this category. That is why U.P. remains a puzzle even after the verdict is fully known.

Part of the answer to this puzzle lies in the two other figures given in the table showing the vore share. This time two things worked against the BJP. In the past the BJP won over 50 seats with a fairly low vote share because its gap *vis-a-vis* the next most popular party, the Janata Dal or the S.P., used to be more than 10 percentage points. This time, like in 1996, the gap narrowed to only 7 percentage points. But unlike in the 1996 election, there was much greater resort to tactical voting at the constituency level. We find that this time the extent of constituency-level consolidation of votes against the BJP has been at its highest, more than 8 percentage points higher than last time.

To sum up: the BJP's votes fell, and even though its main opponent also lost votes, the gap between the two narrowed; the gap was much lower at the constituency level where it actually matters, thanks to a higher level of polarisation of votes against the BJP at that level.

The other part of the answer lies in the region-wise break-up of the verdict. What looks like a difference of seven percentage points between the BJP and its main rival at the State level translated into a very different picture at the regional level. In the two small regions of Uttarakhand and

Performance of BJP: Lok Sabha elections, 1991-1999

Bundelkhand it trailed behind the Congress(I) and the BSP respectively in the matter of vote share. It lost all the four seats in Bundelkhand, while it won three out of four seats in Uttarakhand with narrow margins. In western U.P. the BJP's vote share was barely two percentage points over that of the Congress(I)-RLD combine, which won four seats there. In Poorvanchal, the area bordering Bihar, it trailed behind the S.P. by two percentage points. The BJP's vote share fell most sharply in this region while it could contain its seat loss to only four. It was ahead of the S.P. in Central and the Central East, but only by 1.5 and 2.5 percentage points respectively. Despite this slender lead the BJP lost as many as nine seats in the Central region where Sakshi Maharaj worked to defeat it.

As a result of all these factors, U.P. witnessed much closer triangular and quadrangular fights at the constituency level than the State-wise averages might indicate. Take for example the Ghatampur result: the BSP won this seat by securing 1,56,582 votes followed by the S.P. with 1,56,477 and then the BJP with 1,55,987 votes. In all, the results in 22 seats hinged on less than 10 per cent of the votes. As many as 50 seats changed hands in this election. Of the BJP's victories, 10 were in constituencies it had lost last time. Despite its overall gains, the S.P. lost 10 of the 20 seats it had won last time.

AN interesting thought experiment: what would have happened if the Assembly elections in U.P. were held simultaneously? This time the Election Commission has made Assembly segment-wise results available in record time and we can actually answer this question. The BJP would have performed much worse than in the Lok Sabha polls. It led in only 117 segments, and needed its allies' strength to surpass the S.P.'s figure of 128. The BSP would have improved its position and so would have the Congress(I). But the Congress(I) still has a lot of ground to cover before it can convert its extraordinary feat of making an 11 percentage point gain in the vote share into an increase in the number of seats. Unless the political alignments change, trends point to a hung Assembly in U.P. where every party is way off the majority mark.

Between the 1998 and 1999 elections most parties managed to retain about 80 per cent of their votes, with the notable exception of the S.P., which lost as much as 22 per cent of its votes to the Congress(I).

IN Uttar Pradesh, 49 per cent of the respondents agreed with the statement that one should vote the same way as the rest of the members of one's community do, which figure is a remarkable 14 percentage points higher than the national average. With the exception of the Congress(I), each party enjoyed almost unrivalled support from a particular *Jati*. The BJP collected 77 per cent of the Brahmin vote and 68 per cent of the Rajput vote. However, as it was also particularly popular with the other upper castes, these figures should not be treated as anomalous *Jati* occurrences but as part of a wider caste-

based support base. However, in the cases of the BSP and the S.P. specific *Jatis* show voting behaviour markedly different from the other castes in their "set". Close to 80 per cent of the Yadavas voted for the S.P., which was over 50 percentage points more than the level of support that the remaining OBCs gave the party. Similarly, 74 per cent of the Jatavas voted for the BSP, compared to just 39 per cent of the other Scheduled Castes.

The Congress(I)'s expansion seems to have come from the lower castes. In 1998, its only major segment of support came from among non-Jatav S.Cs, of whom 42 per cent voted for it. Although the Congress(I) managed to retain support among the non-Jatav S.Cs even in 1999, its support increased noticeably also among the Jatavas and the other OBCs (non-Yadav), by 8 and 13 percentage points respectively. The Muslim vote is evenly split between the Congress(I) and the S.P., but the CSDS survey does not show any significant support for the BSP among Muslims.

The percentage of people who had made up their minds on whom to vote for a few days before the election was higher in U.P. at 44 per cent than the nationwide average of 36 per cent. The proportion of people who made up their minds before the campaign started was also significantly lower here, by 15 percentage points, than nationally. Dalits, Muslims and non-Yadav OBCs were by far the most likely groups to make up their mind late. This finding supports the hypothesis that these groups played the most important role in resorting to tactical voting against the BJP.

THE tables relating to class and education both serve to reinforce the fact that the BJP is very much the party of the elite. The very rich are more than three times as likely to vote the BJP than the very poor, and graduates and above are more than twice as likely to vote for the party than illiterates. However, the lower sections of society are far more evenly dispersed between the different parties.

The 1999 result in U.P. thus does not portend any early end to the political churning process; further volatility seems likely before any clear alignments can emerge. If anything, the revival of the Congress(I) and the unforeseen rise in the fortunes of the S.P. makes for a nearly unique situation of four-party system in U.P., a result that sharply diverges from the general trend in most other States towards a bipolar pattern. ■

'Split factor' decides the outcome

CSDS Team with
SUHAS PALSHIKAR

A SIMPLE arithmetical calculation shows that if a split had not taken place in the Congress(I) and the various parties had got the same vote share they did in this election, the Shiv Sena and the Bharatiya Janata Party, would have won just nine Lok Sabha seats from Maharashtra, and the Congress(I) alliance's tally would have been 39, instead of the final figures of 28 and 11 respectively. This alone would have changed the majority equation in Parliament, with the national verdict looking much different from what it does today. This demonstrates once again how an electoral verdict is as much an artifact of party managers and the first-past-the-post system as it is a product of the changing mood of the electorate.

The results did not come as a surprise. Both the Congress(I) and the breakaway Nationalist Congress Party (NCP) knew that the split could prove to be suicidal. Yet, each of them hoped that it would be able to claim a sufficiently large chunk of votes to defeat the Shiv Sena-BJP combine. However, as it turned out, there was no hidden hand to save them from the consequences of the split. The Congress(I) and the NCP together cornered 58 per cent of the popular vote: 33.3 per cent for the Congress(I) and its allies, and 25.1 per cent for Sharad Pawar's NCP and its allies. The split of votes between the two brought the Index of Opposition Unity (IOU) in the State to 63, down from 88 in last year's elections. This drop of 25 percentage points in the IOU is enough to explain the verdict. Maharashtra's is a classic case of the "split factor" rather than the "swing factor" deciding the outcome of the elections.

Indeed, it is surprising that the Shiv Sena-BJP combine did not gain more than it did from this huge split. After having consolidated the gains made in its surprise victory in the 1996 Lok Sabha elections, the Shiv Sena-BJP combine fared poorly in the elections last year, losing in terms of both votes and seats. It lost another 4 percentage points of votes this year – less than it was expected to lose – but added 18 seats to its kitty. It could have gained more, but for the fact that the split worked unevenly in different parts of the State. The split hurt the Congress(I) the most in Vidarbha, where it had won all the 11 seats last time. Although the NCP took only 15 per cent of the votes here and the IOU was 67, it was enough for the Shiv Sena-BJP combine to take six seats. In Mumbai and Konkan, the Shiv Sena-BJP combine retained its supremacy with a little help from the split in the Congress(I). In the north and in Marathwada – the two regions that recorded the highest increases in turnout – the NCP effectively demolished the Congress(I) by making it lose 4 seats in each region, without being able to pick up any seats for itself. It was only in Sharad Pawar's stronghold of western Maharashtra that the NCP was able to translate its vote share into seats. The Congress(I) was the spoiler here But since the Shiv Sena-BJP combine finished a poor third, the split did not seem to have hurt the NCP very much.

Maharashtra: Party Position 1999

Party	Contested	Won	Vote share (%)
Cong(I)	42	10	29.7
BJP	27	13	21.2
NCP	39	6	21.6
Shiv Sena	22	15	16.7
JD(S)	2	1	0.9
PWP/P T	2	1	0.9
RPI	3	1	1.4
BBM	4	1	2.1

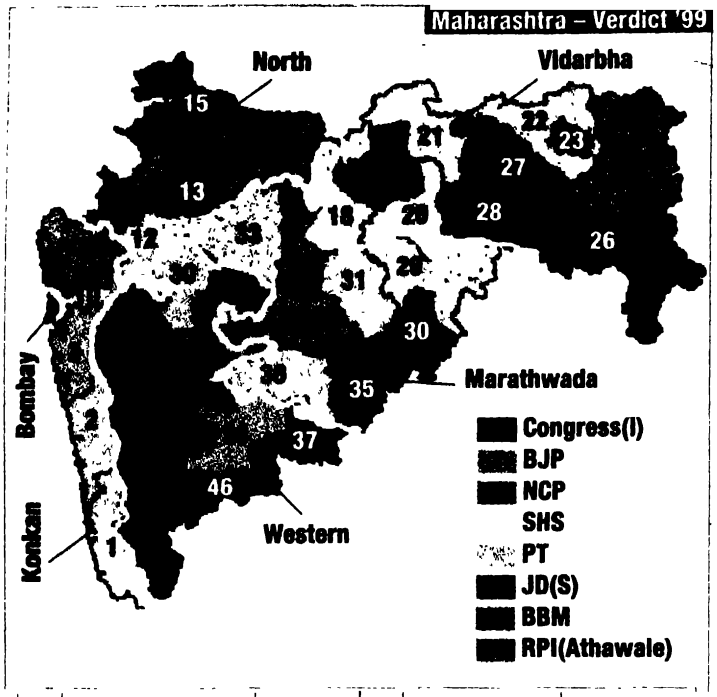
Some analysts had hoped that voters may succeed where the leaders failed, that many voters would resort to tactical voting by choosing the stronger of the candidates from among the Congress(I) and the NCP in order to defeat the candidates of the ruling alliance. The Lok Sabha results show that while the electorate certainly did not favour the combine, its voting choice was not based solely on that consideration. The rivalry between the Congress(I) and the NCP was as fierce as the competition between the Shiv Sena-BJP and non-Shiv Sena-BJP political forces.

This was not the first time that Pawar contested in Maharashtra as a non-

Congress(I) candidate. Between 1980 and 1985 he was out of the Congress(I) fold. In the 1980 and 1984 Lok Sabha elections he managed to get for his party 11.8 and 12.1 per cent of the votes and one and two seats respectively. In the 1980 and 1985 Assembly elections his Congress(S) managed to get 20.5 and 17.8 per cent votes and 47 and 54 seats respectively. It is indeed creditable that Pawar has managed to retain his base. He obviously needs to do better to support his national ambitions.

At the Assembly level, the overall verdict appears to be a near repeat of the 1995 verdict, with the BJP and the Shiv Sena losing a few seats each. A closer look reveals that a good deal of churning has taken place. Of the 288 seats, only 133 have been retained by the same party that won in 1995. The figure goes up to 166 if one includes the 33 seats the Congress(I) has now lost to the NCP. The Congress(I) could retain only 28 of the 80 seats it won in 1995. The BJP and the Shiv Sena did a little better and retained 41 and 52 of their seats respectively.

The regional patterns also show a subtle change. The Congress(I) has improved its position significantly in Mumbai and Vidarbha. Its performance in Mumbai is noteworthy since it differs from the trend of the Lok Sabha results. The NCP won a majority of its seats from western Maharashtra at the cost of the Congress(I) and independents who were backed by Pawar in 1995. The number of independents fell from 45 to 12.



Although there was a lot of speculation about how much of the Congress(I)'s vote Sharad Pawar would take away, the CSDS survey shows that the most likely quantum is somewhere around one-third. Sharad Pawar was thus unable to do what Mamata Banerjee succeeded in doing in West Bengal – split the Congress(I) evenly down the middle. On the other hand, despite an undistinguished term in government, the Shiv Sena-BJP combine was able to hold on to a considerable percentage of those who had voted for it in 1998.

Thee Shiv Sena-BJP combine did not do as well in being able to make those who voted for it in the Lok Sabha elections to do so in the Assembly elections. Whereas 88 per cent and 93 per cent of the people who voted for the BJP and the Shiv Sena respectively in the Assembly elections also voted for the combine in the Lok Sabha elections, the retention rate is not nearly as high when looked at from the other direction. From among those who voted for the combine in the Lok Sabha elections, only 74 per cent voted for it in the Assembly elections. The BJP voters were bigger 'ticket splitters' than the Shiv Sena voters.

Maharashtra's voters are not as polarised along caste lines as those in many other States – except at the lower end of the caste hierarchy. Instead of different groups aligning with different alliances, each caste group seems to be getting divided among the three coalitions. The Maratha and Kunbi vote, which was firmly behind the Congress(I) last time, was fragmented among the Shiv Sena-BJP combine, the Congress(I) and the NCP this time. Since 1990, the Shiv Sena and the BJP have been trying to attract the traditional Congress(I) votes, and to some extent they seem to have succeeded in this. Thanks partly to the Shiv Sena and partly to the split in the Congress(I), they now occupy the space in the middle, and fare well among the Kunbis and other OBCs. They continue to fare badly among the Dalits and Adivasis, and particularly with Muslims, virtually none of whom voted for them. Interestingly, the BJP and the Shiv Sena have rather different social profiles.

During the campaign, the NCP was criticised for trying to unite the four Ms: Marathas, Malis, Mahars and Muslims. It succeeded in this partly, but an analysis of its voter composition shows that the NCP bears an indelible Maratha mark. The Muslim vote was split almost evenly between the Congress(I) and the NCP: 46 per cent for the Congress(I) and 40 per cent for the NCP. As usual, the composition of Congress(I) voters was pretty balanced. However, since its support base spans across all social groups, the Congress(I) lacks a specific social identity. This is fine when a party is on the upswing, but problematic when it is on the decline.

the Shiv Sena that it has received the support of the lower sections of society, the combine is very much a party of the elite. It fared well among the upper classes and the educated. The reverse was true for the NCP and the Congress(I). However, the index for media exposure shows an effect over and above the pattern for class and education. Whereas the lowest classes and the least educated were pretty much equally divided between the Congress(I) and the NCP, the Congress(I) showed a clear lead among the least informed members of society, receiving 41 per cent of the vote from those who have no media exposure.

The usual story of more women than men voting for the Congress(I) and *vice versa* for the BJP is as true for Maharashtra as it is elsewhere in the country. The NCP, however, scored pretty much equally among both the sexes.

The Congress(I) lost to the NCP particularly badly in the rural areas. The rural verdict was split almost evenly among the three main players. The Shiv Sena-BJP combine did substantially better in the urban areas, which comes as no surprise.

Despite Sharad Pawar's vehement stance against Sonia Gandhi's foreign origin, her standing in the popularity stakes as the choice for Prime Minister did not suffer too badly. Overall, 26 per cent of the respondents named her as being their choice for Prime Minister, which was more or less on a par with the national average. However, 19 per cent of the sample felt that she was an unsuitable candidate because of her foreign origin. This figure was higher among the Shiv Sena-BJP combine voters at 31 per cent, than it was with NCP voters at 22 per cent.

The elections have thrown up a complex picture of emerging political loyalties which defies the easy bifurcation of the State polity into two rival political camps. This fragmentation removes the possibility of a formation of the weaker and deprived social groups into an electoral bloc. Just as there are no winners and losers in the elections from Maharashtra, there appear to be no progressives and reactionaries in State politics anymore. ■

Region-wise tally in the Assembly elections 1999 (Gains/losses compared to 1995 Assembly elections)

Karnataka: Party Position 1999

Party	Contested	Won	Vote share (%)
Cong(I)	28	18	45.4
BJP	19	7	26.9
JD(U)	10	3	12.3

THE 1999 elections marked a comeback for the Congress(I) in all regions of Karnataka. The party avenged its humiliating defeat in the 1994 Assembly elections, when it was relegated to the third position. Although it recovered some of the ground in the 1998 Lok Sabha elections, it finished only second, way behind the Bharatiya Janata Party-Lok Shakti combine. This time the Congress(I) snatched 10 seats from the BJP and the Lok Shakti and two from the Janata Dal, and conceded two of its seats to the BJP and one to the Janata Dal (United). Surprisingly, no pollster anticipated the massive nine-percentage-point swing of votes in favour of the Congress(I). Despite a near-perfect seat adjustment for the Lok Sabha elections, the half-hearted BJP-JD(U) alliance lost more than eight percentage points of the popular vote that had gone to the BJP-Lok Shakti alliance last year. Clearly, the addition of the Janata Dal faction led by J.H. Patel brought nothing but discredit to the alliance. The Janata Dal (Secular), led by former Prime Minister H.D. Deve Gowda drew a blank: its leaders faced humiliating defeats. However, with more than 10 per cent of the vote share, it remains a force capable of acting as a spoiler.

The Congress(I) showed its dominance in all the regions including the coastal districts, which had emerged as BJP strongholds in the 1990s. In the Bombay-Karnatak region in the north, where Lingayats were expected to support the BJP-led alliance, the Congress(I) got the same share of votes and seats as its main rival. While Sonia Gandhi's candidature may not have changed the verdict in the entire State, it seems to have had some [illegible] in Hyderabad-Karnatak. The voter [illegible] jumped by nearly seven percentage points and the Congress(I) registered a 12.7 per cent swing in its favour. The Congress(I) won the majority of the Assembly seats in all the districts except Bidar, where communal polarisation may have worked against it. As in its heyday, the Congress(I) has its vote spread more or less evenly across the State, while the BJP-JD(U) combine has weakened in Hyderabad-Karnatak and Old Mysore. It is in the largest southern region of Old Mysore that the BJP alliance suffered its worst loss – four seats and 15 percentage points of its vote share. Despite a spectacular entry into the electoral arena in 1991, the BJP remains a marginal political force, with the rural constituencies continuing to elude it.

The Assembly elections confirmed the dominance of the Congress(I) in all the regions. The most spectacular are the party's gains in the Old Mysore region, where its position improved from 10 seats in 1994 to 61 seats, mostly at the cost of the undivided Janata Dal. Overall, the Congress(I) snatched 69 seats from the undivided Janata Dal and 17 from the BJP. While the BJP made marginal gains elsewhere, it lost seven seats in the coastal region, where it first established its base in the State. It retained only 22 of the seats it won in 1994. The two Janata Dal factors have very little to show except losses. The JD(U) can take delight in the fact that it got more seats than the JD(S) even in Old Mysore.

The flow of votes as revealed by the CSDS survey shows that this turnabout happened in three ways: the Congress(I) retained much more of the 1998 vote share than the BJP-JD(U) combine; it snatched more votes from its rivals than they took from it; and the JD(U) failed to fetch for the BJP-JD (U) alliance more than half the 1998 vote share of the Janata Dal. JD(S) and the Congress(I) each succeeded in taking away one quarter of its 1998 vote, and thus sealed the fate of the BJP-JD(U) combine.

Voting simultaneously for different parties in the Lok Sabha and Assembly elections is not a new phenomenon in Karnataka. Evidently, such voting did not take place on a large scale this time, but it was high compared to Andhra Pradesh and Maharashtra. Once again, the BJP-JD(U)

Karnataka: Region-wise analysis, Lok Sabha elections 1998

Region	Seats	Turn-out 1998	Change over 1996	Congress(I) Won	Gain/ Loss	Vote share	Swing	BJP+JD(U) Won	Gain/ Loss	Vote share	Swing	JD(S) Won	Gain/ Loss	Vote share	Swing
Hyderabad-Karnatak	5	63.3	+6.6	4	+1	53.7	+12.7	1	-1	40.6	-8.1	0	0	6.8	-16.4
Bombay-Karnatak	6	68.3	+4.8	3	+2	46.8	+10.7	2	-2	45.5	-0.9	0	0	6.6	-8.4
Old Mysore	14	63.4	-4.1	9	+4	44.8	+8.2	5	-1	37.1	+2.5	0	-3	13.9	-11.3

Total	28	64.9	0	18	+9	45.4	+9.2	10	-6	40.4	+2.0	0	-3	10.6	-11.2

alliance suffered The two parties fought against each other in a number of Assembly constituencies and could not transfer nearly a quarter of its Assembly-level vote share to their Lok Sabha candidates Although the alliance picked up one-third of the JD(S) vote share in the Assembly elections, that was not enough The Congress(I) fared a little better in this regard

The key to the Congress(I) s success was its ability to reconstruct the classic rainbow coalition as in the days of D Devaraj Urs It trailed the BJP-JD(U) among Lingayats and other upper castes and the numerically insignificant Scheduled Tribes But that was more than made up by an impressive showing among the lower castes and classes It not only took away a handsome slice of the Janata Dal's Vokkaliga vote, but enjoyed strong support among the lower sections of the Other Backward Classes, the Scheduled Castes and Muslims

The Congress(I) also regained some of its traditional support base The poorer the voter, the greater the odds of a vote in favour of the Congress(I) Conversely, the BJP and its allies performed better among the richer sections The contrast is particularly striking at the two ends of the class divide The BJP and its allies have enjoyed a lead of 21 percentage points over the Congress(I) among the rich

Above 55 years	48	45	7

and the super-rich, while the Congress(I) has a whopping 47-point lead among the poorest.

A profile of the voter based on the factor of education shows that access to education accentuates the class effect. The same pattern is repeated in the gender and rural-urban divides. The edge that the Congress(I) enjoys among women and rural voters is much higher in Karnataka than in the rest of the country. The higher urban vote reported for the JD(S) appears odd; the high figure is perhaps due to a greater degree of sampling error for smaller formations. All is not well with the Congress(I), though. The age profile of voters reveals that the Congress(I) is more popular among older voters while the BJP and its allies enjoy an edge among younger voters.

A STUDY associated with the CSDS survey and carried out by researchers at the Department of Political Science, Bangalore University, reported that the most popular choice for Chief Minister was S.M. Krishna of the Congress(I), with the support of 28 per cent of the respondents. B.S. Yediyurappa of the BJP was the choice of 26 per cent; J.H. Patel of the JD(U) was favoured by 10 per cent.

The Congress(I) also regained some of its traditional support base. The poorer the voter, the greater the odds of a vote in favour of the Congress(I). Conversely, the BJP and its allies performed better among the richer sections.

At least 54 per cent of the respondents were dissatisfied with the Janata Dal government. Also, 56 per cent felt that northern Karnataka had been neglected. Among the respondents from northern Karnataka, 84 per cent felt that the region had been neglected.

The essence of the lessons from Andhra Pradesh and Karnataka is that governance matters. The anti-incumbency factor is not a knee-jerk action, nor a foregone conclusion, but a response to the performance of people who have been handed the reins of power. ■

A triumph of alliance arithmetic

CSDS Team with

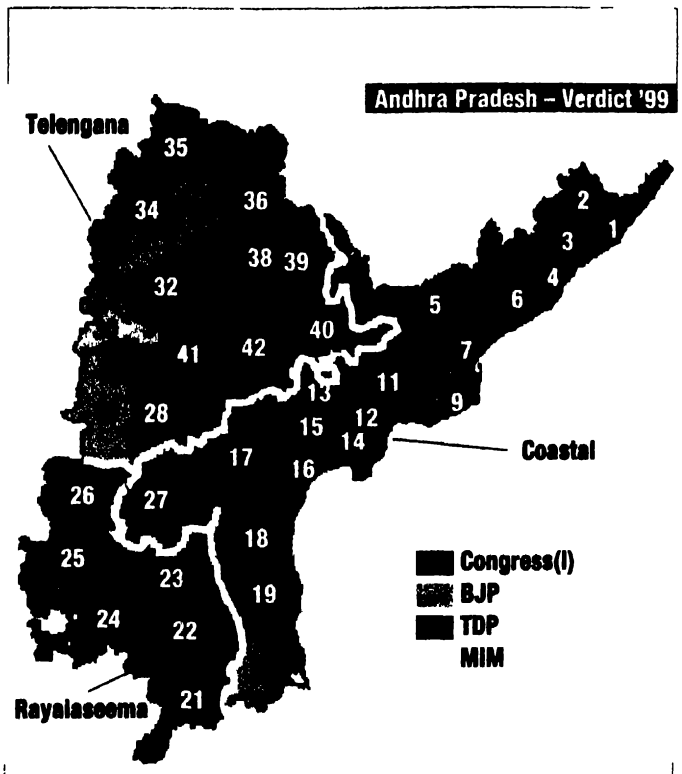
Andhra Pradesh: Party Position 1999

Party	Contested	Won	Vote share (%)
Cong(I)	42	5	42.8
BJP	8	7	9.1
TDP	34	29	40.7
MIM	1	1	1.4

IT is easy to read too much into the victory of the Telugu Desam Party led by N. Chandrababu Naidu in Andhra Pradesh. After all, Chandarababu Naidu can claim to be one of the few undisputed winners of the 1999 elections. As compared to the 1998 elections, his party has increased its vote share and seats tally; to that extent, his visibility and political clout have increased. The TDP under him may not have swept the Assembly elections as it did under N.T. Rama Rao in 1994, but Chandrababu Naidu is one of the few Chief Ministers in recent years to have withstood and triumphed over the tide of anti-incumbency that the media have made much of. The TDP's tally of 29 Lok Sabha seats made it not only the biggest of the BJP's allies, but also the fourth largest party in the Lok Sabha.

Yet the TDP's victory is rather less dramatic when seen in terms of vote share. The vote share of the TDP-BJP combine was only seven percentage points more than the Congress(I)'s vote share in the entire State. The Congress(I)'s vote share in fact went up by over four percentage points as compared to the 1998 parliamentary elections, in which it fared rather well. However, the State witnessed straight contests this time and the spread of votes was relatively even for both the parties; in such a situation, even a small margin translated into an overwhelming victory for the TDP-BJP combine in terms of seats.

This is what made the alliance with the BJP a key factor in the TDP's success. The BJP's vote share of 9 per cent this year perhaps understates its role, for it was forced by Chandrababu Naidu, a hard bargainer, to settle for a meagre share of seats. In the 1991 parliamentary elections, the BJP made a big entry in Andhra Pradesh by securing nearly 10 per cent of the popular vote. Its fortunes declined marginally in 1996. It performed well in 1998: it won four parliamentary seats and secured 18 per cent of the popular vote. The TDP's alliance with the BJP enabled it to more than make up for the losses from the severing of its ties with the Left parties; it also gave the TDP an edge over the Congress(I). The TDP-BJP combine's vote share (nearly 50 per cent) matches the combined vote share of the TDP and the BJP in 1998. If the BJP had not contested as an ally of the TDP and had fared even half as well as it did in 1998, the TDP might well have faced defeat.



The TDP-BJP combine won comprehensively in all the three regions. Even in Rayalaseema, the last remaining bastion of the Congress(I), the TDP-BJP combine took four seats from the Congress(I) and improved on its vote share over 1998. In Telengana, considered the region where the BJP is the strongest, the TDP-BJP's combined vote share fell by three percentage points since 1998, but it managed to finish well ahead of the Congress(I). This is the region where the Left parties secured a reasonably good share of the popular vote. This is also the first election since 1984 that the Left parties did not contest as part of a broader alliance, and their performance this time has not been good. In the coastal region, the TDP-BJP combine won all but two seats.

An analysis of the Assembly election results shows that the TDP dominates in almost all the regions. Although the decision to break with the Left parties and team up with the BJP cost the TDP 20 seats in the Telengana region, it retained its hold over coastal Andhra and fared better than the Congress(I) in Rayalaseema. The Left parties suffered

Region	Seats	Turn out 1999	Change over 1998	Cong(I)+ Won	Gain/ Loss	Vote share	Swing	TDP+BJP Won	Gain/ Loss	Vote share	Swing	CPI-CPI(M) Won	Gain/ Loss	Vote share	Swing
Telengana	15	65.0	-0.4	2	-2	40.5	+8.0	12	+4	46.9	-2.8	0	-1	5.1	-2.9
Coastal	21	69.4	+2.3	2	-11	43.7	+2.2	19	+12	51.7	+0.3	0	-1	1.8	-1.8
Rayalaseema	6	66.6	+4.7	1	-4	46.3	+1.3	5	+4	50.7	+3.1	0	0	0	-5.7
Total	**42**	**67.6**	**+1.6**	**5**	**-17**	**42.8**	**+4.4**	**36**	**+20**	**49.6**	**-0.5**	**0**	**-2**	**2.8**	**-2.7**

the most significant losses this time. The Congress(I) made marginal gains in Telengana and elsewhere, as compared to 1994, when it drew a blank. In all, the TDP retained 141 of the seats it had won in 1994, passed on eight seats to the BJP, and won back 15 from the Left parties, its former allies. The Congress(I) retained only 10 of the 26 seats it had won in 1994, but took 65 from the TDP and 15 from the Left parties.

A carefully crafted alliance and a successful transfer of votes was thus crucial to the TDP's victory. The CSDS survey data show just how successful the vote transfer from the BJP and the TDP to the new combine was, notwithstanding the dissatisfaction in the State unit of the BJP over the terms of the alliance. In the matter of holding on to its own share of votes in the 1998 elections, the Congress(I)'s performance was the best. It also took away a significant slice of the votes of the BJP and the TDP. The TDP, which retained 85 per cent of its 1998 votes, could not win over many votes from the Congress(I) but it managed to offset its losses by adding 82 per cent of the BJP votes of 1998 to the combine's votes. It also captured the majority of the votes secured in 1998 by the CPI and the CPI(M), its allies at that time. As in the case of Bihar, excessive dependence on alliances rendered the Left parties vulnerable.

21	Chittoor	TDP	42	Miryalguda	Cong(I)

In the Assembly elections, both the TDP-BJP combine and the Congress(I) retained more than 90 per cent of the votes that they secured in the Lok Sabha elections.

Underlying the TDP-BJP's successful coalition was the forging of a new social coalition of the upper and the middle castes The addition of BJP votes strengthened the TDP's position among the upper castes and the peasant OBCs, besides consolidating its traditional Kamma votes. These gains more than compensated for the loss of the votes of the Scheduled Castes and the Scheduled Tribes owing to the break with the Left parties, and of Muslims, who shifted their allegiance to the Congress(I). Even so, the TDP-BJP combine enjoyed more support than the Congress(I) did among adivasis; the TDP's share of votes of Muslims is one of the highest for any ally of the BJP.

The class profile of the TDP-BJP combine shows an uneasy coming together of the upper classes (who predominantly support the BJP) and the lower classes (who support the TDP). The Congress(I) fared well among the middle class but was squeezed from the upper end by the BJP and the lower end by the TDP.

PMK	7	5	8 2
MDMK	5	4	5 9
MGR ADMK	1	1	1 5

IF Tamil Nadu threatened to be a psephologist s nightmare this time, the exit poll disaster of 1998 was not the only reason The basic alliance arithmetic of the State was written afresh between the elections of 1998 and 1999 So much so that it is difficult to fix a benchmark from where gains and losses can be calculated In 1998, the alliance led by the All India Anna Dravida Munnetra Kazhagam (AIADMK), which included the Bharatiya Janata Party, swept the polls it won 30 of the 39 seats on the basis of a lead of merely five percentage points over the rival front, which comprised, among others, the Dravida Munnetra Kazhagam (DMK) and the Tamil Maanila Congress (TMC) The Congress(I) fought independently and ended up empty handed, with just 4 8 per cent of the vote

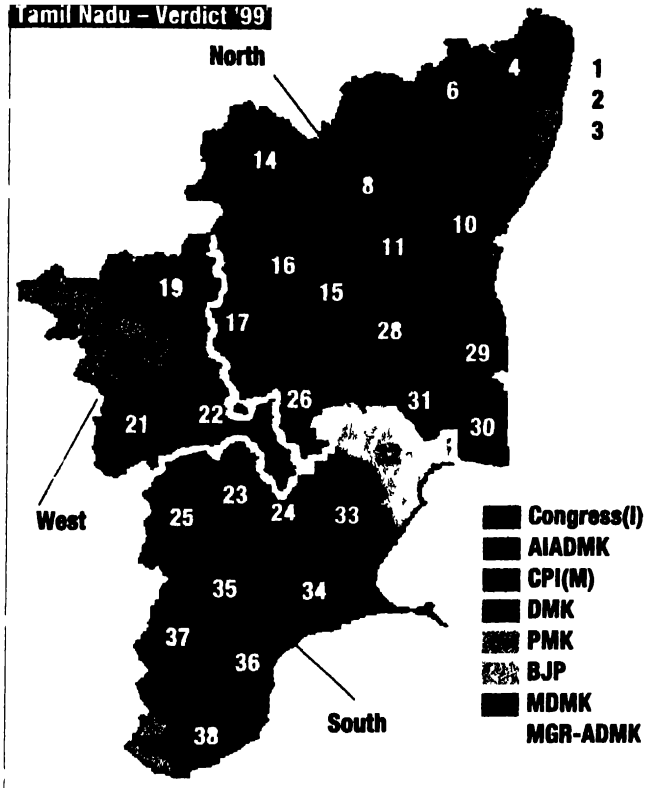
By the time 1999 elections were held, political merry-go-round had turned full cycle If the new alliances were to be judged by the performances of their individual components in the 1998 elections, the starting point for the AIADMK-Congress(I) combine was 33 8 per cent of the vote, while the new DMK-BJP front started with an advantage, at 39 3 per cent of the vote The TMC-led third front could be assumed to have been left with 21 9 per cent

Region	Seats	Turn -out 1999	Change over 1998	Won
North	23	58.1	0	4
West	5	57.2	+0.5	5
South	11	58.1	-0.1	7
Total	39	58.0	+0.1	19

Unlike in Karnataka, the Congress(I) could not reconstruct its base among the poorest sections

During the campaign, TDP leaders repeatedly claimed that the party enjoyed the overwhelming support of women and young voters The survey findings do not support this claim Young voters were equally divided between the TDP and the Congress(I) If anything, the TDP does best among the middle-aged, who perhaps acquired their right to vote about the time the TDP first came to power in dramatic circumstances, in 1983 Similarly, the TDP, which earlier drew a greater share of its support from women than from men, now enjoys about the same proportion of votes across the gender divide The rural-urban divide does not explain much of the difference, for the TDP enjoys the same lead in both areas The Left parties have their traditional source of support in the villages

The survey reveals that as compared to voters in many other parts of the country, voters in Andhra Pradesh are more politicised, more confident, and more attuned to regional politics At the same time, 75 per cent of TDP voters expressed a preference for A B Vajpayee as Prime Minister About 47 per cent of the voters claimed that they had finalised their voting choice much before the campaign began ■



No major shift in popular mood

The final results show a much higher vote share for both the AIADMK-Congress(I) and DMK-BJP fronts, gained at the expense of the TMC However, the final figure of a 5 5 percentage-point gap between the vote shares of the two fronts was exactly what it was at the starting point In other words, the final verdict seems to have had more to do with better alliance-making by the BJP than any major shift in the popular mood

The gap between the vote shares of the two major fronts was to the tune of 8 per cent in the northern region, the largest in the State The DMK and its allies won 19 of the 23 seats here Six of the seats they won were wrested from the rival fronts The AIADMK-led alliance could have ended up in a much worse situation if it were not lucky enough to save seven seats in the southern region despite trailing behind the DMK-led front in the matter of vote share by around two percentage points in each case In the western region, the gap narrowed down to less than one percentage point, and the two fronts shared the honours

In all only 17 out of the 39 seats changed hands in what appears to be a complete turnabout The AIADMK was of course the biggest net loser it conceded 10 of its 18 seats to the DMK-led front and could win back only two The DMK retained all the five seats it had and added seven seats and three percentage points in terms of votes The TMC lost all its three seats, two to the Congress(I) and one to the BJP At 9 3 per cent of the popular vote share, the TMC-led front is nowhere in terms of seats, but retains enough clout to act as a spoiler

As seats changed hands, so did votes The 1999 elections in Tamil Nadu represented an unusual phenomenon of voters changing their voting preferences as the alliances got forged afresh The Congress(I) carried most of its meagre vote share to its new alliance So did the DMK, except that its share was not meagre and was not entirely its own The TMC is virtually born anew, shedding most of the votes it won in 1998 The 1998 vote of the AIADMK front appears to have got split between the alliances led by the DMK and the AIADMK this time But this is more apparent than real, for the voters only continued to vote for the same party which had changed sides Significantly, the direct

Female	38	46	15

shift of votes between the two traditional rivals, the DMK and the AIADMK, was negligible. Much of the flow took place via the allies, such as the Pattali Makkal Katchi (PMK) and the Marumalarchi Dravida Munnetra Kazhagam (MDMK), which changed sides between the two elections. The viability and success of this vote transfer make coalition politics in Tamil Nadu function in a much less arbitrary fashion than elsewhere. It is not surprising that at 34 per cent, Tamil Nadu has a much higher acceptance for coalitions than the national average of 21.

AS the internal composition of the three main fronts changed substantially between the previous two elections, their respective social bases also went through major transitions. Between 1998 and 1999 members of the upper castes and of the Thevar community united behind the DMK-BJP front while the Vanniyars too shifted their loyalty to this front. The formation of the AIADMK-Congress(I) alliance facilitated a consolidation of the Muslim vote. However, it could not lead to a consolidation of the Scheduled Caste vote, as the TMC's alliance with Puthiya Thamizhagam (P.T.) took away the support of the majority of Arundhatiyars and Chakkiliyars. The Congress(I), which fought on its own in 1998, had fairly uniform support in terms of different communities, barring Christians. It did not, therefore, carry with it any exclusive vote bank when it joined the AIADMK-led front.

There is a clear gender divide in terms of support for the two main fronts. The DMK-BJP front is more popular with men than it is with women, and the reverse is true for the AIADMK-Congress(I) front.

INTERESTINGLY, the major parties carry their class profile to the alliance they join. Last year the AIADMK-BJP front had a stronger base among the lower classes and the DMK-TMC combine was supported more by the upper classes. This time the AIADMK-Congress(I) alliance inherited the lower-class profile while the DMK-BJP combine showed an upper class profile. The only change is the entry of the TMC combine, which took away some of the poorest from the AIADMK. Clearly, the national parties in Tamil Nadu take over the basic cleavages of Dravidian politics depending on which ally they team up with. Voting by the levels of education shows the same pattern as in class, for education is largely a function of class. Again, the highly educated mostly support the DMK-BJP, while the AIADMK front and the TMC-P.T. both compete with each other for the votes of the least educated.

There is a clear gender divide in terms of support for the two main fronts. The DMK-BJP front is more popular with men than it is with women, and the reverse is true for the AIADMK-Congress(I) front. But the six-point gap is not as big as one would expect from a front that was jointly led by two women, Jayalalitha and Sonia Gandhi.

THE preferred choice for Prime Minister reveals that the voters of either of the main fronts are firmly behind their national allies' prime ministerial candidate. More than four-fifths of the AIADMK front's voters named Sonia Gandhi while nearly 90 per cent of the DMK alliance mentioned Vajpayee – surprisingly high figures given the secondary role of the Congress(I) and the BJP in their respective alliances in Tamil Nadu. The large percentage of TMC voters who nominated Sonia Gandhi as their choice for the top spot indicates that the party continues to occupy some of the Congress(I) space.

The distinctiveness of Tamil politics has not been eroded by the presence of national political parties in the State. Nationally, 50 per cent of the voters believe that they should be loyal to their own region first, and then to India. However, in Tamil Nadu 78 per cent put their own region first. One must therefore read the gains that the BJP made in the State with caution. ■

A race between traditional rivals

CSDS Team with
G. GOPA KUMAR

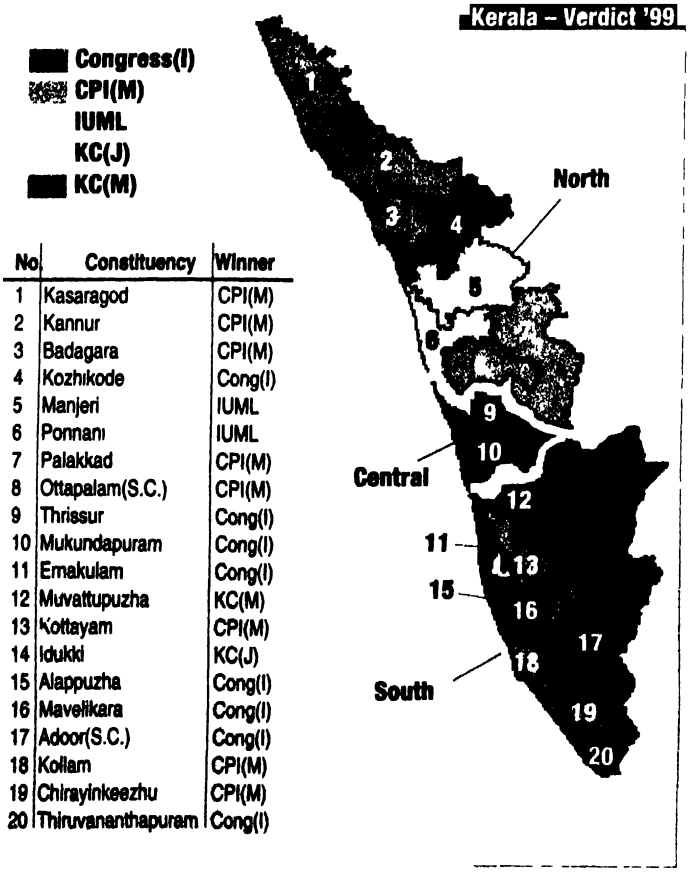
THE outcome of the Lok Sabha elections in Kerala reflects continuity rather than change. Notwithstanding media speculation about a possible shock to the ruling Left Democratic Front (LDF) owing to organisational problems, the overall tally of seats was the same as in 1998 – 11-9 in favour of the United Democratic Front (UDF). Last year's results had shown that the LDF was in a rather precarious position: a mere three percentage-point swing from the LDF to the UDF would deprive it of all its seats. This time the UDF's vote share did go up by about one percentage point and the LDF's vote share declined by about the same measure. However, this did not translate into any net loss of seats for the LDF. The swing was more pronounced in the central region of the State, where the LDF lost one seat However, it gained one seat in the north where the decline in the BJP's vote share upset the balance.

Once again, the BJP failed to win a single seat in the State. In fact its vote share declined by four percentage points, a net decline even if one includes the vote share of its ally, the Janata Dal (United). It seems that for some time to come Kerala will remain the only major State where the BJP or its allies do not matter in the electoral race.

In this round of elections, four seats changed hands. Kollam, where the Republican Socialist Party won in 1998, went to the Communist Party of India (Marxist). The Congress(I) wrested two seats – Thrissur and Adoor – from the CPI, which left the latter unrepresented from Kerala. The Kerala Congress (Joseph) and the CPI(M) wrested one seat each from the Congress(I). All but one of the LDF's nine seats are now held by the CPI(M).

Kerala: Party Position 1999

Party	Contested	Won	Vote share (%)
Cong(I)	17	8	39.4
CPI(M)	12	8	27.9
IUML	2	2	5.3
KEC	1	1	2.4
KCM	1	1	2.3



A look at the flow of votes between 1998 and 1999 shows that voter loyalty has remained stable since the 1998 elections. There is, of course, nothing new about it. Party loyalties are far stronger in Kerala than in many other States. The extent to which the main parties were able to retain their support base is staggering: 94 per cent for the UDF, 92 per cent for the LDF and 89 per cent for the BJP. Even before the campaign started, about 51 per cent of the voters had made up their minds about whom they would vote for. This was nearly 20 percentage points higher than the national average.

Party loyalty is not, however, to be taken for granted. The two main fronts canvassed hard, reaching out (in the CSDS sample) to 95 per cent of the electorate. A small percentage of voters shifted from the LDF to the UDF and *vice-versa*. There was, however, a bigger shift from the BJP to the LDF.

One of the features of the party system in Kerala is that a stable social alliance underlies both the dominant fronts. The extent of voter polarisation on caste-community lines is higher than in most other States.

One of the features of the party system in Kerala is that a stable social alliance underlies both the dominant fronts. The extent of voter polarisation on caste-community lines is higher than in most other States. This round of elections saw no major change in the pattern. The UDF, of which the Indian Union Muslim League and the Kerala Congress (Mani) are constituents, enjoys greater support among Muslims and Christians. This time, about three-fourths of these sections of the minorities appear to have supported the UDF. The LDF's support base is made up largely of the backward classes and the Scheduled Castes. It secured the support of the majority of voters from the Ezhava community and three-quarters of voters of the Scheduled Castes and

Middle	47	43	8
Low	53	36	4
Lowest	36	59	3

the Scheduled Tribes. As expected, the BJP picked up most of its votes from the upper rungs of the Hindu social hierarchy, in particular, from the upper-caste Nair community.

Yet political alignment in Kerala is not just caste- or religion-based. There is an equally sharp alignment on class lines; this cuts across community-based divisions and is more pronounced at the two extremes. The LDF vote is concentrated among the lower classes. It is twice as popular among the poorest as it is among the well-to-do. The profiles

Greater preference for the BJP among the educated

	UDF	LDF	BJP
Matric and above	48	31	14
Upto Matric	46	46	3
Below Primary	47	46	3

UDF does very well among women voters

	UDF	LDF	BJP
Male	39	46	13
Female	52	40	7

Both the major alliances are ageing, not the BJP

	UDF	LDF	BJP
Upto 25 years	44	34	22
26 to 35 years	44	42	11
36 to 45 years	45	46	8
46 to 55 years	48	43	10
Above 55 years	52	41	7

of the UDF and the BJP are radically different; these two formations draw support from those who belong to the upper classes. There is, however, one exception to this: the UDF does better among those sections that are just one rung above the lowest.

Unlike elsewhere in India, the class pattern is not directly reflected in the educational profile and the voting pattern. Both the major fronts get similar support across the education divide. The LDF draws less of its support from among the well educated, while the BJP gets most of its votes from this group.

The gender disparities in respect of support for the UDF are striking. Across the country the Congress(I) is traditionally supported by more women than men; in Kerala the difference on this count between the genders is 13 percentage points. Both the LDF and the BJP thus do better with male voters.

The age profile of supporters of the various parties is illustrative. The UDF enjoys greater support among the elderly; the LDF secures much of its votes from among the middle-aged. Both of them fare rather less well with young voters than with voters in other age groups. The BJP, on the other hand, appears to have the most significant appeal among the youngest among voters. If this trend continues for some years, both the major fronts will have something to worry about.

The survey reveals that Kerala is the only State where Vajpayee figures third in the ranking in respect of voters' preference for Prime Minister. Sonia Gandhi was preferred by 41 per cent of those surveyed, Jyoti Basu by 20 per cent and Vajpayee by 19 per cent. The support that Jyoti Basu enjoys also indicates that the LDF voters' preference is governed by political consideration rather than regional considerations.

In Kerala the competition is principally between the LDF and the UDF, with the BJP nowhere in the picture. There is a high level of dissatisfaction with the Central government. Fifty per cent of the respondents said they were not at all satisfied with its performance, compared to the national average of 25 per cent. The BJP also faces the most strident opposition in Kerala, with 11 per cent of the electorate stating that it would never consider voting for it – significantly higher than the 'negative vote' secured by any other party, either regionally or nationally. There is a high level of opposition to many of the BJP's favourite issues, from Kargil and Pokhran to building a temple at Ayodhya. ■

The CTBT setback

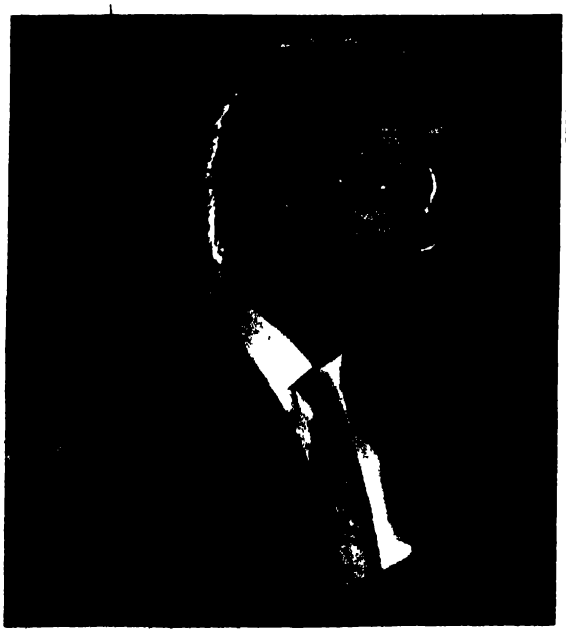
The rejection of the CTBT by the U.S. Senate is a blow to American leadership of the global arms control initiative.

SUKUMAR MURALIDHARAN

IN a "letter of transmittal" calling for the U.S. Senate's "advice" and "consent to ratification" of a global treaty banning nuclear explosive testing, President Bill Clinton referred to the pact arrived at in 1996 as "a signal event in the history of arms control". Elsewhere he used more eloquent phraseology. The Comprehensive Test Ban Treaty (CTBT), he said, is the "longest sought and hardest fought prize" in the history of global arms control.

The U.S. Senate, dominated for all of Clinton's tenure by the Republican Party, seemed oblivious to these virtues. Having received a formal request for ratification in September 1997, it chose the path of evasion. Jesse Helms, the arch-conservative chairman of the Senate Foreign Relations Committee, simply refused to schedule a hearing on the CTBT, fatuously insisting that his priorities were elsewhere. Senate Majority Leader Trent Lott, another conservative Republican, served as a powerful accomplice to Helms all through this endeavour.

Towards the end of September, shortly after the United Nations Secretary-General announced his intention to convene a meeting of "states parties" to facilitate the early entry into force of the CTBT, the Senate Republicans roused themselves to frenetic activity. Displaying a sense of urgency that caught the Clinton administration unawares, Helms and Lott insisted on rushing the treaty to the floor of the Senate by October 12.



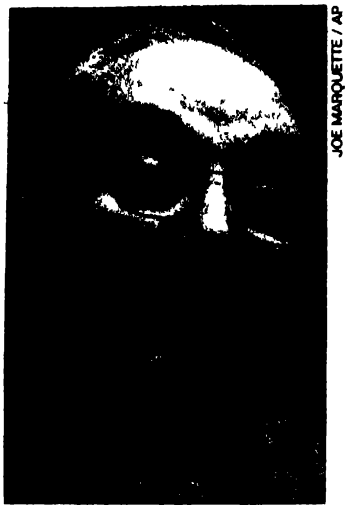
What followed was farce of a high order. On October 14, after a discussion that was accurately described by *The New York Times* as "ludicrously compressed", the U.S. Senate rejected the CTBT by a margin of 51 to 48. The ratification of international treaties requires a two-thirds legislative majority in the U.S. The CTBT was denied even the small, if symbolic, solace of a simple majority.

The last days of the CTBT reflected all the lack of civility that has come to characterise relations between the Clinton presidency and the legislative branch. When it became evident that the Senate Republicans were working towards defeating the treaty, anxious officials from the government went to work to get the vote postponed. The Senate Republicans were amenable to a postponement on one condition – the vote would be deferred if the Clinton administration were to agree never again to bring forward the treaty for consideration. As a prominent Senator from the Democratic Party put it: it was a choice between hemlock and arsenic. Yet a deal was impossible even on these rather skewed terms, since the rules of procedure empower any one Senator to block the cancellation of a vote once it is scheduled.

After the vote, a grim-faced Clinton denounced the Senate for its "reckless and partisan" approach to a treaty of epochal significance. He also vowed to keep up the quest for a complete ban on nuclear explosive testing: "This agreement is critical to protecting the American people from the dangers of nuclear war. It is, therefore, well worth fighting for. And I assure you, the fight is far from over."

Liberal circles in the U.S. have reacted with alarm at the Senate's action, which they see as embodying a new spirit of armed isolationism. It is a mood that is an unstable amalgam of mutually irreconcilable attitudes. The only previous instance of the U.S. Senate rejecting an international treaty with global security implications was when it turned down the Versailles Treaty in 1919. That spirit of isolationism has today been compounded with a certain military arrogance, the confidence that the U.S. can literally shoot itself out of any tight spot.

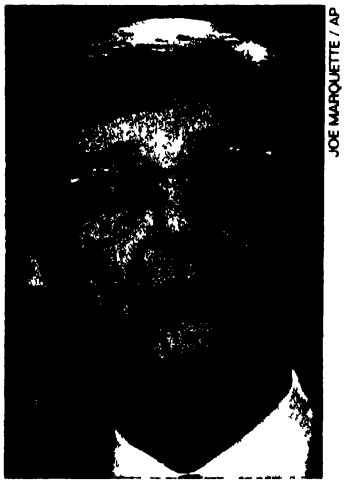
In these renditions, the rejection of the CTBT by the U.S. Senate is a mortal blow to American leadership of the global arms control initiative. "The Senate's action... is a destructive abdication of U.S. leadership on arms control and other international issues," said *The New York Times*. Since this is a perspective that has been offered even by the key allies of the U.S. and by disarmament lobbies, it is well worth a serious evaluation. This requires, at the minimum, an appreciation of the function that the CTBT played in the global architecture of power.



GREG GI

President Bill Clinton at a press conference after the Senate's rejection of the CTBT.

UNTIL 1995, the U.S. remained a recalcitrant element in the multilateral negotiations at the Conference on Disarmament towards a nuclear test ban treaty. The U.S. military establishment was keen that explosions up to a yield of 10 kilograms should be free of all restraints. Hawks in strategic circles were similarly insistent that an easy "opt-out" clause should be inserted, which would enable the U.S. to withdraw from all treaty obligations within a definite timeframe.



The story since then can be recounted in the words of Robert Bell, who has been responsible as Clinton's top adviser on nuclear security matters for shaping the new contours of U.S. policy: "In January of 1995 we made some

very hard decisions within the Clinton administration with respect to the content of our comprehensive test ban negotiating position. ... (This was) because we had come to the conclusion that without the change we would not have prevailed in winning the indefinite and unconditional extension of the NPT (Nuclear Non-Proliferation Treaty). There were a lot of news stories being written through 1995 that said, in effect, we were losing this battle and that the NPT was going to go down. There is no question in my mind that if we had sustained the policy of the two previous administrations and refused to negotiate a comprehensive test ban in any forum, the Conference on Disarmament or otherwise, we would not have gotten the NPT extended."

JOE MARQUETTE / AP

Jesse Helms, Chairman of the Senate Foreign Relations Committee.

JOE MARQUETTE / AP

Senate Majority Leader Trent Lott.

In early-1998, with intimations of the Republican intent to scuttle the CTBT, Bell issued an explicit warning: "If the Senate should reject or refuse to act on the CTBT, I believe we put at risk the NPT."

Fresh hints of turbulence are already evident. At the indefinite extension of the NPT in 1995, it was agreed that the "states parties" would undertake a comprehensive review in April-May 2000. Three meetings of the Preparatory Committee (PrepCom) towards this review conference have been held since 1997. The last PrepCom held in May in New York was a fractious affair, with several of the signatories calling in question the sincerity of the nuclear weapons states (NWSs) in negotiating a framework for disarmament as they are obliged to under Article VI of the treaty. A new grouping of nations that spans the traditional polarities of the Cold War – the New Agenda Coalition (NAC) – issued a warning at the "faltering" pace of "efforts to implement all the obligations of the NPT".

In scarcely concealed disdain at the renewed call for an accelerated programme of disarmament, the head of the U.S. delegation to the PrepCom dismissed those "trying to identify a new agenda" when there is an "existing agenda that remains to be completed". That agenda, as formulated by the U.S. administration, can be reduced to three key components – entry into force of the CTBT, the resumption of the strategic arms reduction process with the Russian Federation under the framework of the Strategic Arms Reduction Treaty (START), and multilateral talks under the auspices of the Conference on Disarmament for a Fissile Material Cutoff Treaty (FMCT).

Viewed against this background, the U.S. Senate's rejection of the CTBT represents a much needed closure. Since the START process has long been deadlocked and the FMCT shows no sign of getting off the ground, the American disarmament agenda is now effectively defunct.

In the U.S. narration, the bilateral arms reduction process involving itself and Russia has been blocked by the failure of the Russian Duma to ratify START-II. This interpretation glosses over the fact that the votes necessary for ratification had been lined up in the Duma on at least three occasions. On every single occasion, the possibility of ratification was dispelled by aggressive American actions on the global strategic chessboard.

In 1997, the U.S. administration brusquely overrode Russian objections to clear the way for the expansion of the North Atlantic Treaty Organisation (NATO) to the doorsteps of that beleaguered country. The elaborate pretence that NATO expansion was not targeted at Russia obviously failed to carry any conviction. The insincerity of the flattery that was used then – about Russia being too large and mighty a country to be part of NATO – did not make things any more comfortable. The provocative expansion of the alliance that has since authored a new doctrine in aggressive militarism came just when the Duma was due to take up START-II for ratification. Angered by the U.S.' insincerity and its insensitivity towards Russia's security concerns, the Duma deferred consideration on the matter then.

Another setback came last December with the bombing of Iraq by the U.S. and the U.K. Infuriated by the U.S. arrogance and its obvious disregard of world opinion, the Duma officially pronounced that START-II was dead. In the following month, the Russian armed forces exulted in the announcement of a series of subcritical nuclear tests in the Arctic region. Since they do not generate an explosion, these tests are in conformity with the obligations of the CTBT. Such tests have been used repeatedly by the U.S. since the CTBT was signed, as part of the "Stockpile Stewardship and Management Programme" – a multi-billion dollar project to maintain the American nuclear arsenal in a state of advanced preparedness.

In January this year, the U.S. announced that it was setting in train preparations for the deployment of a national missile defence (NMD). U.S. Secretary of Defence William Cohen set out two criteria to determine when the deployment would take place: the availability of technology and the existence of a missile threat from a "rogue state".

Under the Anti-Ballistic Missiles (ABM) Treaty signed by the U.S. and the Soviet Union in 1972, both sides are committed to not putting in place a missile defence system. The understanding behind this is simple – both sides must be equally vulnerable to the other side's attack, since deterrence would otherwise lose its potency as a doctrine. If one side were to seek to introduce a missile defence system, the other side would be compelled to multiply enormously its offensive capability, in order to maintain the balance of terror where it was before.

Cohen was at pains to emphasise that NMD deployment would not be intended to counteract the Russian missile threat. In this sense, he claimed, there would be no fundamental breach of the ABM Treaty. In case there was an element of dissonance between the requirements of NMD deployment and the terms of the ABM treaty, said Cohen, he

would expect Russia to accept the necessary amendments to the agreement. If not, then the U.S. would consider withdrawing from its obligations under the ABM Treaty.

Russia was not convinced then and U.S. actions in the Balkans heightened concerns in the Duma later. In April, at the height of the war of aggression in Yugoslavia, Russian President Boris Yeltsin signed a decree on developing and deploying tactical nuclear weapons. This follows the reversal in 1998 of the country's "no first use" policy and its decision in March to use nuclear arms in the defence of its territory and its allies.

Concurrent suggestions by the U.S. that it would consider deploying a "theatre missile defence" (TMD) system in Taiwan, have raised hackles in China. A direct consequence of the January announcements on missile defence systems has been a persistent impasse at the Conference on Disarmament in Geneva. After having closed the year 1998 with ad hoc committees on a fissile material cutoff and negative security assurances, the Conference has failed all through this year to even begin negotiations. The Chinese delegation, for instance, has brought up the issue of nuclear disarmament and the prevention of an arms race in outer space, arguing with great credibility that they need to be addressed along with the fissile material cutoff and negative security assurances.

INDIA for its part has maintained an uncharacteristically low profile on this front since the Pokhran blasts last year. Official spokesmen have claimed that the U.S. Senate's rejection of the CTBT makes no material difference to the Indian position, which is still premised upon the centrality of evolving a domestic political consensus. There is, however, an unmistakable sense of relief in official circles that the new concord with the U.S. over fighting terrorism will not be held hostage by the CTBT.

In seeking this new relationship, India has abandoned its commitment to global nuclear disarmament. At the Conference on Disarmament, India finds itself in the unlikely company of the U.S. and Israel in insisting that existing fissile material stockpiles should not be covered by a cutoff treaty. After a series of uncoordinated interventions in the recent past, India under the leadership of Prime Minister A..B. Vajpayee seems intent today on petitioning the masters of the global nuclear imperium for the privileges of a nuclear weapons state. ■

Nuclear contradictions

Japan's reactions to nuclear issues, specifically the CTBT, appear to be prompted more by a need to perpetuate the global military balance as it stands now, than by a desire to avoid a recurrence of the events of 1945.

F.J. KHERGAMVALA
in Tokyo

"Japan may be in a unique position to play a role of global importance now... because Japan is by far the wealthiest, strongest country in the world without a nuclear programme."

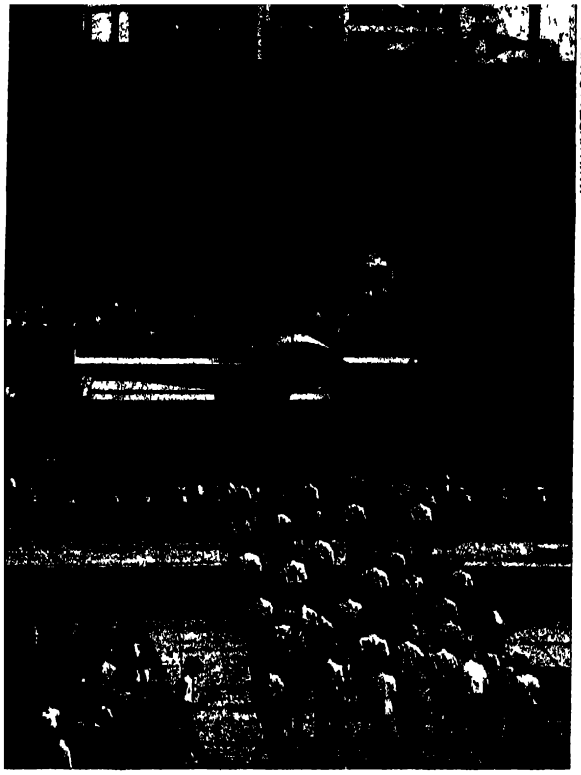
"If the Japanese go to the Chinese and say, 'don't start testing', go to the Indians and say 'don't start testing again'..."

– U.S. President Bill Clinton

IT is not too often that Japan's domestic media and the foreign media reflect similar opinions on matters relating to that country. However, the September-end accident in a uranium processing plant at Tokaimura, about 160 km from Tokyo (*Frontline*, November 5), prompted such a reaction. The accident confirmed once again that Japan's culture and structure does not allow for rapid crisis management. The mishap brought to mind the events that followed the Kobe earthquake of January 1995. Although authorities put into effect a bold plan to contain the damage and stem the leakage on the night of September 30, the 300,000 people of Tokai and the surrounding areas had to undergo a 17-hour nightmare under a proverbial mushroom cloud. Further, even now, none of them know whether they have been affected, and if yes, the extent to which they have been affected.

After visiting the site of the accident, experts from the Vienna-based International Atomic Energy Agency expressed surprise at the "primitive" nature of the accident in an otherwise technologically-advanced country.

The past few weeks have indeed been bad for Japan, with several myths stemming from its overall nuclear culture, perceived or otherwise, and its policies being exploded in the international arena. Particularly galling to the Government of Keizo Obuchi and to those who have shaped the country's security doctrine was the fact that the U.S. Senate defeated the Clinton administration's effort to delay a vote on the ratification of the Comprehensive Test Ban Treaty (CTBT). It was, to borrow from one of Japan's financial imperatives, a "comprehensive Big-Bang" that blasted Japanese diplomacy into reality. As much as the defeat silenced the Clinton administration's moral crusade against countries such as India and Pakistan, so did it scuttle Japan's nuclear diplomacy and perhaps spark a debate on a review of its probably hidden plans on an autonomous nuclear deterrent.



But let us first deal with a few myths and realities in the light of the Tokai mishap and the CTBT impasse.

Myth 1 and reality: Japan is the only country in the world against which a nuclear weapon has been used. For over 50 years, Japan has tried to fool its own people and the rest of the world into believing that this terrible tragedy underpins its national policy on nuclear-related issues as well as its domestic power generation planning. Japanese politicians and diplomats do not bat an eyelid while writing speeches that talk about "Japan, the only country to be destroyed by a nuclear weapon..." And so it happened once again this year. The country's outgoing Foreign Minister, Masahiko Koumura, who as Chairman presided over the "Conference on Facilitating the Entry into Force of the Comprehensive Nuclear Test Ban Treaty" in Vienna in October, used these same words to uphold Japan's demand that the critical 44 nations sign and ratify the CTBT.

The reality is that while responding to nuclear tests by other countries such as France, China, India and Pakistan (but not the U.S), Japan has repeatedly

invoked the moral aspect of the injuries suffered by Hiroshima and Nagasaki on August 6 and August 9, 1945. But successive governments have based their policies not on the sufferings of Hiroshima and Nagasaki, but on Japan's dependence on the U.S., the country that was responsible for the suffering of its people, on security matters. Japanese governments have so far wept not over the victims, but over the fact that if the current nuclear order is not perpetuated, it could greatly endanger its own security. The CTBT impasse is a crisis of a different kind that has frozen Japan's international nuclear diplomacy.

The Clinton administration believes that it is to the U.S.' advantage to freeze the *status quo* now since the U.S. has a technological and military edge over the rest of the world, including its rivals who need first to conduct tests even to begin to catch up with it. Japan's total support for the CTBT and for other vehicles that thwart horizontal nuclear proliferation, such as the Nuclear Non-Proliferation Treaty, stem not from the fact that "Little Boy" and "Fat Boy" were dropped on its cities, but from the overwhelming need to perpetuate the global military balance as it stands now – with its chief and only patron, the U.S., in a dominant position.

KAKU KURITA/ GAMMA

People gather at the Hiroshima Peace Memorial Park on the occasion of the 50th anniversary of the bombing of the city.

Myth 2 and reality: On October 14, Bill Clinton said at a news conference in Washington: "Japan may be in a unique position to play a role of global importance now... because Japan is by far the wealthiest, strongest country in the world without a nuclear programme." In a statement he made a day after the Senate rejected the CTBT, the U.S. President said: "If the Japanese go to the Chinese and say, 'don't start testing', go to the Indians and say, 'don't start testing again'..."

These did not seem to be the words of a President who had been well-advised on the CTBT. Or, it may have been that the White House was signalling to Japan to adopt a "carrot-and-stick" strategy. Although the Japanese government has indeed announced that it will use monetary aid to promote the CTBT, records show that its ability to wield the stick is a myth.

The reality is that for about a year and a half, the governments headed by Ryutaro Hashimoto, and later by Keizo Obuchi, have been under the illusion that once the U.S. ratifies the CTBT, followed by Russia and China, the two recent entrants into the nuclear club – India and Pakistan – will have to bend before the existing sanctions. The rest, as they say, will be history.

However, India has refused to bow before Japan's inflexible policy of cutting off aid and linking its resumption to more than just signing the CTBT. Even Pakistan, whose dollar account is in poor shape, has thumbed its nose at Tokyo. Japan is now trying to backtrack and save face by asking India to bail it out.

It is possible that the A.B. Vajpayee-led Government will, at some point, sign the CTBT, probably at a time when it will gain maximum diplomatic advantage – for example, on the eve of the U.S President's visit to India. However, that by itself will not mean a return to the pre-May 1998 days (before India conducted nuclear tests) when there was no friction in the political relations of the two countries.

One wonders if there is a coincidence in Japanese officials and business realising belatedly how far they had gone. Officials have begun sending signals to India that since a government is now firmly in the saddle in New Delhi, it is time to do business again. One reasonable inference is that the Japanese government is using business to rebuild bridges. However, it is too early to surmise whether an India injured by Islamabad's international crusade against New Delhi on the nuclear issue or Tokyo's initial stand on Kashmir and then on Kargil, will agree to help extricate Japan out of a self-inflicted trauma.

With Pakistan, the situation is even more complex. Japan has made no secret about its awareness of the oft-reported link between the Pakistani and North Korean missile programmes and the two countries' suspected nuclear relationship. The Obuchi Government has on various occasions told Pakistan that it must sever these ties with North Korea and never allow its missile-related kinship with that country to evolve into a trade-off under which Pyongyang will benefit from Pakistan's nuclear knowhow.

However, despite the fact that the Japanese Ambassador was one of the first to be allowed to call on Gen. Pervez Musharraf after the military coup in Pakistan, there is no denying the fact that the Obuchi Government's influence is greatly diminished in Islamabad. On the one hand, there is little room for manouevre, in that Japan continues to favour International Monetary Fund (IMF) loan tranches to Pakistan. On the other, Pakistan knows that the Obuchi Government can no longer afford to surrender even that limited leverage. Japan has let it be known that there is no link between IMF aid and the CTBT. At the IMF, Japan will continue to support the release of a $280-million tranche as part of a $1.5-billion loan decided on by the Fund about two years ago.

China is an even bigger nightmare for Japan since the U.S. has left room for China to vent its anger if and when it decides. One scenario is of China carrying out a nuclear test if it is provoked by the U.S. – a visit by the Taiwanese leader Lee Teng-hui or his successor to the U.S., for example. Another scenario revolves around the adoption of an exaggerated pro-Taiwan tilt by a Republican-dominated U.S. government, leading to intense pressure on the Chinese civilian leadership by the country's military and conservative lobby to send Washington a

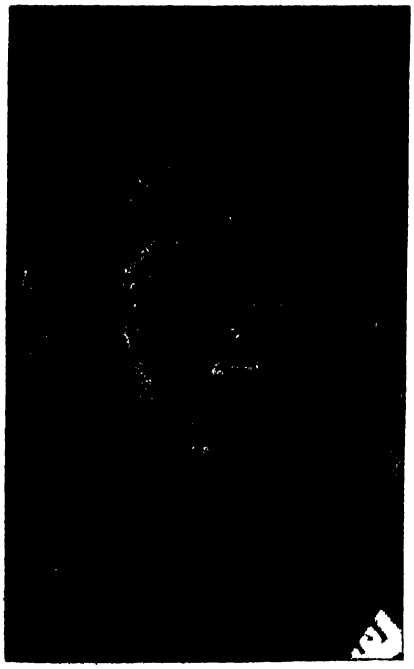
strong message. The second, a very real and high-probability contingency, is what is worrying Japan.

Japan made sharp visible and invisible distinctions in its attitude towards the nuclear tests conducted by China and by India and Pakistan. *Vis-a-vis* China, the visible explanation was that since it was always known that China was one of the nuclear haves, only a cut-off of grants-in-aid (which has long since been restored) would be enough to assuage Japan's hurt feelings. At a cumulative yen 2 trillion-plus so far, China gets far more annual aid from Japan than either India or Pakistan. Thus, logically, Japan ought to enjoy a greater leverage over China's conduct. However, in reality, it is not so.

The real and invisible reason behind cutting off all aid to India and not to China is that Japan cannot afford to cut off aid to Beijing for moral and practical reasons. Nanjing and the occupation of parts of China by Japan are albatrosses that Japan will always have to bear. Besides, aid to China is the only instrument Japan can employ against the U.S. or European Union nations while competing in the world's fastest growing market.

Myth 3, reality unknown: Finally, the question "Is Japan insured?" Right now, the Obuchi Government and the insurance industry in Japan are doing all they can to cough up billions of yen spread over a decade to meet insurance claims at Tokaimura. According to initial calculations, a billion yen will go to the village alone, with its 30,000 people.

It may not, however, be prompted entirely by altruism. The insurance money is linked to the government's and the industry's desperate need to win back public support on the continuation of the nuclear industry. Among other things, the nuclear industry allows the country to stockpile quantities of plutonium far beyond its power generation needs. Many critics and non-governmental organisations have questioned Japan's plutonium consumption *vis-a-vis* the stockpile report. But this report is not intended to investigate a hugely complex subject that might lead to the conclusion that a renewal of confidence gives Japan the option of taking out its own insurance. Rich people, both wise and unwise, do take out insurance policies against the possibility of the night watchman not turning up for duty one evening. Likewise, people expect nations too to make similar provision. Therein lies Japan's double-faced attitude towards India *vis-a-vis* the CTBT and missile development at large. ■



A democratic renaissance

With the election of Abdurrahman Wahid and Megawati Sukarnoputri to the posts of President and Vice-President respectively, Indonesia breaks away from authoritarian rule.

P.S. SURYANARAYANA
in Jakarta

OCTOBER 21 turned out to be a red-letter day in Indonesia's democratic renaissance when Abdurrahman Wahid, an Islamist scholar with impeccable secular credentials, was elected the Muslim-majority republic's fourth President. The democratic process was strengthened further a day later when Megawati Sukarnoputri, idolised by millions of Indonesians, was elected Vice-President.

The newly constituted People's Consultative Assembly (MPR in local parlance) voted Wahid President, overlooking the claims of Megawati, his political "sister", who remained his only challenger in a contest that was clouded by last-minute withdrawal of candidates.

MUCHTER ZAKARIA/AP

Abdurrahman Wahid, the new President of Indonesia.

Megawati was visibly distraught at losing a determined bid for the highest office. For the world at large, though, the election was proof of democracy at work, after decades of authoritarian rule, in the archipelago-state of many religions, languages and ethnic affinities.

Millions of Indonesians were agitated over Megawati's defeat at the hands of her electoral ally, and several thousands took the issue to the streets. Clashes broke out in Jakarta between pro-Megawati protesters and the security forces, including the Army. The new President, however, acted quickly and ensured Megawati's election as Vice-President without sacrificing democratic principles at the altar of political expediency. His action helped turn a potentially dangerous situation into one of celebration.

Wahid, a frail man who suffers from stroke-induced sight impairment, was widely seen to be in need of a trustworthy and politically energetic Vice-President to assist him. Megawati was the obvious choice, given her growing stature as a leader and her Midas touch in matters related to interaction with the masses, despite her perceived inability or unwillingness to communicate with the elite who are in the vanguard of the democratic revolution. Megawati was elected through a transparent political-constitutional process, leaving no room for doubts about the new President's approach.

An enormous advantage Wahid has gained is the fact that his election was totally free and fair, although a drama of power-brokering was enacted before the vote.

DURING its existence as a free state for over half a century, Indonesia has seen two leaders with extraordinary strength and power of persuasion – Sukarno, Megawati's father, and

ACHMAD IBRAHIM/AP

BULLIT MARQUEZ/AP

Megawati Sukarnoputri, the Vice-President. (Right) Supporters of Megawati Sukarnoputri cheer from the gallery of Parliament after hearing of her victory in the vice-presidential election.

Suharto, whose exit from office in May 1998 at the height of a popular uprising against him led to the current democratic resurgence. However different their styles of functioning may have been, both Sukarno and Suharto were viewed as father-figures by the people.

B.J. Habibie succeeded Suharto in May. A man with no charisma, Habibie was catapulted to the highest office solely by the fact that he was then the elected Vice-President and had the blessings of the military chief, General Wiranto. Not surprisingly, he soon found himself marginalised on the political stage, despite his efforts to ensure Indonesia's transition to democracy.

Habibie's brief period in office left a deep scar on the Indonesian psyche, although he can take credit for having fulfilled his promise to hold democratic elections and ensure the freedom of expression. The recent United Nations-sponsored self-determination exercise in East Timor, a disputed province of Indonesia, only served to make Habibie more unpopular. Indonesians had already begun to despise him for apparently shielding his mentor, Suharto, from being investigated for corruption and the accumulation of ill-gotten wealth. In the event, Habibie's tenure will be best remembered for developments that acquired a momentum of their own – the revival of democracy and the holding of an orderly election to the country's highest office. However, even his direct contribution to the enactment of legislation that led to the holding of transparent elections is seen by critics as actions that were influenced more by popular opinion than by his own judgment.

Habibie, who was from the beginning regarded as a transitional President, did, however, seek a second term in office, contributing to the drama that preceded the presidential contest. Central to his move were several sub-plots that brought into focus Indonesian politicians' remarkable capacity to play power games.

Long before the presidential election, it was obvious to most leaders of Suharto's Golkar Party that the people would be doubly wary of the party in the new reforms era. They were concerned in particular about the meteoric rise of Megawati, who was then only a "heartbeat away" from the presidency, having distinguished herself as an Opposition leader with the spirit for resistance during what turned out to be the twilight years of Suharto's long reign.

Before his fall, Suharto had, as had been widely suspected, engineered Megawati's exit from the leadership of her Indonesian Democratic Party. Unable at that time to rectify the anomaly, Megawati became more circumspect, especially during the weeks of popular protest against Suharto in April-May 1998. In the event, she lost some of the political dynamism that she had begun to display initially. However, when the Habibie administration began to try to prevent her from rising to political prominence, Megawati galvanised herself for a fight. The democratic spirit that was at that time beginning to envelop the nation undoubtedly enabled her to fight back. The result was the creation of a new party – the Indonesian Democratic Party of Struggle (PDI-P), which went on to win the highest number of seats, although not amounting to a clear majority, in the 500-member House of Representatives (DPR) in the parliamentary elections held on June 7.

In an attempt to checkmate Megawati, the Golkar Party sought to establish new alliances, mostly of the informal kind, after it became clear that no party or group would win the presidency on its own parliamentary strength. The Golkar Party almost succeeded in the effort, but was thwarted in the last minute.

FRIDIA LISNAWATI/AP

Former President B.J. Habibie.

Long before the Golkar Party began to look for allies, Wahid and Amien Rais had struck a deal with Megawati, in time for the June 7 DPR polls. From those elections they discovered that their collective votes as reformists would not be enough to entice others into joining them and enable the selection of a consensus candidate for

the presidency. Besides, personality clashes had occurred between Megawati on the one side and Amien Rais and Wahid on the other even before the June elections. This complicated matters further. The consequent reality on the eve of the October 20 presidential poll was that as a campaign issue, the intricacies of a political power game gave way to what many people began to see as an Islamist-secular divide.

The ideological-religious divide was nurtured in part by the fact that Indonesia is home to the largest Muslim population in any country, despite having a tradition of accepting its Hindu-Buddhist historical legacy. The perceived infirmity of Megawati, a woman, to rule a Muslim-majority state was freely talked about. Meanwhile, Wahid became disillusioned with Megawati's inability or unwillingness to communicate with her political peers, even as he asserted that Habibie's lack of credibility could be his undoing. (Megawati and Habibie were initially the main candidates for the presidency.)

With Habibie's political authority beginning to wane within the Golkar Party on account of his misadventure on East Timor, Wahid soon sensed that he could project himself as an alternative candidate. He eventually did that with stunning success, as Habibie, by now mired in the Bank Bali scandal involving the funding of his presidential campaign, was dropped by his party as its candidate. Habibie lost a virtual confidence vote when the MPR refused to accept the "accountability speech" he made past the midnight hour on October 19, heralding the day of the presidential election.

Meanwhile, adding to the political drama, the Golkar Party nominated its chairman, Akbar Tandjung, as its candidate, barely an hour before the deadline, only to withdraw his name soon thereafter. He had earlier scored a landslide victory in the election to the post of the Speaker of the DPR. The victory was thought to have been the result of a secret deal with Megawati, under which a core group of the Golkar Party, said to be loyal to Akbar, would back her for the presidency if she did not make a real fight of his election as Speaker. Wahid too had proved his skills in political management in the run-up to the presidential poll by ensuring the emergence of Amien Rais as the Chairman of the MPR in the face of a challenge by a candidate backed by Megawati and a section of the Golkar Party.

The presidential poll saw a direct contest between Wahid and Megawati, after a maverick Islamist, Yusril Mahendra, withdrew from the race minutes before the process began. Wahid won by a margin of 60 in a chamber of 700. As violence broke out and Megawati appealed to her supporters to accept the democratic verdict, Wahid took steps to ensure her victory in the vice-presidential election.

During the high drama, General Wiranto distanced himself from the political rivalries of the civilian elite, although attempts were made constantly by one group or the other to drag him to centre stage. His name was even suggested for the post of Vice-President.

Amidst scenes of popular joy following Megawati's election as Vice-President, questions were being asked about whether she will seek to emerge as the real power behind the throne. However, it is too early to get a clear idea of her plans for the future, as also of the future of Indonesia's new democracy. ■

A scholar and a reformist

P.S. SURYANARAYANA

ABDURRAHMAN WAHID, better known to his admirers as "Gus Dur" or "Elder Brother", surprised many observers by contesting for the presidency, and that too against Megawati Sukarnoputri, whom he has often described as his younger sister. Then, they did not know that the game plan had been drawn up over a month earlier in order to ensure that the highest office would be occupied by a political reformist and not a person with intimate connections with the Suharto era. If Wahid defeated Megawati in a stunning display of political acumen, it was because he had conducted an intensive study of the key players and their followers.

In an exclusive interview he gave this correspondent in early September in Jakarta, Wahid said that he would contest the election. After speaking about the merits of the leaders who had by then announced their intention to run for President, Wahid asserted: "I lead the contest now." Wahid said that although Megawati was skilled in the art of interacting with the masses, she was at a disadvantage because she could not or would not communicate with her political peers and rivals. At the other end of the spectrum was Habibie, who did not enjoy the trust of the people, Wahid said. About General Wiranto, Wahid said that the Army chief was doing a "balancing act" by reconciling himself with both those who wanted instant political reforms and those who favoured a gradual transformation. While Wahid was certainly not in favour of an activist role for the Army, he said that he preferred the Army to reduce the extent of its manoeuvring and ensure the country's transition to democracy from a system that gave it ample scope for political intervention.

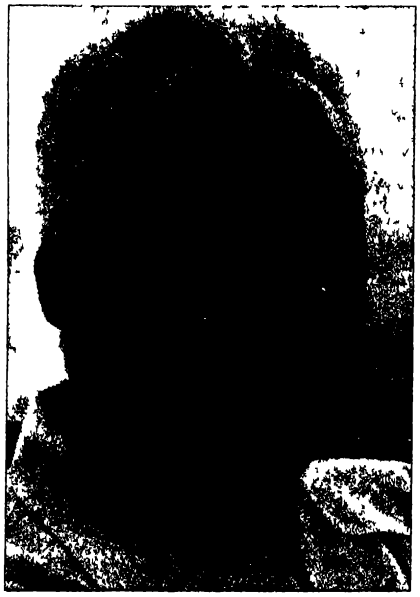
In certain international circles, much is being made of Wahid's roots as an Islamic cleric and scholar in the world's most populous Muslim-majority state. However, there has been no evidence so far that Wahid will turn into a religious zealot. In fact, his secular credentials have impressed scholars who engaged him in intellectual conversations.

Wahid, who was born in 1940 in a family of Muslim intellectuals in Jombang in eastern Java, grew up on a diet of religious teachings, liberal political ideas and a humanist culture. His grandfather founded the Nahdlatul Ulema (N.U.), which to this day has drawn support from the rural people of Java. According to scholars familiar with the N.U.'s origin and growth, Islam- and Hindu-oriented mystical beliefs blend in the N.U. in some ways while competing with each other in other ways. Wahid now heads the N.U., and in doing so he is at ease while interacting with Western-educated liberals.

Wahid, whose eyesight was impaired as a result of a stroke, relies on his vast experience in public affairs. The Ulema was a political party under Sukarno's "guided democracy". It later merged with the Islamist United Development Party. Despite being reasonably friendly with Suharto at one stage, Wahid opposed him from his position as the leader of the Democracy Forum, whose objectives included opposition to sectarian Islamist politics and exploitation of religion for political goals. ■

A socialist and a visionary

Julius Kambarage Nyerere 1922-1999.



M.S. PRABHAKARA
in Cape Town

THE death of former Tanzanian President Julius Kambarage Nyerere, popularly known as Mwalimu (teacher in Swahili), brings to an end the life of a remarkable revolutionary leader. Nyerere died at St. Thomas' Hospital in London on October 14. He was being treated for leukaemia for nearly a month and was in a coma for about two weeks before he died.

The death was expected. Indeed, a South African radio broadcast announced it about 10 days earlier, with the pre-prepared obituary following, only to issue an embarrassing retraction with wishes for his recovery soon thereafter. It was however clear that his case was terminal. He was pronounced 'brain dead' by doctors two days before his death.

Born on April 13, 1922, to a minor tribal chief and his wife (one of several) in the village of Butiama on the edge of Lake Victoria in what was then the British colony of Tanganyika, he was revered as the Father of the Nation who led Tanzania to independence and freedom. Nyerere was mourned not only in the nation state he crafted and led for over two decades, but also in the whole of Africa and indeed in the rest of the world. The United Nations General Assembly paid a silent tribute with the representatives observing a minute's silence. Other U.N. organisations too paid tributes. Among those paying tribute was James D. Wolfensohn, President of the World Bank, an institution whose relations with Nyerere and Tanzania have been best described as complex.

NYERERE, who in various capacities had occupied the highest executive positions in the country since May 1961 (first, as Chief Minister of Tanganyika in its last days as a colony, then as Prime Minister of independent Tanganyika and, when it became a republic in December 1962, as President, and finally, from April 16, 1964, following the union with Zanzibar, to November 5, 1985, as President of the United Republic of Tanzania) did not hold any political

SAYYID AZIM/AP

office in the past 14 years. However, he remained active as the head of the South-South Commission, with the aim of strengthening Third World unity.

Regionally, he was closely involved in facilitating the resolution of conflict in the Great Lakes region, specifically in Burundi. This initiative was viewed with some suspicion by the government in Bujumbura.

Belonging to a generation of leaders who had first-hand experience of life under colonial rule, Nyerere, unlike many others of that ilk, is believed to have never enriched himself personally. He was succeeded by President Ali Hassan Mwinyi in November 1985, and President Mwinyi in turn was succeeded by the present President, Benjamin Mkapa, 10 years later. (A President is allowed only two five-year terms under the Constitution.)

The institutionalisation of such orderly transition in accordance with constitutional provisions is only one of the achievements of Nyerere. Indeed, he was one of the few leaders in post-colonial Africa who quit office when he was neither physically incapacitated nor politically or militarily challenged or overthrown. The only other leader who relinquished office before Nyerere was President Leopold Senghor of Senegal who stepped down in December 1980 after remaining in office for 20 years. More recent additions to such a select company of leaders who voluntarily stepped down are President Ketumile Masire of Botswana and President Nelson Mandela of South Africa, the latter, despite the constitutional provision of two terms for the President, having made clear very early in his days in office that he would not seek another term.

HOW will Julius Nyerere be remembered? What are his achievements and what is his legacy?

As is the case with any revolutionary leader, these are mixed. Perhaps his most important achievement is the forging of Tanzania by uniting Tanganyika and Zanzibar, and, as many analysts have noted, his use of KiSwahili as an instrument to unite the numerous peoples speaking different languages by bonding them under a common language without provoking linguistic or sub-national passions. A tribute by a Tanzanian journalist said: "He allowed Tanzanians to speak with many voices, but in one language. This was his vision of a nation free of tribalism."

Significantly, President Mkapa, in his radio broadcast announcing the death of Nyerere, allayed fears that "the unity of the country will be jeopardised, that our union will disintegrate and our relations with neighbouring countries will be affected."

Nyerere will also be remembered for the readiness with which he ignored the normative prescriptions of the Organisation of African Unity (OAU) about 'national sovereignty', 'inviolable borders' and 'non-intervention in the internal affairs of member-countries' when he sent in troops to secure the ouster of President Idi Amin of Uganda (November 1978-April 1979), an intervention that cost the country over $500 million. Tanzania had to bear this financial burden alone. This, according to some analysts, has been one of the key factors that contributed to its economic problems.

Earlier there were other interventions; in Comoros in December 1975 and in Seychelles in June 1977, not to speak of his support to Biafra in the Nigerian civil war which Nigeria has not forgiven.

Almost every comment on Nyerere since his death noted his 'failed' experiment with 'African socialism' to attain self-reliance through a programme of 'villagisation' and community-based farming collectives, implemented following the adoption of what has come to be known as the Arusha Declaration of February 5, 1967. However, according to Nyerere, the programme had not failed "because it had never been really tried". Even the harshest critics of the Ujaama (Swahili for brotherhood, togetherness) concede that the programme produced major benefits in education and health care.

An obituary in *The Financial Times* acknowledges that the "initial gains in literacy, primary school enrolment and life expectancy in the post-Independence era seemed to have validated Nyerere's approach", though it goes on to add that by the mid-1970s, it was clear that "Tanzania was living beyond its means". The fact, as noted above, is that these economic difficulties were due as much to the intervention in Uganda, whose burdens Tanzania had to carry alone.

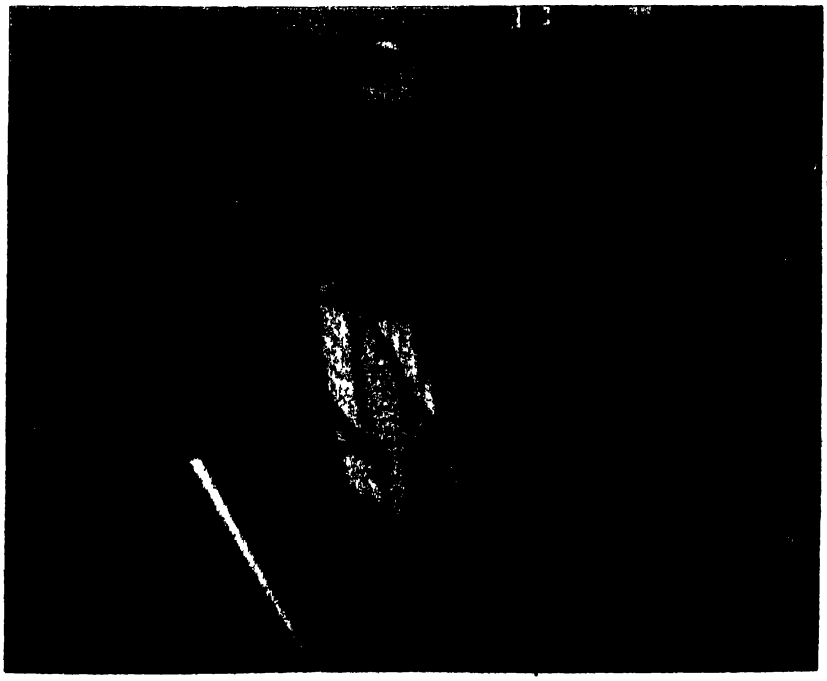
Over and above all these achievements and failures is the crucial role that Tanzania under Julius Nyerere played in the liberation of the last remaining colonies in southern Africa, a true manifestation of international solidarity. Not a rich country by any means, Tanzania was truly a frontline state, providing at one time or the other office and training facilities to the liberation movements of Angola, Mozambique, Namibia, South Africa and Zimbabwe, in some cases rival liberation movements.

Julius Nyerere was among the leaders whom Nelson Mandela met during his first journey abroad in 1962. Tanzania was the first safe haven for exiles from South Africa after they crossed the borders into Botswana or other neighbouring countries.

It was in Morogoro and Mazimbu, Tanzania, that the African National Congress (ANC) located its farm and school, home for generations of exiles. Morogoro is now part of the political vocabulary of the ANC, being the place where it held the pathbreaking conference of April 1969. Among the decisions taken at the Morogoro conference was the one to throw open the membership of the ANC to non-Africans. One should however ask whether this legacy, given the direction of the economy and politics of all these countries (including Tanzania) since their liberation, will endure. ■

Pinochet's tribulations

A court rules that General Augusto Pinochet be extradited to Spain to face trial on torture charges, but his lawyers still have options to prolong his stay in the United Kingdom.



THOMAS ABRAHAM
in London

CHILE'S former dictator, General Augusto Pinochet, lost another round in his battle to avoid extradition to Spain, where he would face trial for torturing political opponents during the 17 years he was in power. Almost a year after he was arrested while he was in a London hospital, a Magistrate ruled that the 83-year-old general could be sent to Spain to face 34 charges of torture and one charge of conspiracy to torture. Pinochet's lawyers have the option to appeal to a higher court, or directly to Home Secretary Jack Straw, and so there is little prospect of his being handed over to Spain immediately.

The proceedings at the Bow Street Magistrate's Court were in a sense a formality. Under the European convention on extradition, the Magistrate had merely to satisfy himself that the charges were extraditable offences and that the paper work was in order. Still, it is that much more probable now that the former dictator will end his days in judicial custody.

The lawyer acting for the Spanish government, Clive Nichols, QC, earlier told the court that Pinochet faced "some of the most serious allegations of crime ever to come before English criminal courts". The charges included torture including beatings and electric shock treatment and the use of hallucinogenic drugs. Pinochet, who reportedly suffered two minor strokes and is in frail health, was excused from attending the proceedings. He was clearly unmoved and unapologetic despite the grave nature of the charges. He protested his innocence.

After the judgment was delivered, Pinochet's lawyers read a statement in which he described the charges as being politically motivated. "As the former President of the Republic of Chile and Senator, I declare that I am not guilty of the crimes of which I am accused. Spain

JUAN EDUARDO LOPEZ/AP

A few months after his arrest, Augusto Pinochet at his rented home near London.

has not produced a single piece of evidence which shows that I am guilty," the statement said. It continued: "It has long been clear that my extradition is politically motivated and being pursued clearly for political reasons."

Whatever the aged general might say, those who suffered during his regime are not allowing him to forget the past. Chilean expatriates who fled the country during his regime, as well as human rights activists, have been keeping up a steady campaign to ensure that the human rights abuses that occurred during his regime are not forgotten.

Pinochet's lawyers have the option to appeal to a higher court, or directly to Home Secretary Jack Straw, and so there is little prospect of his being handed over to Spain immediately.

The Pinochet regime, which seized power with the support of the United States after overthrowing the elected government of Salvador Allende, became a byword for repression. Almost immediately after he came to power, thousands of left-wing opponents were rounded up and herded into the main sports stadium in the capital, Santiago, and tortured and executed. According to one estimate, up to a quarter of a million Chileans were rounded up and kept in detention centres across the country. Pinochet's secret service, DINA, struck terror in the country and abroad, torturing and killing opponents. Pinochet was reported to have said: "Ever so often, democracy has to be bathed in blood."

After losing a referendum in 1987, Pinochet handed over power but only after ensuring that he remained the head of the Army, and later Senator for life, and constitutionally he would remain immune from prosecution. Few of his opponents thought that Pinochet would ever be brought to justice. It was not only because a group of lawyers in Spain, who documented cases of torture and abuse and took them to a crusading Judge, Balthazar Garzon, that he was arrested in London while on a visit last October.

Pinochet, a great admirer of Britain and former Prime Minister Margaret Thatcher, was on one of his routine visits when Judge Garzon made a request to Britain to extradite him to face charges of torture in Spain. Pinochet, who was in hospital after emergency surgery for a back injury, was arrested while he was convalescing. He and his supporters immediately launched a legal battle to prevent extradition.

The case was unprecedented. Here was a former head of state who faced extradition, not to his own country but to a third country to be tried for acts he had allegedly committed in his own country. It immediately raised questions of sovereignty and jurisdiction. Could British courts take action against a former head of state for acts he committed while in office, or was he covered by the principle of sovereign immunity, under which national courts have no right to try rulers of other nations? Also, could he be extradited to a third country for crimes he had allegedly committed in his own country? The Spanish Judge was attempting to try Pinochet in Spain for crimes committed in Chile, against Chilean citizens, under the provisions of the United Nations International Convention Against Torture.

The British legal system grappled with these challenges and came up with contradictory answers. Pinochet gained an early victory when the British High Court ruled that he enjoyed sovereign immunity for acts committed while he was in power, and so could not be extradited. The Law Lords in the House of Lords, Britain's highest court of appeal, however, overruled this and pointed out that torture could not be considered a normal act of a head of government. Pinochet's lawyers challenged the ruling when they discovered that one of the Law Lords who heard the case, Lord Hoffman, had links with the human rights organisation Amnesty International. They successfully argued that Lord Hoffman should not have heard the case, and asked for a fresh hearing. A new panel of judges heard the case. The conclusion, again, was there was no bar on Pinochet being extradited. The second panel, however, added a twist, saying that Pinochet could be extradited only for crimes committed after December 8, 1988, the date Britain ratified the International Convention on Torture. This ruled out 29 of the original 32 charges that the Spanish Judge had presented. Judge Garzon then presented an additional 32 charges of torture and conspiracy to torture committed in Chile after December 1988. The conspiracy to torture charge encompasses the case of 1,198 people who "disappeared" during Pinochet's period in power.

Pinochet's lawyers have until the third week of October to appeal to the High Court against the Magistrate's ruling. But the High Court, or Divisional Court as it is known, can reject the Magistrate's decision only on three grounds – the trivial nature of the offence, the passage of time since the offence was committed, and the bad faith behind the accusation. The Judge can also examine whether extraditing Pinochet would be "unjust or oppressive". Human rights lawyers believe that these grounds are narrow enough to ensure that Pinochet's appeal is rejected. The process can go up to the House of Lords once again, but again the grounds for appeal will be narrow.

Ultimately, Pinochet's fate will rest with Jack Straw. Once the legal process is exhausted, the Home Secretary is the final authority on extradition. The extradition law gives him fairly wide latitude, and Pinochet is almost certain to take the plea that he is too old and frail to stand the rigours of a trial and that he ought to be allowed to return home. His lawyers and doctors say his health has deteriorated and that he is confined to a wheelchair after the strokes. According to some reports, at one stage he was so ill that a priest was summoned to administer the last rites. In all events, Pinochet will not be sentenced to imprisonment. His age precludes that possibility.

The question is whether he is fit enough to stand trial. Recently, there have been cases in which people in their eighties were made to stand trial, most notably in France, where several people were accused of collaborating with the Nazis during the Second World War. These people include Paul Touvier, who was sentenced to prison in 1994 when he was 81, and Maurice Papon, who was sentenced last year to 10 years in prison for ordering the deportation of Jews from Bordeaux. He was 88 when he was sentenced. Papon has since made himself scarce.

Augusto Pinochet Ugarte, the man who once said that not a leaf in his country moved without his knowledge, may still spend the last years of his life before a Judge, trying to defend his actions as a dictator. ■

Another America

Islands of poverty floating in a sea of abundance represent a less talked about aspect of life in the United States, the haven of capital.

VIJAY PRASHAD

"Poverty is terrorism.
Poverty is a terminal disease.
Poverty paralyses.
Poverty is the ultimate censor.
Poverty, a hell, is war."

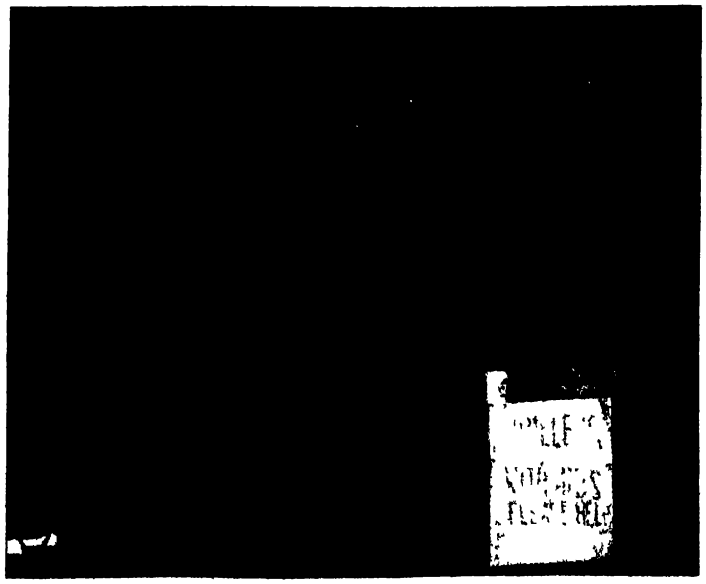
Selma Waldman, "A Poor Haiku", *Real Change*, the newspaper of the homeless in Seattle, United States.

"In America you are not required to offer food to the hungry, or shelter to the homeless, or to visit the lonely – in fact, one of the nicest things about living in America is that you really don't have to do anything for anybody."

– Anonymous poet, *Real Change*.

IN 1995, Pete Du Pont, heir to the vast Du Pont family fortune, wrote that "the minimum wage turns out to be one of our leading killers – a killer of economic growth and opportunity among the young, the poor, and the minority community. It's time to stop it before it kills again." This fulmination came just as the U.S. government raised the minimum wage for the first time in over two decades, a rise in pay that was marginal and has not gone near enough to overcome the inequities that tear the nation apart.

From President Bill Clinton (Democrat) to Texas Governor George W. Bush (Republican), there seems to be a consensus that things have never been better in the U.S., and that the brief recession (during the presidency of George Bush) is now over. For almost a third of the population who live under or near the poverty line, this provides little solace. The previously unemployed may now be at work, but few ask them about their conditions at 'work', about the number of part-time jobs they must hold to maintain a household, or else about their lack of medical insurance. "Economic segregation in this country is so rigid that we literally don't know one another anymore," columnist Molly Ivins complained. If we did, perhaps the hoopla about the return to prosperity would not be made so cavalierly.



For those who watch the U.S. from afar (or during brief, well-orchestrated holidays), it is hard to imagine the poverty within this haven of capital. Sated by Hollywood movies and by the smooth talk of U.S. politicians, the world imagines that each citizen must bear some title to the wealth of the nation. Within the U.S., however, there are few who have illusions about the nature of the economic miracle, of the Second Gilded Age whose Rockefellers and Carnegies are named Gates and Cosses.

From 1983 to 1998, the U.S. stock market grew a cumulative 1,336 per cent. In the 1990s itself, corporate profits rose by 108 per cent, whilst the Standard and Poor's (stock) Index rose by 224 per cent. Someone seems to be doing quite well, as indeed the pay of Chief Executive Officers (CEOs) rose during this period by 481 per cent. Furthermore, the richest 1 per cent of the U.S. now enjoys 40 per cent of the nation's household wealth (1997), more than that held by the entire bottom 95 per cent of the population.

If Du Pont worried about the lack of incentive to the working people, he did not have to worry about the ample incentives provided to the CEOs and the 1 per cent from which they hail. This 1 per cent works hard to lobby with the U.S. government, which passes laws to their tune and not to the democratic sirens that occasionally emanate from the 95 per cent. In 1996, Clinton ended social welfare and let those without work find their own way in the thicket of the market. The Federal Reserve Bank Chairman Alan Greenspan held interest rates down to control inflation (as he argued), but also to keep the dollar strong (a net detriment to the working poor). In addition, the government's tax codes and licence to speculation allowed the 1 per cent to reap more benefits from their wealth, whereas the 95 per cent found themselves at a loss. In the midst of this, the U.S. population seems incensed with the buying up of Washington D.C. by what are called 'special interests'. A lazy population has not squandered democracy (just as poverty is not created by personal laziness). Democracy was assassinated by the plutocracy's assignation with wealth.

The second gilded age

In the three decades before 1900, U.S. 'robber barons' created the Gilded Age in which a few families (Rockefellers, Carnegies, Morgans and Vanderbilts) made massive fortunes and enjoyed an age of 'conspicuous consumption' (as Thorstein Veblen put it). Most of this wealth was built by the rapacious use of resources, and by the withdrawal of the state from the affairs of the wealthy (with the termination of the inheritance tax in 1870, the cession of the income tax in 1872 and the defeat of the Sherman Anti-Trust Act of 1890). If Edith Wharton worried about the 'monstrous vulgarity' of the rich, the 1892 Populist Party complained that "the fruits

PORTER GIFFORD/ GAMMA

Begging on the sidewalks of Manhattan.

of the toil of millions are boldly stolen to build up colossal fortunes for a few, unprecedented in the history of mankind, and the possessor of these, in turn, despise the Republic and endanger liberty." The close relationship between money and government was tempered by the rise of organised labour and the socialists, and by the creation of a civic consciousness by an activist media (led by Ida Tarbells, Upton Sinclair, and Lincoln Steffens).

Ronald Reagan inaugurated the Second Gilded Age with his 1981 tax cut, which prompted a rise in unemployment and a polarisation of wealth (when challenged on the figures in 1982, Reagan explained that "the statisticians in Washington have funny ways of counting"). Reagan conducted what Trinity College Professor of Women's Studies Lisa Armstrong calls, "the opening salvo in the U.S. state's structural adjustment policy against itself."

If 35 per cent of U.S. workers in 1954 formed unions, by the end of Reagan's tenure only 14 per cent did. As Reaganism pulled the rug from under the U.S. worker, the strategy of business unionism followed by U.S. unions meant that they offered immense concessions to corporations in the 1980s rather than act in antagonism to them. From Reagan to the present, the bottom 60 per cent of the U.S. population saw their income drop, while only the top 1 per cent (the same 1 per cent), saw their income explode over 80 per cent. In 1965, the wage gap ratio between the highest and the lowest paid workers was 44 to 1, but by this year it stands at over 200 to 1. In 1999, Microsoft CEO Bill Gates, Berkshire Hathaway CEO Warren Buffett, and ex-Microsoft executive Paul Allen enjoy a combined wealth of $156 billion, an amount more than the GNP of the poorest 43 nations. The wealth of the world's 475 billionaires ($1.7 trillion) is well above the gross wealth of the poorest half of humanity. In the Second Gilded Age, wealth trickles upwards as the rest of humanity takes its chances at the lottery, the casino, or else the stock-exchange.

Wall Street (and its clones across the globe) advertise their power to democratise ownership without revolution and forced redistribution. In this climate, George Soros, Ross Perot and Donald Trump sell themselves as men of the people, simple businessmen who are not so very different from those small merchants who toil under the yoke of interventionist state. However, a close analysis of Wall Street reveals that most stocks (84 per cent) and bonds (90 per cent) are held by not more than 10 per cent of the U.S. population (about 10 million households). Assets of the richest 10 per cent rose by 22 per cent (in the early 1990s) – and it is these people who partly benefited from the meteoric rise in stock prices. The poor gained in one statistic, debt, which rose for the bottom 90 per cent by over 11 per cent while it fell for the richest 1 per cent by 19 per cent. This debt went toward the maintenance of some modicum of the American Dream among households long mortgaged to the will of the banks.

A state of business

The U.S. concocted a welfare state in the 1930s when turbulence in the world of finance left the bulk of the population without waged work and with depleted bank accounts. As a safety net, the U.S. government provided welfare legislation that took care of unemployed single women with children (Aid to Families with Dependent Children) and unemployed hungry people (Food Stamps). Welfare expenditure did not exceed 5 per cent of the Federal Budget, and even this amount was grossly exaggerated by escalating medical costs since the 1980s (for the Medicare programme that provides subsidised care). According to the U.S. Congress, Federal assistance in the early 1990s was lower than that provided in 1970. Yet, in 1995, the U.S. government withdrew the safety net with the argument that welfare denudes the culture of work. The "workfare" programme of the U.S. government, however, cannot deliver quality jobs, a colossal failure best represented by the increase in petty crime (and in the prison population). "The real issue," wrote Peter Edelman who resigned from the Clinton administration in 1996, "isn't welfare. It's poverty." Should the state bear any responsibility for its citizens or should it simply act as the caretaker of business interests?

In his new book, *The Global Gamble* (London: Verso, 1999), Peter Gowan shows how the Dollar-Wall Street regime emerged in the 1970s to maintain the power of U.S. wealth as well as to engineer the world economy to the advantage of mainly U.S.-based transnational corporations. The U.S. worker was not to be spared the harshness of structural adjustment. In the 1980s, the top tax rate was 68 per cent, but revised tax law decreased this to 28 per cent in 1988. While corporations in the early 1950s paid 33 cents of every dollar toward tax, today they pay less than 10 cents. Monies that might have been taxed for socially useful work were used in a speculation binge that, in real estate for example, raised rents to render homes unaffordable to much of the population. The speculation fever increased activity in the stock markets and allowed the 1 per cent to gradually claim the saved income of the many into their coffers.

On October 1, *The Wall Street Journal* reported a modest gain in incomes in the U.S., but it was forced to acknowledge the words of Rose Woolery, a working mother: "This country is still for those who have money. For the people who don't have it, you're not going to get it."

Those who 'have it', 'get it' from U.S. State's corporate welfare programme: $85 billion annually to private business, $200 billion to collapsed banks, over $30 billion to agriculture, and $440 billion on tax breaks to the wealthy. Such funds are not forthcoming to alleviate poverty. Furthermore, the U.S. economy enjoys an inflow of capital (a $2 trillion debt, $1.3 trillion since 1992) from its creditors who are pledged to uphold the dollar (in which they preserve their own wealth). In May 1999, Alan Greenspan noted that "the arithmetic of foreign debt accumulation and compounding interest costs does indicate somewhere in the future that, unless reversed, our growing international imbalances are apt to create significant problems for our economy."

From a distance, the paper tiger of the U.S. economy appears ferocious. The U.S., however, is less powerful as a national economy and far more powerful as the chosen vehicle for the maintenance of the economic power of the global wealthy. The structural adjustment of the world, including the U.S., occurs to ensure the hegemony of the Dollar-Wall Street regime. The international image of America, however, is far grander than this mundane view. Fraught with misery, many hope to find some kind of utopia within the U.S. Nevertheless, Father Gene Boyle, a priest who works along with the strawberry workers in California, warns us: "We live in a time when people are working too hard and are still in poverty. And communities and neighbourhoods are crumbling because of it. We have to bring this into the daylight." If John Locke in the late 17th century wrote: "In the beginning, all the world was America", there are many who hope that "in the end, all shall be America." The question we might ask is which America? ■

With roots in India

A convention in New York of People of Indian Origin discusses issues that matter to the Indian diaspora worldwide.

EUGENE CORREIA
in New York

A CAB-DRIVER in Southall in London, the President of a Caribbean republic, and a computer engineer in Seattle, United States: three persons, who, given their lifestyles and stations in life, might well be from different planets. Yet they are bound by a curious emotional cord to a shared geographical space that they consider their "real home", or *watan*. All three are persons of Indian origin, members of the Indian diaspora, spread worldwide.

A representative group of the People of Indian Origin – though the number of representatives was far too low, considering the size of the PIO community – gathered recently in New York for the Indian Global Convention, organised by the Global Organisation of Indian People (GOPIO), a pan-global organisation that seeks to bring together more than 18 million people of Indian origin worldwide. GOPIO aims, among other things, to address the concerns of the PIO in their countries of settlement and to utilise the expertise of Indian expatriates for the benefit of people in India and the countries where the PIO are settled.

Deliberations at the convention were given over to making follow-up suggestions on the Indian government's programme of issuing identity cards to People of Indian Origin. The PIO cards are intended to give their holders certain privileges – for instance, in the repatriation of income. Persons whose ancestors up to the third generation were persons of Indian origin are eligible to apply for the card by paying a fee of $1,000. The convention adopted resolutions urging the Indian government to consider extending the eligibility for PIO cards to those who are sixth-generation PIOs and lowering the fee to $250.

The presence of Guyanese President Bharrat Jagdeo, 35, a person of Indian origin, in New York to attend the United Nations General Assembly session, gave the convention a high profile. Jagdeo and his political mentor Cheddi Jagan have inspired two generations of Caribbean Indians, and the former is a role model for a generation of PIO who exemplify the theme of the convention, People of Indian Origin: Forging a global alliance. Jagdeo's presence also drew a large contingent of Guyanese Indians from the Queens area in New York.

One of the resolutions passed at the convention called on the Guyanese government to institute an independent inquiry into the alleged atrocities against Indians in that country and to ensure that the ethnic balance was preserved in appointments to the government and the armed services. Indians make up more than half the population but are not adequately represented in the police and the army; this is significant when one considers that the Caribbean country has witnessed many ethnic riots.

SOME of the speakers at the convention seemed keen to impose a Hindi-Hindu worldview on the gathering although the move met with a degree of resistance from a section. The attempts at seeking to emphasise the divisive aspects of a culturally heterogeneous diaspora raised more than a few questions. For instance, one of the resolutions called for the adoption of a "first language" by GOPIO members and delegates. Although it was not explicitly stated, the reference was to Hindi. (The resolution said that given India's linguistic diversity, English had served as an effective link language and served as a door to the world for many Indians.) When a section of the gathering questioned the purpose of this resolution, the chairperson said that its aim was to keep alive in expatriate Indian communities "traditions and religious and spiritual identities".

Similar sentiments found resonance at a session on "Secularism, religion and the national ethos". Speaking on "Focus on Indian culture in the diaspora", Reshmi Ramdhony, senior lecturer and head of Hindi Studies at the Mahatma Gandhi Institute in Mauritius, proposed that GOPIO undertake an "intra-diasporic compilation .. of all the cultural symbols that still thrive." Such an approach, Ramdhony said, "would not only serve to revitalise and syncretise Hindu faith and Indianness in plural societies but would also help PIOs to address the needs posed by their living far, far away from the Indian mainstream."

Another speaker, Parasram S. Thakur of Community College, Rhode Island, said that Hinduism had been grossly "misunderstood and misinterpreted". Thakur said: "The idea of polytheism, paganism and heathenism, attributed to

BY SPECIAL ARRANGEMENT

On the opening day of the Indian Global Convention, organised by the Global Organisation of Indian People in New York. The convention made several follow-up suggestions on the Indian Government's programme of issuing identity cards to People of Indian Origin.

Hinduism..., is derived from the ignorance of Western Euro-centric scholars, and the exclusivity of Christian dogmatic intolerance for external ideas."

GOPIO-India president Harish Mahajan used the platform he was provided to make undisguised communal statements. In his paper, "Wisdom of religious conversions", Mahajan criticised "Christian pundits" for not responding to Prime Minister A.B. Vajpayee's call for a national debate on religious conversions, following the attack on Christian places of worship in Gujarat last year. Conversions, he said, were proceeding "unabated" without any concern for the "likely implications", including the possibility that "serious reactions" might recur. Mahajan's case was that Christian missionaries were "on the prowl" and were proselytising people "in the garb of service to and upliftment of the deprived ignorants of India." Conversions, he added, were causing "serious emotional hurt" to the majority community in India – which numerically exceeded the combined populations of the United States, Canada and Europe.

GOPIO aims to address the concerns of the people of Indian origin and to utilise the expertise of expatriates for the benefit of people in India and the countries where the PIO are settled.

GOPIO may not have acquired the saffron hue of the Overseas Friends of BJP, a powerful pressure group that is active in the U.S., but the dangers of its providing a platform for hate campaigns are self-evident. It was left to secular-minded scholars such as Sebastian Devasia, Rajiv Gandhi Professor for World Order Studies, New Delhi, to challenge Mahajan's chauvinistic ramblings. GOPIO secretary-general Dr. Jagat Motwani, who chaired the session, put the issue to rest by stating that the subject was too controversial to be discussed.

THE most telling remarks on the problems and issues affecting the Indian diasporic communities came from noted West Indian historian Dr. Brinsley Samaroo, who called for solidarity among Indians the world over in order to prevent any further abuse or discrimination in their adopted lands.

Samaroo wanted Indians to come together to "offer that continuing spiritual guidance to the wider world which so desperately needs the sustaining spiritual force, such as that which Mahatmaji unleashed in his epic struggle against the British empire with its enormous technological power."

Speaking on "Sharing the inheritance", Samaroo said: "Indians, wherever they are and in whatever circumstances they find themselves, must cease to be apologetic and defensive about their culture and their civilisation." He wanted the Indian diasporic communities to follow the "African diaspora" in facilitating cultural fusion in each "diasporic settlement", instead of being "too preoccupied with small disputes and internecine warfare whilst the large picture eludes our focus."

Dr. Chandrasekhar Bhat of the Study for the Indian Diaspora, Hyderabad, echoed the same sentiments in his paper on "Contexts of intra and inter ethnic conflict among the Indian diaspora communities", and offered examples of identity clashes between what he calls the Older Diaspora and the New Diaspora. He feels that "a major domain of intra-ethnic conflict today among the Indian diaspora is religion". He notes that Operation Bluestar "left its scars" on the Hindu and Sikh communities in Britain.

Bhat said that caste too played a role in the power structure of particular communities. In this context, he pointed out that there were two associations representing Telugu people in the U.S. – the Telugu Association of North America (TANA), made up largely of people belonging to the Kamma caste, and the American Telugu Association (ATA), comprising Reddys.

ON the eve of the convention, Prof. Jagdish Bhagwati, Professor of Economics and Political Science at Columbia University, told a local newspaper that immigration from India was no longer considered brain drain but rather a phenomenon "serving almost an overseas arm of Indian culture and prosperity."

He said: "In that sense, an institution like GOPIO is useful. Indians are playing a major role here but I think we need to cast our net wide and see what is happening around the world to our community and people who are descended from India."

Dr. Thomas Abraham, GOPIO president, recalled that since it was founded in 1989 in New York, the organisation had come some way but its operations were hampered by a financial crunch. Going by the number of participants at the convention, it appears that GOPIO has not reached out to many persons of Indian origin even in New York, New Jersey and Connecticut.

Abraham had earlier served as president of the Federation of Indian Associations (FIA) and the National Federation of Indian American Associations (NFIA).

The first Global Convention of People of Indian Origin was held in New York in 1989 and was attended by an estimated 3,000 delegates. Four years later, a second convention was held in New Delhi; it was inaugurated by then Guyanese President Cheddi Jagan and presided over by Dr. Karan Singh. Dr. Najma Heptullah and Atal Behari Vajpayee delivered the keynote speeches. A constitution was formally adopted and office-bearers were elected. Abraham was elected president. An international secretariat was set up in New York in 1994. (It operates from the residence of a PIO and is run on a voluntary basis.)

In the ten years of its existence, GOPIO has taken up with the U.N. the issue of human rights violations in Fiji and Sri Lanka. In 1994, it came up with the idea of the PIO card, sensing that the Indian government was reluctant to consider dual-citizenship.

Like many other associations in the U.S. that claim to represent the Indian diaspora, GOPIO has grand visions of bringing PIOs under one global banner. However, given its current pattern of membership, its plans appear to be overly ambitious. It has no more than 150 life members, and its ordinary members number about 100. Much of the organisational work is carried on with personal contributions from office-bearers.

The constitution of GOPIO envisages a three-tier body with a global convention, an executive council, and an executive committee. There is to be a human rights commission, an international advisory council and a credentials committee.

The international secretariat is operational, but this is not the case with the regional structures. There are no organised structures even in countries such as Canada. Given GOPIO's current plight, it may be a long while before it sets out to achieve its stated objectives. ■

Northern magic

Samiland has no borders or boundaries, wars or armies, and it does not appear on the map – it is a place for those who love nature untouched and clean.

A glacier above Finse. Samiland has many lakes, rivers, streams, mountains and boundless hills.

Text and pictures:
HARISH KOHLI

FROZEN deep in the Arctic Circle and along the same latitude as Alaska and Siberia lies Samiland – an imaginary country that has no borders or boundaries, no wars or armies. It is imaginary because it appears on no map, and yet the Lapps – or the Sami people, as they prefer to call themselves – have lived here from time immemorial and traces of their presence here go back more than 8,000 years. Even today, they jet across parts of Norway, Sweden, Finland and northern Russia on their shiny skidoos, largely oblivious to the outside world.

Samiland is a mighty land, rich in lakes, rivers, small streams and, not the least, grandiose mountains and boundless hills, which in some places reach as far as the Atlantic coast. In winter the wind occasionally blows across the wide Finnmarkvidda (plateau) in northern Norway and Finland, and the temperature plummets to minus 50 degrees Celsius It affords the sort of adventure you might expect to experience in the vast plateaux of Tibet or in Antarctica.

Harish Kohli travelled to the north of Norway to practise ski-sailing as part of his training for a projected crossing of Antarctica. There, in the wilderness, he discovered a whole new world – that of the Sami people, with their fascinating, age-old culture, and the magnificent, almost unreal, landscape in which

Finnmarkvidda lies in Samiland and visitors to Norway now come here to see its scenery, which is spectacular. It is the vastness of the inhabited areas that make the greatest impression here: ranges of mountains and fjells stretch away to the horizon, seemingly without end, silent and awe-inspiring – a place for those who love nature untouched and clean.

As night descends, the snowy mountains and the frozen lake are still coruscating bright white, the sky a deep Tibetan turquoise blue, the air crisp and pure like a swig of fine dry champagne I

At Finnmarkvidda. The scenery is spectacular here.

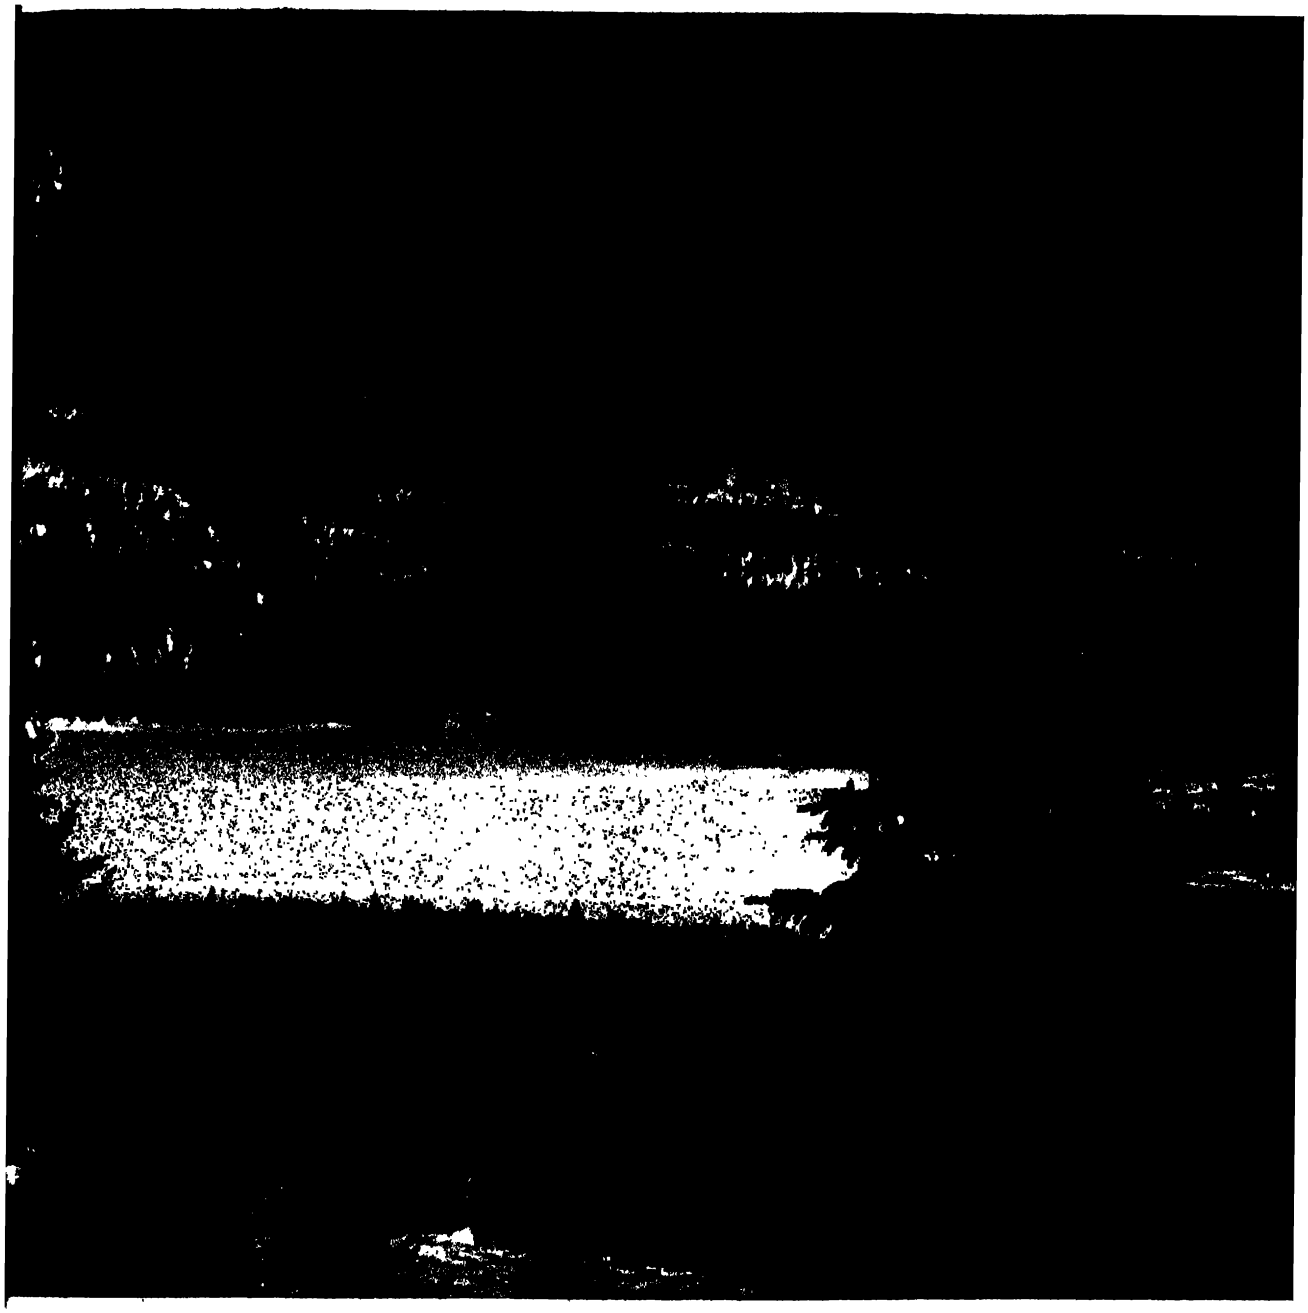
strap myself to a harness, attached to my pulk carrying one month's supplies complete with food and fuel. My skis – a new set of Norwegian backcountry 'Madshus' – are lighter than those I used while traversing the Himalayas in 1995. My body is acclimatised and tuned after a month's initial training in Hardangervidda, Europe's largest mountain plateau south-east of Bergen.

Agnar Berg, a veteran explorer who, with four others, achieved the first crossing of Greenland, wearing clothing and equipment as used by the Norwegian hero Fridtjof Nansen, skis alongside me. He is there to encourage me, to express his happiness at witnessing the beginning of an adventure or to wish me luck, or all three. It is a Norwegian send-off by one explorer of another.

At Jotka, Agnar turns back. Ahead, there is silent white: bushes laden with frosted snow look stunted in the distance; the sky beyond is now deep violet. The surface is all scarred and fractured ice. This is Lake Jotka on Finnmarkvidda. It seems so unreal, it is easy to believe it could be home to extraterrestrial life. For me it is a training ground.

It is to this idyllic setting that I have come to practise for my long-held ambition to traverse Antarctica. The route – starting from the Chilean end of the continent and climbing steadily over treacherous crevasses to the South Pole, rising up to 3,350 metres in the Trans-Antarctic mountains and across to McMurdo Sound – is almost 3,000 km long. It is a hundred-day journey with a payload of 200 kg and if one is going to attempt it alone, then one needs to practise, practise and practise.

Two months earlier, I reached London, courtesy Air-India, and then Oslo where I trained at Hardangervidda for one month. I then flew from Oslo to Alta, the second biggest town in the north and possibly the oldest in Norway with a population of 14,000. Remains of a stone-age settlement – 10,000-14,000 years old – are said to have been discovered here in the Komsa Mountains.



Agnar drove me to his home, where I was able to see a different aspect of the people of the north. Fifteen or so howling hounds met us on our arrival, and Agnar took a few minutes to frolic around their enclosure with them. Four years ago he led a journey through the Northwest Passage with dog sleds, while his wife, Irena, followed him along a safer route with their two-year old son in her lap. He has been across Greenland and the Northwest Passage, but he is basically a dog-man, one of a tribe of old adventurers.

Earlier in the day, he drove me to the Finnmarkvidda, from where I am now beginning my journey. At the edge of Jotka Lake, half a dozen skidoos stand and

I can hear conversation inside the single hut. I enter and find six people gathered around three empty wine bottles and plates with well-polished reindeer bones. It is warm inside, they smile, we make conversation and I move out into the cold again. It is almost midnight. Two Samis cross on their skidoos. The wind begins to gain strength and my GPS (global positioning system) equipment begins to malfunction. I move away from the skidoo track and dig in. As I begin to camp, the world's biggest light show, the Aurora Borealis, begins.

The Northern Lights can resemble a psychedelic experience. The sky is filled with pink swirls, which, in a split second, change to sharp green zigzags, then fold

Oslomarka, a forested area near Oslo. Oslo is one of the world's biggest cities, but much of the area is surrounded by forests. These forests are well-preserved by the residents, who use them for trekking and cross-country skiing.

in on themselves to become high-speed silver rain. The oddest thing is that all this happens in the dense Arctic silence – Ravi Shankar's sitar or Zakir Hussain's tabla would suit this celestial disco.

I wake to find myself on an awesomely flat ground, across which I can see almost 40 km, maybe more. A Sami man and two women pass me on their skis. Some distance ahead I catch up with them while they rest and soon I realise that they represent three generations. The eldest of the three, the man's grandmother, is nearing 70 and still fit. The wind is strong, but from the northeast, the direction in which I am travelling, it is a head wind and I cannot use my ski-sail, the very reason I have come here from so far away. If the wind were right, I could zip along at breathtaking speed, like the skidoos.

Jiesjavrre (lake), which runs north to south and is about 50 km long, is the biggest of the 177,000 lakes in Finnmark. Molisjok, at the southeastern end of this lake, is a strange oasis in this wilderness. A generator, making a "tuk-tuk" noise, powers the single house and the long aerial that helps locals and travelling executives from Stockholm, Tokyo and London to keep in contact with the outside world through their mobiles.

'Mobile' could be a Sami's middle name. They are on the move all the time, usually tugging around behind them some kind of temporary home. Apart from the deafening noise of their skidoos, the only sound in Finnmark is what you can make yourself.

Yet it is the kind of place where every Norwegian would like to be. For Scandinavians, sunshine is synonymous with life – something to be cherished, pursued and exploited. In winter they seek their sun god (Baldur, as he was known to their pagan ancestors) on the shores of the Mediterranean, the Canaries and the Azores. And in summer, as soon as the sun gathers strength, they take

'Mobile' could be a Sami's middle name. The Sami people are on the move much of the time, usually tugging around behind them some kind of a temporary home.

every conceivable opportunity to get out of doors and luxuriate in its warmth.

"Look, he is almost brown," say Kristine and Kirsten, awed at what they take to be my tan. They have themselves driven here from Hammerfest, the northernmost city in the world, in the hope of becoming as brown as I am Now, after a week's skiing on the plateau and drinking in large doses of sunlight, they only feel invigorated. "I am ready to join the world again now," says Kirsten. "I am beginning to unfurl, in my thoughts, like a fern when its leaves unfurl I feel like a new human being."

And so they look They have come straight out of the sauna at Ravnastua, my day's destination. I catch a whiff of their perfume as they wish me luck As they pass by, I notice their light blue eyes twinkle and their blonde hair framing their tanned, glowing skin.

I continue my journey past Ravnastua, where a courting couple sit, having driven there on their skidoos. Not far beyond, I sit in the wide wilderness, take out my steel thermos from the pulk and drink coffee. I drop my chocolate bar in the mug for it to melt rather than risk my teeth. The cold is intense.

A convoy of about two dozen skidoos passes by, some of the drivers casting amazed looks, while others give a customary navy salute. I smile and raise my thumb. Later, I ski past elk and reindeer, marvelling at the thousands of stunted silver birches (more hardy than pine and fir) and lolloping arctic hares. The reindeer is the most important animal here and the basis of the Sami household. It is the Sami's staple and his future.

There are very few truly nomadic Sami people left. Most now have a permanent home, even though the herders from the interior still move with their herds to the high grounds in the summer. During late summer and in autumn the reindeer are driven down to the woods near the foot of the mountains where the lichen pasture is rich. There they stay during winter, roaming freely until the spring, when it is time once more to move up the mountains to the high slopes where the vegetation is now juicy, succulent and nourishing.

Remarkably enough, though they constitute a minority, the Sami people have been very successful in conserving their rich cultural heritage and many unique traditions. They have fought for political control over their own affairs and now have their own Sometinget (Parliament) in Karasjok.

As the plateau drops down in the Karasjok valley, the gradient becomes steep. The pulk pushes from behind, threatening to cause an awful accident. The route comes out at Assebakte on the Kautokeino-Karasjok road. I find an emergency shelter in which to camp. The scene from the window is beautiful, and I watch it for a long time as the full moon rises in the sky. It is never really dark these days. There is always a glow, like an unending evening.

The next day, the route along the Jies Jokka (river) is sprinkled with Wild West-style villages until I reach Karasjok. Karasjok is the Sami centre, where the ancient and modern houses blend into each other. A new Sometinget is under construction, its design reflecting modern architectural influences. So does the new church in the new part of town while the old still stands in the ancient centre.

What is interesting about the com-

Ski-sailing. On a summer night in May, the author has this to say of his ski-sailing experience: "... I am in a trance, where only my sail and I exist. The only sound is of the wind and my skis zipping on the snow. This is ecstasy..."

munity is how the Sami, the townspeople and the newer arrivals all get on so well, drawn together by a frontier mentality and fierce independence. Local Finns and Swedes herd elk and reindeer alongside the Sami. Women dressed in beautiful braided clothes visit the Rimi and Mega shopping plazas. We stop and admire each other.

In the uptown handicrafts emporium, you can buy reindeer leatherwork and traditional silver jewellery, exquisitely handcrafted into chains and elegant pendants. Silver was discovered in the frozen mountains by the Europeans, who arrived here in the 16th century. In the 1880s an iron-ore mine was excavated at Kiruna in Sweden, and a coalmine at Gullivare, and Lapland became a northern frontier with bars and boxcars, gambling parlours and moonshine brews.

I continue my journey along the Tana River, known for its salmon. Across the river is Finland but these borders are meaningless for a Sami, who moves at will across the northern territories. This is a Mecca not only for skiers but also for anglers: in one recent year, 28,000 day passes were issued and about 50,000 kg of salmon was caught with fishing poles.

"The Finns have two distinct passions," a Finnish priest said. "These are angling and sauna." Every village has a forest, a lake and a little group of huts that can be hired to provide the authentic sauna experience. In fact, "sauna" is a Finnish word. Everyone is equal in the sauna culture. The Finnish Cabinet used to meet in the sauna every evening in what came to be known as the "evening school". "It was there that the major decisions were taken, but not any more," said the priest, shaking his head. "Not since they decided to appoint a woman as Minister."

Outside a hotel in Finse, at an elevation of 1,222 metres.

Birch fires have been burning all day to heat the gargantuan sauna room. I undress, tip a couple of barrels of water over myself, then hang out in the cosily dark sauna and pass out. I awake to a light beating on my back with bunches of birch twigs from (don't ask), who, like me, were travelling to Lavajok.

Rasti-gaissa, at 1,067 m, is the highest mountain in the eastern part of the plateau. "So high, it may be closer to heaven," reads a signboard at the beginning of the track at Lavajok. My progress, although late in the day, is obstructed by Ole, who emerges, as if magically, from behind the clouds. We walk to his hytte, inside which two women are playing dice. They don't speak English, but they have beautiful smiles.

I sleep in the outhouse and slip out, as pre-arranged, at 3 o'clock in the morning. By 8 o'clock I am still struggling with my pulk and half way up when Ole overtakes me on his skidoo. His two women are safely tucked behind on a sled under layers of reindeer skins. At noon, when I reach Levva javrre (lake), Ole has already set up a tent, with oil burner, light and a VHF (very high frequency) telephone.

We spend the day fishing in the lake through a hole about 15-20 cm in diameter made by a drill. As dusk falls, the peaks throw shadows across the ice; a bonfire is lit on the frozen lake to ward off the chill and we cook fresh arctic char, a tasty deep-water fish. It is their kind of a weekend

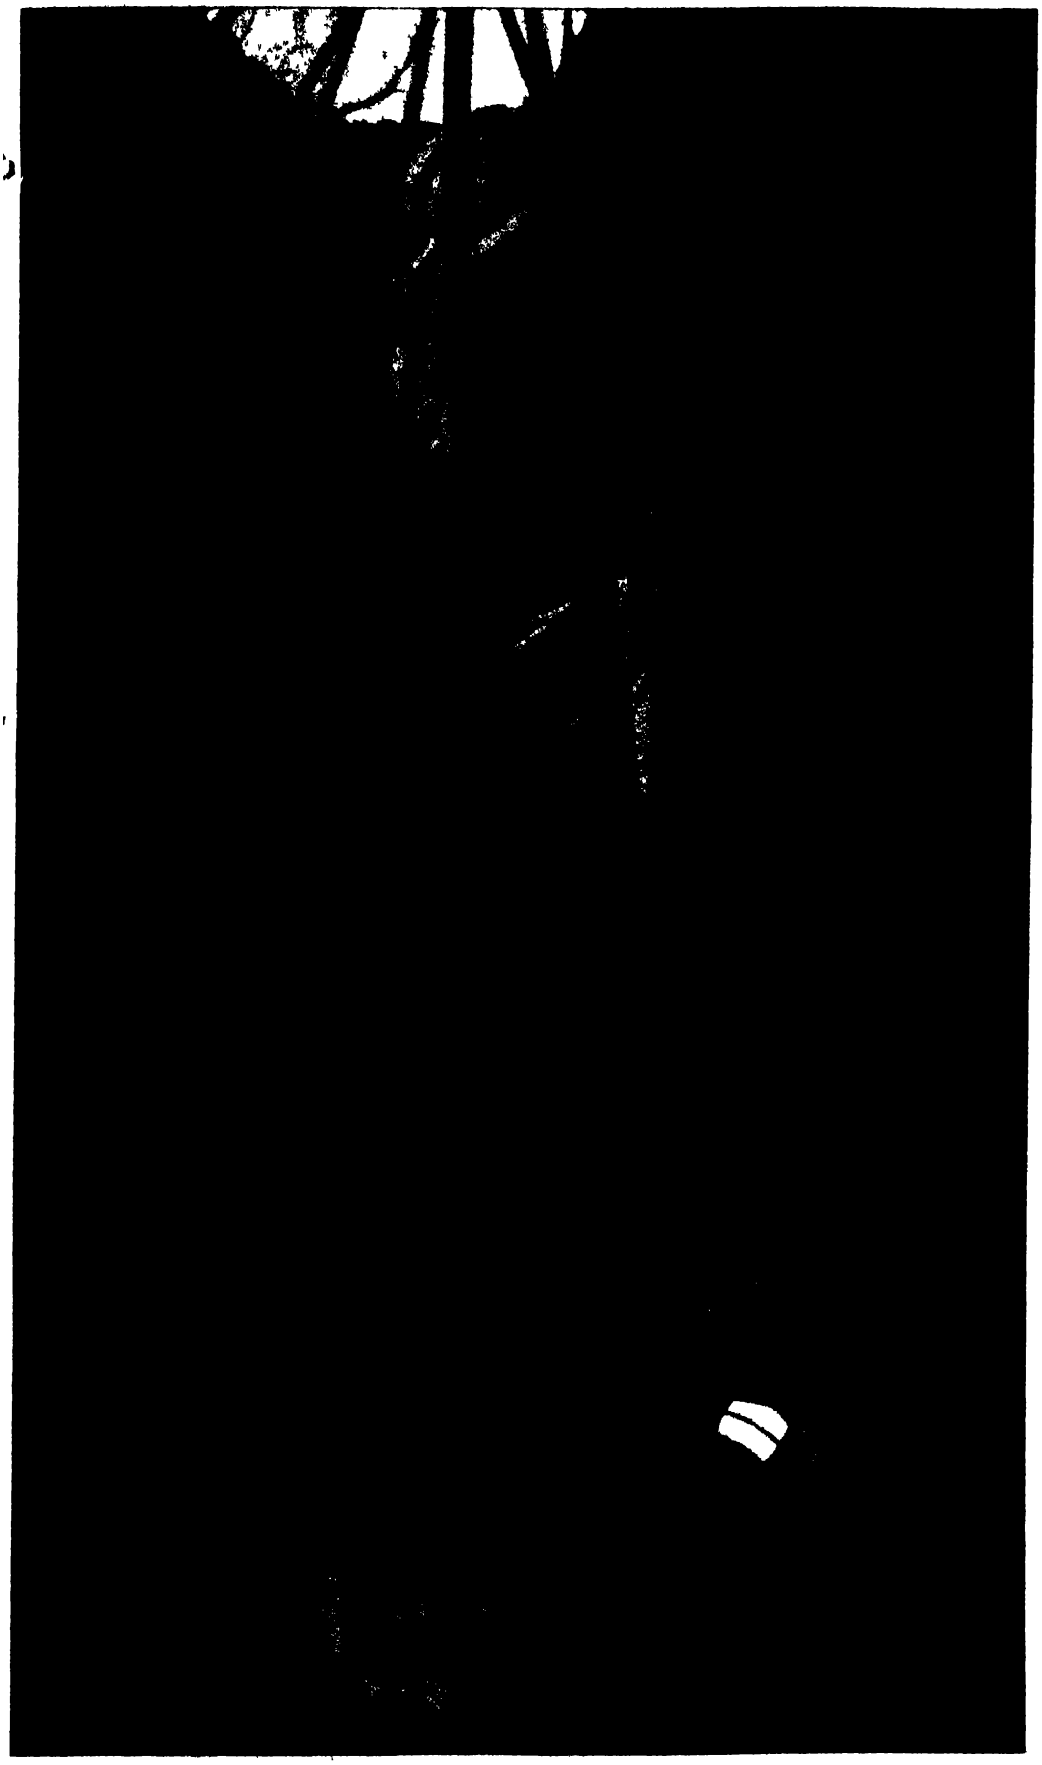
The next day the wind is strong, but I travel anyway, copiously using my GPS and compass. I cross over the mountain range between Suodine and Ucca gaissa to Suodine javrre, from where I pick up another skidoo trail that runs northwest. From lake to lake and mountain to mountain, I travel alone on the frozen Martian landscape with no one to talk to or see. I cannot even remember if this is the world I live in. The Seven Wonders of the World don't even come close to this. This is far more beautiful, far more exotic, far more seemingly unreal.

At day's end I notice a hytte, the only one since my start from Lavajok and the only one I may find till I reach Skoganvarre. Its location in the wide wilderness impresses me and I begin to wonder how people will react on seeing a stranger. And what if the stranger is profusely tanned, with a shaggy white beard, and smells less like a human and more like a reindeer?

Knock, knock! I can hear voices but no footsteps. I peep through the glass in the door and catch sight of a woman. She stares, drops her jaw and turns. Another woman opens the door, drops her jaw and retreats. I look on. A man strides up from behind, winks and motions me to come in.

Randi, the tall woman, laughs at herself for mistaking me for someone else, as she pours wine into my glass and fills hers. Yes, wine! Mari, the other woman, sits alongside and we make conversation. She uses a mix of Sami and English, at the end of which she nods and says, "Oh, you understand." I nod back, saying, "Yes, I do." Actually, I have understood nothing. Bjarne, the man, looks on, rising occasionally to pour wine or kiss one of his ladies. The wine-women-and-wilderness cocktail is heady.

For supper we have a Sami staple – reindeer meat. I am served chops and reindeer tongue with clear soup, a delicacy. My stomach growls as I look at the tongue unappetisingly stretched out on my plate. In the end I realise I have finished three helpings and many cups of soup. It was delicious.



The three are half-Sami and reflect the strong Sami culture for protecting animal species. A discussion ensues on the effects of technology on nature. From the window, as far as I can see, it is pristine nature. This is the route I take the next day.

All day I have nothing but wild beauty in front of me. Wilderness is irresistible but after a time you develop a hunger to share it with another person. Mari called it "Magi, magi" last night. Now I understand what she meant. It is magic, magic!

As I begin to descend, I notice the mosses and lichens giving a gentle splash of colour to the rocky hillsides and the edges of the bog. Perhaps these colours have been a source of inspiration for the Sami costume that is now worn only on special occasions. During Easter, particularly in Kautokeino, there are no bounds to this richness and colour, which make a magnificent sight.

At Skoganvarre I am in the lowlands where pine, blue fir and spruce grow and the reindeer dutifully troop south to their winter pasture. The road between Karasjok and Lakselv cuts through the plateau and runs further to North Cape. I look for skidoo tracks crossing the road that I can follow to climb up the western plateau again. Soon I come to a farmstead. A dog barks, a window opens, a sun-baked head pops out and I am asked who I am. I answer and am told that I don't have permission to go any further before I have had a cup of coffee with him. I have two.

I am now on my fourth and final lap. The journey from Skoganvarre will bring me back to Jotka, a circuit of almost 400 km on the Finnsmark plateau. The day's journey is dominated by Vuorje, which at 1,024m looms large, majestically overlooking the wide, flat terrain and shelter-

Inside a lavvu, a Sami tent. There are very few truly nomadic Sami people left, and most of them now have a permanent home.

ing Laevnjas javrre at its foot – one of the prime fishing locations. As I approach, I see a couple zip past on their skidoo. The wind starts blowing; I draw out my ski-sail but realise it is again a head wind as it has been throughout my journey. I camp as soon as I reach the end of the lake. The scene from my tent is exotic and I find it hard to relate it to anything I know. Imagine the red planet Mars with water, emerging out of the Ice Age. It is the closest I can get.

The next day I meet three young men who are travelling from Norway's southern tip to North Cape – an adventure that many young Norwegians like to undertake after they graduate. I wish that many young Indians would show a similar spirit and go Trans-Himalaya.

Adventure, I suppose, cannot be taught in schools. It is caught from one generation by another. Fridtjof Nansen, Roald Amundsen, the Arctic explorers, and Thor Heyerdahl of the Kon Tiki and Ra expeditions, still are a great inspiration for Norwegian youth. And the number of modern explorers such as Borge Ousland, Sjur Modre and Agnar Berg is on the rise.

Despite the inhospitable nature of the region and the ferocity of the winter, the people of Finnmark are greatly attached to their part of Norway. Outside an old unused telephone hut at Dollajuolgge, two boys sit on their skidoos and watch the wind blow the snow. I ask if they are coming or going. The

(Left) A Norwegian woman in traditional dress. The embroidery on her dress is similar to the one on the ceremonial dress of the Queen of Norway.
(Left centre) Thousands of Norwegians come together in Hemsedal Valley to celebrate Easter. For Scandinavians, sunshine is synonymous with life – something to be cherished, pursued and exploited.
(Left below) On the waterfront at Oslo. Norwegians like to live near the sea and do what their ancestors have enjoyed doing for generations – sailing.

answer is, neither. They are there just to be outdoors.

It is May, and the night is light. It is this pale, translucent light of what the Norwegians call a *sommernetter* (summer night) that is so much more remarkable than normal light. Instead of dipping, the sun begins to rise, rise and rise again. In this magical, diffused golden light, all normal rules of life seem suspended and anything at all is possible.

Just then, the wind tugs me from behind. I am thrilled. It is a back wind and could be perfect for sailing. Although it is late at night, I clip on my ski sail and I am ski-borne. The plateau ahead is wide, open and flat. On it are my sail, my pulk and myself travelling at great speed, without fear, moving as wildly as a skidoo. Travelling at this speed, I am more exhausted with excitement than by the pull of the sail in front and the pulk behind. I am in a trance, where only my sail and I exist. The only sound is of the wind and my skis zipping on the snow. This is ecstasy. I feel heady, drunk on life. I begin to understand why the Norwegians call their summer night the "time of life".

This day comes as a present from nature and I cherish it as the most beautiful in my life. It is a day I will live for again. It is a place I will come to again and again. And when I retire, I want to live here, die here. Is nature giving me a portent of success, by showing me that the wind can be harnessed and that I have been tried and tested? The wind took me south but will it take me to the South Pole? ■

Harish Kohli is an adventurer and explorer and founder of the Asian Geographic Trust for the promotion of adventure (www.asiangeographic.com). He is based in London where he works as a travel consultant and freelance travel writer. He is currently planning a solo Trans-Antarctic expedition and can be contacted on hkohli@asiangeographic.com

Looking back on the Net

The story of the evolution of the Internet, thrity years on.

GEORGE JOHNSON

THIRTY years ago, on October 29, the inaugural message was sent over the first thin reed of what was to become the Internet. It was nothing so portentous as "What hath God wrought," the words christening the telegraph in 1844. It was just the simple word "login"

There were only two nodes on what was then known as the Arpanet, the precursor to the Internet built by the U.S. Defence Department's Advanced Research Projects Agency (ARPA). As the story has become enshrined in folklore, a student of University of California, Los Angeles (UCLA) named Charley Kline tapped out the letters "l" and "o", which were dutifully echoed back by a computer at the Stanford Research Institute (SRI), a centre about 768 km northwest in what was not yet Silicon Valley. When he typed the third letter, "g", the SRI computer was supposed to recognise and complete the full command.

Instead, the letters caused a memory buffer to overflow, bringing down the system. But it was an exceedingly minor crash, said Bill Duvall, who was tweaking the connection on the Stanford end. The buffer size was increased and the first connection was flawlessly made.

"I guess that I really don't care to be known as 'The First Guy to Crash the Internet'," Duvall wrote in an e-mail message. What sticks in his mind is the satisfying feeling of getting the pieces of the complex system to mesh. The SRI computer had to be fooled into thinking it was talking to a regular old teletype machine, a "virtual user" which might as well have been in the same room. Stanford had practised for the occasion by running simulations of the network connection. But there is no substitute for the real thing.

"Quite a bit of thought went into debugging the initial network connection," Duvall recalled. "When the SRI end came up, I was pretty happy. I guess that it is a bit like a symphony – it's the last note that is remembered, not all of the stuff in between." No one apparently thought of taking a picture. And no one recalls what messages followed. "It seems like it should have been 'Watson, come here! I need you!'" Duvall said, referring to Alexander Graham Bell's first, urgent telephonic command (he had just spilled battery acid). "That would not have been out of character. But, alas, I really don't remember."

And so the revolution quietly began. With one scarcely noticed milestone after another, the planetary nervous system envisioned in the early 1960s – cyber rhetoric is as old as a Beatles tune – unceremoniously began insinuating itself into society. A strange amalgam of U.S. Defence Department money, engineering expertise, and even a dab of countercultural idealism, slowly brought on the Net we know today.

There was no big ribbon-cutting a month later when a third node was installed at the UCLA at Santa Barbara, or the following month, when the reach extended outside California to the University of Utah. No golden spike was hammered into the ground to commemorate the joining of the coasts with a link to Cambridge, Massachusetts, where a small consulting company called Bolt Beranek & Newman had won the contract to build and run the Arpanet.

What was emerging would be barely recognisable today. There were no dot coms, no World Wide Web, nothing called e-mail. The main purpose was to let university-based researchers for the Defence Department agency share computer resources, allowing someone in, say, California to run a program on a machine in Massachusetts. Many system administrators were reluctant. Computer power was scarce. Why should they share it with strangers?

But from very early on, a handful of visionaries realised the synergistic power that would come from someday putting a computer on everybody's desk, then gradually weaving them into one great matrix. In an age when computers were still identified in the public mind with punch cards and spinning reels of tape, some of the early fomenters of the information age showed stunning prescience.

AS long ago as 1945, in *The Atlantic Monthly*, Dr. Vannevar Bush, the engineer, educator and government research adviser, came up with the basic idea of the personal computer, a device he called the memex – a mechanical extension of human memory. Never mind that it was as big as a desk and that it stored all your documents, including encyclopaedias and reference libraries, on super-fine-grained microfilm shuffled by nimble mechanical fingers and projected onto translucent screens.

Though embodied in the clunky technologies of the time, the memex would work something like an associative memory – or, less grandiosely, a relational database. A user researching the history of the bow and arrow might start by calling up an encyclopaedia article. When he found another relevant passage in a book, he would link the documents with a few keystrokes, encoding them with crude hyperlinks, and even add his own annotations. "Thus he builds a trail of his interest through the maze of materials available to him," Bush wrote.

To his credit, Bush also speculated that going beyond "dry photography", the data might be stored as magnetised dots on metallic sheets using the technology that already existed for recording voices on spools of wire. And for entering data, he even envisioned the scanner, an outgrowth of the radio facsimile machines that already existed in his day.

The big thing Bush missed was electronic networking. As he saw the chain of events, the researcher would meet someone a few years later who wanted to incorporate the bow-and-arrow material into his own study on technology. "He sets a reproducer in action, photographs the whole trail out and passes it to his friend for insertion in his own memex," he wrote, "there to be linked into the more general trail." He had invented the World Wide Web with messengers on bicycles in place of high-speed digital T-3 lines.

A decade and a half later, Dr. J.C.R. Licklider, one of the most visionary computer scientists of his day, took another

leap with his predictions of a "Galactic Network" linking everyone to a universe of information. In a later paper titled "The Computer as a Communication Device," he and Robert Taylor, who would go on to direct the Arpanet project, imagined nothing less than "a labile network of networks, ever-changing in both content and configuration".

"What will go on inside?" they asked. "Eventually, every informational transaction of sufficient consequence to warrant the cost. Each secretary's typewriter, each data-gathering instrument, each dictation machine, will feed into the network."

There would be no need for letters, telegrams, telephone calls or even business trips. People would simply link their computers to other people's computers. Dictionaries, encyclopaedias, investment advice, tax counselling, advanced scientific modelling programmes – all would be available within the Net.

Online communities would form with people selected "more by commonality of interests and goals than by accidents of proximity." And, more ominously, the two researchers speculated, those denied the benefits of this "intelligence amplification" might be relegated to an information-deprived underclass. Both the bright and dark sides of today's Internet were anticipated years before the first message was sent.

For all the grandiosity of the vision, the Internet developed haltingly. To make Licklider's Galactic Net a reality, scientists and engineers had to design a communications system that operated like none that had come before. The obvious example to emulate might have been the telephone network, in which long-distance calls from one small town to another were routed like airline flights through one or more central hubs.

BUT in the early 1960s, researchers began to realise that a computer network would be made much less vulnerable to failure if it was more widely spread out – less like the air travel system than like the network of back roads weaving together every municipality in the country. Each point is connected to its nearest neighbours by several redundant paths. If a connecting node between A and B fails, it is easy to find an alternative route.

But there was an even more radical difference between the networks of old and the one that was about to take root. In an ordinary telephone system, two phones were linked by forming a temporary circuit, a dedicated physical channel through which the electrified voices flowed. The telegraph used a different technology called message switching: each telegram was given an electronic address, then sent into the Net, where it would be relayed, node by node, to its destination.

Paul Baran at RAND Corp. and Donald Watts Davies at the British National Physical Laboratory independently saw the advantages of taking this "store and forward" model a step further. A message from one computer to another would be chopped up into many little packets, which would be sent swarming through the network to find their way. Some would take this route, some would take that. Each would carry a destination label along with instructions for where the packet fit inside the overall message. No matter in what sequence the pieces arrived, they could be reassembled.

In this system, called packet switching, there would be no need to tie up a circuit for a single transmission. And since the messages were broken into smaller fragments, the flow would be smoother. Finally, if a packet got corrupted, one could just resend it and not the whole transmission.

Around the same time, Dr. Leonard Kleinrock, who would preside over the establishment of the first node at UCLA, was using a mathematical tool called queuing theory to understand how data would flow in a packet-switched network. By 1966, with these and other basic ideas in place, Lawrence Roberts, recruited by ARPA from the Massachusetts Institute of Technology, mapped out the plan.

Two years after the first transmission, the number of host computers grew to 23. The "@" symbol was invented in 1972, and a year later 75 per cent of the Arpanet traffic was e-mail. It was starting to look like the Net.

Before long, other organisations, like the National Science Foundation, wanted their own networks. By the late 1970s, Dr. Robert Kahn and Dr. Vinton Cerf of ARPA were putting the finishing touches on the lingua franca, inelegantly called TCP/IP, that would weave the patches into the electronic quilt called the Internet.

And that is just a fraction of the contributions. No one stands in relation to the Internet as Bell to the telephone or Morse to the telegraph. There was no single moment when it all came together. From the beginning, it was a continuous collaboration of many minds. And any attempt to recite the history in less than a book must be notable for its omissions.

IT was not until 1984, when the Net had grown to include 1,000 host computers, that the domain name system was established that lets Amazon.com be Amazon.com and not 208.216.182.15. And in 1991 came the World Wide Web followed by Mosaic, the first graphical interface, or browser, that inspired Netscape and Explorer. The number of Internet hosts quickly exceeded a million, and this year that number multiplied fifty-fold.

Before long the barbarians were at the gates. Scientists on the Net were suddenly getting e-mail from journalists, then from their own parents, and then from schoolchildren asking for help with their homework. The Pentagon was sharing the Web with pacifist groups, cyberspace mirroring the conflicts of the physical world.

And what a powerful tool it has become. Simply by typing "Watson, come here" into a search engine, one can now find a scanned image of Bell's original notebook pages at the Library of Congress. There on the yellowed paper, in his own handwriting, is what he really said (slightly different from what is often quoted): "Watson – come here – I want to see you."

Sitting up in the futurist's perch, where Licklider put himself almost half a century ago, today's visionaries talk about the arrival in the first decades of the coming millennium of "ubiquitous computing". Hand-held computers will merge with cellphones, talking to computers hidden in the office walls and the trunks of cars, all linked into a pervasive net. With a spoken command, a person would have instant access to the invisible ether of information.

Writing in 1960, Licklider called this kind of technobiological mind meld "man-computer symbiosis" and ventured that bringing it together might take 15 years. "The 15 may be 10 or 500," he added more realistically, "but those years should be intellectually the most creative and exciting in the history of mankind."

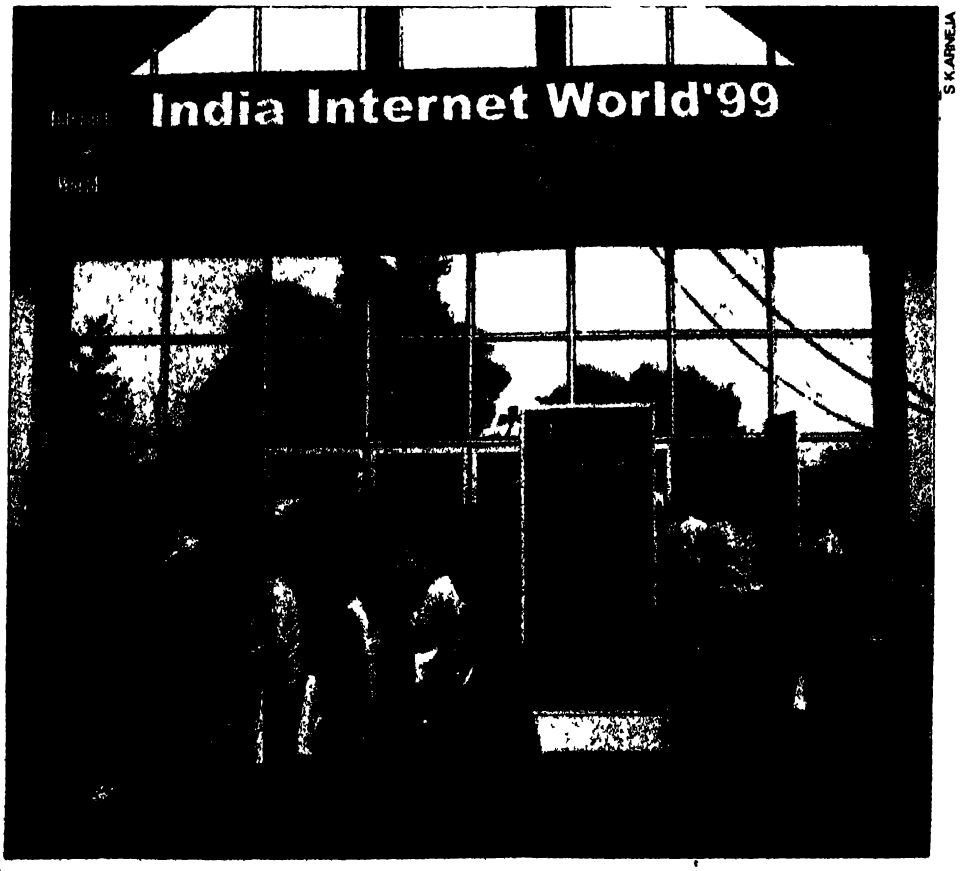
As the Internet inevitably recedes into the background, it can almost be taken for granted – the ultimate compliment. It has become the platform on which its successor will rise. When the 40th anniversary or the 50th rolls around, it will be even harder to untangle the individual contributions to something so much bigger than its inventors. ■

New York Times Service

Surging ahead

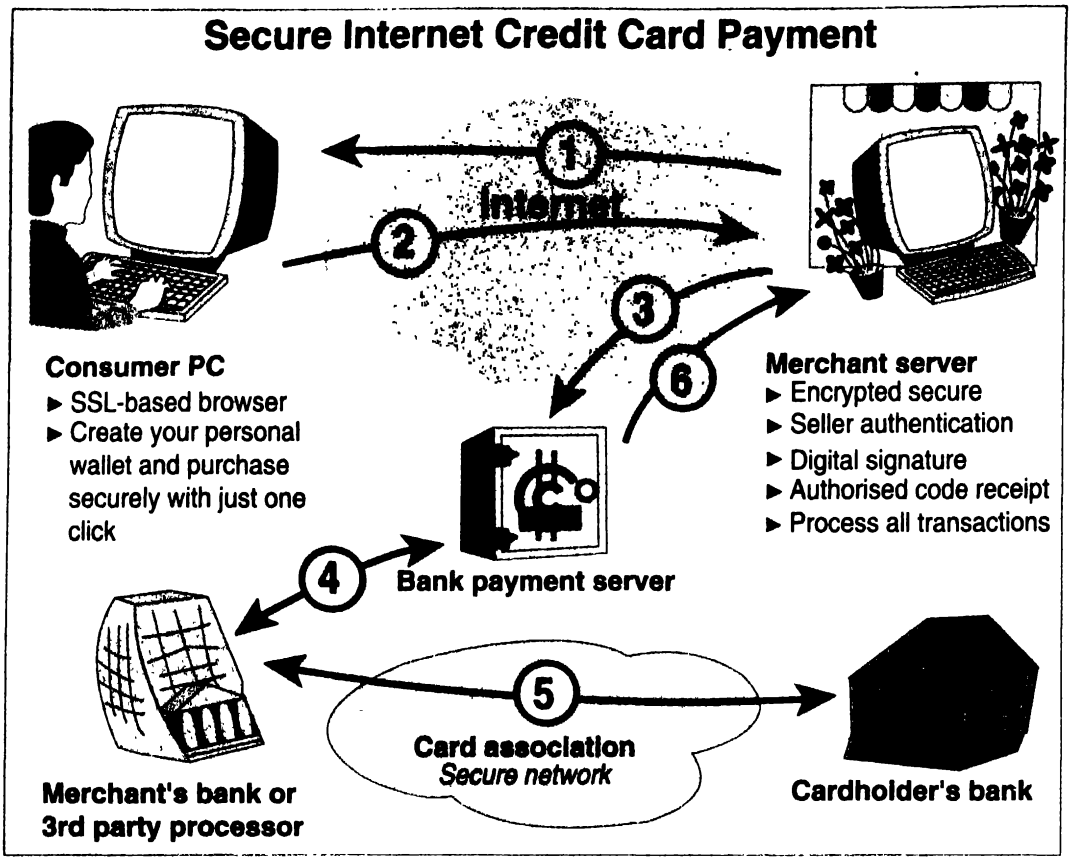
A recent Internet show in Delhi showed that the throwing open of the telecom sector has given a boost to information technology in the country.

ANAND PARTHASARATHY



THERE could be nothing as rosy as government-inspired statistics. They invariably err on the side of breezy optimism. But on rare occasions, unexpected and positive developments make even the bureaucracy's optimistic projections under-estimates. The Indian government's estimates about the growth of information technology in the country constitute a good example of such under-estimation. For years, one was told that the penetration of the personal computer (PC) was one per 500 persons. This figure was sanctified in the government's Information Technology Task Plan for a decade, which was published in mid-1998. The plan document stated that efforts would be made to increase this figure to one per 50 persons by the year 2008. The planners were obviously unaware that the Indian government's long-delayed telecom liberalisation policy and the arrival of the Internet would prove these estimates too modest.

On November 6, 1998, the government announced a new policy for Internet Service Providers (ISPs). This policy removed the monopoly enjoyed by state-run agencies such as the Department of Telecommunications (DoT) and its external arm, Videsh Sanchar Nigam Ltd (VSNL). This allowed private ISPs to provide value addition and sell Internet services to Indian customers. Early players such as Satyam Online were initially content to stick to the VSNL price structure, which many Indian users found prohibitive. However, when more ISPs stepped in – 10 nationally, 15 regionally and at least 100 based in single cities – competition reduced nearly by half the cost of accessing the Internet. Today, 70 Indian towns have access to the Internet through a local telephone call.



Along with this expansion of services came a sharp drop in the price of personal computer products: multimedia 'Internet-ready' PCs, with 25 hours of free Net access thrown in, were available for Rs. 35,000 in mid-1999. (The price of Internet-optimised colour inkjet printers crashed below the Rs.5,000 mark.) As a result, thousands of Indian middle class families could afford to buy a PC and have an Internet connection.

In mid-1999, the Manufacturers' Association for Information Technology (MAIT) announced that the sale of PCs in India had for the first time crossed the one-million-a-year mark and that the installed base by the end of this fiscal year would be at least four million. Take the fact that India's population would be above the one billion mark around that time, and you know why the IT industry is the country's "sunrise" industry. People bought twice as many PCs as the most optimistic statistics had projected. By September 1999 there were 1.5 million Internet users in the country. Although this is still way behind the figures for the United States – 70 million out of 379 million Internet users worldwide – IT watchers were more interested in the 100 per cent growth rate that contributed to this number, making the Internet the fastest-growing media sector.

It was this upbeat mood that was evident at India Internet World, which was organised in Delhi in end-September.

At India Internet World '99 in New Delhi.

Internet service providers used the event, the largest such in Asia, to show the different ways in which they were providing value addition even while doing the same thing – buying telecom bandwith and Internet gateway access from the government and reselling it to customers. Satyam, which pioneered the use of CD-ROMs to sell hassle-free Net access, announced a new Web site for business-to-business products and services called www.seekandsource.com, where even organisations that do not have their own Internet presence can do business on the Net. Wipro, one of the first major Indian IT manufacturers to enter the ISP business, announced a Web-based distance learning service called Virtual Education Network, which would enable companies to link their far-flung offices for training sessions (www.wipro.net). It also placed on tap the learning resources of Lotus Corporation. Mantra Online, a joint venture between Bharti Enterprises and British Telecom, offered Fleximantra – reduced connection charges during off-peak hours.

inevitable that sooner or later meone would realise the potential of tapping India's large non-English-speak- pulation. The Delhi event saw the guration of what was termed "India's first Hindi Internet portal" – a Web site that served as an entry point to dozens of other resources in the same language. Created by Suvi Information Systems Ltd, an IT company that pioneered the Web site for the Indore-based Hindi newspaper *Nai Dunia*, the new portal (www.webdunia.com) is a canny mix of news, cultural round-ups, recipes, religious features and "infotainment" based on the Mubai film industry. It was obvious that the creators of the site thought beyond the Hindi heartland. Both E-patra, the free e-mail service (www.epatra.com), and E-varta, the chat site, are multilingual – one can enter it in Marathi, Gujarati, Malayalam or Punjabi. Suvi has promised to include every Indian language in the near future. For those who need both English and Hindi services, DSF Internet Services offers the first Indian bilingual portal at http://in.orientation.com. In order to show that international portals with a *desi* accent can be steered rapidly towards commercial success, pioneers in the field such as the Mumbai-based Rediff on the Net (www.rediff.com) and the Calcutta-based 123 India (www.123india.com) were on hand to display their range of customers and e-services.

Indeed, e-commerce and e-services seem to be the buzzwords of the day, and "Move your business on the Internet, or move out", the *mantra* that motivates hundreds of Indians. Helping in this process are international IT majors such as Sun, IBM, Hewlett-Packard and Microsoft, who are aggressively marketing their e-biz initiatives in India. The only stumbling block appears to be India's antiquated laws – some, like the Indian Penal Code, the Indian Telegraph Act, the Indian Evidence Act and the RBI Act, date back to the 19th century. These laws need to be sharply revised if the new regime of "digital signatures" and "electronic payments" is to become a reality.

Buoyed by this vision, multinationals such as CyberCash, which specialise in secure Net-based payment systems, as well as Indian telecom providers such as Global Tele-Systems (which offers the "secur-e-pay" system) are now promoting their services in the country. "If I make a payment on the Net, will it reach the seller, and more important, is information about my account safe from Net-pirates?" is a question that inhibits even the most enthusiastic of Internet users from shopping online. Payment system companies thus play a crucial role in instilling customer confidence.

Even in the relatively less critical area of online banking, most banks in the nationalised sector continue to dither over providing even simple Net services such as giving information on cheque status and account status. Meanwhile, almost all foreign-owned and many of the enterprising private sector Indian banks have launched such services to complement their network of Automatic Teller Machines (ATMs). An event like India Internet World served to separate the "talkers" from the "doers".

N. Muralidharan, head of technology and e-solutions, SchoolNet India Ltd, the technology arm of Infrastructure Leasing and Finance Services (IL&FS),

said that the apparatus of Web-based trading is in place and can generate a million deals a day as soon as the Securities and Exchange Board of India (SEBI) permits Internet-based trading. The company is geared to launching Internet-based trading by April 2000 and expects to double the number of daily transactions at Indian stock exchanges.

Meeting the large communication overheads of such ambitious projects is in itself big business. Global telecom giants such as Ericsson, Hughes, Gilat, Teleglobe and Comsat, which have arrived in India either through marketing agents or in partnership with Indian companies, have begun to bid for many large public contracts. Particularly relevant in a country where the telephone network is thinly spread is the communication option of using Indian satellites in conjunction with Very Small Aperture Terminals (VSATs). Unrealistic monopoly pricing by the government for this option had hitherto hampered potential user agencies. A competitive market environment is, however, poised to open the satellite-based Net route in a big way for Indian corporates.

For the rest of the people, new and affordable alternatives are in the offing. The Delhi Finance Corporation has announced plans to provide loans up to Rs.2.40 lakhs for setting up 'Cybercafes' in Delhi. At the Internet World exhibition, prospective investors could view products such as the WebRamp, a Rs.20,000 gizmo that allows a person to share a single Internet connection among dozens of user terminals. Cybercafe software is also available off the shelf.

A trial run organised by the National Association of Software and Service Companies (NASSCOM) to provide cheap video e-mail services between Mumbai and Jaunpur in Uttar Pradesh has proved to be so popular that the facility will soon be available between telecom centres in the metros. The sender sits in front of a video camera and a microphone and records a message for three minutes. This is then compressed and sent via e-mail to the recipient centre. The receiver sits in front of an identical set-up at the recipient centre and sees the recorded video message. The entire process takes only a few minutes and costs only Rs.15. On October 2, eight towns in Bihar and U.P. introduced this service.

The transformation of STD/ISD booths into cyber information kiosks is already taking place – the first 100 booths that were so converted were commissioned in the National Capital Region on September 25. The State governments of Tamil Nadu, Kerala, Andhra Pradesh, Karnataka, Delhi, Gujarat and West Bengal have tied up with WorldTel, a company promoted by Sam Pitroda, former Chairman of the Telecom Commission, to set up their own State-level fibre optic networks. They will ultimately form part of a National Information Backbone (NIB).

Meanwhile, it has become clear that various people are working overtime, trying to ensure that India, a late starter in the Internet business, catches up and probably even overtakes the early starters since it has a vast reserve of software talent. Interestingly, while the heads moved to the Silicon Valley and other destinations in the West, the hearts continue to root for Malleswaram in Bangalore, Mambalam in Chennai, and Chowringhee in Calcutta. The former group comprises entrepreneurs of Indian origin, who today control almost half the foreign-owned Internet start-up companies in the U.S. Names such as Sabeer Bhatia, founder of Hotmail, and K.B. Chandrasekhar, co-founder of the leading server hosting company, Exodus Communications, are already part of legend. At India Internet World, others such as Ram Shriram and Rakesh Mathur were on hand to provide motivation to young aspirants. Ram Shriram first served with Netscape and then joined Junglee.com, a product finder service that was acquired by Amazon.com, the pioneer bookseller on the Net. He moved to Amazon.com as vice-president and his current interest is google.com, a service that filters out garbage and retains critical information from the Internet. He recommends an aggressive – even predatory – attitude for surviving in the Internet business. Rakesh Mathur, co-founder of Junglee, who quit Amazon a few weeks ago along with Shriram, has decided to come back to India in five years to help strengthen the infrastructure here. Rohit Chandra set up the Internet's first user identity company, eCode.com – you get a free, single, permanent identity which you retain even though your e-mail address or Web site may change. It was a simple idea, and it succeeded because it is useful. Prof. V. Rao Vemuri of the University of California at Davis, is one of the gurus of neural computing. In recent months he has turned his attention to his home State, Andhra Pradesh, where he has set up an Indo-U.S. company, Smartifacts.com, dedicated to "mining" nodules of useful information from the Internet and delivering it in processed form to the receiver.

After being highly successful in the U.S., these people are now looking homeward since for the first time in many years the technological prospects have increased. They think that India can launch itself into the big league. In the fading days of this century, it looks like India has found in them its secret weapon – a cyber-driven *'agni asthra* that will power its surge into the next century. ■

At the India International Maritime Expo '99 in Panaji.

RAVI SHARMA
in Panaji

THE India International Maritime Expo '99 or Inmex 99, held in Panaji, Goa, from October 6 to 10 was the first exhibition in India to be dedicated to maritime products and services Held at a time when the global maritime industry is facing a sea of troubles, the event provided a platform for the industry to advertise its wares It also underscored India's achievements in this field and focussed on the challenges ahead as India develops its maritime infrastructure

During 1998-99, the overall global gross registered tonnage (GRT) was 8 33 million, about 1 68 per cent less than that in the previous year Commander J Sinke, a retired Dutch naval officer and sales manager of MarineSafety, a Dutch company, said "The maritime industry experiences ebbs and flows Right now, the prospects for the offshore industry are not good "

Inmex '99 focussed on maritime development and utilisation across the world Although the prime targets were Central and State government organisations, commercial operators were also in it out. As one exhibitor said: "Almost everyone knows what everyone else has to offer, but being here and showcasing our products is important "

Prominent manufacturers from 22 countries, including India, were represented at Inmex '99 The exhibition covered the entire gamut of maritime products and services Among the manufacturers were Schottel, MarineSafety, Kamewa Finland, France Telecom, the Shipping Corporation of India (SCI), the Chennai Port Trust, the Mumbai Port Trust, the Mormugao Port Trust, Simpsons, Adani Port, IHC Holland, Skanti, Penang Port, Port Klang, STN Atlas, CounterFire, Cummins India, Heinen & Hopman Engineering, Anderson Marine, the National Institute of Oceanography and Stone Marine The Indian Navy, the Indian Coast Guard, the Ministry of Surface Transport, the Port Trusts and Defence Laboratories such as the Naval Science and Technological Laboratory and the National Ship Design Research Centre were also represented.

Inmex '99 was organised by Pradeep Deviah and Associates, a Bangalore-based group which specialises in exhibitions, with support from the Ministry of Surface Transport. Over 150 stalls were put up in three prefabricated hangars; among the products on offer were large ships, bulk carriers, fishing trawlers, tug boats, dredgers, work boats, navigational equipment, marine engines and barges Among the services were port development, ship-building, fire-fighting, communications, ship repair, marine air-conditioning, vessel traffic management systems and oil spill crisis management systems

A two-day conference, Maritime 2000, held concurrently with Inmex '99, generated debates on trade, shipping, ocean resources, ports, oil spills crisis management, harbours and ship-building. Only Indian vessels participated in the static display at Inmex '99.

WATERWAYS – global, inland and coastal – are a cost-effective alternative to rail and road routes, which are overly congested worldwide. Dr. Jose Paul, Chairman of the Mormugao Port Trust, said, "More than 80 per cent of all international trade by weight or volume moves by sea; in the case of developing countries, the percentage is even higher. (In India's case, it is 95 per cent.) In order to facilitate the extension and diversification of international trade, sea ports and their facilities must be constantly expanded, modernised and run efficiently."

A range of products and services to cater to these demands were on offer at Inmex '99. Dutch maritime officials promoted vessel traffic systems that are in place at Rotterdam, the world's busiest port. These included virtual reality systems that allow marine pilots, tug masters and vessel traffic service operators to simulate escort, towing and shore-based pilotage exercises. Sinke said that MarineSafety's Full Mission Bridge Simulators took in over 200 ship models and different geographic areas, including the Mumbai port.

IHC Holland showcased its newly developed rotor tugs. Tug boats have no rudder; they have only three propellers. The "rudderpropellers", as they are called, make the 75-tonne bollard pull tugs highly manoeuvrable and cost-effective.

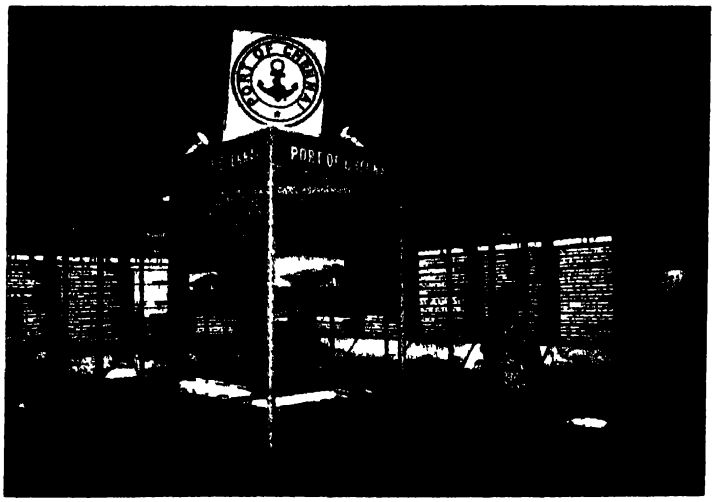
Poland's maritime industry was represented by its Consul in Mumbai, Ireneusz Makles. According to Makles, Poland's shipyards have overcome the bleak years. "Today we are the world's sixth largest shipbuilder. Many of our yards have been merged and privatised and are working to full capacity." Polish ships are cheaper than those manufactured in other European countries and have a ready market in Norway and Germany. Their shipyards also offer repair facilities (for which most Indian ships go to South Korea) and are looking for joint ventures with Indian shipyards. A memorandum of understanding was signed recently between Naval Shipyard Gdynia and the Mazagon Docks for the production of four medium-class warships for the Indian Navy. The project will cost $160 million, and production will start in 2000; one warship will be manufactured in Poland and the rest in India.

Polish shipyards also hope that the Indian government will call for a re-tender for the 105,000 DWT (Dead Weight Ton) aframax oil carrier that the SCI wants to acquire. The South Korean company Hyundai won the contract but is yet to make the delivery.

China, which is competing with South Korea in the Asian maritime market, had a small presence through its agents. Shandong Machinery from Qingdao province offered propulsion systems, cargo-handling equipment, navigational aids and even patrol and life boats. Mohan Chitre of Bohra Industries, which will supply the Chinese firm's equipment in India, said: "Chinese products are cheaper and we hope to make articles like propellers a consumer item which can be bought off the shelf."

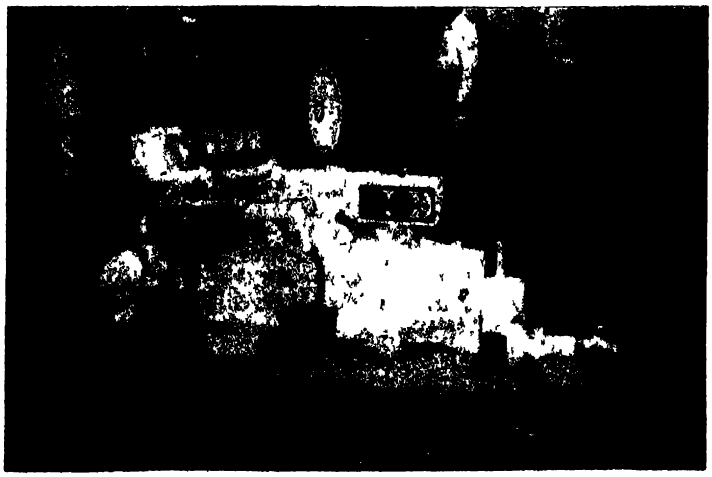
Most of the Indian companies at the show were representative firms or selling agents for foreign companies. The Chennai-based Simpson and Co. Ltd, for example, presented its Volvo Penta marine engines (150 to 600 horsepower). The engines have their outdrive mounted on the stern, which makes it easy to use the rudder. Simpsons also put its indigenously built Simpson Marine Engine (54 hp) on show.

Cummins India showcased its indigenously developed 6B 5.9 Marine (94 hp) engine. According to Cummins zonal manager V. Nageshwaran, the light-weight engine, fuel-efficient and environment-friendly, will be ready for the market by January.



Wadia Boat Builders from Bilimora (Gujarat), Anderson Marine from Goa and Tebma Shipyards from Chennai, whose products range from dredgers, small craft, boat and launch builders to pontoons and barges, were three of the Indian enterprises which part-manufactured the equipment that they sold.

Tebma Shipyards builds dredgers, and its Tusker series of standard cutter suction dredgers, with amphibian capabilities, are built with the technical collaboration of Degroot Nijkerk Machinefabriek, Holland. Its Turtle 100 dredger, being used at the Vijayawada Thermal Power Station, can also be used on small canals and lakes and cooling water canals of power stations; it can be used even to clean city sewers. According to E. Chacko, managing director of Tebma Shipyard, the municipal administrations of Surat and Delhi are interested in using Turtle 100 to clear sewage lines.



Most Indian shipbuilders build the hull, which could be made of steel, wood or fibreglass, depending on the size of the vessel and the requirement; the engine and the propulsion systems are imported.

The Naval Science and Technological Laboratory, which is part of the Defence Research and Development Organisation (DRDO), showcased its High Speed Towing Tank.

THE Indian maritime industry is going through difficult times.

The Port of Chennai stall at Inmex '99. The lack of adequate infrastructure and management systems at Indian ports came up for discussion at the Maritime 2000 conference.

Cummins India's indigenously developed 94-hp engine, which will be in the market by January 2000.

Economic liberalisation has facilitated private participation in infrastructure development, including ports, but simultaneously many concessions have been withdrawn or diluted. The quantum of cargo that the government controls has fallen, resulting in a reduction of cargo support for Indian shippers.

Indian ships carry only around 32 per cent of all Indian cargo and just 10 per cent of Indian breakbulk cargo; foreign vessels carry the rest.

According to Rohet Tolani, chairman and managing director, Tolani Ltd, an Indian shipping company, "Indian shipping has become less competitive in the global context and therefore less profitable." Tolani added: "The industry is therefore unable to compete for capital for the long term. Owing to discriminatory taxation of Indian seafarers serving on Indian ships, the industry is unable to attract the best manpower. These factors, and antiquated labour laws, have together meant that the industry is incapable of managing operating costs."

LACK of adequate infrastructure and management systems at Indian ports came up for discussion at Inmex '99. Although the 11 major Indian ports handle (and will continue to handle) cargo in excess of their capacity, the volumes are far lower than those of ports in other Asian countries. Captain Rajan Vir, president of the Indian Maritime Foundation, said: "No Indian port qualifies as a hub port (a port where the world's mainline traffic comes). Even the major ports are used only as feeder ports. Only the smaller lines come to India, while the mainlines move from hub to hub. In the Asian region, mainlines move from Aden to Colombo to Singapore to Hong Kong and Japan."

Cargo congestion, customs delays, protest action by dock workers or delayed paperwork often means that the turnaround time (the time taken for unloading/loading of a ship) at Indian ports is unduly long. As a result, ships waiting to unload have to pay demurrage to the ports. According to SCI Director Sudhir S. Rangnekar, around $0.5 billion is paid to Indian ports as demurrage every year.

Commodore Ranjit B. Rai added: "Most Indian ports do not have heavy lift capacity, which has therefore to be hired from outside – a costly proposition, which pushes up costs of projects for which heavy machinery is required."

Rear Admiral (retd) Mohan Raman said: "The world over, shipbuilding is a catalyst for industrial growth. It was the case in Germany, Britain, Japan and even South Korea. Unfortunately, this is not being given importance in India. There has to be a dramatic increase in the volume of water-borne trade, both domestic and international."

According to a statistical report on world fleets (1998-99), India ranks 17th among maritime nations in terms of GRT. It has a fleet strength of 425 vessels with a combined GRT of 6.41 million.

The Planning Commission has set a target of 9 million GRT during the Ninth Plan, but that is unlikely to be met. However, Rangnekar argues that GRT is not the only criterion to judge a fleet "It is not necessary to keep adding tonnage; we can charter tonnage." The answer, he says, is "a profitable, robust-growing shipping industry". He adds: "Privatisation is not the panacea. What we need is an attitudinal change. For example, most Indian ports are departments of the government. Instead, let them operate as corporations. Make them responsible for their profits or losses."

There is also an opinion that if Indian ships are to increase the amount of cargo they carry, they will have to go in for cross-trading – hop from port to port with cargo that is not Indian. According to Rangnekar, this is the litmus test of a fleet's standing in the international market. Indian ships, he said, tended to travel empty to their ports of loading, using ballast instead of cargo. Cross-trading would bring down the ballast component (which is now 40 per cent).

Many speakers at Maritime 2000 were of the opinion that the choice before major and minor ports as they planned infrastructure development was to add new facilities or convert existing facilities into more efficient propositions. Mukesh G. Parikh, vice-president, Adani Port Ltd, one of Gujarat's fledgling semi-private sector ports (in which the Gujarat Government has a 26 per cent stake), said that during 2001-06 India would need $18.3 billion for infrastructure development.

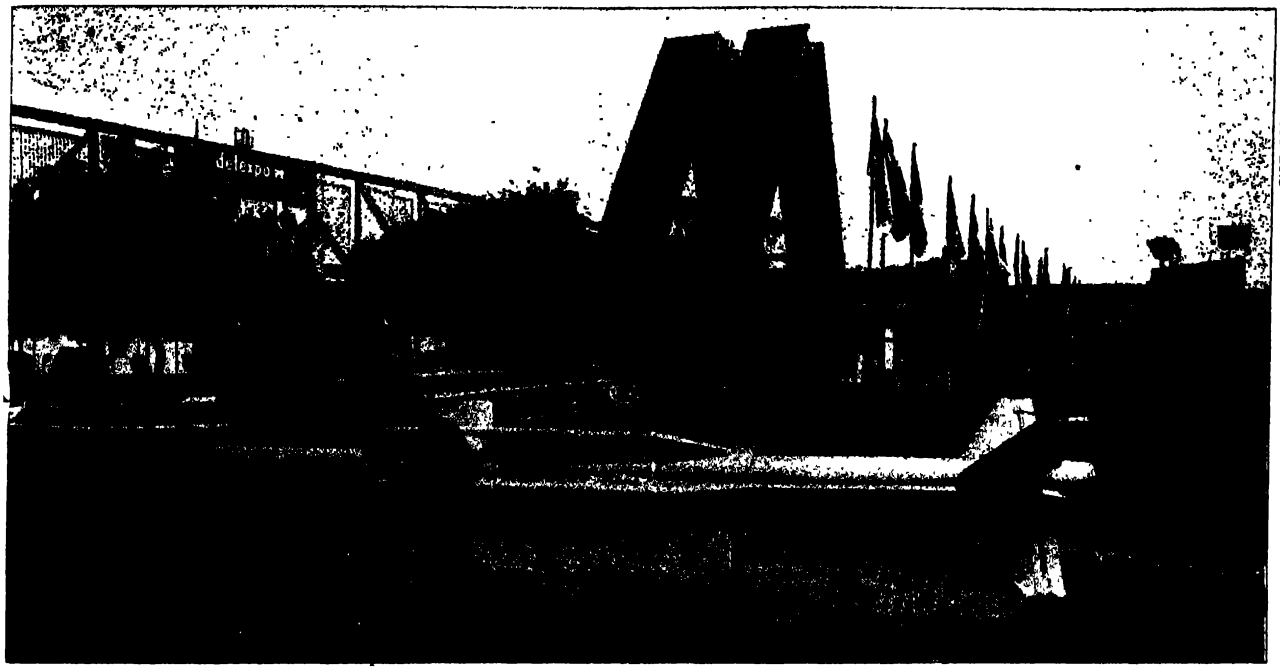
Although successive governments at the Centre have revised various sections of the Indian Ports Act in order to encourage private participation, the feeling was that much more needed to be done. Parikh said: "The paperwork and clearances that have to be obtained are time-consuming and laborious. There should be a single window for securing clearances, within a time-frame."

India's major ports keenly encourage private sector participation in keeping with the Vision 2020 plan prepared by the Ministry of Surface Transport. A study undertaken by the Rail India Technical and Economic Services (RITES) in association with High Point Rendel (U.K.) and Prof. E.G. Frankel of the Massachusetts Institute of Technology states that if the terminals or services within an existing port are privatised, they will stand a much better chance of taking off than a totally new port at a greenfield location.

The report notes that under the Indian Ports Act, a major port cannot be privatised; therefore it recommends that terminals and services be offered to private entrepreneurs to run.

The Mumbai Port Trust, the first Indian port to offer designated cargo-specific berths to the private sector to operate, is in the process of handing over a general cargo berth. The entrepreneur will have to equip the berth, pay a royalty, undertake to deliver an assured quantum throughput and manage all operations.

Saroj Tahiliani, company secretary of the Mumbai Port Trust, said: "Private initiative has been a good experience. They have been able to deliver a better throughput than we." The port also plans a joint venture with the private sector to upgrade its existing dry docks at a cost of Rs.25 crores.



Other major ports have followed the Mumbai example. The Ennore port has gone a step further: it is to be run as a corporation. Other such exercises hinge on its success.

While it is unrealistic for India even to think of competing with 'flags of convenience' or open registry countries such as Panama, Liberia and the Bahamas (where rules and regulations are not as rigorous and costs are 30 per cent less), some exhibitors at Inmex '99 felt that if India invested more in infrastructure development, it could hope to benefit from having an efficient and cost-effective growth in maritime transport.

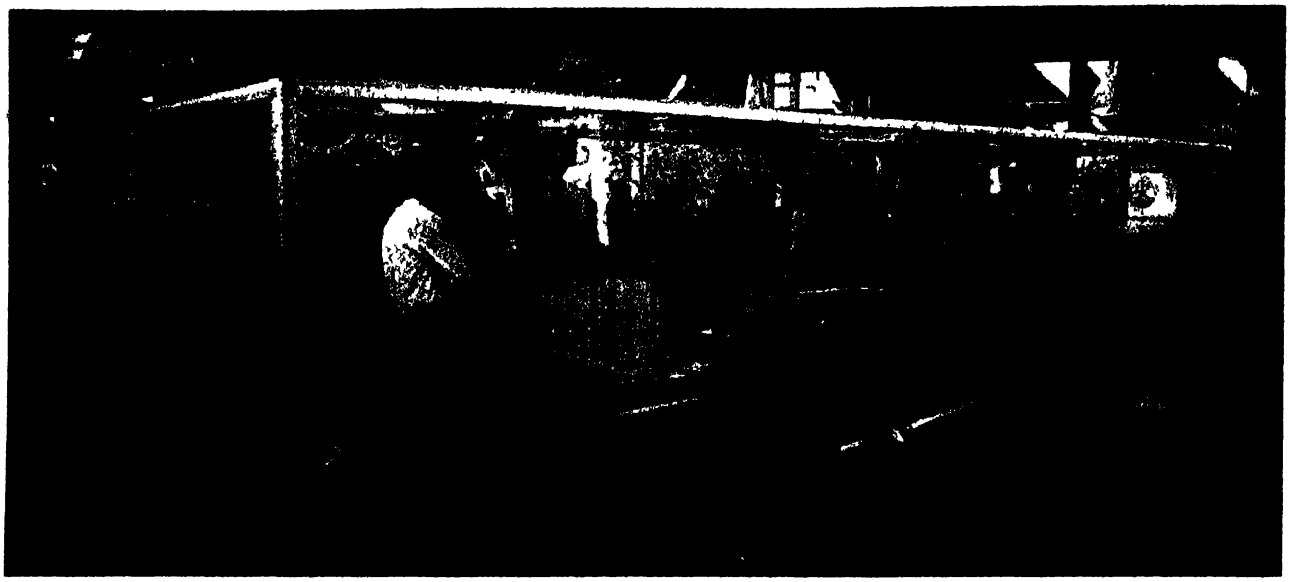
As was evident at Inmex '99, the world wants to do business with India, provided an enabling environment is provided. India plans to modernise and increase the handling capacity of its 11 major and over 150 minor ports from the present 250 to 420 million tonnes by 2002. India also plans to develop coastal shipping and inland waterways and modernise its fleet. The development of port infrastructure alone is expected to cost $4 billion. But all this is almost certain to translate into tonnes and tonnes of business. ■

The defence bazaar

As many as 193 companies from 17 countries participated in Defexpo '99, an exhibition of defence equipment held recently in Delhi.

PICTURES R V MOORTHY

Akash, one of the four missiles manufactured by Bharat Dynamics Limited, among other exhibits at Defexpo '99 in Pragati Maidan, New Delhi.



JOHN CHERIAN
in New Delhi

INDIA'S first land and naval systems exhibition, Defexpo '99, was held in Delhi from October 12 to 16. It was organised by the Department of Defence Production and Supplies (DDPS), Ministry of Defence (MOD), in association with the Confederation of Indian Industry (CII). According to Prabir Sengupta, Secretary, DDPS, it was meant to showcase the capabilities of India's defence industry and provide a forum for the government and the private sector to interact with each other and strengthen the country's military capabilities in order to meet the challenges of the new millennium.

The Indian defence industry was represented by 39 ordnance factories, which are under the Ordnance Factory Board (OFB); eight public sector undertakings; and 68 private sector industries, including small-scale industries. The highlight was the presence of 193 companies from 17 countries. South Africa, Israel, the United Kingdom and Russia had a significant presence. The South African Defence Minister, Mosiuoa Lekota, led a delegation of senior Ministry and South African National Defence Force (SANDF) officials to India specially for the Defexpo. Lekota's visit is viewed as one more "concrete" step towards the implementation of the "strategic partnership" between the two countries. In the South African pavilion, that country's arms industry displayed its prowess in niche defence capabilities. On display for the first time there was an Indian-built Arjun tank fitted with a South African T6 turret (155 mm artillery howitzer). This collaborative effort was the result of an earlier agreement on defence cooperation between the two countries. Despite some misunderstandings at the political level, defence cooperation between the two countries has reached an advanced level. For instance, South African 155 mm artillery shells, which are used in the Bofors guns of the Indian Army, played an important role in the Kargil conflict.

Talking to mediapersons, Lekota said that he expected a defence and security agreement with India to take shape in the near future. South Africa has one of the largest defence production industries in the world and is keen to sell weapons to or start joint production with friendly countries. India has purchased 90 South African-made Casspir armoured vehicles, which have proved themselves in the tough African terrain. Also under active consideration is the purchase of the G-5 towed artillery gun. South Africa recently signed multi-billion dollar defence deals with Germany, Italy and Britain.

The South African Government's "guns and butter" policy has involved the signing of multi-billion dollar contracts with a view to extracting promises from foreign arms makers of investment in South Africa's defence or civilian industries. German, British, Swedish and Italian suppliers have promised to invest a total of nearly $17 billion in develop-

The Indian defence industry displayed a wide range of products, services and communications systems available for export.

ment projects. These include a steel mill, a crankshaft factory and a tannery unit. According to South African officials, the total represents a return of more than 3 to 1 on South Africa's investment in military equipment. The defence deal was worth $5 billion.

OTHER countries that had big pavilions at the exhibition and that were eager to showcase their military hardware were Russia, Israel and Britain: only these three had separate national pavilions. Leading arms manufacturering countries such as the United States and China did not participate in Defexpo. The government had wanted all leading arms manufacturers to be present and had extended invitations to all countries save Pakistan. The organisers were not forthcoming about the reasons for the absence of the U.S. and China, but the suspicion was that it had something to do with the post-Pokhran sanctions imposed on India. France was not too keen to participate but the Indian government apparently insisted on a French presence. The French are more interested in clinching aviation deals. The Israelis, on the other hand, were eager participants. Ahead of the exhibition, there were unconfirmed reports that India had committed itself, in the wake of the Kargil conflict, to buying hi h-tech Israeli weaponry worth $200 [illegible].

[illegible]he British pavilion had two of the [illegible]'s top 10 defence companies par-[illegible]ing – British Aerospace, the [illegible] largest, and Marconi Electric [illegible]s, the fifth. The strong British presence had partly to do with India's imminent deal to purchase 66 Hawk training aircraft from Britain. According to reports, the Indian government has earmarked $1.38 billion to procure advanced jet trainers. With the Bharatiya Janata Party-led government now safely ensconced in New Delhi, the British armaments industry feels that India will be a seller's market. Immediately after taking office, Defence Minister George Fernandes hinted that the country's defence budget will be raised further.

The 5.56 mm INSAS Rifle on display.

The Indian military and political establishment seems to be impressed by the quality of the Israeli weapons that have already been purchased and the equipment that are being tested. In fact, the Secretary, Defence Production, said in response to a question that India has identified Israel, the U.K., France and South Africa as potential long-term collaborators for the development of military hardware. Diplomats from Arab countries are of the opinion that Israeli weaponry is too expensive and most of it is manufactured under licence from U.S. companies. Many Arab governments and the Arab League have expressed their misgivings about growing Indo-Israeli military links. Indian officials, however, point out that countries like China also deal with Israel in the international arms bazaar. China and Israel have had strong defence links since the late 1980s, despite periodic protests from U.S.

A glossy brochure brought out by the Israeli Defence Ministry claimed that every military item made in Israel, from a bullet to an early warning system or a missile, was always operationally tested in the field, and bore the tag of "battle proven". The Israeli focus at the exhibition was on advanced products such as unmanned air vehicles, early warning systems, defence electronics, smart weapons systems and other state-of-the-art intelligence systems. The upgrading of aircraft and helicopters and the supply of unmanned aerial vehicles (UAVs) are priority areas for the Israeli arms industry.

British industry had a strong presence at the exhibition.

The Israeli focus at the exhibition was on advanced products such as unmanned air vehicles, early warning systems and other state-of-the-art intelligence systems.

The Russian presence was comparatively low-profile, but the fact remains that defence links between India and Russia continue to remain strong. Both countries have a "strategic partnership", as the representative of Rosvoorouzhenie, the Russian foreign trade organisation representing the Russian defence industry, said in Delhi. According to the official, this means that Russia is the only country that is willing to supply "special weapons" exclusively to India. No other country or manufacturer has yet given a similar assurance to the Indian government. The official said that India actively considered buying the Russian S-300 air defence system. The Rosvoorouzhenie official also emphasised that the Russian arms industry attached great importance to the upgradation and modernisation of Russian military hardware already in use. The official also underlined a major selling point of Russian armaments – that of reliability at reasonable prices.

The Indian defence industry displayed a wide range of products, services and communications systems available for export. Officials of the Ministry of Defence stated that the exhibition demonstrated the capabilities of the Indian defence industry and assisted potential collaboration in defence electronics and avionics. They expressed the hope that such interaction would serve to raise the level of defence exports in the coming years.

Prabir Sengupta pointed out that the direct supply of private sector goods to the defence services had more than doubled in the last few years. Tarun Das, Director-General, CII, said that Defexpo '99 represented a "unique partnership" between the private and public sectors and was "the most visible symbol" of an increasingly intensive interaction between the two in the past few years.

George Fernandes said that Defexpo reflected the increasing interaction between public and private sector industries in the area of defence production. Inaugurating the exhibition, he said that India was keen to establish joint ventures to produce world-class defence hardware for the domestic and export markets. He admitted that Indian exports were "modest" but expressed the hope that India would be able to "access a large share of the export market". Fernandes even mentioned that India exported missiles to some countries. People involved in India's defence production feel that West Asian and South Asian countries are potential markets for Indian military hardware. But the Managing Director of Bharat Dynamics Limited (BDL), Commodore S. Rao, is of the opinion that India has entered the export market too late. BDL, which makes four missiles – Prithvi, Trishul, Akash and Nag –, executed an export order worth Rs.5 crores during 1998-99.

Lessons for India

A. G. NOORANI

Contemporary British Politics by Bill Coxall and Lynton Robins; Macmillan; pages 538, £14.50
British Politics since the War by Bill Coxall and Lynton Robins; Macmillan; pages 322, £13.99
Choosing a Leader: Party leadership contests in Britain from Macmillan to Blair by Leonard P. Stark; Macmillan; pages 246, £15.99.
Prime Minister, Cabinet and Core Executive by edited by R.A.W. Rhodes and Patrick Dunleavy; Macmillan; pages 364, £13.99.
Constitutional Reform: Reshaping the British Political System by Rodney Brazier; Oxford; pages 197, Rs 795.

JUST as the Constitution-making process began in India, Sardar Patel said in the Constituent Assembly on July 15, 1947 that the country had decided to opt for "the parliamentary system of Constitution, the British type of Constitution with which we are familiar". It was a natural and wise choice. But, while the model continued to develop, the emulator stagnated. For instance, parliamentary privileges in India remain frozen as of January 26, 1950, when the Constitution came into force. A Supreme Court ruling in 1958 threw the law centuries back and endowed Speakers of the Lok Sabha and State Assemblies with the power to order the press not to report expunged proceedings. No Speaker of the House of Commons claimed this power. The Commons would not dream of exercising the power of commitment for breach of privilege in the manner it is done in India. For that matter, no English judge would get worked up over comments made by Arundhati Roy and Medha Patkar as Chief Justice A. S. Anand and Justice S. P. Bharucha did.

There is sharp contrast on a whole range of constitutional and political issues between reform and renewal in Britain and stagnation and even regression in India. Federal India refuses to rid itself of distortions in constitutional practice which make a mockery of the States' autonomy as recognised by the Constitution. The tepid Sarkaria Report has been ignored for over a decade. Unitary Britain has made impressive strides in the devolution of power to the regions in what, to use its correct name, is the United Kingdom of Great Britain and Northern Ireland; a union of England, Scotland, Wales and Northern Ireland. Referendums were held in Scotland, Wales and Northern Ireland on how they should be governed. Legislation was briskly set afoot. The Scotland Act, 1998 provides for a Scottish Parliament and a Scottish Executive. Scotland's first Parliament in nearly 300 years met last May.

The Government of Wales Act, 1998 establishes a National Assembly of Wales. Elections were held to these bodies and their executives are in place. The Belfast ("Good Friday") Agreement of 1998 was approved in a referendum by an overwhelming majority followed by elections to a new Northern Ireland Assembly. Decommissioning of arms by paramilitary groups is holding up progress. The statutes enacted provide good models for devolution of power to regions within the States.

There is sharp contrast on constitutional and political issues between reform and renewal in Britain and stagnation and even regression in India. Federal India refuses to rid itself of distortions in constitutional practice.

Both India and the U.K. are pledged to fight privilege and hate groups, racial in the one case, communal in the other. Prime Minister Atal Behari Vajpayee's censure of the murder of Australian missionary Graham Staines and his two sons did not touch the groups behind it. Prime Minister Tony Blair's condemnation of the forces behind Stephen Lawrence's murder did. The Macpherson report found "institutionalised racism" in the police force. Justice D. P. Wadhwa of the Supreme Court exonerated the Bajrang Dal, the Rashtriya Swayamsevak Sangh (RSS) and the Bharatiya Janata Party despite overwhelming evidence of the culprit Dara Singh's affiliation with these bodies.

Lok Pal Bills have been hanging fire since 1972. The House of Commons' Select Committee on Standards in Public Life is not the best instrument for eradicating corruption; but it works. The first thing our Parliament's Committee on Ethics did was to travel to Europe, with the U.S. next on its busy agenda. A gaping void in the British constitutional system has at last been filled by a very British compromise. Parliament is sovereign, unfettered by any Bill of Rights Act. However, the Human Rights Act, 1998 incorporates as part of U.K. law the rights and freedoms guaranteed by the European Convention on Human Rights (1950) by an elaborate and cumbrous procedure.

ALL this, bar the Committee on Standards in Public Life, has been achieved by the Labour Government since it was voted to power in April 1997, with promise of more reforms to come. In his speech at the Labour Party Conference at Bournemouth on September 28, Blair pledged the party to fight "the old class divisions, old structures, old prejudices, old ways of working and of doing things... The old prejudices, where foreign means bad. Where multi-culturalism is not something to celebrate, but a left-wing conspiracy to destory their way of life... The old elites, establishments that have run our professions and our country too long. Who have kept women and Black and Asian talent out of our top jobs and senior parts of Government and the services, who keep our bright inner city kids from our best universities. And who still think the House of Lords should be run by hereditary peers in the interests of the Tory Party."

He also said: "The forces of conservatism allied to racism are why one of the heroes of the 20th century, Martin

Luther King, is dead. It's why another, Nelson Mandela, spent the best years of his life in a cell the size of a bed. And though the fact that Mandela is alive, free and became President, is a sign of the progress we have made; the fact that Stephen Lawrence is dead, for no other reason than he was born black, is a sign of how far we still have to go. And they still keep opposing progress and justice. What did they say about the minimum wage?..."

There is little awareness in India of the incongruity of working a democratic Constitution through undemocratically governed political parties.

He, thus, related the fight against racism to the fight for equality and social progress. There is a lesson for the Muslim communal bodies here.

There is yet little awareness in India of the incongruity of working a democratic Constitution through undemocratically governed political parties. In the U.K. the candidate for Parliament is *elected* by his constituency party, not selected by the party headquarters in London, though it has a voice in the process if things go wrong; more so in the Labour Party. A party high command as such does not exist. The MP is not beholden to anyone for a favour. Both Labour and Conservative parties have undertaken extensive reforms of their party structures. Two of India's leading parties are run with scant respect for democratic norms. The BJP, in the final analysis, obeys the RSS' diktat. The Congress(I) is based on the personality cult with a clique that constitutes the "High Command".

The cluster of books under review records the impressive strides towards reform in the U.K.

Except for the book, *Constitutional Reform*, which is by a distinguished constitutional lawyer, the rest are by political scientists. All the books are well documented and contain useful material for reference. The historical resume in *British Politics since the War* provides the setting in which a society, innately conservative, bestirred itself for radical change. Two recent incidents reflect the political culture there. On May 21, 1999, the Labour Government found that its majority of 178 in the House of Commons had dwindled precariously to just 40 when many of its MPs either abstained or voted against the leadership on its plans to cut welfare payments to the disabled who were unable to work. This was a personal rebuke for Prime Minister Tony Blair. It could be delivered only because the MPs were not indebted to him for their seats in the House.

Consider another, on July 9. The Prime Minister tried to dampen talk of a leadership rift with his deputy, John Prescott, while acknowledging that he and Prescott were from "different parts of the Labour Party". He added: "Although he comes from the traditional wing of the Labour Party and I come from the modern wing, we both believe in the same things." They had fought over the public sector in what was seen as symbolic of the gap between Labour modernisers and its traditional working class supporters. Prescott swiped at the "faceless wonders" in Downing Street, whom he blamed persistently for sniping at his bid to reform the chaotic, privatised railway system.

No one suspects Prescott of ambition to oust Blair. Their differences are over ideology and policy; openly aired and with no fear of a sack. Prescott enjoys respect in the Labour Party and while the party is behind the Prime Minister, it is not his fiefdom. This is what gives life and meaning to parliamentary democracy. A Constitution erects the skeleton of the polity; politics gives it flesh and blood.

These incidents could have happened in India only in a few rare cases; L. K. Advani, for instance, enjoys power in his own right. But we do need furiously to think of the pathetic state of our parliamentary democracy in the following vital topics: inner-party democracy generally, the absence of which in very many of them has invited censures from Chief Election Commissioners for the last two decades; selection of party candidates; election of the leader of the parliamentary party; the state of the Cabinet; and reforms to ensure effective accountability in the government.

Coxall and Robins' book, *Contemporary British Politics*, has been comprehensively revised in its third edition to cover "New Labour's First Year". Both Tony Blair and William Hague, leader of the Conservative Party in Parliament, known as "the 1922 Committee", have made extensive changes in the set-up of their respective parties which are succinctly described. Both have tightened their grip over their parties, ironically, amidst democratic reform. Blair has sought to bypass the National Executive Committee (NEC) and the Annual Party Conference by appealing directly to the members.

Hague has worked to build a unified national party, ending the division between the parliamentary party and the central office. The National Union of Conservatives and Constitutional Associations is to be wound up. The party will now comprise its two other elements: the parliamentary wing and the Constituency Associations, "the party in the country". Hague plans to build a mass-membership party.

The authors' description of the procedure for the selection of parliamentary candidates is of particular relevance to India and bears quotation *in extenso*. "Selection of Labour parliamentary candidates is done by the constituency parties (CLPs). CLPs consist of delegates from a wide variety of labour organisations and societies and are run by General Management Committees (GMCs). Selection of parliamentary candidates cannot begin without permission from the NEC, which automatically forwards its approved list of candidates to the constituency party concerned. Nominations are made and usually include many names not on the approved list. Next, the CLP General Committees shortlist candidates. Shortlists must include the sitting labour MP; any candidate receiving 25 per cent of the nominations or any candidates with 50 per cent of the nominations from affiliated organisations; at least four candidates where no Labour MP is in contention; and at least one woman. If the sitting MP is nominated by two-thirds of nominating bodies, he or she is automatically re-selected; and if he or she has at least one nomination the CLP may vote for automatic re-selection anyway. Since 1993, the final selection of Labour parliamentary candidates has been in a full meeting of the CLP by the 'one member one vote' principle. Successful candidates must then seek endorsement by the NEC.

"CLPs have been subject to considerable NEC intervention in their selection processes in recent years. The main example of this centralisation was the imposition of all-women shortlists in half of 'winnable' seats between 1993 and 1996. But there have been many instances of tough action by the NEC where it has

found local party choices of processes unacceptable; for example, Denis McShane was imposed on the local party in Rotherham (1994). Phil. Woolas on the new Oldham and Saddle-worth CLP (1995) and, most controversially, the candidature of Liz Davies, the choice of the Leeds NE CLP, was overruled (1995) on the grounds of her political 'disloyalty'. The NEC has also suspended CLPs it suspects of dubious practices.

In contrast, "local Conservative Associations possess considerable freedom from outside interference in choosing a parliamentary candidate. Candidates must either be on the party's approved list of candidates or, if not, gain acceptance by the party's Standing Advisory Committee on candidates. A Vice-Chairman at Central Office is in charge of the 800-strong candidates' list. As soon as they are on the list, candidates can apply for advertised vacancies. Applications are considered by a sub-committee of the local Association's Executive Council; it draws up a shortlist of about 20 candidates, whom it interviews and reduces to a final shortlist of about three, who then go before a final selection meeting of the full Executive Council. The Council then must recommend at least two candidates for final choice by a special general meeting of the Association. Local associations have largely resisted Central Office pressure to select more working-class and women candidates."

There are, thus, checks on power at every tier – the constituency party, the party headquarters, the parliamentary party comprising MPs elected in the manner they were, the Cabinet, and the leader of the party elected by a free vote. Forget the idolatrous Congress, the Janata Party in 1977 and the Janata Dal in 1989, 1996 and 1998, picked the leader who became Prime Minister by dubious procedures, shunning a free vote.

Leonard Stark's work *Choosing a Leader* demonstrates after a thorough survey of elections since 1963, that far from imparting unity, free elections to the post of leader *helps* to bind it together. It ensures fairplay and the defeated candidates take the result in their stride. An Appendix sets out the texts of the Rules for the Selection of leaders of all three parties, Labour, Conservative and the Social and Liberal Democrats.

Hague's proposals envisage "a new democratic system for the election of the party leader in which MPs choose the candidates in a Westminster primary and then the leader is chosen by the party membership by a simple majority on a one member/one vote principle."

In India, the Intelligence Bureau and the Research and Analysis Wing should be made more accountable... The Interception of Communication Act, 1985, however inadequate, imposes some checks on the grosser abuses of phone-tapping.

RHODES and Dunleavy's collection of essays demolishes the myth of "prime ministerial government", fostered by Richard Crossman. Their assessment of the present state of the Prime Minister – Cabinet relationship is far more accurate than is drawn from admiring accounts of Margaret Thatcher's tenancy of 10 Downing Street.

Rhodes points out: "If the Thatcher era apparently highlighted the strengths of the monocratic approach to prime ministerial power, it also rather graphically demonstrated its dangers and limitations. The resignations of Michael Heseltine over the Westland affair, Nigel Lawson over the role of Sir Alan Walters as the Prime Minister's economic adviser, and Sir Geoffrey Howe over European Community policy all illustrate that a domineering style can impose heavy costs on a Prime Minister."

Asquith bequeathed to the world his one memorable saying: "The office of Prime Minister is what its holder chooses and is able to make of it." It is important to remember that the Prime Minister is expected to lead, not only by the country at large but by backbenchers and by ministerial colleagues. "They want him to give a sense of purpose, to inspire the party at the (party) conference, to mince the opposition in Parliament and to win the next election. As far as policy goes, they want purpose, cohesion and no nasty parliamentary rebellions. When ministers disagree, they want the matter sorted out swiftly and without public embarrassment. Two or three senior members of Cabinet might not be too upset if the Prime Minister bungles it because they might gain promotion, possibly even the succession, if he goes – although Prime Ministers are seldom, if ever, overthrown in office; Mrs. Thatcher was the first peacetime Prime Minister to be overthrown for 70 years."

Michael Heseltine's resignation from the Cabinet undermined Thatcher's leadership. Another contributor, Simon James, remarks that "this held-on approach seems also to have heightened the likelihood of her being overruled by her Cabinet, which happened to her with a frequency unknown to her more cautious predecessors. On at least three issues – public spending cuts in 1981, a radical review of public expenditure in 1982 and membership of the ERM – she was overruled on issues so crucial to the Government's policies that they could easily have broken her administration (and indirectly, the ERM conflict did precisely that)."

Lastly, there has been significant reform in a wide range of institutions and agencies. In India, the Intelligence Bureau and the Research and Analysis Wing still function without a statutory charter. They should be made more accountable with statutes like the Security Services Act, 1989 on the MI5 and the Intelligence Services Act, 1994, concerning MI6 and the GCHQ. The Interception of Communication Act, 1985, however inadequate, imposes some checks on the grosser abuses of phone-tapping. The Official Secrets Act, 1989, is an improvement on the archaic law; not much though.

The cumulative impact of reforms on the system and the inadequacies that still remain are analysed incisively in Rodney Brazier's book, aptly sub-titled "Reshaping the British Political System". He makes detailed suggestions on the reform of the House of Lords and the judiciary.

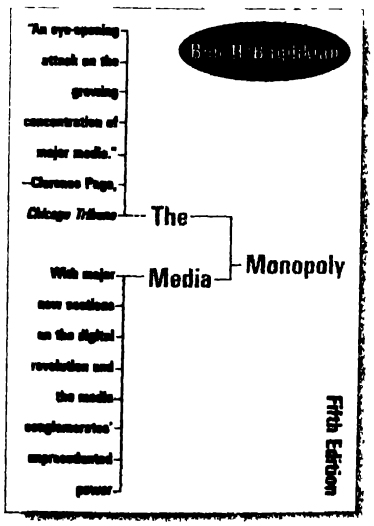
But, by far his best contribution is his critique of "Ministerial Powers". Despite the checks, executive power has increased and calls for yet more effective curbs.

Is it too much to ask for a national consensus on similar reforms in India? It would be far more worthwhile than the escapist and dangerous advocacy of the presidential system. India's Constitution has stood the test of time. The fault lies with constitutional practice which has warped the supreme law and the political set-up which is essentially undemocratic.■

The new masters of the universe

SUSAN RAM

The Media Monopoly by Ben H. Bagdikian, fifth edition, paperback, Beacon Press, 1997; pages 289, $16.



IN 1983, Ben Bagdikian, a two-time Pulitzer Prize-winning journalist, documented and exposed what he saw as the central paradox in the development of the United States' media during the twentieth century. The very period that had wit nessed exponential growth in the scope and reach of the media, diversification of media forms and modes of delivery and technological advances beyond the imaginings of our ancestors a hundred years ago had also seen an accelerating, seemingly immutable process of narrowing: the step-by-step shrinkage of the media's ownership base. In 1983, argued Bagdikian, the U.S. media, commanding awesome power to influence events and perceptions at home and across the planet, were dominated by as few as 50 private corporations. In his study, he set out to explore the implications – for journalism, for society, for democratic politics, for people's perceptions of the reality unfolding about them – of the inexorable trend towards monopoly ownership and control.

Back in 1983, there were critics who dismissed Bagdikian's analysis as 'alarmist'. Their caveats and ostrich-style complacency doubtless continue to surface, and to win the plaudits of corporate America. But for a reader with a modicum of objectivity, what is striking about Bagdikian's book is not only the brilliance and persuasiveness of the case it argues but also its ability to read the future. For by 1997, when the book was republished in its fifth edition, the number of corporations controlling most of America's daily newspapers, magazines, television, radio, books and films had dropped from 50 to just 10. Today, the U.S. media is in the grip of a new communications cartel with a power to penetrate and shape the social and political landscape that is unmatched in human history.

For this latest edition, Bagdikian prefaces the research which proved such a landmark back in 1983 with a 25-page update on developments since the appearance of the fourth edition in 1992. The scale of the change over that five-year period is such that even this gifted and resourceful writer is left groping for words; there is a schematic quality to this update which points to the need for a qualitatively fresh research engagement. But the case which Bagdikian put forward 16 years ago emerges as unassailable and uncontested in its essence by intervening developments.

Bagdikian's contribution in part derives from his dual identity: on the one hand, a working journalist who knows his profession from within, and on the other, a scholar capable of sustained research under conditions of academic rigour. His teaching and research at the Graduate School of Journalism at the University of California at Berkeley (where he is currently Dean Emeritus) have helped shape his perspective on the nature, goals and responsibilities of journalism, irrespective of the medium by which it is articulated and disseminated.

Journalists, argues the author, carry out for society a number of crucial functions. Through their work, they establish and enforce the principle of accountability, vital to the working and integrity of democratic societies. They sound alarm bells, signalling system weaknesses or failures that would otherwise go undetected. And they also help people contextualise events in such a way that their understanding of what is happening about them is enriched and endowed with meaning. Bagdikian endorses the view of James Britton in his 1970 study, *Learning and Language*, that, given the kaleidoscopic character of experience, humans need to group events on the basis of similarity; without this, nothing can be made of the present moment nor can expectations or predictions be entertained.

Concentration of media ownership, in tandem with the growing clout of mass advertising and the prioritising of commercial values, argues Bagdikian, undermines each of these journalistic functions and responsibilities. Journalists whose newspapers, magazines, television and radio stations are part of vast, interlocking corporate empires are tremendously weakened in their ability to call to account those in positions of power and authority. Moreover, with their editorial independence now fatally compromised, they may no longer see it as part of their remit to exercise their accountability function. Alarm bells that should be sounded remain silent. And consumers of the media, far from being helped to gain a rounded, well-informed perspective on reality, are fed a diet of pap: news presented in discrete morsels; the heavily loaded messages of mass advertising; generous helpings of tittle-tattle, trivia, sex and violence.

Bagdikian documents his argument with a series of case stories which buttress his position and enhance the accessibility of his study. For readers inclined to doubt the baneful impact of corporate ownership on editorial freedom, he tells how, back in the 1970s, a book by Noam Chomsky and Edward Herman was effectively killed by Warner Communications, an awesome conglomerate that had begun life as a firm 'specialising in funeral parlours and parking lots'. He pursues the dismal story of mainstream American journalism's repeated failure to question the powers-that-be, from the McCarthy years in the early 1950s to the Vietnam War and beyond.

In a section that carries particular resonance today, as the U.S. tobacco giants stand indicted before the world for their culpable hawking of their deadly products, Bagdikian tracks what he calls 'a strictly media disease, a strange paralysis'. This, he shows, so afflicted the U.S. media that it could not alert readers and viewers to a basic truth, established beyond doubt as long ago as 1954: that smoking causes can-

cer. Tobacco, it should be noted, was until recently the most heavily advertised product in America.

The U.S. media's interaction with the tobacco industry also serves to illustrate the limitations of the 'doctrine of objectivity', an article of faith within mainstream American journalism. This holds that, in the interests of 'balance', one point of view articulated in the course of reporting should be matched by an opposing one. In practice, as Bagdikian documents, adherence to this doctrine has prioritised the views of the authorities and the officialdom, resulting in bland reportage from which all elements deemed dissenting or 'extremist' have been purged. Notions of balance have been taken to absurd degrees: Bagdikian shows how, in the case of the tobacco industry, scientific testimony and the views of doctors were routinely required to be countered by industry spokespersons in the interests of 'objectivity'. Small wonder that large sections of the American public remained confused and misinformed about tobacco over so many decades – and to such deadly effect.

Whereas it was once possible to identify specific corporations dominant in one communications medium, with only a few of them similarly dominant in a second medium, the new conglomerates pursue a far more comprehensive agenda.

Such notions of 'objectivity', Bagdikian argues, originate in the world of mass advertising. Here, blandness is favoured, confrontation is eschewed, and energy is focussed on creating and sustaining a 'buying mood'. In the case of American television, which has evolved as a commercial activity supported almost entirely by advertising, corporate interests can be seen to promote a 'buying mood' via a range of strategies, among which the doctrine of objectivity emerges as one of the more subtle and subliminal. Bagdikian cites numerous examples of corporations intervening directly to restrain, censor or otherwise influence the content of programming.

As Bagdikian's book has passed through a succession of editions, the basic processes at work within the U.S. media have strengthened and accelerated, perhaps beyond his own worst case scenario. Concentration of media ownership has grown inexorably, with all that that implies for journalistic freedom and integrity, while mass advertising has tightened its grip on media content and the purposes to which the media are directed. But from the early 1990s, Bagdikian suggests in the preface to this fifth edition, the name of the game has changed – in qualitative as well as quantitative terms. Not only has the ownership base of the U.S. media shrunk still further; there is something qualitatively new in the character of the corporations that constitute the cartel in command.

HE ten corporations that now dominate the U.S. media are identified as: Time Warner; Disney; Viacom; News Corporation Limited (Rupert Murdoch's empire); Sony; Tele-Communications, Inc.; Seagram; Westinghouse; Gannett; and General Electric. The resources they command inspire, in equal measure, awe and fear; the $340-million media merger between Gannett and Combined Communications Corporation – the biggest media merger in history at the time Bagdikian's book first appeared – shrinks in significance beside the $19-billion deal that, in 1996, brought together Disney with ABC/Cap Cities. This latter union, Bagdikian points out, created a conglomerate commanding great power over every mass medium: newspapers, magazines, books, radio, broadcast television, cable systems and programming, movies, recordings, video cassettes – and, through alliances and joint ventures, telephone and cable.

The name of the new game is 'synergy'. Whereas it was once possible to identify specific corporations dominant in one communications medium, with only a few of those corporations similarly dominant in a second medium, the new media conglomerates aggressively pursue a far more comprehensive agenda. As Bagdikian notes, they aim to acquire "dominant positions across every medium of any current or expected future consequence." The process by which one company subsidiary is used to complement and promote another has helped produce what the author identifies as a "quantum leap" in the power exercised by the media cartel over news, information and popular culture.

In the 25 pages of his new preface, Bagdikian provides fascinating glimpses into the world of the new media masters of the universe. There is some active demythologising here. For media consumers in America and around the world, the Disney empire is shown to extend far beyond its benign film-and-theme-park packaging:

> The Disney empire includes - in addition to non-media interests in oil and insurance – interests in interactive TV and the America Online computer network, Buena Vista home video, Hyperion and Chilton book publishing, four movie and TV production studios and a national distribution system for them, four magazine publishing groups...., 429 retail stores selling Disney products, television and cable networks, a major league baseball team and a National Hockey League team, three record companies, eleven newspapers..., and nine theme parks in the United States and other countries. (p. xxv)

Bagdikian also draws attention to the growing involvement in the media of industrial conglomerates, including such major defence industry players as General Electric and Westinghouse. One wishes for a more extended engagement with the implications of this trend.

Indeed, the one substantive criticism that can be levelled at this new edition of what is rightly ranked a classic among studies of the U.S. media is the brevity and schematic quality of its preface. The 25 pages establish the character of change during the first half of the 1990s, but offer little more than tantalising hints as to the implications and results. A case in point is Bagdikian's engagement with the digital revolution, the Internet and the World Wide Web; while casting doubt on casual assumptions that these will stand as guarantors of individual freedom against the predations of the mass media cartel, he offers only a sketchy outline of why this should be so.

What seems beyond dispute is that Bagdikian's classic study will continue to illuminate and excite general readers and students of journalism for years to come. As the global reach of the U.S. mass media strengthens and the impact of American news presentation and popular culture is felt in every corner of our planet, his analysis – and his warnings – deserve the widest possible dissemination. And one looks forward to what he doubtless has in mind: not a sixth edition, but a new book for a new, even more challenging media age. ■

For Waugh 'completists'

RICHARD EDER

The Complete Stories of Evelyn Waugh; Little, Brown & Company, Boston; pages 536, $29.95.

Evelyn Waugh, A Literary Life by David Wykes; St. Martin's Press, New York; pages 224, price $39.95

DAVID WYKES' lively study of Evelyn Waugh comes up with a word all too pertinent to this collection of every single one of the short stories that could be unearthed, including childhood scribbles. "Completists", Wykes calls enthusiasts who cherish even those things that no one else could cherish – their author least of all.

Putting aside Conrad and Woolf, Waugh may be the greatest English novelist of the century. He was also, quite consciously and for reasons almost inseparable from his rebarbative genius, a great hack. *The Complete Short Stories*, 39 of them, include a half dozen that are notable, if not up to the novels; and another eight or so that are interesting failures, or interesting because they so closely prefigure or replay the novels.

A dozen stories are tinny potboilers of very small pots: for instance, a contraption commissioned by a magazine series entitled "The Seven Deadly Sins of Today". (Waugh chose Tolerance, but the joke gets no farther.) Another dozen he wrote as a schoolboy or at Oxford. Juvenilia sometimes display the roots of a writer's growth: Waugh, though, did not write from his roots but – reinventing – against them. He broke backward into his cool and tragicomic voice out of a process of elaborate contrivance that periodically relapses into just that.

If the pen is not to be censored, neither is the wastebasket. Waugh did not literally throw away his hackwork, but he plainly treated it as something produced only for the money, and to be ignored. The money was for symbolic as well as material need: it supported the painfully expensive self-image of a testy country squire. Wykes – he is supposed to come later in this review but keeps intruding – writes: "Waugh lived like a gentleman whose income was inherited and came from his estates. But there were no estates, and the income came from the family trade, his writings." The irony takes a moment to register: Waugh as the middle-class tradesman he affected to despise in life and in his books.

In any event, there is a whole category of Waugh that retains about as much survivor interest as one of his poke-out-your-eye check suits. There would be little reason to resurrect such travel books as *Robbery Under Law*, an excoriation of the Mexican revolution subsidised by an expropriated oil company; or *A Tourist in Africa*, paid for by the Union Castle shipping line.

Similarly, a good two-thirds of *The Complete Stories* is matter for the completists. These stories have the familiar brittleness, along with Waugh's impersonation of a God who keeps his eye on the sparrow the better in order to shoot it. Even in his first novel, *Decline and Fall*, Waugh used these traits to far better purpose. He exploded the brittle wit into clattering shards of icy hilarity. When the clatter subsided, a silence ensued. Like the dog that didn't bark, it suggested presence by absence. The religious note became more audible, later on, in the squashy *Brideshead Revisited*. Only in the *Sword of Honour* trilogy, his late triumph, did he discover how to sound it.

There is no point describing the hack items (try to think third-rate Saki, P.G. Wodehouse, Ring Lardner, Roald Dahl) or the school and Oxford efforts. A Selected rather than *Collected Short Stories* might include interesting failures like "The Balance" (1926), a semi-modernist mess with a suggestion of the chiselled gouge of Waugh's dialogues; and "My Father's House" and "Lucy Simmonds", chapters from the unfinished novel *Work Suspended*, hybrids with some dreadful romantic writing and a little that is very good.

It might also include the prefigurings: "The Man Who Liked Dickens", a study for the grisly ending of "A Handful of Dust"; and "Compassion", a rending, exquisite story of Jews interned in war-time Yugoslavia. This was virtually reproduced in the final volume of *Sword of Honour* a full 12 years later. It took that long for Waugh to fuse successfully faith and art, malice and compassion, comedy and anger in a structure that could accommodate prose of such direct, laconic sorrow.

S for the stories that best survive on their own, "A House of Gentlefolks" is a gem of upper-class comedy and cruelty. Its doddering Duke of Vanburgh is P. G. Wodehouse's Lord Emsworth as pig-starver. "An Englishman's Home" taps a pure Waugh vein in its duel of vanities among three different species of sub-gentry (one genuine, two not so) who attempt a common stand against the threat of a real estate development. "Love in the Slump" strings a wonderfully absurd farce of errors around two young things who marry and drop – bump! – out of Oxford languor and London revelry onto the stony ground of meagre funds and intimate betrayal.

There is "On Guard", told from the point of view of a young woman's dog, a present from her fiance, who instructs it to guard her while he is off for an indefinite stay in Africa. What it guards her from, all too well, is suitors. A trifle, and silly, but the silliness wafts giddily up and finds sudden legs in a sere last line.

The volume's best retrieval is "Charles Ryder's Schooldays". Written shortly after "Brideshead" but published only posthumously, it is immeasurably stronger: a fierce, subtle, layered portrait of a boy, both vulnerable and armed, in mid-joust through an English boarding school. By comparison, Orwell's acid Eton memoir, "Such, Such Were the Joys", is virtually sentimental. Curiously, in its intensity of fury and longing, "Schooldays" is closer to Joyce's *Portrait of the Artist as a Young Man*.

Yet Wykes has it: "They are the most tedious pages of fiction he ever wrote." Clearly, this is blind – though should the author read this, he might well think I am. There are all kinds of critical blindness, though, and the most useful is love. Wykes' study is acute, perceptive, stylishly written

and passionately appreciative of Waugh at his best.

Wykes' best does not always coincide with mine, but he is so intelligently right so much of the time that it is exhilarating once or twice to think him wrong.

Wykes' passion is for the first six novels, loosely categorised as comic satire (though he recognises more in them than that), beginning with *Decline and Fall* and ending with *Scoop and Put Out More Flags*. No quarrel with this. Furthermore, Wykes writes of each of them with a mix of what all of us see and what he sees a little beyond.

He accomplishes gracefully the link between life and writing, a particularly close one. Waugh was his own material; the genius was in the transformation. Wykes notes, for instance, a happiness and lyrical virtuosity in *Decline* that its successor, *Vile Bodies*, lacks. Not, I think, because the former is less barbed but because the arrows Waugh shot were also the ones that hit him; and the sheer youthful exuberance of the archer wore into the stiffer, crabbier demeanour of the target.

Then came the conversion to Roman Catholicism, right at the time *Vile Bodies* was published. Religion did not, for a while, change Waugh's literary temper directly or make the world's disorder less painful; but it provided him a way to deal with it. Wykes has found two lines that in nicely improbable conjunction fix the essential Waugh from then on.

One was by his society friend, Ann Fleming: "He liked things to go wrong." The second, from St. Augustine, deepens the first: "The reason why humans behave as they do is because they are not living in their true home."

This religious sense, always implicit, underpins *A Handful of Dust*. Wykes, who analyses *Handful* brilliantly, asserts a sharp decline once religion turned explicit. He is right about the sentimentally redemptive *Brideshead*, its *Deus* popping out of its *machina*. What he does not quite recognise in the War-time and post-War *Sword of Honour* trilogy is *Deus* popping back. Not all the way; Waugh allows grace, in the person of old Gervase Crouchback, to take a place in the chaotic circus without quietening it one bit. At most it pokes an air hole in the tent flap.

Bumpy as it is, the trilogy remains Waugh's masterpiece; a crotchety introduction of the worm of faith into the world's mealy apple. Sword is a great, shattered work: a partway Don Quixote, if Cervantes had believed the windmills were entirely windmills and also giants, somewhat. ■

■ THE ENGLISH LANGUAGE

Self makes a comeback

WILLIAM SAFIRE

"SELF" used to be a dirty word. "The wretch, concentered all in *self*," wrote Sir Walter Scott in 1805, might get "power and pelf" but would wind up "unwept, unhonoured and unsung." Not so, said Walt Whitman a half-century later. "I celebrate myself," he sang in his "Song of Myself."

Since then, however, the notion of *self* as something to be celebrated has been taking a beating; Scott's sneer at *self* reverberates through the language. It is bad to be *selfish*, good to be *selfless*. People who are smug are *self-satisfied*, narcissists are *self-absorbed* and often *self-indulgent* and braggarts are *self-serving*. You can find a few uses that reflect well on *self*–like *self-reliant* and *self-possessed* – but most praise is lavished on the rejection of self, as in *self-sacrifice*. And *selflessness* is next to godliness.

Then *self* made a comeback. Showing some self-confidence, it became the name of a Conde Nast magazine aimed at women interested in their own bodies and minds. Its 20th-anniversary issue, out this month, faces some of the bad *self*s ("self-love, self-pity, self-delusion, self-aggrandisement") but dwells more on the good *self*s ("self-help, self-governing, self-made, self-respect, self-denial" and, for ovens, "self-cleaning").

Though a bit self-conscious about a decline in their publication's circulation, *Self*'s editors gutsily reprint a Mike Twohy cartoon showing a timid fellow writing in his diary, "Dear Diary, Sorry to bother you again," captioned "Low Self-Esteem." In that regard, what to do about *myself*?

This reflexive pronoun requires reflection. *Reflexive* means "turned back on itself," and a reflexive pronoun turns the action back on its subject: "I (pronoun as subject) perjured (verb) *myself* (reflexive pronoun pointing back to the subject 'I')."

The correct use of *self* or *selves* attached to *my, your, him, her, them* or *our* is to turn the action back on the other pronoun in the sentence. The subject and the object are the same thing. But too many writers are using *myself* in an orgy of false modesty, fearing to make the squeakily assertive sound of the first-person singular accusative and dative *me*.

President Jimmy Carter did it in his farewell address (a speech he concluded with the word *farewell*, which is the proper way to end a farewell address). He said, "I will work hard to make sure that the transition from *myself* to the next president is a good one."

When I popped him on this, E. Ward Gilman, editor of Merriam-Webster's Dictionary of English Usage – "Dr. Roundheels" himself – cited the use of *myself* instead of *me* by grammar-conscious authors from Dr. Samuel Johnson to E.B. White. He even found the abomination in a sentence – "No longer were Price, Buchanan and *myself* part of the innermost circle" – written in 1974 by me, and in no way "written by myself." Even Homer noodled.

Myself is being used incorrectly in place of the first-person singular nominative. (I'm too shy to write *I*.) The new Uriah Heeps, wallowing in phony humility, eschew the use of *I*. Sometimes, blushing shyly and digging a toe in the dirt, they substitute *yours truly*.

A generation ago, I was astounded when my predecessor as a conservative *New York Times* columnist, Arthur Krock, titled his memoirs about growing up in the 1890s *Myself When Young*. Not until I plunged into the philological scholarship required for this article did I discover that he bottomed the title on Edward FitzGerald's translation of a quatrain in the "Rubaiyat of Omar Khayyam" (*ruba'i* means "quatrain"; *rubaiyat* is the plural): "Myself when young did eagerly frequent..."

If you hate to begin a sentence with *myself*, as in "*Myself*, I could not care less," try *as for me* or *for my part*. A reflexive pronoun is fine, however, as an emphasiser. I used one a moment ago, as "Dr. Roundheels *himself*," above.

Americans use *myself* to underscore a pronoun as often as the British use the superfluous *indeed*, which means "you bet; hear, hear," and the emphatically reflexive "If I do say so *myself*." Let us not become the *Myself* Generation. If you want to show submission, sew a large sign on the seat of your pants that reads, "Kick me." Avoid "Kick *myself*." The latter lacks *self-esteem*. ■

Auschwitz, Pokhran and beyond

The claim of the amorality of science is a clever way of escaping responsibility for the horrors that have sprung or can spring from science.

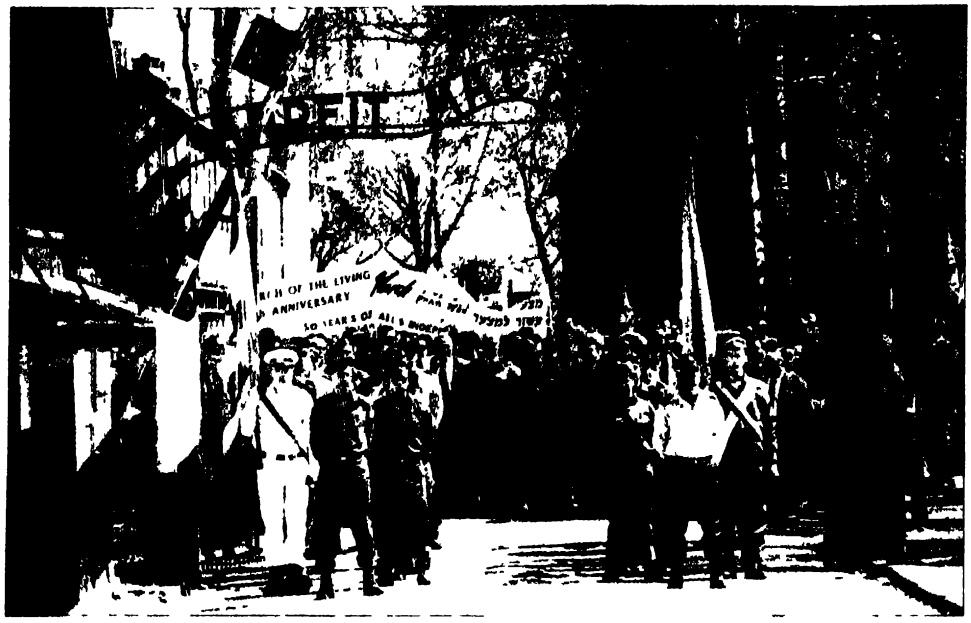
AMULYA K.N. REDDY

A WORLD energy assessment meeting in Cracow, Poland, in September 1999 brought me to within 50 km and an hour's bus ride from Auschwitz and Birkenau, where the concentration camps are now preserved as museums. I decided to go with my energy analysis co-authors on a half-day visit to the camps. Brought from all over Nazi-occupied Europe during the Second World War, about 1.5 million innocent victims, overwhelmingly Jews, went either directly to the gas chambers and the crematoria at Auschwitz and Birkenau, or indirectly via the camps where they were held prisoners until they were too weak to labour.

The tour of the camps left me with a completely unexpected feeling. The scale of human extermination was so enormous that I had to remind myself – particularly because the camps have been unpopulated since 1944 – that there used to be human beings there. Human belongings – toothbrushes, shoes and suitcases – were piled from floor to ceiling in huge rooms, a separate room for each item, but the aggregate was more reminiscent of factory inputs. Even the human hair that filled a room looked like raw material for an industry – in the case of Auschwitz, the manufacture of tailor's lining cloth.

If Auschwitz was unbelievable, Birkenau, 3 km away, beggared the imagination. Birkenau was spread over 175 hectares with 300 buildings, each capable of housing 1,000 inmates. As my friend Bob Williams pointed out, it was a scale-up from the pilot plant demo at Auschwitz with a peak of 20,000 prisoners to full-scale commercialisation of mass-murder technology at Birkenau with 100,000 prisoners in August 1944. The powerful impression that persisted was of detailed engineering resulting in "... the immense technological complex created... for the purpose of killing human beings" (*Auschwitz – How many perished*, page 11, Ved Vashem Studies, volume xxi, Jerusalem, 1991). The meticulous organisation and rigorous management were characteristic of mega-industries, "gigantic and horrific factories of death". The main gate of Auschwitz displayed the inscription *Arbeit macht frei* ("Work brings freedom"). Perhaps a more apt announcement would have been "Technology completely decoupled from values". Also, one could not help reflecting on the frailty of the social institutions that sanctioned these horrors and the failure of legal safeguards to prevent them.

As the scale of killing increases, the technology often (but not always) becomes more and more sophisticated – from knives to guns to machine guns to bombs to gas chambers and crematoria to atomic bombs. Also, with the scale increasing, not only does the distance from victims become greater but also the complexion becomes more and more technical. Burial is sufficient for one body, but for hundreds or thousands of bodies, one thinks in terms of "throughput", "air/fuel ratios" and "burning capacity".



In Auschwitz, it is obvious that nothing happened spontaneously. Everything was designed and planned. One of Germany's top chemical industries, IG Farben, produced the poison Cyclon B for exterminating people in the gas chambers. Careful experiments were done to determine the time it would take for a person to be poisoned. An engineering firm designed the crematoria furnaces to process 350 bodies a day in Auschwitz I. So, there must have been engineers preoccupied with the technical problems. Perhaps, like Oppenheimer talking about the atomic bomb, some even thought that the problem was "technically sweet". Or, like the Department of Atomic Energy scientist at the Bangalore Kaiga debate in 1989 who said: "Hiroshima provided us with a fortunate opportunity to study radiation effects"!)

Once the problem was defined as eliminating hundreds and thousands of people a day, the Auschwitz solution was inevitable. But, who defined the problem and promulgated the order? By and large, it is political decision-makers who define the problem. There was a conference at Wannsee, a suburb of Berlin, on January 20, 1942, at which the Nazi leadership decided in less than two hours before lunch on the "final solution" – to exterminate the Jews. Ethnic superiority, racial/religious hatreds and fundamentalist views are well-known bases for decisions with far-reaching destructive impact on human beings.

WHY was this definition of the problem so widely accepted? There could be several reasons. There was the silencing of the informed and articulate dissidents who became the first inputs to the camps. The media were not allowed to reveal the truth. As a result, many citizens genuinely claimed ignorance as an excuse. The most serious problem is the plea of duty and the obligation to carry out orders. Recall the movie *Judgment at Nuremberg* with Spencer Tracy as the judge trying the Nazi judges for having furthered the extermination of Jews. These judges defended themselves by submitting that they were just carrying out orders. The judgment at Nuremberg was that a human being has to take full responsibility for the consequences of his/her actions and that the excuse of obeying orders is inadmissible.

Apart from the above factors that operate in the case of officials and technical personnel, there is the additional device of taking a top-down macro view (for instance, national security, geopolitical compulsions and so on). In such a macro view, numbers and statistics displace human beings. New proxy words dominate the discussions – "burning capacity" replaces "the number of corpses burnt", "kilotonnes yield" replaces "kilodeaths", and so on.

Functionaries, however, cannot avoid contact with the prisoners and victims in order to keep the system going. What is overwhelming in Auschwitz and Birkenau (as my friend Thomas

LASKI DIFFUSION / GAMMA

At the main gate of the Auschwitz museum, participants of a march in April 1998 in memory of the victims of the Holocaust. The inscription on the arch reads: "Work brings freedom".

Johansson also noted) is the unbelievable cold-bloodedness of the operation. It appears that the guards treated the inmates inhumanly because they believed that the victims were sub-human and "things" rather than people. Once this belief is propagated and accepted, anything goes – as in the growing number of examples of ethnic cleansing and genocide (native Americans, Partition, Rwanda, Bosnia, Kosovo, and East Timor).

The tour of Auschwitz ends at the gas chamber and the crematorium. But just before that, near the main gate, is the gallows where Rudolf Hess, the bestial camp commander, was hanged after a trial.

Just when I felt that this was fair retribution, a doubt arose: are only the vanquished tried as war criminals, while the victors go scot-free?

Reeling under the impact of what we had seen, I began to wonder how the development of the atomic bombs at Los Alamos, the test at Alamogordo and the bombing of Hiroshima and Nagasaki differed from the Nazi concentration camps. Of course the Allies in the Second World War were not driven by the racism of the Nazis, and they were not pursuing a final solution of extermination of any particular religious group. But with regard to the scale of killing, the recruitment of capable minds, the harnessing of science and technology (some people perhaps hoping that the weapons would never be used and others even opposing the use of the weapons after they were developed), the extent of organisation, the resort to effective management, and the choice of targets to maximise the annihilation of Japanese civilians, the Manhattan project was like the concentration camps, in fact, even more horrendous in its impact.

BUT, for me it was not merely the standard school question "Compare and contrast X and Y". I was leaving the same evening for India and I was agonising over what all this meant for India. Over the past year and a half, the country had witnessed the scientist-politician nexus underlying the nuclear tests at Pokhran, the use of security arguments to advance party agendas, the jingoism of the scientists, the virtual absence of dissent, the silence of its media with a few notable exceptions and the obfuscation of reality. After an initial silence on the subject (as if it never happened), the journal *Current Science* publicised the official/government version of the "kilotonnes yield" of the test bombs but rejected/suppressed M.V. Ramana's estimates of the hundreds of thousands of innocent non-combatants who would be killed if even a primitive atomic bomb were exploded on Mumbai or Karachi.

Other questions bothered me. Are the institutions on the Indian sub-continent necessarily more robust and moral than those in the Germany of the 1930s and 1940s? Are Indian politicians and parties less prone to exploiting religious animosities? Are Indian scientists and engineers less eager to get political support for their next ego trip or power play (for instance, neutron bombs because they kill but do not destroy). Once the nuclear-tipped missiles are deployed, are there guarantees against "some crazy guy doing some crazy thing"? Are we sure that Pokhran will not lead as inevitably to Lahore and/or Chagai to Mumbai as Alamogordo led to Hiroshima?

The claim of the amorality of science is a clever way of escaping responsibility for the horrors that have sprung or can spring from science. For example, the well-known statement of a missile developer that he is "only an engineer" and that his "missile can also be used for delivering flowers". The relationship between the scientist (the subject) and the object of scientific study must be such that initial separation (and distance) ends in subsequent unification (and embrace). The suppression of emotion *during* analysis must give way to emotion *after* analysis. The functioning of scientists as individuals, groups and institutions must be constrained and limited by moral strictures and taboos. Otherwise, the isolation of the subject from the object, the removal or absence of emotions and feelings, and the perception of people as "things", all lead inevitably to science becoming the instrument of violence, oppression and evil. Science, therefore, is not neutral, but it can be – and must be – encoded with life-affirming values, as Shiv Viswanathan demands. The link between science and morality must be re-established.

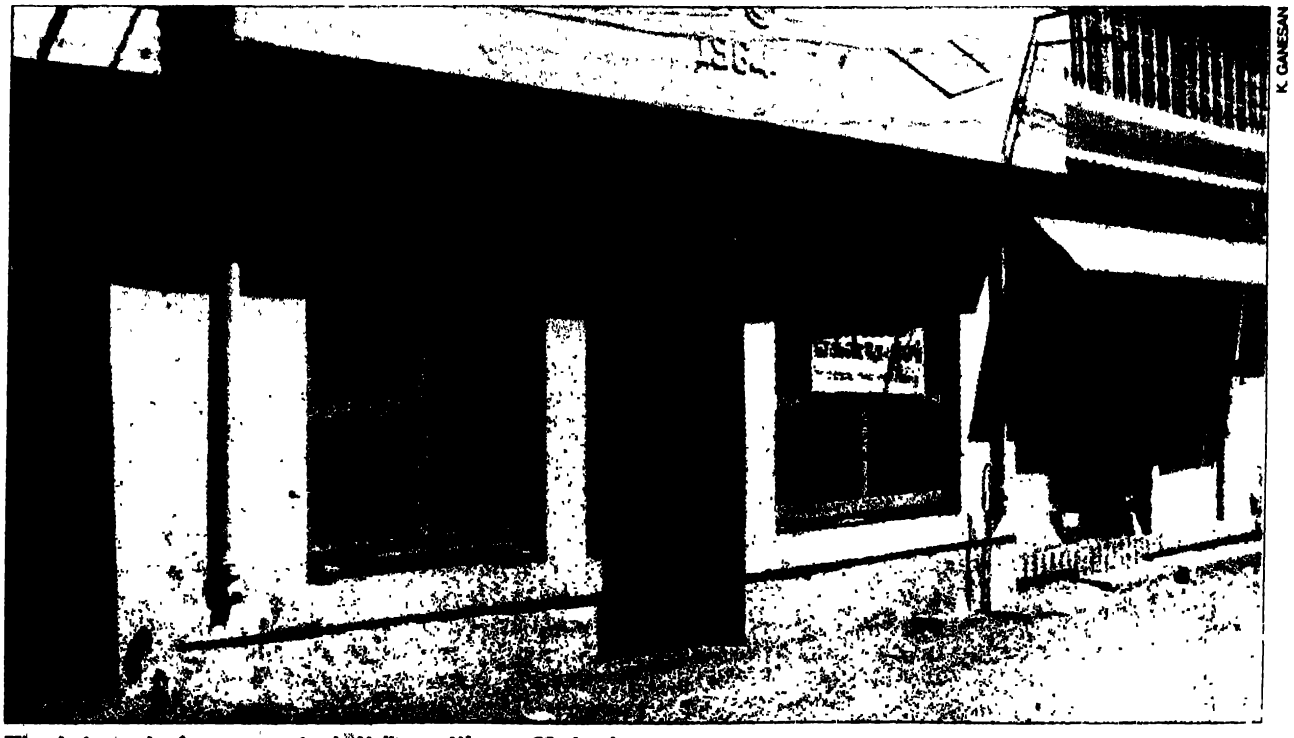
A crucial safeguard is to insist that, quite apart from the top-down macro view of security, yields, kill-ratios and so on, there must be a bottom-up micro view based on human beings. We must see beyond the numbers and the statistics, we must see children and parents and grandparents, lovers and married couples, siblings, friends and comrades. We must never forget the Gandhi talisman: "Recall the face of the poorest and most helpless person... and ask yourself if the step you contemplate is going to be of any use to him. Will he be able to gain anything from it? Will it restore to him control over his life and destiny?" ■

Amulya K.N. Reddy retired as a Professor of the Indian Institute of Science, Bangalore. He is currently president of the International Energy Initiative.

Foeticide unlimited

The campaign against sex-selective abortions based on pre-natal sex determination procedures gains momentum in Tamil Nadu with the State Government making concrete moves to enforce the law.

ASHA KRISHNAKUMAR



EFFORTS to end the practice of sex-selective abortions and to check the decline in the sex ratio in Tamil Nadu got a shot in the arm with the State Government taking steps in recent months to implement seriously the Pre-Natal Diagnostics (Regulation and Prevention of Misuse) Act. The Government, which had gazetted the Act and framed the rules in 1996, has decided to act in the face of pressure from certain non-governmental organisations and media coverage of the issue.

Though female foeticide is apparently practised throughout Tamil Nadu, there is reason to believe that it is concentrated in Madurai, Salem and Dharmapuri districts, as indicated by the low and rapidly declining juvenile (0-6 age group) sex ratio in these districts. In Tamil Nadu as a whole the ratio declined from 995 (girls per 1,000 boys) in 1961 to 948 in 1991. In Madurai district alone it fell from 988 to 918, in Dharmapuri from 993 (in 1971) to 905, and in Salem from 990 to 849. The figure for Salem is one of the lowest in the country.

Amniocentesis, the sampling of the amniotic fluid during pregnancy by the insertion of a hollow needle into the uterus, which can also serve as a sex-determination test, began to be performed in the 1970s in Delhi essentially in order to determine the sex of a foetus before opting for abortion on the basis of the determination. Later it spread to other parts of the country. With public outrage mounting against sex-selective abortions, the Centre in 1994 legislated the Pre-Natal Diagnostics (Regulation and Prevention of Misuse) Act.

Under the Act, pre-natal diagnostic centres set up for the express purpose of detecting any foetal abnormalities need to register themselves with the Appropriate Authority. The Act also forbids sex-determination *per se*. Chapter II, Section 3 of the Act states: "No medical practitioner... shall conduct... any pre-natal diagnostic techniques at a place other than a place registered under this Act." Further, Chapter III, Section 6(b) states: "No person shall conduct... any pre-natal diagnostic techniques... for the purpose of determining the sex of the foetus." And, Section 5(2) of the same chapter states: "No person conducting pre-natal diagnostic procedures shall communicate... the sex of the foetus by words, signs or in any other manner." Non-compliance with or breach of these provisions is punishable by imprisonment up to three years and a fine of up to Rs.10,000.

But the Government's failure to implement the Act effectively has by all accounts led to sex-selective abortions on a fairly large scale. For instance, in some villages in Madurai district sex-determination tests continue to be performed with impunity, with the aid of ultrasound scanning (which costs Rs.150), followed by sex-specific abortions, assisted in many

K. GANESAN

File photograph of a scan centre in Usilampatti, near Madurai.

instances by doctors and paramedics, sometimes at great risk to the woman's life (*Frontline*, December 18, 1998). This situation also raises serious questions of medical ethics.

The Campaign Against Sex-Selective Abortions (CASSA) – a movement of non governmental and women's organisations, human rights groups, lawyers, educationists, academicians, mediapersons and activists, led by the Madurai-based Society for Integrated Rural Development – has been, since December 1998, seeking to prevail upon the Appropriate Authority to regulate the setting up and functioning of scan centres. Until recently none of them was registered as mandated by the Act.

With the pressure mounting, the Tamil Nadu Assembly debated in April 1999 the issue of female foeticide and the need to enforce the legal provisions that require scan centres to register themselves and forbid them from revealing the sex of the foetus. The State Government then advertised in some newspapers asking all scan centres to register themselves with the Appropriate Authority.

By September 1999, the Appropriate Authority had issued 545 applications, of which 250 were submitted for registration. While this is a good start, the response from the very districts with a concentration of such centres has been poor – only two centres from Dharmapuri and 18 from Madurai district had sought registration until October 1.

At a meeting in Chennai in September, CASSA got representatives from the Indian Medical Association, the law enforcement machinery, government officials and the Appropriate Authority to discuss the implementation of the 1996 Act. Dr. Captain N. Ramasubbu, Director of Medical and Rural Health Services, who is the Appropriate Authority to implement the Act in Tamil Nadu, announced that the district authorities would be asked to prepare a list of scan centres. Notices would be issued to those which are not registered.

While moving to get the scan centres to register themselves with the Appropriate Authority is a step in the right direction and the least the government should do, it would not ensure by itself that the centres do not reveal the sex of a foetus, aiding the continuation of the pernicious practice. According to Joint Director (Medical Termination of Pregnancy) Dr. N. Bakthi Devi, who was put in charge of monitoring the implementation of the Act after the Campaign Committee met in September, "surprise checks will be conducted at the scan centres to find out if they are violating the Act". But, as pointed out by Dr. Vasanti Devi, former Vice-Chancellor of Manonmaniam Sundaranar University, medical ethics lies at the root of the implementation of the Act. The Indian Medical Association acknowledges that some doctors are indeed committing foeticide and has condemned the practice. It has written to all its branches asking them to appeal to doctors to comply with the law.

Clearly, government schemes have not made much headway in protecting the girl child. Worse, there is now evidence that with the introduction of the new diagnostic technique the problem of female infanticide is giving way to that of female foeticide. According to media and academic reports, female foeticide is on the rise in Tamil Nadu.

ACCORDING to Dr. Ramasubbu, Tamil Nadu is relatively better off in terms of the declining sex ratio when compared to States such as Bihar. This is largely because of the various State Government schemes to protect girl children from families that are below the poverty line. One of the important programmes, according to him, is the 'Girl Child Protection Scheme'. But this scheme is ill-conceived as is clear from the eligibility criteria, which stipulate, among other things, that one of the parents of the child concerned should have undergone sterilisation; that the family should have only one or two daughters and no sons; and that the beneficiary child should be less than three at the time of enrolment in the scheme.

Under the scheme, Rs.2,500 was to be invested in a fixed deposit in the name of the girl child, who would be given some money periodically for studies and at the end of 20 years Rs.10,000. Between November 1992 and March 1997, 2,503 children were enrolled under the scheme in Madurai district. But the scheme was not implemented and was finally revised in April 1997. Under the revised scheme, if a family has one girl child, Rs.3,000 would be invested in her name, and if there are two girl children, Rs.1,500 each would be invested. Under this scheme, 1,226 children were enrolled in Madurai district between April 1, 1997 and March 31, 1998 to receive Rs.1,500 each and 11 girls to receive Rs.3,000 each. In all 39,218 girls were registered in the State before April 1997 and 14,161 thereafter.

These numbers are too meagre to make any significant change in the situation. Even according to the 1991 Census, there were 20 lakh female children in the 0-4 age group in rural Tamil Nadu. Assuming that 40 per cent of them are below the poverty line (this is according to 1983 figures and is unlikely to be different today), the number of poor female children in rural households in Tamil Nadu would be around eight lakhs. To this every year 1.5 lakh female infants get added in poor rural households. The government would have to set aside Rs.22.5 crores every year just to cover the new additions, and some Rs.120 crores for the backlog of eight lakh poor female children.

However, the government set aside only Rs.4.05 crores for this scheme in 1996-97, and added another Rs.4 crores later. For 1998-99, Rs.2.25 crores was allocated.

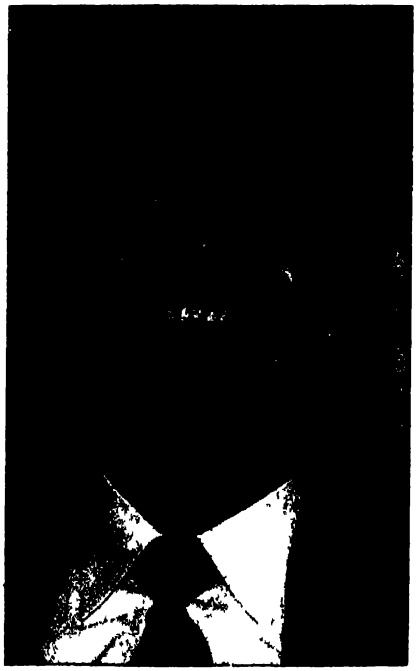
Clearly, government schemes have not made much headway in protecting the girl child. Worse, there is now evidence that with the introduction of the new diagnostic technique the problem of female infanticide is giving way to that of female foeticide. According to media and academic reports, female foeticide is on the rise in Tamil Nadu.

CASSA sees an urgent need to pressure the Appropriate Authority to implement the Pre-Natal Diagnostic Act focussing on the aspect of medical ethics that lies at the core of compliance with the Act. But in the long run, as Vasanti Devi says, unless the larger issues which perpetuate the discrimination against women are addressed, attempts to arrest the declining sex ratio would be futile as it would amount to dealing with the symptoms rather than the disease. ■

For excellence in science

On the men from the sciences who have won this year's Nobel prizes and their work.

R. RAMACHANDRAN



CHEMISTRY

CHEMICAL reactions, say between molecules A and B to form C, roughly proceed like this. When A and B come sufficiently close together, they begin to interact. As they move even closer, other molecular species, which are neither A nor B, are formed. One of these transitory species represents the stage at which the reaction can proceed irreversibly to result in the creation of a new, stable molecule, C. This stage is technically called the transition state. The converse process takes place when C gets sufficiently energised. It passes through the transition state to form molecules A and B. If one can determine how molecular motions change during the critical transition phase, one can understand how new chemical bonds form and how old ones break. This, in turn, can help one understand why some chemical reactions occur and not others, and help design new drugs or molecular-electronic devices, optimise industrial processes and even understand the delicate mechanisms of life processes.

In practice, however, observation of the transition state in real time and witnessing the "birth of the molecules" had proved very difficult for the simple reason that reactions occur extremely fast, over time scales of less than a millionth millionth of a second (10^{-12}s), or one picosecond (ps). Heavy molecules or atoms typically emerge from chemical reactions at velocities of about one km/s. If molecules A and B are close enough to be in a transition state, the distance between them must be of the order of a chemical bond, about 0.1 nanometre (10^{-10}m). The ratio of the distance to the velocity gives the time spent in a transition state — 10^{-13}s, or 100 femtosecond (fs), one fs being 10^{-15}s, which is to a second what a second is to 32 million years. For the simplest of all chemical reactions, involving the hydrogen molecule, the transition state is very short-lived, about 10 fs. Thus the time scales for transition states are in the 10^{-100} fs range.

THIS year's Nobel Prize in Chemistry has been awarded to Professor Ahmed H. Zewail, a Linus Pauling Chair Professor of Chemistry at the California Institute of Technology (Caltech), United States, "for his studies of transition states of chemical reactions by femtosecond spectroscopy", as the Nobel citation noted. Using molecular beams and ultra-fast laser flashes, Zewail developed the techniques and the methodology for observing atoms and molecules in "slow motion" during a chemical reaction. His pioneering investigations on some key chemical reactions and their time scales have led to a revolution in chemistry with consequences in other fields such as biology and molecular electronics. Interestingly, Zewail is also a Professor of Physics at Caltech.

"The existence of short-lived transition state in any chemical reaction is an axiom in the teaching of chemistry. The structure, shape or lifetime of this state were always in the realm of speculation. Zewail's work has virtually put an end to the need for speculation about these short-lived species. Now they can be directly observed and distinguished from the reactants and products. In short, by filling the gap, he has put an end to the story of how and why chemical reactions occur," said Prof. N. Periasamy of the Tata Institute of Fundamental Research (TIFR), Mumbai.

CHRIS PIZZELLO/AP

Ahmed H. Zewail, winner of the Nobel Prize for Chemistry. He demonstrated that a rapid laser technique can observe the motion of atoms in a molecule as they occur during a chemical reaction.

The new field that this has opened up is called femtochemistry, a term coined by Prof. Richard Bernstein, a colleague of Zewail. "Femtochemistry," observes Prof. Brengt Norden of the Nobel Committee, "has fundamentally changed our view of chemical reactions. From a phenomenon described in vague metaphors such as 'activation' and 'transition state' we can see the actual movement of individual atoms; we can speak of their motion in time just as we imagine them; they are no longer invisible."

Chemical reactions ranging from the rusting of iron to the explosion of dynamite proceed with varying velocities. However, what is common to all is that the reactivity increases with temperature, when molecular motions become more rapid. That is, molecules need to be activated or kicked over a barrier if they are to react faster. This barrier is determined by the forces that hold atoms together in the molecule (chemical bonds) and if the "temperature kick" is not enough for the molecule to overcome the barrier, they simply collide and scatter off. The temperature dependence of reactivity was quantified by Swedish chemist Svante Arrhenius in 1889. While Arrhenius' formula does give a handle on chemical dynamics at the macroscopic level, a detailed quantum-theoretic picture at the microscopic level – the path of the molecule over the barrier and what the molecule actually looks like at the top of the barrier (the transition state) – was absent.

In the 1960s, the development of new techniques involving molecular beams – which allowed the isolation of reactions in vacuum – enabled the obser-

vation of processes at time scales, or time resolution, of about a thousandth of a second. This was good enough to study chemical intermediates but was too long for transition states of a few femtoseconds. In the late 1970s, Zewail and his associates used a combination of laser techniques and molecular beams to achieve time resolution of tens of picoseconds, which by 1984 was improved to three picoseconds Although this allowed a direct measurement of the rate of reaction of a molecule as it changed from one quantum mechanical state to another, this was still far away from the femtosecond time scale of transition state dynamics.

In any kind of photography to study continuous motion, one needs snapshots of sufficient resolution to capture distinct events so that a fast motion can be slowed down to the desired extent for the eyes to see. In femtosecond photography, the definition of the frame should be less than 10^{-10} m, distances over which chemical reactions occur and, because the speed of molecular motion is typically 1 km/s, the "shutter"' resolution must be better than 100 fs. Therefore, to record, for example, the characteristic spectra of transition states, the signatures of the underlying quantum mechanical processes, a "molecular camera" with such a time resolution, or "shutter speed", was necessary.

A shutter speed of a few femtoseconds is impossible if one uses mechanical or electrical devices. To build a femtosecond camera, Zewail and his colleagues combined the technique of molecular beams with the technology of tunable ultrashort laser pulses with femtosecond resolution. Since no chemical reaction occurs faster than this scale, Zewail's techniques are sufficient to understand fully the detailed dynamics of chemical reactions.

THE conceptual idea behind the femtosecond experiments of Zewail is rather simple but ingenious. First, a laser flash, called the pump pulse, hits a molecule in isolation and in vacuum (in the molecular beam apparatus). This initiates the reaction and at the same time sets the experimental clock at zero. A second (weaker) pulse at a chosen wavelength, called the probe pulse, arrives several femtoseconds later and records the snapshot of the reaction. When the probe pulse hits the molecule, it does not produce an image, unlike in a conventional camera. Instead, the molecule interacts with the probe and then emits a spectrum of light. With the given wavelength of the probe pulse, the free molecules A, B and C and the transition state produce different characteristic spectra. Using information from the spectral signals combined with the time elapsed between the pump pulse and the probe pulse, reactions and their "images" can be reconstructed in real time.

Zewail's studies on light-induced coherent conversion of a molecule from one structure to another have given insights into the high efficiency of eye vision. Another crucial application of femtochemistry is in biology where it proves the efficient energy conversion in chlorophyll molecules.

Femtosecond studies based on Zewail's concept are now performed in various related fields, not only by using molecular beams but by studying processes involving catalysts, in liquids and solvents (to understand the mechanism of dissolving, for example) and in polymers (to develop new materials for electronic applications, for example).

In the early 1980s, when Zewail had just begun his investigations using molecular beams, TIFR scientists also began research in the area. But the advances in laser technology, according to Prof. Periasamy, left them behind.

Interestingly, in 1986, the TIFR had invited Egyptian born Zewail to participate in a workshop on Fast Chemical Processes organised by the institute. Zewail declined the invitation saying that he was busy with his experiments. Those were the very experiments that have brought him the coveted prize now.

PHYSIOLOGY/MEDICINE

ABOUT 100,000 billion cells make up the body of an adult human being. Each cell is made up of several compartments, called organelles, which carry out specific specialised tasks. Each organelle is surrounded by a membrane. The cell nucleus contains the genetic material DNA (deoxyribonucleic acid) in the form of chromosomes and thus governs all the functions of a cell. The mitochondria occur in the cytoplasm (which surrounds the nucleus), and they are the site of the reactions that produce the key enzymes required for cell function. In that sense, they are the respiratory centres producing the energy required by the cell. Within the cytoplasm is a system of membranes that constitutes the endoplasmic reticulum, which, together with ribosomes that exist on its outside, is responsible for the synthesis of proteins.

Every cell contains about one billion protein molecules, which are the building blocks of living systems. Cartilage, skin, hair, nails and eyeballs are all made of the same basic substance. In addition, the molecular machines that perform, or catalyse, the building, tearing down and maintenance work that keeps organisms functioning are made of protein. The proteins within the cell are constantly degraded and re-synthesised. Proteins are made up of amino acids and these range from 50 to several thousands in number, forming long, folded chains.

However, it remained a puzzle for long how large proteins could traverse the tightly sealed lipid-containing membranes that surround the organelles. It was also unknown how newly made proteins were directed to their specific locations in the cell. For solving both these puzzles in the 1970s, through the discovery that "proteins have intrinsic signals that govern their transport and localisation in the cell", Prof. Gunter Blobel of the Rockefeller Institute, New York, has been awarded this year's Nobel Prize in physiology/medicine.

Blobel began investigations into these problems soon after he joined the well-known cell biology laboratory of Prof. George Palade at the Rockefeller Institute in 1967. Blobel's work was built on the work of Palade and his team, which had studied the structure of a cell and the principles of the transportation of newly synthesised proteins out of a cell. This work had earned Palade the Nobel Prize in 1974.

In 1971, Blobel postulated that synthesised proteins have an intrinsic signal that is essential to direct them to and across the membranes of the endoplasmic reticulum. In 1975, through elegant biochemical experiments, he established the various steps involved. The signal, Blobel showed, is essentially a peptide – a specific sequence of amino acids that forms an integral part of the protein. He recognised the importance of this signal in enabling the protein to be correctly processed for transportation to its destination. He also suggested that transport across the membrane of the endoplasmic reticulum occurs through a channel. Over the next two decades, Blobel and his co-workers characterised the step-by-step molecular mechanisms underlying these processes. The most significant outcome of the work is that the "signal hypothesis" is universal and these processes are the same in yeast, plant and animal cells.

In collaboration with other research

groups, Blobel soon showed that similar intrinsic signals directed proteins to other intracellular organelles. On the basis of this he was able to formulate in 1980 general principles for the sorting and targeting of proteins to particular cell compartments. The protein structure contains the information needed to specify its localisation in the cell in the form of specific amino acid sequences.

These 'topogenic signals', as they are termed, are present either as a "short tail" at one end or are located sometimes within the protein. They determine whether a protein is meant to pass through the membrane into a particular organelle or become integrated into the membrane or be exported out of the cell. A range of signals that direct proteins to different parts of the cell have now been identified, proving Blobel's "signal hypothesis".

STAURT RAMSON/AP

Dr. Gunter Blobel of the Rockefeller Institute in his laboratory in New York City.

"In effect the cellular machinery is like an enormously complex airline baggage handling system. The baggage tags are little sequences of amino acids within the protein sequence," Prof. P. Balaram of the Indian Institute of Science, Bangalore, said. "The idea that amino acid sequences encode not only the information necessary for folding and function but also for determining the spatial location of a protein in cells and organelles is indeed a major conceptual advance," according to him.

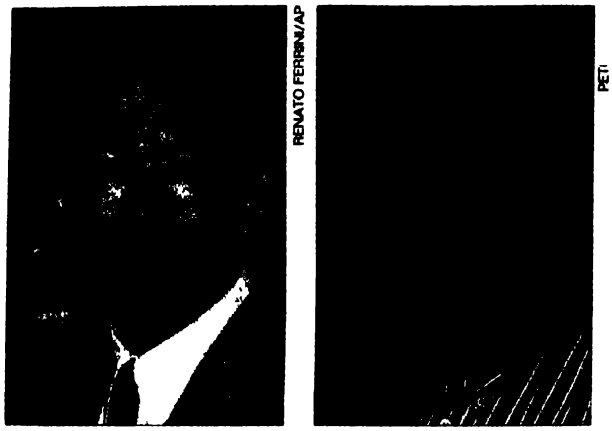
"Blobel's work has had a major influence on modern cell biology. Protein trafficking is an area that is directly derived from Blobel's early work. His work has also allowed definition of the details of the biochemical mechanisms involved in the precisely controlled processes of protein transport in biology in general," Balaram pointed out.

THE knowledge of topogenic signals has greatly increased the scientific community's understanding of many medically important mechanisms such as the production of antibodies in the human immune system. If the sorting signal in a protein is altered, the protein will obviously reach the wrong destination. This could be the underlying mechanism in several genetic disorders. One example is primary hyperoxaluria, which causes the formation of kidney stones at an early age. In some forms of familial hypercholesterolemia, it is known that deficient protein transport signals lead to high cholesterol levels in blood. Other genetic diseases, such as cystic fibrosis, are also caused by similar factors.

With the imminent mapping of the human genome, deduction of the structure and topogenic signals of various proteins will become possible. The knowledge will increase scientists' understanding of processes that lead to diseases and can be used to develop new treatments.

Increased knowledge about protein transport mechanisms will also be useful in designing new drugs that are targeted at a specific defect in the cell. The finding is important from the perspective of future cell and gene therapy.

PHYSICS



PHYSICS at the sub-nuclear level, particle physics as it is called, is described in terms of the basic constituents of matter and forces of interaction among them. The forces that are at work are electromagnetism (which causes an electric bulb to shine), the weak nuclear force (which causes radioactivity and is the source of the sun's energy), the strong nuclear force (which binds neutrons and protons in atomic nuclei) and gravitation. In the current understanding, the fundamental constituents of matter are of two kinds: *leptons* which are not affected by the strong nuclear force and *quarks* which experience the strong force. Leptons include the familiar electron and quarks make up sub-nuclear particles such as the proton, the neutron and the meson.

In a quantum description, the forces – barring gravitation which has so far defied a quantum description – through which these constituents interact, display a basic similarity. They are described by certain mediating particles: electromagnetism is transmitted by the massless photon, the weak nuclear force by a triplet of massive particles (W^+, W and Z^0) called vector bosons, and the strong force by an octet of massless particles called gluons. The quantum description of electromagnetism, called quantum electrodynamics (QED), was completed in the 1940s and has been verified by experiments to great accuracy. The currently accepted mathematical framework which governs particle physics beyond electromagnetism, and appears to be well borne out by experimental measurements so far, is what has come to be called the Standard Model. The mathematical foundations for this theory were laid by the works of Sheldon Glashow, Abdus Salam, B. W. Lee and Steven Weinberg in the late 1960s. Subsequent works of Glashow, J. Iliopoulos and L. Maiani ensured that the theory reproduced correctly the known basic features of weak interactions.

But it was the work of Martinus J. G. Veltman and Gerardus 't Hooft of the University of Utrecht in the late 1960s and early 1970s that enabled physically meaningful quantum theoretic calculations to be performed using the Standard Model, which could be verified by experiments. The discovery of the top quark in 1995 with the correct mass as predicted by the Standard Model several years earlier (which was possible only by using 't Hooft-Veltman techniques) has proved the validity of the Standard Model. This year's Nobel Prize has been awarded to this teacher-student duo for this breakthrough work which placed the Standard Model on a firm mathematical footing.

The most important feature of the Standard Model is that it provides a unified description of electromagnetism and the weak nuclear force. That is, the two apparently disparate forces of nature can

be described in a single mathematical framework. This "electroweak" unification is possible because of the following principle: Despite their manifest disparities in strength and range, the different forces of nature seem to have a deep unifying mathematical connection, an underlying symmetry, which remains hidden in the real world. The unifying principle in the mathematical description of all these forces is called the gauge symmetry. Physicists believe that gauge symmetry is a fundamental feature of physics and theories based on the properties of gauge symmetry are called gauge theories. It is hoped that this underlying gauge symmetry will eventually lead to a single unifying theory of all forces, and the electroweak unification marks the first step in that direction.

Prof. Gerardus 't Hooft and Dr. Martinus J.G. Veltman who shared the Nobel Prize for Physics.

Gauge symmetry arises from the fact that force fields – magnetic and electric fields, for example – can be expressed in terms of certain mathematical functions (the gauge fields) which allow certain mathematical operations (the gauge transformations) to be performed on them without changing the physical values of the force fields. That is, force fields remain invariant with respect to gauge transformations and the theory is said to be gauge invariant. In the case of electromagnetism, the allowed transformations are such that the order in which they are performed is irrelevant. Electromagnetism is referred to as an abelian gauge theory. But one can have more complex mathematical structures where the order of gauge transformations becomes important. Such a theory is referred to as a non-abelian gauge theory.

Since the 1950s, there were attempts to describe the weak nuclear force in terms of a non-abelian gauge theory (also known as Yang-Mills theory). This culminated in the work of Glashow, Salam, Lee and Weinberg which not only provided a mathematical framework for the weak force but also unified it with electromagnetism. An important concept that enabled this unification was that of *spontaneous symmetry breaking*. The basic principle here is that while the underlying theory and the equations of motion are gauge invariant, the specific real world solutions do not respect this gauge symmetry resulting in the observed difference in electromagnetism and the weak interaction. Crucial to the development of a self-consistent quantum theory that would implement the idea of spontaneous symmetry breaking was the 't Hooft-Veltman work.

The problems that confronted the quantum description of a (spontaneously broken) non-abelian gauge theory – which the 't Hooft-Veltman work resolved – can be understood by going back a few decades when QED was being developed. Calculations of physical quantities like mass and charge gave rise to infinite values which did not make sense. The problem was resolved by Shin-Itrio Tomonoga, Julian Schwinger and Richard Feynman for which they were awarded the Nobel Prize in 1965. The method developed by them is called *renormalisation.*

In simple terms, renormalisation is a prescription to "absorb" the infinities in the definition of physical quantities. That the method actually worked and gave physically meaningful results was demonstrated by Freeman J. Dyson who devised rules to carry out this procedure in a self-consistent manner. In modern terminology, Feynman, Schwinger, Dyson and Tomonoga renormalised an abelian gauge theory.

When the electroweak theory was formulated in the late 1960s, history repeated itself. Calculation of physical quantities, like the masses of W and Z bosons or quantum corrections to any weak process, produced absurd results, which were more vicious than the abelian case. The non-abelian nature of the theory gave rise to twin problems: one, physical quantities became divergent and, two scattering probabilities came out to be greater than one, violating the basic probabilistic interpretation of quantum mechanics. Many researchers at that time were pessimistic about the problems being satisfactorily resolved.

"When Veltman came on the scene, the problem was a major challenge to all the top particle physicists of the time. But Veltman has this knack of seeing through the maze of equations and he could see that it could be solved," pointed out Prof. S. Rai Choudhury of Delhi University. "The key element in their work is the discovery of a renormalisation procedure that preserves gauge invariance, an idea that did not occur to many," he said.

The two showed how non-abelian gauge theories like the Standard Model could make sense and provided a theoretic machinery for precision computing of physical quantities in these theories. In many respects what 't Hooft-Veltman did is similar to what Dyson had done in QED 20 years earlier.

An important consequence of spontaneous symmetry breaking in the electroweak theory is the existence of an as-yet-unseen particle called the Higgs boson. Given the precision calculations that are now possible *a la* 't Hooft and Veltman, physicists feel that the mass of Higgs is more or less fixed. Though it is too heavy to be produced in the present accelerators, it should show up in the future particle factories such as the Large Hadron Collider (LHC) being built at CERN and due to become operational in 2005.

"One of the things that this Nobel work has done," Rai Choudhury said, "is to make experiments look for specific predictions made by the Standard Model, one by one through precision measurements and validate it completely because there are no uncertainties in the theory anymore."

"For elucidating the quantum structure of electroweak interactions in physics," said the Nobel citation for the Award. However, the 't Hooft-Veltman work has had enormous impact on the development of particle physics beyond the Standard Model. "Before the 't Hooft-Veltman work, the richness of the structure of a non-abelian gauge theory was not apparent – that even a non-interacting theory could have such interesting mathematical properties. Today these have given rise to a whole new array of ideas in particle physics which perhaps would not have been possible otherwise," said Rai Choudhury. ■

Software for safety

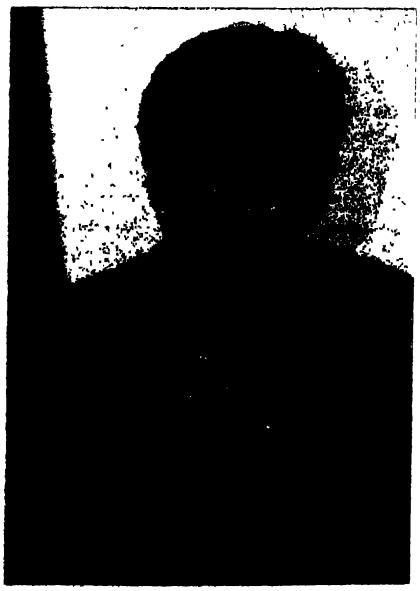
Interview with Dr. Venkat Venkatasubramanian.

When a safety alarm goes off in an oil refinery, control-room personnel must make crucial decisions in a matter of minutes. Should the process be shut down? Which unit should be stopped? Should the other units continue to run? For how long? Every minute counts, for some poisonous, carcinogenic or inflammable substance that can kill people and destroy property could be escaping into the air.

A case in point is the 1984 Bhopal gas tragedy, in which more than 3,000 people died and thousands were affected, when a pesticide plant run by the Union Carbide Corporation accidentally released a toxic gas. Had the leak been detected before the safety alarm went off, the disaster could probably have been contained, if not averted. But is such detection possible?

Yes, asserts **Dr. Venkat Venkatasubramanian**, Professor of Chemical Engineering, who leads a research group in the Intelligent Process Systems Laboratory at Purdue University, United States. After working on the problem for 16 years, he and his team have come up with an online, real-time computer program that could quickly determine the cause of process abnormality and recommend appropriate action. Called DKit, or Diagnostic ToolKit, it can serve a variety of industries, including chemical plants.

While DKit works backwards from the symptom to the cause, another program, HAZOPExpert, also developed by the team, works forward, from the causes to the hazard and helps design safer plants.



Troubled by the Bhopal tragedy, Venkatasubramanian, who had just completed his Ph.D in chemical engineering from Cornell University, U.S., decided to explore methods to prevent such industrial accidents. After a stint as Research Associate, Artificial Intelligence, in the Department of Computer Science at Carnegie-Mellon and Columbia universities, Venkatasubramanian joined Purdue University's Chemical Engineering Department.

Venkatasubramanian has published more than 100 research papers, which cover areas of process fault diagnosis and supervisory control, hazard and safety analysis, operating procedures synthesis and product design using knowledge-based systems, neural networks, genetic algorithms, artificial intelligence, mathematical programming and statistical approaches.

DKit and HAZOPExpert systems combine Venkatasubramanian's expertise in various specialities. His experience as a consultant to global corporations and institutions such as Exxon, Honeywell, DowElanco, Lubrizol, the United Nations Industrial Development Organisation, the United Nations Development Programme, the Indian Oil Corporation, Imperial Chemical Industries, American Cynamid, Amoco, Arthur D.Little and G.D. Searle, has helped him understand the needs of various industries.

Recipient of several awards and honours, Venkatasubramanian serves on the editorial board of the *Process Safety Progress* journal published by the American Institute of Chemical Engineers. He was recently selected by *Industry Week* magazine as "one of the 50 stars in the U.S. whose achievements are shaping the future of our industrial culture and America's technology".

Recently in Chennai to establish links with academic institutions and industries in order to test DKit and HAZOPExpert, Venkatasubramanian spoke to **Asha Krishnakumar** on his research work. Excerpts from the interview:

S THANTHONI

▶ *What motivated you to work on the problem of industrial accidents?*

The 1984 Bhopal incident. Several things went wrong there. Incidents like that do happen when you design complex systems. There are risks involved and we try to minimise them to absolutely low levels. We cannot, however, eliminate them. The role of the plant manager is crucial. He is concerned about how to run the plant not only safely but optimally and economically. In this case I was interested in designing systems which could monitor chemical plants in real time, 24 hours a day and 365 days a year, and recognise abnormal situations. Typically, the alarm system in a plant goes off when the problem has progressed to a considerable extent, but just short of the danger level.

The way alarms are set, it may not be too late before they go off. But when several things conspire to happen at the same time and when people do not know how to react, it may be too late. Most often there is a panic reaction to abnormal situations as it is difficult to reason through all possibilities within a few minutes.

I was interested in designing a system that could detect the problem and warn people of the abnormal situation much before the alarms went off and tell operators what had gone wrong and why, and suggest solutions. An alarm does not tell you why something has gone wrong.

The control systems in chemical plants do not do this. For example, if a system has to control a plant at a certain temperature, it takes periodic temperature readings and compares them with what is required. If the reading is higher or lower than normal, it will open or close the valve appropriately. The problem is that the sensors that take the readings may fail, or the valve that has to open or close may fail or something else might fail. This is when you need human help. But, then, it may be difficult for humans to diagnose what went wrong and how to rectify it quickly. So, I was interested in designing the next generation control systems.

▶ *What represents next generation control systems?*

Systems that are capable of sophisticated reasoning. So, in some sense I was,

and still am, interested in designing computers that can reason like humans but much faster, covering a lot more ground. This is where artificial intelligence comes in – designing systems to think and reason like people. With this knowledge-base we developed DKit, the first part of our research work, and HAZOPExpert systems, the second part.

▶ *What is DKit?*

It is an intelligent control system that can help figure out what is going wrong in a plant and what should be done. That is, abnormal situation management (ASM) wherein you reason from symptoms to causes.

▶ *What kind of research work is involved in DKit?*

We began laying the foundation for DKit in 1984-85, soon after the Bhopal incident. We looked at the different approaches to ASM. Reasoning backward was not easy. To understand ASM we worked on neural networks, trend monitoring, causal and analytical modelling, artificial intelligence and statistical techniques. Each had its own strengths and weaknesses. No single approach addressed all the complexities of industrial diagnostic problems. So, we combined all the five approaches in DKit.

DKit is equipped with a moderator or a scheduler, which pools recommendations from different approaches, assesses the strengths and weaknesses of each, applies conflict-resolution algorithms and comes to a conclusion

If DKit does not offer one answer, it narrows the possible causes of an abnormal situation for the plant operator's consideration.

▶ *What is HAZOPExpert?*

In order to have a safe plant, it is best to design one to begin with. This is called process hazards analysis (PHA). When you design a new plant or take an existing plant and make changes to it, retrofitting, you analyse all the implied hazards. That is, you build into the system all that can possibly go wrong with the various parts of the plant, their causes, consequences and ways to protect the system. All these things have to be worked out by a detailed, systematic analysis, involving an enormous number of man-years.

Since we had already developed some techniques for going back, I figured that I must be able to develop techniques to go forward as well using a computer. So, we designed a whole series of systems, called the HAZOPExpert. In PHA, the well-known approach is hazard and operability analysis, or Hazop. So we developed two systems, HAZOPExpert for continuous process plants such as refineries and Batch HazopExpert for batch processing plants such as those used by pharmaceutical and speciality chemicals companies.

For this we developed algorithms using which, sitting in front of the computer screen and looking at every single unit of the process drawing, you can identify thousands of things that can go wrong in a plant, identify the causes and consequences, and provide the results in a summarised form, as a table

When people do PHA, they look at two scenarios. First, the routine functioning that is common to all plants. You ask the same kind of questions and go through the same kind of logic. These are the routine hazards. Some situations are unique to particular plants. We have focussed on routine situations, as 80 per cent of the effort is expended on solving routine problems.

So Hazop models hazards that may arise routinely in a plant are common to all plants. So, the Hazop system can take care of 80 per cent of the problems quickly.

For a large chemical plant it is almost impossible to analyse and build into the system all possible system failures. A typical chemical plant has hundreds of units, each responsible for 10 different activities. And there may be thousands of such combinations. It is humanly impossible even to identify all possible hazards. But that is how it is done now. This takes enormous amounts of time, effort and money. In the U.S., industries spend $ 2-3 billion a year on PHA.

For long, people did it because it was the right thing to do. But after the Bhopal incident, U.S. companies became concerned; they carried out a number of investigations. PHA was always being done by good chemical companies because that was the right thing to do. But in 1992, when Hazop was made mandatory, all U.S. plants became interested in our work at Purdue.

We are in the process of commercialising all our software. Batch HAZOPExpert is being tested in G.D. Searle and Company in Chicago.

Ideally, we would like to have one comprehensive system that is both diagnostic, like DKit, and predictive, like HAZOPExpert. As they are both related and part of the same problem, our team is now working on combining the two programs.

▶ *Are you thinking of marketing your product?*

One of the techniques we developed was recently licensed to Honeywell Inc. to make it into a product. It is the first of its kind – a technique licensed from a university for control purposes – anywhere in the world. It is called the qualitative trend analysis (QTA) technique.

▶ *Have you had a trial run of the process safety software in industries?*

I have been working on this technique for over 10 years, and in the last year and a half it has been on real-time trial in a major chemical plant, Exxon, in the U.S. and the results have been spectacular. It detected problems in the plant long before the alarms went off and advised the operator about what went wrong and what to do.

▶ *After the Bhopal tragedy there has been a lot of research work to understand the problem. How is your work different from the rest?*

There is nothing like this (HAZOPExpert). We are acknowledged as the leaders in process safety, both on-line and off-line design. It is something of a pioneering effort.

▶ *How long did it take to complete the program?*

Since we had to start from scratch, we took longer than would have been the case otherwise. QTA and the diagnosis work took us 15 years, roughly about 50 man-years of work. HAZOPExpert and Batch HAZOPExpert took nearly half of that.

▶ *How relevant are the products for India?*

They are especially relevant for developing countries, such as India. After all, the worst accident in the history of chemical plants happened in India. Also, a number of chemical plants are being built in India. Many plants are also shifting base from developed countries to countries like India because of the advantages of cheap labour, environmental considerations and so on.

▶ *Have you patented your work?*

We have licensed part of our work to Honeywell. The intellectual property rights are with Purdue. When we set up the company and market the products, we will acquire the rights. Purdue encourages the faculty to start companies to disseminate knowledge as it sees its role not only as one which creates knowledge but also one that transfers the knowledge to society. The two ways of transfering knowledge are through licensing and by setting up companies. Purdue does both.

Of courts and freedoms

A military court probing the leakage of alleged confidential official documents relating to the Kargil War summons as witnesses journalists, civilians not subject to the Army Act, raising a host of questions.

ANUPAM GUPTA

"FREEDOM of discussion," said Professor A.V. Dicey, father of the concept of rule of law, writing sardonically in 1885, is "in England little else than the right to write or say anything which a jury, consisting of twelve shopkeepers, think it expedient should be said or written." It is hardly an exaggeration to say, he wrote, that from this point of view the "liberty of the press is not recognised in England."

Hardly a soul in England would adhere to that position today. But a century and 14 years later, on the threshold of the third millennium and almost 50 years after India gave itself its own democratic Constitution, the Indian Army, or its legal advisers, apparently believe that the position is no better in India today than it was in England during Dicey's time. How else can anyone explain the unprecedented summoning of journalists by a military court of inquiry at Leh, set up to probe the leakage of alleged confidential official documents relating to the Kargil War? The documents are associated with Brigadier Surinder Singh, commander of the 121 Infantry Brigade at Kargil, and his advance warnings of a Pakistani intrusion then dismissed as alarmist.

In an action clearly calculated to intimidate the media as a whole and dampen the investigative ardour of the journalists concerned in particular, the court of inquiry has used its statutory power to summon civilian witnesses not subject to the Army Act – *Outlook* and *Frontline* reporters who first revealed to the public the damning evidence contained in Brig. Surinder Singh's letters. "Whereas a Court of Inquiry has been ordered to assemble at Leh," reads the summons, "for investigating the circumstances under which allegedly contents of confidential communications were made available to unauthorised persons by Army personnel in contravention to the Official Secrets Act 1923, I do hereby summon and require you to attend as a witness at the sitting of the said Court at Leh.... and so to attend from day to day until you shall be duly discharged, whereof you shall fail at your peril." It is signed by the Presiding Officer of the Court of Inquiry, Brigadier A.K. Duggal, Deputy General Officer Commanding, 3 Infantry Division.

The power to summon civilians not subject to the Army Act, enjoyed earlier only by courts-martial, was conferred on courts of inquiry in September 1992 by an amendment to Section 135 of the Army Act. The Section is a part of a fasciculus of provisions, Sections 128 to 152, grouped together in Chapter XI of the Act under the general title "Procedure of Courts-Martial". Apart from Section 135, none of the provisions in the chapter refers to a court of inquiry.

As a matter of fact, only three other provisions in the Army Act, which has 194 sections, speak of a court of inquiry, though the Act is replete with provisions relating to courts-martial. They are Section 89 (levy of collective fines by a commanding officer for weapons lost or stolen after obtaining the report of a court of inquiry); Section 106 (court-of-inquiry probe into a person's absence from duty without leave for 30 days or more and any deficiency in arms, equipment or other property entrusted to his care); and Section 191 (the Central Government's power to make rules regarding, *inter alia*, the assembly and procedure of courts of inquiry). None of them defines what a court of inquiry actually is, or explains why and how it is called a "court". Nor does Section 3, the introductory definitional provision of the statute, shed any light on this vital semantic point. It is made up of 24 clauses, each defining a distinct term or expression of the Act, plus a last, residuary clause which adopts the definitions given in the Indian Penal Code (IPC). The Section goes to the extent of defining terms such as "Chief of Army Staff", terms one would have thought needed no definition, but leaves out a court of inquiry.

The IPC, on its part, defines "judge" (Section 19) as also "court of justice" (Section 20), and defines them in terms which would exclude without any doubt courts of inquiry from their ambit. A "court of justice" denotes a judge acting alone or a body of judges acting as a body, while a "judge" denotes a person who is empowered by law to give in any legal proceeding, civil or criminal, and subject to appeal or confirmation, a definitive judgment. Even a magistrate exercising jurisdiction in respect of a charge which he has power only to commit for trial to another court is not a judge (Section 19, illustration 'd').

Unlike a court-martial and unlike even a commanding officer, a court of inquiry can neither try nor commit (or remand) anyone for trial nor award any punishment to any person subject to the Army Act. It is no more than what Rule 177 of the Army Rules candidly describes it to be: "an assembly of officers... directed to collect evidence and, if so required, to report with regard to any matter which may be referred to them."

Just two rules later there is, in fact, intrinsic evidence of a striking nature to show that not only is a court of inquiry not a court but that it is the very antithesis of a court or even a quasi-judicial authority. A court of inquiry, says Rule 179, "shall be guided by the written instructions of the authority who assembled the court. The instructions shall be full and specific and shall state the general character of the information required. They shall also state whether a report is required or not." Report or no report, after the inquiry is over the "whole of the proceedings of a court of inquiry shall be forwarded by the presiding officer to the officer who assembled the court."

A court or a quasi-judicial authority taking instructions or directions from a superior is an idea repugnant to the rule of law. Even when expressly conferred by statute (and not merely rules or delegated legislation framed under it), the power to issue such directions was unequivocally condemned by the Supreme Court in Raman's case (1959) as a "naked arbitrary power capable of being used to compel quasi-judicial tribunals to dispose of cases in a particular way".

It is a "basic and elementary postulate of the rule of law", a Constitution Bench

INTERFACE 180538

of the court reiterated five years later in Rajagopala Naidu's case, that a judge or quasi-judicial authority "must be left absolutely unfettered by any extraneous guidance by the executive or administrative wing of the state". Directions which forge fetters on quasi-judicial authorities in the exercise of their discretion, said Chief Justice P.B. Gajendragadkar, are "completely inconsistent with the well-accepted notion of judicial process".

And yet, despite all this, despite the fact that it is not a court at all or anything approaching a court, the military court of inquiry at Leh, exploiting the mystique that surrounds the processes of any institution called a "court", has chosen to subpoena the Fourth Estate in a bid to scare it into committing an obvious professional sin: the disclosure of its sources.

Accustomed as they are to restriction, even wholesale "abrogation", of their fundamental rights and freedoms courtesy Article 33 of the Constitution, it is ideologically and temperamentally difficult, if not impossible, for the armed forces to appreciate the constitutional rights and obligations of others not subject to military law.

The right of journalists to protect their sources of information is as integral and indispensable a part of their constitutionally guaranteed right of freedom of speech and expression as their right to write and publish itself. The one cannot exist without the other. "After studying the cases it seems to me," Lord Denning, one of the greatest judges this century has produced, said in 1980 in the Granada Television case, "that the courts are reaching towards this principle: the public has a right of access to information which is of public concern and of which the public ought to know. The newspapers are the agents, so to speak, of the public to collect that information and to tell the public of it. In support of this right of access, the newspapers should not in general be compelled to disclose their sources of information..."

The reason, he explained, writing in his own inimitable style, is that "if they were compelled to disclose their sources, they would soon be bereft of information which they ought to have. The sources would dry up. Wrongdoing would not be disclosed. Charlatans would not be exposed. Unfairness would go unremedied. Misdeeds in the corridors of power, in companies or in government departments would never be known."

His colleague on the Bench hearing one of the leading English cases on the subject, Lord Justice Watkins, was no less forthright and lucid. He said: "It is well founded on ample legal authority that newspapers and television and broadcasting authorities and their servants are in principle immune from disclosing their confidential sources of information. This principle has been applied in a number of cases before courts and tribunals, some of which have achieved public prominence. The public can be said to approve of it. It is in their interest to do so. It is, therefore, a public interest immunity."

Dealing then with the possible exceptions to this general principle, Watkins concluded with a pregnant statement. Save in "very rare and exceptional circumstances", he said, "it is impossible to foresee a claim for disclosure which a court would entertain being brought by anybody whose iniquity has been exposed."

That was in the Court of Appeal, which occupies a position in the British judicial hierarchy midway between the High Courts and the Supreme Court in India. In an appeal to the House of Lords, the highest judicial forum in England, the views of Denning and Watkins were approved by Lord Salmon but rejected by the remaining four Law Lords led by Lord Wilberforce. Each of the four delivered a separate judgment (called "speech" in the House of Lords), all equally hostile to the very concept of the freedom of the press.

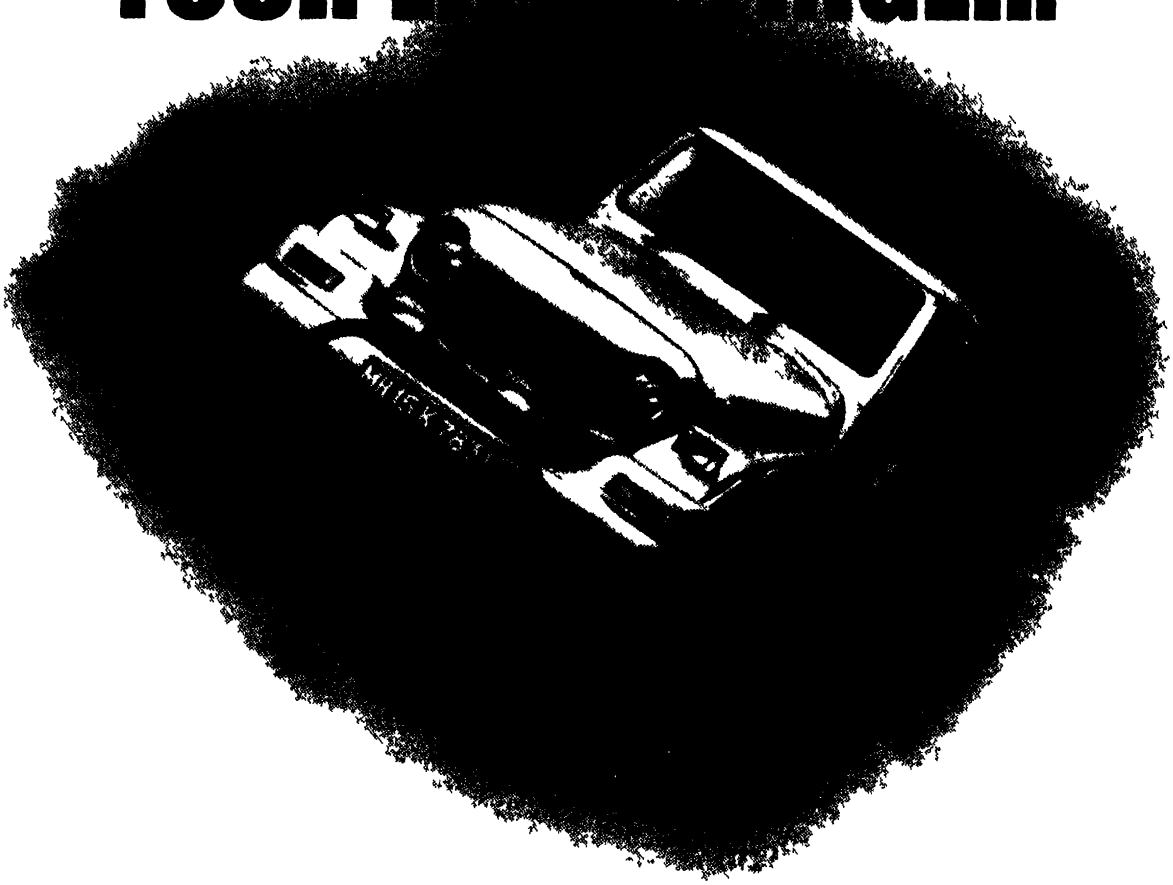
In less than a year, however, the law as settled by the majority was overturned by Parliament. Section 10 of the new Contempt of Court Act, 1981, barring courts from requiring journalists to disclose their sources of information "unless it be established to the satisfaction of the court that the disclosure is necessary in the interests of justice or national security or for the prevention of disorder or crime," embodies, in substance, the liberal and enlightened views of Salmon, Denning and Watkins.

Even though England has no written Constitution and no Bill of Rights, non-disclosure of a journalist's sources is now the statutory rule and disclosure the exception, the onus of establishing the necessity of which lies on the party which seeks such disclosure.

The position in India, with a written Constitution and Fundamental Rights expressly protected from encroachments, can only be better, not worse. This constitutionally fortified position has been recognised by Parliament in Section 15 of the Press Council Act of 1978. Sub-section (1) of Section 15 confers on the Press Council the "same powers throughout India as are vested in civil court" in respect of summoning and enforcing the attendance of witnesses and examining them on oath, requiring the discovery (or disclosure) of documents, etc. Sub-section (2) of Section 15. And it provides complete, unfettered immunity to journalists from disclosing their sources. "Nothing in sub-section (1)," it reads, "shall be deemed to compel any newspaper, news agent, editor or journalist to disclose the source of any news or information published by that newspaper or received or reported by that news agency, editor or journalist."

This immunity has been granted despite the fact that the Council is obligated, under Section 13 (which sets out its objects and functions), to foster among journalists a "due sense of both the rights and responsibilities of citizenship" as also a "sense of responsibility and public service". It is apparent that in the opinion of Parliament a journalist's right to protect his or her sources is consistent with his obligations as a citizen and in no way detracts from his responsibility as a journalist.

As and when the issue is directly raised before the Supreme Court under Article 19 of the Constitution, as it is bound sooner or later to be in view of the Army's conduct, the latest 1996 verdict of the European Court of Human Rights in Goodwin's case will also be of tremendous significance. And that is because of the similarity between the provisions of Article 19(1)(a) read with Clause (2), dealing with freedom of speech and expression, and those of Article 10 of the European Convention on Human Rights which, after the collapse of Communism, has begun to exert an increasing influence on constitutional jurisprudence the world over.



"Protection of journalistic sources," ruled the European Court, "is one of the basic conditions of press freedom." Absent such protection, the "vital watchdog role of the press may be undermined and the ability of the press to provide accurate and reliable information may be adversely affected. Having regard to the importance of the protection of journalistic sources for press freedom in a democratic society and the potentially chilling effect an order of source disclosure has on the exercise of that freedom, such a measure cannot be compatible with Article 10 of the Convention unless it is justified by an overriding requirement in the public interest."

Flush with the victory in Kargil, the military authorities at Leh have clearly bitten off more than they can chew. ■

Lessons from Pakistan

Gloating over the military takeover in Pakistan and self-congratulation over the 'inherent' strength of Indian democracy is unwarranted, even dangerous.

If there were a nuclear Doomsday Clock for India and Pakistan, we would now have to advance its hands by two minutes. After the Pakistan military *coup d'etat* of October 12, it would stand at three minutes to midnight. The clock, whose concept was invented by peace-minded atomic scientists to warn humanity of the gravest threat to its existence, has registered many nasty advances since 1974 in South Asia, especially with the nuclear tests last year. Kargil took it forward by two minutes: Indian and Pakistani Ministers and senior officials exchanged veiled nuclear threats at least 13 times during the conflict.

With the coup, a crucial assumption about the low likelihood of an India-Pakistan nuclear exchange has broken down – namely, the integrity of the establishments of the two countries and their ability to take rational decisions about the life and death of millions of people. The coup has exposed the fragility of the Pakistan establishment. Generals who can plot against one another (as ISI chief Khwaja Zia-ud-din did against Gen. Pervez Musharraf) and overthrow elected governments, can also overturn norms of rational strategic conduct. They can invent, and over-react to, threats; they can panic, or pull the nuclear trigger – in hubris or desperation, to assert "national pride", or in pre-emptive "self-defence".

This should alarm us and induce salutary sobriety in the Indian responses to the events in Pakistan. Instead, India's policy-makers and -shapers have gloated over them, indulged in self-congratulation over the "inherent strength" of Indian democracy, and ridiculed Pakistan and its people. Beneath bland official statements of neutrality, and declarations of willingness to deal in a mature manner with all regimes in Pakistan, whether civilian or military, lurk many Indian suspicions and calculations. The main calculation is how to use Pakistan's present crisis to court Washington through slogans such as "cross-border terrorism".

The Foreign Office did India no credit by pooh-poohing Pakistan's unilateral troop withdrawal from the international border, and summarily rejecting its offer of an "unconditional", "results-oriented" dialogue. In today's situation, tension defusion and dialogue resumption are so important that it really does not matter whether Gen. Musharraf's intentions are sincere, or whether the pullback extends to the Line of Control (LoC) in Kashmir. Any pullback is unreservedly welcome and in our own interest. Had it responded positively to the Pakistani proposal, New Delhi would have heightened its stature and also won the Pakistani people's goodwill. Instead it has chosen to be petty, and thus strengthened the view that, led by a traditionally anti-Pakistan party it is not interested in conciliation.

Some of our self-styled strategic analysts – read, Pakistan-baiters who predictably recite little *mantras* memorised over the years – have put their own spin on the coup by saying that military rule is the normal or "natural" state of Pakistan: the army merely acted as the guardian of the Two-Nation Theory; there is nothing unusual about this. The Pakistanis don't know how to manage democracy. Only we Indians do. Jaswant Singh pompously said "the events are themselves a commentary on the events".

BEYOND THE OBVIOUS

PRAFUL BIDWAI

This view ignores the steps – wobbling and indecisive, and yet definite and numerous – that Pakistan has taken towards democratisation during the past decade. It makes light of the evolution of Pakistani civil society: which is more powerful than anything existing in Ayub Khan's or Zia's time. And the analysis portrays misgovernance as a fundamental and necessary failure of democracy. Rather than deal with the specifics of the present crisis and its roots in leadership failure, it makes sweeping generalisations about the unviability of the Pakistani state itself. The coup was always waiting to happen!

THIS monocausal, conjuncture-non-specific, one-glove-fits-all hypothesis is methodologically wrong. It does not consider the dynamics of Pakistan's evolution half a century after its formation. It assumes that once a state is founded on religious identity, it is doomed to remain so forever. Historically, this is belied not just in "Christian" or "Buddhist" societies, which have evolved into broadly secular systems, but also in "Muslim" Iran, Iraq or Turkey. Iran is an excellent contemporary example. Twenty years after the Islamic Revolution, it is transiting towards some kind of pluralist, liberal democracy, with a greatly reduced weight for religion in politics.

The usual premise beneath Pakistan's "unviability" thesis is even worse: namely that Islam and democracy are mutually incompatible. This is communal nonsense. Secular democracy is not meant to reflect or capture a particular religion in politics. It is about basic separation between *all* religion and politics. If predominantly "Muslim" Turkey or Bangladesh can sustain modern democracy, so can Pakistan.

Pakistan's failures are explained by the crisis of its leadership under specific circumstances, not the fundamental conditions of its formation. The army did not intervene because Sharif was jeopardising the Two-Nation Theory. A different conflict was being played out. Sharif tampered with the military line of command, creating resentment. This surfaced during Kargil. His decision to withdraw the Mujahideen further sharpened tensions with Gen. Musharraf. His more recent meetings with some Corps Commanders precipitated the final act, leading to the mid-

air dismissal of Gen. Musharraf and attempt to prevent his aircraft from landing at Karachi. The coup came as a reaction.

THE context-setting backdrop to all this was Sharif's 21 month-long, feudal-style despotic rule which lost him all credibility despite a thumping parliamentary majority and a cooperative bureaucracy. Sharif could have put Pakistan on the road to progress and set exemplary standards of governance. Instead, he proceeded to corrupt, subvert and destroy all democratic institutions. His Cabinet did not meet formally even once during the past year. Decisions were taken by personal fiats and ordinances. The National Assembly has not passed a single piece of legislation since late 1997. In Sindh, the Assembly was prevented from conducting legislative business altogether. Corruption under the Sharif kleptocracy became monumental. Crony capitalism reached new heights as the economy went into a tailspin. The breakdown of public services was total. The army was drafted to collect electricity and water bills. Little wonder, then, that three-fourths of Pakistanis polled by Gallup shed no tears for Sharif, although three-fifths want civilian democracy.

B K. BANGASH/AP

Pakistani troops firing at Indian positions during the Kargil War. Kargil takes forward the nuclear Doomsday Clock for India and Pakistan.

It is not clear if and how Musharraf will put Pakistan back on the road to democratisation. The situation in Pakistan is fluid and there is some relief at Sharif's departure. But it is clear that Pakistan's 140 million people have lost democratic rights, the Constitution stands suspended, and the military is back overtly interfering in public life after 12 years. Pakistan seethes with problems: severe economic inequalities and low growth, intense regional-ethnic tensions, and rising fundamentalism. Both the Pakistan People's Party and the Muslim League stand discredited, having been tried twice, and found wanting. There is no obvious democratic alternative on the horizon. The events leading to the coup, and the coup itself, are a terrible setback for the Pakistani people. We must sympathise and solidarise with them.

THE Pakistan crisis comes in conjunction with two other developments: the swearing-in of a hardline right-wing government in India, and a global setback to nuclear disarmament. Whatever Vajpayee's protestations, he belongs to a political current, itself tied to the Rashtriya Swayamsevak Sangh (RSS), which believes in Akhand Bharat (annexation of Pakistan and Bangladesh) and is viscerally anti-Pakistan, indeed sees Pakistan as intrinsically inimical. Such currents in both India and Pakistan have fomented exclusivist nationalism, militarism and jingoism. These, in turn, promote mutual tension and hostility. This vicious cycle is part of what is the world's longest-lasting hot-cold war. It must be broken. The BJP-led government is least equipped – and least willing – to do so. At its core is a party dedicated to a Hindu Rashtra and anti-Islamic prejudice.

After the May 1998 nuclear watershed, India-Pakistan relations have decisively changed. Renewed tensions between them, within a few months of the Kargil war, could have profoundly negative consequences for their people. The coup and hardline responses to Pakistan from India are liable to strengthen hawkish sentiments and reliance on the armed forces in that country. Once "security" and "defence" are put at the top of the agenda, the military naturally gets the top priority: who else will defend the "nation"?

Two months ago, India ignited a new nuclear arms race by publishing a "draft Indian Nuclear Doctrine", which calls for a huge, open-ended arsenal with triadic (land, air- and sea) capabilities. Pakistan has said it has no choice but to match India. Even China is re-evaluating its nuclear posture. All this is likely to stoke militarism in the region further.

Global developments have been equally dismal, especially the U.S. Senate's rejection of the Comprehensive Test Ban Treaty (CTBT). The treaty cannot come into force for a couple of years. This takes the pressure off India and Pakistan to sign it. Although the CTBT does not prevent nuclear weapons manufacture, it will create conditions conducive to restraint. Absent restraint, India and Pakistan are likelier to persist with nuclear preparations. The CTBT failure signifies a larger setback. The Republican Right in the U.S. is now out to sabotage all arms control initiatives. The whole global agenda of nuclear arms restraint and reduction – including START-II ratification and progress on the Fissile Material Cutoff Treaty (FMCT) – is liable to suffer, and the Anti-Ballistic Missile Treaty (which bans full-scale 'Star Wars') is likely to get jeopardised. This could lead to a collapse of the entire post-Cold War momentum in favour of nuclear abolition. This will strengthen hardline approaches everywhere, including in South Asia.

ALL this underscores the danger from India's myopic and mean-spirited response to the coup, in particular New Delhi's high-handed rejection of Musharraf's offer of unconditional dialogue and its spurning of the chance to effect mutual disengagement. Pakistan is bursting with tension. It is in India's own long-term interest that it does not disintegrate or collapse. Surely, we do not want a Nuclear Somalia at our doorstep. Making a dialogue conditional upon withdrawal of support to "cross-border terrorism" is a retreat from Lahore. Even after the Kargil conflict, India repeatedly said it remains committed to improving relations with Pakistan and resuming the dialogue begun at Lahore.

The coup does not alter the rationale of such a dialogue. Indeed, if Musharraf is followed by an elected leader, she or he will have an added incentive to do one better and take the process of conciliation even further. Musharraf's idea of talks on

a "package deal" including Kashmir, does not sound totally incompatible with India's own "composite dialogue" concept. Questioning Pakistan's intentions on this score leaves New Delhi vulnerable to the charge that its own intentions are not honourable. Did it not do "bus diplomacy" mainly to appear reasonable to the world after the nuclear tests?

To respond rationally, New Delhi must stop looking at Pakistan through the prism of Indo-U.S. relations, and give up its deplorable attempt to establish an exclusive strategic relationship with Washington. This agenda diverts attention from India's own priorities and problems, including strains on its democracy. Surely, given India's institutional erosion, corruption in public life, growing elitism in economy and society, and the subversion of so many norms of Cabinet functioning, this democracy too has become vulnerable. Its health, while far better than that of Pakistan's democracy, cannot be taken for granted. It has to be nurtured and guarded carefully. We should not be smug about it.

Nor should we ignore the peculiarity of the military-civilian relationship in India. The principal reason the Indian military has not got overtly politicised, and not meddled with or defied civilian authority, is not that this society is inherently resistant to militarism, or that its army comes from a different tradition than Pakistan's. The reason is that the military understood a long ago – as did the rest of our Establishment – that in a plural, diverse society, you cannot build, work or sustain any institution unless you act consensually and take the bulk of society with you without relying primarily on coercion. Insofar as the political leadership performs well, it can do this reasonably. Its increasing failure to deliver should worry us. Indeed, the Sangh Parivar's recent efforts to communalise the military should alarm us.

We must remember – and Pakistan is an extreme-case reminder – that democracy is not about elections and majority rule alone. It also involves fundamental liberties and freedoms, and the rule of law and legal entitlements. It has to be inclusive. It must be based on robust representative institutions, and on separation of powers among them. Free debate and an unshackled media are indispensable to it. And it cannot do without institutionalised mechanisms to promote accountability. When these are weakened, democracy can erode, even collapse. ■

'Big Tickets' for Big Business

Why privatisation may be hardly the solution to India's fiscal problems.

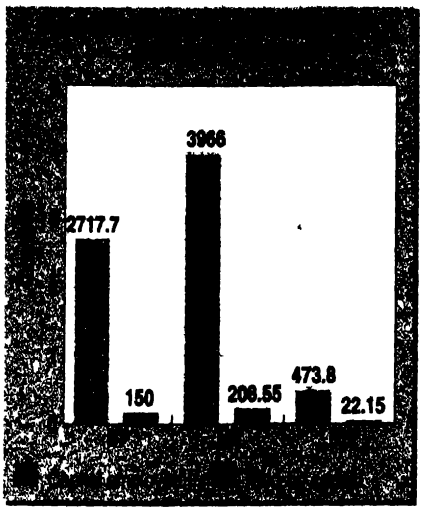
C.P. CHANDRASEKHAR

IT cannot be dismissed as pure coincidence. Immediately after resuming his post as Finance Minister in the new Cabinet of the National Democratic Alliance, Yashwant Sinha announced that crossing his own target of mobilising Rs. 10,000 crores through public sector disinivestment was crucial to his game plan of capping the fiscal deficit. Promising to use "unconventional and innovative approaches" to cross that target, he declared that he was looking at "a couple of big ticket items" to achieve his goal. The Finance Minister's need for a strategic disinvestment drive of this kind is obvious. It exploits size and the promise of handing over control to the acquirer to meet the disinvestment target within the end-March, fiscal year deadline in order to dress up the size of the fiscal deficit. And it could achieve this goal even if international institutional investors temporarily withdraw from the markets in response to the Y2K threat.

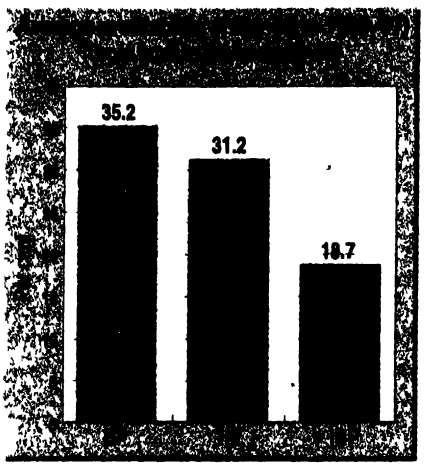
Barely days after Yashwant Sinha's statements, Anil Ambani, managing director of Reliance Industries Limited, announced that the RIL subsidiary, Reliance Petroleum Limited, was keen to acquire public sector oil refining and marketing companies such as Bharat Petroleum, Hindustan Petroleum and IBP, so long as the government was willing to hand over the management control of these companies to the private sector. Ambani's message was that if the government was willing to retract from its strategy of mobilising resources by promoting cross-holding of equity among oil companies, which keeps both equity and management within the public sector, he had the cash-flows needed to fund these acquisitions

The keenness the government displays in making strategic sales of "big ticket" PSUs can give rise to speculation that the intent is to dispose of public assets, even if it involves prices that imply significant public losses.

Ambani's interest in acquiring these companies is understandable. They would be in keeping with the company's original strategy of integrating vertically down the production chain from synthetics through intermediate hydrocarbons to refining and oil production. Moreover, these are companies which, despite being hamstrung by price control and lack of administrative autonomy, have been performing extremely well. According to the Bureau of Public Enterprises, the three-year average rate of return during 1994-95 to 1996-97 as measured by the ratio of gross profit to total capital employed stood at an attractive 35.13 per cent in the case of Bharat Petroleum, 31.24 per cent in the case of Hindustan Petroleum, and a modest but comfortable 18.71 per cent in the case of IBP. Thus, based on both short-run, profit-maximising considerations and a strategic point of view, these acquisitions by RPL would amount to buying a gold mine when gold prices are set to rise.



WHAT about the government's point of view? At the end of 1996-97, the government's shareholding in these three corporations amounted to 66.2, 55.4 and 59.6 per cent respectively. At par, that holding was valued at Rs.228 crores. The current market value would be many multiples of that amount, making the shareholding in these corporations alone more than adequate to fund the government's resource-mobilisation-through-privatisation target of Rs.10,000



crores. This "matching of interests" of the government and one of India's leading private sector groups seems to make the case for privatising these corporations self-evident.

The difficulty with this argument is that while it does evaluate RIL's interests appropriately, it fails to assess correctly what is good for the government. Consider, for example, the current obsession with the fiscal deficit. Even if that version of the budgetary deficit crosses 6 per cent this financial year, it does not appear to pose any major inflationary threat. With food stocks and foreign exchange reserves being comfortable, the government has the wherewithal to manage the supply situation. It can, through the release of those stocks or by resorting to imports of essentials, meet any unexpected surge in prices.

However, it is argued, the deficit is still a matter of concern, since it could contribute to a rise in interest rates by increasing the government's borrowing from the open market. That is, the cause for concern is not the possible erosion of real incomes of the ordinary citizen, but the likely adverse impact of a possible increase in interest rates on private sector growth and profitability. Even if such concern is warranted, the actual source of the problem remains unidentified in the logic leading up to the privatisation solution. The deficit on the central government's budget remains high because of the erosion of the government's tax base in the wake of the customs duty reductions and the excise and direct tax concessions that have accompanied liberalisation. According to the Reserve Bank of India's (RBI) estimates, the ratio of the Centre's gross tax revenue to gross domestic product fell from 10 per cent in 1991-92 to 8.5 per cent in 1996-97. This has meant that even when capital and social sector expenditures have been curtailed, the fiscal deficit has remained high. Dealing with the fiscal deficit, therefore, requires efforts aimed at reversing the erosion of the tax base.

BUT, setting that aside for the moment, even the current deficit need not have affected interest rates if the government had not chosen to do away with the practice of borrowing from the RBI at relatively low rates of interest, or "monetising" a significant part of this deficit. However, as part of the International Monetary Fund-influenced drive to give the central bank greater freedom, its autonomy is not merely being

institutionalised, but ensured through attempts to pre-empt any adverse impact of the government's borrowing arrangements on the RBI's independence. With tax revenues under squeeze and borrowing from the central bank against ad-hoc Treasury Bills foreclosed, the government has virtually tied its hands. It cannot but run up a large fiscal deficit and resort to large-scale borrowing, unless it curtails spending massively and slows growth or it garners funds through privatisation, which has been rendered the only other source of finance. Since in the view of both business and government it is the role of the latter to revive growth, spending cuts are now not on the agenda. Nor are efforts to increase taxes and widen the tax base. That leaves only privatisation as an option. It is this view that Yashwant Sinha espouses when he argues that, in order to avoid an internal debt trap, the government must push ahead with privatisation.

Unfortunately even this limited perspective is valid only in the short run. By selling off some of its best assets to reduce the fiscal deficit in any particular year, all that the government is doing is reducing the extent of its additional borrowing; it does not wipe out any of its already accumulated debt. Adopting the privatisation solution to the fiscal problem means that while the burden of past borrowing in the form of interest and amortisation commitments has to be borne, significant, non-tax sources of continuous income generation are being whittled away. As reported earlier, the returns on capital employed earned by some of corporations targeted for privatisation are remarkably high. And the value of capital employed in the cases being discussed stands at between 18 and 21 times the par value of their paid-up capital. The return on paid-up capital would therefore be much higher than on capital employed. Hence, unless the shares of these companies are sold at a huge premium, the interest payments saved by using the revenue from that sale to reduce debt would be lower than the return forgone through privatisation.

Past experience suggests that the government is not always a maximiser when selling off assets. Controversies over the price at which oil blocks explored and discovered by the public sector were handed over to the private sector (including Reliance) to exploit, still persist. And, quite recently the government sold a part of its holdings in Videsh Sanchar Nigam Limited (VSNL) at a discounted price of Rs.750 a share, when the prevailing market price was around Rs.1,100 a share.

Given this experience, the manner in which the government has tied itself down to the privatisation option and the keenness it displays in making strategic sales of "big ticket" public sector undertakings (PSUs), can give rise to speculation that the intent is to dispose of public assets, even if it involves prices that imply significant public losses. Clearly, the Reliance management has sensed such a prospect. Not surprisingly, it has zeroed in on a tendency in government which many have been critical of – that of forcing public sector corporations to use their surplus funds to buy into the government's shareholding in other PSUs, rather than invest in modernisation and expansion, so as to ease the fiscal problem facing the administration. What RIL wants instead is a near-outright sale to the private sector.

That, however, appears to be the worse of the two options. It merely provides the "big ticket" option to big business, without touching the structural problems afflicting the government's finances. ■

The path to privatisation

The M.S. Verma Committee's report, apart from recommending the restructuring of three major banks, lays the basis for the eventual privatisation of India's banking industry, which is now dominated by the public sector.

V. SRIDHAR

THE report of the Working Group on restructuring weak public sector banks, headed by M.S. Verma, former Chairman of the State Bank of India (SBI) and honorary adviser to the Reserve Bank of India (RBI), has sent shock waves through the banking industry. More than 20,000 employees from the three banks identified for restructuring – Indian Bank, United Commercial Bank (UCO Bank) and United Bank of India (UBI) – are in danger of losing their jobs if the panel's recommendations, submitted to the RBI on October 4, 1999, are acted upon. Moreover, the wages of other employees of these banks would remain frozen for three years.

Although the report has basically outlined a restructuring strategy for the three "weak" banks, there are fears among the 13 lakh bank employees in the country that such harsh measures will soon be extended to other public sector banks. The basis for the fear is the panel's identification of six other banks – Allahabad Bank, the Central Bank of India, Indian Overseas Bank, Punjab and Sind Bank, Union Bank of India and Vijaya Bank – as being in the "distress zone". Bank employees feel that aggressive downsizing of the public sector presence in banking is just round the corner.

Bank employees, represented by their unions, are outraged that they are being asked to pay with their jobs for the ills of the banking system. They allege that the Verma panel has failed to address the basic causes for sickness in the industry. For instance, massive irregularities have directly contributed to the present plight of Indian Bank *(Frontline,* July 30, 1999). Bank employees allege that the institutions have suffered either because of *mala fide* actions of persons occupying senior positions in the banks or the because of banks' inability to recover huge amounts outstanding from big industrial and corporate borrowers. The problem of making provisions for non-performing assets (NPAs) in the bank's balance sheet has thus been a major drain on the bank in the last several years.

The panel has estimated that the restructuring package for the three banks is likely to cost about Rs.5,500 crores. This includes Rs.300-400 crores for technology upgradation and Rs.1,100-1,200 crores for the 25 per cent reduction of the workforce through Voluntary Retirement Schemes (VRS). The panel has warned that if the VRS is not accepted by enough employees, they will have to face the prospect of an across-the-board wage cut. The panel has suggested provision of Rs.1,000 crores for the buyout of NPAs from the three banks. This is to be done from an asset reconstruction fund (ARF) that would be run by a privately managed asset management company (AMC). The panel has also recommended the recapitalisation of Rs.3,000 crores by the government in the three banks so that they fulfil the capital adequacy norms. However, the panel has suggested that recapitalisation be accompanied by stiff conditions imposed on the managements and unions of the three banks.

Although Union Finance Minister Yashwant Sinha has welcomed the recommendations, he has refused to provide recapitalisation to the three banks, a key aspect of the report. The Finance Ministry believes that providing budgetary allocations to banks, whether weak or strong, will amount to a deviation from its policy of letting banks raise capital from the market rather than from the government. The unions believe that this posturing by the Finance Minister is aimed at arm-twisting the employees into accepting the harsh measures.

THE Verma panel's report is the third in a series that has charted financial sector reforms in India since 1992. The first report, of the Committee on the Financial System (CFS), headed by M. Narasimham, was released in 1992. It advocated reforms that would align the Indian banking sector with the global financial markets. It recommended the introduction of capital adequacy norms and norms that would result in a transparent reflection of NPAs in the balance sheets of banks. In bankers' parlance, advances to borrowers are classified as assets. When these assets fail to generate returns because of the borrowers' inability to repay their loans, they are termed as NPAs. The total value of such assets in the books of public sector banks in India is about Rs.50,000 crores. This figure is only for the principal amount; including the interest payable, the total would exceed Rs.100,000 crores.

In 1998, the Committee on Banking Sector Reforms, again headed by M. Narasimham, published its report, which advocated changes in the organisational structure of the banking business. Among its crucial recommendations were those relating to the dilution of government stake in banks.

The thrust of the recommendations of the two Narasimham-led panels was that banking operations should be governed predominantly by profit considerations and that banks, in order to be linked to the global economy, should adopt international prudential norms. Norms relating to capital adequacy and NPA provisioning thus acquired overarching importance in the context of financial sector reforms. The Verma panel's report is remarkable for its continuity with the Narasimham Committee's reports.

It was on the basis of a set of seven criteria that panel identified Indian Bank, UCO Bank and UBI for restructuring. A crucial element in the exercise of determining weakness was the NPA levels. At the end of the last financial year (1998-99), gross NPAs in the case of the three banks amounted to Rs.6,974 crores – Rs. 3,709 crores for Indian Bank, Rs.1,716 crores for UCO Bank and Rs.1,549 crores

BY SPECIAL ARRANGEMENT

Employees of Indian Bank demonstrate in front of the bank's central office in Chennai on October 11 in protest against the M.S. Verma Committee report.

for UBI. Significantly, the panel did not attempt to find why their NPA levels have been high.

In the case of Indian Bank, the high level of NPAs was caused by reckless lending to various business groups. Several accounts with the bank are under investigation by the Central Bureau of Investigation (CBI). Almost one-third of the total NPAs is accounted for by the top 15 borrowers. In the case of UBI too, a significant level of NPAs are from industrial and business houses. A sub-group constituted by the Verma panel, whose report is annexed to the main report, observes that about 21 per cent of the advances to industry are non-performing and that another 24 per cent "appear vulnerable". The bank's operations have also been hit by the prolonged recession that has swept the ferrous and non-ferrous metal industries in the eastern region where it has a major exposure.

Just before the Verma panel submitted its report, Indian Bank constituted a four-member committee headed by the Chairman of Housing Development Finance Corporation Ltd., Deepak Parekh, to recommend a restructuring strategy. This committee is expected to "prioritise" the various restructuring options. The Chairman and top officials of Indian Bank have avoided the media since the Verma panel's report was released on October 4.

About 43 per cent of the branch network of UCO Bank and 87 per cent of that of UBI are in the eastern and north-eastern regions. They have borne the burden of the development objectives that were part of the agenda for banks after nationalisation. The panel observes that the presence of the banks in these regions has been "disadvantageous to them". How the market mechanism will ensure access to banking facilities for people in these regions is obviously outside the narrow framework that the panel has chosen to adopt for restructuring.

Two aspects of the Verma panel's report on NPAs stand out. First, the committee does not appear to be interested in making a fine distinction about NPAs in banks, particularly about how they have accumulated over a period of time. For instance, the NPA-related problems in Indian Bank are vastly different from those faced by UBI or other banks whose credit portfolios have suffered as a result of the prolonged industrial recession. Referring to the report, the Chairman and Managing Director of UBI, Biswajit Chaudhuri, remarked that "any straitjacket type of approach is bound to be counter-productive." Regarding the recommendation that the bank close its overseas operations, he asked why the bank should shut down a profitable operation.

The second aspect relates to problems that impair banks' ability to recover loans. For instance, NPAs amounting to more than Rs.900 crores in the three banks are accounted for by industrial units that have been referred to the Board for Industrial and Financial Reconstruction (BIFR). In addition, the three banks have launched recovery proceedings before Debt Recovery Tribunals (DRT); suits in these cases involve more than Rs.3,600 crores. Besides, cases involving more than Rs.600 crores are pending in other courts. Although the panel observes that the DRTs "are not helping recoveries of bank dues", it has not seen it fit to address this issue before recommending full-fledged restructuring for the banks.

K. Krishnan, general secretary of the Indian Bank Employees Federation, affiliated to the Bank Employees Federation of India (BEFI), alleges that while the reforms in the sector have concentrated on making banks comply with the NPA provisioning norms, their ability to make recoveries from defaulting clients have been severely restricted. He says that the reforms in general, and the Verma panel's work in particular, have failed to bring to book corporate and business interests that have borrowed heavily from the banks. Indian Bank has already put in operation a "compromise proposal" which emphasises lenience with defaulters so that the bank can recover whatever it can. Krishnan asks: "Why the RBI is not allowing the bank to display the list of defaulters." He says that this will put social pressure on the defaulters. Among the top defaulters in the case of Indian Bank is a company believed to be promoted by a Union Minister from Tamil Nadu. Interestingly, while the Verma panel has said that there are "moral hazards" in government funding the bailout of banks, it is silent on the greater moral hazards of allowing defaulters – primarily corporate and business interests – a free ride at the expense of public sector banks.

The panel's recommendation on the formation of the ARF has also come in for criticism. It has suggested a two-tier structure to manage the ARF: while the ownership of assets would vest with the government – to prevent legal challenges from borrowers or anyone else – the ARF will be managed by the AMC. The panel says that this is necessary because the "government body owning the asset may not possess the necessary skills and attitude to ensure (their) recovery." The panel has skilfully skirted the question of how the conflict of interest between government ownership and private management will be managed.

The plan as envisaged by the panel is as follows. The AMC, managed by a private company and with funds of Rs.1,000 crores, is to purchase all NPAs that amount to more than Rs. 50 lakhs, adding up to Rs. 3,000 crores. This implies a dis-

count rate of almost one-third The AMC is to issue interest bearing bonds to the banks after the transfer of the NPAs The three banks, already desperate to make whatever recoveries they can, will thus be able to remove NPAs of about Rs 1,000 crores from their balance sheets

The All India Bank Officers Confederation (AIBOC) has alleged that the affluent and wilful defaulters would thus be able to go scot-free Significantly, industry organisations, ranging from the Federation of Indian Chambers of Commerce and Industry (FICCI) to the Confederation of Indian Industry (CII) have welcomed the Verma Committee report but have skirted the question of large-scale defaults by business and corporate interests While the CII has expressed scepticism over the manner in which the assets may be valued, Krishnan told *Frontline* that the valuation of the assets implies a "scandal in the making" The unions fear that the shedding of NPA assets at a 'throw-away price', coupled with the massive VRS is meant to make these banks attractive for eventual takeover by private interests The panel, drawing on the "international experience", observed that "transfer of ownership to reputed corporate groups or to foreign banks' was a possible path of restructuring the three banks However, it said that the "prohibitive cost" of restructuring was a disincentive to private entities that may want to take over the banks It also noted that the 'present staffing pattern" in the banks is one of the 'deterrents'

Krishnan said that the banks needed strong legislative protection, the lack of which had led to their present plight According to him, strong action should be taken against persons responsible for the present situation He wanted action to be taken against the RBI and government nominees on the boards of the weak banks for having failed to protect the interests of the banks"

Sharda Singh, Chairman and Managing Director of UCO Bank, has demanded that reforms in the banking sector be supported by legal reforms to enable banks to recover dues from defaulters Sharda Singh, who was recently in Chennai to address a conference of UCO Bank employees, observed that "even the AMC suggested by the Verma Committee cannot do any better" in the absence of legal reforms to protect public sector banks

Krishnan is also critical of the Verma panel's observation that banks cannot lay any special claims to the large volume of funds in government and public sector company accounts The panel has observed that banks' accessibility to accounts should be determined by market forces Krishnan says that the SBI, which enjoys monopoly access to cheap funds in many of these accounts, is able to enjoy better interest spreads in its banking operations "The panel," says Krishnan "has evaded the question of the SBI's monopoly on these accounts "

The adverse impact on workers through job losses and frozen wage levels is only one facet of the panel's report More important, the panel has laid the basis for the eventual privatisation of the banking industry in India, which is predominantly publicly owned It has thus provided the new government with the ammunition it needs for accelerating the pace of reforms in the financial sector

The Verma panel's report has laid the ground for the first major confrontation between the new government and the unions. The United Forum of Bank Unions (UFBU) organised rallies in front of RBI offices The UFBU has planned demonstrations at the head offices and branches of various public sector banks. It is also sending delegations to central trade unions and members of Parliament, seeking their support. ■

Verdict '99

"Managing to lose" (November 5) analyses the reasons for the worst ever performance of the Congress(I) in Lok Sabha elections. Blaming it on Sonia Gandhi, the party's star campaigner, is too simplistic. A combination of factors put paid to the party's dream of returning to power. Organisational weakness still plagues the party. Although large crowds attended the election meetings addressed by Sonia Gandhi, the lack of follow-up action resulted in the party winning fewer seats than last time. Three Chief Ministers campaigned for the party in Delhi, Rajasthan and Madhya Pradesh but the majority of people in these States voted for the BJP. The Kargil factor and Sonia's inexperience in politics may have weighed with the voters, who chose to play it safe by preferring an experienced leader like Vajpayee.

Bangalore

★ ★ ★

The results are seen as a major setback for the Congress(I), and Sonia Gandhi's "immature leadership" is blamed for it. The ground reality is totally different. The Congress(I) has come back to power in Karnataka and Maharashtra. Earlier, under Sonia's leadership, it wrested Rajasthan and Delhi from the BJP. The best course for the Congress(I) now is to work as a responsible Opposition in Parliament, reposing faith in Sonia.

Jammu

Reservations

This has reference to the article, "Standing up for a right" (November 5).

It is undeniable that the Supreme Court rulings (August and September 1999) and the office memorandums of the Department of Personnel and Training amount to social discrimination in a refined form to deprive the Scheduled Castes and Tribes of their constitutional right to reservation in educational institutions and government jobs. In the long term, such actions will perpetuate and reinforce social inequality which is at the root of political, economic and other inequities.

The higher judiciary and administration are manned by people from privileged castes and classes. These sections have always felt that it was because of reservations that their youth do not get jobs. They also feel that their hold over the higher echelons of the power structure is under threat. Hence the attempt to dilute the benefits of reservation and block the rise of the S.C.s and S.T.s in institutions of science, technology and medicine.

Over the years the entire issue of reservations has been raised and debated in public and in courts. It has been recognised that social groups that have suffered atrocities, indignities, injustices and exploitation over the centuries need the support of the government and society as a whole. Even today the problems of poverty, unemployment and illiteracy are widespread among S.C.s and S.T.s. They continue to be exploited and discriminated against and deprived of even their political right to vote ("Targeting Dalit voters", October 8).

In this situation it is necessary for the S.C.s and S.T.s, as also non-governmental organisations, to come together and launch a campaign to protect the right to reservation.

It is the duty of the Ministry of Law and Justice to ensure that this constitutional right is not hijacked. The media should also highlight these problems.

China

It is appropriate that *Frontline* covered the 50th anniversary of the formation of the People's Republic of China as a Cover Story ("People's China at 50," October 22).

The world is keenly watching the experiment conducted by Chinese society in its march towards egalitarianism. Some people say that the reforms undertaken by the country mark a clear break from its traditional path of socialism. But, as Prabhat Patnaik argues, the economic development that has taken place in China in the past 20 years has its foundation in the policies pursued prior to the reform period. I also share the opinion of Utsa Patnaik that during the transition to market socialism China has lost some of the gains it made in the first three decades after the Revolution. It is to be hoped that the Chinese leaders will take steps to counter this trend.

Baroda

★ ★ ★

In the past, China has struggled a lot but today it is emerging as the only power that is capable of challenging U.S. hegemony. China has realised that a strong economy is the foundation of a powerful nation.

India has two lessons to learn from China. First, China employs market economy but it is not controlled by the market. Secondly, it has adopted a prudent economic policy with regard to foreign investments and government expenditure.

For decades India has adopted a negative attitude towards China. It should take a pragmatic approach. China is not an expansionist dragon but a loving and friendly one. Thanks to some of the pronouncements of the Vajpayee government, the relations between India and China are at a new low. While hostilities and a proxy war continue on the western border of India, there is peace and tranquillity on the eastern side. If only Vajpayee had directed his bus towards Beijing instead of Lahore, India would have benefited a lot.

Pravin Chaubey

Raipur

Opinion polls

In 1995, it was Chief Election Commissioner T.N. Seshan. In 1999, it is the Election Commission itself.

The judgment of the Constitution Bench of the Supreme Court upholding publication/telecast of opinion and exit poll results during the election process has dealt a major blow to the Election Commission, which has been working tirelessly to provide a 'level playing field' to political parties and thus achieve the goal of free and fair elections ("Polls and opinions," October 8). The Election Commission has rightly observed that the Indian electorate, being largely poor and uneducated, is likely to be influenced by these surveys. They also provide an opportunity to political parties to influence media organisations and have survey results that are in their favour published. The spirit behind the constitutional right to freedom of speech and expression should not be misused.

The Election Commission does not have the power to enact laws, but as a watchdog it surely can exercise the option to bark if not bite. As suggested by the Chief Election Commissioner, such sensitive issues should be debated at the national level before they are legislated upon.

The nuclear question

The Indian voter, who would vote out

a government when the price of onions rises and then vote against the newly elected government if he finds his water tap dry, cares little for the danger posed by nuclear weapons. He worries little about the prospect of his children and grandchildren being turned into ashes instantaneously or left alive with radiation-induced cancer.

Now that the Vajpayee Government is relatively stable, it can afford to unwind itself of its aggressively populist posture on the nuclear issue. The first step is to sign the Comprehensive Test Ban Treaty (CTBT). India's decision on signing the treaty should be linked only with that of Pakistan, for which that country is agreeable. It will be unwise to think that all nuclear weapon powers are our potential enemies and that we should have arms to deter all of them. No one can dispute that our technical capability is above that of Pakistan and by stopping tests at this stage we shall be able to maintain our superiority. Pakistan may be more backward than India, but if India begins testing for the purpose of achieving weapons sophistication, Pakistan will do the same. This will result in a disastrous nuclear arms race in the subcontinent.

Delhi

Minorities and the BJP

The students of Vidyajyoti Jesuit College of Theology, New Delhi, have written that the killing of Fr. Arul Doss and Sheikh Rehman took place in Orissa "on the eve of the general elections" ("Letters," October 22). I am not a supporter of the BJP, nor do I sympathise with fundamentalists, whether they are Hindus, Muslims or Christians. But is it not ironical that a party branded as the Saffron Brigade and a Hindu party would mastermind such a heinous crime on the eve of the elections? While all political parties try to improve their image prior to elections, how could a national party like the BJP have committed such a mistake?

If at all there is any political support given to the killers of Fr. Arul Doss and Sheikh Rehman, it is by the so- called secular forces. This is done with the intention of arousing the religious sentiments of people, for obvious reasons.

Water policy

It is a great misfortune of our country that when one part of it is submerged in floods another is in the grip of drought ("The Kosi untamed", September 25).

In a country where 75 per cent of the

RESPONSE

Of development and deprivation

The emotional outburst of H.M. Desarda in the debate "Of Development and deprivation" (*Frontline*, October 8) makes interesting reading. One can hardly disagree with him when he says that the dominant ideology of the past 50 years has been: "growth, unlimited". He specifically points out to the pursuit of growth in terms of mega irrigation and power projects and perhaps industries. Unfortunately, what he has forgotten to point is that we have also vigorously pursued growth in another field: India's population has increased from 350 million at the time of Independence to a billion now. It is strange that those who crusade against the so-called unsustainable development of natural resources have nothing to say about the unsustainable growth of population, which has proved to be the biggest cause of pollution and over-exploitation of scarce resources. All the problems these well-meaning activists have been highlighting and also anticipating stem from the population explosion and the resultant additional demand for basic necessities.

If it is "erroneous to equate waters and energy with mega-projects", it is equally erroneous to equate them with "age-old" and "time-tested sources of energy and methods of tapping them". The age-old practices – the burning of fuel-wood, agricultural refuse and cow-dung cakes, and the use of biogas, wind mills and so on – were evolved by the rural people for their local needs. With the increase in the population and the division of families, local sources were no longer adequate to meet their needs. The result was migration and concentration of population in urban centres, requiring concentration of water and energy needs. One fails to understand how these "age-old" practices would be able to run trains, buses or planes, operate tractors, produce fertilizers or supply pure tap water. Perhaps we must revert to the age-old practices of travelling in bullock-carts, using animal-driven ploughs, vegetable-oil lamps, cow-dung manures and manually drawn well water. It would be interesting to know how Desarda hopes to meet the present-day energy and water needs of both rural and urban population through age-old methods. Large-scale urbanisation has become a reality which one cannot wish away.

Statements such as "Plans and projects involving thousands of millions of rupees have not helped the toiling millions. On the contrary, the so-called development projects have affected them adversely and accentuated their daily suffering" are too sweeping to be believed. The fact is that through planned effort the country increased foodgrain production from 50 million tonnes in 1950-51 to 203 million tonnes in 1998-99. Otherwise millions would have starved, as was the case at the time of Independence when sustenance was provided by imported wheat.

Figures relating to the displacement of people by large dams are also blown out of proportion. It has now been proved by Surjit Bhalla and many others that the total number of people displaced by large dams in India could be only 5 to 8 million and not 40 million as estimated by Arundhati Roy. It is nobody's case that these 5 to 8 million people should not be given the best rehabilitation package and should not be placed in conditions much better than those in which they lived earlier. But to say that there should be no displacement at all is to deny survival to some potential beneficiaries of the project, who live in conditions much worse than those of people facing displacement.

Even China, opposed to the western model of development, has 21,600 of the world's 40,000 large dams. It is at present building one of the world's largest dam projects, the Three Gorges Dam, to produce 18,200 MW of power (India's total existing hydroelectric capacity does not add up to this), which involves the displacement of some two million people.

It is surprising that such a hue and cry is being raised about mega-hydropower projects as if hydropower is India's main energy source. In fact, even 20 per cent of the country's total hydropower potential of 85,000 MW has not been tapped because of resistance to submergence caused by reservoirs. The opponents of large dams prefer the use of coal (one has only to see the plight of coal miners, who live in worse conditions than

population depends on agriculture for livelihood, provision of water should get priority. Owing to the absence of a proper water policy, we are not able to take advantage of the 4,000 trillion litres of rain water the country is estimated to get every year. Priority should be give to the transfer of water from water-surplus areas to other parts of the country.

Gwalior

An appeal

For nearly 50 years, I have shed tears for the young, bright persons who became vegetables after suffering brain injury in accidents involving two-wheelers. Young widows with children evoke our sympathy, but it is more distressful to see young women struggling to support brain-damaged husbands and young children. Similar is the plight of elderly parents who are left with a son or a daughter who has suffered brain injury in a two-wheeler accident.

I invite the members of the public to visit with me the hospital wards in Tamil Nadu to see parents and young wives weeping for their sons and husbands. This will convince them not to worry about minor inconveniences caused by the wearing of helmets. People avoid wearing helmets on the ground that their hair style would be disturbed. But only if there is a head can there be hair or a hair-style. If hair really falls off owing to the use of helmets, most of the bike-riders in the West, Japan and South-East Asia and even New Delhi would be bald by now.

Some people say that it is difficult to wear helmets in hot weather. This is true but people in Delhi, West Asia and many places in South-East Asia, which are hotter than Chennai, for instance, wear helmets for safety. The headache that a helmet causes is temporary and certainly less intense than the pain resulting from fractures of the skull or brain injury.

Nobody denies that carrying a helmet and keeping it safe are inconveniences. But if you had shed one thousandth of the tears I have shed for my patients and their wives and parents, you will immediately demand that wearing crash helmets be made compulsory for two-wheeler riders.

Correction: In the Maharashtra Assembly elections, the BJP won 56 seats and the Shiv Sena 69 seats. The seats position with regard to these two parties got interchanged erroneously in the table accompanying "Fractured mandate in Maharashtra" (November 5).

dam-affected people) and also imported oil which involves the spending of thousands of crores of rupees in foreign exchange. The fact that hydropower is renewable, clean, cheap and eminently suitable for peaking does not appear to appeal to them.

Desarda makes yet another sweeping statement when he says that Indian as well as global experiences amply proves that mega-projects for irrigation and power generation are antithetical to the interests of the common people. He, however, does not cite examples. Dams such as Bhakra, Nagarjunasagar, Hirakud, Hoover, Tennessee Valley, Aswan, Itapu, Ataturk and hundreds of others prove this wrong. These dams have boosted the economy of the countries in which they are situated.

After visiting the High Aswan Dam (HAD) in 1990, J. Cotillon, the then Secretary-General of the International Commission on Large Dams (ICOLD), said: "My first surprise was to learn that HAD had saved Egypt from famine in 1972-73 and between 1979 and 1987, when there were nine consecutive years of drought, and that the main objective of the dam was fulfilled in the early years of service..."

In the concluding part of his report, Cotillon says: "Back in Paris, I met a journalist writing an article on the misdeeds of the world's large dams. I mentioned the famine averted by Aswan, Nothing more. She was so amazed that she changed the title of her article to "Large Dams: A necessary evil:They feed the Third World and give it electricity"."

The main objection to Sardar Sarovar is that it affects some 40,000 families in the reservoir area. The exact number of people who will be affected is 1,27,446 of whom only 63,223 are tribal people. In 82 of the 193 villages that will be affected in Madhya Pradesh, less than 10 per cent of their land will be submerged.

In another 32 villages, only 11 to 25 per cent of the land will be submerged. In 21 villages, only the dwellings will be affected, and that too only temporarily, owing to the reservoir backwater effect during floods. In another nine villages, only government wasteland will get submerged. Only in 18 villages will more than 5 per cent of the land get submerged. In the three States, only 11,279 hectares of cultivable land will go under the reservoir. The area of forest land (which is degraded land) that will be submerged is only about 13,385 ha.

All the affected families (even an adult son is considered as constituting a separate family) need not necessarily be displaced. In fact, of the 33,014 affected families in Madhya Pradesh, 18,890 have opted to stay on as they will only be temporarily affected by flood backwaters. They only need to shift to nearby higher ground temporarily when such floods occur. Thus the displacement issue is blown out of portion by critics. They, like Desarda, make a vague claim that a vast number of villages will be submerged if the height of the dam is raised even by 5 metres. The Grievance Redressal Committee headed by a former Chief Justice of a high court has already certified that those who run the risk of being affected if the dam height is raised by 5 m have been shifted. Many people fail to appreciate the fact that during high floods, many overbank areas get inundated even if there is no dam. Was the city of Bharuch flooded this September by the backwaters of a dam? Any flooding on the Narmada's banks should not be attributed to the Sardar Sarovar project. When the critics cannot find fault with the Sardar Sarovar project, they conveniently use the phrase "Narmada Valley" and assemble people affected by other dams.

The State has tried to provide amenities to the displaced people to an extent that is not available to the majority of its rural population. Gujarat has enough land to rehabilitate all the affected people who want to settle in the State.

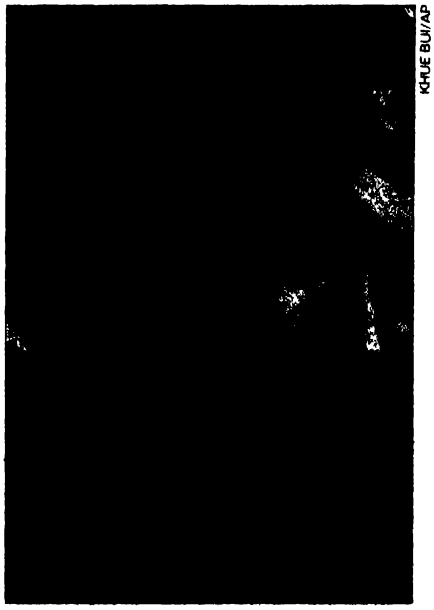
The author is welcome to ensure that these people get the most reasonable treatment in Gujarat so that they can forget their miserable past. But I request him not obstruct the Sardar Sarovar Project, because if it is stalled some 20 million people of Gujarat's semi-arid and desert areas will be doomed, without water.

M.U. Purohit
Consulting Engineer
Sardar Sarovar Project

Sanctions: an uncertain status

Have the nuclear-related sanctions imposed by the United States against India and Pakistan got kicked in again or not? No one seems to know.

R. RAMACHANDRAN
in New Delhi



THE imposition of sanctions against India and Pakistan by the United States as a consequence of the nuclear tests conducted in May 1998, or their waiver, would seem to be stuck in a legislative conundrum in the administrative machinery in the U.S. as a fallout of the standoff between the Republicans and the Clinton administration. The sanctions, pursuant to Section 102(b) of the Arms Export Control Act (AECA), also known as the Glenn Amendment, were imposed soon after the tests and were partially lifted through waiver provisions of the Agriculture Export Relief Act (AERA) 1998 and the India Pakistan Relief Act (IPRA) 1998.

But these expired on October 21, 1999. Legislative action or a presidential executive order that would dictate the course of action by the U.S. administration in this regard is not in place. Though a bill that would grant authority to the President to waive the sanctions beyond October 21 was sent to him by the Senate on October 14, he had not signed it into law because of disagreements over other provisions of the bill. So, at the beginning of the last week of October, the fate of the sanctions remained unclear.

The issue would appear to have got caught in the politico-legal mess which seems to have been created over the ratification of the Comprehensive Test Ban Treaty (CTBT) by the Senate. Early in October, the Senate deliberated on the Treaty after a delay of over two years and rejected it (article on page 55). In what would appear to be Clinton's way of getting back at the Republicans, he has not signed into laws many pending appropriation bills for financial year 2000. In fact, he exercised his veto on the Foreign Operations, Export Financing and ...ed Programmes Appropriations Bill ...aining the provision for sanctions in ...ent of a coup that would be applied on Pakistan) on October 18 and returned it to the Senate alleging that the Republicans were shortchanging expenditure on key foreign policy affairs.

The provision for the waiver of sanctions against India and Pakistan is contained in the House Joint Resolution 2561 which has been tagged on to the Defence Department Appropriation Bill (DDAB) for financial year 2000 and sent to the President for assent. The President had not signed it on the ground that it went beyond what had been sought and that it budgeted for things which the Pentagon had not asked for.

The administration is apparently making a last-ditch effort to sort out the issue with Congress and find politically feasible measures to address the expiry of the sanctions waiver, pending the enactment of a new presidential waiver authority. Given that such an authority has been passed by Congress in the DDAB, the attempt apparently is to see whether this can be interpreted to imply a continuation of the waiver until a new piece of legislation takes effect. This they think is possible because of the Continuing Resolution H.J. Res 71 which was signed into a public law as of October 21. If this is (legally and politically) feasible, the imbroglio with regard to the sanctions may be viewed as a merely technical one, and business as usual (with the limited waivers on the sanctions as they were in place till October 21) could go on. In any case, though the waiver has expired, a renewal of AECA sanctions in full will take effect only if the President decrees a fresh imposition. In legal terms, therefore, it all appeared very confusing, and everything may be put on hold till things get sorted out.

KHUE BUI/AP

President Bill Clinton.

TO trace the course of sanctions so far, after Clinton announced in May 1998 the sanctions, which flow from Section 102(b) of the AECA, the administration announced the details on June 18. These included: (a) the termination of the assistance under the Foreign Assistance Act of 1961, except for humanitarian assistance and food or agricultural commodities – which includes U.S. developmental assistance and International Military Education and Training (IMET) programme funding; (b) the termination of the sale of defence articles, defence services or design or construction services under the AECA, and the termination of licences for the export of any item under the United States Munitions List; (c) the termination of all foreign military financing under the AECA; (d) the denial of any credit, credit guarantees, or other financial assistance by any department or agency of the U.S. government – such as the Department of Agriculture (USDA), the U.S. Exim Bank, the Overseas Private Investment Corporation (OPIC) and the Trade Development Agency (TDA); (e) opposition to any loan for financial or technical assistance by any international financial institution – such as the Asian Development Bank, the International Monetary Fund and the World Bank - except for humanitarian purposes; (f) the prohibition on U.S. banks from making any loan or providing any credit to the government of the country against which sanctions have been imposed, except for the purposes of purchasing food or other agricultural commodities; and (g) the prohibition of exports of dual-use goods and

echnology controlled by he Export .dministration egulations (EAR).

After its enactment in 1994 as part of the Nuclear Proliferation revention Act (NPPA), ne Glenn Amendment anctions were being mplemented for the first ime. However, the U.S. farming community was concerned over the loss of its market in India and Pakistan, particularly the latter, because of suspension of USDA export credit guarantees. (Pakistan is a major user of these credit guarantees under USDA's scheme called GSM-102. India has a credit line but has never made use of it.) This led to the enactment of the Agriculture Export Relief Act (AERA) on July 14, 1998, which exempted USDA export credit guarantees from the Glenn Amendment provisions till September 30, 1999.

The overthrow of a democratically elected government in a military coup in Pakistan attracts its own set of sanctions which would override the waivers that were in place till October 21.

Pursuant to the above-mentioned bar on loans or assistance by international financial instituions, the U.S. administration claimed on June 18, 1998, that it had gained the support of the G-7 countries and Russia to postpone consideration of "non-basic human needs" loans for India and Pakistan. On the same date, the U.S. administration announced that bank-related sanctions (item 'f' as mentioned obove) would be implemented through an "executive order". But these remained in the draft stage with the Treasury Department and were not implemented. That is, that particular categtory of sanctions was not in place.

The dual-use export sanctions were implemented by means of guidelines of the Bureau of Export Administration (BXA) of the Department of Commerce issued on June 22, 1998. These were formally incorporated into the EAR as an "interim rule" on November 19, 1998. This rule included an Entities list comprising 40 Indian and 46 Pakistani end-users, along with more than 200 subsidiaries. The sanctions meant a presumption of denial of export licences for items subject to export controls to these entities. A ceiling of 2,000 million theoretical operations per second (MTOPS) on high performance computers (HPCs) was imposed, above which level a licence would be required for exports with a strong presumption of denial to all the entities.

On October 21, 1998, Congress passed the India-Pakistan Relief Act (IPRA) of 1998. Section 902 of the Act (the Brownback Amendment) authorised the President to waive "for a period not more than a year upon enactment of the Act" certain parts of the Glenn Amendment sanctions. This was necessary because the Glenn sanctions do not provide for the lifting or waiving of sanctions. Significantly, IPRA also gave an authority to waive sanctions pursuant to Section 620(E)(e) of the Foreign Assistance Act (the Pressler Amendment), which allows economic and military assistance to Pakistan. As regards the Glenn sanctions alone, this allowed a waiver of sanctions (a), (d), (e) and (f) as given above but not (b), (c) and (g).

President Clinton partially exercised this authority on December 1, 1998. Even within the scope of (a), (d), (e) and (f) of 102(b), sanctions were lifted only with respect to (1) Eximbank, OPIC and TDA operations; (2) IMET programmes; (3) loans or credits to the two governments by U.S. banks (though this part had not been imposed); and (4) any loan or financial or technical assistance (only) to Pakistan by international financial institutions in support of the assistance programme that Pakistan was negotiating with the IMF. (On January 14, 1999, a $575-million IMF loan was approved, in the voting of which the U.S. abstained.) The lifting of sanctions on USDA credits ran concurrently but only till September 30, 1999, since (1) above did not include the USDA.

Interestingly, on October 1, 1999, the President extended the waiver on USDA credits till October 21 so that all waiver provisions expired on that date, although a 20-day difference between the two sets of waivers should not have caused any problem. This seems to have been specifically done in order to enable Pakistan to complete the negotiations with the USDA for a pending $60-million credit line that was opened in January 1999. Between September 3 and October 6, 1999, $36.80 million seems to have been negotiated and approved while $23.20 million remained to be approved. Now if the coup-linked sanctions are put in place, the remaining ones cannot be negotiated unless this amount too has already been approved between October 6 and the imposition of sanctions following the October 12 coup.

While with regard to India it would be easy for the U.S. administration to adopt the interpretation of a continuing waiver beyond October 21, with regard to Pakistan the issue may be more complex because of the coup-related sanctions. The overthrow of a democratically elected government in a military coup attracts its own set of sanctions under Section 508 of the Foreign Assistance Act which would override the waivers that were in place till October 21. However, while the coup-related sanctions cover all manner of U.S. assistance, they do not include the provision to oppose loans from multilateral funding organisations such as the IMF, and the World Bank as the sanctions pursuant to Section 102 (b) of the AECA do. So, unless the G-7 and Russia decide to postpone decisions on loans to Pakistan, the U.S. will not oppose such multilateral assistance to Pakistan.

Unlike the India-Pakistan Relief Act (Brownback I), the new waiver authority bill (HJRes. 2561), which now forms part of the DDAB, is a permanent waiver with a provision of reimposition only if the country detonates a nuclear device subsequent to the enactment. Otherwise the scope of the waiver is identical to Brownback I in the sense that it does not allow any waiver on (b), (c) and (g) of 102 (b) of the AECA, which means restrictions on dual-use technologies and goods will remain and so will the opposition to loans from international financial institutions. From the Indian perspective, these would be the key considerations for a long-term impact (*Frontline*, May 21, 1999).

Also, as in the case of Brownback I, it provides authority to waive the Pressler provision. Therefore, if this bill – which is the only one that has been sent to the President – becomes an act, exercising the waiver authority to any of its elements become a permanent feature, unless another detonation takes place. Given this fact, it is not clear why so much of noise was being made about the waiver on the Pressler provision. As in the case of Brownback I, it only gives a waiver authority and it is up to the President to exercise it or not. However, in the wake of the coup, Republican Frank Jr. Pallone introduced another bill on October 18 (H.R. 3095) that seeks to amend DDAB so that the authority to waive the Pressler Amendment sanctions is not there.

Now Brownback I or IPRA required the Secretary of State to report to Congress one month before the expiry of the sanc-

Relive the sensation

tions on the economic and security developments in India and Pakistan. As part of this exercise, and in anticipation of congressional action during 1999 on sanctions reform legislation and the consideration of the renewal of the presidential waiver authority, the House Committee on Ways and Means had directed the U.S. International Trade Commission (USITC) to examine the impact of the sanctions. The USITC submitted its report on September 17. The findings of the report, "Overview and Analysis of the Economic Impact of U.S. Sanctions with Respect to India and Pakistan", must have formed the basis for the joint resolution seeking a permanent waiver authority for some provisions of the Glenn Amendment sanctions. Besides other factors, including the October 12 coup, this report is also likely to influence the President's decision on extending the waiver in the manner of the joint resolution or otherwise.

The USITC report says that the economic sanctions had a relatively minimal overall impact on India's economy... They, however, had an adverse effect on Pakistan's economy.

The USITC investigation employed three methods – a telephone survey of 269 U.S. companies and associations; market share and lost export sales analysis to the extent data were available; and modelling. The Commission obtained additional views from the industry through a public hearing held on June 22, 1999, and through written submissions. According to the findings of the telephonic survey, the U.S. companies most affected by the Glenn sanctions were those involved in the sale of certain agricultural products, industrial machinery, transportation, construction and mining equipment, electronics products and infrastructural development services. Restrictions on customer or company access to project financing or loan guarantees from Exim Bank and OPIC were noted as factors hindering their business in the two countries. Financial services firms stated that their operations were affected by the uncertainty regarding how the sanctions would eventually be implemented.

Industry representatives stated that one result of the sanctions was the increasing perception of U.S. companies as unreliable suppliers and many customers were turning to sources in Europe, Japan and elsewhere. The U.S. Embassy in Delhi apparently reported to the USITC that sanctions continued to have a negative impact on U.S. business in India as U.S. companies were reluctant to pursue business opportunities because of the uncertainty over sanctions.

As regards the overall economic impact of sanctions, the Report says they had a relatively minimal overall impact on India's economy, although it would be difficult to isolate the effects of sanctions from the effects of other concurrent economic events and policies. They, however, had a small adverse effect on Pakistan's economy, says the Report. According to it, since U.S. was a relatively small provider of aid, trade and investment, the sanctions alone may not have had a large impact, and moreover most economic assistance was terminated as a result of other sanctions which were already in place, such as those pursuant to the Pressler Amendment.

On the likely impact of the reimposition of sanctions, the Report, based on submissions from the private sector U.S. companies, says that the reimposition of prohibition of USDA credits is likely to affect U.S. wheat exports to Pakistan and that wheat producers in the Pacific Northwest would be affected most. U.S. agencies also expressed concern that prohibiting Eximbank and OPIC financing might harm U.S. competitiveness and diminish the perception of U.S. companies as reliable partners. It was felt that sanctions would make it difficult for U.S. companies to participate in major infrastructural projects. Prohibiting Eximbank and OPIC financing could delay projects in India and Pakistan until alternative sources of financing were arranged, the companies stated. Pakistan could be adversely affected if the U.S. and other major countries opposed future IMF loans to Pakistan.

The implication of the Report that sanctions have had only a marginal impact on the economies of India and Pakistan, as well as that of the U.S., save loss of business to individual companies, probably served as a guide in formulating a legislation toward a permanent waiver. But what President Clinton is likley to do is anybody's guess.

Meanwhile, administration officials are likely pulling their hair out. Are the sanctions in place or not? ■

The Management of time for the IAS Exam.

The IAS is no longer the exclusive territory of Law and Humanities students. Today, bright young Management and Commerce graduates are finding the perfect niche for their talent and background in the IAS. And subjects like Physics and Mathematics share pride of place with History and Public Administration. But whatever your optionals, Time Management is one subject you will need to excel in when preparing for the Civil Services Exam. Because the enormous volume of information to be gathered and absorbed is nothing short of staggering

Unless, of course, you have Brilliant beside you. A committed team of highly qualified and experienced professors, researchers and support staff spend thousands of hours encapsulating the vast study matter for each subject into lessons that are concise and easy to assimilate. So that your time is spent, not in gathering, but in mastering all this information.

Our Postal Course helps you in 3 distinct areas for the IAS - equipping you with relevant knowledge of your optional subjects, providing you with a wide coverage of general studies and a constant update on current affairs, and finally coaching you for the most gruelling of interviews.

Brilliant's Course for the Civil Services Exam is a comprehensive package dedicated to helping you achieve your goal. Proof of its power lies in the number of Brilliant's students who sweep the top ranks and make it into the IAS year after year.

MATHEMATICS	POLITICAL SCIENCE
PHYSICS	ECONOMICS

Popular perceptions

Most Pakistanis seem relieved that the Nawaz Sharif regime has been toppled, and look to the military regime to clean up the economic mess. But this does not quite conceal the real concerns about the country's future.

RASHEEDA BHAGAT
recently in Pakistan

A COUPLE of days after the Nawaz Sharif Government was toppled in Pakistan, Bilal Musharraf, son of General Pervez Musharraf who led the coup, had quite a lot to say about his father and his action.

Evidently smarting from the international criticism that his father had been subjected to since the coup, Bilal, who lives in the United States, said in a message posted at a Web site popular among overseas Pakistanis: "My father is a self-made man and I wish to state this up front that he has made a conscious effort to never abuse his influence for personal gain." He described his father as being "thoroughly professional" and justified the coup by saying that the Army chief had no choice but to resort to it. "My immediate family," Bilal claimed, "has managed with the income of a military officer and there have been no complaints. There is only relief that he has made it this far without compromising on his ethics... Today, he is the Chief Executive of Pakistan."

At about the same time that Bilal was preening over his father's success, Hasan Sharif, son of the ousted Prime Minister and now a student in London, was issuing an appeal to the international community to use its weight to secure his father's release.

The Commonwealth suspended Pakistan, and the rest of the international community urged the military ruler to restore democratic rule at the earliest. In this background, the rest of the world is puzzled by the fact that Pakistanis themselves do not seem to be overly worried about the toppling of a democratic regime in Islamabad. On the contrary, Pakistanis seemed to be celebrating the fall of the "corrupt government of Mian Nawaz Sharif".

In Lahore, Rawalpindi and Karachi, people have been openly saying: Yeh *lootmar aur jhoot bolney ki sarkar se tau army-walley behtar hei* (Compared to this looting, lying and fraudulent government, the Army people are better). Stunned as it was by such expressions of popular approval for the coup, the Pakistan Muslim League, the ousted party of government, took almost a week to demand the release of the dismissed Prime Minister and the restoration of democracy.

KHALID MUSTAFA, a Karachi-based industrialist, said that Pakistanis were celebrating the advent of a military regime "because they believe that what we have had for the last 10 years is not real democracy."

According to Mustafa, the belief that a democratic system would be more sensitive to the problems of the people and improve their lot had been belied in Pakistan. The people, he said, were tired of one regime coming in "only to investigate the corruption and bank frauds committed by politicians of the previous regime. Then those in power would go ahead to commit an even bigger fraud on the people." But this time around, Mustafa added, politicians from the ousted ruling party as well as the former Opposition would be in the dock. "There is a lot of hope that corruption cases against all of them will be investigated without fear or favour."

However, not many people share this optimism. Ghulam Kibria, a former United Nations consultant who served as a technocrat in the Zulfikar Ali Bhutto regime, has little hope that the "looted millions from bank defaulters and other corrupt politicians can ever be brought back into the exchequer because the money has already gone out of the country."

In a telephonic interview from Karachi, Kibria said: "This is the fourth time that Generals have taken over the governance of Pakistan. But there are two big differences. One, this time it was a counter-military coup against a civilian coup that was planned against the Generals. Two, this time there is no jubilation as had been experienced following the previous three military coups. But there is definitely a huge sigh of relief over the fact that the corrupt Sharif government is gone."

Kibria acknowledged that the rest of the world and a section of the intelligentsia in Pakistan were worried about the dismissal of a democratically elected government and the prospect of a spell of military rule. "But," he said, "what the rest of the world, and even some people within Pakistan, do not understand is that there has been no real democratic political process in Pakistan. People have not really been involved in the democratic process... I would even say there is no real political consciousness among the people of Pakistan. They have always looked for saviours in their politicians, whether it was Benazir Bhutto or Nawaz Sharif. The All India Muslim League had neither a political process nor inner-party democracy and we inherited this."

Kibria attributed the relative success of Indian democracy to the fact that the political system had over the years become inclusive and had accommodated the traditionally underprivileged sections of society. "Things changed in India to a certain extent, with the result that backward classes and Dalits were involved in government and became MLAs and MPs."

Describing Sharif as "an elected dictator", Kibria said that his regime had not granted autonomy to the provinces or to municipalities. "Municipal elections have not been held in Karachi for several years," he added.

A Karachi-based executive who writes poetry under the pen name Baligh said that the dismissal of the Sharif regime had been greeted with relief, especially by the people in Karachi, "who had to bear the brunt of the increasing lawlessness and violence".

K.M. CHOUDARY/AP

Celebrations on the streets of Lahore after the military takeover. Public opinion within Pakistan has been largely supportive of the coup.

All talk of democracy was a sham in "this aristocratic land", he said: most Pakistanis were bitter that "in the last 10 years our democratically elected leaders have used every opportunity to take advantage of their positions for personal gain. The country is on the brink of bankruptcy but the personal assets of these people are ever-increasing; a handful of them can, with their off-shore assets, pay off the entire debt of the country."

Baligh added that there was a lot of expectation that the military regime would introduce accountability and bring the bank defaulters and tax evaders to book. In his opinion, geopolitical and regional considerations today – "with barely 100 days to go for the new millennium" – were such that it would not be possible for a military ruler to stay on for long. "It will not be possible for the current CEO to follow in the footsteps of his predecessors like Gen. Zia-ul-Haq and hold office for an extended period. I think he should remain in power for a maximum of two years and bring in technocrats and experienced politicians to take Pakistan out of the present economic mess."

The consensus in Pakistan is seemingly in favour of a "civilian government made up of technocrats and experts". But as an editorial in the Pakistani English daily *Dawn* cautioned, although such "well-meant" advice from various quarters was "driven by a sincere desire to see the country put back on the right path... prolonged deviations from the democratic path have invariably led to more problems than have been solved. All the stretches of military rule proved disastrous for Pakistan."

Sounding a note of caution against excessive expectations from "technocrats and experts", the editorial noted that in "all previous military regimes technocrats and bureaucrats have played major roles. They did not work wonders then. It strains credulity to think that they will do any better now."

PAKISTANIS are at the moment celebrating their release from years of misgovernance: successive elected governments have demeaned democracy by indulging in large-scale corruption and chipped away at institutions such as the judiciary and the executive, and even the office of the President. However, the present euphoria cannot last long.

There are no magic wands or formulae to repair the damage done to the country's economy, which has been reduced to one of the wobbliest in the developing world. The educated sections and the intelligentsia in Pakistan wonder sceptically how long it will take the new rulers to step into the shoes of their predecessors and amass wealth.

It is in this light that Bilal Musharraf's claim about his father's integrity and ability to withstand pressure and not compromise on his ethics acquires significance. There are conflicting reports about Pervez Musharraf: one says he is an Islamic fundamentalist and is soft on the Taliban; another, echoed by the U.S. Ambassador to Pakistan, William B. Milam, describes him as a "moderate man". Observers will be looking at the events of the coming days, the kind of people he appoints to key administrative positions and the manner in which he presides over Pakistan's destiny, to draw inferences on Musharraf's beliefs and commitments. However, India, which perceives him as the architect of the Kargil misadventure, is certain to view him and what he says with scepticism.

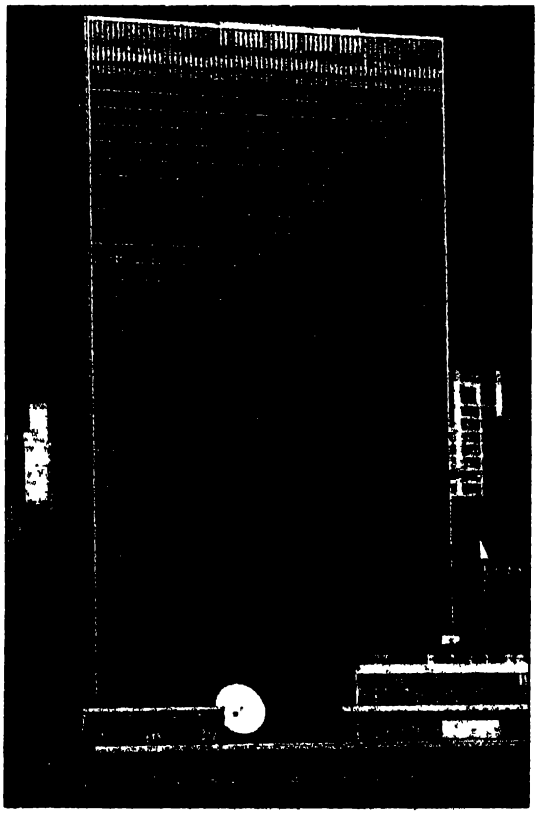
MEANWHILE, there is speculation in Pakistan about Sharif's fate. Lt. Gen. (Retd) Moin Uddin Haider, who was the Sindh Governor for two years before he was replaced by a Sharif crony in June 1999, says that Sharif will "reap as he sowed"; he, however, rules out the possibility of Sharif's execution.

Kibria agrees. "It is difficult," he says, "to make a prediction now as there is no political process in the country at the moment. But I doubt very much that he will ever be tried. Even if he is... I believe he will get away and will not be punished."

At the moment, however, the mood of the common person and what she or he thinks of the military regime may be summed up in what a Karachi-based businessman has to say: "We Pakistanis are tough guys. We love to be ruled by iron hands. Are we shedding tears for democracy, did you ask? What rubbish. The people on the roads do not give a damn about the system. They want only *roti, kapada aur makan*... and of course occasional peace." ■

In the cause of peace

Since its inception in 1945, the United Nations has played a crucial role in defusing many a crisis, including a near-disaster involving two superpowers. An anecdotal account of a few of the important moments in the history of the world body.



C.V NARASIMHAN

EVERY year, October 24 is observed as United Nations Day. It was on that day in 1945 that a sufficient number of ratifications from member-states to bring the world body into existence was received. During my long tenure at the U.N., one particular U.N. Day stands out in my memory – October 24, 1962.

In mid-October 1962, an international crisis developed over the presence of Soviet-made missiles in Cuba. From the time Cuba became a Communist nation under Fidel Castro, there had been considerable hostility between the United States and Cuba. It was not generally known that Cuba, the only Communist country in the western hemisphere, was arming itself with Intermediate Range Ballistic Missiles (IRBM) provided by the Soviet Union. These missiles were capable of hitting any destination on the eastern seaboard and the central part of the U.S. Although the arms build-up had been going on clandestinely for some time, it became a crisis on the night of October 22, 1962, when President John F. Kennedy made a statement on television and radio that the Soviet Union was building offensive missile sites in Cuba. Kennedy decided to impose a naval and air blockade to prevent the import of more missiles and equipment into Cuba by the Soviet ships that were already proceeding towards Cuba. The world was on the verge of a nuclear confrontation between the two superpowers.

The crisis came to a head on October 24. Being U.N. Day, there was the usual Western music concert at 3 p.m. in the huge General Assembly Hall. Interestingly, the music was provided by the Leningrad Symphony orchestra under the baton of the maestro, Mravinsky. The violin soloist, David Oistrakh, was one of the great violinists of the century. After the concert was over, the leading members of the orchestra and senior members of the Soviet mission to the U.N. went up to the Secretary-General's conference room where a big reception was held for them. As soon as the event was over, Secretary-General U Thant called me to his room and we decided on the course of action to be taken in the Security Council which was due to meet late that night.

U Thant made a statement in the Security Council. He said: "Today the United Nations faces a moment of great responsibility. What is at stake is not just the interests of parties directly involved, not just the interests of all member-states, but the very fate of mankind." He went on to express the profound hope and conviction that moderation and good sense would prevail over all other considerations. He also stated that at the request of the Permanent Representatives of a large number of member-governments, he had sent identically-worded messages to President Kennedy and Soviet Prime Minister Nikita Khrushchev. He made an appeal to the parties concerned to enter into negotiations "even tonight if possible". He went on to say: "The Secretary-General cannot serve on any other assumption (subject to human frailty and honest difference of opinion) than that all member-nations honour the pledge to observe all articles of the charter." What he meant in effect was that if his appeals were not heeded he might seriously think of resigning his post.

STEPHEN FERRY/GAMMA

The United Nations headquarters in New York.

The Security Council met on the morning of October 25 but even before the meeting U Thant had sent further messages to Khrushchev and Kennedy. Around 3 p.m. that day, Khrushchev sent a very friendly reply, accepting U Thant's proposal that the Soviet ships stop in their course and not challenge the blockade imposed by the U.S. He went on to request that the U.S. also act in this spirit of moderation. He concluded his message by saying, "I thank you for your efforts and wish you success in your noble task."

This came as a tremendous boost to U Thant. Kennedy also sent a message, through Adlai Stevenson, the U.S. Permanent Representative to the U.N. It said: "If the Soviet Government accepts and abides by your request that Soviet ships already on their way to Cuba stay away from the interception area you may be assured that this Government will accept and abide by your request that our vessels in the Caribbean do everything possible to avoid direct confrontation with the Soviet ships in the next few days to minimise the

risk of any untoward incidents."

The situation was thus defused but by no means was it certain that there would be no further confrontation. In fact, on the night of October 28, it looked as if the U.S. was getting ready to send its bombers over Cuba to destroy the missile sites. However, the day passed without any incident.

U Thant had also been corresponding with Castro, who was the Prime Minister of Cuba then. During these discussions Castro invited him to visit Cuba. U Thant accepted the invitation. He left for Havana on the morning of October 30, on a Varig Brazilian airline plane chartered by the United Nations. (At the time there was no direct plane service between the U.S. and Cuba.) He was accompanied, among others, by Brigadier-General I.J. Rikhye.

U Thant hoped that Castro might agree to permit a small group of observers to be stationed in Cuba to certify the withdrawal of Soviet missiles from Cuba. However, it was not possible to get Cuba to agree to stationing any observers on its soil. Eventually the withdrawal was done without the presence of any observers and the world breathed a sigh of relief. On January 7, 1963, Adlai Stevenson and V. Kuznetsov, Deputy Foreign Minister of the Soviet Union, sent a message of thanks to U Thant for his efforts. The cooperation of the Soviet Union was won on the basis of an assurance that Cuba would not be attacked by the U.S. These diplomatic efforts helped preserve the peace and averted a nuclear confrontation.

Towards the end of his meeting with Castro, U Thant asked the Cuban leader to return on humanitarian grounds the body of Major Rudolf Anderson, a U.S. Air Force pilot whose reconnaissance plane had been shot down (with a Soviet missile) by Cuba on October 27. Castro replied that Anderson was killed when he violated Cuba's air space, but agreed to return the body. U Thant returned to New York as a "conquering hero".

C.V. Narasimhan with U.N. Secretary-General U Thant.

PERHAPS the darkest days in the U.N.'s history were those that followed the tragic death of Secretary-General Dag Hammarskjold in an air crash on the night of September 16, 1961. On a peace mission to the Congo, Hammarskjold was going to meet Moise Tshombe of Katanga in Ndola. The bodies were found only the next morning, and flown back to New York. Hammarskjold's body was flown to Stockholm. I attended his funeral at Uppsala a few days later. For the first time in U.N. history, the U.N. Day came and went without a Secretary-General. After a great deal of secret negotiations U Thant of Burma (now Myanmar) was appointed Secretary-General on November 3, 1961.

V.K. Krishna Menon, India's Defence Minister, was the leader of the Indian delegation to the General Assembly in 1961. He knew he was not very popular in the U.S. He also had a macabre sense of humour. In September 1961, he had to undergo major surgery at a hospital in the Bronx which involved making an incision in his skull. When I went to visit him at the hospital, he said: "Narasimhan, your American friends think I am a lunatic. You can now tell them on good authority that you had indeed seen me at hospital and I am a man with a hole in the head."

In mid-December 1961, acute tension developed between India and Portugal on the subject of Goa and other Portuguese enclaves in India. It looked as if an invasion of Goa by the Indian military forces was imminent. U Thant sent identically-worded messages to the Foreign Ministers of Portugal and India requesting them to settle the dispute through peaceful means. This appeal fell on deaf ears and on December 18, Indian troops marched into Goa and completed the takeover of the territory in short order. This left a bad feeling amongst several delegates, who felt that India, a founding-member of the United Nations, had blatantly violated the U.N. Charter.

In the U.S. press there was comment about the fact that Krishna Menon had organised this military adventure and there was a cartoon depicting him as a python swallowing Goa and describing him as the "Goa Constrictor"!

In the summer of 1962, U Thant had some interesting visitors from India – C. Rajagopalachari, R.R. Diwakar and B. Shiva Rao. (It was a delegation from the Gandhi Smarak Seva Samithi, led by Rajaji, and its mission was to plead for complete cessation of nuclear testing. They had already made this plea to Khrushchev in Moscow. They were on their way to Washington to meet President Kennedy.) U Thant was happy to meet them. He knew Rajaji very well and had great respect for him. I invited Rajaji and his associates for lunch in my home. U Thant and Ralph Bunche also graciously attended this luncheon. We had a very interesting discussion, full of good humour. Taking advantage of the spirit of humour, I asked Rajaji whether he had heard the joke about himself which went like this:

Question: "Which famous studio in Hollywood is named after the last Governor-General of India, the Hon'ble Sri Rajagopalachari?"

Answer: "20th Century Fox."

U THANT had another important success in his mediation efforts, in this case between the Netherlands and Indonesia. Towards the end of 1961, tension developed between the two countries in regard to a territory which was known as West New Guinea, one of the largest islands in the world. The eastern part of the island is called Papua New Guinea and it was under the trusteeship of Australia, which discharged its responsibility to the full satisfaction of all concerned. In 1975, Papua New Guinea became an independent and full sovereign member of the U.N.

West New Guinea was an immense territory with an approximate population of 750,000, all aborigines. Since it was ruled by the Netherlands as part of the Netherlands East Indies, Indonesia claimed that this territory should also be transferred to it. The Dutch resisted this claim and the situation became very tense.

In early 1962, U Thant began a series of informal talks with the Dutch and Indonesian representatives through the good offices of a well-known U.S. diplomat, Ellsworth Bunker. The Netherlands was not willing to transfer the territory straightaway to Indonesia. Bunker devised a plan that envisaged a phased transfer of the territory. He proposed an

interim period during which the U.N. would take over the administration of the territory. This proposal was endorsed by the Security Council on August 15, 1962, and Indonesia and the Netherlands signed an agreement. On September 21, a resolution sponsored by Indonesia and the Netherlands was approved by the General Assembly and the agreement between the two states concerning West New Guinea (West Irian) was ratified.

Administering a territory was an immense responsibility for the Secretary-General because it was for the first time in the history of the U.N. that executive authority was vested in the U.N. itself, in the form of the United Nations Temporary Executive Authority (UNTEA).

U Thant entrusted the responsibility for this operation to me. I conducted it with my small staff in the Secretariat. In the field we had an array of international officials provided by the U.N. and by specialised agencies. For example, the World Health Organisation provided a hospital in Hollandia (now Djadjapura), the capital of West New Guinea. We had to have, as usual, a peace-keeping contingent in the territory. On my recommendation, the Secretary-General approached the Government of Pakistan, which provided a battalion to serve in this area under the leadership of General Saiduddin Khan. An administrator had also to be appointed to run the territory and U Thant chose a distinguished Iranian diplomat, Djalal Abdoh, for the job. Abdoh was assisted by N.S. Subaraman, who had come to serve the U.N. from the Government of India. (He had at one time served as a private secretary to Prime Minister Jawaharlal Nehru.) He was a very able international civil servant and his help was much appreciated by the administrator.

The General Assembly resolution provided that UNTEA would transfer the territory of West New Guinea to Indonesia on May 1, 1963. I was deputed by U Thant to represent him on this occasion. U Thant had also prepared a message which I delivered on his behalf and the transfer of the territory to Indonesia was completed. Indonesian Foreign Minister Subandrio represented Indonesia. The same night, the entire U.N. contingent consisting of about 100 officials, including me, left for New York by a KLM flight. From Hollandia the nearest airport was Biak, which was in the north-westernmost tip of West New Guinea. The plane arrived on time and we all boarded it. Most members of the team were going on to New York, but some officials were to transfer to a flight to Geneva. I stayed on at The Hague for a couple of days in order to meet the Prime Minister and the Foreign Minister of the Netherlands. When we arrived in Amsterdam the next morning, I learnt to my pleasant surprise that I was also to be received in audience by the Queen of the Netherlands. The meeting was scheduled for 10 a.m. The queen received me graciously and expressed her great concern that, after the transfer of jurisdiction to Indonesia, the interest of the people of West New Guinea should be safeguarded. I told her that we had received all possible assurances on this from the Indonesian Government, and there was also, of course, the provision to ascertain the wishes of the people in 1969. She seemed satisfied with this assurance.

I completed my discussions on the same lines with the Prime Minister and the Foreign Minister of the Netherlands. They told me about their plan to set up a separate fund for the benefit of West New Guinea to be administered by the U.N. This fund was established and the contributions from the Netherlands were matched by those from Indonesia in local currency. This fund also came under my control and we did the best we could with this money for the benefit of the people of West New Guinea.

Two features about the West New Guinea operation are noteworthy. It was the first time that a peace-keeping operation was authorised, not by the Security Council, but by the General Assembly. The second point is that the entire cost of the operation was met by Indonesia and the Netherlands.

U Thant was a splendid host and loved to entertain. On one occasion his guest of honour was the Prime Minister of the United Kingdom, Harold Macmillan. As per U.N. protocol the permanent mission of the U.K. was asked what the favoured main course for the distinguished guest would be. The reply was: "Roast beef, of course."

At the luncheon in the Secretary-General's private dining room, U Thant was sitting opposite Macmillan. Macmillan had on his right Adlai Stevenson and I was sitting next to Stevenson. In those days, being a "vegetarian", I invariably had an omelette at lunch as the main course. When the roast beef was brought to Macmillan he said, "No thank you", to the consternation of the chef and myself. At that point I observed Macmillan taking some interest in the omelette that had just been brought in. I turned to the Prime Minister and said, "Would you rather have an omelette?" Macmillan said, "Yes, very much so, but do not want to take away your omelette from you." I said, "Mr. Prime Minister, let me share this omelette with you. Your omelette will be ready in another five minutes and you can give me half of yours; and then, I can truthfully claim that while many have broken bread with the Prime Minister of the United Kingdom, I am the only one who has broken eggs with him." Macmillan laughed heartily, and it was done accordingly. At that point, Stevenson, a great phrase-maker, said: "Egg-heads of the world, unite! you have nothing to lose but your shells." Stevenson was a great wit. He used to say: "There is one thing common to flattery and smoking, they are both dangerous only if you inhale."

IN September 1962, Trinidad and Tobago became a member of the U.N. Eric Williams was the Prime Minister of Trinidad, He was my collegemate at St. Catherines, Oxford, between 1934 and 1936. Later on, he was a Professor at Howard University in Washington D.C. He became the first Prime Minister of an independent Trinidad and Tobago. He called on me at my office after having visited U Thant, and invited me to visit his country as his personal guest. This visit took place in the summer of 1963. Tobago is a beautiful island with a very fine beach and cottages. Trinidad has a very large Indian population. The capital, Port of Spain, has an Indian quarter with many Indian street names. The island-nation also has a large Chinese population, and the Governor-General was a Chinese, Sir Solomon Hochoy. I stayed at Government House and the Prime Minister hosted a dinner in my honour. All his Cabinet members were present and he introduced me to them as his old personal friend going back to his Oxford days in the 1930s. This was for me a very heartwarming occasion.

ONE anecdote of earlier years comes to my mind. In October 1957, Finance Minister T.T. Krishnamachari was on a visit to New York to meet the heads of major American banks. V.K. Krishna Menon was also in New York as the leader of the Indian delegation to the General Assembly. When someone asked, "Why are the two Krishnas from India in New York at the same time?" The answer was: "For exactly opposite reasons, one has come for Cashmere, the other for mere cash!" ■

C.V. Narasimhan, a former Indian Civil Service officer, was the Under-Secretary General of the United Nations.

Stable, for now, in Maharashtra

ıe Congress (I)-NCP Ministry in Maharashtra is essentially on unstable ground; yet if it puts into action a ear programme to reverse the damage the Hindu Right has inflicted on the State, it might survive.

RAVEEN SWAMI
Mumbaı

PEOPLE who throng Ramlila performances in this festival season may have found familiar parallels in the fortnight-long theatre preceding the formation of the Lokshahi Aghadi (Democratic Front) government in Maharashtra For all its moments of high drama and low farce, the formation of the Congress (I)-Nationalist Congress Party (NCP) front was in essence predictable But if both the Congress(I) and the NCP knew how the spectacle would end, the future of the Lokshahi Aghadi is less clear Chief Minister Vilasrao Deshmukh could well find himself overtaken by crisis sooner than most observers might expect

The dismal performance in the Assembly elections of the NCP led by Sharad Pawar set the stage for the new political order The NCP was decimated through the State, making its core political position of maintaining equidistance from both the Congress(I) and the Bharatiya Janata Party unsustainable Pawar managed to secure just five of 46 seats in Marathwada to the Congress(I)'s 10, and he could take just one of Mumbai's 12 Assembly seats. Even in its western Maharashtra heartland, the NCP won only 43 of 111 Assembly seats, while the Congress(I) took 26 and the Shiv Sena-BJP alliance took 31.

Having won just 58 of 288 Assembly seats, Pawar had few options. At least a few powerful figures in the NCP made clear that they preferred to go with the BJP. Former Lok Sabha Speaker P.A. Sangma's assertion that the NCP would under no circumstances ally itself with the Congress(I) was rapidly joined by former Maharashtra Chief Minister Sudhakarrao Naik. On October 10, Naik announced that a Shiv Sena-BJP-NCP alliance would be put in place "within a few days". In defence of this alliance, Naik claimed that his party's principal objective was to ensure that "the Italian lady does not come to power" While Naik's position may in part have been polemical, it is evident that he spoke for at least some sections of the NCP

BJP leaders negotiating with the NCP offered other carrots Party spokesperson Prakash Jawdekar, speaking about discussions between the BJP and Sudhakarrao Naik, pointed out that if "the NCP joins hands with the BJP-Shiv Sena, then the national level gains for Pawar would increase'

But the BJP had its own problems Former Deputy Chief Minister Gopinath Munde's negotiations with the NCP had incensed the Shiv Sena, which understood clearly that its level of influence in any alliance with Pawar would be limited Shiv Sena boss Bal Thackeray was alarmed enough by October 13 to issue a statement making it clear that he would only support a BJP-NCP front from the outside A day later, all three Union Ministers from the Shiv Sena underlined the threat by failing to show up at their new offices in New Delhi

Shiv Sena fury at the BJP's negotiations with the NCP had not a little to do with the realisation that Munde was likely to be its principal beneficiary. While Sudhakarrao Naik had gone public with his backing for giving former Chief Minister Narayan Rane a second term in office, sources say this idea found little backing even among the pro-BJP faction within the NCP Instead, the pro-BJP MLAs in the NCP suggested that either one of their own, or failing that Munde, lead the alliance Both Rane and Thackeray were incensed at the prospect of Munde becoming the Chief Minister, violating prior agreements that the larger party in the Hindutva front would command the top office

Events soon snowballed into an ugly BJP-Sena spat Rane claimed that the BJP had sabotaged the Shiv Sena's efforts to recruit independent MLAs through Babanrao Gholap Gholap, facing charges of embezzlement of funds meant for the welfare of Dalits, had retained close links with the Shiv Sena apparatus despite having been sacked from his ministerial job earlier this year 'Whenever we collected supporters,' Rane said of the BJP, "they would go and threaten these people not

Chief Minister Vilasrao Deshmukh. (Right) NCP leader Sharad Pawar and Deputy Chief Minister Chhagan Bhujbal with supporters in Mumbai.

to support us. They also went around asking people to support the NCP."

"From their behaviour," the former Chief Minister concluded, "I feel that the BJP is not interested in having an alliance with us." "All this," he said, although without naming Munde, "is because of the personal ambitions of one person, which are not being fulfilled."

Munde denied the charges, insisting instead that the BJP was indeed committed to its alliance with the Shiv Sena. But efforts for an alliance with the NCP continued. One last-ditch measure was a campaign to install former Housing Minister and Jalgaon MLA Suresh Jain in Rane's place. The bid, carried out without Sena Rajya Sabha member Mukat Patel's backing, incensed Thackeray. At his usual Dasara-day rally in Mumbai, the Shiv Sena boss attacked Patel for his role in the affair. Jain, in turn, dared his party leader to expel him for anti-party activity, adding that he "never licked anyone's boots". With an evident understanding of the Shiv Sena's weak position, Jain added that he would leave the party the "day I wish".

VIVEK BENDRE

Former Chief Minister Narayan Rane of the Shiv Sena and former Deputy Chief Minister Gopinath Munde of the BJP at the Raj Bhavan in Mumbai.

It was now clear even to the pro-BJP faction in the NCP that its efforts were rather pointless. More disturbingly for Pawar, there were signs of revolt from anti-BJP figures within the NCP. Chaggan Bhujbal, the one-time architect of the Shiv Sena's expansion out of Mumbai's ghettos into rural Maharashtra, made his displeasure clear to Pawar, along with powerful NCP figures such as R.R. Patil, Arun Mehta, Vasant Chavan and Digvijay Khanvilkar. The group, which was responsible for taking on the BJP-Shiv Sena alliance in the Assembly over the past five years, protested the influence pro-BJP figures such as sugar baron Vijaysinh Mohite-Patil had come to have within the NCP.

Bhujbal and his pro-Congress(I) associates, however, had their own problems in striking a deal. Sushil Kumar Shinde, the All India Congress Committee general secretary in charge of the party's affairs in Uttar Pradesh, who had been seen by the NCP as an ally within the Congress(I), resigned taking responsibility for the party's "debacle" in the Lok Sabha elec[illegible]. Since the Congress(I) had done relatively well in Uttar Pradesh, the State [illegible]sted to Shinde, the resignation was [illegible] by the NCP as having been engineered to remove a pro-Pawar figure. In effect, Shinde was out of the race to be Chief Minister. Deshmukh, for long hostile to Pawar, was made head of the Congress Legislature Party, signalling the Congress(I)'s unwillingness to negotiate on the NCP's terms.

The problems mounted. From the outset, the Congress(I) had rejected the NCP's demands that it be given the power to choose the Chief Minister. Bhujbal, desperate to sell an alliance with the Congress(I) to his party, and aware of Sudhakarrao Naik's parallel negotiations with the BJP, became increasingly desperate. "How can any talks progress," he asked on October 12, "when they are not even budging from the first point – of the Chief Minister?" The same day, Samajwadi Party general secretary Amar Singh joined Bhujbal's calls for the Congress(I) to support an NCP Chief Minister. "If Mayawati could form a government in Uttar Pradesh with just 40 MLAs," he said, perhaps oblivious to the ironies, "why cannot the NCP do so in Maharashtra?"

But with the collapse of the BJP option increasingly evident, the Congress(I) was unwilling to concede any ground to the NCP. Other events too strengthened the Congress(I)'s hands. Eleven MLAs – five from the Peasants and Workers Party (PWP), two from the Janata Dal, two from the Samajwadi Party, and two from the Communist Party of India (Marxist) – made clear that they would only support a secular formation in Maharashtra. Since both the PWP and the Samajwadi Party had fought the elections in alliance with the NCP, the October 12 meeting signalled to Pawar that his allies' patience was running out. Hopes that the Congress(I) would be weakened by dissent, in the likeness of protests by former Minister Ranjit Deshmukh against Vilasrao Deshmukh's appointment, also proved abortive.

The fact that no formation could command a majority held out the possibility of Central rule. Should that happen, NCP leaders were clear, the party would split down the middle. Cornered, and with the Congress(I) showing no sign of relenting, the NCP gave in. By October 15 it was clear that Sureshdada Jain's last minute enterprise to replace Rane had failed, and that Munde had been unable to carry the Shiv Sena with him. On October 16, Bhujbal announced that a deal had been formalised. The NCP would agree to Deshmukh becoming Chief Minister, in return for Bhujbal's appointment as Deputy Chief Minister and Arun Gujarathi being made the Speaker.

As Deshmukh was sworn in Maharashtra's 21st Chief Minister on October 18, Rane was left complaining about the events that robbed him of a second term. Of his resentment against Munde, there was no doubt. "The entire party," he said ruefully, "cannot be held responsible for the folly of one person."

NCP spokesperson Devendra Dwivedi, meanwhile, attempted to explain just why it was appropriate for his party to ally itself with the BJP in Meghalaya, and the Congress(I) elsewhere. "I will call it pragmatism and not opportunism," he said wryly. Asked to define the difference between the two, Dwivedi was candid. "The dividing line between the two concepts is extremely thin," he said.

WHAT prospects await the Lokshahi Aghadi? Despite media speculation, the threats against it are unlikely to materialise immediately. Arun Gujarathi's October 22 election as Speaker threw up no signs of dissidence within the alliance's ranks, with 154 members voting for him and 132 for the Shiv Sena-BJP nominee, Girish Bapat. The Lokshahi Aghadi won one vote less than expected owing to the

eath of MLA Marzaban Patrawala. ıpport for Bapat was four votes fewer than it claimed by the Shiv Sena-BJP alliance ıen it staked its claim to form a government. That would suggest that four independents have gone the Lokshahi Aghadi y. The fact that the members of the Shiv na-BJP alliance chose to walk out rather ı an oppose the confidence vote on October 23 illustrates the numerical solidity of the Lokshahi Aghadi.

But this early stability is unlikely to last. For one, Prakash Ambedkar's Republican Party of India has been complaining of its exclusion from the 26-member Ministry, set up on a rough proportional representation principle. Congress(I) dissident Ranjit Deshmukh, already bitter over his exclusion from the Cabinet, has pointed to regional biases in the Ministry. Eight of the 26 Ministers belong to western Maharashtra, and half are Marathas. Ranjit Deshmukh had opposed Vilasrao Deshmukh's appointment on the ground that the Chief Minister's loyalties to the Congress(I) had been somewhat fickle. "Only four members of the Council of Ministers are loyalists," he claimed.

While such bickering is perhaps not unusual, the fact remains the Lokshahi Aghadi is an unstable formation. The reasons are not difficult to discern. Within the NCP it is evident to most people that Sharad Pawar, who has never led any party to an Assembly election victory, must seek some form of affiliation with the Congress(I) in order to survive. What form such an affiliation could take is not clear, but that in turn could lead to fresh alignments. At least a section of the NCP could choose to go the Shiv Sena-BJP way. Finally, if allies such as the PWP and the Samajwadi Party find themselves marginalised or isolated, they along with small groups of independent MLAs could create problems.

In important senses, the Lokshahi Aghadi is most likely to survive if it puts into action a clear programme to reverse the damage the Hindu Right has inflicted on the State. Deshmukh has announced a review of several controversial Shiv Sena-inspired development and housing schemes, as well as of the Justice B.N. Srikrishna Commission of Inquiry into the Mumbai riots of 1992-1993. Thackeray has been unnerved enough by the prospect of prosecution for his role in the riots, to threaten public disorder should legal action be taken. But if the Lokshahi Aghadi remains too mired in its inner factional struggles to act decisively, it could find itself in real trouble. ■

POLITICS

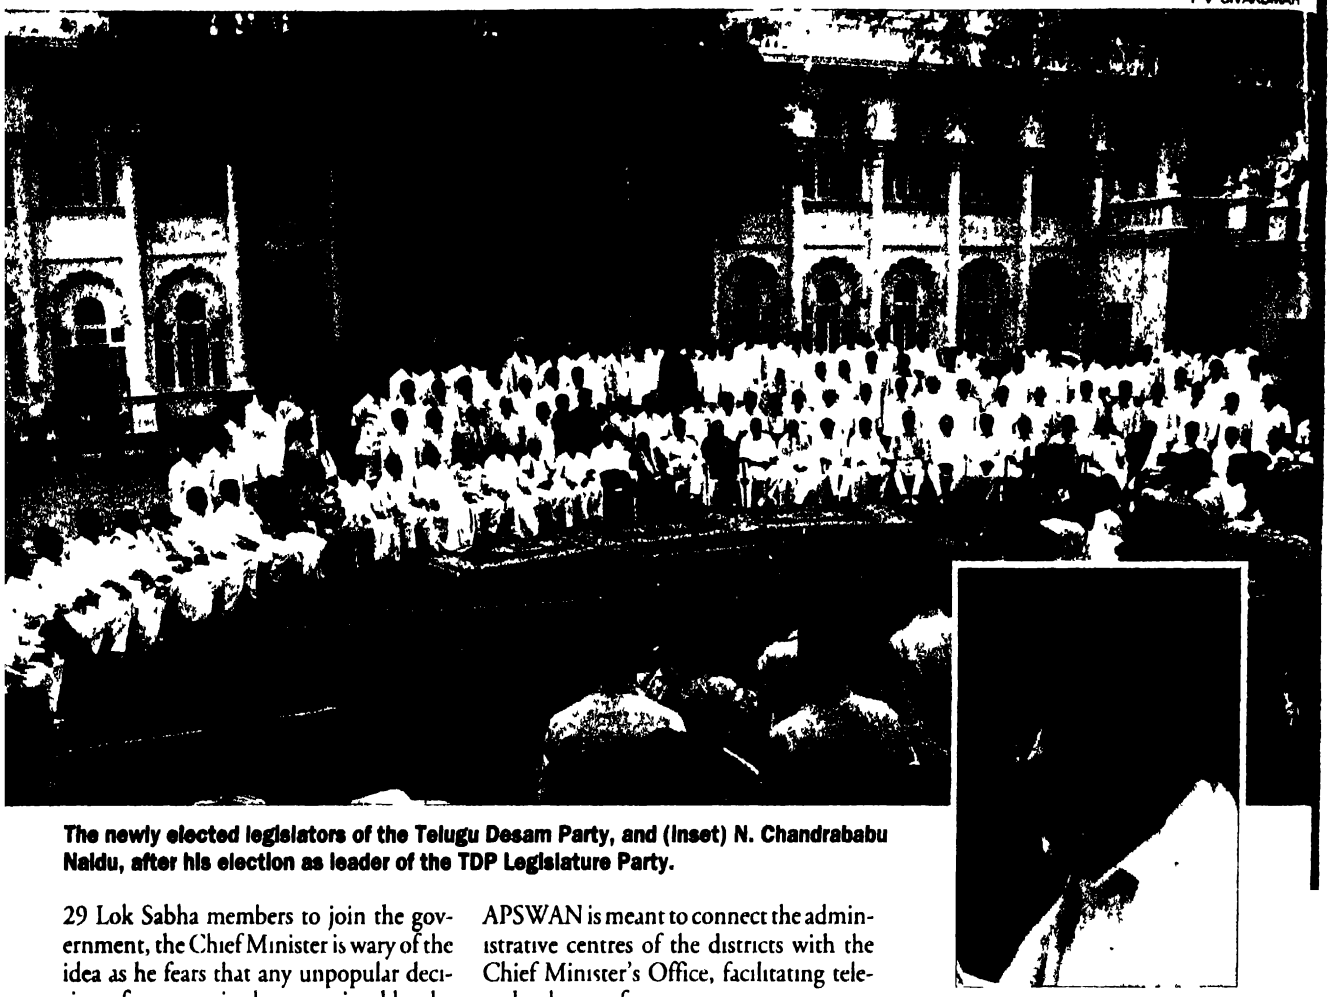
Promises to keep

Having raised popular expectations to high levels, N. Chandrababu Naidu is bound to find his tasks in his second term as Andhra Pradesh Chief Minister tough.

DASU KESAVA RAO

RETURNED to power with a fresh and decisive mandate, Andhra Pradesh Chief Minister N. Chandrababu Naidu has settled down to business, apparently determined to pursue his much-publicised goal of building a "Swarnandhra Pradesh" (golden land) via economic reforms. The Telugu Desam Party (TDP) chief began his second innings in power with a compact eight-member team and with a promise to expand it "at the earliest". Apart from retaining his trusted lieutenants – P. Ashok Gajapati Raju, T. Devender Goud and A. Madhava Reddy – he took in Yanamala Ramakrishnudu, Speaker of the 10th Assembly, and K. Vijayarama Rao, former Director of the Central Bureau of Investigation (CBI). While Ramakrishnudu was given Finance, Vijayarama Rao got Roads and Buildings.

Even before the victory celebrations were over, the new Government was faced with two major challenges – a severe drought in several parts of the State and extensive damage caused by a cyclone in Srikakulam district in the northern coastal region. Over 450 of the 1,000-odd rural mandals were declared drought-affected, and the recovery of loans and the collection of tuition fees were suspended in these mandals. Shortage of drinking water and fodder spurred the migration of people and cattle. Groundnut crops on 9.75 lakh hectares were the worst-hit. The prospects of the kharif crop appeared bleak – a disturbing fact, when seen in the context of the bumper crop of 1998.



The Chief Minister lost no time in resuming the Deepam scheme he had introduced (providing cooking gas connections to poor households); he made a visit to Delhi to streamline its implementation with the help of Central government officials. He is keen that the welfare and development programmes, including programmes that involve interaction with the people, are reviewed and their deficiencies identified and corrected. He wants these programmes to be redesigned and made "fool-proof" within a month.

Chandrababu Naidu is one of the few Chief Ministers who could overcome the anti-incumbency factor and win a renewed mandate in elections held in recent years. He describes the electoral verdict as a decisive mandate in support of his performance and as a "clear, positive vote". His claim is, however, disputed by the Congress(I) and other parties as well as by some political analysts.

The Congress(I) contends that the TDP owes its victory to its alliance with the Bharatiya Janata Party and "sympathy" for Prime Minister Atal Behari Vajpayee. This is a clear turnaround on the part of the party; its earlier contention was that the alliance was doomed to fail because the minorities and the oppressed sections would move away from the TDP. The Congress(I) also claims that the percentage of votes it polled is higher than that polled by the TDP, although the ruling party, together with the BJP, obtained a larger vote share. The Communist Party of India (Marxist), an ally-turned-critic of the TDP, said that the 1999 verdict could in no way be construed as an endorsement of the Chandrababu Naidu Government's policies of reforms. The party pointed out that the vote share (49.5 per cent) of the TDP-BJP combine is marginally less than the combined vote share (50.27) of these two parties, which contested the 1998 elections separately. The Congress(I), on the other hand, had improved its vote share, from 38.6 per cent in 1998 to 42.79 in 1999, the CPI(M) said.

For his part, Chandrababu Naidu is now less apologetic about his party's alliance with the BJP than he was earlier. At the swearing-in of the National Democratic Alliance (NDA) Ministry, he made a significant statement that his party's support to the Vajpayee Government this time was "unconditional" (and not "issue-based" as earlier) and would continue for its full five-year term. Although under pressure from the party's

P V SIVAKUMAR

The newly elected legislators of the Telugu Desam Party, and (inset) N. Chandrababu Naidu, after his election as leader of the TDP Legislature Party.

29 Lok Sabha members to join the government, the Chief Minister is wary of the idea as he fears that any unpopular decision of or any mistake committed by the government will have an adverse impact on the TDP's future. In his view, the promotion of the State's interests is more important than obtaining a few berths for the party in the Union Ministry.

Unfazed by the debate on the mandate, Chandrababu Naidu has made it clear that he intends to keep his promises, whatever the hurdles. Expectations are high and the tasks daunting. The World Bank-driven economic reforms have evoked hostile criticism from the Left Opposition and caused apprehensions among government employees that computerisation and e-government might lead to loss of jobs and curtailment of employment avenues.

It is precisely this fear that forced the Government to drop the Andhra Pradesh Value Added Network (APVAN) project and delay the Andhra Pradesh State-wide Area Network (APSWAN) project. The first envisaged the offer of "citizen-friendly" services such as receiving payments for bills and answering enquiries through a single window, at the press of a button. It was to have been taken up in collaboration with a Singapore-based consortium. APSWAN is meant to connect the administrative centres of the districts with the Chief Minister's Office, facilitating tele- and video-conferencing.

His professed commitment to economic reforms notwithstanding, Chandrababu Naidu has "miles to go" in achieving progress through them. Admittedly, he saved the State's finances from tottering by taking some steps, unpopular though, such as the closure of loss-making public sector undertakings, the relaxation of prohibition, a hike in taxes and an increase in the issue price of subsidised rice. Yet, public spending in non-productive areas continues to be on a scale that has affected fiscal health and capital investment. The industrial prospects are also bleak in the absence of any substantial increase in investments. Chandrababu Naidu is also accused of pushing the State into a debt trap by "reckless borrowings". However, the TDP avers that debt-servicing by the State Government has been satisfactory and notes with pride that thanks to Chandrababu Naidu's credibility the World Bank pumped in substantial funds, part of them as grants, despite the sanctions imposed on India following the Pokhran tests. Unlike during Congress(I) rule, the party contends, the borrowed funds were not siphoned off in collusion with contractors but put to optimal use for the creation of infrastructure or for the development of human resources.

The Chief Minister personally oversaw reforms in the power sector and the unbundling of the State Electricity Board. He has succeeded in optimising its functioning, improving its collections and streamlining supply and distribution, but other objectives such as value addition through more investments, increase in generation capacity or the launching of new power projects are yet to be accomplished. Within days of his swearing- in, the watch unit of Allwyn, a State government undertaking, was ordered closed. This has generated fears that more such closures are in the offing.

Chandrababu Naidu, who is eager to correct "the mistakes of the past", has to set the record straight in respect of the criticism that the introduction of the nodal officers system in the case of the Janmabhoomi programme and the constitution of education committees, mothers' committees and so on to oversee government-run schemes were aimed at undermining the powers and authority of panchayati raj bodies. ■

Playing it safe

Chief Minister S.M. Krishna sticks to convention in the constitution of his Ministry.

PARVATHI MENON
in Bangalore

THE Congress(I) in Karnataka has chosen not to depart from the guidelines that have governed ministry formation in the past, although its return to power has come about after a 10-year gap. Indeed, Chief Minister S.M. Krishna's promise that he would have a small and efficient Ministry, with political accountability as its watchword, had suggested that he would strike an independent path in the crucial matter of portfolio allocation. However, the final list shows that he has opted to play it safe by giving representation to various pressure groups. On the face of it, experience and capability do not seem to have been the guiding criteria.

After confabulations with the party leadership in Delhi, Krishna announced a 42-member Ministry, including 25 Cabinet Ministers, nine Ministers of State with independent charge and eight Ministers of State. Surprisingly, many of the senior and experienced leaders have not been given the portfolios best suited for them, while relative newcomers with unproven administrative skills have been allocated vital Ministries.

Despite the large size of the Ministry, the Chief Minister has chosen to keep the most important Ministries and civic bodies under his control. These include Finance, Personnel and Administrative Reforms, Information Technology, Energy and the Bangalore Development Authority, the Bangalore City Corporation, the Bangalore Water Supply and Sewerage Board, the Bangalore Metropolitan Region Development Authority, and the Karnataka Urban Infrastructure and Finance Development Corporation. The significance of Krishna retaining the Finance Ministry under which falls the politically sensitive Excise Department, has not been missed. (Excise is a major source of revenue for the State. The liquor lobby in Karnataka has had a close relationship with politics and has been a major source of election funds for political parties.)

Senior Congress(I) Minister Mallikarjuna Kharge has been allocated the Home Ministry. Kharge, now in his seventh consecutive term as Member of the Legislative Assembly, was the Leader of the Opposition in the last House. He was a contender for the post of Chief Minister. M.Y. Ghorpade, another veteran Congressman, who represents the Sandur constituency in Bellary district, has been given Rural Development and Panchayati Raj, a portfolio he has held before. H.K. Patil, who was the Leader of the Opposition in the Legislative Council and Textiles Minister in the Veerappa Moily Cabinet, has been allocated the important portfolio of Medium and Major Irrigation. K.H. Ranganath, who has won six times from the Hiriyur constituency and has wide administrative experience, has been given Forest, Ecology and Environment.

R.V. Deshpande, former Minister of Medium and Heavy Industry in the J.H. Patel government, has retained the same Ministry. Deshpande, who quit the Patel government to join Ramakrishna Hegde's Nava Nirmana Vedike, joined the Congress(I) well before the elections were announced. The allocation of this portfolio is seen as a reward for having joined the Congress(I) and as a recognition of his performance as a Minister. He has also been given Infrastructure Development, which was taken away from him when he was in the Patel Ministry.

SAGGERE RAMASWAMY

S.M. Krishna (left) being sworn in Chief Minister by Governor Khurshid Alam Khan in Bangalore.

THERE is some opposition from within the party to the allocation of Cabinet positions to R. Roshan Baig and Qamarul Islam, both last-minute "defectors" from the Janata Dal. While Baig has been given Tourism and Haj, Islam has been allocated Housing. Syed Yasin, son-in-law of former Union Minister C.K. Jaffer Sharief, who is leading the opposition, plans to submit a memorandum on this issue to the central leadership. (There are six Muslims in the Ministry, four of whom have Cabinet rank.)

The Primary and Secondary Education portfolio has been given to H. Vishwanath, who

Focus on development

Interview with S.M Krishna.

Chief Minister S. M. Krishna hopes to put the past behind him and work towards initiating a dialogue with his Tamil Nadu counterpart on the Cauvery question on the basis of shared concerns. "We are profoundly concerned about the plight of farmers in Thanjavur," he said in an interview he gave **Parvathi Menon** a few days after assuming office. Krishna also spoke about his government's other priorities. Excerpts:

▶ *You had said that your Ministry would remain small, efficient and accountable. But you have now chosen to have a 42-member Ministry. There is a perception that although the Ministry has a great deal of experience within it, there is a mismatch of portfolios and expertise.*

A small team need not necessarily be efficient and a bigger team need not necessarily be inefficient. Politicians are not experts. They are men with a general educational background. So the kind of mismatch that you are talking about is not well-placed. Secondly, I have drawn the best talent available in the Congress(I) Legislature Party. Many of them have been associated with government earlier. So I think that the general perception is that it is a good Ministry and that the distribution of portfolios in terms of regions and various other equations has been a good exercise.

▶ *You have kept a large number of key ministries with yourself. Will there be a reallocation of some of these?*

Well, the Chief Minister is the leader of the team and he chooses, depending upon the importance of the portfolio, what he should keep. As of now I feel that Finance and Power are very crucial portfolios and that I should keep them, apart from General Administration for which I am held responsible. I don't think a reallocation is warranted immediately.

▶ *There is the expectation that your government will take a fresh approach towards the settlement of the Cauvery dispute with Tamil Nadu. Hitherto governments have tried to look for solutions only during periods of crisis brought on by water scarcity.*

I have purposely raised the settlement of the Cauvery waters issue at this time, when the Krishnarajasagar dam is full and there is no anxiety in Mettur and Thanjavur. I think that the Chief Minister of Tamil Nadu would be gracious enough to think in terms of talking things over with his Karnataka counterpart. We are both mature and experienced, and Mr. Karunanidhi is much more experienced in government than I am. So I have made a modest and humble suggestion that we meet and try to talk things over. But there is a Tribunal, we are stuck with it; there is the Cauvery River Authority, we are stuck with it. In spite of these, can we not sit together and look for areas of agreement?

For example, there are five or six hydel power units that can come up along the river in both States, if we both agree. Let us explore the possibilities of doing things together at least on the power front. After all they need power for their farmers and we for ours.

Let us start somewhere. We cannot go on fighting and suspecting each other. We are profoundly concerned about the plight of farmers in Thanjavur. They should also be concerned about what is happening in Mandya and Mysore and how much storage we have in the reservoirs. Anyway, given the goodwill on both sides we should be able to arrive at some settlement.

▶ *Some of your senior Ministers have said that you are planning to have senior civil servants and Ministers sit together and draw up a blueprint of what you plan for the next five years. What are likely to be the priority areas?*

Developmental issues are going to be our focus. We will pay special attention to rural health care, rural education and drinking water facilities. Task forces will be created in these areas. We have not talked much about them; they are not fashionable. If I say that I want to provide good drinking water, it does not catch the imagination of the people. If I talk about an international airport, it catches the imagination of lots of people. Look at the literacy situation. The emphasis has been lopsided. I am worried about the high dropout rate among the rural poor. I would like the literacy rate to go up to 80 per cent from the present rate of hardly 56 per cent. These are all alarming developments and we would like to address ourselves to them. ■

has little experience in handling this portfolio; he was in charge of Forests and Kannada and Culture earlier. Also, S Kumar Bangarappa, actor-son of former Chief Minister S. Bangarappa, a newcomer, has been made Minister of State with independent charge of Minor Irrigation, apparently following pressure from Bangarappa. Kagodu Thimmappa has been put in charge of the Ministry of Social Welfare, overlooking his controversial record as a senior Minister in the Bangarappa regime. A. Krishnappa, who has been elevated to Cabinet rank, has been given the unrelated portfolios of Animal Husbandry and Sugar.

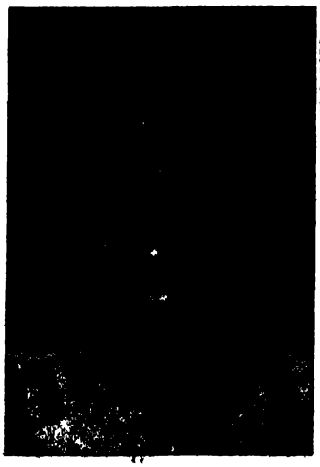
Senior Congressman D.B. Chandre Gowda has been given the Ministry of Law and Parliamentary Affairs. The important Ministry of Higher Education has for some reason been clubbed with Science and Technology, and has been allocated to G. Parameswara, a relatively inexperienced legislator who has earlier been in charge of the Sericulture Ministry.

A.B. Maalakareddi, who has been given Health and Family Welfare, is well suited for this Ministry since he has headed it before. He is a former faculty member of the Gulbarga Medical College B.K. Chandrashekhar, the party's spokesman, has been made Minister of State with independent charge of the Ministry of Information and Publicity. Chandrashekhar joined the Congress(I) from the Janata Dal last year. He has a background in law, having taught at the Indian Institute of Management for several years and, more recently, at the National Law School of India University.

S.M. Krishna has given only a token representation to women. Of the four, only Mottama is a Minister of Cabinet rank. She gets the Ministry of Women and Child Welfare, a Ministry that has, as an unwritten rule, been reserved for women by all governments. Rani Satish, a senior Congressperson with an excellent administrative record, has been made a Minister of State in charge of Prisons and Parliamentary Affairs (yet another example of clubbing unrelated portfolios under one Minister). The two other women Ministers of State are Uma Vasanth (Planning) and Nafees Fazal (Medical Education).

North Karnataka has been adequately represented and crucial portfolios have been allocated to Ministers from that region. These include the six key portfolios of Home, Irrigation, Industry Panchayati Raj, Public Works and Urban Development. ■

Politicking time in U.P.



The BJP in Uttar Pradesh is in ferment, with personal and group equations and the balance of power, changing constantly.

VENKITESH RAMAKRISHNAN

THE mood in the Bharatiya Janata Party in Uttar Pradesh during the run-up to the Lok Sabha elections was one of despondency. Many BJP activists stated candidly that the party was in for an adverse verdict and that some post-poll developments could prove even more disastrous. Among the possible adversities they identified were the collapse of the BJP-led State government headed by Kalyan Singh and a split in the State unit of the party on the basis of caste identities.

The election results have borne out the first part of their prediction, but it is not clear yet whether the second part would also come true. It is, however, a fact that the party unit is in ferment. There have been swift developments in both Lucknow and Delhi. Personal and group equations within the BJP in the U.P. keep changing, and as a result the balance of power in the party has been alternating almost on a day-to-day basis.

The most dramatic of the shifts related to the equations between the Kalyan Singh-led backward classes group and the group in the central party organisation, led by Union Home Minister L.K. Advani. During the run-up to the polls, Advani and also Prime Minister Atal Behari Vajpayee, national president of the party Khushabhau Thakre, and Union Human Resource Development Minister Murli Manohar Joshi threw hints that Kalyan Singh would be replaced as Chief Minister after the elections. According to some followers of Kalyan Singh, the central leadership had even told the Chief Minister that Rajnath Singh, the State president of the party, would be the replacement. However, after the polls Advani has become Kalyan Singh's chief benefactor.

V. SUDERSHAN

Chief Minister Kalyan Singh.

During the election campaign the consensus in the national leadership was that replacing Kalyan Singh was the best way to strengthen the party in U.P. The leadership felt that upper-caste groups such as Brahmins, Thakurs and Banias were increasingly getting alienated from the BJP because of what they perceived as the pro-backward class actions of Kalyan Singh. In the Central leadership's perception, the upper-caste support base could be retained by replacing Kalyan Singh with Rajnath Singh, a Thakur, as Chief Minister. However, after the elections Advani and his close associates such as national general secretary K.N.Govindacharya find that the BJP is losing the support of not only the upper castes but also the backward classes. In their estimation, the erosion of backward class support has led to the party's defeat in at least 15 constituencies. They attribute the erosion mainly to the active campaign carried out against the party by Sakshi Maharaj, a former BJP member of Parliament who has turned a supporter of the Samajwadi Party (S.P.). The campaign influenced a large section of the Lodh Rajputs, traditionally BJP supporters. The Advani group reportedly told inner-party meetings that the BJP became a potent force in U.P. since the 1980s only by expanding its support base, beyond the upper castes and including the backward classes. The group sees Kalyan Singh as having been responsible for this to a great extent. Its leaders now fear that any hasty action might further alienate the backward classes.

The change in the Advani group's stand has created confusion in the national leadership of the party. Vajpayee and his supporters such as Jaswant Singh and Lalji Tandon, Urban Development Minister of the State, do not agree with the assessment. They want the party to go ahead with the pre-election plan of replacing Kalyan Singh.

These two opposite view-points gain the leadership's support alternately. Two days prior to the swearing-in of the Vajpayee Government, the Advani camp's line held sway and the leadership almost implemented its "revised formula for organisational changes in Uttar Pradesh". According to this formula, Kalyan Singh was to continue as Chief Minister but a representative of the upper-caste group would be given an important position in the Union Ministry. Rajnath Singh was tipped for this position, and he was all set to take over as a Minister of State with independent charge.

However, a section of the upper-caste lobby, led by Lalji Tandon, sabotaged this plan. A group of Tandon supporters, including Rajesh Pandey, Member of the Legislative Council, represented to Vajpayee against inducting Rajnath Singh into the Union Ministry "at this juncture". They argued in favour of a package deal for U.P. that would include organisational changes in the State party, besides the induction of one State representative in the Union Ministry in a key position. The group would not budge on its demand to replace Kalyan Singh as Chief Minister. Vajpayee gave in, and the invitation to Rajnath Singh to join the Union Ministry was withdrawn.

Kalyan Singh, who had welcomed the move to shift Rajnath Singh to the Centre, was apparently upset over the talk of a package deal. He demanded to know what the Central leadership planned for Uttar Pradesh. He told mediapersons on October 17, after a closed-door discussion with Rashtriya Swayamsevak Sangh (RSS) ideologue Nanaji Deshmukh, that there were several rumours about the central party leadership's action plan for U.P. and that that was not good for the party. He wanted the leadership to clarify its position. "Personally I am happy to be an ordinary worker of the party," he said, and added, "I am not looking for any position, whether of Chief Minister, Union Minister or Governor. I just want to be a disciplined soldier of the party."

This posture of "a disciplined soldier of the party" was, however, not lost on the leadership, including his detractors. The anti-Kalyan Singh lobby intensified its pressure tactics and floated the name of Public Works Minister Kalraj Mishra, a Brahmin, as a possible replacement to Kalyan Singh. In a show of strength, Mishra's supporters gathered at his residence about 100 MLAs belonging to the ruling coalition. The MLAs were ostensibly greeting the Minister on the eve of Dasara.

These developments have had a divisive impact on the BJP's allies such as the Uttar

Pradesh Loktantrik Congress (UPLC) and the Janatantrik Bahujan Samaj Party (JBSP). Indications are that while UPLC president Naresh Agarwal and seven Ministers support Kalyan Singh, the deputy leader of the legislature party, Amar Mani Tripathi, and seven or eight Ministers are with the anti-Kalyan Singh group. Similarly the dominant group in the JBSP, consisting of 12 MLAs, is reportedly opposed to the Chief Minister, while five Ministers belonging to the breakaway Kisan Mazdoor Bahujan Party (KMBP) support him.

Although Kalraj Mishra is the most prominent name to have emerged from the anti-Kalyan Singh group as a potential replacement as Chief Minister, other names too are in circulation, such as national secretary of the party Sangha Priya Gautam, Union Minister Santhosh Gangwar and Assembly Speaker Kesri Nath Tripathi. Gautham is a Dalit, and Gangwar belongs to a backward caste. Tripathi is seen as more experienced than Mishra, and he has greater popular appeal. Whatever the final result of these power games, governance has been the immediate casualty.

THE two principal rivals of the BJP in the State – the S.P. and the BSP – are making use of the confusion in the ruling party in their preparations for Assembly elections. Both S.P. president Mulayam Singh Yadav and BSP leader Mayawati have launched their campaign at the grassroots level with workers' meetings. The S.P. and the BSP, which have improved their strength in the Lok Sabha to 26 and 14 seats respectively from the 1998 tally of 20 and four, performed impressively in the Assembly segments. While the S.P. registered a lead in 129 Assembly segments, the BSP led in 88. The S.P. emerged as the single largest party in terms of leads in Assembly segments, pushing the BJP to the second spot. The BJP's allies led in 11 Assembly segments and the Congress(I)-Rashtriya Lok Dal (RLD) alliance in 58.

Meanwhile, the Congress(I) has revived its efforts to align itself with the BSP. According to the party's leadership, an alliance with the BSP is a winning strategy, especially in the context of the shift in upper-caste and Jat votes of the BJP towards the Congress(I) and the RLD. An alliance with the BSP would bring to the Congress(I)-RLD combine the Dalit vote bas of the BSP. By all indications, BSP pre dent Kanshi Ram is open to this idea alth ugh Mayawati is not. In Mayawati's pe ption the BSP will come within striki stance of power on its own with further support from Muslims. ■

Targeting the Pope

Sections of the Sangh Parivar fire salvos against the visit of Pope John Paul II to India scheduled from November 5 to 9.

V. VENKATESAN

"WE welcome the Pope's visit, but we oppose 'Churchianity'." This is how the position of the Samskriti Raksha Manch (Save Culture Forum), a Sangh Parivar outfit, on the visit of Pope John Paul II to India was enunciated by B.P.Singhal, Bharatiya Janata Party member of the Rajya Sabha and younger brother of Vishwa Hindu Parishad (VHP) president Ashok Singhal. The Rashtriya Swayamsevak Sangh-VHP-Bajrang Dal combine, however, is grabbing every opportunity to make the visit controversial. The Pope's visit, in response to an invitation extended by I.K. Gujral when he was Prime Minister, is scheduled from November 5 to 9.

Although the RSS and the VHP have sought to use the papal visit as an occasion to attack Christianity, they have refrained from launching any formal protest at the national level, in view of the embarrassment such an action could cause to the Atal Behari Vajpayee Government. Apparently, they use the SRM as a cover. It was not surprising therefore when the SRM launched a "Dharma Jagran Rathyatra" from Panaji to Delhi on October 20. The rath yatra would pass through Karnataka, Maharashtra, Gujarat, Madhya Pradesh, Rajasthan and Uttar Pradesh, before reaching Delhi immediately after the Pope's arrival. Sadhvi Rithambara, the VHP demagogue who launched the rath yatra at Rivadi, Goa, said that the Pope could visit India if he put an end to the induced conversions of Hindus to Christianity. She alleged that a mass conversion campaign organised by the Vatican under the "2000 and Beyond" programme was to be launched following the Pope's visit. The BJP and the government have both kept a distance from the Sangh Parivar propaganda but have not condemned it or stopped the rath yatra which is blatantly communal. Instead, the government appears to have bought peace with the Sangh Parivar by seeking from it an assurance that despite the sabre-rattling, things would not be allowed to go out of control before and during the Pope's visit. This explains why irrespective of its vicious campaign the RSS-VHP combine tries to clarify that it is not against the visit as such. B.P. Singhal, for instance, promised to restrain SRM activists who threatened to burn the Pope's effigies.

RSS general secretary H.V. Seshadri, addressing activists on the occasion of Vijayadasami in Nagpur, congratulated the Vajpayee Government on its electoral victory, thus identifying the Sangh's interests with those of the coalition government. Seshadri said that the Chinese and Sri Lankan governments had denied the Pope permission to visit their countries for fear that such a visit might give a fillip to religious conversions by Christian missionaries. "Since India has welcomed his visit, the Pope should reciprocate the gesture by not only following state protocol but declaring all religions as equal," he said.

Ashok Singhal stated that the VHP had no objection to welcoming the Pope as a guest as per age-old Hindu traditions. "It is even ready for a dialogue with him on contentious issues either here or in Rome," he said. However, he urged the Pope to tender an apology for what happened in Goa, Kerala and Vasai, where "Hindus were constantly subjected to harassment at the hands of Christians".

The SRM referred to the Goa Inquisition between A.D. 1567 and 1808, when "lakhs of Hindus were slaughtered and hundreds of temples destroyed", and claimed that the Pope had reportedly expressed his intention to apologise for this. However, a Church spokesman, Dr Dominic Emmanuel, denied the claim.

The SRM publicised its appeal to the Pope to recognise Hinduism as an institution and stop every type of assault on it. It stated that conversion by any method inevitably led to the destruction of traditions and uprooted deeply-held beliefs, resulting in social turmoil. Trying to make it appear as though the Pope is coming to India for proselytisation purposes, the

Janata Sangharsh Samiti activists protest against the Pope s visit, at the Red Fort, New Delhi, on October 22

coming to India as a pilgrim of peace fascinated by the culture and people of this land that he so profoundly loves therefore we should turn this into a celebration of our essential oneness and not allow vested interests to abuse it for promoting communal dissention and disunity

The Shankaracharya dismissed the fears that the Pope s visit would trigger conversions If we are so weak and vulnerable to accept conversions then we are to blame ourselves he said He advised persons who protested against the Pope s visit to work for the eradication of poverty and illiteracy He said it was not fair to ask the Pope to apologise for events that took place centuries ago he said one of the papal visit to welcome the Pope as he carries the message of love and peace

Meanwhile Dominic Emmanuel said that the Catholic Bishops Conference of India had been tipped off about intelligence reports including VHP and Bajrang Dal activists plan to intrude into gatherings to be addressed by the Pope by securing invitations in large numbers and raise slogans to disturb the meetings

The VHP s request for an appointment with the Pope has been turned down by the organisers who plan the Pope s engagements

POPE JOHN PAUL II arrives in New Delhi on the evening of November 5 On November 6 he will perform Mass in the Vatican Embassy chapel in the capital He will then meet President K R Narayanan at Rashtrapati Bhavan after a ceremonial welcome He also has meetings scheduled with Vice President Krishan Kant and Prime Minister Vajpayee After paying homage to Mahatma Gandhi s samadhi at Rajghat he will meet the bishops of the synod and promulgate the synod document at the Sacred Heart Cathedral in New Delhi and make a speech On November 7 he will lead a Mass at the conclusion of special assembly of the Asian synod bishops In the evening he will meet representatives of various religions The Pope will leave for Georgia on the morning of November 9

The present Pope was in India for 10 days starting February 1 1986 when he visited several parts of the country ■

SRM warned that as per a Supreme Court ruling there was no fundamental right that allowed one to convert a person to one s own religion

The SRM is reluctant to call its propaganda a protest against the visit It does not even refer to the questions raised to the Pope as demands B P Singhal asked *Frontline* How can we demand something from our guest However much of the SRM s press releases addressed to the Pope use expressions such as the Pope ought to and the Pope must On October 22 the Janata Sangarsh Samiti a little known organisation allowed its activists in New Delhi to burn effigies symbolising religious conversion by Christian missionaries

The SRM urged the Pope to tell the Church in India that it cannot call itself a casteless or creedless entity if it continued to demand reservation for Dalit Christians A draft Bill to extend the reservation for the Scheduled Castes to Dalits among Christians is yet to be approved by the Cabinet and Parliament

THE CPI(M) demanded immediate steps to curb the Sangh Parivar propaganda The propaganda material which is being brought out by the VHP and other RSS outfits spew hatred against the Christian minority the party said and warned that it would damage the secular image of the country It is a sign of the changed circumstances that under the BJP led government hostile propaganda against a religious group is freely conducted the party observed Congress(I) leaders Rajesh Pilot and Ajit Jogi too condemned the campaign

While the Government and the BJP have failed to curb the anti Christian crusade opinion makers from various religious groups have acted Religious leaders from different communities who gathered on a common platform in New Delhi on October 21 hailed the papal visit Shankaracharya Swami Madhavanand Saraswati Maharaj of Puri Jagadguru Islamic scholar Maulana Wahiduddin Khan Dr Mohinder Singh Jain Acharya Nagraj and Reverend Professor Valson Thampu appealed to all people to respond unitedly to this historic event in the true spirit of India s religious traditions all of which teach us to love and to treat one another with respect and dignity They urged the Government to ensure that due courtesies were extended to the Pope and that nothing that detracted from the spiritual significance of the visit be allowed to happen

Any discourtesy shown to the Pope will cause agony and embarrassment not only to the Christian community in this country but also to all well meaning people who care for basic human values they stated They also said that the Pope was

The burden of diesel price

The Government's decision to raise the price of diesel, which may be followed up with increases in the prices of kerosene and cooking gas, holds rather grim prospects for a substantial chunk of the population.

SUDHA MAHALINGAM
in New Delhi

HARDLY had polling for the 13th Lok Sabha been completed when the Bharatiya Janata Party-led caretaker government effected a hefty rise in the price of diesel. The timing of the announcement was crucial, coming as it did just after the elections, although such a proposal had been there since April when international diesel prices began to harden.

The price hike, the sharpest in recent times, is seen as a forerunner of what the BJP-led National Democratic Alliance (NDA) Government has in store for the common man. Soon after assuming office, Finance Minister Yashwant Sinha warned of tough measures on the economic front.

Not satisfied with the sell-out on the telecom migration package by the previous BJP-led government, the NDA now talks of second-generation reforms. The Disinvestment Commission is on the verge of being dismantled because the Government is in a hurry to sell the remaining public sector units without intermediation by the Commission. The Cabinet has already approved privatisation of the insurance sector. The Foreign Exchange Regulation Act (FERA) is to be replaced with a much-diluted version, the Foreign Exchange Management Act (FEMA), while a Prevention of Money Laundering Bill that cannot prevent large-scale accounting jugglery and laundering of money siphoned off from corrupt deals is to be passed in the current session of Parliament.

THE ex-storage price of high speed diesel (HSD) has been increased from Rs.6,882.15 a kilolitre to Rs.9,634.60. With this, the retail sale price of diesel has gone up from Rs.10.35 to Rs.13.91 a litre in Delhi. It has gone up from Rs.11.27 to Rs.15.24 a litre in Chennai, from Rs.10.52 to Rs.14.20 a litre in Calcutta, and from Rs.12.23 to Rs.16.54 a litre in Mumbai.

The price increase has kicked up a storm, with the Opposition parties demanding a rollback of the hike. The Indian National Lok Dal (INLD), a constituent of the NDA, has even threatened to pull out of the alliance if the hike is not revoked. In West Bengal, the Left Front has organised a State-wide protest against the hike.

From October 21, truckers all over the country went on an indefinite strike. By the fourth day of the strike, inflation – fuelled by higher freight costs as well as by hoarding – had begun to hurt the common man in a very bad way. The wholesale price index (WPI), which was just below 2 per cent in the beginning of October, was set to go up by 0.75 points by the Government's own admission. Chief Economic Adviser Shankar Acharya was reported to have confirmed that the hike in diesel price was likely to have a direct impact of about 0.8 percentage point. Considering the cascading effect, this might go up to 1 percentage point.

The Government claimed that it had set up a high-powered committee on prices, chaired by the Cabinet Secretary, to handle the supply-side preparations to manage inflation in the coming months. According to the Government, even with the price increase, the oil pool account deficit will not be wiped out, although the rate of accumulation of deficit would slow down. In fact, it claimed that the financial year-end would witness a deficit of Rs.3,400 crores. In order to wipe this out, it is likely to increase the prices of kerosene and liquefied petroleum gas (LPG) as well. The Petroleum Ministry wants the subsidy on LPG brought down to 15 per cent of the import parity price. It has therefore proposed a hike of Rs.90 for a 14.5-kg LPG cylinder and Rs.2 for a litre of kerosene. Sources said that the Government may eventually settle for a lower quantum of hike – around Rs.40 a LPG cylinder and Rs.1.50 a litre of kerosene.

Raising the price of kerosene, predominantly the common man's fuel, has become inevitable because the greater the difference in the prices of kerosene and diesel, the higher the incentive to adulterate the latter with the former. The prognosis appears to be rather grim for a substantial chunk of the population, especially the middle and lower income groups. Bus fares have already gone up in many cities and towns – in some places by as much as 100 per cent.

According to reports, the oil pool account recorded a deficit of Rs.5,200 crores in end-September. The deficit comprised the claims of oil companies amounting to Rs.2,100 crores, the proceeds of oil bonds to be redeemed at Rs.385 crores, interest on bonds amounting to Rs.900 crores, miscellaneous claims of Rs.1,000 crores and a cash deficit on account of increases in international prices, amounting to Rs.815 crores. The Government claimed that the oil pool account deficit was set to increase by Rs.750-800 crores every month because of the prevailing trends in international oil prices.

By increasing the price of diesel, the Government hopes to raise Rs.6,600 crores during the October 1999-March 2000 period. M.S. Ramachandran, Executive Director of the Oil Co-ordination Committee, justified the increase on the grounds that otherwise the Government would not have been able to pay for crude imports. He said that prior to the increase, domestic diesel price had been pegged to the international diesel price prevailing in April. Since then the international price had gone up from $97.38 a tonne to $162.10 a tonne and therefore a revision in the price was long overdue, he explained

In 1997-98, the Government decided to dismantle the Administered Price Mechanism (APM) for petroleum products. The objective was to permit decanalisation of imports in many products and fix the prices for refined products on the basis of import parity up to the storage level. The process began with the deregulation of prices relating to naphtha, furnace oil, Low Sulphur Heavy Stock (LSHS) and bitumen. Motor spirit, LPG, aviation turbine fuel and kerosene continue to be under the APM. Diesel prices are periodically revised to bring them on a par with import prices.

The linkage to the international market was predicated upon the assumption that the benefits of declining crude prices could be passed on to the consumers. There were

few occasions since September 1997 when diesel prices were revised downwards. However, the current steep revision has been of a much higher magnitude than the previous reductions. Had the Government increased the price even as international diesel price had begun its climb, the impact would not have been huge. However, the BJP-led government shied away from taking such a tough decision at that time since it had its eyes set firmly on the elections.

Farmers protesting against the diesel price increase block the road with tractors near Parliament House in New Delhi.

Under the APM, diesel and kerosene had deliberately been priced low. This, however, led to distortions in the consumption pattern, with the two products finding applications even in areas where other fuels would normally have been used. In fact, it is estimated that the demand for diesel will go up to 52.5 million tonnes by 2001-2002, far ahead of estimates for other petroleum products. In 2001-2002, the demand for petrol is estimated to be 7.9 million tonnes, naphtha 7.2 million tonnes, kerosene 12.2 million tonnes and LPG 7.9 million tonnes. Diesel is used in gensets and pumpsets, apart from trucks, cars and locomotives. However, since diesel is purchased from retailers for use in gensets and pumpsets, it is virtually impossible to separate consumption figures for other applications from those for motor fuel.

Considering the fact that there is a huge demand for diesel cars even in the luxury segment, what prevents the Government from levying a one-time fee on diesel cars at the time of sale? The proceeds could be credited to the oil pool account. Currently, although diesel cars are priced higher than petrol-driven cars, the difference is being pocketed by automobile manufacturers, even as the Government continues to subsidise the fuel cost for the car owner. In fact, there is a suggestion that the Government levy a higher excise duty on diesel cars with the proviso that the amount so collected should be credited into the oil pool account. Evidently, these are tough measures that will not endear the Government to the powerful automobile lobby and the influential segment of automobile users.

The use of diesel gensets, especially by commercial establishments, has been on the rise, adding to the demand for diesel. Levying a higher excise duty on such gensets would have checked the pressure and kept diesel consumption within manageable limits. However, that would have antagonised the trader/shopkeeper lobby, the BJP's own, especially in the Capital. Therefore the Government has opted for the easy way out – putting the burden on the common man.

THE Railways have claimed that the diesel price increase will push up their fuel bill by Rs.678 crores for the year ending March 2000. P.V. Vasudevan, Financial Commissioner, Indian Railways, said: "With the February hike and the current 40 per cent hike, the Railways will be losing over Rs.600 crores in the next few months." He told *Frontline* that the truckers' strike had slowed down railway freight traffic. "Unless there are trucks to load and unload the goods wagons, how can we carry cargo?" he asked. Currently, the Railways account for 40 per cent of the cargo movement in the country. While Railway Minister Mamata Banerjee has said that she is against raising passenger and freight rates, there are indications that an increase in both freight tariffs and passenger fares is inevitable unless the Government makes up for the loss through budgetary support.

CURIOUSLY, Indian industry has welcomed the diesel price hike. Rahul Bajaj, president of the Confederation of Indian Industry (CII), said that the hike would help control the fiscal deficit in the long term, although he did concede that in the short term it would lead to inflationary pressures. The Associated Chambers of Commerce (Assocham) welcomed the price increase, saying that it came at the right time – when inflation was at its lowest. The Federation of Indian Chambers of Commerce and Industry (FICCI) has also welcomed the hike, which it believes will reduce the extent of cross-subsidisation in the fuel sector.

MEANWHILE, the truckers' strike continues, with both the Government and the truckers' associations sticking to their respective positions. The All India Motor Transport Congress (AIMTC), the apex body of various transport associations, claimed that over 22 lakh truck operators across the country were staying off the roads. The Delhi Transport Association claimed on October 22 that even tempos and mini-trucks that ferried essential commodities had gone off the roads. O.P. Aggarwal, AIMTC president, alleged that the Government had increased the truckers' permit fees, further aggravating inflationary trends. This claim was promptly rebutted by the Government.

According to reports, the truckers' strike paralysed the movement of goods. Maharashtra witnessed a partial strike, with some truckers' associations refusing to join the strike. Deputy Chief Minister Chhagan Bhujbal said that his government would consider invoking the Essential Services Maintenance Act (ESMA) against the strikers. In some States, the governments themselves commissioned and operated trucks. The Uttar Pradesh Government instructed the District Magistrates to make appropriate security arrangements at important installations such as oil refineries, checkposts and railway stations to prevent the disruption of the transportation of essential commodities.

Chief Secretary Yogendra Narain said that the services of the U.P. State Roadways Corporation would be sought to tide over the difficulty. While the Delhi Government threatened the strikers with punitive action, in Andhra Pradesh, the strike virtually paralysed the movement of goods, leading Chief Minister N. Chandrababu Naidu, whose party is a constituent of the NDA, to request the Centre to withdraw the hike. In Tamil Nadu, the prices of essential commodities rose sharply.

Even as the truckers and the Government continued to test their respective strength, the hoarders had a field day. The casualty was the common man. ■

A question of justice

AYEAR ago when 18 year old British *au pair* Louise Woodward was found guilty by a court in the United States of the death of a child in her care there was a wave of outrage in Britain. The press and the public were convinced that she was innocent groups sprang up to lobby her case and money was collected for her defence. When she was eventually allowed to return to Britain she was received like a celebrity.

Earlier in October another British woman was found guilty by a US court of causing the death of a child who was in her care and has been sentenced to 25 years in jail. This time the conviction hardly created a ripple in the public consciousness. The media covered it perfunctorily only for a few days.

The reason for the difference in the treatment of the two cases is difficult to understand. The second woman Manjit Basuta is of Indian origin whereas Louise Woodward is English. Manjit Basuta is a Sikh who came to Britain from East Africa before moving on to the US.

Basuta moved to the US 10 years ago after her husband got a job in a communications company in San Diego. She ran a day care centre at their home in Carmel Valley San Diego. Her problems began last March after one of the children in her care 8 month old Oliver Smith died of head injuries. The prosecution claimed that she had shaken him violently and banged his head on the ground in a rage of frustration because he would not be lured off from watching a TV programme to have his nappy changed. Basuta denied this and her lawyers have said that the child must have suffered the serious head injury earlier. Her lawyers told the court that Oliver had been playing outside when he fell unconscious and that Basuta had rushed to try and revive him.

Basuta's relatives who live in Britain said they would appeal against the sentence. The family as well as Basuta's lawyers convinced there has been a mistrial and say that evidence crucial to her defence was not allowed to be placed before the court. Her lawyer Eugene Iredale described the sentence as an atrocity on justice.

The defence argued that the key prosecution witness Christine Cuillo a Guatemalan who had been working illegally in the US had changed her version several times. Initially she said that the child had fallen in the playground and hurt his head. Later she said that she had seen Basuta shake the child. Basuta's lawyers allege that she changed her story after she was threatened with deportation as an illegal immigrant.

The Mail on Sunday in an investigation said it had seen documents indicating that the boy's mother Audrey Amaral was prone to violence and that the child had been taken to hospital on an earlier occasion with injuries. The boy's father Albert Smith who is separated from his mother had reported to the police that he feared for his son's well being because of Audrey Amaral's unstable moods. *The Mail on Sunday* reported that Albert Smith had told the police that his former wife would shout at strike and shake the baby when he cried. These pieces of evidence were however not placed before the court.

Whether or not there has been a miscarriage of justice this case clearly brings out the difficulties that ethnic minorities and foreigners face in getting justice outside their own countries. This appears to be a particular problem in the US where trial by jury is common and it is difficult to get juries that are familiar with or sensitive to those perceived to be outsiders. ■

Thomas Abraham

Documentary evidence

A DOCUMENTARY on the death of 17 persons in Tirunelveli on July 23 1999 following police action on a procession of tea garden workers has once again brought to the fore the disturbing questions surrounding the event (*Frontline* August 13 and August 27 1999). If the gripping documentary in video format titled *Oru Nadhiyin Maranam* (The Death of a River) highlighted the brutal aspects of the sections of the police force the Tamil Nadu Government's angry response to its screening for an invited audience in Chennai on October 10 has raised issues concerning the freedom of expression and the right to information.

On July 23 the police descended on the procession taken out to press wage related demands of workers of the Manjolai tea estate in Tirunelveli district beat its participants with lathis and chased them into the Tamirabarani river. Seventeen persons including two women and a child were killed. The Government contended that they were drowned in the river the post mortem reports also recorded deaths due to drowning. Political parties and human rights organisations however alleged that the deaths were owing to police excesses. The Government ordered an inquiry by Justice S. Mohan a retired Judge of the Supreme Court. The inquiry commission has in three sittings received about 300 affidavits half of them from the police.

The documentary has enough in it to counter the Government's version. It includes footage from Nila TV, a Tamil satellite channel that is now defunct interviews with the injured poignant narratives by victims relatives and eyewitness accounts by processionists and their leaders.

A day after the screening I. S. S. Mani whose name figures in the credit titles of the film was arrested from his residence in Chennai and produced before a magistrate. He was remanded to 15 days custody. R. R. Srinivasan who directed and produced the film for Kanchanai Film Society Tirunelveli obtained anticipatory bail from the Madras High Court. According to the first information report (FIR) filed by the police the two persons along with the manager of a theatre complex that included the hall in which the film was screened have committed offences under various sections of the Cinematograph Act the Tamil Nadu Exhibition of Films on Television through Video Cassette Recorders and Cable Television Network (Regulation) Act 1984 and the Indian Penal Code. The FIR stated that the documentary had no censorship clearance was exhibited without a licence and contained scenes that intended inducing caste hatred affecting public tranquillity.

The police action was condemned by the Tamil Nadu Progressive Writers Association the Tamil Nadu and Pondicherry unit of the People's Union for Civil Liberties (PUCL) human rights activists writers and media persons. They said that it showed the extreme intolerance of the state machinery and its attempt at muffling the voice of democracy. P. V. Bhaktavatsalam advocate and president of the Organisation for Civil and Democratic Rights (OCDR) said that no government permission was needed to screen video documentaries. Srinivasan said that it was a private screening arranged by film societies including the Kanchanai Film Society. ■

Supreme Court strictures

THE Supreme Court has expressed its unhappiness with Narmada Bachao Andolan (NBA) leader Medha Patkar and Booker Prize winner Arundhati Roy for knowingly making comments on pending proceedings and for disobeying interim injunctions issued by the court. However, the court chose not to initiate contempt proceedings against them supposedly in view of the importance of the rehabilitation effort for people displaced by the Narmada Project which the judiciary has been overseeing for some years now.

Medha Patkar.

The Supreme Court gave its ruling on October 15 on a petition filed by the Gujarat Government which drew attention to the writings and comments pertaining to an interim judicial order permitting the raising of the height of the Sardar Sarovar dam. The court initiated contempt proceedings on July 22. But in a final ruling, Chief Justice A.S. Anand held that "in the larger interest" it may not be appropriate to pursue the matter any further. The Chief Justice did hold out an admonition to the NBA and its leader that they desist from acting in a manner which has the tendency to interfere with the due administration of justice or which violates the injunctions issued by this court from time to time.

The comments that attracted judicial anger were apparently made through interviews and press releases after the court permitted an increase in the height of the Sardar Sarovar dam to 85 metres. The court also expressed displeasure over what it termed the "distorted writings" in Arundhati Roy's extended essay "The Greater Common Good" first published in *Frontline* dated June 4, 1999. It held that whatever may have been the motive, the author had obviously decided to use her literary fame to misinform the public and project a totally incorrect picture of how the Supreme Court had dealt with the issue of resettlement and rehabilitation of people displaced by the dam.

Having said so much, the court chose to disavow any undue sensitivity on its part towards fair or outspoken comment on its judgments and orders. This tolerance did not, however, extend to deliberate distortions of the court's order or attempts to give them a particular slant in the public understanding.

Arundhati Roy

The NBA has chosen not to react to the strictures. That is perhaps the prudent course since its writ petition seeking a direction to the various State governments to implement the tribunal award on the resettlement of dam oustees will be heard on November 1.

On the part of the Supreme Court, the decision not to invoke the power of contempt must be deemed an act of prudence. Contemporary notions of the power of contempt tend to view the freedom of expression as primary with the judiciary's power to abridge this right restricted to instances when the ends of justice are at stake ("Questions of contempt", *Frontline*, October 8, 1999). The ends of justice, needless to say, are not congruent with the reputation of an individual judge or even a collectivity of judges. Neither the ends of justice nor the integrity of the judiciary is preserved in any way through shielding judges from the glare of public scrutiny. ■

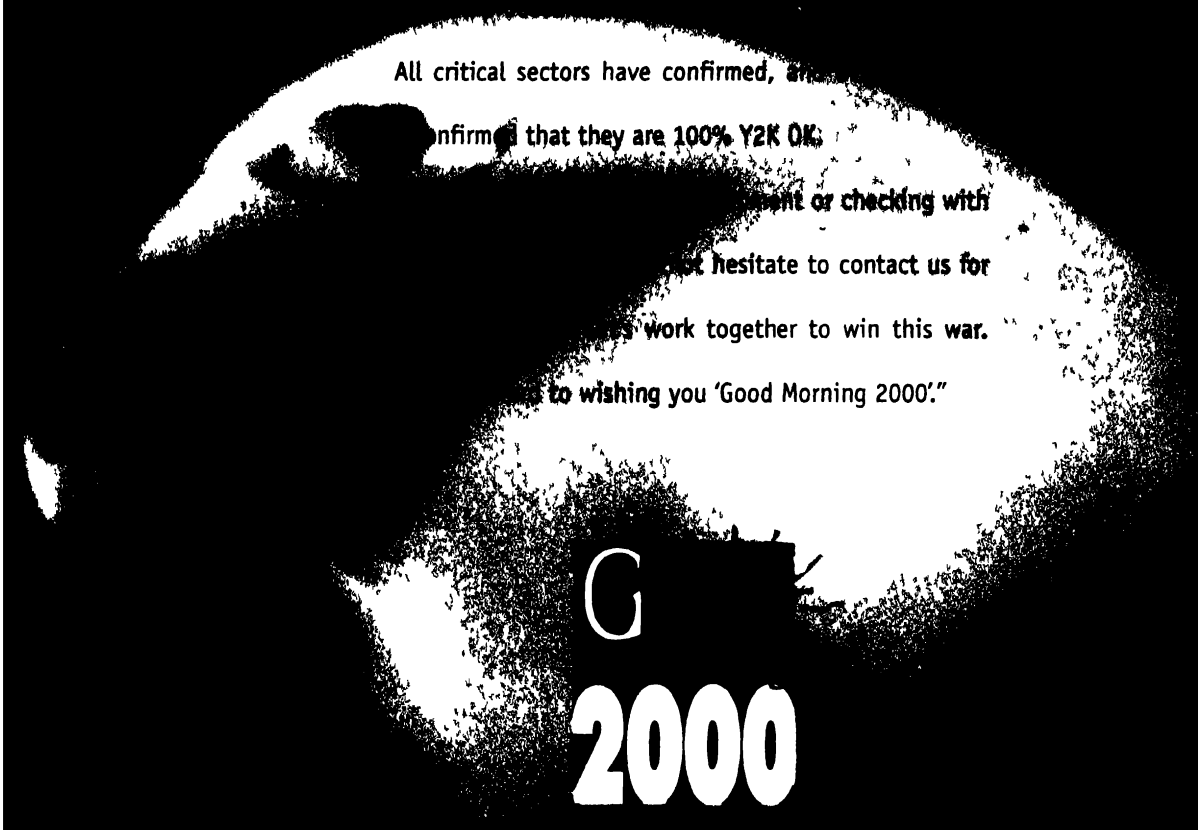
T.K. Rajalakshmi

King of cyberchess

A WORLD war waged across 64 squares and countless communication lines ended last fortnight with the reigning monarch of chess proving yet again – in somewhat controversial circumstances – that he is the undisputed King of The World.

On October 22 world champion Gary Kasparov (36) defeated a World Team of Internet chess players after a four month battle on a game zone Web site hosted by Microsoft, the global software giant. In the encounter, an experiment sponsored with the aim of popularising cyberchess, Kasparov considered the greatest player ever, took on the World Team, an online community of chess players. For each of Kasparov's moves, anyone who logged on at the game zone could vote over a 24-hour period, on a variety of countermoves suggested by a panel of four young Grand Masters. The move which proved the most popular was played, to which Kasparov would respond 24 hours later. Over the four months, the site hosted 3 million visitors from more than 75 countries.

GAMMA



The event was Kasparov's first public match-up with computer technology since the Russian Grand Master was defeated by Deep Blue, a supercomputer designed by the techno-behemoth IBM (*Frontline*, May 30, 1997). The high on hype ended off was however a public relations fiasco for Microsoft which faced accusations that it had mishandled a move by the World Team. On Move 58 with the game poised for an exciting finish the game zone did not post a move recommended by U.S. women's chess champion Irina Krush (15) who was one of the four analysts for the World Team. Microsoft claimed that her recommendation sent by e-mail had been received late owing to a server error. Some analysts believe the move may have forced a draw but without her input and analysis the World Team settled for a weaker move. Outraged chess buffs registered their protest by opting overwhelmingly for a suicidal (but legal) move on their next turn. However, seeking to avert negative publicity, Microsoft disqualified that move, claiming that the vote was rigged and posted a move of its own. But by then the game was up. On Move 62 the World Team, facing certain defeat, conceded the match.

The controversy aside, the experiment showed up the vibrancy – and the limitations – of e-collaboration. The collective mental faculties of millions of players worldwide sustained a high quality of play that broke new ground in chess theory. In the end, however, one man's mastery triumphed over a democratic army's cumulative might. ■

KNOW YOUR BOFORS

The facts, the issues and what lies ahead

Picture yourself on the most powerful credit card in the world.

The Citibank International Gold Card. At home in India and abroad.

Reflect your personal power with the Citibank International Gold Card. It can now be yours at **no additional cost.** With the convenience to pay in Indian Rupees

Powerful advantages in India:

- Unique Rewards that get you free holidays, free airline tickets and exciting gifts
- Free Personal Accident Insurance of up to Rs 15 lakh
- Free Household Insurance* protects your valuable household possessions
- Free Baggage Insurance* while you travel in India and abroad
- Purchase Protection* on all purchases made on the Card

Powerful advantages overseas:

- Free international **Air Miles** and **Hotel Nights**
- Discounts of up to 7% on air tickets through select travel partners
- Free GlobalOne Calling Card to call your family while travelling abroad

THE BOFORS TRIAL

As India's most explosive case of political corruption in recent years goes on trial, an examination of the state-of-play and the prospects.

SUKUMAR MURALIDHARAN
in New Delhi

AFTER a brief interval dominated by political grandstanding, the charge-sheet filed by the Central Bureau of Investigation (CBI) in the Bofors payoffs case came up before Special Judge Ajit Bharihoke in New Delhi on November 3. The first hearing, a much-awaited media event, turned out to be anti-climactic. The Judge merely asked to be shown the originals of all the documents that the CBI had cited as evidence in the most explosive case of political corruption in recent years.

Following a scrutiny of the 213 documents appended to the charge-sheet, Judge Bharihoke decided the following day that there was "sufficient prima facie material on record to proceed against the accused". The court proceeded to issue summons to three of the four individuals listed as accused: Martin Ardbo, former chief executive of A B Bofors, Sweden, S K Bhatnagar, former Secretary in the Ministry of Defence, and W N 'Win' Chadha, the long-serving agent for the arms manufacturer in India, were directed to appear before the court on December 13. Also summoned was the Swedish company itself, now known after a series of corporate takeovers, by the relatively uncontroversial name of Celsius, and represented in judicial proceedings by its chief executive.

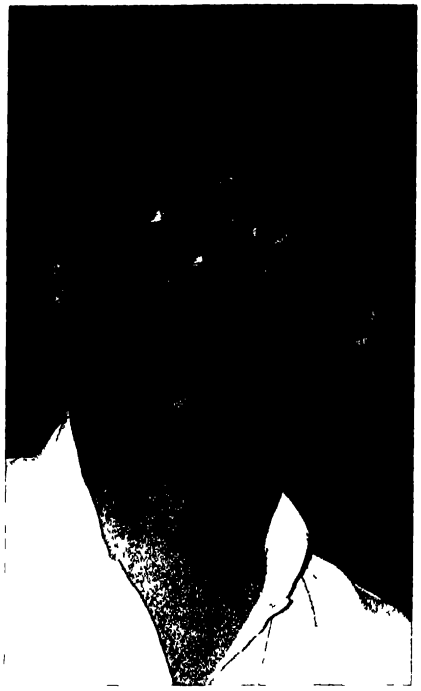
The court also issued a fresh non-bailable warrant for the arrest of Ottavio Quattrocchi, the Italian businessman whose involvement is proving the greatest political liability for the Congress(I) and its leader. The Judge observed pointedly that the accused had early this year been granted provisional immunity from arrest by the Supreme Court to come to the country from his exile in Malaysia and assist the CBI in its investigations. The opportunity had been squandered, making the issue of a fresh arrest warrant unavoidable.

Appropriately enough for an investigation that has stretched over nine years and run the gauntlet of the judicial systems in India and Switzerland, the CBI has marshalled a voluminous body of evidence for the prosecution. In the reconstruction of the steps that led to the award of the contract for the Indian Army's purchase of 155 mm howitzer guns from A B Bofors, the role of former Prime Minister Rajiv Gandhi is crucial. It is on account of this compelling requirement of logical closure that the CBI has included Rajiv Gandhi's name as an accused. In conformity with established procedure, his name is featured in Column 2 of the charge-sheet, as an accused not being sent up for trial because he is dead.

The Bofors FH 77B weapons system in action in Kargil.

"It may well have been a viable strategy for those who are anxious to protect the aura of the former Prime Minister and president of the Congress(I) to keep their criticism on a low key and allow the process of law to take its course. But this manner of sobriety has been conspicuously absent in the reactions of the Congress(I) and its partisans. First off the mark was Kapil Sibal, the Congress(I) MP who served all through the recent election campaign as the party's principal spokesman. Allowing partisan passions to get the better of his legal acumen, Sibal pronounced initially that there was simply no precedent for a dead individual being named as an accused in a criminal trial.

This bungled reading of judicial precedent served as the underpinning for the Congress(I)'s initial vituperations on the issue. The bubble was rather rudely deflated by Minister of State Arun Jaitley, speaking for the Government in the Lok Sabha. Two rather well-known precedents were cited, familiar to anybody with



even a passing knowledge of the law – the indictment of Beant Singh in the Indira Gandhi assassination trial and the inclusion of the name of the "human bomb" Dhanu in the Rajiv Gandhi assassination case charge-sheet.

The offensive having all too predictably gone askew, the Congress(I) adopted a new strategy. It was not appropriate for a junior Minister who was not yet a member of either House of Parliament to respond to their concerns on an issue of such gravity, claimed Congress(I) spokespersons. The matter warranted an intervention from the Prime Minister himself, they said.

Discretely though, the Congress members had, even while raising this clamour, withdrawn the notice for a discussion on the Bofors matter in both Houses of Parliament. This showed an infirmity of conviction that the Government was quick to capitalise on, meeting the continuing tumult in the Congress(I) benches with the simple assertion that a full-fledged discussion could be scheduled without any delay. Expectedly, the forceful statement of this position by Prime Minister A.B. Vajpayee had a noticeably sobering effect on some irrepressible elements within the Congress(I).

Logical consistency continued to be at a severe premium in the main Opposition party. In one of many interventions on the issue, the Congress(I)'s deputy leader in the Lok Sabha, Madhavrao Scindia said: "Let the Government not determine what the course of the law should be." Curiously, this bore a close resemblance in its spirit to Arun Jaitley's statement that "it would be a sad day" if governments were to influence criminal investigations and decide who should be charged and on what counts. Aware of this uncomfortable symmetry, Scindia's voluble colleague in the party, Mani Shankar Aiyar, took a different approach: "We wish to know whether government will delete his (Rajiv Gandhi's) name. This is our demand and we insist upon it."

The crowning performance came from Sonia Gandhi, Congress(I) president and Leader of the Opposition in the Lok Sabha. Rising to support the motion of thanks for the President's address to Parliament, she took a quick detour to denounce the inclusion of her late husband's name in the charge-sheet. The Government, she said, had acted "maliciously and vindictively" in bringing forward charges against an innocent man without a shred of evidence. To have dragged the honour of a dead man in the mud was simply "despicable", she said.

V. SUDERSHAN

Former Prime Minister Rajiv Gandhi.

STANDING in for an indisposed Prime Minister, Home Minister L.K. Advani caused a minor flutter when he opened his reply to the debate with the assurance that he would give due consideration to the sentiments voiced by the Leader of the Opposition. Was he being correct and courteous in seeking to assuage Sonia Gandhi's deeply felt anguish? Or was he giving the first hint that the Government was prepared to yield on the Bofors issue in order to secure the Congress (I)'s cooperation in the ambitious legislative agenda that it had framed? The speculation did not proceed very far before it was scotched by a number of fairly decisive assertions

The Government had no authority under the law to intervene in a criminal prosecution, said Ram Jethmalani, Minister for Law, shortly after the brief session of Parliament had ended. He followed this up with a witheringly pejorative reference to Sonia Gandhi's level of knowledge of the law.

A definitive statement of the official view came on November 5, when the Delhi High Court took up a petition by a private advocacy group – the Rajiv Gandhi Ekta Samiti – pleading for the deletion of the former Prime Minister's name from the charge-sheet. Appearing for the Government, Additional Solicitor-General S.R. Jaisinghani pleaded for the dismissal of the petition on the grounds that it lacked merit. His plea was seconded by senior counsel N. Natarajan, who appeared on behalf of the CBI. Clearly unconvinced of the *locus standi* of the petitioners, the High Court deferred hearings till November 18, in order to provide them an opportunity to establish how Rajiv Gandhi's indictment impinged on their rights.

BRIEFLY put, the charge-sheet makes out a case of undue favours being done to the Swedish arms manufacturer in return for pecuniary advantages of a precisely quantified magnitude. These illicit remittances were received in Swiss bank accounts opened in the names of A.E. Services Ltd and Svenska Inc., which were front organisations for Quattrocchi and Chadha. This was a clear breach of a contractual undertaking given by the arms vendor to the Indian Government to eliminate all middlemen and avoid commission payments.

In itself, this may constitute a case for prosecution under the law of contracts. It does not yet amount to a case of criminal conspiracy. That essential linkage is provided by Section 5(1)(d) of the Prevention of Corruption Act, 1947, which is cited by the CBI in its charge-sheet. The Section reads as follows: "A public servant is said to commit the offence of criminal misconduct if he, by corrupt or illegal means or otherwise abusing his position as public servant, obtains for himself or for any other person any valuable thing or pecuniary advantage..." It is not necessary, in other words, to prove that a public servant has directly benefited from a transaction. To hold him or her liable for prosecution, it is sufficient to know that he or she has contributed to the illicit enrichment of "any other person".

At the present level of knowledge, Rajiv Gandhi's role in the Bofors scandal did not involve a direct pecuniary gain for himself. This point was made amply clear through an intervention by Joginder Singh, former Director of the CBI, who oversaw the crucial phase of investigations that has led directly to the ongoing prosecution. It is not essential for a viable case, in his estimation, to prove that Rajiv Gandhi directly received any of the monies paid out by Bofors. There is, rather, ample scope to indict him for his various acts of "omission and commission".

The charge-sheet makes out a case that Rajiv Gandhi went out of his way to ensure that Bofors was awarded the contract for the howitzer deal before March 31, 1986, which was the cut-off point beyond which A.E. Services' contractual entitlements to a part of the Bofors commissions would

Setting out the legal rationale

Arun Jaitley, Minister of State for Information and Broadcasting, has been the principal spokesman for the Government on the Bofors issue in the Lok Sabha. Though prudently emphasising that the matter does not fall within his ministerial charge, he was willing to offer some comments on it as a lawyer. Following are excerpts from an interview he gave **Sukumar Muralidharan** on November 8:

▶ *Could you elaborate on the rationale behind the inclusion of Rajiv Gandhi's name in the charge-sheet?*

In India, we have now developed a system where you have independence of investigating agencies. By this I mean, it is the police officer and the investigating agency who have functions under the Criminal Procedure Code to perform. It is no part of the obligation of the political government of the day to interfere in the investigative process. The administration of the police and the CBI can be functions of the State and Central governments respectively. But the investigative functions of those agencies have to be completely independent. In fact, there is a famous line in a British judgment which says that no Minister of the Crown can ever tell an officer of the law whom to charge-sheet or whom not to charge-sheet. In India, we have followed this principle. Our Supreme Court has reiterated it in the hawala and the fodder scam cases.

▶ *You had given some explanations on the logic underlying the inclusion of Rajiv Gandhi's name.*

I am not arguing for the CBI, but as a former lawyer I can understand the legal rationale. First, under Section 173, the pro forma under which a charge-sheet is filed is prescribed by the CrPC. Column 2 speaks of accused who are not being put up for trial. It is past practice that the CBI continuously follows, that when a particular person may have been involved in an offence, but is either absconding or has died, his name is not put up for trial. Whatever practice or precedent has been applied to any deceased accused in the past has been followed in this case. It would be a very bad precedent to change that practice merely because a person is politically influential.

I gave the illustrations of Beant Singh and Dhanu. In the St. Kitts case, A.P. Nanday has been named in column 2. Now I am very sad to say that an argument has been put forward by the Leader of the Opposition that we are comparing her late husband to Beant Singh and Dhanu. This is wrong. Nobody is comparing the late Shri Rajiv Gandhi to those people.

▶ *You made a point that it is necessary to include the name in order to sustain the charge-sheet. Could you explain?*

This case can go in three stages. It can be a case of bribery, or of abuse of position by a public servant to benefit a third party, or it can be a case of destroying or covering up evidence. In a conspiracy case, the principle of evidence is very clear under Sections 8 and 10 of the Evidence Act. Each accused person or each conspirator is bound by the acts of the others. Each is answerable for the actions of the others, because they are all done in pursuance of the common intention.

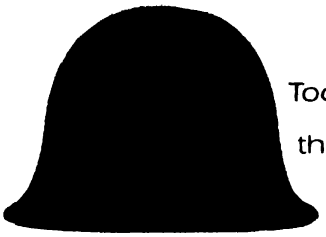
In a corruption case, the central figure is the public servant. The conspiracy revolves around him. Assuming that the allegation is that a public servant has abused his position to grant pecuniary advantage to a third person, can you only prosecute the third person without naming the public servant? If there is no public servant, the Prevention of Corruption Act itself would fall. And the central figure in this case is the man who took all the decisions, the man to whom Quattrocchi was close.

▶ *There could be a certain reservation in the public mind because there is no evidence yet that Rajiv Gandhi was a recipient of the illicit payoffs. Secondly, he is no more and if it is necessary to name him to sustain the charge-sheet, there could be some sympathy for the view that the charges have abated.*

These are three different points. The first is, what is the direct evidence that the money was passed on to Rajiv Gandhi? It is a matter of individual culpability. The matter is before the court and it is not fair for me or anybody to comment on it.

But let me clarify on a matter of law. Under the PCA, bribery is not the only act of corruption. Section 13(1)(d) of the Act says that if a public servant abuses his position to cause pecuniary advantage to a third person, then he is independently liable. Money may or may not have reached him.

Finally, since Rajivji was a former Prime Minister and the leader of a very important party, should he at all be named in the charge-sheet? Well, in law, there is only room for evidence, there is none for sentiment. In another branch of law, can a person say that I am a very good social worker, so the bank should not file a case for recovery of dues against me? And here, because Shri Rajiv Gandhi is dead, he has not been charge-sheeted, he will not be put up for trial, no evidence against him will be led, no charges against him will be framed. He is named in column 2 because the legal requirement of the case is that evidence relating to his conduct will be led against the other accused. In a conspiracy case, you cannot break the links in the chain of events.



▶ *What about the argument that in the Baroda dynamite case, the government did intervene to have a name deleted from the charge-sheet?*

This is again based on two incorrect surmises. Under Section 321 of the CrPC, the public prosecutor alone can move an application for withdrawal of a case. The government can only advise the public prosecutor, who will not be bound by this advice and would have to apply his mind independently. In this case, there is no prosecution against Shri Rajiv Gandhi. So Section 321 does not come in at all.

Secondly, one of the considerations for withdrawal is that it is in the public interest to do so. If after 13 years of investigations and breaking through the secrecy of the Swiss banking system, you have made a breakthrough in a case which shook the conscience of Indian society, the public prosecutor cannot possibly stand up and say that I want to withdraw prosecution. I think that would be the grossest misuse of the provision. ■

THE UNTOLD STORY...

OF AN UNKNOWN PEACE-KEEPER

Today thanks to the tireless vigil of our armed forces, the borders are well protected, terrorists in check and peace prevails

Behind the success story of our armed forces is the untold story of Indian Ordnance Factories who equip them with superior combat equipment like anti-mine vehicles, new generation 5 56 INSAS rifles and ammunition bulletproof apparel and more Because we believe peace comes from strength

cease. In order to do this, he applied an arbitrary guillotine on the competing bid by Sofma of France. Bids from both the principal contenders were being continually received from January 1986. On March 11, Bofors submitted what would be its final offer. Without any further deliberation, the negotiating committee in the Ministry of Defence decided on March 12 to issue a Letter of Intent to the Swedish vendor for the purchase of the guns. The matter went through five tiers of official approval and three Ministers on a single day, before it was approved by Rajiv Gandhi in his capacity as Minister for Defence on March 14.

IF this shows an undue interest in awarding the contract to Bofors, Rajiv Gandhi's conduct after the Swedish Public Radio blew the lid on the scandal in April 1987 betrays an obsessive concern with suppressing the truth. India's Ambassador to Sweden, B.M. Oza, had advised the government to disregard Bofors' disclaimers and instead wait for a final pronouncement from the Swedish official investigation. This eminently sensible proposal was overruled by Rajiv Gandhi, who instead directly conveyed his inclination to accept Bofors' denial to his Swedish counterpart and sought to dissuade him from pursuing the official investigation.

As Defence Secretary, Bhatnagar too partook of the attempt to obscure the truth, suppressing the considered professional evaluation of the Chief of the Army Staff, General K. Sundarji, that the threat of cancelling the howitzer contract would rapidly bring Bofors around to naming the beneficiaries of its commissions, while not impinging too seriously on the country's defence preparedness. Gen. Sundarji's suggestion, which was endorsed by the Minister of State for Defence, Arun Singh, elicited a hostile – indeed, almost hysterical – reaction from Rajiv Gandhi.

To add to all this, the CBI is learnt to have gathered a mass of evidence on the kind of contacts that existed between Quattrocchi and the Rajiv Gandhi family. These include evidence on the movements of two cars belonging to the Italian businessman, which points to the ease of access he enjoyed to the prime ministerial household. Five photographs, one of them a "group photograph", have also been cited as evidence of this proximity. Then again, 10 of the 83 witnesses listed by the prosecution are employees – both past and present - of Snamprogetti, the Italian fertilizer-related conglomerate that Quattrocchi represented for close to a quarter century in India.

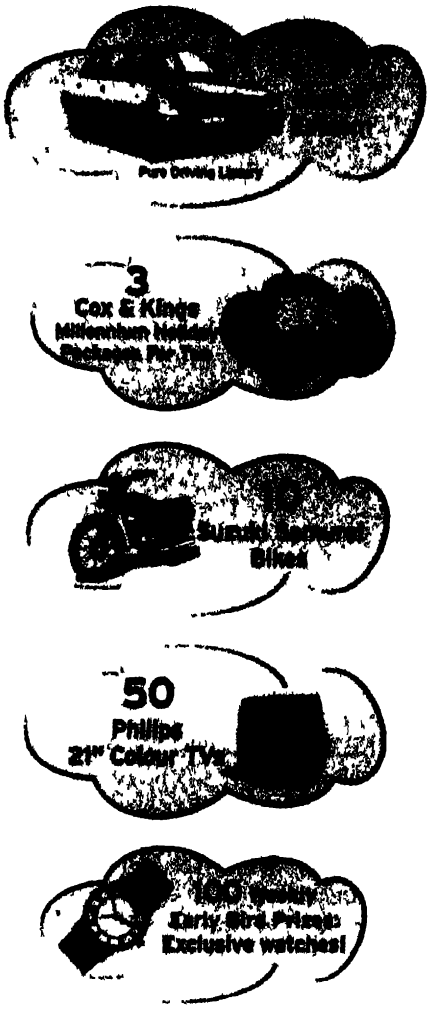
Since the first information report (FIR) in the Bofors case was filed in January 1990, the prosecution effort has withstood judi-

cial tests of extreme severity. These began with the maladroit effort by an individual of uncertain credentials to obtain the quashing of the FIR during the Chandra Shekhar Government's tenure. With the enforcement authorities wavering in their resolve, the Delhi High Court then gave a ruling which could have seriously debilitated the investigative effort. It took the intervention of the Supreme Court to restore a sense of propriety to the handling of the matter.

Martin Ardbo, former chief executive of A.B. Bofors.

Still more severe tests were inflicted during the P V. Narasimha Rao Government's tenure. If the Bofors investigation has progressed now to the stage of trial, this is a testament to its inherent robustness and to the sense of purpose with which it has proceeded To invoke mawkish sentimentality to subvert the process of law at this stage would be a rude affront to the basic principle of democratic accountability.

THE immediate prospects are that the trial will encounter continuing intransigence by the accused With the exception of S.K. Bhatnagar, all the other accused are in exile. Neither Quattrocchi nor Chadha is likely to return voluntarily to cooperate with the prosecution. As for Ardbo, he has expressed his disinclination to involve himself any further in the case. In this matter he has won the support of the Swedish Justice Ministry, which has ruled out the possibility of any citizen of that country being extradited for trial elsewhere. There is a possibility held out by the Ministry, though, of Ardbo subjecting himself to judicial cross-examination in Sweden.



When the trial reopens on December 13, it is likely that the Judge will have only one of the accused – Bhatnagar – before him. The Judge will then have to decide whether to provide another opportunity to the absentees or declare them absconders. need to be explored with Malaysia in the case of Quattrocchi and the United Arab Emirates in the case of Chadha. An extradition treaty was recently signed between India and the UAE, while Malaysia is obliged to extend cooperation under a Commonwealth agreement on mutual assistance in criminal matters.

MEANWHILE, two more fronts are also expected to open up in the near future. The first could see the charge-sheeting of Madhavsinh Solanki, former Union Minister for External Affairs. Consent for prosecution under the Prevention of Corruption Act has been received from the appropriate quarters. Formal charge-sheeting is now expected to be only a matter of time.

The second front, though, could be the more consequential one. The Swiss Federal Councillor is considering a final appeal against the transfer of documents pertaining to another set of bank accounts where funds from the Bofors payoffs were parked. It is widely known that the appellants in this case are the Hinduja brothers – Gopichand, Srichand and Prakash – enormously influential financiers of Indian descent settled in London. They have lost their case at three levels of the Swiss judicial hierarchy and taken recourse to a rarely used clause of law to appeal to a quasi-ministerial functionary in the federal government. The CBI expects a decision in its favour and could proceed with preparing charge-sheets once these documents are received.

The political sensitivities that are likely to be bruised in *l'affaire* Bofors are many. As of now, it is only the Congress(I) that is feeling the heat. But the Hindujas are known to have been extremely catholic in scattering patronage. For the Bharatiya Janata Party, will proceeding on this front involve shredding up some of the IOUs it may have accumulated during its relentless push for power? ■

KNOW YOUR BOFORS

The facts, the issues, and what lies ahead.

N. RAM

THE long-drawn-out Bofors drama has reached a legally and politically interesting stage. The Central Bureau of Investigation has concluded its investigation in the main and filed charge-sheets against five of the accused in the bribery case registered in 1990. They are S.K. Bhatnagar, former Defence Secretary; Ottavio Quattrocchi, wheeler-dealer and "close family friend" of Prime Minister Rajiv Gandhi; W.N. ('Win') Chadha, Bofors' longstanding agent in India; Martin Ardbo, former president of A.B. Bofors; and A.B. Bofors (which now goes by the name of Celsius). In striking contrast to the official stance during the prolonged cover-up of the Bofors scandal, Column 2 of the charge-sheet includes the "late Rajiv Gandhi" himself as an accused who cannot be sent up for trial for obvious reasons. If charges have not yet been laid against the three Hinduja brothers, G.P., Prakash and Srichand, who find mention in the document as co-conspirators and recipients of Bofors payoffs, the indications are that a charge-sheet will be filed against them once the final set of bank documents – sought by the CBI from Switzerland and blocked by the brothers through dogged legal manoeuvres – are in hand.

With Judge Ajit Bharihoke of the Special Court for CBI cases taking cognizance of the charge-sheet, recording the opinion that "there is sufficient prima facie material on record to proceed" against the five accused parties, and directing issue of a non-bailable warrant against Quattrocchi and summons against the other four, the Bofors drama has entered a stage that could prove politically damaging for the Congress(I) and its president, Sonia Gandhi. In October-November 1999, she put her party in an unenviable position by requiring it to defend the indefensible, thus making it hostage to Bofors once again. This attitude is very much in line with the famous official response of the Rajiv Gandhi government, in April 1987, to the original bribery charges that surfaced in the Swedish media: "false, baseless and mischievous."

With Sonia leading from the front and proclaiming in Parliament that her party "shall not tolerate the framing of an innocent man who is not in a position to defend himself", loyal camp-followers have been reduced to twisting the documented facts ludicrously and denying the crux of the criminal case in a confused, shrill, almost hysterical way. One camp-follower has even put out a new line that Rajiv Gandhi, who was squeaky clean on Bofors, might have been the victim of a 'sting' set up by Quattrocchi and Arun Nehru, and that Bofors itself, which paid no bribes but only 'winding-up' charges, might have been among those who were "cheated".[1]

IN the face of such attitudes, the crux of the Bofors criminal case, as investigated by the CBI, deserves emphasis. It is laid out in legalese, but clearly enough, in the CBI's charge-sheet: "... between 1982 and 1987, certain public servants entered into a criminal conspiracy with W.N. Chadha, Martin Ardbo, G.P. Hinduja and others in India and abroad, and in pursuance thereof, committed offences of criminal conspiracy, bribery, criminal misconduct by public servants, cheating, criminal breach of trust, forgery for the purpose of cheating and using as genuine a forged document in respect of the contract dated March 24, 1986 entered into between Government of India and M/s. AB Bofors." Further, the charge-sheet alleges, "the accused S.K. Bhatnagar, W.N. Chadha... Ottavio Quattrocchi, Martin Ardbo, M/s. Bofors and the late Shri Rajiv Gandhi entered into/were parties to a criminal conspiracy with some persons at New Delhi (India), Sweden, Switzerland and other places during the period 1985-87 and thereafter, with an object to award a contract by Government of India in favour of M/s Bofors" for the purchase of Bofors 155 mm howitzers "by abuse of official position by the abovesaid public servants and for causing wrongful gain to private persons/others and corresponding loss to the Government of India in the said gun deal." Take away the vital part played in the Bofors case by "public servants", as defined under the Prevention of Corruption Act 1947, and the bribery charges have no leg to stand on.

Yet, the documented facts have bribery written all over them. A massive order of illegitimate and unacknowledged payments, termed "commissions" and calculated on a percentage basis, was made by the Swedish arms manufacturing company into secret Swiss bank accounts after the Indian howitzer contract was won on March 24, 1986. The internal Bofors documents, seized by the Swedish police, gained by *The Hindu*'s investigation in 1988-89, and verified in the CBI investigation, have made it absolutely clear that the payoffs made by Bofors were directly contingent on winning the contract.

The payments were specifically for 410 field howitzers and accessories the Rajiv Gandhi government purchased from Bofors as part of an SEK 8.41 billion or Rs. 1,437.72 crores advanced 155 mm gun system. Had Bofors lost the contract to its French rival, Sofma, or to any other bidder, there would have been no question of

1. See the article, "More sting than scam," by Mani Shankar Aiyar in *The Indian Express*, New Delhi, November 2, 1999, page 8. The ludicrousness of the falsehoods presented in this article extends to asserting that "the relevant extracts" from the Ardbo diary (the explosive references to "Q", "Gandhi trust", "Nero", "N", and "R") "were scooped by this newspaper." The record shows that the first excerpts from the Ardbo diary and handwritten notes were published (as part of a detailed analytical expose by Chitra Subramaniam and N. Ram) over three pages of *The Hindu* of November 25, 1988; and that further explosive excerpts, including the famous July 2, 1987 reference to the "Gandhi Truste(e) lawyer", were published simultaneously in several leading Indian newspapers, including *The Hindu*, *Indian Express* and *The Statesman*, on October 31, 1989 under the same bylines. I happened to make these "relevant extracts" available to a representative section of the Indian press, and subsequently, after a criminal case was filed in early 1990 on Bofors, handed over photocopies of the Ardbo diary pages and handwritten notes to the CBI, as required by law.

paying these "commissions" to the contracted parties.

THE $50 million payoffs were in flagrant contradiction with assurances repeatedly given by Bofors to the Government of India to the effect that it had no agents or representatives in India for the howitzer deal.

Between May and July 1984, the Negotiating Committee set up, for the howitzer acquisition, by the Ministry of Defence was officially informed by the four shortlisted suppliers, Sofma, Bofors, the International Military Services Ltd of the United Kingdom and Voest Alpine of Austria, about their agents in India. Bofors identified W.N. Chadha as its agent. Following a discussion of the matter in the Negotiating Committee, its chairman, Defence Secretary Bhatnagar, met representatives of the four shortlisted howitzer manufacturers on May 3, 1985. He informed them that "the present Government did not approve of the appointment of Indian agents acting for foreign suppliers"; that in case they had made provision for any commission for their Indian agents, they should make a suitable reduction in their offers; and that they would be "disqualified" if it came to the notice of the Government of India that they had appointed Indian agents. Ardbo was specifically given this message. In response, he confirmed to Bhatnagar that Chadha was acting as Bofors' agent in India, and promised that he would consider the advice of the Defence Secretary on the Indian Government's policy and take "necessary action". Ardbo, however, did not disclose the name of any other agent. On July 22, 1985, a telex message arrived from the Military Attache at the Indian High Commission in London mentioning Chadha as a Bofors representative in India, but Bhatnagar failed to ask Bofors for a clarification on this.
